Already in the 9th/15th century, the coastal plains between Drama and Karaferye (Verroia) and Vodena formed an important cotton producing area in Rumili. In 1163/1751, the Venetian consul Choidas estimated the total amount of raw cotton exported from this area to be 13,000 bales (7,000 for France, 4,000 for Venice; in Salonica, 1 bale was equal to 110, sometimes 100 *okkas*, see Svoronos, 249), while in 1212/1797, Felix de Beaujour's estimate was 60,000 bales of both raw cotton and cotton yarn exported (40,000 to Germany, 10,000 to France). In 1211/1796, de Beaujour gives a record 98,500 bales for the total export of raw cotton (50,000 to London and Amsterdam, 30,000 to Germany and 12,000 to France). De Beaujour that only 10,000 bales were consumed in the area itself.

The cotton boom in the second half of the 12th/18th century was apparently responsible for the structural changes in the area, sc. the shift from rice cultivation to cotton, the reclamation of new land for cotton agriculture, the extension of big *čiftliks* and commercialisation of agriculture, and the growing prosperity of the big *aʿyāns* with increasing control of the land and peasant labour.

The organisation of cotton trade and industries. The *ķāḍī* court records and market regulations provide us with quite detailed information on the processes of cotton trade and manufacture in the Ottoman towns (see *Iḥtisāb* regulations in *Tarih vesikaları*, nos. 5, 7, 9; for court records see Eluçay).

In cotton producing areas, *ķozaķ*, i.e. cotton bolls, and cotton cleaned from its seeds, was brought to nearby town markets, usually by camels (Uluçay, doc. 22). In towns, special markets, *penbe pazarı*, were reserved for cotton sale. Most of the crop was purchased in small quantities by local *djullāhs* or *čulāhs*, spinners who were poor townsfolk, mostly women. Usually, foreign merchants from the port cities tried to reach producers or local markets through their agents. In order to get the best grade cottons, the merchants, in keen competition among themselves, used a system of advanced payment for a crop directly to the producers through their "factors". The system of a future contract was bitterly denounced by the French, since they said it caused scandalous competition, resulting in higher prices (Masson, ii, 435). Also, native middle-men or speculators in the cotton trade, mostly consisting of members

of the Ottoman élite along with Jews and Armenians in the Izmir area, bought the next season's produce in advance. Such contracts, called *salam*, widely practised in Islamic countries, were strictly regulated in Islamic law because of the uncertainty about the subject of contract (see al-Ṭaḥāwī, *Kitāb al-Shurūṭ al-kabīr*, ed. J. A. Wakin, New York 1972).

The customs registers provide definitive evidence that there was a group of Anatolian merchants who specialised in the cotton trade and who took their cotton goods as far as the northern Black Sea ports (İnalcık, *The Black Sea*, 91-107). The cottons in hairsacks or bales were taken in caravans into centres such as Kayseri, Ankara, Bursa, Ḳasṭamonu, Toḳāt and other parts of the Empire or by sea to Europe. Public regulations provided that all cotton imported for sale in the large cities had to be brought into a special building, called the *penbe ḳabbānī*. Cotton was to be weighed, taxed, and distributed there. For accomodating caravan merchants with their cotton goods, special caravanserais (*penbe-khānī*, *wakālat al-ḳuṭn* in Egypt) were built (Raymond, ii, 640).

In the *penbe ḳabbānī*, each member of the guild of *ḥallādj*s purchased his share of cotton at the officially-fixed price (*narkh-i djārī*) under the supervision of the *kadkhudā* and *yigit-bashī* of the guild. The *ḥallādjīn*, or carders, separated the fibre from the seed by beating (*atma* or *čalma*) the cotton with a *kemān* or *yay*, a bow-like instrument, to make the cotton clean and fluffy. The *ḥallādjīn* were also cotton dealers in the cities. According to a regulation dated 1138/1717 (Istanbul *eṣnāf niẓāmlarî*), there were 104 *ḥallādj*s in Istanbul, 15 in Galata (Pera), 9 in Üsküdar and 4 in Eyüp.

Each group of artisans was responsible for a stage in manufacturing. They were organised in *ḥirfet*s, guilds, and their shops occupied the same street or *khān*.

For example, in Magnisa, a relatively small town but an important centre of production of cottons, we find *pamuḳdjular* (cotton dealers), *djullāhlar* or *bezdjiler* (weavers of coarse cottons), *boghasīdjīlar* (weavers of fine cottons), and *bezzāzs* (dealers of cotton stuffs) directly involved in cotton trade and industry, while *boyadjīlar* (dyers), *takyedjiler* (cap-makers), *yorghandjīlar* (quilt-makers), and *terziler* (tailors) were considered as related crafts. In 980/1572, there were 520 *ḥallādjs*, 120 dyers, and 150 *bezzāzs* in Magnisa (Uluçay, doc. 64). Each craft guild elected its governing body, a *shaykh*, a *kadkhudā*, a *yigit-bashī*, and a committee of experts (*ehl-i khibra*) responsible for the supervision of the guild regulations, called *niẓām* or *ḳānūn* [*q.v.*]. *Djullāh*s in Magnisa had an *akhī baba* [see AKHĪ] as the head of the guild (Uluçay, doc. 38, dated 1044/1634). In important cities, these men obtained through local *ḳāḍī*s the Sultan's diploma empowering them to exercise authority over their guild members and to get the support of the local law-enforcing bodies.

In Istanbul, the guilds using cotton goods were *khayyāṭān* (tailors), *ḳawuḳdjuyān* (makers of wadded headgear for men), *tākyedjiyān* (makers of headdress for women), *yorghandjīyān* (quilt-makers), *gömlekdjiyān* (shirt-makers), *dülbenddjiyān* (dealers of muslim turbans), *yaghlīkdjīyan* (dealers of napkins and handkerchiefs), and *čadirdjīyān* (tent makers); for Cairo, Evliyā Čelebi (x, 370-1) gives a similar list of crafts and dealers. In both cities, guilds dealing with cottons were included in the group of 14 crafts connected with clothing or home furnishings, headed by the chief tailor.

Bazzāzs (in Turkish *bezzāz*), textile dealers, can be classified into two groups: big merchants of international or interregional connections; and local traders (see *Edirne askerî kassâmı*, ed. Barkan, 143, 261, 303, 306, 308, 325, 344, 352, 406, 421). The former dealt with costly goods, cottons, silks, and woollens, products of Anatolia, Aleppo, Damascus, Yemen, Egypt, Baghdād and India. Their stocks and credits amounted to big sums, sometimes over one million *aḳča*s or about 16,000 Venetian ducats in the 10th/16th century. They supplied the local guilds of dressmakers, cap makers, etc. with imported materials or re-exported them to distant areas usually on credit. These big merchants usually had their shops in the *bazzāziyya* or *bazzāzistān* (in Turkish, *bedestan* or *bedesten*) in the cities (see İnalcık, *The hub of the city: the Bedestan of Istanbul*, in *International Journal of Turkish Studies*, i, 1-17), and were the wealthiest and most respectable members of the society. As far as their social background was concerned, many of them came from the ruling élite (*ibid.*).

The second group included those dealers of modest capital, dealing only in local trade in the city. Their stocks usually consisted of cheap cottons, and a large variety of textiles in small amounts. In Edirne, we find former Janissaries among their ranks (Barkan, *op. cit.*, 306, 308), but also a big merchant of Janissary origin (270).

Some of the big *bezzāzs* specialised in importing or selling particular kinds of cotton goods.

Market dynamics. Artisans and dealers in cottons had a variety of difficulties as a result of shortages of raw materials, competition from other centres of production, and intrusions by related guilds in procurement of raw materials and marketing. It was in large cities or export-oriented production centres with a dynamic economy that strains and conflicts were particularly acute and recurrent. There was a kind of delicate balance established by custom and regulation among the guilds which performed successive stages of manufacturing. If one guild in cotton crafts or some members of it diverged from the standards or marketing rules laid down in the regulations, the other guilds were disturbed and the whole system affected. Consequently, the government was usually scrupulously conservative in keeping the old standards and regulations, and often intervened authoritatively to restore the established norms. However, should the public interest require modifications, the innovations were accepted and introduced into the regulations. It was usually through the local *ḳāḍī* [*q.v.*] that the government changed the regulations; he consulted with the guild officers and elders in making these changes.

In the regulations, the quality and measures of each product were laid down. Prices were fixed periodically, every three or six months, by the *ḳāḍī* in consultation with the representatives of each guild. *Djullāh*s, for example, were required to make coarse cotton fabrics called *baladī*, three *arshīn* or 2.04 metres long, and *bučuk ve rubʿ* or 49.5 cm wide, with 1,600 threads at warp (*Bursa iḥtisāb*, II 7, 33, 908/1502).

It was the duty of the officers of the guild, *yigit-bashī* and *ahl-i khibra*, in particular, to supervise the standards during the process of manufacturing. The goods were also inspected by the *muḥtasib* [see ḤISBA] when marketed. Periodically, the government conducted inspections using special inspectors (*müfettish*) sent from the capital (see *Bursa iḥtisāb*, *loc. cit.*). In larger cities, growing demand and the

import of cheaper grades of cottons caused difficulties for the town handicrafts under regulations with strict standards. Despite the periodic inspections, the regulations and standards for town handicrafts were often ignored in order to produce cheap products so as to compete with imports (see *ibid.*).

Not being organised as a guild, spinners of cotton yarn in cities came from among the poorest segments of the population, mostly poor women and children. They purchased cotton at the cotton market directly from the peasants or from the *ḥallād̲j̲*s. This group of spinners, the real proletariat in the Ottoman cities, was particularly vulnerable to the speculation which caused unfair competition and unemployment among them. They often claimed that the merchants caused shortages and high prices by purchasing and re-exporting the imported cotton. Also, since too many spinning wheels depleted quickly the cotton supply at the market, the government restricted the number of the wheels in a town so that hand spinners could find enough raw cotton for their use (Uluçay, doc. 25). Sensitive to the complaints of the poor masses in the towns, the government repeatedly ruled that no merchants could purchase raw cotton until after the town spinners and weavers had completed their purchases at the cotton market.

Cotton manufacturers in large cities distant from the cotton producing areas were usually supplied with imported cotton yarn (*Bursa iḥtisāb*, II-7, 33) as opposed to bulky raw cotton with high transportation costs. Under regulations, imported yarn was to be available to the weavers directly from the importers. The regulations forbade the dealers of cotton yarn of the city to re-sell imported yarn to merchants—a measure taken to prevent the prices of cotton goods from going up and disrupting the price system set up by the regulations. Actually, better prices offered by the Europeans tempted local merchants to engage in smuggling with the foreigners. The government acted energetically to prevent this (Faroqhi, *Şehirleşme*, ch. 2, 73-4).

The important issue for *bezzāz*s, sellers of cotton textiles, was to protect their monopoly of sale in the city. Both weavers in the city or merchants from outside (in Magnisa, native Armenians or those of Persia) sometimes sold their wares in the bazars of *k̲h̲ān*s (caravanserais) or as peddlers in the back streets. All finished goods, however, either locally made or imported, had to be sold under regulation to the dealers of cotton in the city (Uluçay, docs. 16, 44, 43, 48, all belonging to the 11th/17th century). In Magnisa the *bezzāz*s obtained the Sultan's order, which protected their monopoly and banned Armenians of Persia from having shops and competing with the town dealers (Uluçay, doc. 61; cf. A. Refik, *Istanbul 1100-1200*, 40-1).

*Bezzāz*s were also concerned with keeping up the standard in the size of the cottons and the quality of cotton and dyes used in the fabric. The finished goods were to be inspected and stamped by the government agents at a specified place in the cotton textile market (*bog̲h̲asl-pazarl*). Those products found short of standards were fined one *aḳča* for each two *parmaḳ*s (1 *parmaḳ* = 2.83 cm.) of coarse *bog̲h̲asl* and for one *parmaḳ* of fine quality (Uluçay, doc. 3). The *resm-i tamg̲h̲a* or stamp tax was 2 *aḳča*s for each two *d̲h̲irā*ʿs (1 *d̲h̲irā*ʿ of the bazaar = 68 cm.) of fine cotton fabrics such as *elwān*, *alad̲j̲a* and white *bog̲h̲asl* and for each ten *d̲h̲irā*ʿs of *astarlıḳ*, a kind of coarse cotton fabric (this rate was valid in the provinces of Ṣaruk̲h̲ān, Aydln, Mentes̲h̲e, and Sug̲h̲la in Ramaḍān 1070/1659; Uluçay, doc. 46).

Concentration in cotton loom industries. In the 12th/18th century, the makers of towels of all kinds (*pes̲h̲temāl*, *ḥawlu*, and *siled̲j̲ek*), kerchiefs (*maḥrama* or *mahrama*), white "raw" *alad̲j̲a*, and bundle wrappers (*bog̲h̲ča*) were permitted to work only in the workshops in the three *k̲h̲ān*s in the district of Klz-tas̲h̲ī in Istanbul (Ṣldḳī, *Gedikler*, Istanbul 1323/1907, 17).

Again in Istanbul, the makers of printed cottons (*basmad̲j̲ī*), all located at Wezīr-k̲h̲ānī, were organised in 27 *gedik*s or workshops with patent. In 1138/1725, there were 192 *basmad̲j̲ī*s in the *gedik*s, each *gedik* consisting of one master, one associate (*s̲h̲erik*) and several journeymen (*k̲h̲alīfa* or *ḳalfa*). Thirty-three of them were Muslim and the rest were Armenian. The *kadk̲h̲udā*, or head of the guild, was Muslim, while his associate was an Armenian. Considered as "workers" (*ʿamele*), they worked for merchants or individual citizens in return for a fee (*Eṣnāf niẓāmlarī*). Such centres of manufacturing activities were created, as a rule, as part of the *waḳf* [*q.v.*] establishments and were rented to the members of the guilds (see A. Refik, *Istanbul 1100-1200*, 98). Thus the state or the members of the ruling élite became instrumental in constructing "factories" (*kār-k̲h̲āne*) or workshops which brought together the artisans of the same manufacture in one place. The confessed purpose for it was to serve the public by making goods abundant and cheap (*rāyegān ve rak̲h̲īṣ*). The leases for the shops included the provision that the leasers acquired the monopoly of the manufacture of a specific product. In 1102/1690 the *basmad̲j̲ī*s obtained such a monopoly in an area from the Black Sea mouth of the Bosphorus down to the mouth of the Dardanelles on the Aegean. Also, the Ottoman government sent orders to the main production centres for large quantities of sailcloth for the navy (Uzunçarşılı, *Bahriye*, 515) and coarse cottons for lining and underwear for the soldiery in Istanbul (Uzunçarşılı, i, 282-4).

Government orders involving the output of large quantities of cotton goods in a limited period of time appear to have generated changes in the volume, prices, and even in the organisation of manufacturing in the centres of cotton production. The areas most affected by this situation were those closest to the Ottoman capital or those connected with it by sea—Gelibolu, Bergama, Cyprus, Livadia, Athens, Euboea, Stifa and Aleppo (Uzunçarşılı, *Bahriye*, 515; Faroqhi, *Şehirleşme*, 65-73).

Export centres. It can safely be said that, next to leather manufactures, the cotton industry with a large export capacity was the most important of all the industries in the Ottoman dominions, particularly in western Anatolia, Syria, upper Mesopotamia and southern Macedonia. It constituted the foundation of economic prosperity and urban development in the empire until the 13th/19th century. The high cost of transport of the bulky raw cotton accounted for the concentration of cotton industries in districts near cotton production areas, whereas finished goods, costly cotton textiles, *bog̲h̲asī* and *dülbend*, as well as cheaper cottons, *kirbas* and *astar*, and cotton yarn were sent by sea or land to all part of the Empire and to Europe.

First among the main areas of cotton industries with large export capacity was western Anatolia during the 9th/15th and 10th/16th centuries. The most active towns in this region at this period were Bergama, Magnisa, Menemen, Tire, Uşak, Gördes and Denizli. Tire specialised in making pillow and mattress cases, *alad̲j̲a*, as well as cotton thread, called

Cottons imported in the northern Black Sea lands in *ca.* 1164/1750.
(1 groush = 40 para = 120 aḳča; 1 arshîn = 68 cm; 1 okka = 1,2828 gr.)

	Thousand in groush	Price	Origin
Toḳāt-basmasî (prints of Toḳāt)	200	6-10 para per arshîn	Toḳāt
Boghasî (fine cotton fabric)	400	1½ groush per piece of 10 arshîn	Toḳāt, Ḳasṭamonu, Amasya
Astar or *bez* (coarse, cotton fabric)	250	—	from various Anatolian towns (*Čorum-bezi*, *dag-bezi*, *etc.*)
Dülbend (Muslin)	10-12	17-20 groush per piece	—
Čember (handkerchief and headdress)	250	6½ groush per piece	Anatolian as well as European and Indian kinds
Cotton shirts	4	2½ groush per piece	—
Cotton yarn	7.5	2½ groush per okka	—
Towels of Serres	8-10	—	Serres
Peshtemāl	10	15 para to 10 groush per piece	Sinope, Istanbul
Threads	16-18	30-35 para per okka	—
Gediz-bezi	600 bales	50-65 para per piece of 20 arshîn	Gediz in western Anatolia

rishte-yi Tire or simply *Tire*. Bergama specialised in sailcloth for the navy. The Ḥamîd-ili was known in the 9th/15th century for its large exports of *boghasî* from such centres as Ulu-Borlu (Borlu), Egirdir, Burdur and Isparta. Products from this area were sent to the great transit centre of Bursa, where they were dyed and re-exported (on the dependence of the area on Bursa market, see *Tarih vesikaları*, II-7, 32). The Ḥamîd-ili appears to have dramatically increased its production of cotton fabrics by the mid-10th/16th century (Faroqhi, *Şehirleşme*, 96).

During the 10th/16th century, the Antalya and the Silifke-Mut areas on the Mediterranean coast appear to have been among the most important areas of cotton growing and processing (Faroqhi, *Şehirleşme*, 96-7). The Ḳaramān-Ḳonya area, with centres at Ḳonya and Lāranda, exported fine cottons, *dülbends*, *boghasîs* and ordinary *bez* to Istanbul and the Black Sea region. The *boghasî* of Ḳaramān was found among the imports of Buda (Hungary) in 980/1572 (L. Fekete and Gy. Káldy-Nagy, *Rechnungsbücher türkischer Finanzstellen in Buda*, Budapest 1962, 227).

Aleppo, along with Antakya (*Antākî* cottons), Kilis, ʿAyntāb (Gaziantep) and Marʿash made up another major area of cotton industries with large capacity for export to the other parts of the Ottoman lands, Egypt, and Europe. *Ḥalebî* cottons were among the imports to Kaffa as early as 892/1487 (Kaffa Customs Register). The *ḳabbān-î penbe*, cotton scales tax in Aleppo, amounted to 13,000 *aḳčas* and dues at dyehouses to 50,000 *aḳčas* in 926/1520 (*Tapu defteri*, 93). Half-a-century later (*Tapu defteri*, 544), the increase to 38,360 and 71,274 respectively can be taken as a proof of the development in cotton trade and industries in Aleppo. In the 1091/1680s and 1102/1690s, the costly cotton fabrics of the area, white and blue "daman" (of Ḥamā), handkerchiefs and cotton yarn were among the imports to France (Masson, i, table VIII). Ḥamā is described as "a city where the population made cotton yarn, cloaks for women, and towels" (Evliyā, iii, 60). Aleppo was also a transit centre for Indian cloths coming via Baṣra-Baghdād in the 11th/17th century (Sahillioğlu, *Belgelerle türk tarihi*, ix, 67). In Aleppo, imitations of the Indian cottons wrre made, while *ḥalebî* fabrics were imitated in Bursa and Istanbul.

Further east, Mārdîn (Göyünç, *Mardin*, 139, 167) and Diyārbakir were important centres of cotton loom industries. Coarse cottons and red cotton yarn of Diyārbakir were exported to Istanbul and Europe.

In northern Anatolia, the Ḳasṭamonu-Amasya-Toḳāt area developed as an important centre with large outlets in the northern Black Sea countries. According to the customs registers of Kaffa and Akkerman about 1100/1500 (İnalcık, *The Black Sea*, 95, 105), these lands imported large quantities of cotton textiles as well as cotton yarn and raw cotton. The imports included varieties of cotton cloths, such as *kirbās*, *boghasî*, *aladja*, and *ḥalebî*, as well as quilts, handkerchiefs, aprons, bath wraps, covers, thread, belts, and tents. Judging from the merchants taking these goods to Kaffa, one can conclude that western and southern Anatolian centres of cotton industries too took part in this trade also. Moreover, merchants came from large centres of the cotton trade and industries: Istanbul, Ḳasṭamonu, Sinope, Amasya, Merzifon, Toḳāt, and Bursa in northern Anatolia, and Bergama, Uşak, Gördes, Menemen, Tire, and Denizli in western Anatolia (*ibid.*, 101). Merchants from Bursa imported cotton manufactures of Ḥamîd-ili; those from Istanbul cottons of western Anatolia, and those from Ḳasṭamonu and Sinope cottons of the Amasya-Toḳāt area.

Altogether, cottons exported from Anatolia to northern Black Sea countries amounted to over one million groush in the mid-18th century. It appears that foreign cotton imports were negligible in this period.

The pattern of cotton trade between Anatolia and the north did not change much, as demonstrated by a comparison of this table with the data from the customs registers of Kaffa, Akkerman and Kili of the 1500s.

Indian competition and the Ottoman cotton loom industries. Apparently it was the Levant market that originally contributed to the expansion of Indian cotton industries. India began to manufacture the

Ottoman types of cotton or cotton and silk fabrics much in demand in Turkey—*aladja* and *ḳuṭnī*—in in the 10th/16th and 11th/17th centuries (*allejaes* and *cuttanees* in the English East India Company documents, see Chaudhuri, 502, 504). *Aladja* and *ḳuṭnī* were varieties already popular in Turkey before 906/1500 (Customs Registers of Kaffa, Akkerman and Kili).

Indian textile imports to Turkey go back to the 9th/15th century. In 875/1470, Maḥmūd Gāwān [*q.v.*] sent his agents from India to Bursa "with *aḳmisha* (cloths)" to trade there and in the Balkans (*Belleten*, xxiv, 69, 75, 95). The list of the Indian textiles, as found in the court records of Edirne, includes Indian dark-blue *ḳuṭnī* (*Ḳuṭnī-i Hindī lādjiward*) (960/1553), Indian napkins (*peshkir-i Hindī*) (977/1569), Indian kerchiefs (*maḳrama-i Hindī*) (979/1572 and 1016/1608), kerchiefs of *Ser-hindī* and *Bihārī* and Indian *boghasī*, turbans, quilts, and girdles (*Edirne askerî kassâmı*, ed. Barkan, 120-3, 138, 147, 224, 335-8, 431). Home made *fūṭa* and *bāfta* were used in Turkey in much earlier times than in Europe (*phataes* and *baftas* in English, see Chaudhuri, *ibid.*)

It is possible that while the Indian industries, alert to the demands of the Levant market, made necessary adjustments in fashion and varieties (Chaudhuri, 239-40, 247), the original Indian luxury fabrics became popular in the Ottoman lands, as in Europe, particularly from the mid-17th century onwards. The fashion and use of Indian textiles became so widespread in the Ottoman lands that an Ottoman historian, Naʿīmā (iv, 293) claimed in the 1112/1700s that bullion sent to India to pay for Indian luxury textiles, had reached an alarming point for the whole economy of the Empire. He recommended the use of home-made products instead. At any rate, it was before European cottons dominated the Ottoman market in the 13th/19th century that Indian cottons, fine muslims, prints, *aladja* and *ḳuṭnī* types, as well as Indian cotton yarn, invaded and apparently threatened the Ottoman native cotton industries. It was during the period 1071-1164/1660-1750 when India became the chief producer and exporter of cotton textiles in the world that Indian cotton fabrics began to be imported in great quantities into the Ottoman markets.

By 1102/1690, the Indian exports to this area were estimated at five times as many calicoes as to the British and Dutch markets (Chaudhuri, 245-16) although no figure is available. Indian textiles reached the transit centres of the Empire, Baghdād and Aleppo via Hormuz and Baṣra on the Persian Gulf and Djidda and Mecca via the Red Sea. In the spring of 1019/1610, in a caravan from Baghdād to Aleppo with 120 merchants, there were ten Indian merchants, all Muslims. Most of the merchants in the caravan were carrying indigo, drugs, silk, and Indian textiles. Although Arab and Persian merchants made up the majority of the merchants in the caravan, there were also Turks, Armenians, Christian Arabs and Italians (five persons). Two Persian merchants from Hamadan had Indian wares, including indigo, drugs, and three bales of cloth of Lahore, all estimated to be worth 12,000 groush (H. Sahillioğlu, *Bir tüccar kervani*, 63-9.

In the Persian Gulf, Baṣra and Bandar ʿAbbās (Gombroon) were two outlets through which Indian textiles entered the Ottoman and Ṣafavid territories (R. W. Ferrier, *The trade between India and the Persian Gulf and the East India Company in the 17th century*, in *Bengal: past and present*, lxxxix/2, No. 168 (Calcutta, July-Dec. 1970), 189-98). An East India Company memorandum dated 1107/1695 tells us that "the Moors drive a great trade from hence (sc. from Surat) to Persia, Bussora, Aden, Mocha, and Judda, where they dispose of those goods which from hence are carried throughout the Grand Signor's Dominions" (Chaudhuri, 195). Gudjarāt was the main emporium of Indian textiles to Baṣra. Turkey also received luxury fabrics from the Pandjāb by the land route via Lahore and Ḳandahār or Sind (Chaudhuri, 242-45).

Also, an important part of the cotton fabrics imported by the Dutch and British from India was re-exported to America, West Africa, and the Levant (K. Glamann, *Dutch-Asiatic trade*, Copenhagen 1958, 133-4, 143). In the last three decades of the 11th/17th century, however, the European market showed a great demand for Eastern textiles when the use of Indian cotton textiles became fashionable, beginning with the women of the upper class (Glamann, 133; Chaud huri, 280-3; Masson, ii, 195). The fashion spread to lower classes, and initiated a dramatic increase in demand for cotton fabrics, despite the government prohibitions of the use of imported cottons which were brought about under pressure from the domestic industries of woollens and linen (prohibitions in France in 1098/1686, 1112/1700, and 1121/1709; in England in 1112/1700 and 1133/1720; cottons banned by the Church as "the manufactures of the Infidels", see Chaudhuri, *ibid.*, and Masson, ii, 277-8). The French imports of coarse cotton cloths from the Ottoman lands rose to about 3 million French livres in 1115/1703. The imported cotton fabrics were dyed and "printed" in Marseilles and an important part of them re-exported to Spain and Italy (Masson, 198-9). Thus the Levant shared with India the boom in the production and export of cotton textiles to Europe. This boom reached its maximum in the period 1112-64/1700-50. With their superior quality, the Indian textiles, however, dominated western markets through the East India Companies of Holland and England, while Levantine products, cotton yarn and coarse fabrics, were chiefly imported into France. Peyssonel (*Traité*, i, 31), the French consul in Izmir and the Crimea in the mid-12th/18th century, found that the export of French textiles to the Levant was limited mainly by the successful competition of the native cotton manufactures. The French export of cottons to the Levant in 1204/1789 was only 42,000 livres' worth (Masson, ii, 495; then 3 French livres = £). Red cotton yarn from western Anatolia and Diyārbakir exported from Izmir always found a ready market in the West, due to its high quality in dyeing and its low price. It was exported in great quantities to the Netherlands (O'Heguerty, 204) and to France.

Cotton yarn exported to France
(value in French livres)

	1700-02	1750-4	1786-9
Southern Syria	735,000	1,305,000	421,000
Aleppo	46,000	41,000	268,000
Cyprus	——	——	97,000
Egypt	213,000	267,000	156,000
Izmir	295,000	238,000	1,951,000
Istanbul	3,200	73,000	15,000
Total	1,292,200	1,924,000	2,908,000

Source: R. Paris, *Le Levant*, 514.

By the end of the 12th/18th century, the annual cotton yarn production of Thessaly and Macedonia reached 20,000 bales, or about 2.5 million kg., half of it dyed (F. de Beaujour, cited by Svoronos, 248). The Austrian firm of Starrhemberg, established in Salonica in 1190/1776, became a spectacular success. By 1204/1789, it had opened several factories which produced cotton yarn in Serres and Larissa (Svoronos, 182-5). Importing cotton and cotton yarn mostly through Marseilles, Switzerland too developed a cotton textiles industry, and in 1174/1760 a Swiss consulate was established in Salonica with the main purpose of promoting the cotton trade (Svoronos, 185, 252).

Cotton yarn and textiles from Egypt to Europe, i.e., France, Leghorn and Venice, consisted of only a small part of Egypt's total exports (Raymond, ii, 180). However, cotton textiles from Cairo, Maḥallat al-Kubrā and Rosetta, called *dimittes* (*Dimyāṭī*?), *agamy* (*ʿAd̲j̲amī*), and *mellaouy* (*Maḥallawī*), which were mostly exported to France, increased rapidly from 1133/1720. These exports reached their peak in the period 1143-52/1730-9 with an average of 609,362 livres, or 30.5% of total export. They then experienced a decline, to 291,708 livres in 1786-9 (the figures include exports of fabrics of flax, which made up one-third of the total in 1798). The decline was explained by the deterioration in quality, possibly a result of competition with western cottons (Raymond, i, 230).

England's share in the import of Egyptian tissues was less than 10% during the same period (Raymond, i, 174, 180-2). On the other hand, Egypt itself imported cotton fabrics from Syria, Izmir, Bursa and Istanbul. Syrian cottons or silk and cotton fabrics, such as *Anṭākī*, *Nāblusī*, *ḳuṭnī*, *alad̲j̲a*, and *S̲h̲āmī*, were an important part (about 43 million *paras* by the end of the 12th/18th century) of the Egyptian imports from that country (Raymond, i, 190). Before the English cottons invaded the area, Cairo was the main emporium of Indian textiles imported via the Read Sea. The total value of the Indian, European, and Syrian cloths imported was estimated at 500 million *paras*. The growing imports had a disruptive effect on the domestic textile loom crafts in Egypt as early as the turn of the 12th/18th century (Raymond, i, 191, 193, 199).

European competition. It is generally accepted that the reversal of the roles in cotton manufacturing and export between East and West occurred in the period 1164-84/1750-70. After 1184/1770, England, France, Germany, Austria and Switzerland began to export their cotton textiles to the Levant markets in growing quantities. Already by the mid-18th century, Western governments, changing their policies

Cotton textiles exported to Istanbul in 1191/1777 (value in French livres)

	Muslins	Woollen Cloths
Britain	691,000	656,000
Netherlands (1778)	298,000	583,000
Venice (1782)	97,000	217,000
Trieste (1782)	108,000 ("bours" and muslims)	220,000 (Austrian and German products)
French	42,000	7,448,000

of prohibition, permitted the expansion and protection of their domestic cotton manufactures.

Note the first-place ranking of the British in the export of cotton goods already at this time, and the dominance of the French woollens in the Levant market.

It is said that while the British cotton industries developed under the impact of Indian trade, the French developed under the Levantine one (Masson, ii, 434, n. 2). From 1133/1720 onwards, in order to protect national industries and those of its colonies in the Antilles, the French government imposed a heavy duty (20 livres per quintal) on the cotton yarn imported from the Levant (Masson, ii, 201). Already by 1142/1729, the French noted with pride that French imitations of Indian cotton prints found an outlet in Istanbul and were expecting even to manufacture the white cotton cloths themselves, thereby reducing their import from the Levant and Holland (Masson, ii, 436, 456).

In the second half of the 18th century, of the great variety of imports from Germany (Leipzig) and Austria to the Ottoman Empire, cotton textiles, muslins, and the so-called *indiennes*, were at the top of the list. German cotton goods had quite a large market at Izmir (55-60,000 pieces annually) and Bursa (30,000 pieces) (C. Aubin's report, ed. A. Cunningham) English cotton products exported to Germany also reached the Balkans through the Leipzig fair. Along with Leipzig, Vienna was another important centre for the Ottoman trade. Here we find 268 Ottoman resident merchants by 1181/1767, including a number of Muslim Turks (a certain Mollā Ḥuseyn owned six storehouses and Mollā Ḥasan four). During the period 1164-1227/1750-1812, when Austrian-Ottoman trade showed great development, raw cotton and cotton yarn became the principal exports from the Serres area to Austria and Germany (V. Paskaleva, 49-56).

However, the Eastern cotton yarn still had the advantage of lower prices due to the cheaper food and lower wages in the Levant (Masson, ii, 436-7). The cotton yarn imports from the Levant continued. By the 1195/1780s, while French cotton industries found markets, first in Spain and then Italy for their products, whose designs appealed to the taste of the populations there, the Muslim population of the Levant did not favour the imitations of the West. Western cotton industries would definitively conquer the Eastern markets only when they succeeded in solving the problem of price differential (by using machines) and when they imitated or created designs and colours which attracted an eastern clientèle.

The introduction of dyeing methods from the Levant was a crucial factor contributing to the success of western cotton industries and exports. The Dutch and the French finally succeeded in learning the special technique known as Edirne dyeing. Consequently, Turkey's export of red cotton yarn was reduced (O'Heguerty, 204; Masson, ii, 439-40). This reversal of the situation was apparent in the rapid growth in raw cotton imports and the diminishing proportions of cotton textiles and yarn from the Levant. Between 1112/1700 and 1203/1788, the French imports of raw cotton increased ten times, representing 39% of the total imports from the Levant, while cotton yarn did not make the same progress.

As has been seen above, change was a rather long process and one achieved in stages. For some time the Levant continued to export its cotton cloths, now in a raw state, undyed; then mainly its cotton

yarn, especially those dyed red with *alizari*; and finally only its raw cotton. On the other hand, invasion of the Levantine markets by western products was realised only after the industrial revolution in England with its mass production of cheap and finer quality cotton yarns (the so-called twist and mule) and prints. The dramatic change occurred in the period 1194-1231/1780-1815, and led to a situation in which the Levant became totally dependent on the western cotton industries for the supply of cotton yarn and textiles and for the sale of its raw cotton.

British supremacy and impact of the industrial Revolution. It was to the cotton imported from the Levant that the first cotton industry in England owed its foundation. First, fustians, made with a cotton weft and a linen warp, were produced in Lancashire under Elizabeth I at some time before 994/1586. By the middle of the 11th/17th century, the cotton industry was considered to be a well-established industry in England, although it depended upon a regular import of raw cotton from the Levant, Izmir, Cyprus, Acre and Sidon (A. C. Wood, 74-5).

During the period 1091-1184/1680-1770, the Levant suffered a decline in its exports of cotton and cotton goods to Britain. This was mainly due to the overall decline of the English trade in the Levant, as well as to the English domestic policies against the use and manufacture of cotton goods (R. Davies, *Devonshire Square*, 29-31). Another factor, a more enduring one, was the competition of colonial supplies to England from the West Indies and India. After the mid-18th century, when British cotton industries were encouraged, the cotton trade experienced a revival from which western Anatolia emerged as one of the main sources of supply.

Cotton imported from the Levant was approximately 300 tons in the years 1111-13/1699-1701, 150 tons in the 1133/1720s and 1143/1730s, and over 500 tons in the 1164/1750s (Davies, *op. cit.*, 173). Also some Levant cotton was imported to England through the Netherlands (Wood, 160). In the 1184/1770s, large cargoes in British ships from the Levant consisted of cotton and fruits. The "cotton boom" was responsible for the revival of the British trade in the Levant in the period after 1194/1780, when the English industry made its tremendous advance (R. Davies, *op. cit.*, 187, 241-2).

British cotton manufactures had to compete in the Levant not only with the Indian fine cotton textiles—muslins and calicos in particular—but also with Indian cotton yarn. The Ottoman consumer did not at first favour the British imitations of Indian cottons, but price became a key factor, and by 1215/1800, he came to prefer the cheaper British manufactures (Aubin's report). For the manufacture of fine cottons, Indian yarn was imported into the Levant until 1800, when it was replaced by British "twist", a strong thread used mostly for the warp (Aubin). "Twist" invaded Ottoman markets as far as the cotton production centre of Diyārbakir via Trebizond, and Central European markets via Salonica (Aubin). The demand of the Istanbul weavers alone was estimated at 10,000 *okka*s and that of Izmir and its hinterland at 400-500,000 lbs. Also, British imitations of Indian muslins, widely used in turbans, veils, and headgear for women, superseded the Indian imports in the Levant. By 1227/1812, other more popular English cotton textiles, all of them imitations of Indian cottons, were printed calicoes (with a consumption estimate of 35-40,000 a year in Izmir), chintz (Hindī *čhint*, Persian and Turkish *čit*), shawls and "shirtlings", etc. (Aubin gives a long list in his report).

Cheap, durable, bright in colour, the English cotton goods thus enjoyed a "prodigious demand" over the Levant from Cairo to Istanbul. This was considered to be a trade of the "highest importance" for England (Isaac Morcmer's report dated 1814, cited by Wood, 192-3). Although raw cotton imports from the Levant showed a great increase during the same period, their value was not significant when compared to that of the manufactured cotton goods exported to the Levant. Turkish cotton was only one-twelfth of the total imported by Britain.

After India, Germany too experienced losses at the Levant market for cottons in favour of British manufactures. During the Napoleonic Wars, the British took advantage of the rising prices in Germany and the closure of Trieste and Fiume, principal transit ports for Austrian-German exports. Great Britain's interest in the Levant as an important market for British manufactured cotton goods grew particularly from 1241/1825, when the full impact of the Industrial Revolution was felt at home. Taking advantage of its role as a protector during the Egyptian crisis, Great Britain had the Ottoman government sign the commercial treaty of 1254/1838 which awarded Britain favourable conditions and turned the empire into an open market for its cotton industry (V. J. Puryear, *International economics and diplomacy in the Near East*, repr. Archon Books, 1969, 107-30; F. E. Bailey, *British policy and the Turkish reform movement*, Cambridge 1942, 39-178; Mübahat Kütükoğlu, *Osmanlı-Ingiliz iktisadi münasebetleri, 1838-1850*, Istanbul 1976). The principle of free trade was virtually introduced into Turkey before it was accepted in Great Britain (Puryear, 117). From 1254/1838 to 1269/1852, British imports of cotton textiles tripled and those of cotton yarn doubled, 63.9 to 183.8 million yards and 5.6 to 11.9 million lbs. respectively (Kütükoğlu, 82, 86). The value of the British cottons imported to Turkey rose approximately from one thirty-eighth in (1241/1825 to one-ninth of the total production in 1272/1855 (Bailey, 86).

The Ottoman trade occupied third place in Great Britain's foreign trade in 1267/1850 (Bailey, 82-3).

In the Ottoman Empire, the break-down occurred first in the cotton yarn production, which directly affected spinners, the poorest section of the population in rural and urban areas. In 1249/

1833 D. Urquhart tells us (*Turkey and its resources*, 148) that "their own yarn being unequal, heavy in weaving and liable to break, the weavers prefer much the English yarn". Also, the first serious crisis in cotton loom industries appears to have occurred in the period 1241-6/1825-30 (Urquhart, 47-54; Ö. C. Sarç, in Ch. Issawi, *Econ. history of the Middle East*, 48-9). At a later date, in 1279/1862, another Englishman, Lewis Farley (*The resources of Turkey*, 59-60) observed that "Turkey is no longer a manufacturing country. The numerous and varied manufactures which formerly sufficed, not only for the consumption of the empire, but also stocked the markets of the Levant, as well as those of several countries in Europe, have, in some instances, rapidly declined, and in others became altogether extinct ... The printed calicoes of Tokat ... the muslim looms of Scutari and Tirnova [in Thessaly] which in 1812 numbered 2,000 were reduced in 1841 to 200 ... Baghdad was once the centre of very flourishing trades, especially those of calico printing ... Aleppo was still more famous, for its manufactures of gold thread, of cotton tissues, ... and pure cotton called nankeens gave occupations to more than 40,000 looms, of which, in the year 1856, there remained only 5,560 ... now taste has changed. Cloth and every variety of cottons have supplanted silk. English muslins are preferred to those of India, and cashmere shawls were replaced by the Zebras of Glasgow and Manchester." He adds (61) that Great Britain "will continue to find Turkey an increasing and profitable market for our merchandize."

An American observer (C. Hamilton, *Among the Turks*, New York 1877) tells us how, following the free trade granted by the treaties of 1254/1838, "five thousand weavers in Scutari were without employ, and reduced to the most deplorable beggary. The fast colors and firm material of Diarbekr disappeared, ... and Bursa towels came from Lyons and Manchester ... Thus, all the industries of Turkey have perished."

Apparently, all these figures given are simply rough estimates, sometimes grossly exaggerated. In Aleppo, for example, in the period before 1273/1856, only 1,000 looms with an annual output of half a million pieces are mentioned in John MacGregor, *Commercial statistics*, 140; cf. Issawi, *Econ. history of the Middle East*, 221; also Viquesnel's more modest figures, *ibid.*, 51. In a French report cited by Chevallier (*Les tissus ikatés*, 300), the total number of looms manufacturing cotton-silk textiles in Damascus and Aleppo was estimated at 25,000 for the year 1241/1225. The report dated 1261/1845 considered the ruin of native cotton loom industries in Syria to be the result of the growing imports of low-priced cottons from Europe. English cotton yarn and prints headed the imports. However impressionistic, these Western reports demonstrate the dramatic disruption in Ottoman cotton industries by the mid-19th century. In the 1277/1860s, the first Turkish journalist (see İhsan Sungu, *Yeni Osmanlılar*, in *Tanzimat*, i, 787) became the mouthpiece of the population in their distress, and blamed the government's westernisation and free market policies as well as the shift in taste and fashion to Western products, for the depression.

In a survey of the Ottoman economy made in 1332-5/1913-5 (*Osmanlı sanayii*, ed. G. Ökçun, Ankara 1970, 134; V. Eldem, *Osmanlı imparatorluğunun iktisadi şartları hakkında bir tetkik*, Ankara 1970, 76), it was observed that 80 % of all cotton production (20,000 tons in 1335/1915) was exported abroad, while imported cotton manufactures constituted the major part of the overall imports. By 1335/1915, modern cotton factories in the Ottoman lands numbered only nine (altogether 82,000 looms and 68,500 spindles employing 3,024 workers), all of them making only cotton yarn and coarse cotton textiles (*ibid.*, 133; Eldem, 130-1). However, by the end of the 13th/19th century, Ḳonya, Ḳaramān, Antalya, Niğde, Ağlasun, Toḳāt, Merzifon, Marʿas̲h̲, and Antep (ʿAyntāb) were still mentioned as the important centres of cotton loom industries (Oppel, 525). At the turn of the 13th/19th century, as a result of the disorders, a number of cotton weavers left Aleppo for Egypt, ʿAyntāb and Marʿas̲h̲. ʿAyntāb made great progress in cotton manufactures, especially in red dyed yarn in the 1900s (Oppel, 528).

Some branches of the Middle Eastern loom industries, though adhering to the traditional techniques and types, resisted and survived the invasion of western machine-made cottons, thanks to the rural population's conservatism which favoured old-fashioned fabrics of the urban centres as luxuries. In Turkey, *alad̲j̲a* and *ḳuṭnī* are still popular with the peasants who use them in clothing and furnishings. As in the past, in these fabrics the woof is cotton and the warp is silk (or rather artificial silk).

Glazed and stiff, these fabrics still preserve traditional colourful designs and stripes (cf. Syrian *alad̲j̲a* and *ḳuṭnī* manufactured today in Aleppo, see Chevallier, 308).

(H. İNALCIK)

ḲUṬR means in Arab geometry (1) the diameter of a circle or of any section of a cone and the diameter of a cone; (2) the diagonal of a parallelogram or of any quadrilateral; (3) in trigometry, the hypotenuse of the so-called umbra triangle; as such it is either the secant or the cosecant of an angle, according as the side opposite it is the tangent or cotangent of this angle; in the first case it is called *ḳuṭr al-ẓill al-awwal* ("hypotenuse of the first umbra"), in the second case *ḳuṭr al-ẓill al-thānī* ("hypotenuse of the second umbra").

ḲUṬRABBUL, a place name of ʿIrāḳ. Also given as Kaṭrabbul, the name is regarded as Persian in origin. (1) Yāḳūt lists a village (*ḳarya*) of that name which was situated between Baghdād and ʿUkbarā. This Ḳuṭrabbul was reportedly frequented by pleasure seekers, who recognised the quality of the local wine. As a result, the village is often mentioned by such poets as Abū Nuwās [*q.v.*] and in tales comparing the virtues of different wine-bearing locations. (2) Ḳuṭrabbul also refers to one of the four major administrative subdistricts (*ṭassūdj*, and in Yāḳūt, also *kūra*) of the greater urban area of Baghdād. The sub-districts, which also included Bādūrayā, Nahr Būḳ and Kalwādhā, were in existence before the Islamic occupation of the area and may have continued to serve some administrative function after the construction of the Islamic city. Ḳuṭrabbul and Bādūrayā occupied the lands west of the Tigris River with the Ṣārat Canal serving as a boundary between them. The geographers speak of Bādūrayā being east of the Canal and Ḳuṭrabbul to the west, though it would perhaps be more correct to speak in terms of south and north. Ḳuṭrabbul thus came to represent the area which comprised the Round City of al-Manṣūr [*q.v.*] and the northwestern suburbs, including the military cantonments of al-Ḥarbiyya.

ḲUṬRUB, the werewolf. The Arabic word goes back to Syriac *ḳanṭrōpos* (or *ḳanṭrōpā*), which was subsequently transformed into the Arabic *ḳuṭrub* in the same way as other names of animals, like *djundub* "locust" or *ḳunfudh* "hedgehog". *Ḳanṭrōpos* itself is the Syriac transcription of Greek λυκάνθρωπος.

The saga of the werewolf is by itself indigenous to Arcadia in the central Peloponnesus (see Pausanias, viii, 2), but has many parallels amongst the Romans, Celts, Teutons and Slavs. Originally it was unknown to the Orient, and the Arabs came to know the figure of the werewolf in the 2nd/8th century at the earliest. According to an oft-repeated anecdote, Sībawayh once described his pupil Muḥammad b. al-Mustanīr as *ḳuṭrub^un layl^in*, so that the latter was subsequently known by the nickname of Ḳuṭrub [see following

article]. The poet Abū Dulāma called his mother *khayāl al-kuṭrub* (*Aghānī*[1], ix, 133, [2]x, 259), but alleged earlier evidence for the word in ʿAbd Allāh b. Masʿūd (d. 32/652-3) (Zamakhsharī, *Fāʾiḳ*, ii, 177/360 Bidjāwī) and Imruʾ al-Ḳays (ed. Muḥammad Abu 'l-Faḍl Ibrāhīm, no. 76, 36) is forged. Al-Djāḥiẓ does not seem to refer to the *kuṭrub*, but al-Masʿūdī (*Murūdj*, iii, 319 = § 1203) mentions it amongst several fabulous beings. Muḥammad b. ʿAbd Allāh b. Ẓafar (d. *ca.* 564/1169) apparently confuses it with the *ʿudār* (see al-Djāḥiẓ, *Ḥayawān*, index, and al-Masʿūdī, *loc. cit.*). Although the werewolf was integrated into the demonological world of the Arabs, it never attained the popularity which was always enjoyed by the *djinn*, the *ghūl*, the *ʿifrīt* and the *shayṭān*.

The Greeks, however, saw in the werewolf not only a fabulous creature, but also the manifestation of a mental disorder. Following Marcellus of Side, Oribasius (*Synopsis ad Eustathium*, viii, 9), Aëtius of Amida (vi, 11), Paul of Aegina (iii, 16) and later Byzantine physicians described lycanthropy as a kind of melancholia which caused the diseased person to shun the company of mankind, to seek out solitude and frequent cemeteries, and to roam about aimlessly with hollow eyes and lost in gloom. Through the translations of the works of Paul of Aegina in the 3rd/9th century and of Aëtius of Amida in the following one, the Arabs likewise came to know about this alleged illness. Paul of Aegina's information is quoted by Muḥammad b. Zakariyyāʾ al-Rāzī (*Kitāb al-Ḥāwī*, i, Ḥaydarābād 1955, 205 ff., 222), and Aëtius's chapter was the model for the descriptions of ʿAlī b. al-ʿAbbās al-Madjūsī (*Kāmil al-ṣināʿa al-ṭibbiyya*, i, 333), of Abu 'l-Ḳāsim al-Zahrāwī (*Kitāb al-Taṣrīf*, Ms. Chester Beatty 4009, fols. 110-11), and of Ibn Sīnā (*Ḳānūn*, Rome 1593, i, 315/Būlāḳ 1294, ii, 71).

Finally, the term *kuṭrub* is also a component of the plant name *sirādj al-kuṭrub* (a translation borrowed from the Syriac *shrāghā dh-ḳanṭrōpos*), mostly used to indicate the mandrake root (*yabrūḥ*).

(M. Ullmann)

ḲUṬRUB, the cognomen of Abū ʿAlī Muḥammad b. al-Mustanīr, grammarian and lexicographer of Baṣra in the 2nd/8th century, the freedman of Sālim b. Ziyād. He was born in Baṣra, where he studied not only grammar with the founders of that science, ʿĪsā b. ʿUmar, Yūnus b. Ḥabīb and Sībawayh (who is said to have given him his nickname), but also theology with the famous Muʿtazilī authority al-Naẓẓām. He became the tutor to the son of the military commander and minister Abū Dulaf al-ʿIdjlī [see al-ḳāsim b. ʿīsā, abū dulaf], and died at Baghdād in 206/821. According to Ibn al-Sikkīt, his pupil, he was not to be regarded as a reliable authority for lexicography.

Ḳuṭrub holds a very important place in the history of Arabic grammar, as the first grammarian known to have written a work on the three following topics: (1) words with two opposing meanings (*aḍdād* [*q.v.*]); (2) words with the same consonant skeleton capable of having three different meanings (*muthallath*) according to whether they have one or other of the three vowels; and (3) the explanation of the causes and occasions (*ʿilal*) of grammatical phenomena.

Furthermore, Ḳuṭrub seems to have held original ideas about syntax. Al-Zadjdjādjī in his *K. al-Īḍāḥ* (ed. M. al-Mubārak, 70, 77) states that Ḳuṭrub, as opposed to all the other Baṣran grammarians, did not believe that the *iʿrāb* affected nouns in order to show their different functions and to distinguish them from each other; he averred that there are nouns with the same *iʿrāb*, whose function differs, and nouns with differing *iʿrāb* but with the same function, and accordingly held that *iʿrāb* only affects a noun in order to distinguish two grammatical states, sc. at the end of a speech unit, without a final vowel, to mark pause (*waḳf*), and within a speech unit, with a final vowel, to mark liaison (*waṣl*) with the succeeding word.

Of the 18 works listed by Ibn al-Nadīm in his *Fihrist* and which dealt with exegesis and theology as much as grammar and lexicography only four have survived: the *K. al-Muthallath*, ed. E. Wilmar, Marburg 1857, and R. Souissi, Tunis 1398/1978; the *K. mā khālafa fīhi 'l-insān al-bahīma*, ed. R. Geyer, in *SBAK Wien*, cv (1888), 380-91; the *K. al-Aḍdād*, ed. H. Kofler, in *Islamica*, v (1931), 241-84, 385-461, 493-544; and the *K. al-Azmina*, still unedited.

Bibliography: Brockelmann, I, 102, S I, 161; *EI*[2] s.v. (M. Ben Cheneb); Kaḥḥāla, *Muʿdjam*, xii, 15.

(G. Troupeau)

KUTTĀB (a., plural *katātīb*), itself probably plural of *kātib* ("scribe"), a type of beginners' or primary school. The term is frequently synonymous with *maktab* in Arabic and Persian and *mektep* in Turkish. In Ottoman it was also called *mekteb-khāne* or *mekteb-i ṣibyān* or *ṣibyān mektebi*, ("children's school"); later, in the *Tanẓīmāt* era, it was more generally referred to as *ibtidāʾi mekteb* ("beginner's school") and then as *ilk mekteb* ("primary school"). European writers have often called it "Ḳurʾānic school".

The *kuttāb* was formerly widespread in Islamic lands. Although the appellation was almost universally applied to Muslim beginners' schools, *kuttāb* has also been known to designate Jewish *ḥeder*-type schools in Arabic-speaking countries. While there are no precise indications as to when they were first established, they spread during the Umayyad era in the wake of the conquering armies. and the *kuttāb* system was already wide-spread in early ʿAbbāsid times. There is some evidence that the structure and teaching methods of the *kuttāb* were modelled on the Byzantinie primary school (Lecomte, in *Arabica*, i [1954], 324 ff.), but its curriculum was purely Islamic and Arabic. The early *kuttāb* was an important agent for socialising different ethnic groups into the Islamic faith and its way of life. Later, in the Ottoman Empire, it served as vehicle for transmitting the values of the Ottoman Islamic society from generation to generation. The *kuttāb* provided a common educational basis for all who attended it. It was homogeneous in its aims and methods, and thus differed from the indigenous traditions of education, which displayed remarkable diversity. Until the penetration of Western models of education in modern time, the *kuttāb* was the only vehicle of public instruction for young Muslim children. Even up to the present, it has displayed remarkable staying-power by continuing to compete tenaciously with other educational institutions in many Islamic countries.

Since basic education [see tarbiya] was usually imbued with a religious spirit, and its professed goal was to produce a true believer, much of it was closely connected with the mosque [see masdjid]. Consequently, the *kuttāb* was frequently attached to a mosque, whose officials also provided further instruction.

The *kuttāb* itself was located in any sort of room available, a tent in the desert or even (as in Uganda) in the open. If specially constructed, a *kuttāb* consisted (in the Ottoman Empire, at least), of a large domed, unadorned hall in which all the pupils sat crosslegged on mattresses in a rough semi-circle, usually next to low desks. Such buildings were generally erected by philanthropists (through a *waḳf* or otherwise) or by the pupil's parents, who also provided the teacher's fees (in money and food). In the Middle Ages, wealthier families sometimes set up a private *kuttāb* for their children. The state hardly intervened until well into the 19th century, so that fees, physical arrangements and the curriculum were agreed upon between teachers and parents alone. There are even recorded instances of teachers volunteering their services without pay, though in many other cases they were underpaid, and some had to send their pupils to collect alms for them (as in Nigeria, in the late Middle Ages). In other instances (mostly in Africa and possibly in Iran), schoolchildren performed all sorts of tasks for their teacher in lieu of school fees.

Boys formed the overwhelming majority of pupils in the *katātīb*, while girls studied, if at all, separately (although there are recorded cases of coeducation, chiefly in Iran and India). Attendance was voluntary, and there was no precise age-limit: pupils enrolled at age four or above and, in general, studied for between two and five years. All the pupils studied in the same room—there was seldom, if ever, a division into groups by age—and each pupil progressed at his own rate. Instruction was usually carried out from sunrise to sunset (or earlier) daily; Fridays (and Thursdays in the Maghrib) as well as some festivals, like Ramaḍān, were free days. The *kuttāb* was open throughout the year, except when economic needs (such as harvesting) or natural calamities (like floods) prevented attendance. Due to the character of the *kuttāb*, its student body was almost exclusively Muslim. There were, however, infrequent cases of others attending, as in Iran even during the reign of al-Mutawakkil (who forbade the attendance of non-Muslim children) and in Egypt, where a few Copts attended in the late 19th century.

The teacher was called *mudarris* or *muʿallim* and later *muʾaddib* in the Arab lands (in some cases, the *muʾaddib* was a higher rank, namely the more learned or the private tutor); *khōdja* in Turkey; *maktabdār* in Iran; *mollah* in some parts of Central Asia; *lebbe* in Ceylon; and *mallam* (from *muʿallim*) in Nigeria and some other areas in Africa. He was popularly referred to as *fiḳī*, or *fḳīh*, probably the vernacular for *faḳīh*. In the larger *katātīb* he was sometimes aided by an assistant (*muʿīd*, literally "repeater"), or, in other cases, by a senior pupil (*ʿarīf*, literally "monitor"). All these persons frequently adopted the carrot-and-stick approach: beatings [see FALAḲA] were administered to the lazy or unruly, while the meritorious, who had mastered a large section of the Ḳurʾān by heart (*khatma* [*q.v.*]), were offered prizes, usually sweets or even the honour (in Morocco and Ḥaḍramawt) of being led around on a camel.

At first, when books were very difficult to acquire, the teacher used to dictate the material, which his pupils wrote down with a pen or reed (*ḳalam*) on a tablet (*lawḥ*). Afterwards, the pupils read the material aloud, with the teacher correcting their errors and elaborating on some points. Emphasis was generally laid on memorising. Since independent thinking was frowned upon, as liable to lead to the weakening of belief and disobedience, learning by rote was customary. This method was, to a large extent, self-defeating, as it meant studying difficult subject-matter in a barely understood language. Literary Arabic was hardly known even by Arab children, not to speak of non-Arab Muslims. Even among the latter, however, the Ḳurʾān was initially taught in Arabic, although it was clear that the pupils could not understand the language. Only later were difficult passages sporadically explained in the local language, such as Turkish, Persian or Urdu. The teaching of Arabic *per se* in these schools was instituted in the Ottoman Empire only in 1781, by Sultan ʿAbd al-Ḥamīd I (Persian was added then, also, but not Turkish!). However, this revolutionary innovation was in effect introduced in only a few schools; it became more widely accepted, along with other reforms, in the *Tanẓīmāt* era (beginning in 1846, the study of Turkish was also added, selectively).

While the general aims of the *kuttāb* were universally identical—to impart the rudiments of instruction required for the formation of a good Muslim—there were obvious qualitative differences between the towns and countryside, as well as substantive variations in emphasis in the curriculum. The Ḳurʾān was studied in all the *katātīb*, with stress laid on memorising and absolute accuracy. The teacher began with the *Fātiḥa*, then proceeded to the shortest, the 114th, *sūra* (*al-Nās*) and continued back until the class reached the longest, the 2nd, *sūra* (*al-Baḳara*). When a pupil had mastered all this, he began to practise his recitation in the correct order.

As a general rule, the early-morning hours, considered the best time of the day, were earmarked for studying the Ḳurʾān. At other times, prayer and religious rituals were imparted regularly. In the eastern Arab lands (Egypt, Palestine, Syria and ʿIrāḳ), Arabic grammar and poetry were usually studied as well. This was likewise the case in Muslim Spain, where composition was also added to the curriculum. While in Algeria, Morocco and among the Muslims of Africa south of the Sahara, little was learned besides the Ḳurʾān, in Tunisia *ḥadīth* was generally included as well. Some calligraphy and a smattering of arithmetic were added in some *katātīb* in Turkey as well as in Iran, where Islamic history and fragments of Persian poetry (e.g. from Saʿdī and Ḥāfiẓ) were occasionally included, from the 7th/13th century onwards. A little Persian poetry was also taught in the *katātīb* of Afghānistān and the parts of Central Asia ruled by Imperial Russia. In some *katātīb* in Ceylon, Arabic grammar, elementary arithmetic and the writing of Tamil in Arabic characters was practised in addition to the Ḳurʾān. All considered, one may surmise that although the *kuttāb*'s curriculum laid a basic foundation for further study, many of the pupils who ended their education at this level were hard to put to use it profitably, except for prayer.

Since the mid-19th century, the *kuttāb* has exhibited signs of change. Some reform has been promoted from above, as in the Muslim parts of the French possessions south of the Sahara, where the authorities initiated a campaign to supervise these schools and improve their quality (their success has not always been evident). Elsewhere the *kuttāb* stood in competition to the newly-imported Western-type primary schools, which also imparted a Muslim education but in more efficient ways. The *kuttāb* has held its own in Egypt, partly because this was the first Arab country that attempted to adapt it to modern requirements and integrate it into the state system.

An inspector of these schools (*Mufattish al-makātib*) was first appointed in 1835; since 1867, the Ministry of Education has been officially empowered to inspect these schools regularly (in the Ottoman Empire, a Ministry of Education to supervise the *katātīb* and other schools was established by an *irāde* in 1846). By 1890, official supervision of *katātīb* was fairly widespread in Egypt, and its effectiveness was increased by governmental grants-in-aid. Later, Muḥammad ʿAbduh [*q.v.*] was instrumental in expanding their curriculum (which today includes object lessons). Indeed, there are recorded cases of 20th century Egyptian children attending an elementary school in the morning and the *kuttāb* in the afternoon, or going to the *kuttāb* in the early morning before school.

The fortunes of the *kuttāb* in the 20th century have accordingly varied. In the Sudan, it has coexisted with the more general schools introduced by the British soon after they had defeated the Mahdist [*q.v.*] forces. In Zanzibar, in 1907, the British director of education decided to make the Ḳurʾān a basic component of the general curriculum and to integrate the *katātīb* into the school network. In India (e.g. in Bengal) the British rulers tried to increase the number of *katātīb* and raise their standards by introducing secular studies (The Reform Scheme, 1914). The same trend was evidenced in the British administration of Arab education in Palestine after the First World War. In Syria, in the 1943-4 school year, there were still 1,229 *katātīb*, with an enrolment of 34,440 children; more recently, however, the bulk of Islamic education is carried out in secular government schools. Although in Iran western influences began to affect the *kuttāb* adversely in the 1890s, and a Ministry of Education was set up in 1910 to foster modernism, as late as 1939 there were still 2,356 *katātīb*, compared to 1,218 state primary schools.

In recent times, the fortunes of the *katātīb* have as a rule suffered wherever Muslims are in a minority, e.g. in the Soviet Union, where all these schools were closed by the authorities in 1928. Much the same occurred in Yugoslavia in 1946. In India, however, they made a comeback after Partition, sponsored by active Muslim organisations. The *kuttāb* is on the decline (although no detailed statistics are available) in countries undergoing modernisation, especially in urban areas. The extreme instance is Republican Turkey, which disestablished these schools in 1924 and closed them down in 1926—although some have continued to function surreptitiously in remote villages. The opposite case is to be found in theocracies like the former monarchical Libya or in Saudi Arabia, where the *kuttāb* (sometimes under other names) has long provided the only type of basic instruction in both the desert and rural areas; modernised primary schools have gradually been introduced there only recently.

In some other Islamic countries, the *kuttāb* has survived thanks to efforts towards raising its level and enriching its curriculum and to the generosity of various philanthropists. In yet others, the *kuttāb* flourished for a while due to the importance ascribed to it by anticolonialist movements. In Morocco during the 1930s, the prestige of the *kuttāb* (called *msid*, from *masdjid*) increased because it served as a focus for nationalist propaganda against the French Protectorate. In Algeria during the 1930s, an Association of *ʿulamāʾ* set out to revive the *katātīb* and increase their number as a means of protecting the younger generation against the modernising influences of the French. Later, in January 1964—less than two years after independence—a decree reorganised basic Muslim education to suit the new situation. Elsewhere, too, *kuttāb* instruction still continues to have current relevance; in 1962, for example, an Upper Volta politician in search of Muslim votes claimed that he had studied in such a school.

Practically all newly-independent Arab states, as well as Pakistan, Malaya and Indonesia, have attempted to incorporate the *katātīb* into the national school system, to supervise them and to provide them with a better-organised curriculum, including regular class hours, examinations and grades. While the integration of the *katātīb* into the state systems of education may well ensure their continued existence, particularly in rural areas, state supervision is gradually altering their original character. This is especially so since in all Islamic lands the study of the Ḳurʾān and of Islam has become a standard part of the core curriculum of basic instruction.

AL-KUTUBĪ, Abū ʿAbd Allāh Muḥammad b. Shākir al-Dārānī al-Dimashḳī (686[?]-764/1287-1363), Syrian historian. The date of his birth is uncertain, since only one ms. of Ibn Ḥadjar's *Durar* fills the blank that was to contain it. It is plausible, however, and neither confirmed nor contradicted by the fact that a highly personal obituary notice in the *ʿUyūn* (Ms. Cambridge 699, fols. 7b-8a, *anno* 735) speaks of a young scholar born in 706/1306 as "our friend" (*ṣāḥibunā*). Born apparently in Dārayyā in the Ghūṭa, he spent all his later life in Damascus. He possibly went there to study with famous *ḥadīth* scholars such as Ibn al-Shiḥna (apparently), Aḥmad b. Abī Ṭālib al-Ḥadjdjār, *ca.* 624[?]-730) and al-Mizzī (654-742), but, being very poor, he went into the book trade and acquired a sizeable fortune. He had personal contact with the great al-Dhahabī, who quoted verses to him (*ʿUyūn, anno* 748). A fellow historian, Ibn Kathīr [*q.v.*], took part in the funeral service for him on Saturday afternoon, 11 Ramaḍān 764/24 June 1363.

If there is practically nothing known about his life, this is due to the fact he did not occupy any major official position in the scholarly-political establishment. His two surviving works were, however, highly esteemed and much used. His large history *ʿUyūn al-tawārīkh*, is represented in many libraries but usually only by individual volumes (presumed autograph in Topkapısarayı, Ahmet III 2922, cf. Cat. Karatay, iii, nos. 5853-65; O. Spies, *Beiträge*, in *Abh. f. d. Kunde d. Morgenlandes*, xix/3 [1932], 76). It has been little studied and not yet been edited, possibly on the *a priori* assumption that most of its contents is known from other sources. It does contain valuable information; see, e.g., F. Sayyid's introd. to *Faḍl al-iʿtizāl*, Tunis 1393/1974, 43-5, for the bibliography of Abu ʾl-Ḳāsim al-Kaʿbī al-Balkhī. That al-Kutubī considered new information not to be found else-

where as the hallmark of a successful history is shown by his statement to this effect in connection with al-Djazarī (*ʿUyūn*, *anno* 739), even if this statement should turn out not to be original with him (cf. Ibn al-ʿImād, *Shadharāt*, vi, 124). The value of the *ʿUyūn*'s contemporary section, preserved in Cambridge 699 (Add. 2923) and Ahmet III 2922, vols. 22, 24, has been stressed by E. Ashtor. It contains al-Kutubī's own observations, principally on Syrian intellectual and religious life. The close relationship of the *ʿUyūn*, for its last two decades (years 741-759/60), to Ibn Kathīr's *Bidāya* (cf. also Ḥādjdjī Khalīfa, 1185 f.), has been tentatively explained by Ashtor as being the result of al-Kutubī having used Ibn Kathīr's original notes; however, despite first-person references in Ibn Kathīr, it could well have been the other way round, especially if al-Kutubī was so much older than Ibn Kathīr.

Al-Kutubī's other work, *Fawāt al-wafayāt*, has been edited repeatedly (Būlāḳ 1283, 1299; ed. M. M. ʿAbd al-Ḥamīd, Cairo 1951; ed. Iḥsān ʿAbbās, Beirut 1973-4, utilising autograph volumes written in 753/1352, Ahmet III 2921, cf. Cat. Karatay, iii, nos. 6405-7). Following Ibn Khallikān and using al-Ṣafadī's *Wāfī*, it contains a wealth of biographical and literary information, mainly on Syrian littérateurs, which is noteworthy for its uniqueness and for the intimate glimpses it offers of Syrian cultural life.

Bibliography: Ibn Rāfiʿ, from his *Wafayāt*, cf. E. Ashtor, in *Scripta Hierosolymitana*, ix (1961), 25, n. 106; Ibn Ḥadjar, *Durar*, iv, 71 f. (Cairo 1385-7); al-Sakhāwī, *Iʿlān*, tr. R. Rosenthal, *A history of Muslim historiography*², 496; Ibn al-ʿImād, *Shadharāt*, vi, 203, quoting *Durar*; Brockelmann, I, 400, II, 60, S II, 48: E. Ashtor, in *Israel Oriental Studies*, i (1971), 277-84; Ṣ. al-Munadjdjid, *Muʿdjam al-muʾarrikhīn al-dimashḳiyyin*, Beirut 1390/1978, 183-6. A. J. Arberry's identification of the copyist of Ms. Chester Beatty 3495 with al-Kutubī (*MMIA*, xxiv (1949), 234 f.) was silently retracted in Arberry's catalogue of the Chester Beatty collection. (F. Rosenthal)

AL-KUTUBIYYA [see marrākush].

KÜTÜPHANE [see maktaba].

ḲUṬUZ, al-Malik al-Muẓaffar Sayf al-Dīn al-Muʿizzī, third Mamlūk sultan of the *Dawlat al-Turk* or Baḥrī dynasty. A nephew of the Khwārazm-Shāh Djalāl al-Dīn, Ḳuṭuz (whose original Muslim name was Maḥmūd b. Mamdūd) was taken prisoner by the Mongols and sold to a Damascus merchant who, in turn, sold him to the Mamlūk *amīr* Aybak in Cairo. Aybak, as the husband of Shadjar al-Durr, became in 648/1250 al-Malik al-Muʿizz, from which title Ḳuṭuz derived his *nisba*, al-Muʿizzī.

While still a youth, Ḳuṭuz claimed on the basis of various prophecies that he would rule Egypt and avenge his uncle by defeating the Mongols. A major step toward fulfilling that ambition was taken in 650/1252 when Aybak deposed his Ayyūbid co-sultan al-Malik al-Ashraf Mūsā and appointed Ḳuṭuz viceroy of Egypt (*nāʾib al-salṭana*). In the following year Ḳuṭuz was one of those *mamlūk*s who assassinated Aybak's rival to the throne, Aḳṭāy, a leader of the Baḥrī regiment. When Aybak was himself murdered in 655/1257 at the instigation of Shadjar al-Durr and was succeeded by his young son al-Manṣūr ʿAlī, Ḳuṭuz retained the viceroyship and managed the affairs of state. In 655-6/1257-8 he led expeditions against Baḥriyya *amīrs* and their Syrian Ayyūbid allies. In the following year (657/1259), however, Ḳuṭuz and the Baḥriyya were reconciled and joined forces to combat a Mongol invasion of Syria. In addition, claiming that al-Manṣūr ʿAlī was too immature to defend Muslim territory, Ḳuṭuz deposed him and had himself proclaimed sultan. Thus Ḳuṭuz was the first of many *mamlūk*s to depose the son of his *ustādh* in order to make himself sultan, thereby setting, according to Ibn Taghrībirdī (Cairo, vii, 56) "an evil precedent which led to the decline of affairs in Egypt".

Ḳuṭuz promised those *amīrs* who protested against this act of usurpation that he would step down from the sultanate once the Mongols had been defeated. To secure the co-operation of the Ayyūbids of Syria, Ḳuṭuz proffered his allegiance to al-Malik al-Nāṣir of Damascus and Aleppo and volunteered to defend him against the Mongols. To Hülegü himself, however, Ḳuṭuz offered only defiance and in 658/1260 put to death the envoys whom Hülegü had sent to demand his submission. Proclaiming a *djihād*, Ḳuṭuz led an army from Egypt into Palestine. Although the Mamlūk *amīrs* were reluctant to join battle against the Mongols, Ḳuṭuz succeeded in persuading them to march with him and sent Baybars al-Bunduḳdārī, the future sultan, at the head of an advance force. Ḳuṭuz first secured the neutrality of the Franks at Acre and then met, and defeated, the Mongol army at ʿAyn Djālūt. After the battle Ḳuṭuz marched to Damascus, which he used as a base from which to clear Syria of Mongol troops and to establish Mamlūk rule in the province, appointing his own *amīrs* to some key posts and retaining Ayyūbids in others. During the march back to Egypt, Ḳuṭuz was murdered at al-Ḳuṣayr, near al-Ṣāliḥiyya. Though the court historian Ibn ʿAbd al-Ẓāhir claims that Baybars was the sole assailant, it is clear from other sources that this historian was attempting to establish Baybars' unique claim to the sultanate according to "the law of the Turks" which states that *man qatala malikan kāna huwa al-malik*. (Shāfiʿ b. ʿAlī, quoted in *al-Rawḍ al-zāhir*, ed. al-Khowaitir, 31).

There is also disagreement over the motivation for the assassination. Several historians claim that Ḳuṭuz reneged on his promise to award Baybars the viceroyship of Aleppo after ʿAyn Djālūt, but Ibn al-Dawādārī says that Ḳuṭuz had already aroused Baybars' enmity by rebuking his brother *amīrs* for cowardice during the battle. Ibn ʿAbd al-Ẓāhir claims that Ḳuṭuz offended Baybars by refusing to share the glory of the *djihād* with him. In any event, it is clear, as Baybars al-Manṣūrī points out, that the enmity between Ḳuṭuz and the Baḥriyya was of long standing, and Baḥriyya ambitions for the sultanate were undoubtedly a factor. The disposition of the body of Ḳuṭuz is also a point of dispute, with Ibn Taghrībirdī claiming that Baybars transferred it from the original grave when it became a site of pilgrimage, while others merely say that it was buried in Cairo. Be that as it may, the sources are virtually unanimous in hailing Ḳuṭuz as a hero of Islam for the victory at ʿAyn Djālūt.

Bibliography: The fullest contemporary source that has been published is Ibn ʿAbd al-Ẓāhir's *al-Rawḍ al-zāhir fī sīrat al-Malik al-Ẓāhir*, ed. A. A. al-Khowaitir, Riyadh 1976, see index; a shorter version of this source was edited and translated by Fatima Sadeque, *Baybars I of Egypt*, Dacca 1956, index. See also the 8th/14th century historians: Baybars al-Manṣūrī, *Zubdat al-fikra*, British Museum MS. Ar. 1233, fols. 11a-16a; Ibn al-Dawādārī, *Kanz al-durar*, viii, ed. U. Haarmann, Freiburg 1971, index; Ḳuṭb al-Dīn al-Yūnīnī, *Dhayl mirʾāt al-zamān*, i, Hyderabad 1954, 379-84; and

the 9th/15th century historians: al-Maķrīzī, *Kitāb al-Sulūk*, i/2, ed. M. M. Ziada, Cairo 1936, 417-35; and Ibn Taghrībirdī, *al-Nudjūm al-zāhira*, vii, Cairo 1938, 72-89. There are biographies of Ķuṭuz in Ibn al-Ṣuķā'ī, *Tālī Kitāb Wafayāt al-a'yān*, ed. and tr. Jacqueline Sublet, Damascus 1974, no. 205; and Ibn Shākir al-Kutubī, *Fawāt al-wafayāt*, ed. M. M. 'Abd al-Ḥamīd, Cairo 1951, ii, no. 353; ed. I. 'Abbās, Beirut 1973-4, iii, 201-3. See also A. A. al-Khowaitir, *al-Malik al-Ẓāhir Baybars*, Riyadh 1976, 18-26; idem, *Baibars the first; his endeavours and achievements*, London 1978, 15-25; M. M. Ziada, *The Mamlūk sultans to 1923*, in *A history of the Crusades*, ed. K. M. Setton, ii, Philadelphia, 1962, 735-58. (D. P. Little)

ĶU'ŪD (A.), the verbal noun *Ķa'ada* "to sit", which developed into a technical term. (1) In the *ṣalāt* [*q.v.*] it indicates the sitting posture which is the penultimate component of a *rak'a* [*q.v.*]. For descriptions and illustrations, see Lane, *Manners and customs of the modern Egyptians*, 3rd edn., London 1842, i, 107, postures 7 and 13, and T. P. Hughes, *A dictionary of Islam*, London 1885, 467. (2) In early Islamic history it is the designation of the political attitude of a faction of the Khāridjīs, the *ķa'ada* (also called *ķu''ād*, *ķā'idūn* and simply *ķa'ad* after the analogy of *ḥāris*, pl. *ḥaras*). This designation is sometimes taken to refer to "self-declared non-rebels" (M. A. Shaban, *Islamic history A.D. 600-750 (A.H. 132)*, Cambridge 1971, 151), although the generally accepted notion is "quietism". This notion may have been derived from the pre-Islamic custom with the Arab tribes to "abstain from" warfare, raiding, etc. (in Arabic: *ķa'ada 'an*) during Dhu 'l-Ķa'da, one of the four sacred months.

The quietist is extolled in a probably spurious tradition dating possibly from the end of the first century A.H.: "There will be a *fitna* [*q.v.*]; he who does not take an active part in it (*ķā'id*) is better than he who does (*ķā'im*)", cf. *Concordance*, v, 439, left column, first trad., where Ibn Ḥanbal, i, 169 and 185, may be added to the list of references.

(G. H. A. Juynboll)

AL-**KUWAYT** (conventionally spelled Kuwait), the capital city, situated in lat. 29°20′ N and long 47°59′ E, of an amirate of the same name situated on the Arabian shore at the head of the Persian Gulf. The mainland state is bounded by 'Irāķ to the north and west and by Saudi Arabia to the south. Kuwayt also owns a number of islands and islets, the largest and most important of which are Būbiyān, Warba and Faylaka. The total area of the state is approximately 6,900 sq. miles.

1. Geography and economy

At least two explanations have been suggested for the origins of the name; one is that it is a diminutive form of *kūt* ("fort"), and this in turn is said to refer to the existence of a small Portuguese defensive settlement there in the late 16th century. The other less general derivation suggests that in local usage Kuwayt means "a number of small wells", and that these exist near the low sandstone ridge called Ra's Adjūza, which is where the modern town was founded in the early 18th century. European sources usually refer to this settlement as Grane or Graine, which is probably a corruption of al-Ķurayn, an islet in the bay about four miles west of the centre of the town, near to which there was a good anchorage.

The bay is the largest in the Persian Gulf, with a maximum length of 20 miles (east-west) and a maximum breadth of 10 miles (north-south). It is the only good natural harbour near the head of the Gulf. The terrain is mainly flat and arid with occasional low hills; the highest point in the country, less than 1,000 ft. in elevation, is in the south-west. The coast-lands are low and sometimes marshy. Natural vegetation is very sparse and consists of scrub and stunted bushes. Spring rains sometimes produce a short-lived cover of grass. Oases are few; the largest is al-Djahra, some 18 miles west of the capital city. Permanent surface water does not exist, neither do springs. In the past drinking waters was drawn from wells which were often brackish, and it was also brought by boat from Baṣra. Some drinking water now comes by pipeline from the Shaṭṭ al-'Arab, but a large sea-water distillation plant is the most important source of supply. The underground water table near al-Rawḍatayn in the north is also tapped for additional supplies.

The climate is hot, but often less humid than at other places in the Gulf. Summer daytime shade temperatures usually reach 105° F. to 110° F., but temperatures of over 120° F. have been recorded. The coldest month is January, when the daily maximum shade temperature is usually about 60 F. to 65° F. but temperatures as low as 24° have been recorded inland. Frosts sometimes occur in the desert but are almost unknown at the coast. Rainfall occurs chiefly between October and March and is slight: the average is under 5″ per year. Winds in winter are generally from the north-west and are relatively cool. Southerly winds in the spring and early summer are mainly hot and dry, those from the south-west later in the year are also hot but are often damp. Sandstorms more often occur during the winter than during the summer.

Before the discovery and exploitation of oil, the chief coastal occupations were trading, pearl and other fishing, and boat building. In the interior, nomads herded sheep, goats and camels and there was a little settled cultivation. The port served much of north-eastern Arabia, as well as acting as an entrepôt for trade with the south of 'Irāķ and southern Persia. Horses, animal products, fish and pearls formed the major traditional export items. Imports were chiefly foodstuffs and piece goods. In 1904, some 460 pearling boats worked out of Kuwayt and their crews numbered about 9,200 men. In the winter, about a third of these went to Ceylon for the pearling season there. The world-wide economic depression which began in 1929, and the introduction of cultured pearls from Japan, greatly reduced the demand for Gulf pearls. Boat-building using wood and fibre from India employed about 300 men in 1904, but this number obviously increased, for in 1912-13 as many as 120 pearling boats were reported to have been built. In 1904 the population of the town was estimated to be about 35 000. Of that number, about 1,000 were Persians, up to 200 were Jews and the Negro population was said to be about 4,000. By 1952 the population of the state had risen to about 152,000. Since that date it has grown very rapidly, because of changes which spring from the development of the oil industry. According to the census of April 1975, the population of the state was over 990,000. This very sharp rise was due chiefly to immigration, but the native birth rate is also very high. The same census reported that non-native-born residents made up 52.6% of the population; many of these were Palestinians or other Arabs, but immigrant workers have also entered Kuwayt in large numbers from Iran and the Indian subcontinent. There is a significant European and American community.

The first oil exploration concession was granted in December 1934, and oil was discovered in 1938 at al-Burḳān, but the Second World War halted the development of these fields. The Kuwait Oil Company, which held the concession, was owned jointly and equally by the Anglo-Persian Oil Company (later the British Petroleum Company) and the Gulf Oil Corporation of the United States of America. Production began in 1946, and in that year approximately six million tons of oil were exported. The Ābādān crisis of 1951 and the resulting embargo on oil supplies from Iran gave much impetus to the development of the oil industry in Kuwayt. In 1956 production exceeded 54 million tons, and Kuwayt was at that time the largest oil producer in the Middle East. By 1972 production had reached 148 million tons, but Kuwayt was no longer the leading regional producer, having given way to Saʿūdī Arabia and Iran. In January 1973 the Kuwait Oil Company and the Government of Kuwayt reached an agreement under which the state was to acquire immediately a 25% share in the Company, and by 1982 this would have risen to a 51% controlling interest. The Kuwaytī National Assembly, however, expressed strong disagreement with these terms, and there were demands for the immediate nationalisation of the Company. Further negotations were held and in December 1975 a new agreement was signed which transferred full ownership of the Company to the Government with retrospective effect from March of that year. During the War of October 1973, Kuwayt joined other Arab countries in restricting production, and for the first time since oil had been produced output showed a decline. The sharp increase in oil prices in 1973 encouraged the authorities to give increased attention to the question of conservation in order to extend the life of the oil reserves, the country's only known natural asset. A limit on production has been established of two million barrels per day, equivalent to about one hundred million tons per year; at this rate, it has been estimated that the state's known reserves should last at least until the middle of the next century. Kuwayt was a founder member of both the Organisation of Petroleum Exporting Countries (established in 1960) and of the Organisation of Arab Petroleum Exporting Countries (established in 1968). The latter institution has its headquarters in Kuwayt and the Kuwaytī authorities have taken an important and active part in the work of both bodies.

The recent development of the oil industry has had some striking economic and social effects. From being a relatively poor society of traders, fisherfolk, boatbuilders and herdsmen, the country now (1978) has one of the highest levels of income per capita in the world, and the state provides an impressive array of social services. Kuwayt has become, despite its harsh environment, one of the most highly-urbanised states in the world. The dependence on oil is overwhelming, with over 90% of government income currently being derived from oil production. The pearling and boat-building industries are no longer of economic importance. Fishing has been modernised and catches of shrimp are sold in Japan, Western Europe and the United States of American rather than locally. Agriculture is of little significance; less than 3% of the land is regarded as cultivable and only about 1% is actually in use. Imports now consist of construction materials, consumer goods and industrial equipment as well as foodstuffs and textiles. Exports, apart from oil and related products such as petrochemicals and fertilisers, are negligible. Ships of all the major maritime nations now use the port; the airport is served by many daily international flights; and the most modern means of international telecommunication are widely available. Oil revenues have enabled the government to offer significant amounts of financial aid to poorer states, both Arab and non-Arab. By 1977 loans worth over US $ 1,500 million had been provided.

2. History

Archaeological excavations on Faylaka island have revealed traces of settlements dating back to 2500 B.C., but relatively little is yet known of the history of Kuwayt prior to the 18th century and the assumption of power by the first members of the present ruling dynasty of Āl Ṣabāḥ in about 1170/1756.

The Sāsānid King S̲h̲āpūr I is said to have had a great ditch dug from Hīt on the river Euphrates to the northern shore of Kuwayt bay to protect the Sawād [*q.v.*] from Arab raids, and it was in the neighbourhood of Kuwayt that K̲h̲ālid b. al-Walīd is reported to have defeated a force of Persians in 12/633. The foundations of the modern state date from about the end of the 17th century when a group of ʿUtūb Arabs, who claimed to be a branch of the ʿAnaza confederation [*q.v.*], migrated into the area. According to local tradition the three clans—the Āl Ṣabāḥ, the Āl K̲h̲alīfa, and the Āl D̲j̲alāhima—were expelled from their previous settlements near Umm Ḳaṣr by the Ottomans because of their acts of brigandage and piracy. By the middle of the 18th century, the Āl Ṣabāḥ had achieved a position of local dominance. The Āl K̲h̲alīfa [*q.v.*] left Kuwayt in 1179-80/1766 and migrated to Zubāra in Ḳaṭar before taking control of Baḥrayn in 1197/1783. The Āl D̲j̲alāhima left Kuwayt later and they too went to Ḳaṭar.

The first mention of Kuwayt by a European is that of E. Ives, who refers to it as Grane, but he does not give the name of the ruling *s̲h̲ayk̲h̲* at the time of his visit in 1758. Niebuhr refers to the town as having a population of 10,000, but he noted that during the hot months the number declined to about 3,000. He reported that the harbour contained 800 ships and that the inhabitants were employed in fishing and pearling; but like Ives, he does not give the name of the ruler.

Kuwayt grew in prosperity after Karīm K̲h̲ān Zand had seized Baṣra in 1190/1776, for during the three-year Persian occupation, the East India Company used Kuwayt instead of Baṣra as the terminal point for its caravan route from Ḥalab (Aleppo) to the Gulf. According to Capper, who did not visit the town, the ruler of Graine was very friendly towards local British officials in 1193/1779; and in 1207/1793, after a quarrel with the Ottoman authorities in Baṣra, the East India Company's Agency was moved from there to Kuwayt. The Agency returned to Baṣra in 1210/1795. It was at this period that Kuwayt was often threatened by Wahhābī raiding parties.

The next century-and-a-quarter of Kuwayt's history was to be shaped by three sets of circumstances and by the relations between them. Those circumstances were threats from Northern and Central Arabia, the uncertain and varying nature of the relations between Kuwayt and the Ottoman Empire, and the emerging interest of first Great Britain, and later of other European powers, in this large natural harbour at the head of the Persian Gulf.

The temporary eclipse of Wahhābī power in Nad̲j̲d and al-Ḥasā after their conquest by Muḥammad ʿAlī in 1232-4/1817-19 reduced the threat to Kuwayt for a

time. When a British officer visited Kuwayt in 1252/1836, he found that Egyptian envoys were present in the town, and the re-entry of Muḥammad ʿAlī's forces into Eastern Arabia shortly afterwards increased British suspicions about the extent of Egyptian ambitions. An officer of the Indian Navy surveyed the island of Faylaka in 1255/1839 as a possible base for British military forces, but it was concluded that the island was unsuitable. The harbour at Kuwayt was also surveyed at this time. The withdrawal of Egyptian forces in 1256/1840 meant that British interest began to wane. The fact that Kuwayt had not been heavily involved in piracy meant that the trucial system of relations, which had been established by Britain from 1820 with Baḥrayn and the other shaykhdoms of the lower Gulf, was not extended to Kuwayt. Although Kuwayt was involved in the slave trade, the anomalous nature of her relations with the Sublime Porte meant that the British government was reluctant to seek engagements for the suppression of that trade from Kuwayt similar to those which had been secured from the Arab rulers of the lower Gulf.

The economic fortunes of Kuwayt fluctuated throughout the 19th century. Stocqueler, who visited the town 1246-7/1831 estimated that its population was only about 4,000. Some revival appears to have occurred, for Palgrave, who was in Arabia in 1278-9/1862-3 but who did not visit Kuwayt, reported that the town was well-governed and that trade was flourishing. The same author described Kuwayt as the natural maritime outlet for the trade of the Djabal Shammar area, and Guarmani, who visited that region in 1280/1864, reported that many horses were exported from there to India via Kuwayt. The possibility of building a railway line from the Eastern Mediterranean to the Euphrates and onwards to the head of the Persian Gulf had been suggested as early as 1856, but the construction and opening of the Suez Canal in 1869 put a temporary end to such plans.

The relationship between the rulers of Kuwayt and the Sublime Porte had varied ever since the Āl Ṣabāḥ had established themselves in Kuwayt, but it was rarely anything other than vague and nebulous. Occasionally, as in 1871, the Ottoman authorities in ʿIrāḳ were able to exercise some sort of sovereignty over the Shaykh of Kuwayt, and the town was then used briefly as a staging post for the Ottoman annexation of al-Ḥasā, Kuwaytī boats being employed to transport some of the troops. In May 1896 the ruler of Kuwayt, Muḥammad b. Ṣabāḥ, was murdered and he was succeeded by his half-brother Mubārak. There was much suspicion that Mubārak was implicated in the death, and intense family rivalries threatened the position of the new Shaykh. In order to consolidate his authority, Mubārak tried to secure the recognition and support of both the Ottoman and the British governments. The former showed some signs of seeking to extend its influence over Kuwayt. The latter initially declined Mubārak's invitations, but when it became known that a Russian entrepreneur, Count Kapnist, was seeking a concession from the Ottoman government to build a railway line from the Eastern Mediterranean to the Persian Gulf, with Kuwayt as the suggested railhead, British interest quickly revived. The concern of the British government was also increased by the belief that the Russian government might be seeking permission to construct a coaling station on Kuwayt Bay, and in Ramaḍān 1316/January 1899 an agreement was reached under which Shaykh Mubārak gained British support in return for a promise not to cede, sell, lease, mortgage or otherwise dispose of territory to a foreign government or national without specific permission from the British government. Increased international interest in Kuwayt became even more apparent in 1900 when a party of German railway engineers visited the area to seek a suitable site for the terminus of a possible extension to the Persian Gulf of the projected Berlin—Baghdād railway. Shaykh Mubārak opposed these plans, believing in part that they would tend to lead to an increase in Turkish control over Kuwayt. After a prolonged period of diplomatic negotations, the British and Ottoman authorities completed in 1913 a draft convention concerning their interests in the Persian Gulf. Under article 1 of this convention, Kuwayt was recognised as an autonomous *ḳaḍā*ʾ within the Ottoman Empire. That document also laid down the land frontiers of Kuwayt, but the outbreak of the First World War prevented the draft convention from being ratified. In 1914 the British government sought the support of Shaykh Mubārak against Turkish forces in Southern ʿIrāḳ, and among other reassurances the ruler was informed that the British government recognised Kuwayt as an independent government under British protection.

The Ottoman authorities were not the only threat to the independence of Kuwayt at the end of the 19th century. The value of that port as an outlet for the trade of Djabal Shammar attracted the attention of the rulers of the Āl Rashīd [*q.v.*], and that clan was engaged in open rivalry with the Āl Saʿūd [*q.v.*]. Much turbulence was caused in Northern Arabia in the late 19th and early 20th century by that contest for power. ʿAbd al-Raḥmān b. Fayṣal Āl Saʿūd and his son ʿAbd al-ʿAzīz took refuge for a time with Shaykh Mubārak, and a raiding force from Kuwayt was defeated by the forces of ʿAbd al-ʿAzīz b. Rashīd near Ḥāʾil in March 1901. The recapture of al-Riyāḍ by the Āl Saʿūd and the curbing of the power of the Āl Rashīd reduced the immediate threat to Kuwayt, but as the power of the Āl Saʿūd increased it looked as if they rather than the Āl Rashīd would now pose a danger to Shaykh Mubārak.

In 1913 ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān Āl Saʿūd succeeded in expelling the Turks from al-Ḥasā and in gaining an outlet to the Persian Gulf. This meant that Kuwayt was now encircled to the west and the south by the territory of the Āl Saʿūd. In December 1915 the British authorities signed a treaty at al-ʿUḳayr with ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān Āl Saʿūd, among the provisions of which was a promise by the latter not to attack Kuwayt. Shortly before the signature of this document, Shaykh Mubārak had died and there was renewed family rivalry over the succession. Mubārak's eldest son Djābir became the *shaykh*, but he died in February 1917, and was succeeded by Mubārak's second son Sālim. Sālim was by no means as prudent as his father had been in his relations with either the British or with the Āl Saʿūd. He allowed the harbour of Kuwayt to be used for the transport of supplies to the Turkish army and from February 1918 the port was blockaded by ships of the British navy. This blockade was lifted in the autumn after the cessation of hostilities between the Allied Powers and the Ottoman Empire.

The lack of a defined frontier meant that relations between the Āl Ṣabāḥ and the Āl Saʿūd were unlikely to be easy or harmonious, but the activities of the *Ikhwān* [*q.v.*], and particularly their building of a *hidjra* at Ḳarya al-ʿUlyā, made matters worse. In 1920 ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān Āl Saʿūd

imposed an embargo on trade with Kuwayt and this ban lasted until 1937, doing much harm to the prosperity of Kuwayt. Fear of an *Ikhwān* attack prompted the building of a defensive wall around the city and in October 1920 a force of *Ikhwān* led by Fayṣal b. Sulṭān al-Dawīsh, the leader of the Muṭayr tribe, attacked the nearby oasis of al-Djahra. This attack did not succeed, but *Ikhwān* raids continued to pose a threat to the security of this part of north-eastern Arabia until the movement was finally suppressed by ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān Āl Saʿūd in 1930 after it had rebelled against his authority.

Shaykh Sālim died in February 1921 and he was succeeded by Aḥmad b. Djābir, the eldest son of the previous ruler. Shaykh Aḥmad endeavoured to improve relations with the Āl Saʿūd, and in December 1922 a Convention was signed at al-ʿUḳayr in which a fixed frontier between the two states was established. The new territory of Kuwayt was very much smaller than that which had been allotted to it in the draft Anglo-Ottoman convention of 1913, and Shaykh Aḥmad believed that the British authorities had not supported his claims against those of ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān Āl Saʿūd as strongly as they should have done. This belief was an important factor in Shaykh Aḥmad's reluctance to grant an exclusive oil concession to the Anglo-Persian Oil Company; and it strengthened his later determination to secure the involvement of an American company in the development of Kuwayt's oil resources. (The growth of the oil industry has been treated in section 1 above.)

In 1920 Great Britain had been awarded the Mandate over ʿIrāḳ by the League of Nations, and in April 1923 the British High Commissioner for ʿIrāḳ recognised the frontier between Kuwayt and ʿIrāḳ as being that which had been laid down in the Anglo-Ottoman draft convention of 1913. There have, however, been disputes about this boundary. The most serious occurred in June 1961, when the 1899 agreement between Great Britain and Kuwayt was terminated and Kuwayt became a fully-independent state. The Government of ʿIrāḳ immediately claimed that Kuwayt was rightfully an integral part of ʿIrāḳ. The ruler of Kuwayt, Shaykh ʿAbd Allāh b. Sālim (who had succeeded Shaykh Aḥmad in 1950) appealed to Britain for military assistance. This request was granted and the dispute was debated by the Security Council of the United Nations. On 20 July Kuwayt was admitted to the League of Arab States and that body resolved to preserve the independence of its new member. In 1963 Kuwayt became a member of the United Nations.

In November 1962 a new constitution was promulgated and elections for a 50-member legislative assembly were first held in January 1963. The Constitution was suspended in August 1977 as a result of internal political difficulties.

(R. M. BURRELL)

ḲUWWA (pl. *Ḳuwā*), Arabic term denoting "strength, power".

1. Lexicographical study. Ibn Sīda defined the word *ḳuwwa* as the opposite of weakness (*naḳīd al-ḍaʿf*), cf. Ḳurʾān XXX, 54: "It is God who has created you from weakness (*min ḍaʿf*) and who then, after weakness, has given you strength (*ḳuwwa*)". It is thus the concept of strength and of vigour which is paramount. A man is described as *ḳawī* when he is strong in himself, and as *muḳwī* when he owns a robust mount. On the other hand, like the word *ṭāḳa* (which also has the sense of "ability to act"), *ḳuwwa* denotes a thread which is part of a rope. As may be read in a *ḥadīth* of Ibn Daylamī: "Islam is unravelled link by link, as a rope is unravelled thread by thread (*ḳuwwatan ḳuwwatan*)". Abū ʿUbayda observes that when such threads become loose (*tukhrī*), the rope is liable to be broken. This may be seen as a further example of the idea of strength and solidity. Thus it is primarily a physical force that the term *ḳuwwa* evokes in the language.

Numerous words in Arabic have similar meanings. Attention has been drawn above to *ṭāḳa*, defined in *LA* as power over something (*al-ḳudra ʿalā shayʾ*). The term *ḳudra* is itself given as a synonym of *ḳuwwa* (*ibid.*); it is employed, as *maṣdar* of the verb *ḳadara*, in the expression *ḳadara ʿalā 'l-shayʾ ḳudratan*, with the sense of possessing (*malaka*) something. Possession is the exercise of a power, either physical or judicial. Furthermore, just as the idea of power-to-act implies possibility and aptitude, so *ḳuwwa* has been likened on the one hand to *imkān* (possibility) and to *istiʿdād* (disposition). *Ḳuwwa* in the sense of possibility is, according to al-Tahānawī, the power or the faculty which is a preparation (*tahayyuʾ*) to produce a thing or its opposite, whereas *istiʿdād* is limited to preparation for production of a single effect.

2. *Ḳuwwa* in the Ḳurʾān. A quite frequent use is that which gives this word the meaning of power in the sense of capacity to act, to fight, to win, and which applies it either to communities or to individuals. Thus in IX, 69, there is reference to "those who before you were stronger than you in power (*ashadda minkum ḳuwwatan*) and were richer in goods and offspring". Speaking of man at the Day of Judgment, God says (LXXXVI, 10): "He will then have for himself neither strength nor succour". A second use of a more moral nature is to be found in verses where there is the injunction to "take" the Revelation "with strength" (*bi-ḳuwwa*)" (cf. among other verses, II, 63 and 93; VIII, 145). Al-Zamakhshari explains the word with the expression: "with effort and firmness" (*bi-djidd wa-ʿazīma*). Finally and most importantly, *ḳuwwa* is attributed to God with the sense of *ḳudra*; for example in LI, 58, where it is said: "God is the Provider of all good things; He is the unshakable Master of power (*dhu 'l-ḳuwwati 'l-matīn*)" and in XLI, 15: "God, who has created them, is stronger than them in power (*ashaddu minhum ḳuwwatan*); elsewhere we find "There is no power but through God (*lā ḳuwwata illā bi-llāh*)" (XVIII, 39).

3. *Ḳuwwa* in theology. In the discussion by the Muʿtazila concerning the attributes, and with regard to the doctrine of *taʿṭīl* which stripped the divine essence of all its attributes, by reducing them either to this very essence, or to simple names, it was necessary to stress that the revealed Book speaks of the power (*ḳuwwa*; cf. above), as well as of the knowledge (*ʿilm*) of God. In the *Maḳālāt al-Islāmiyyīn*, al-Ashʿarī notes that one group of Muʿtazila, on the basis of XLI, 15, "claim that in saying that God has power, we are led to say that He is powerful (*ḳādir*). They take *ḳuwwa* purely and simply as a synonym of *ḳudra*. But they maintain this point of view only in regard to *ḳuwwa* and *ʿilm*, being two substantives which occur definitively in the Book of God, and not in regard to the other attributes of the essence such as life (*ḥayāt*), sight (*baṣar*) and hearing (*samʿ*)." This is, according to al-Ashʿarī, the doctrine of al-Naẓẓām and the majority of the Muʿtazila of Baṣra and Baghdād. A second group understands "knowledge" in the sense of the object of knowledge (*maʿlūm*), and "power" in the sense of the object of power (*maḳdūr*). To say that God has a power (*ḳudra*=*ḳuwwa*), therefore signifies, not that there exists in Him such an attribute, but that created beings depend on Him in such a fashion that they could be called *maḳdūrāt*. This is why, when Muslims see rain, they say: "That is the power of God", meaning that it is a *maḳdūr*. These theologians reserve this explanation, among the attributes of the essence, for knowledge and power, for a purely scriptural reason, as has been seen in the case of the preceding group. A third group assert that God has a power which is identical to Himself (*ḳudra hiya huwa*), and the same applies to His knowledge; but they extend this interpretation to all the other attributes of the essence: this is the thesis of Abu 'l-Hudhayl and his disciples. A third group comprises the disciples of ʿAbbād b. Sulaymān, who is known to have sacrificed the texts to the requirements of reason: it can neither be said that God has knowledge and power, nor that He does not have them. This contradicts the formal declaration of the Ḳurʾān.

Ibn Ḥazm, in addition to the verse XLI, 15, quotes a *ḥadīth*. When instructing his Companions how to formulate a prayer to obtain a favour (*istikhāra*), the Prophet says: "O my God! I ask You for this favour through Your knowledge; I ask You for it through Your power" (*ḳudra*=*ḳuwwa*). Then Ibn Ḥazm puts power on the same level as knowledge: *ḳuwwa* and *ḳudra*, like *ʿilm*, belong to God really and not metaphorically; they are nothing other than He, although it cannot be said that they are God, because if power were God, God would be power, which is false. The same applies to knowledge. These terms play the same role as the word *nafs* (soul) in the verse VI, 17: "It is He Himself (his soul) that ordains mercy". The expression "soul of God" is a "description of Him (*ikhbār ʿanhu*)", but indicates nothing at all other than Him.

4. *Ḳuwwa* in philosophy. In his *Iṣṭilāḥāt al-ʿulūm al-islāmiyya*, al-Tahānawī gives a panoramic

survey of the question. *Ḳuwwa* is the origin of the act (*mabdaʾ al-fiʿl*), whether or not it is differentiated, and whether or not it is accompanied by awareness (*shuʿūr*) and by will (*irāda*). In this general sense, *ḳuwwa* is dependent at the same time on nature (*ṭabīʿa*), the principle of involuntary movement, and on the soul, the principle of voluntary movement. There is thus a distinction between the power of the spheres (*al-ḳuwwa al-falakiyya*) which produces a unique act, and the power of the elements (*al-ḳuwwa al-ʿunṣuriyya*) which produces acts that are differentiated in terms of the various combinations of elements, and which has also been called *al-ḳuwwa al-sukhriyya*, executive power of imposed labour, as a way of recalling that all power to act comes from God, taking inspiration from, among others, the verse XXII, 65: "Have you not seen that God has pressed into your service (*sakhkhara lakum*) all that is on the earth?" Nevertheless, in the Ḳurʾān, this term is also applied to the stars, as in XIII, 2, since the Book makes no ontological distinction between the firmament and the sublunary world. After elemental power come vegetative power, the faculty of the vegetal soul, and animal power, the faculty of the soul of animals. Finally, the term *ḳuwwa* is also applied to the origin of the change that is produced in one thing, transforming it into something else (*mabdaʾ al-taghayyur fī shayʾ ākhar min ḥaythu huwa ākhar*).

By origin is understood the cause (*sabab*), whether it is efficient (*fāʿil*) or not. In effect, the power can be active or passive, engendering qualities or receiving them (*ḳabūl*). As the origin of the change, it can be applied solely to its receptacle (*maḥall*), as is the case with the form (*ṣūra*) of the air which demands the production of humidity in the matter which it pervades. It can also be the origin of change in its receptacle first, then in another thing: this is the case with the form of fire which produces heat and dryness in its matter and transmits these features to neighbouring objects. But the power of change can act from the start in something other than a receptacle: this is the case with the rational soul which acts immediately on a thing other than itself in producing a change in the body.

According to Fakhr al-Dīn al-Rāzī, some powers have substantial forms (*ṣuwar djawhariyya*), such as the power of fire; others have a basis in accidents which happen to the substance. Consequently, there is no generic notion of *ḳuwwa*, as it is impossible to unite substance and accidents in a single genre.

5. *Ḳuwwa* in medicine. As an extension of its philosophical usage, this term is frequently employed in medicine. Al-Tahānawī indicates that the physicians introduced three divisions: natural power; animal power; and psychical power. The natural and animal powers include powers served by others (*makhdūma*) and powers which serve them (*khādima*). The first are, in the realm of the living, those which operate with a view to the preservation of the individual, the faculty of nutrition and the faculty of growth, or with a view to the preservation of the species, generative power (*muwallida*) and plasmatic power (*muṣawwira*). The second are four in number: the power of attraction (*djādhiba*), the power of retention (*māsika*), the power of digestion (*haḍma*) and the power of repulsion or of evacuation (*dāfiʿa*). These four faculties are served in their turn by heat and cold, dryness and humidity. As for psychical powers, they are divided into two types: the power of perception (*mudrika*) and the power of motion (*muḥarrika*). Perceptions are external (*ẓāhira*), in the case of the five senses, or external (*bāṭina*), in the case of the coenaesthetic sensations. The power of movement comprises on the one hand the power that incites movement (*bāʿitha ilā 'l-ḥaraka*) with the faculty of desiring (*shawḳiyya*) which may be positive or negative, and the power of inclination (*nuzūʿiyya*) which guides the former towards the act; and on the other hand, the power responsible for the setting in motion (*mubāshira li 'l-taḥrīk*).

6. *Ḳuwwa* in human psychology. This is the faculty of deliberate voluntary action. It operates in accordance with a certain order; first there is a representation of the movement to be executed, then a desire, then a will to achieve the end envisaged, and finally the realisation of the movement and the act. Certain philosophers introduce an intermediary between the faculty of desire and the active power: they call it *idjtimāʿ*, a term which seems to correspond to the δογκατθεδις (consent) of the Stoics. It is the decision (*djazm*) which follows after a hesitation (*tarraddud*) between action (*fiʿl*) and non-action (*tark*), as a result of which one of the two parties prevails (*yataradjdjaḥ*). According to others, there is no intermediary, but a desire which may continue to grow until the decision and the act are put into effect. *Idjtimāʿ* is nothing more than this desire at its maximum intensity. As for the followers of Ibn Sīnā, they reckon that *idjtimāʿ* depends on will and that there is a great difference between desire and will.

A position of eminence is given to the power of the intellect (*al-ḳuwwa al-ʿāḳila*). All theories concerning the intellect, from the end of Antiquity, throughout the Hellenistic period and until the time of the *falāsifa*, depend on interpretations of the third book of Aristotle's ***Treatise on the soul***.

7. The notion of *ḳuwwa* and Greek influences on *falsafa*. The numerous meanings applied to the term *ḳuwwa* in philosophy may be examined, with a view to comparison with Greek thought, from two points of view. The concept δύναμις has two opposites in the writings of Aristotle: 1. ἀδυναμία (*lā-ḳuwwa* or *ḍaʿf*, inability or weakness); 2. ἐνήργεια (*fiʿl*, activity, reality). *Ḳuwwa* in the former sense is dealt with in the *Categories* and *Metaphysics* (v. 12), in the latter mainly in the *Metaphysics*, viii-ix. It may be here observed that inability is to be distinguished from impossibility (ἀδύνατον = *mumtaniʿ* or *mustaḥīl*).

A. *Ḳuwwa*, to be more accurate *ḳuwwa ṭabīʿiyya* (productive ability), being the second species of the category of quality (ποιόν [cf. MAḲŪLĀT]) is defined, with Aristotle, as that arrangement by which some one or some thing comes into action quickly and easily, while *lā-ḳuwwa* predisposes to undergo something easily and quickly. Activity and passiveness are here to be conceived as opposites, which exclude one another. They cannot be present at the same time in one and the same subject. *Ḳuwwa* in this sense is the positive capability for a definite activity or, as the Stoics expressed it: the qualities of things are active forces, agencies. The orthodox *kalām* referred this doctrine only to the activity of God. Muslim theologians said for example—cf. Christian dogmatics—that God's qualities (*ṣifāt*) are the sources (*maṣādir*) of his actions. The philosophers, however, referred it in the first place to the workings of nature. Nature is endowed with many forces and abilities and each ability has a corresponding inability. Inability, however, is nothing positive but a deprivation (στέρησις, *ʿadam*) or a decay (φθορά, *fasād*). *Lā-ḳuwwa* is not an absolute nothing but a non-existing of what according to Aristotle

belongs to a thing from its nature. It is especially emphasised that the transition from *ḳuwwa* to *lā-ḳuwwa* (or from active to passive) takes place not continuously but without intermediary, i.e. suddenly, timelessly. The Muslim philosophers are, for the rest, usually content to explain these sometimes very questionable assertions with the examples given by Aristotle. In the *Logic* (*Categories*) these are with reference to living beings health (ability) and sickness (inability), and in the organic world, hardness and softness. In addition, in other branches of knowledge, rest is sometimes defined as deprivation of motion, blindness as a want of ability to see, wickedness as the non-existence of good, and so on. All these deprivations (στερήσεις) are regarded with Aristotle as accidents of matter. Hence the practice (at least since Ibn Sīnā [cf. *Tis*ʿ *rasāʾil*, 64] who probably follows a Greek exposition) of distinguishing *ʿadam* as accidental principle from the essential principles: matter and form.

Al-Fārābī (*Abhandlungen*, ed. Dieterici, 87, fr. 11) first discussed the question whether suffering (πάσχειν), as the term is used under the category of quality, meant the same as suffering as the last (10th) of the categories. Perhaps he was led to this by a passage in Aristotle (*De anima*, 417b) in which "suffering" is said to have two meanings: 1. it is a kind of decline (φθορά) through the opposite (see above); and 2. the preservation (σωτηρία) of the possible through what is active, and in this way that thereby a natural basis is evolved for its own being. Instead of a decline we have here a question not only of a mere survival but also of a higher development, a suffering in *bonam partem*, an endurance (passive, receptive, contemplative) of higher influences [see ATHAR].

B. More important than the contrast between *ḳuwwa* and *lā-ḳuwwa* for the history of philosophical terminology became the distinction between *ḳuwwa* and *fiʿl*, or, to use the language of the schools, power and action, commonly found in the formulae *bi 'l-ḳuwwa* (δυνάμει) and *bi 'l-fiʿl* (ἐνέργεια). Both expressions are closely connected with the two fundamental conceptions of Aristotelian philosophy, matter and form. Power is peculiar to matter, action to form. Power and action are called ὑπάρχοντα (Arab. *lawāḥiḳ*, attributes) of matter and form. Aristotle sought in this way to reconcile a static with a dynamic consideration of the world. Matter and form [see SABAB] are names for the constituents of the existing, power and action for the stages of development of the becoming. These fundamental conceptions cannot be defined more exactly. Like Aristotle, the Muslim philosophers endeavour to illustrate them by examples.

The development from power to action presupposes a continuous world of becoming, time and change. According to one principle of Aristotle, which was taken over by the Muslim thinkers, at least with reference to the world, the infinite cannot be real. But in time, especially if it is conceived without beginning and without end, lies the unending possibility of all that possesses its limited reality in any particular moment. Under definite conditions, if there is no obstacle in the way, the possible advances to full realisation by stages. Possibility and realisation are to be regarded as termini of a development taking place within time. This process, the development from power to action, is called by Aristotle motion (κίνησις, *ḥaraka*) which is defined as the realisation (ἐνέργεια) of the possible as such. The end (to be *bi 'l-fiʿl*) is called in Arabic also *kamāl* (perfection) just as Aristotle uses ἐνέργεια and ἐντέλεχεια synonymously.

The concept of an originally pure (i.e. without quality) possibility which can in course of time become everything, is according to Aristotle a conceivable abstraction. Everything becoming is already more or less formed, realised; deprivation is an accident of matter, not as the neo-Platonists asserted, matter itself. Aristotle himself did not succeed in carrying through logically his distinction between the principle of deprivation (*ʿadam*) and matter as pure possibility. The Muslim thinkers who were under neo-Platonic influences were naturally still less able to do so. They often identified *ʿadam* and *ḳuwwa*. Usually however, they endeavoured to represent our world of becoming as a hierarchy of positive forces or powers. The process of becoming is then to be conceived as a co-operation, a working into one another of active and passive. With Aristotle, the Stoics, etc., they talk of active and passive, moving and moved, ruling and serving forces, which by no means rule one another out. Two aspects of one and the same process are thus described. One and the same power may therefore be active, moving, ruling with respect to what is below it in the order of stages of being but passive, receptive, contemplative with respect to those above it. In other words *ḳuwwa* and *fiʿl* are used in the correlative sense exactly like matter and form. A material more or less formed, e.g. clay, is matter for bricks and the formed brick is material for a building. Similarly, in the sperm there is the potentiality to become a boy, in a boy a potentiality to become a man. In other words, the sperm possesses the immediate potentiality for a boy, a remote potentiality for a man.

Amongst the Ismāʿīlī thinkers, the problem of power is equally put forward in another form, in the shape of the idea of receptiveness (*ḳubūl*). Whilst the Primal Intellect receives at a single stroke (*dafʿatan wāḥida*) everything which rightfully makes up its being, the "creatures" inferior to it are incapable of this. Hence they receive successively in the course of time the characters and qualities which belong rightfully to their essence and which make up their secondary perfection. This explains why these latter gradually become transformed according to the different kinds of movement. It is through this that the power of generation (*kawn*) is explicable. But when they have reached their perfection, certain beings tied down to matter are unable to keep it and decline into final corruption (*fasād*); in this way, the force of destruction may be explained.

The whole theory is closely connected with the dynamic view of the existence of the world. Thus as in Aristotle, in the Muslim philosophers physics, including psychology, are developed into a hierarchical system of natural forces and faculties of the soul. In place of faculty we sometimes find parts of the soul (μέρη, *adjzāʾ*; Platonic terminology, also used by Aristotle). Galenic influences may be traced, in the doctrine of the faculties of the soul especially and their localisation (in al-Fārābī, Ibn Sīnā and al-Ghazālī). Al-Fārābī deals with this in his *Fuṣūṣ* (i.e. *Abhandlungen*, ed. Dieterici, 72 ff.; wrongly ascribed to Ibn Sīnā in *Tis*ʿ *rasāʾil*, 42 ff.); cf. his "Model State" (ed. Dieterici, 34 ff.). Ibn Sīnā (*Kitāb al-Nadjāt*, Cairo 1913, 258 ff.; cf. *Ishārāt*, ed. Forget, 123 ff.) enumerates some 25 *ḳuwā* from the highest faculty of the reasoning soul to the powers of the simplest bodies. Al-Ghazālī (*Tahāfut*, ed. Bouyges, index) is acquainted with over 30 *ḳuwā*; but some are synonyms.

As briefly explained above, in the world of becoming *kuwwa* is earlier in time than *fiʿl*, but *fiʿl* —so his Muslim successors teach following Aristotle— is always the earlier in the sense of the higher. What is potential cannot of itself devolve into actuality. God who is the perfectly real, according to the Muslim philosophers, brought the world from non-existence (*ʿadam*) to existence (*wudjūd*) or from *kuwwa* to *iʿl* (*ikhrādj*). The spirits (*ʿukūl*) which act as intermediaries between God and the world are usually called real. It is the activity of the last heavenly spirit, the *ʿakl faʿʿāl*, which as Ibn Sīnā, following al-Fārābī, expresses it, gives everything earthly its form (*wāhib al-ṣuwar*; cf. for this expression *Enneads*, v. 9, 3), or, as Ibn Rushd prefers to say, brings everything potential here into actuality. This is however not a distinction in principle between the two philosophers: with Aristotle they regard matter and form as substances, potentiality and activity as their attributes (*lawāhik*).

C. In the *Theology of Aristotle* (ed. Dieterici, 94) is the following remarkable passage: "In this (sensual) world, action is preferable to potentiality, in the higher (intelligible) world, however, potentiality is preferable to action". This pregnant sentence is not found in the *Enneads* but corresponds completely to the utterances of Plotinus (*Enn.*, v. I, 6 f.; 3, 15 f.; 4, 1 f.; 5, 13 f.) According to a general principle of Plotinus—not however always logically carried through—the categories and main conceptions of Aristotelian philosophy are only to be referred to the sensual world. If they are applied to the spiritual world, they have another but higher meaning. The higher *kuwwa* is an intensification of the productive faculty discussed under A. In addition, there is an exchange of value in the factors potentiality and actuality.

According to Plotinus, the first and only principle of all things (in the *Theology of Aristotle* = God) is raised above the logos of the Stoics (*kalima*, active force) and above the energeia of the Peripatetics (*fiʿl*). It is true that one can say of the νοῦς (*ʿakl*), the first created thing, it is λόγος καί ἐνέργεια of the First, but the First himself is from his nature δύναμις, i.e. power, all-power. With the uniqueness of the First (also called, as e.g. by Plato, the absolute good) only one quality, that of omnipotence, is compatible. All activity however, whether it is thinking or acting, presupposes multiplicity and effort, which cannot be ascribed to the absolutely simple Being. On this definition of the First as Dynamis, cf. Plato's utterance (*Soph.*, 247 E): "I define the being of the existing in this way, that it is nothing but a Dynamis".

Excluding the Muʿtazila, it may be said that this emphasis on the omnipotence in the being of the Unique (God) must have been much more natural to the Muslim theologians—although traditionally they deal with God's knowledge before his power—than the Aristotelian view that God is pure Energeia, which manifests itself only in thinking.

ḲUZAḤ [see ḳaws ḳuzaḥ].

KWANADI (self-designation—Kwantl hekua or Bagolal; Russian designation—Bagulall, but Kvanadinskiy yazlk for language), a people of the eastern Caucasus. Kwanadi forms, with Andi, Akhwakh, Botlikh, Čamalal, Godoberi, Ḳarata and Tindi, the Andi division of the Avar-Andi-Dido group of the Ibero-Caucasian languages. Their population was 3,054 according to the 1926 Soviet census.

The Kwanadi inhabit the auls of Khushtada, Kwanada (Tsumada region), Gimerso, Tisi, Tlibisho (Akhwakh region) south of the bend of the Andi Ḳoysu in the Dāghistān A.S.S.R. Living in isolated mountain valleys, the Kwanadi have maintained many patriarchal customs. The Kwanadi are Sunnīs of the Shāfiʿī school. Their traditional economy was based on sheep and goat herding and related activities, and on agriculture.

There are two dialects of Kwanadi, sc. Bagulal and Tlisi, both of which are purely vernacular. Avar and Russian serve as literary languages. The Kwanadi are being culturally and linguistically assimilated by the Avars, and they appear as Avar-speaking Avars in the 1959 and 1970 Soviet censuses (see also andi, avar, dāghistān, al-ḳabḳ).

(R. Wixman)

KWAṬṬA, Quetta, a town and district of northern Balūčistān, now in Pakistan. In both the former British India and now in Pakistan, Quetta and Pīshīn, some 20 miles to its north, have formed an administrative district. The region is geologically complex and is very mountainous, with peaks rising up to nearly 12,000 feet/3,850 metres, and it is centred upon the basin of the Pīshīn-Lora river and its tributaries. The climate is temperate, with cold winters. Crops—wheat being the chief *rabīʿ* or spring crop and sorghum the chief *kharīf* or autumn one—can only be grown in the alluvial river bottoms, and then by irrigation; at present, there are about 300 *kārīzs* or *ḳanāts* [*q.v.*], plus a reservoir and a canal, for this. The surrounding mountains furnish chromite and also coal (in the Sor range near Quetta and at Mač in the Bolān Pass area), whose exploitation now employs several thousand men, including Swati migrant labour and Pathan and Balūč nomads in the off-herding seasons.

In mediaeval Islamic times, the history of the Quetta-Pīshīn region was closely connected with that of Ḳandahār [*q.v.*], some 130 miles/210 km. to the north-west with which it is connected by an ancient route through Čaman just on the Pakistan side of the modern border with Afghānistān. The town of Quetta (whose name may stem from Pashto *kwata* "heap, hill", or from *kota* "room, fortress", ultimately from Hindi *koṭhā*) was more commonly known till the 19th century, and is still known by the local people, as Shāl or Shālkot; Mountstuart Elphinstone in 1809 calls it "Shawl" (*An account of the kingdom of Caubul*², London 1839, ii, 225). In 884/1479 Ḥusayn Mīrzā Bayḳarā [*q.v.*], the Tīmūrid ruler of Harāt, awarded Shāl, Mustang and Sībī to Dhu 'l-Nūn Beg Arghun of Ḳandahār [see arghun]. These places passed after Dhu 'l-Nūn's death in 913/1507 to his progeny, and in 930/1524 Shāh Ḥusayn Beg b. Dhi 'l-Nūn acknowledged the Mughal Bābur's suzerainty. After a brief Ṣafawid occupation of 963-6/1556-9,

they were incorporated in the Mug͟hal empire. The *Āʾīn-i Akbarī*², tr. H. S. Jarrett, ii, Calcutta 1949, states that the Quetta-Pis͟hīn region supplied the Emperor Akbar with 2,500 cavalry and 2,500 infantry, plus grain, sheep and 38 *tūmāns* in money. After 1031/1622 it came under Ṣafawid control again, and S͟hāh ʿAbbās I [*q.v.*] conferred S͟hāl, Mustang and Sībī on the Pathan chief S͟hīr K͟hān Tarīn. In the 18th century, the Quetta-Pis͟hīn region was disputed by G͟hilzay Pathans and the Brahuis of Kalāt, but after 1112/1758-9, Aḥmad S͟hāh Durrānī [*q.v.*] left Naṣīr K͟hān of Kalāt as ruler in Quetta in return for a contingent of troops, at a time when the Afg͟hān ruler's position in India was being threatened by the Mahrāṭās. Henceforth, Quetta was controlled by the rulers of Kalāt, whose seat was the town of that same name 103 miles/182 km. to the south [see KILĀT]; Pis͟hīn and S͟horarūd, however, remained in Afg͟hān hands till 1879 (see below).

The importance of Quetta in recent times has arisen from its commercial role as an emporium for trade between southern Afg͟hānistān and the lower Indus valley, but above all, from its strategic position. It lies at a point where a north-south route runs from Ḳandahār and the southern Afg͟hānistān frontier via Quetta and the Bolān Pass to Jacobabad and the Indus at S͟hikarpur in Sind, and where a transverse route comes from the middle Indus at Dēra G͟hāzī K͟hān [see DĒRAD͟JĀT] and runs westwards through Quetta to the Persian border. These factors became especially operative in the 19th century after the annexation by Britain of Sind (1843) and the Pand͟jāb (1849). During the First Afg͟hān War (1839-42), when S͟hāh S͟hud͟jāʿ al-Mulk was placed on the throne in Kabūl [see AFG͟HĀNISTĀN. v. History], Quetta was occupied by British forces during these years; the town was used as a forward base for operations in the Ḳandahār region, and a political agent, Capt. Bean, installed there. It was, nevertheless, still only a small place, with a mud wall pierced by two gates and the governor's fort or *mīrī* on artificial mound; C. Masson in the late 1820s said that "Shāll" possessed "about 300 houses and a fair bazaar" (*Narrative of various journeys in Balochistan, Afghanistan and the Punjab*, London 1842, i, 327-30); and W. Hough described it in 1839 as "a most miserable mud town, with a small castle on a mound, on which there was a small gun, on a rickety carriage" (*A narrative of the march and operations of the army of the Indus in the expedition into Afghanistan*, London 1840). Three decades later, A. W. Hughes still estimated its population at only *ca.* 4,000 (*The country of Balochistan, its geography, topography, ethnology and history*, London 1877, 67, 73-4).

After 1842, when Quetta reverted to the K͟hān of Kalāt's control, voices in the Government of India, such as that of General Sir John Jacob in 1856, urged its permanent occupation as a vital strategic point and also its being linked with Sind and Karāčī by railway (*The views and opinions of General John Jacob*, ed. L. Pelly, Bombay 1858, 349). It was, however, feared that such a distant place, as it then was, in the heart of the tribal area of northern Balūčistān, would be difficult to hold in times of crisis, and the proponents of "masterly inactivity" carried the day until the 1870s. Fears arising from the Russian advance against the Central Asian khanates and possible pressure on Afg͟hānistān led, however, to the adoption now of a "Forward policy", and in 1876 a decision was made to occupy Quetta. The Treaty of Jacobabad between the Viceroy Lord Lytton and the K͟hān of Kalāt renewed the right of Britain, already secured in 1854, to send troops into Kalāt territory in times of stress and made Kalāt into a protected native state. Quetta was occupied, and Major (later Sir) Robert Sandeman became the first Agent there to the Governor-General.

Quetta's military value was soon proved in the Second Afg͟hān War (1878-80), when troops were moved through the Bolān Pass and via Quetta into the Ḳandahār region. By the Treaty of Gandamak of 1879 with the Afg͟hān Amīr Yaʿḳūb b. S͟hīr ʿAlī, Sībī and Pis͟hīn, with the land up to the K͟hʷād͟ja ʿAmrān Mts., the so-called "assigned districts", were ceded to Britain, to form with Quetta in 1887 the nucleus of British Balūčistān; in 1883 Quetta was formally leased to the Government of India by the K͟hān of Kalāt in return for an annual payment of 25,000 rupees. It was at this time that the administrative District of Quetta and Pis͟hīn was formed. After 1879 a broad-gauge railway was built from a point near Sukkur to Pis͟hīn via the Harnai Pass, and Quetta now became linked with the North-West Railway system of India. Later, during the First World War, a lengthy branch (441 miles/830 km.) was constructed through British Balūčistān westwards to a railhead in Persian territory at Zāhidān.

Quetta town is situated in lat. 30°10' N. and long. 67°1' E., and lies at an altitude of 5,508 feet./1,770 metres at the northern end of the S͟hāl valley. Under British rule, it became a very important military centre, the headquarters of the 4th Division of the Western Command, and the seat of the Staff College. In 1896 it became a municipality. Quetta lies in an earthquake zone, and was severely hit by the earthquake of 1935, when tens of thousands of people died: buildings subsequently erected there have had to be earthquake-proof (see R. Jackson, *Thirty seconds at Quetta, the story of an earthquake*, London 1960). It now possesses a good amount of local industry, and in 1972 had an estimated population of 139,800 (swollen in summer-time by temporary residents), comprising the cantonment and the civil area. The population of Quetta itself is now somewhat mixed, though still largely Pathan. The surrounding areas are, to the north, overwhelmingly Pathan and Pas͟hto-speaking (Kākaṛs, Tarīns and Āčakzays); this Pas͟hto is close to that of Ḳandahār, i.e. of the southwestern group (for specimens of the Pas͟hto of Ḳandahār and Pis͟hīn, see *Linguistic survey of India*, x, 105-12). To the south of the town, the Brahui area begins. Quetta accordingly straddles the ethnic and linguistic boundary between Pathans and Brahuis-Balūč.

In the present administrative organisation of Pakistan, Quetta is the centre of Quetta-Pis͟hīn District, continuing the former British arrangement here (area 5,314 sq. miles/13,763 km.²), and also, since the re-organisation of 1955, when Balūčistān was merged into the single western unit of Pakistan, the centre of the Quetta Division, comprising the Districts of Quetta-Pis͟hīn plus those of Zhob, Loralai and Sībī to the east, and Chagai to the west (area 53,115 sq. miles/137,567 km.²).

L

LAʿAḲAT al-DAM "lickers of blood", the name given to a group of clans of Ḳuraysh̲. According to tradition, Ḳuṣayy [*q.v.*] had allocated to the different subdivisions of Ḳuraysh̲ the quarters which they were to occupy in Mecca and had entrusted to the Banū ʿAbd al-Dār various local offices: administration of the *dār al-nadwa* and bearing the standard (*liwāʾ*), the furnishing of provisions (*rifāda*) and drink (*siḳāya*) to the pilgrims, and custodianship of the Kaʿba (*ḥid̲j̲āba* [see kaʿba]). However, the Banū ʿAbd Manāf thought themselves more worthy of these privileges, and Ḳuraysh̲ (with the exception of the B. ʿĀmir b. Luʾayy and Muḥārib b. Fihr, who stayed neutral) split into two hostile factions. The B. Asad b. ʿAbd al-ʿUzzā, the Zuhra b. Kilāb, the Taym b. Murra and the al-Ḥārith b. Fihr joined the side of the B. ʿAbd Manāf, and the five clans swore to aid each other and not to abandon each other's cause *mā balla baḥr^un ṣūfa*, i.e. till the end of time. In order to make binding the oath, a vessel full of perfume was brought into the Kaʿba, and the participants dipped their hands in it and then dried them on the walls of the shrine. Thus they became known as the Muṭayyabūn "perfumed ones".

In the opposing group, the B. ʿAbd al-Dār had the support of the B. Mak̲h̲zūm, the Sahm, the D̲j̲umaḥ and the ʿAdī b. Kaʿb, and these five clans took the same oath and became known as the Aḥlāf "allies". The two sides were ready to come to blows when an appeal for reconciliation was made, and peace was kept by the ʿAbd al-Dār's conceding to the ʿAbd Manāf the *siḳāya* and the *rifāda*.

The composition of the respective two groups is given identically in the old sources, but the Aḥlāf are not always given, and Ibn Ḳutayba, for instance, speaks only of the Muṭayyabūn (*Maʿārif*, 604). Nevertheless, in his rescension of the *dīwān* of Ḥassān b. T̲h̲ābit (ed. W. Arafat, London 1971, ii, 260), Muḥammad b. Ḥabīb cites a passage of al-Kalbī which attributes also the name *laʿaḳat al-dam* to the Aḥlāf, and in his *Muḥabbar*, 166, this same author states that this group slaughtered a camel and plunged their hands into its blood; since one member of the B. ʿAdī licked this blood, the rest of the Ḳuraysh̲ present imitated him and were therefore called *laʿaḳat al-dam*. A parallel version is given by Ibn Saʿd (*Ṭabaḳāt*, ed. Beirut 1380/1960, i, 77), with the difference that we only have mention of a vessel containing blood and no reference to the sacrifice of a camel. The author of the *Ḳāmūs* (s.v. *l. ʿ. ḳ*) echoes this tradition and gives the name of *laʿaḳat al-dam* to the five clans mentioned above, giving the detail that in order to seal the oath they killed a camel and either licked its blood *or* dipped their hands into it; he does not however say anything about the circumstances surrounding this ceremony.

Now, for its part, the *Sīra* indeed sets forth the difference between the Muṭayyabūn and the Aḥlāf over the public duties in Mecca (i, 131-2), but does not mention here the name *laʿaḳat al-dam*, which it reserves (i, 196-7) for one of the two groups formed at the time of the dispute among Ḳuraysh̲ about the positioning of the Black Stone during the rebuilding of the Kaʿba. It relates that the B. ʿAbd al-Dār brought in a vessel filled with blood and dipped their hands in it, swearing, together with the ʿAdī b. Kaʿb, to fight to the death; it was at this time that they became called *laʿaḳat al-dam*, but the *Sīra* does not say whether other clans joined with the ʿAbd al-Dār and the ʿAdī nor anything about the licking of fingers. In any case, it was a member of Mak̲h̲zūm who advised the two opposing sides to submit to the arbitration of the first person who entered the Kaʿba by the door of the Banū S̲h̲ayba, and as is well-known, this was the Prophet. We find exactly the same version as the *Sīra*'s one in al-Ṭabarī, i, 1138.

A little later, al-Masʿūdī (*Murūd̲j̲*, iii, 119-21 = §§ 968-70) enumerates the factions making up the Aḥlāf and Muṭayyabūn, but gives the name of *laʿaḳat al-dam* to the ten clans belonging, in his view, to the Ḳuraysh̲ al-Biṭāḥ and made up, apart from two exceptions, of the united body of the two factions involved.

It appears clearly from all the pieces of evidence mentioned here and agreeing about the Muṭayyabūn and Aḥlāf of Mecca, but disagreeing about the episode of the *laʿaḳat al-dam*, that we have such a vague tradition that one wonders whether the story of the hands dipped in blood and licked has not been invented in the interests of symmetry by traditionists anxious to find a parallel with the perfume of the Muṭayyabūn. It is furthermore the only attestation of a practice involving the taking in of a few drops of blood [see dam in Suppl.] which we possess, and the *LA* makes no allusion to it when it cites, in regard to the oath called *g̲h̲amūs* (s.v. *g̲h̲. m. s.*), the ashes, perfume and blood in which the oath-takers steeped their hands.

(Ch. Pellat)

LAʿB [see laʿib].

LABĀB (from Pers. *lab-i āb* "riverside"), the irrigated region along the banks of Amū Daryā [*q.v.*] in its middle course. The name, though of Persian origin, became known apparently only in modern times, when this region became one of the main centres of the settlement of the Turkmens. The exact limits of the region have never been defined; it seems that it extended as far as Darg̲h̲ān (the southernmost town of K̲h̲ʷārazm [*q.v.*]) in the north and as far as Kālif [*q.v.*] in the south. In pre-Mongol times a narrow tract of cultivated land stretched along both the left and the right banks of the river, though on the left bank conditions for artificial irrigation were better; the uniformly cultivated tract began to the north of Āmul [*q.v.*].

In the post-Mongol period, the irrigation system fell into decay, and both banks of Amū Daryā were inhabited by nomads, except for several townships with their surroundings. After the middle of the 17th century, a number of Turkmen tribal groups began to migrate to Labāb from Western Turkmenia through Khʷārazm, and in the 18th century the region was inhabited mainly by Turkmens who became sedentarised and built a network of irrigation canals. In the 18th and 19th centuries, Labāb belonged to the Khānate of Bukhārā and was administratively divided between two *wilāyats*, Čārdjūy (former Āmul) and Kerkī. In the 19th century, Labāb was the most densely populated region among all those inhabited by the Turkmens, and lack of irrigated lands brought about considerable emigration to Afghānistān and Eastern Bukhārā. The most numerous among various Turkmen groups of Labāb have been the tribes Salur [*q.v.*] to the north-west of Čārdjūy, Saḳar to the south-east of Čārdjūy, and especially Ersarī [*q.v.* in Suppl.] further to the south, up to Kālif. Besides them, there have been in Labāb almost 30 other tribal groups of Turkmens interspersed with each other and, in the vicinity of Čārdjūy, with Uzbeks. Now Labāb belongs to the Turkmen Soviet Republic of the U.S.S.R., forming the core of the *oblast'* (province) of Čardjūy.

LABBAI (Tamil *ilappai*, thought by Tamil *ʿulamāʾ* to derive from *labbayka*, the pilgrims' cry [see TALBIYA]), a community of Tamil-speaking Muslims residing in or originating from Tamilnadu State, South India. Labbai is a generic term incorporating four subdivisions, the Marakkayar, Kayalar, Rawther and Labbai. All four groups are Sunnīs, the first two predominantly of the Shāfiʿī school, while the latter two are Ḥanafīs. The Marakkayars and Kayalars predominate in the southern coastal regions of Tamilnadu, while Rawthers and Labbais reside in greater numbers in the state's north and its interior. Urbanisation has led to the geographic mixing of these communities, but in the countryside usually only one group lives in a particular location.

Each subdivision is associated with a distinctive tradition. The Marakkayars claim to be the descendents of Arab sea traders and have a reputation as dealers in gems and pearls and as smugglers. Kayalars are said to originate from Kayalpatinam, once an important port on the southern Coromandel coast. These two groups once published books and newspapers written in the Tamil language and using the Arabic script. The Rawthers claim a heritage as cavalrymen and horse-traders, while the subdivision of Labbais are said to be the descendents of Ḳurʾānic scholars. In Madurai District, Rawthers refer to the employees of their mosques as Labbais.

The four Labbai subdivisions are effectively endogamous, although they accept no ideology that would dictate this. On the contrary, they are adamantly egalitarian and do not accept any caste ranking of their groups, despite being surrounded by caste Hindus. The small amount of intergroup marriage that does occur in the cities substantiates this egalitarianism, since these marriages are considered socially acceptable.

The Labbais are more urban than rural, and consider mercantilism to be their occupational forte. In 1961 approximately 55% of the Muslim population of Tamilnadu was urban compared to 26.7% of the total state population. This latter figure is commensurate with a society based on an agricultural economy. The 55% figure is high and reflects the non-agricultural basis of the Muslims' livelihood. Throughout the state they are recognised as astute businessmen and traders. A few families have achieved wealth, but most operate petty businesses.

In search of a livelihood, Labbais have travelled over much of the Asian world, especially over South-east Asia. For centuries they were an important economic and political force in Malacca, and they are found in numbers in Malaysia, Thailand and Singapore. Prior to World War II, some had business in Japan. Wherever they go, they are primarily merchants.

Despite the Labbais' far-flung wanderings, India remains a homeland for them and ties are maintained with kinsmen in India. Often, overseas Labbais maintain households and families in India to which they periodically remit money and return home. It is clear that, despite their wanderings and attachment to Islam, they identify themselves as Tamilians.

The Labbais identify strongly with Tamil culture and society. For most of them, Tamil is the language both within and without the mosque. The Tamil-speaking Muslims are proud of their contributions to Tamil literature, the *sine qua non* of Tamil culture. The Labbais of the countryside dress in a fashion which is more similar to the Hindu mode than do most of their urban fellows. Their celebration of the ʿAbd al-Ḳādir Djīlānī *ʿUrs* commemorating the death of "Mohaiyadeen Abdul Kadar Andakai Jilani" is in many features similar to the Hindu cart festivals. Saint worship centred around this *ʿUrs* forms an important popular undercurrent to the strict orthodoxy of urban religious leaders. Many Labbais do not eat beef because they have been socialised to Hindu custom, but not to Hindu religious ideology.

In the northern part of Tamilnadu and in Madras City, the Labbais have undergone a process of Islamisation with a stress on Sunnī orthodoxy. Saint worship is frowned upon as *shirk* by religious leaders, and when it occurs is much less flamboyant than the gala events of the countryside and is accompanied by conscious attempts to avoid *shirk*. Labbai dress is distinctively Muslim, and many have acquired Urdu as a second language because they consider it the language of Indian Muslims and akin to Arabic, if only in script. Some mosques in this northern part of the state recognise the importance of the *Dār al-ʿUlūm* at Deoband as a centre of religious learning, and hire *ḥāfiẓ*s from there during Ramaḍān. The impulse towards Islamisation is part of a process of de-parochialisation. As Muslims have become urbanised, their desire to become

recognised as good Muslims as well as good Tamilians has increased.

LABBAYKA [see TALBIYA].

LABĪBĪ, the pen-name of a Persian poet who lived at the end of the 4th/11th and the beginning of the 5th/12th century. His personal name as well as almost any other particulars of his life are unknown. The *Tardjumān al-balāgha* has preserved an elegy by Labībī on the death of Farrukhī [*q.v.*], which means that the former was probably still alive in 429/1037-8. A *ḳaṣīda* attributed to him by ʿAwfī is addressed to a *mamdūḥ* by the name of Abu 'l-Muẓaffar, who in that source is identified with a younger brother of the Ghaznavid Sultan Maḥmūd. But it is more likely that he was a member of the Āl-i Muḥtādj, the rulers of Čaghāniyān, who was also a patron of Farrukhī's poetry (see C. E. Bosworth, *The rulers of Chaghāniyān in early Islamic times*, in *Iran, JBIPS*, xix [1981], 11-12). In the *Madjmaʿ al-fuṣaḥāʾ* (i, 445) the poem is in fact presented as a work of the latter, but it also occurs in manuscripts of the *Dīwān* of Manūčihrī and in the works of other poets. The attribution to Labībī was rejected by Rypka and Borecký, but is defended by most modern Iranian scholars. Apart from this poem, the remaining poetry of Labībī consists of fragments only, mostly single lines quoted in evidence by lexicographers. Some of these lines belonged to *mathnawī*-poems, the subject of which can no longer be ascertained.

Though his work fell into oblivion quite soon, Labībī must have been a poet of some distinction in his own age. Bayhaḳī, writing about 450/1058, appreciated him as an *ustād-i sukhan*; and so did Masʿūd-i Saʿd-i Salmān, who also styled him *sayyid al-shuʿarāʾ* and imitated one of his *ḳaṣīdas* (*Dīwān*, ed. R. Yāsimī, Tehran 1339/1960, 571). The many quotations contained in the *Lughat-i Furs* of Asadī prove that his poems were still circulating in the later part of the 5th/11th century.

Bibliography: The remnants of Labībī's poetry were collected and studied most comprehensively by J. Rypka and M. Borecký, in *ArO*, xiv (1943), 261-307; other collections were published by Muḥammad Dabīr-Siyāḳī, in *Mihr*, viii (1331/1952), 310-2, 367-71, 650-3, *Labībī wa ashʿār-i ū*, Tehran 1332/1953, and *Gandj-i bāz yāfta*, i, Tehran 1334/1955, 1-34. P. DE BRUIJN)

LABĪD B. RABĪʿA, ABŪ ʿAḲĪL, Arab poet of the *mukhaḍram*. He belonged to the family of Banū Djaʿfar, a branch of the Kilāb, who belonged to the Banū ʿĀmir b. Ṣaʿṣaʿa (see Ibn al-Kalbī-Caskel, Tab. 93 and Register, ii, 374-5).

According to Ibn Saʿd, vi, 21, he died in 40/660-1 in the night on which Muʿāwiya arrived in al-Nukhayla to conclude peace with al-Ḥasan b. ʿAlī. Others, like Ibn Ḥadjar, iii, 657, whom Nöldeke (*Fünf Moʿallaqât*, ii, 51) thinks ought to be followed, give 41 A.H., others again 42. He is said to have reached an unusually great age (al-Sidjistānī, *K. al-Muʿammarīn*, ed. Goldziher, § 61). In fact, he makes several allusions to this in his poems. The date of his birth can only be approximately fixed. Even before 600 A.D. he seems to have attained a prominent position in his tribe by his command of language. As quite a young man, he is said to have accompanied a deputation from his tribe to the court of king Abū Ḳābūs Nuʿmān of al-Ḥīra (*ca.* 580-602), and when the latter was incited against the Banū ʿĀmir by his friend Abū Rabīʿ b. Ziyād al-ʿAbsī (of the tribe to which Labīd's mother belonged), Labīd succeeded with a satirical *radjaz* poem (*Dīwān*, no. 33) in so ridiculing him to the king that he restored his favour to the Banū ʿĀmir. A verse from Nuʿmān's answer to his courtier, who sought to defend himself from the lampoon on him in this *radjaz* poem, became proverbial (cf. al-Mufaḍḍal, *al-Fākhir*, i, 41-2; al-ʿAskarī, *Amthāl*, on the margin of al-Maydānī, ii, 117, 7-18; al-Maydānī, ii, 33; *K. al-Aghānī*,¹ xv, 94 f.; ²xvi, 22 f.; ʿAbd al-Ḳādir, *Khizānat al-adab*, ii, 79 ff., iv, 171 ff.). In his later poems Labīd also often prides himself on having helped his tribe by his eloquence. He remained loyal to his tribe even when a famous poet, and scorned the profession of a wandering singer, practised by his contemporary al-Aʿshā. But the coming of the Prophet Muḥammad threw him out of the usual groove. We do not know the exact date of his conversion to Islam. As early as Djumādā II of the year 8 Sept.-Oct. 629, the chiefs of the tribe of ʿĀmir b. Ṣaʿṣaʿa, sc. ʿĀmir b. Ṭufayl and Arbad b. Ḳays, a stepbrother of Labīd, seem to have negotiated in Medina about the adhesion of their tribe to the new community, but without reaching any result (see Caetani, *Annali*, ii, 90 ff.). Both men are said to have soon afterwards come to an

untimely end, ʿĀmir from plague and Arbad from a lightning stroke; the latter story seems to find confirmation in Labīd's lament for him (*Dīwān*, no. 5). The accusation on the other hand that Arbad attempted to kill the Prophet is quite incredible. In the year 9/630-1, the tribe again sent a deputation to Medina which included the poet, and an agreement was reached. Labīd is said on this occasion to have become a Muslim. He later migrated to Kūfa, where he died. Of his family, only a daughter is mentioned who is said to have inherited his talent (see al-Maydānī, ii, 49, 13 ff.; al-Ghuzūlī, *Maṭāliʿ al-budūr*, i, 52, 7 ff.).

Labīd's poems were very highly esteemed by the Arabs. Al-Nābigha is said to have declared him the greatest poet among the Arabs or at least of his tribal group, the Hawāzin, on account of his *Muʿallaḳa*. He himself is said to have claimed third place after Imruʾ al-Ḳays and Ṭarafa. Al-Djumaḥī (*Ṭabaḳāt al-shuʿarāʾ*, ed. Hell, 29-30) places him in the third class of pagan poets along with al-Nābigha al-Djaʿdī, Abū Dhuʾayb and al-Shammākh. Labīd showed himself equally master of the *hidjāʾ*, the *marthiya* and the *ḳaṣīda*. One of his *ḳaṣīdas* was adopted into the collection of *Muʿallaḳāt* and is thought by Nöldeke (*Fünf Moʿallaqât*, ii, 51) to be one of the best specimens of Bedouin poetry. Labīd uses the traditional pictures from the animal world—wild asses and antelopes fleeing before the hunter and fighting with his dogs—as charmingly as the usual complacencies about drinking bouts. He seems, on the other hand, to have cultivated the *nasīb* only because it was traditional. He deals far less with the subject of woman's love than with the description of the *aṭlāl*, which he likes to compare with artistic calligraphy. He is also fond of recalling memories of places of his native district, the palmgroves and irrigation channels which continually move him to charming descriptions; indeed, in one such connection he gives the whole itinerary (*Dīwān*, no. 19, vv. 4 ff.) of a journey from central Arabia to the coast of the Persian Gulf (see von Kremer, *op. cit.*, in *Bibl.* below, 12). As his almost contemporary Abū Dhuʾayb is fond of doing, in the *Muʿallaḳa*, v. 55 ff., he turns however once more to his beloved, and thus combines the *nasīb* with the main part of the *ḳaṣīda* into an organic whole; but for him this is simply a mode of transition to a new descriptive passage. His poetry is, however, distinguished from that of other poets of the pagan period by a certain religious feeling which seems to have been not exactly rare among his contemporaries, even before Muḥammad's mission. While Zuhayr, for example, still expresses his practical wisdom derived from the experience of a long life, in plain though impressive language, Labīd on such occasions always strikes a religious note. He certainly did not profess Christianity, nor can we see in him a representative of the so-called *ḥanīf*s of the *Sīra*, as von Kremer wished to do. In him, rather, we find the belief in Allāh as the guardian of morality finding particular expression, a belief already widely disseminated in Arabia. Such passages naturally invited the Muslim traditionists to increase them. Indeed, a later author went so far as to ascribe to him a verse by Abu 'l-ʿAtāhiya (fragment 18). But many passages of his *Dīwān* seem to owe their inspiration to the Ḳurʾān. The statement that he wrote no more poetry after his conversion to Islam is obviously an invention (see Ibn Saʿd, vi, 21, 4, repeated later; e.g. by al-Ghuzūlī, *Maṭāliʿ*, i, 52, below); it is contradicted by the simple fact that poems 21 and 53 of the *Dīwān* were only composed shortly before his death (*Aghānī*, xvi, 101). The description of Paradise (*Dīwān*, nos. 3, 4) is certainly inspired by the information in the Ḳurʾān, like the idea that precedes it, that a record is kept of the doings of men. Under the influence of Islam in nos. 39 and 41 (v. 11 of which, as Ibn Ḳutayba (*K. al-Shiʿr*, 153, 5) already points out, certainly must be written after his conversion, if it is not to be considered an interpolation), he replaces the *nasīb* by pious admonitions. Thus he creates a new artistic form, that of poetical paraenesis on the transitoriness of human life; besides the Ḳurʾān, he may of course have been influenced by the Christian preaching in the works of ʿAdī b. Zayd. He only follows older models in this connection when he combines admonition with the averting of blame from a woman in no. 14, as in Ṭarafa's *Muʿallaḳa*, vv. 56 ff., 63-5 (cf. Caskel, *Das Schicksal*, 9), where this is, however, only an episode in the *ḳaṣīda*.

Labīd's *Dīwān* was edited, according to the *Fihrist*, 158, by several of the greatest Arabic philologists, al-Sukkarī, Abū ʿĀmir al-Shaybānī, al-Aṣmaʿī, al-Ṭūsī and Ibn al-Sikkīt. Of these recensions, only half of that of al-Ṭūsī, together with a commentary, has survived in the manuscript of al-Khālidī (see below) from the year 589/1193. All other manuscripts are much later, e.g. those in Leiden and Strasbourg, and that in Cairo not yet utilised, which also contains the *Dīwān* of Abū Dhuʾayb, ed. by J. Hell.

LABIN or Libn (coll.; singular *labina*, *libna*) designates in Arabic the unfired brick whose use in building dates back to the earliest antiquity; to speak only of the present domain of Islam, some traces have survived above-ground on the Iranian plateau, in Mesopotamia, Palestine and Egypt, where this material was used in the Pharaonic period to build palaces and royal tombs as well as poor hovels; it is certain that it was also in use in the Arabian peninsula and North Africa. The hog-backed bricks of Mesopotamia appear to be no longer used, and the *labina* generally has a geometric, fairly regular shape, that of a parallel-sided rectangle, whose variable dimensions are at the largest those of a bond-stone and often have the ratio 4 × 2 × 1 (e.g. length 56 cm., width 28, thickness 14, or 42 × 21 × 10.5,

36 × 18 × 9, 32 × 16 × 8; but 45 × 35 × 5 in South Arabia). This unfired, rough and fairly economical brick is composed essentially of dampened, shaped clay, which is then turned into a wooden mould (*milban*) without a bottom or cover, packed tight and finally dried in the sun; the clay is fined down, depending on the region, with sand, gravel, chopped straw, and potsherds in fixed proportions to prevent its crumbling and cracking. Once taken out of the mould, the bricks are left for a while longer in the sun and sometimes stockpiled before being used in the construction of buildings which can reach a considerable height; this was notably the case of the ziggurats of Mesopotamia, and it is still that of the houses, several storeys high, which are built in South Arabia (the technique of manufacture and construction is explained by M. Bāfaqīh and J. Chelhod, *Notes préliminaires sur l'architecture de Shibām*, in *St. Isl.*, li [1980], 195-6). At Shibām, the foundations to a depth of 3 m. are of stone; however, the trench intended for them, usually wider than the wall, may only be filled up with beaten earth and ballast. In low houses and enclosures the walls are sometimes supported by wooden posts driven into the ground with regular spaces between them. The building can be strengthened, at least in its lower part, by means of two thicknesses of bricks placed alternately longwise and crosswise; the walls erected are generally thicker at the bottom than at the top, which, on the outside, gives the impression that they are leaning dangerously. Houses of unfired brick have the advantage of being warm in winter and cool in summer, and there are countries, such as Egypt, where *labin* is preferred to fired brick. But the large buildings form great masses of thick walls (as much as 10 m. in antiquity), pierced with a few narrow apertures.

This material is in current use, either because of its low cost, or because, in the region, clay is readily exploitable, and stone is rare, hard to extract or too heavy; but rainfall must not be very plentiful, for heavy rains cause severe deterioration of the walls to the point of making them disintegrate, even if they are lined with a coating of earth mixed with lime or plaster. The ancients took some supplementary precautions against erosion, by providing gutters, drains, reed beds, etc.

Unfired bricks are pointed with a mortar made of earth with an admixture of lime or ash (the use of bitumen, as in ziggurats, does not seem to be current). This mortar, like the coating mentioned above, is called *madar* (see *LA*, s.v.) in Classical Arabic, but this term (which one hesitates to connect with *materia*) seems clearly to be applied also to construction of earth and *labin*, to judge at least by the expression *ahl al-madar* which designates the sedentaries as opposed to *ahl al-wabar* "the people of the camel skin" = tents, i.e. the nomads, even allowing for the Arab taste for paronomasia; a fairly strong indication is supplied by the meaning of *madara* "a village built of *labin*". However, the ambiguity of the vocabulary does not always enable us to distinguish clay or mud from unfired brick, for Arabic texts give the impression that the same term was used for the different techniques; but it is probable that the Prophet's house in Medina was actually of unfired brick and that the *ahl al-madar* lived in dwellings of the same kind, while the expression is also applied, by extension, to some citizens living in stone houses.

Another difficulty arises from the uncertainty of the terminology. Although Ibn Manẓūr (*LA*, s.v.) classifies *ṭūb* as a synonym of *ādjurr* "fired brick" (see below) and this word still has this meaning in Egypt for example, it designates in the Muslim West a lump of earth or an unfired brick, and it is furthermore in this latter sense that it has been adopted and preserved in Spanish in the form *adobe*. But Ibn Khaldūn (*Muḳaddima*, Bk. i, Ch. v, 25) states that the *ṭawwāb* is the mason who builds a wall in clay. At first sight, this craft name appears to be derived directly from *ṭūb* with the meaning of "clay", but it is quite possible that a telescoping may have taken place with *ṭāb(i)ya* "clay, mud" which, on the other hand, comes from the Spanish *tapia* (see Dozy, *Suppl.*, s.v.). This borrowing leads us to think that the clay technique, well-known in antiquity, notably in Mesopotamia, was imported into the Maghrib from Spain. *Ṭābya*, which is still in use today in Algeria and Morocco, is used by Ibn Khaldūn, when he speaks (*loc. cit.*) of *binā' bi 'l-turāb*) and describes in detail the way a clay wall is built, according to a process which has not changed since then (cf. a description in Berber in E. Laoust, *Mots et choses berbères*, Paris 1920, 24). The masons, generally specialists belonging to particular tribes, use a frame made of two boards (*lawḥ*) of variable dimensions, but on average 150 to 180 cm. long by 80 wide, which they place face-to-face at a distance equal to the width of the wall under construction; the frame is held in place by cross-pieces and ropes and closed at both ends. The earth, prepared as for unfired brick, is mixed with lime, gravel etc. and carried in baskets; as soon as it is ready to be turned into the frame, it is beaten with a kind of rammer (*mirkaz*, pl. *marākiz*). The workmen generally arrange several frames so as to be able to carry out their work horizontally, then vertically with superimposed coats until the work is completed. Clay, which can form a really solid concrete, is used for the construction of all kinds of buildings, which can reach a great height and be very long-lasting. This is the case particularly with ramparts and military works; near Fās a bridge was built of very hard clay reinforced with fired bricks on top of the arches.

The kiln-fired brick is designated in Arabic by the collective *ādjurr*, but to judge by the multiplicity of forms which this term assumes (*ādjur*, *adjūr*, *yādjur*, *ādjirūn*, *udjurr*, etc.; noun of unity *ādjurra*, *adjurra*, etc.), all at any rate in the *LA*, it is clear that the Arabs did not possess either the term signifying or the object signified; nor is it known in what period there took place the borrowing from Persian *agūr* which Arab lexicographers freely recognise. It is a fact that fired brick, whose use is widespread throughout the Islamic world, was used particularly in Persia and the lands which fell directly under its influence. It will be recalled, for example, that the Muslims who founded Baṣra first demarcated the mosque by means of a reed enclosure, then built it in *labin* and rebuilt it in fired brick a few years later. All the same, a Roman and Byzantine influence was felt to an equal extent in the regions situated further west. The word which is used today with the meaning "tile", *ḳirmid*, is a sing. made from *ḳarāmid*, of which the *LA* asserts (√*ḳ.r.m.d.*) that it designates in Syria the fired bricks (*ādjurr*) of the baths and comes from the *rūmī* word *ḳirmīdāśī* (*sic*; κεραμίς, ιδος "brick, tile", rather than κέραμος).

The kiln (*attūn*) is similar to that of the potters, and consists of a furnace with a firing-room on top of it. Of smaller dimensions than the *labin*, the fired brick is not nearly so thick (3 to 6 cm.). Buildings

in which it is exclusively used are rare (a characteristic example is the Mausoleum of the Sāmānids at Bukhārā, where the arrangement of the bricks is particularly stylistic); in fact, it is generally combined with other materials (e.g. the Ḳaṣr al-Ḥayr al-Gharbī [*q.v.*] consists of a wall of limestone, fired brick and unfired brick at the top); it is used for certain parts of the building (arches, vaults, staircases, etc.) and put to good use by architects to vary the decoration of their works. From the 6th/12th century, the glazed block has offered the possibility of obtaining similar effects to those of mosaic.

(CH. PELLAT)

LABLA, the name given by Arabic authors to NIEBLA, ancient Ilipla, which was the seat of a bishop in the Visigothic period and which is situated about 40 miles to the west of Seville in the right bank of the Rio Tinto (in the modern province of Huelva). Certain authors, notably Yāḳūt, also call it al-Ḥamrā' because of the reddish colour of its walls and of its environs. It was the main town of one of the *kūra*s of the Gharb al-Andalus [*q.v.*]; it must have been integrated within the great division of Ishbīliya [*q.v.*], and separated from it in the course of the administrative reorganisation. The *kūra* was bounded, at 40 miles to the west, by the plain of Ukshunūba; at 20 miles to the east, by the Aljarafe of Seville; at 50 miles to the north, by the *kūra* of Bādja [*q.v.*] (Beja); and at 6 miles to the south, by the Atlantic. According to al-ʿUdhrī, it contained eight districts (*aḳālīm*), including that of the town itself, and the total tax revenue in the time of al-Ḥakam I went as high as 15,627 *dīnārs*. The town's population included a certain number of Arab families, amongst whom the Yaḥṣubīs were dominant, some Berbers and the descendants of the Hispano-Romans and the Hispano-Visigoths, both Christian and Islamicised.

The soil of Labla favoured all sorts of agricultural exploitation, thanks to its fertility and to the waters which the three river sources of the Sierra d'Aracena brought down; one of these gave sweet drinking water, another contained alum and the third copper sulphate. The district produced cereals and a wide variety of fruits, with fig trees, numerous olive trees and vineyards which yielded high-quality raisins. Excellent safflower (*ʿuṣfūr*, *carthamus tinctarius*) was grown which, together with other dyestuffs like cochineal (*ḳirmiz*), was used for dying leather and skins. Bovines and horses were reared, and these, plus hunting and fishing, were sources of wealth. It was also a lively commercial centre.

Niebla still retains ancient remains and solid walls from its original foundation. There were dependent on the *madīna* towns and a fortress, notably for a certain period, Huelva (Awbābā, Ūnaba or Wānaba), Tejada (Ṭalyāta) and Gibraleón (Djabal al-ʿUyūn) on the Odiel.

According to Ibn al-Shabbāṭ, it was conquered in 93/712 by Mūsā b. Nuṣayr or, more feasibly, by his son ʿAbd al-ʿAzīz in the next year. Niebla was the seat of a part of the *djund* of Ḥimṣ. In 149/766 there was the rising of Saʿīd al-Maṭarī al-Yaḥṣubī. In 240/844, after having occupied Ishbīliya for some days, the Northmen or Madjūs [*q.v.*] went on to Labla, sacked it and carried off the inhabitants. In 284/897 occurred another rising, whose suppression the *amīr* of Cordova entrusted to his son Abān. Between this date and 304/916 it must have risen yet again, for on 20 Ramaḍān 304/17 March 917 the *ḥādjib* Badr b. Aḥmad occupied it when it was in the power of a certain ʿUthmān b. Naṣr. At the fall of the caliphate, it became a *ṭā'ifa* principality, actually set up in 414/1023-4 when Abu 'l-ʿAbbās Aḥmad b. Yaḥyā al-Yaḥṣubī, Tādj al-Dawla, rose up and was proclaimed ruler, this being recognised by the people of Gibraleón. His brother and successor (in 433/1041-2) had difficulties with al-Muʿtaḍid of Seville. For some time, al-Muẓaffar of Badajoz provided the ruler of Labla with help, but in the end the latter had to shelter under the protection of Abu 'l-Walīd Ibn Djahwar [see DJAHWARIDS], with whom he sought refuge in 433/1052-3. Labla remained under the rule of his nephew, Fatḥ b. Khalaf b. Yaḥyā, Nāṣir al-Dawla, who made a treaty with al-Muʿtaḍid; but the latter ravaged his territories and in 445/1053-4 Fatḥ b. Khalaf had to flee to Cordova, where he died.

In the middle of the year 484/1091, Labla passed into the hands of the Almoravids. In *ca.* 538/1144, the doctrines of Ibn Ḳasī [*q.v.*] of Mértola caused a certain amount of anxiety. Being hostile to Almoravid power, Yūsuf b. Aḥmad al-Bitrūdjī defended the town against Ibn Ghāniya until the time when it submitted, in 540/1146, to the Almohad Barrāz al-Masūfī. Eight or nine years later, the latter rebelled, and Labla had to be taken in 549/1154 by Yaḥyā b. Yaghmūr, who conducted a great massacre of the populace. The Infante Don Sancho of Portugal and Portuguese troops passed by Labla in 574/1178 and 578/1182. Under Ibn Maḥfūẓ, it came to form, in the 7th/13th century, an independent principality comprising Huelva, Saltés and part of the Algarve, and recognised the suzerainty of Ferdinand II of Castile. It was besieged for several months by Alfonso X, and capitulated in 660/1262.

(J. Bosch Vilá)

LACCADIVES, a group of coral islands in the south-eastern Arabian Sea lying off the Malabar Coast of India between lat. 8° and 12°30′ N., and between long. 71° and 74° E. Under British Indian rule these were formerly the Laccadive Minicoy and Amindivi Islands; but in 1956 the group was brought under a single administration to form the Indian Union Territory of Lakshadweep (Sanskrit: *Lakṣadvīpa* "the hundred thousand islands"). There are in all 27 islands and islets of which ten—Maliku, Kalpeni, Kavrathi, Androth, Agathi, Amini, Kadmat, Kiltan, Bitra and Chetlat—are inhabited. Maliku, which is separated from the rest of the group by the 114 mile-wide Nine Degree Channel and from the Maldive Islands [*q.v.*] by the 71 mile-wide Eight Degree Channel, is attached to Lakshadweep politically, but belongs ethnically and culturally to the Maldives. In this article it is considered separately from the "Laccadives Proper".

The Laccadives were originally settled (possibly as early as the 2nd century A.D., but certainly by the 1st/7th century) by Hindu groups (Nambudiri, Nayar and Tiyyar) from North Malabar. Little is known of the early history of the islands. They were conquered by the Chola Rād̲j̲ās of South India in the 4th/10th century. By *ca.* 1500 they had passed under the rule of the Kólatirri Rād̲j̲ās of Kólattunād (North Malabar), by whom they were given in *d̲j̲āgīr* [*q.v.*] to the Ālī Rād̲j̲ās of Kannanūr [*q.v.*] in the mid-10th/16th century. The Ālī Rād̲j̲ās were the leading family of the Malabar Muslim community or Māppilas [*q.v.*], and under their rule the Laccadive Islands' coir trade became the monopoly of the Kannanūr Māppilas.

In 1786 the inhabitants of the northern (Amindivi) islands of Amini, Chetlat and Kiltan rose in protest against the coir monopoly and the harshness of Kannanūr rule. They appealed for protection to Tīpū Sulṭān of Mysore [*q.v.*], and as a result were transferred to his rule in 1787; they passed to the East India Company after the fall of Seringapatam in 1799. The Southern (Laccadives) group remained under Kannanūr until they were finally sequestrated by the British in 1875 (though the Bībī of Kannanūr retained a nominal sovereignty until 1908). Both groups of islands remained under British rule until India attained independence in 1947. Today the capital of the Union Territory of Lakshadweep is Kavrathi Island, and the population (including Maliku) is 31,810 (*Census of India*, 1971, Series 29 (*Laccadive, Minicoy and Amindivi Islands*, part ii/A, 5)).

The people of the Laccadives are linked ethnically and culturally with the Malayalam-speaking Dravidian people of Kerala, especially with the Māppilas of North Malabar. There has also been a sustained Arab—particularly Yemeni—influence on the islands which lie in the path of the direct sea route between Arabia, South India and the Far East; certainly the mediaeval Arab navigators were familiar with the Laccadives, which they knew as the *D̲j̲uzur al-fāl*, *D̲j̲uzur al-fālāt* or (collectively with the Maldives) as the *Dībad̲j̲āt* (G. R. Tibbetts, *Arab navigation in the Indian Ocean before the coming of the Portuguese*, London 1971, 458-60). As a result of this Arab influence, the islanders speak Malayalam with an admixture of Arabic, and write in the Arabic script.

The Laccadives were converted to Islam in *ca.* the 7th/13th century, according to legend by one ʿUbayd Allāh, an Arab castaway whose tomb on Androth island is particularly venerated. The islanders are overwhelmingly Sunnī Muslims of the S̲h̲āfiʿī *mad̲h̲hab*, but there are also followers of the Rifāʿī and Ḳādirī *ṭarīḳas*, and of the Wahhābī-oriented Mud̲j̲āhid movement (which is active in Kerala). The women do not observe *purdah* and may (as in the neighbouring Maldives) have their own mosques with a female *imām* (Ellis, *A short account of the Laccadive Islands and Minicoy*, Madras 1924, 66).

Unusually for an Islamic society, the Laccadives are predominantly matrilineal. The people follow the Malabar system of matrilineal descent (Malayalam: *Marumakkathāyam*). The community is organised in exogamous matrilineal groups known as *taravāds*. There is a duolocal residence pattern (i.e. after marriage the wife remains in her maternal home and is "visited" by her husband). Descent is traced through the mother, and family (*taravād*) property is passed on through the mother's line. The self-acquired property of the father is passed on according to the Islamic family law. Monogamy is usual, but divorce is common.

The Laccadive Islanders are divided into three caste-like endogamous groups, in hierarchical order the *Koyas* (the land-owners); the *Malmis* (from the Arabic *muʿallim*, traditionally the sailing class); and the *Melacheris* (the coconut workers—originally the agricultural serfs of the *Koyas*). Today both the traditional caste-structure and the *marumakkathāyam* system are breaking down under the impact of modernisation.

Maliku (corrupted by Europeans to Minicoy, perhaps from the Arabic *Milikai*), is an isolated island within the Maldivian cultural sphere which by the mid-10th/16th century had fallen under the control of the Ālī Rād̲j̲ās of Kannanūr. Maldivian political control has never been re-established. The inhabitants are Indo-European, speak the Maldivian language *Divēhi* (though it is known on Maliku as Māhl), and use the Maldivian script *Tāna*. Originally Theravada Buddhist, the islanders are today Sunnī Muslims of the S̲h̲āfiʿī *mad̲h̲hab*. They were probably converted in the mid-6th/12th century. Descent is patrilineal, but women occupy a respected and powerful position in society. They do not observe *purdah*, but sometimes wear a head-veil called the *burūga*. As in traditional Maldivian society the people are divided into four hierarchical, caste-like groups; see MALDIVES.

(Census Reports) The Government of India issues decennial census reports, the most recent being 1971. See *Census of India*, 1971, Series 29, "Laccadive, Minicoy and Amindivi Islands) (3 vols.). (A. D. W. Forbes)

LADĀKH, a region of the extreme north of India. It lies between lat. 32° and 36° N and long. 75° and 80° E, and is bounded on the north and east by the Chinese territories of Sin-kiang and Tibet, on the south by the Indian province of Himačāl Pradesh, on the north-west by Baltistān, and on the west by Kashmīr, of which it now constitutes a province, covering an area of 30,220 sq. miles. Its capital is Leh.

Ladākh is known to the Tibetans as Mangyāl or Māryul. The population may be divided into four racial groups, Čampās, Ladākhīs, Baltīs and Dārds, of whom the first three are of Tibetan stock and the last Aryan. There is a small Muslim community, but the majority are Buddhist, whence the name Bhottas traditionally given to the inhabitants of Ladākh by their neighbours.

The indigenous chronicles furnish little more than a list of rulers with the merest sketch for each reign (see K. Marx, *Three documents relating to the history of Ladakh*, in *JASB*, lx [1891], 97-135; lxiii [1894], 94-107; lxxi [1902], 21-34), but from time to time references in external sources provide a valuable landmark. In the 8th century A.D., through the medium of Kashmīr, then vassal to the T'ang, Ladākh was briefly drawn into the Chinese sphere of influence, after which there is a long gap until around 1400, when Leh received an embassy from the great Tibetan reformer Tsong-kapa. At this time there were two main principalities in Ladākh, but in the mid-10th/16th century we find the country reaching its greatest extent and united under one ruler. Its size was temporarily reduced through subsequent wars with its neighbour ʿAlī Mīr [see BALTISTĀN], and late in the 11th/17th century it was invaded from Tibet by the Džungarian Mongols [see KALMUK]. This threat Ladākh withstood by calling in the aid of the Mughal Emperor, who made it a condition that the ruler should become a Muslim. His successors were again Buddhists, but from this time dates the penetration of the country by Islam.

In 1834 it was invaded by Zurāwar Singh, the general of Mahārādjā Gulāb Singh of Djammū, and was obliged to pay tribute. There ensued a series of risings and intrigues until 1841, when Ladākh seized its opportunity to revolt following the defeat of the Dōgrās in Tibet, but was soon crushed by a fresh army from Djammū. It was now definitively annexed to Djammū [*q.v.*], thus becoming in 1846 part of Kashmīr. For its subsequent history, see KASHMĪR..

Francke, *A history of Western Tibet*, London 1907; *Imperial gazetteer of India*, new ed., Oxford 1907-9, xvi, 88-94; for mentions of Ladākh in the Kashmīr sources, see Pandit D. R. Sahni and A. H. Francke, *References to the Bhottas or Bhauttas in the Rajatarangini of Kashmir*, in *Indian Antiquary*, xxxvii (1908), 181-92.

(P. Jackson)

LĀDHIḲ, the name of several Anatolian towns, and the Turkish form, phonetically identical, of the name of Laodicea (Λαοδίκεια), which, since the imperial period often appears in inscriptions with the form Λαδίκεια, accented on the second syllable (cf. Robert, *Villes d'Asie Mineure*², Paris 1962, 283); Modern Turkish orthography Lâdik.

1. Lādhiḳ near Denizli, Laodicea of Lycos, or Laodicea of Phrygia. The ruins are located at a place called Eski Hisar, 8 km. to the north of the centre of Denizli, the acropolis standing on a hill which dominates the valley of the Lycos (Çürük Su), a left-bank affluent of the Great Meander. Captured for the first time by the Turks before 1119 (Cinnamus, Bonn ed., 5), this date saw the restoration of the town's defences by John Comnenus (Nicetas, *John Comnenus*, Bonn ed., iv, 17), but the town was abandoned before 1156, at which period its population was dispersed into the surrounding countryside (idem, *Manuel Comnenus*, iii, 163). It survived, however, for some time, following a shift in location, transferring to a more remote and more defensible site close to the foothills of the Baba Dağ (*in pede altissimi montis*, Ansbert, *Historia de expeditione Frederici imperatoris*, in *Fontes rerum Austriacarum* (*Scriptores*, v), Vienna 1863, 58), where the fortified strongholds perhaps survived until the end of the 13th century. But a parallel development was the growth in the immediate neighbourhood of the Turkish urban settlement of Denizli, where the first epigraphical datings go back to the second third of the 13th century. The latter had no direct connection with Laodicea, but nevertheless bore the name of Lādhiḳ concurrently with

its own. It is also found separately (for example in the work of Ibn Bībī who, writing in 679/1280-1, speaks exclusively of Lādhiḳ) until the 8th/14th century (in Mustawfī, *Taʾrīkh-i guzīda*, ed. Browne, 444, 483, and on the coinage of the Īnandj Oghullarī and the Germiyān Oghullarī until the year 760/1360), then as the equivalent of the new name until the 12th/18th century, at least in the work of Western writers (Kātib Čelebi, *Djihān-nümā*, tr. Armain, 620, in L. Vivien de Saint-Martin, *Histoire des découvertes...*, iii, Paris 1848: "Degnizli ou Lazakieh"), but this was nothing more than a scholastic tradition; the original text does not give the name of Lādhiḳ.

Bibliography: X. de Planhol, *Le cadre géographique : le pays de Laodicée-Denizli. ii. De Laodicée à Denizli*, 403-13, in Jean des Gagniers (ed.), *Laodicée du Lycos. Le Nymphée, campagnes 1961-1963*, Quebec-Paris 1969, which presents a detailed discussion of the problem and the solutions previously offered (Ramsay, Philippson, Akça) regarding the relationship between the two towns, together with a full bibliography.

2. Lādhiḳ near Konya, Laodicea Katakekaumene. Currently a large village, 35 km. to the north of Konya, in the *kaza* of Kadınhanı, *nahiye* of Sarayönü, on the road leading towards Afyon Karahisar and Eskişehir. The ancient name (Λαοδίκεια ἡ κατακεκαυμένη, Laodicea Combusta, which passed into the Islamic sources with the form Lādhiḳ Sūkhta, "the burnt L."), no doubt referred not, as is the opinion of J. A. Cramer (*A geographical and historical description of Asia Minor*, Oxford 1832, ii, 33), to the volcanic nature of the terrain (as in the case of Phrygia Katakemaumene), which here is primarily calcareous, but definitely to the existence of ancient mining or metallurgical workings. There is no need to retain the form "Yorgan Ladik" (from *yorgan*, quilted covering fixed to the upper bed-sheet), recorded by the Western travel literature of the 19th century (and the works which derive from it, *EI*[1], art. s.v.), starting with W. M. Leake, *Journal of a tour in Asia Minor*, London 1824, 43, and explained by the textile industry (coverings, carpets) which was active in the locality. What has happened, as has been shown by Besim Darkot (art. *Ladik* in *İA*), is a mis-reading of the form یورکان لادیق given in the *Djihān-nümā*, which should be interpreted as Yürükān Lādīḳ ("Lādīḳ of the Yürük or nomads", with Persian suffix). The form "Ladik-el-Tchaus", also given by Leake (*loc. cit.*) appears incomprehensible. The village, which Ewliyā Čelebi (*Seyāḥat-nāme*, ed. Zuhuri Danışman, iv, Istanbul 1970, 87) describes as having suffered ravages on the part of the Djelālīs [see DJALĀLĪ in Suppl.], is cited by Kātib Čelebi as a small town which is nevertheless the administrative centre of a subsidiary district of Konya (tr. M. Norberg, Lund 1818, ii, 584-5), with numerous shops, and Leake (*loc. cit*) calls it "a large place". Decline must have set in in the 19th century (cf., for a comparison of the population in the 19th and 19th-20th centuries, the figures of W.-D. Hütteroth, *Ländliche Siedlungen im südlichen Inneranatolien in den letzen vierhundert Jahren*, Göttingen 1968). It had no more than 1,785 inhabitants in 1941 and had no administrative role of any kind.

3. Lādhiḳ near Amasya, a large village 40 km. north of Amasya, currently centre of a *kaza* (*ilçe*) subsidiary to the *vilayet* of Samsun. At an altitude of 950 metres, it stands on the edge of a plain, at the extremity of the Phazimonitis of antiquity, the base of which is occupied by a lake (formerly Lake Stiphanus, currently "Lake of Lâdik") 9 km. to the east of the town, reduced to a shallow swamp in summer but considerably augmented to the point of overflowing in spring, its waters, at this time, spreading, via the Terdekan Çay, into the Yeşil Irmak. According to Ewliyā Čelebi, who has left us a detailed description of the place (iv, 87-91), the urban area comprised, in the 11th/17th century, 3,020 houses and 400 shops. Its prosperity was owed in particular to the fact that Bāyezīd II, when he was governor of Amasya (known to be residence of hereditary Ottoman princes in the 9th/15th and 10th/16th centuries; cf. P. Kappert, *Die Osmanischen Prinzen und ihre Residenz Amasya im 15. und 16. Jahrhundert*, Istanbul 1976), chose it as a summer resort, spending six months of the year there, and embellishing it with numerous monuments and gardens. Important *waḳf*s were constituted there and the village, in the 17th century, still lived practically independently of provincial authority. Being off the main route, it declined when it lost its status as a princely residence. J. Hamilton, *Researches in Asia Minor, Pontus and Armenia*, London 1842, saw only "a small and miserable place, but called a town because it possesses a royal mosque with two minarets". It had no more than about 1,500 inhabitants at the end of the 19th century, rising to a population of 5,054 in 1950.

4-5. Two other localities, in the same region, currently small villages of a few hundred inhabitants, also bear this name: Lādhiḳ near Çekerek, in the *nahiye* of Kadı-Şehri, *kaza* of Çekerek, 28 km. to the south of Zile, on the southern flank of the Deveci Dağ; and Lādhiḳ near Niksar, 20 km. to the west of this town, to the south of the valley of the Kelkit, on the northern slope of the Kemer Dağ.

All these three localities must correspond to ancient "Laodiceas". Only one is attested in the region: Pontic Laodicea (Λαοδίκεια Ποντικῇ), whose existence is, in addition, known only from the coinages of Mithridates Eupator. Although E. Honigmann, in *EI*[1], wanted to locate it at Lādhiḳ near Çekerek, it should almost certainly be sought at Lādhiḳ near Amasya, in accordance with the opinion of Ruge, in Pauly-Wissowa, *Realencyclopädia*, on the basis of the text of Strabo (xii, 560) which identifies near the lake a ruined fortress (Ikizari) and a royal place (cf. J. G. C. Anderson, *A journey of exploration in Pontus*, Brussels 1903 (*Studia Pontica*, i) 79-80).

6. Finally, "The Blind Lādhiḳ". (Kör Lādhiḳ) is known exclusively from the works of Ewliyā Čelebi (*loc. cit.*, 87), who mentions it as a *sandjaḳ* of the province of Van. This locality is cited in no other source, and it may be an error on the part of Ewliyā.

Bibliography: on the overall subject, see the article *Lâdik* by Besim Darkot, in *İA*, vii.

(X. DE PLANHOL)

AL-**LĀDHIḲIYYA** (European transcriptions: Lattaquié, Latakia), a major Syrian port, was known by the Greek name of Λαοδίκεια ἡ ἐπι θαλάσσῃ, and later by the Latin name of Laodicea ad Mare, whilst the Crusaders called it La Liche. In the second millenium, the settlement bore the name of Ramitha of the Phoenicians and was dependent, before taking its place, on Ugarit, a powerful metropolis lying 8 miles/12 km. to the north. It was in 327 B.C., or six years after the death of Alexander that Seleucus Nicator (301-281 B.C.) founded on this site

a city to which he gave the name of Laodicea in honour of his mother Laodice. At the end of the period of Seleucid domination it belonged to the Tetrapolis, a union linking the four most important cities of Syria: Antioch, Apamea, Laodicea and Seleucia, πόλεις ἀδελφαί—the "sister cities". It was for a long time to remain one of the major centres of Greek-Roman Syria.

Conquered by Pompey in 64 B.C., it suffered in the Roman civil wars. Sacked by Pescennius Niger at the end of the 2nd century, it was restored by Septimus Severus. In the 3rd and 4th centuries the city was dependent on Antioch.

The city is situated in lat. 35° 32′ N. and long. 35° 40′ E. and is built below a massive rocky promontory pointing towards the south, the Rās Ziyāra, which is surrounded by the sea on three sides with cliffs. It is principally linked to the dry land towards the east, two hills of 60 to 70 m. in height constituting the eastern limit of the ancient town. On the northern hill are two twin castles. The modern city has grown to the west of the mediaeval town. The urban area has been the victim of a number of severe earthquakes, of which the most recent took place in 1822.

The city plan. When Laodicea was founded, Seleucus laid down housing blocks of 112 m. by 57 m., following an orthogonal schema, as in other Seleucid foundations. To the original settlement the Romans added identical blocks. It is the remains of four avenues with lateral colonnades which have enabled Jean Sauvaget to reconstruct the ancient plan of the city and to discover in the present-day layout of Lādhiķiyya some elements of the Seleucid square design. The limits of the ancient city are defined by two large extramural cemeteries to the east and the north. Together with the port, the city covered an area of 220 ha. "The city of Laodicea has retained its straight streets. It is curious that this apparently quite modern design existed in the Middle Ages. It possibly dates back to antiquity, like some straight streets of Damascus and Jerusalem", observed Max van Berchem (*Voyage en Syrie*, i, 289).

Around Lādhiķiyya stretches a small fertile coastal plain (*sāhil*); it is bounded to the north by the Djabal al-Lukkām [*q.v.*], to the east by the Djabal Anṣāriyya, and enjoys a Mediterranean climate with strong prevailing winds from the west and south-west in January and March; rainfall varies from 750 to 1000 mm. annually, while temperatures reach their average minimum in January at 11° C. and their average maximum in July at 26°. To the north of the city, olive-trees flourish, while in the hinterland citrous fruits grow in abundance. In the Middle Ages, white and green marble were mined in the vicinity of the town and this material was exported to ʿIrāķ.

Mediaeval history. After the revolt of Antioch in 387 A.D., Laodicea returned to imperial favour and enjoyed prosperity in the Byzantine period. Justinian made it the capital of the province of Theodorias, recently founded (528). At the time of the Muslim expansion, the town was captured, after a siege, by troops under the command of ʿUbāda b. al-Ṣāmit al-Anṣārī. The citadel was stormed. Those of the Christian inhabitants who had taken refuge at al-Busayṭ were permitted to return on payment of the *kharādj*; they retained their church while ʿUbāda built a mosque which was later enlarged.

In 100/719, supported by their fleet, the Byzantines attacked the coast of Lādhiķiyya, burnt the city and led the inhabitants away into captivity. ʿUmar b. ʿAbd al-ʿAzīz organised the restoration of the buildings and the fortifications and ransomed the prisoners. After the death of the Umayyad caliph, his successor and cousin Yazīd b. ʿAbd al-Malik completed the reconstruction of the city, improved its fortifications and reinforced the garrison.

In the golden age of the ʿAbbāsid caliphate, Lādhiķiyya does not seem to have played a particularly distinctive role. In 357/968, Nicephorus Phocas appeared in northern Syria; two years later the city, which was the port of Apamea, was taken over from the Ḥāmdanids and became Byzantine. According to Yaḥyā b. Saʿīd (d. 458/1066), the emperor Basil II appointed as governor of Lādhiķiyya in 980 a certain Karmarūk, who distinguished himself in an expedition against the Fāṭimid prov nce of Ṭarābulus [*q.v.*]. When the city was attacked by Nazzāl, governor of Ṭarābulus, Karmarūk was taken prisoner in the course of a sortie and later beheaded in Cairo. In 374/985, Lādhiķiyya belonged to the *djund* of Ḥimṣ [*q.v.*]. Ibn Buṭlān gave a description of the Byzantine city in 440/1049.

In 479/1086 it belonged to the Banū Munķidh [*q.v.*] of Shayzar, who then ceded it to the Saldjūķ sultan Malik Shāh. On 8 Ramaḍān 490/19 August 1097 a fleet of twenty-two ships from Cyprus penetrated the harbour and sacked the town. In 491/1098, Raymond de Saint-Gilles in the course of his journey to Jerusalem left a garrison at Lādhiķiyya and returned to establish his base there following the success of the First Crusade. In spring 1100, Raymond set out on the Anatolian crusade; returning to the coast in 1101, Raymond was obliged to renounce his claims to the city, then occupied by the Byzantines. Tancred took control of the city in 1103, after a siege lasting eighteen months, with the aid of a Genoese fleet of forty ships. Lādhiķiyya was integrated into the principality of Antioch and at that time was one of the most active ports of the eastern Mediterranean. This port, called by the Crusaders La Liche, used to export the commodities brought by the caravans from the Far East. For a number of years the city was the object of rivalry between the Franks and the Byzantines. In 1104, a fleet commanded by the admiral Cantacuzenus succeeded in forcing the Franks to capitulate. Tancred succeeded in forcing the Franks to capitulate. Tancred succeeded four years later, after Bohemond had promised it to Alexis Commenus, in recapturing Lādhiķiyya with the aid of the Pisans; the latter, like the Genoese before them, were granted an enclave in the city, as well as freedom of trade in the ports and markets of the Principality.

In 1134, the princess Alice donated a house to the Knights of the Order of the Hospital [see DĀWIYYA and ISBITĀRIYYA, in Suppl.], who made it their headquarters in Lādhiķiyya. In Radjab 530/April 1136, the *amīr* Sawār who governed Aleppo on the authority of Zankī, mounted a raid against Lādhiķiyya and devastated it. In 559/1164, Nūr al-Dīn [*q.v.*], in his turn, invaded the region and attacked the port.

On 25 Djumādā I 584/22 July 1188, after a rigorous siege, Saladin captured Lādhiķiyya; the most beautiful city of the coast, according to ʿImād al-Dīn Iṣfahānī, was pillaged, and the marble façades of the houses were ripped off and carried away. The Ayyūbid prince appointed the *amīr* Sunķur al-Khilāṭī as governor of the city, which was given a strong Muslim garrison. This was the end of the Frankish occupation. In 1190, at the approach of Frederick Barbarossa, Saladin had the ports of the

Syrian coast dismantled. In October 1191 Bohemond III tried in vain to recapture Lā<u>dh</u>iķiyya. He renewed the attempt in 1197, but al-Malik al-Ẓāhir <u>Gh</u>āzī had given the order to make the port unusable; seeing the damage, the prince of Antioch withdrew and shortly after, al-Malik al-Ẓāhir of Aleppo restored the citadel.

Under the Ayyūbids, the district of Lā<u>dh</u>iķiyya was part of the province of Aleppo. In 601/1204-5, the Franks of Tripoli and the Hospitallers attacked the town, which was also an embarkation base for expeditions against Cyprus. In 1207 the Venetians, the rivals of the Genoese, received from al-Malik al-Ẓāhir <u>Gh</u>āzī a concession with a *funduķ*, a *ḥammām* and a church. At the end of 620/December 1223, an army sent from Aleppo, fearing it would be unable to resist the forces of the Fifth Crusade, destroyed the defences of Lā<u>dh</u>iķiyya and dismantled the citadel. In 1261, taking advantage of the defeat of the Muslims at the hands of the Mongols of Hülegü, Bohemond VI took possession of the town with the support of the Hospitallers, to whom he awarded half of the city and of the surrounding area. The Genoese re-established themselves there at the expense of the Venetians. In 673/1275 there was an exchange of correspondence between Baybars [*q.v.*] and King Hugo III of Antioch-Lusignan on the subject of Lā<u>dh</u>iķiyya. On 4 July 1275 the Franks obtained from the Mamlūk sultan the freedom of the city in return for an annual tribute of 20,000 *dīnārs*, and continued to exercise authority, but the town was in a state of constant decline to the benefit of Tripoli, Alexandretta and Payas, whither commerce was diverted following the fall of the Principality of Antioch. In 1287, a severe earthquake caused damage to the fortifications and a number of towers, including the Pigeon Tower, the Pier and the lighthouse collapsed; without delay, the sultan Ķalāwūn [*q.v.*] sent the *amīr* Turuntay, one of his lieutenants, to attack Lā<u>dh</u>iķiyya. The siege machinery completed the destruction of the fortifications; to capture a massive tower built by Bohemond III in order to guard the entry to the harbour, Turuntay was obliged to enlarge the embankment linking it to dry land. On 5 Rabīʿ I 686/20 April 1287, the city fell, putting an end to the presence of the Franks in northern Syria. Lā<u>dh</u>iķiyya soon become the centre of one of the *niyābas* of the new province of Ṭarābulus, its *nāʾib* being an *amīr* of ten with military responsibilities. When Ibn Baṭṭūṭa visited the city in 1355 he was impressed by its size and by the number of its inhabitants, as well as by its fine anchorage. But the city was not slow to decline. In 1366, arriving from Cyprus, Pierre de Lusignan attacked Lā<u>dh</u>iķiyya, pillaged and razed it. In 1436, the sultan Barsbay [*q.v.*] expelled the Venetian merchants from the town, and in the middle of the 15th century it was less populated than Beirut and Tripoli, and much of it was in ruins. It exported cotton and luxury fabrics (*samīs*) as well as Arabian manna to Europe, and in 1494 was importing its sugar from Cyprus. Until 1516, Lā<u>dh</u>iķiyya was apparently subject to the viceroys of Ḥamāt.

Ancient and mediaeval monuments. Arab historians and geographers mention a large number of ancient buildings in Lā<u>dh</u>iķiyya. Ibn al-A<u>th</u>īr and Abū <u>Sh</u>āmā praise the "high and beautiful houses and the perfectly straight streets paved with slabs of marble". The baths, the amphitheatre, the hippodrome and the sanctuaries built by Septimus Severus existed at the start of the 5th/11th century only in the memory of the inhabitants. However, thirteen monolithic columns still mark the location of commercial streets covered in by porticos of the Roman period. A number of cisterns in use at the beginning of this century and the remains of an aqueduct to the east of the city bear witness to the ancient hydraulic system. The city's ramparts have finally disappeared as a result of earthquakes, innumerable sieges and successive demolitions. The anchorage was designed according to the relief plan which is unconnected with the external shape of the built surface. The gates of the city were situated at the ends of the main arteries, each one flanked by two crenellated towers, if we are to judge by the mural crown worn on Roman coinage by Tyche, the tutelary goddess of the city. There were two gates, that in the east which was the starting point of the road to Afāmiya [*q.v.*] and which proceeded by way of the pass between the hills dominating the town, and the north gate which stood at the end of the colonnaded avenue which passed by the foot of the citadel and continued beyond the walls as the road towards Antāķiya [*q.v.*]. Among the best-known towers are the Tower of the Pigeons that provided the postal service, and the Pier which, in the Middle Ages, protected the narrows of the harbour on the site of an ancient lighthouse, probably the new tower constructed by Bohemond in 666/1268. On the northern causeway, at the site of the modern lighthouse, the Fārūs marked the entry to the port. This was, judging by the evidence of numismatic iconography, a round or polygonal tower built on a base of two levels with a second smaller tower bearing a tall, draped statue at its summit. This monument existed in the reign of Domitian (1st century A.D.). The Fārūs gave its name to a famous convent, the Dayr Fārūs, which was held to be the most beautiful in Syria; situated outside the town according to Ibn Baṭṭūṭa, it was much visited by Christians and also attracted large number of Muslims.

At the perimeter of the ancient town there stands an important monumental arch, the Tetrapyle, with its four fully-rounded arches banded between four strong pillars. The east-west thoroughfare came to an end at this monument. At a distance of 500 m. from the Tetrapyle there remain four Corinthian columns of a peristyle—doubtless the remains of a temple dedicated to Bacchus which was converted into a church (*Kanīsat al-muʿallaķa*).

All the authors speak of two twin castles linked together and built on a hill overlooking the town to the north-east. Röhricht (in *ZDPV* x, 310) has prepared a list of the buildings that are known to us from the Frankish sources.

The Ottoman period. In the middle of the 16th century, the port of Lā<u>dh</u>iķiyya was part of the *liwāʾ* of <u>D</u>jabala; cotton and olives were cultivated in the region; walnuts and mulberry trees were of high quality, while vine-growing retained its ancient reputation. In the first half of the 18th century, Lā<u>dh</u>iķiyya was subject to Ṭarābulus, and was governed by Yāsīn Bey, son of Ibrāhīm Pa<u>sh</u>a al-ʿAẓm. In Rabīʿ I 1143/September 1730, there was a major uprising; the rebels were joined by the troops sent to rescue Yāsīn Bey, and when a few months later fresh troubles broke out, the ʿAẓms were removed from all their positions of authority in Syria.

The modern period. In 1914, Lā<u>dh</u>iķiyya, with a population of 7,000, was nothing more than a small town belonging to the *vilāyet* of Beirut and administered, according to the Ottoman law of

1294/1877, by a municipality of which the president was chosen by the government in Istanbul from among the elected councillors.

In 1919, with the arrival of foreign troops, the opposition rallied behind the Shaykh Ṣāliḥ and incited insurrections against the French. On 31 August 1920, with the establishment of the French Mandate—confirmed by the League of Nations in 1922 and put into effect in 1923—Lādhiḳiyya became the capital of the autonomous territory of the Alaouites, with a governor under the authority of the mandatory administration. In June 1922 this territory became the State of the Alaouites, composed of two *sandjaḳs* : that of Lādhiḳiyya and that of Ṭarṭūs. It received a French governor and was integrated into the federation of mandated states. In 1923, Sulaymān Murshid headed an anti-French movement with a religious flavour. In December 1924, General Weygand announced the secession of the State of the Alaouites, proclaiming its independence on 1 January 1925. In 1930, a fundamental law, published on 14 May by the High Commissioner, created a government of Lādhiḳiyya. In 1936 this government was integrated into Syria, but benefited from a special administration under the authority of the Syrian government; France was authorised to station troops there for five years. In July 1939, Lādhiḳiyya became the capital of the autonomous territory of the Alaouites, separate from Syria. On 20 June 1942, this territory was once more integrated into Syria. This integration was confirmed in 1946 with the proclamation of independence.

The port. At the present day, the port of Lādhiḳiyya is the most important port of Syria. Originally, it was a bay open to the south-west, with no protection from the prevailing winds. The sea-bed is of inferior consistency, but the inlet is well protected from the south winds. Immediately behind rises a range of hills with fertile soil; "it is not the prosperity of the port that has created that of the town, but the reverse" observes Weulersse.

The ancient port was "perceptibly more low-lying on the ground than the present-day port". In 1934, Sauvaget noted a depression, which corresponded to the ancient docks, gradually covered over by shifting soil, whose outline marked those of the ancient port. The conquering Arabs found a port which had already lost its prominence. Its economic value remained; the battles fought by Byzantines, Muslims and Crusaders for possession of the town are proof of this. The Arab geographer al-Dimashḳī (d. 727/1327) describes it as "a very beautiful port, one of the most spacious, always full of great ships".

The expulsion of the Franks led to a decline which lasted until the Capitulations. The port silted up. In the 18th century it could contain no more than four to six small boats. In the 19th century the haven was used only by small sailing boats; European ships anchored out at sea. Nevertheless, the port was very active, and around 1835 more than a hundred ships were visiting it annually. At the end of the 19th century, the volume of traffic using Lādhiḳiyya placed this port behind Beirut and Tripoli, but well ahead of Sidon and ʿAkkā [*q.vv.*]. The annual traffic was 120 steamships (55 of them French) and 570 sail-boats.

With the establishment of the Mandate, Lādhiḳiyya was roused from its lethargy. A restoration of the harbour was undertaken; the north and south moles were rebuilt, the depth of the inner harbour was increased from two to six metres, but these enlargements were still not sufficient for large ships, and merchandise and passengers continued to be disembarked at sea and brought ashore in lighters. In 1932, the scale of Syrian importing and exporting was such as to give rise to speculations that Lādhiḳiyya might be able to regain its original prosperity, and a plan was formulated to double the size of the dock by building an outer harbour and to construct a solid embankment further to the west proceeding towards the north, thus creating a deep-water port and an easily-dredged inner harbour.

Lādhiḳiyya lived "a life without glory and without future" until the day when, after the loss of the *sandjaḳ* of Alexandretta in 1938, Syria had no other solution to the problem of its commerce than to provide the means of restoration to its sole remaining harbour on the Mediterranean coast. The first plan was prepared in 1944 and then a more extensive project was envisaged in 1948. Lādhiḳiyya was at that time only a fishing port, with an annual turnover of 300 to 400 tons of fish. The construction of the modern port began in 1950; the following year, 24.6% of overseas trade passed through Lādhiḳiyya. In 1953, the construction of a large jetty was begun and also a silo of 35,000 tons capacity. In 1955, it was realised that the original project no longer responded to the needs of a major port. In 1957 the first stage of the modernisation was completed. If the activity of the port was modest until 1958, it was already handling no less than 52% of overseas trade. The ten-year plan of 1958-68 foresaw important works of infrastructure; thus it was that by 1968 there was a breakwater 1423 m. in length, assuring the protection in all seasons of a dock of 44 ha. a principal quay 600 m. long by 9.50 m. high capable of accommodating five ships at once, a quay 250 m. long beside the old dock, the total length of the quays amounting to 1160 m., and with modern equipment permitting the rapid handling of merchandise. The construction of a railway and of the highway No. 3 leading to Aleppo and the valley of the Euphrates have given a strong impetus to the economic activity of the Lādhiḳiyya, which has become the commercial outlet for Aleppo, northern Syria and the Djazīra. In 1967, 1,526 ships visited the port; they imported 1,294,000 tons and exported 331,000 tons of such Syrian products as tobacco, cotton, silk, fruit and eggs. The activity of the port is supplemented by industry represented by asphalt factories, soap factories, cotton processing works, flour-mills. The population of Lādhiḳiyya has expanded remarkably: in 1914, 7,000; in 1931, 20,000; in 1940, 30,000; in 1960, 68,000; and in 1970, 126,000.

LADJĀʾ (literally "refuge") is the largest, geologically-recent lava-field in the south of Syria, comprising a plain of *ca.* 900 square km. It has roughly the form of a triangle, the base of which is formed in the south by the line Izraʿ-Shahba (*ca.* 45 km.) and the apex of which lies *ca.* 48 km. to the north near Burrāḳ (*ca.* 50 km. south-east of Damascus). In the north, the area is limited by the Wādī al-ʿAdjam, in the east by the Arḍ al-Bathaniyya [see AL-BATHANIYYA], in the south-east by the Djabal al-Durūz, in the south by the Nuḳra of Ḥawrān [*q.v.*], in the south-west by Djawlān [*q.v.*] and in the north-west by Djaydur.

Volcanic cones, some more than 1,000 m. high (the highest, 1,159 m., lies west of Shahba), tower up from the volcanic fields, which lie at an average of 600-700 metres above sea level. The fringes of the area are inhabited, as are also a few favoured places in the interior where agriculture is made possible by depressions which are free of stones and which have a diameter of several hundreds of metres. These depressions, called *ḳāʿ*, probably originated from volcanic eruptions of gas. Since springs and underground water are now failing, water is supplied by cisterns (R. Dussaud, *Topographie historique de la Syrie antique et médiévale*, Paris 1927, 371-81; E. Wirth, *Syrien*, Darmstadt 1971, 419 ff.).

The area has borne its contemporary name since the Middle Ages (Yāḳūt, iv, 350). In antiquity, it was known under the name of Trachonitis (indicating also the *Tulūl al-Ṣafā* which lie further eastward) (Josephus, *Ant.* xv, 10,1; Ptolemy, v, 15, 26; Strabo, xvi, 2,16 and 20). During the second and first millennia B.C., Trachonitis, itself without any political and economic significance, was under the influence of the Hebrews in the south and the Aramaeans of Damascus in the north. In the second century B.C., Trachonitis was annexed to the empire of the Seleucids and formed the frontier between the spheres of influence of the two Arab peoples, the Nabataeans in the south and the Ituraeans in the north-west. When in 24 B.C. the region was put by the Romans under the command of Herod, it was inhabited by a rapacious nomadic people without agriculture, who infested both the trade route to Damascus and the Jewish pilgrimage route from Babylonia to Jerusalem. In order to check the Trachonites, who were living with their cattle in the volcanic caves and depressions of the region (Josephus, *Ant.*, xv, 10,1), the town of Bathyra was founded during Herod's reign (its site is disputed, but was probably in the neighbourhood of Ṣanamayn, see Dussaud, *Topographie*, 331). Trachonites and the neighbouring regions obtained freedom from taxation and were soon sedentarised.

Between the 1st century B.C. and the 4th century A.D., numerous settlements and towns with theatres, colonnades and several temples were founded, like Philippopolis (Shahba) and Shāʿara (the classical name of which is unknown). A road, traversing the Ladjāʾ from north-west to south-east, was connected with the Roman road system in Syria. Inscriptions and ruins from the Roman period are found in nearly 20 sites (for the antiquities, see H. C. Butler *et alii*, *Syria. Publ. of the Princeton Univ. Arch. Expedition to Syria in 1904-5*. Division i, Leiden 1930, 95 ff.; Division ii, Section A, Part 7: *The Ledjā*, Leiden 1907-19).

The post-Roman pattern of settlement in the Ladjāʾ resembles that of other regions in Syria which are equally disfavoured by nature. Under the Byzantines (4th-7th century A.D.), the density of settlement reached a height that can only be compared with that of most recent times. In nearly 30 sites, Byzantine remains have been preserved, among which is the famous bilingual inscription in Greek and Arabic at Ḥarrān in the south of the Ladjāʾ (*RCEA*, i, no. 3). Not far from Ḥarrān, in Busr al-Ḥarīrī (Bosor in ancient times) and Izraʿ (Andrea Zorava, with the still undamaged St. George's church from 515), lie the most impressive Byzantine ruins of the region. Both sites are also mentioned by the Arab geographers of the 7th/13th century. According to Yāḳūt (ii, 921), Izraʿ (= Zurrā or Zurʿ) belonged to Ḥawrān (also in the later Ibn Baṭṭūṭa, i, 254). Busr (= Busr al-Ḥarīrī), where the tomb of al-Yasaʿ or Ilyasaʿ was revered (Harawī, *K. al-Ziyārāt*, 16; Yāḳūt, i, 621), seems to have been the more important site at the time. The fact that the Ladjāʿ is mentioned only by the later Arab geographers points to a re-settlement in the area at that period. As in other volcanic regions of Syria, repopulation was caused by the pressure produced by the Mongols on the population to the east of Syria. There is no doubt that the greater part of the Islamic ruins, proved to exist in 13 sites of the area, date from the 13th century.

We do not have accurate information on the period when settlement started to decline after the Middle Ages. With the exception of a few Christian settlements on the borders, the region seems to have been depopulated by the 17th century at the latest. During the 18th and 19th centuries, Druzes immigrated from Lebanon into the eastern and southern parts of the Ladjāʾ, and in the 19th century Bedouins settled in the north and the west. As in pre-Roman times, the Ladjāʾ was considered to be a hiding place for rebels and marauders during extensive periods of Ottoman rule. Notwithstanding the garrisons established on the border of the Ladjāʾ, the Ottomans were not able to bring it under control. Only the French mandatory power succeeded in doing this by sending over low-flying aircraft. At present, the Ladjāʾ is inhabited by peasants who are Muslim, Druzes and Christians (the latter mostly Greek Catholics).

LADJDJŪN, a small town in the Esdraelon plain in the vicinity of ancient Megiddo, in the north of Palestine, at lat. 32° 34′ N. and long. 35° 21′ E. It was the seat of the sixth Roman legion, on account of which it came to be known as Legio, and Ladjdjūn is the Arabic adaptation of the Roman name. The town, which is 175 m. above sea level, is referred to by early Arab geographers as part of Djund al-Urdunn bordering on the Djund of Palestine. The Islamic geographers emphasise its location on the highway between Damascus and Egypt, and it was also well-connected by roads to other parts of northern Palestine.

When the Mamlūks, after the expulsion of the Frankish Crusaders from Bilād al-Shām (Greater Syria), reorganised the country into a number of *mamlakas* or provinces, the old Djund al-Urdunn was incorporated into the new province of Ṣafad. Al-Ladjdjūn and Djīnīn constituted the seventh *ʿamal* or district in this province. Shaykh Ṣadr al-Dīn Muḥammad b. ʿAbd al-Raḥmān, better known as al-ʿUthmānī (d. 780/1379), states that Ladjdjūn's inhabitants and those of the Esdraelon plain belonged to the Yamanī faction [see KAYS ʿAYLĀN. Ḳays and Yaman in the Ottoman period] and are most likely the descendants of the B. Djudhām [*q.v.*] mentioned in earlier sources as living in that neighbourhood. During the late Mamlūk period and during the 10th/16th and 11th/17th centuries, an indigenous Bedouin clan by the name of the Āl Ṭarabay, sometimes called Āl Ḥāritha, emerged in that area. The Mamlūks, as well as the Ottomans, entrusted this family with administrative and fiscal duties.

Ladjdjūn owed its prominence to its excellent location in a fertile plain with abundant water supply, to the influence of the Āl Ṭarabay and to the sanctity of a shrine, attributed to Abraham, which attracted pious people and on the site of which a domed building was constructed. It was also important because the Mamlūk sultans and senior officials travelling through the region used to rest there, since the sultan had his own *maṣṭaba* (an elevated piece of land for pitching his pavilion) there. Furthermore, it had its own *khān* [*q.v.*] or caravansaray to accomodate travellers and merchants, referred to by Ewliyā Čelebi.

In 945/1538 the town of Ladjdjūn, mentioned as a *ḳarya* or village in a *tapu defter*, had a population of 23 Muslim households. One-fourth of its revenue amounted to 4,670 *aḳčes* and formed part of the *iḳṭāʿ* of Ṭarabay. From the list of revenues, it appears that wheat, barley and sesame were grown there, and it had its own two-stone water mill paying a tax of 1,000 *aḳčes*. The protection-money tax (*bādj ghifārah*) yielded 30,000 *aḳčes*, collected annually at the above-mentioned *khān*. As late as 1696, when the English traveller Henry Maundrell was passing on his way from Aleppo to Jerusalem, he paid a local Bedouin chieftain "two caphars, one of Legune, one of Jenin".

In the second half of the 10th/16th century, a new *sandjaḳ* consisting of four *nāḥiyas*, that of Ladjdjūn, was set up in northern Palestine, where the village of Ladjdjūn formed part of the *Khāṣṣ-i Pādishāh*. The number of its inhabitants had now risen to 41 Muslim households and one-fourth of its revenue amounted to 15,500 *aḳčes* yearly. The extant imperial *firmāns* addressed to the various officials in both the *sandjaḳ* itself or in the Province of Damascus, exhibit the sultan's interest in maintaining law and order and in restoring fortifications in the area.

The decline of Ladjdjūn is associated with the eclipse of the Āl Ṭarabay in 1677, and the rising importance of the Syrian coastlands, following the creation of the new province of Sidon in 1660 and the benefits arising there from the growing trade with Europe. This fact was recognised by the Bedouin clan of the Āl Zaydānī, who replaced the Āl Ṭarabay and made Acre their principal town. Ladjdjūn remained a centre of the *sandjaḳ* and had its own *mutaṣarrif* (provincial governor), but nevertheless it continued to lose importance to the coastal villages of Ḥayfā and Acre. In 1940, the village had 1,103 souls; nine years later, after the establishment of the state of Israel, a Jewish settlement was established in its environs reviving the old name of Megiddo.

Ladjdjūn is further the name of a place to the east of modern al-Karak [*q.v.*] in Trans-Jordan, described by several geographers as a halting-place on the route to Mecca.

LĀDJĪN (LĀČĪN), AL-MALIK AL-MANṢŪR ḤUSĀM AL-DĪN, alias SHUḲAYR or AL-ASHḲAR, Turkish Mamlūk sultan. Originally a *mamlūk* of al-Malik al-Manṣūr ʿAlī b. Aybak, Lādjīn was purchased after his master's deposition in 658/1259 by the future sultan Ḳalāwūn [*q.v.*], on whose accession he was raised to the amirate, and sent to Damascus as governor of the citadel (Dhu 'l-Ḥidjdja 678/April 1280). His appointment alarmed the provincial governor, Sunḳur al-Ashḳar, who proclaimed himself sultan. The revolt was suppressed by an expeditionary force from Egypt, and in Rabīʿ I 679/July 1280 Lādjīn was appointed governor of the province. His successful tenure of this office throughout the

remainder of Ḳalāwūn's reign made him one of the most powerful magnates in the realm at the accession of al-Malik al-Ashraf Khalīl in 689/1290, and the two regarded each other with mistrust. Lādjīn headed the Damascus contingent at the siege of Acre, during which he was arrested and sent to Ṣafad (Djumādā I 690/May 1291). He was restored to favour, but in Shawwāl 691/September 1292 he fled, fearing arrest, was captured by Arabs, and sent a prisoner to Cairo. Again released, he conspired with the vicegerent (*nā'ib al-salṭana*) Baydarā al-Manṣūrī and other malcontent *amīrs* against the sultan, who was murdered during a hunting expedition (Muḥarram 693/December 1293). The conspirators failed, however, in their further aim of placing Baydarā on the throne; he was killed, and Lādjīn absconded. Khalīl's infant brother, al-Malik al-Nāṣir Muḥammad, was installed as sultan with the vicegerent Kitbughā al-Manṣūrī as *de facto* ruler. In Ramaḍān/August, Lādjīn emerged from hiding. Under his inspiration, Kutbughā usurped the sultanate (Muḥarram 694/December 1294), and Lādjīn himself was invested as vicegerent. Kutbughā's short reign was marked by dearth and famine in Egypt, and by the settlement in Palestine of numerous Oirat warriors with their families, fugitives from the Īlkhān Ghāzān after his overthrow of Baydū [*q.vv.*]. Since Kitbughā was himself a Mongol, the Turkish and Circassian *amīrs* may have seen this immigration as a threat to their ascendancy. A faction headed by Lādjīn deposed Kitbughā and installed Lādjīn as sultan in Muḥarram 696/November 1296.

Recurrent crises of the Mamlūk sultanate arose from the inveterate hostility between the *mamlūks* of the reigning sultan and those of his predecessor, whom the new ruler invariably sought to displace in order to reward his own household and to secure his own position. In an attempt to safeguard themselves, Lādjīn's fellow-conspirators made an accession compact with him by which he undertook to renounce the absolute discretion, the essence of the royal autocracy, and not to give his own *mamlūks* power over them. The absence of institutional sanctions for this compact soon rendered it null. In Dhu 'l-Ḳa'da 696/September 1297, the sultan removed his fellow-conspirator, Ḳarā Sunḳur al-Manṣūrī, from the vicegerency, which he bestowed on his own *mamlūk*, Mankūtamur. The tactless exercise of plenary powers by the new vicegerent antagonised the *amīrs*, who had still more reason to be alarmed by the sultan's fiscal reforms. A cadastral survey and redistribution of *iḳṭā'*s in Egypt (*al-rawk al-Ḥusāmī*) was carried out in Djumādā I-Radjab 697/March-April 1298, the first measure of this kind since Saladin's time (572/1176). The sultan retained the previous categories of beneficiaries, i.e. the privy purse (*al-khāṣṣ*), the *amīrs* and the *ḥalḳa* [*q.v.*], but whereas the allocation to the privy purse was unchanged, the other two categories were combined and given a smaller total assignment. The sultan was thus left with a surplus, free of the charges on the privy purse, on which he could maintain a new military force—an obvious threat to the power of the *amīrs*. In the following months their resentment led to a conspiracy, and on the night of 11 Rabī' II 698/eve of 16 January 1299 Lādjīn was murdered and Mankūtamur put to death. After some days of uncertainty, al-Malik al-Nāṣir Muḥammad was restored as titular sultan.

LAGHOUAT (al-Aghwāṭ), Algerian town and oasis, administrative centre of a *wilāya* (district), 420 km. to the south of Algiers (long. 0° 30′ E. [Paris], lat. 33° 48′ N. Altitude: 787 m.). It was formerly the administrative centre of one of the four "Territories of the South" forming the region of Algeria administered under martial law, until the reform instituted by the law of 20 September 1947 (*Statut de l'Algérie*). On account of its geographical position, dominating the defence of the Sahara, as well as memories connected with the dramatic story of its conquest by the French (1844-52), not to mention its attractions as a centre of tourism, Laghouat has been the subject of numerous studies (see *Bibl.*). On the other hand, the town occupies a position of eminence in the cultural and religious history of contemporary Algeria, especially as one of the very first focal points of orthodox reformism of the Salafiyya [*q.v.*].

Population. Because of its isolated location, on the fringes of the desert, far removed from the main areas of economic activity in the north, Laghouat has for a long time lived the uneventful life of a self-contained oasis. Its small-scale economy was limited to the cultivation of palm-trees, supplemented by local craftsmanship (weaving of wool) and sheep-rearing, according to long-standing practices of association between Laghouatis and Bedouin of neighbouring tribes (Larbā' and Mkhālīf). In this phase of economic stagnation, the population only grew at a very slow rate: from 7,000 in 1928, to 11,999 in 1954, a rate of increase lower than that of the remainder of the Muslim population of Algeria. With independence (1962), and in spite of the departure of the Europeans (who numbered about a thousand) and of the Jewish community (about 600), the population of the town underwent a spectacular increase, this being due to the economic influx engendered by the hydrocarbon industry (particularly prospecting and exploitation of natural gas deposits in the area of Hasi Rmel, and heavy road traffic towards the oil-fields of the far south).

Location. The town and the oasis are situated on the right bank of the Wādī Mzi, which descends from the Djabal 'Amūr and is absorbed into the Shaṭṭ Malkhīr, in the Constantinian south. The oldest sectors are set out on the two slopes of two rocky outcrops, foothills of the Djabal Tizgrārīn. The new town has developed to the north-west of these hills, and is steadily encroaching on the area of palm-plantations. The oasis itself extends in a semi-circle to the north-west and south-east of the town. The palms (about forty thousand trees) produce several excellent varieties of dates (but not the famous *daglat nūr*) and constitute one of the main pillars of the local economy. Through its position on the central north-south (Algiers-Sahara) axis, which has become a vital artery for independent Algeria, and its location between the Oranian south and the Constantinian south, at the point of divergence of routes leading, to the west towards the territory of the Awlād Sīdī 'l-Shikh, to the east towards the

Zībān and the Biskra, to the south towards the Mzāb (Ibāḍī territory), then towards the oilfields (Ḥāsī Masʿūd) on the one hand, and towards the main highway for penetration of the African continent, the "Trans-Sahara", on the other, Laghouat is at the centre of a considerable network of communications.

History. In the 4th/10th century, there already existed on the banks of the Wādī Mzi a locality whose inhabitants, after acknowledging the authority of the Fāṭimids, took part in the revolt of Abū Yazīd al-Nukkārī [*q.v.*]. The neighbouring region was overrun by Berber tribes belonging to the family of the Maghrāwa [*q.v.*] (cf. Ibn Khaldūn, *Kitāb al-ʿIbar*, Algiers 1851, i, 64, Beirut 1956-9, vii, 96; Baron Mc G. de Slane, *Histoire des Berbères...*, iii, 273). The Hilālian invasion brought into the region other tribes of the same race, notably the Ksel, fugitives from the Zāb, who founded a village called Ben Būṭa (the *nisba* "al-Būṭī" is still in use in Laghouat). Several other *ksour* (Bu Mendala, Nadjal, Sīdī Mīmūn, Badla, Ḳaṣbat Ftūḥ) were built by other emigrés, some of Arab origin (Dwāwda, Awlād Bū Zayyān), others from the Mzāb. This collection of urban centres was known by the name *Laghwāṭ*/*Laḳwāṭ*, the latter orthography being the only one which corresponds in reality to the current pronunciation in the Laghouati dialect. The modern form al-Aghwāṭ indicates a concern for conformity with the paradigms of Classical Arabic (cf. the model *afʿāl*). Now the classical form *ghawṭ*/*ghāṭ*, plur. *aghwāṭ*, is totally foreign to the linguistic usage of Laghouat and its surrounding neighbourhood. In spite of the feeling of Arabism which is a feature of the collective consciousness, there is still evidence of an ancient Berber stock, in various forms: personal names: numerous patronyms cited by Ibn Khaldūn (cf. above) are still borne in Laghouat and its surroundings; toponymy: place-names of Berber consonance in the Laghouat region are too numerous to be mentioned (see the detailed maps); agricultural sphere: the technical vocabulary of palm cultivation includes terms of Berber pedigree, particularly to denote fine varieties of dates (*timdjuhret, tizzawet, taddalet*, etc.); social sphere: the *twiza* (Berber *thiwizi*) has for a long time been a form of ritualised collective mutual aid (domestic tasks, weaving of wool, seasonal work in the oasis or the fields); and folklore: the old antagonism between sedentary Berbers and Arab tribesmen is still expressed in the form of a satirical folklore which perpetuates a more or less caricature image of "Arabs" (meaning Bedouin).

Little is known of the social and political history of Laghouat until the 18th century. At the end of the 16th century, it paid tribute to the king of Morocco. In 1666, the *ksour* of Badla and Ḳaṣbat Ftūḥ were abandoned. In 1698, a holy man, a native of Tlemcen, Sīdī 'l-Ḥādjdj, took up residence in Ben Būṭa and sought to reconcile the rival factions. His moral authority extended to the people of three other *ksour* as well as to the neighbouring tribe of the Larbāʿ. Under his leadership, the people of Laghouat defeated the inhabitants of the *ksar* al-ʿAssafiyya, but found themselves obliged to pay tribute to the sultan of Morocco, Mawlāy Ismāʿīl (1672-1727 [*q.v.*]), who came and camped under the walls of the town in 1708. After the death of al-Ḥādjdj, the patron of the town (1151/1738), the history of Laghouat was reduced to that of confrontations between two parties who competed for political and religious superiority: the Awlād Serḳīn, inhabitants of the south-west quarter, allied to the Tidjāniyya [*q.v.*] and the Aḥlāf, the majority of them affiliated to the Ḳādiriyya [*q.v.*]. In the course of these internecine struggles which periodically brought bloodshed to the oasis, the Turks succeeded in having their supremacy recognised. From 1727, the Bey of Tīṭrī had, in effect, imposed an annual rent on the people of the *ksour*. On the other hand, the Mzābīs, expelled from the oasis where they had acquired a share of the plantations, formed a confederation with the nomads of the south, over which the Laghouatis triumphed thanks to the support of the Larbāʿ (1752). This memorable episode seems to have put an end to a prolonged religious war, through the definitive elimination of Ibāḍiyya from an oasis whole-heartedly attached to Mālikī orthodoxy, over and above its ancestral discords. Towards the end of the 18th century, the Turks made an effort to reassert their supremacy, from which the Laghouatis had been gradually freeing themselves. Military expeditions were undertaken for the annual collection of taxes, with varying degrees of success, by the Bey of Medea, then by the Bey of Oran (1784 to 1802). In turns, the Aḥlāf and the Awlād Serḳīn were the object of favours or reprisals on the part of the Beys.

The two parties were not slow to re-align themselves with their respective allies, and the confrontations resumed with even greater severity, until the day when the chieftain of the Aḥlāf, Aḥmad b. Sālim, having allied himself through marriage with one of the leading Serḳīn families, became master of Laghouat and of the neighbouring *ksour* (1828). After a period of tranquillity, Laghouat became involved in the struggle of the *amīr* ʿAbd al-Ḳādir against the French. The chieftain of the Awlād Serḳīn, al-Ḥādjdj al-ʿArbī (descendant of the patron saint of the town) was appointed *khalīfa* by the *amīr*. But he was unable to maintain his position and was obliged to flee to the Mzāb. His successor, ʿAbd al-Bāḳī, was no more fortunate, although he had a force of 700 regular soldiers and a piece of artillery. His policies met opposition from the civic leaders and caused a riot; he was forced to leave Laghouat (1839). Al-Ḥādjdj al-ʿArbī was appointed *khalīfa* for the second time. The same year, when the *amīr* was forced to raise the siege of ʿAyn Māḍī (after eight months) to regain control of the Tell, Aḥmad b. Sālim and his partisans took the opportunity to rally their troops. The *khalīfa* al-Ḥādjdj al-ʿArbī was overthrown and then captured, at Ḳsar al-Ḥīrān, where he was killed (1839). Thus restored to power in Laghouat, Aḥmad b. Sālim entered into negotiations with the French (Col. Marey-Monge) to ask for recognition of his authority over southern Algeria (March 1844). This protectorate constitutes the first stage in the process of annexation of Laghouat, a process too long to be summarised (cf. R. Le Tourneau, *Occupation de Laghouat par les Français (1844-1852)*, in *Études Maghrébines. Mélanges Ch. A. Julien*, Paris 1964, 111-36). Following several expeditions (1844, 1847, 1852), the town was taken by storm on 4 December 1852, at the cost of heavy losses on both sides (more than 2,500 dead). The taking of Laghouat (on the orders of General Pelissier) was one of the bloodiest episodes in the conquest of Algeria. On the Algerian side, the memory of the martyrs never ceased to be honoured, in the guise of a semi-folkloristic, semi-religious ritual, until the time of independence. After its conquest and fortifications, Laghouat received a permanent garrison and became the operational base of the French in the south.

In its various phases, from the beginnings (4th/10th century) to the eve of the contemporary period, the dramatic history of Laghouat has been a microcosm of the general history: (a) of the Central Maghrib, as depicted by the historian Ibn Khaldūn: chronic anarchy, with no respite for the population, exhausted by a perpetual struggle for survival independent of any aspiration for economic and cultural order, and any effort towards civilisation; (b) of modern Algeria under Turkish domination. Like all urban centres or tribes escaping direct control on the part of the central authority (Algiers) and of its beyliks (Oran, Medea, Constantine), Laghouat had only the most distant connections with the Turkish administration, which was interested only in the collection of taxes (the regularity of which was determined by the relative strength of the sovereign power and its vassals); and (c) of French Algeria. After a rigorous conquest and a long period of pacification, the oasis of Laghouat was, for almost a century, to be oriented towards the Sahara, as administrative centre of one of the four "Territories of the South" under military control. The population of Laghouat and its environs thus lived on the fringe of northern Algeria, without becoming permeated by French influence. In the absence of a political will and sufficient means, the "moral conquest" by means of education and the exercise of republican freedoms would seem to be a myth incompatible with colonial realities. Until the inter-war period (cf. the celebration of the "Centenary of Algeria" in 1930), the diffusion of French language and culture attained only insignificant proportions, even within the native Jewish community. For this reason, the traditional aspect of the Muslim society of Laghouat were preserved almost intact. With its natural connections with neighbouring Bedouin peoples (on account of pressing economic requirements), with the permanence of specific symbols of religious culture (a dozen mosques, some twenty Ḳurʾānic schools), and the preponderance of shrines and institutions of religious mystics (Tidjāniyya, Ḳādiriyya, Shādhiliyya, etc.), Laghouat found itself well-equipped in its cultural resistance to the West. These socio-cultural features were to be reinforced, in the nineteen-twenties, by the reformist preachings of the Salafiyya. In fact, thanks to the prestige and the strong personality of the *shaykh* Mubārak al-Mīlī (1897-1945), Laghouat became (from 1927) onward) one of the strongest centres of the reformist movement in Algeria, under the stimulus of the Association of Algerian Muslim *ʿUlamāʾ* and of its leader, the *shaykh* ʿAbd al-Ḥamīd b. Bādīs [*q.v.*] (cf. A. Merad, *Le réformisme musulman en Algérie...*., Paris 1967, 199-200).

LAḤAD [see ḲABR].

LĀHAWR (LAHORE), the principal city of the Pandjāb [*q.v.*], situated on the left bank of the Rāwī about 700 feet above sea level, at lat. 31° 35′ N. and long. 74° 20′ E. Its strategic location in the fertile alluvial region of the upper Indus plain has guaranteed it an important rôle in Indian history, very often as a frontier stronghold and more recently as the capital of the Sikh [*q.v.*] empire. Since 1947 it has been included in the republic of Pākistān, of which it is the second largest city.

1. History. Popular etymology connects the foundation of Lāhawr with the mythical Lava (Lōh), son of Rāma, and the forms Lōhāwar (cf. Peshāwar) and Lavapura have both been hypothesised by scholars, Cunningham (*Ancient geog. of India*, i, 197-8) identifying it with the place Labokla (< Lavalaka) mentioned by Ptolemy. Yet another possibility, Lahanagar, may have been preserved in the spelling Lāhanūr which appears in the 7th/13th century *Ḳirān al-saʿdayn* of Amīr Khusraw. It has also been identified with the anonymous flourishing city which the Chinese pilgrim Hsüan Tsʾang came upon around A.D. 630 on his way to Djālindhar.

At one time confused with Lohara in Kashmīr (see Sir M. Aurel Stein, *Kalhaṇa's Rājataraṅgiṇī*, Westminster 1900, ii, 293, 298, 363-4), Lāhawr is actually first mentioned in 372/982 in the *Ḥudūd al-ʿālam*², 89-90, where we read that it was subject, although a city populated exclusively by Hindus, to the Ḳurayshite ruler of Multān [*q.v.*]. Possibly this is what underlies a later tradition that at the time of the first Ghaznawid invasion the capital of the Hindū-shāhī rulers of the western Pandjāb had been moved from Lāhawr to Siyālkoṭ [*q.v.*]; and certainly Bīrūnī, writing shortly afterwards, locates the capital of the Lāhawr region at a place called Mandhūkūr (ed. Sachau, 101; cf. the discussion in S. H. Hodivala, *Studies in Indo-Muslim history*, Bombay 1939-57, i, 53). Lāhawr was captured at an uncertain date by Maḥmūd of Ghazna [*q.v.*], who constructed a fortress there and allegedly renamed the city Maḥmūdpūr, though this is doubtful. Under his successors it effectively became, as the administrative centre of the Indian provinces, the second capital of the Ghaznawid empire. The governor Aḥmad Yīnaltigin rebelled in 424/1033, and in 435/1043-4 Lāhawr was subjected to a long and unsuccessful siege by a confederacy of Hindu princes. But it remained firmly in Ghaznawid hands, serving, after the loss of Ghazna itself in 558/1163, as the capital until its capture by the Ghūrids [*q.v.*] in 583/1187 put an end to the dynasty.

On the murder of the Ghūrid Muʿizz al-Dīn Muḥammad b. Sām in 602/1206, Lāhawr became temporarily the capital of the Indian domain ruled by his slave Ḳuṭb al-Dīn Aybak [*q.v.*], but after his death it was disputed for some time among the other former Ghūrid officers Ḳubāča, Yīldīz, and Shams al-Dīn Iltutmish [*q.v.*]. Ḥasan Niẓāmī in his *Tādj al-maʾāthir* (Brit. Lib. ms. Add. 7,623, fols. 124b-129a) describes at great length its capture by Iltutmish's forces in 613/1217, although Djalāl al-Dīn Khwārazmshāh [*q.v.*], who invaded the Pandjāb a few years later, found a son of Ḳubāča in revolt against his father at Lāhawr (Nasawī, ed. Houdas, text 90), and it probably fell definitively to Iltutmish shortly before Ḳubāča's overthrow in 625/1228. Under Iltutmish's weak successors [see DIHLĪ SULTANATE], the govenors of Lāhawr were frequently in rebellion, and Kabīr Khān Ayāz was virtually independent there in 639/1241, when Lāhawr was taken and sacked by the Mongols. They did not follow up their victory, abandoning the city immediately, but around 651/1253, in the course of another inroad, they installed at Lāhawr the renegade prince Djalāl al-Dīn Masʿūd b. Iltutmish. Sub-

sequently, however, it appears again as part of the Dihlī Sultanate under its governor Shīr Khān, who is credited by the historian Baranī (*Taʾrīkh-i Fīrūzshāhī*, ed. S. A. Khān, Calcutta 1860-2, Bibl. Indica, 65) with numerous military successes against the Mongols. The city was restored by the Sulṭān Ghiyāth al-Dīn Balban [*q.v.* in Suppl.] soon after his accession in 664/1266, but Lāhawr was to remain for some decades a frontier region subject to regular Mongol attacks and seems to have been replaced as an administrative centre by Dēōpālpūr. It attained to a temporary prominence once more early in the 8th/14th century under the governorship of Ghāzī Malik, who himself ascended the throne of Dihlī in 720/1320 as Ghiyāth al-Dīn Tughluḳ [*q.v.*]. In the reign of his son Muḥammad [*q.v.*], however, the district was ravaged by the Čaghatay khān Tarmashīrīn around 729/1329, and a few years later Lāhawr was occupied by a Mongol chief named Hülečü [see HÜLĀGŪ] in alliance with the Khokars [*q.v.*]: the brutal reprisals against the populace by Muḥammad's forces are mentioned by Ibn Baṭṭūṭa (iii, 333). After this, its history is again obscure until the turn of the century, when Shaykhā Khokar, who had been appointed governor of Lāhawr by Maḥmūd Shāh Tughluḳ, made a timely submission to Tīmūr (801/1398), but on showing signs of disaffection was suppressed by an army under the conqueror's grandson Pīr Muḥammad b. Djahāngīr.

Lāhawr was included in the territory conferred by Tīmūr upon Khiḍr Khān, who in 817/1414 seized power in Dihlī and established the Sayyid dynasty. Under his successor Mubārak Shāh, the city was twice attacked by the Khokars, now led by Shaykhā's son Djasrat, while at the same time the Afghān Lodīs [*q.v.*] were beginning to encroach upon the Pandjāb. In 845/1441 Muḥammad Shāh Sayyid, in an effort to curb the power of the Khokars, granted Lāhawr to Bahlūl Lodī, who repaid the Sayyids by supplanting them at Dihlī ten years later. During the Lodī era, the province continued to enjoy a quasi-independence. It was the sulṭān's kinsman Dawlat Khān Lodī, governor of the Pandjāb, who encouraged the designs of Bābur [*q.v.*] on Hindūstān, leading to the occupation of Lāhawr by the Mughals in 930/1524. On the outbreak of the rebellion of Shīr Shāh Sūr, Bābur's son and successor Humāyūn fled to Lāhawr, which he had been compelled at an earlier date to cede to his brother Kāmrān Mīrzā. The two Mughal princes were unable to hold the Pandjāb, and abandoned it to Shīr Shāh (947/1540), with the result that Lāhawr once again enjoyed a period of Afghān rule. Shīr Shāh is said to have regretted on his deathbed that he had not razed the city, in view of its strategic value to an invader from the northwest, a sentiment doubtless echoed by his ephemeral successors when Humāyūn reoccupied Lāhawr in Rabīʿ II 962/February 1555.

With the restoration of Mughal rule, Lāhawr entered on the era of its greatest prosperity, to which belong also its principal monuments (see below). Abu 'l-Faḍl in his *Akbar-nāma* testifies to its flourishing condition under Akbar, who used it as his headquarters for his expeditions against Kashmīr, Sind and Ḳandahār in the period 992-1006/1584-98. It was here that he received in 1595 the Portuguese Jesuit missionaries who were later, under his son Djahāngīr, to build the church and school which were destroyed by Shāh Djahān. Djahāngīr actually made Lāhawr his capital from 1031/1623, and it continued as such for most of the reign of Shāh Djahān, who was particularly attached to it as his birthplace, establishing a carpet manufactory and renovating the *dawlat-khāna*. During the period of its apogee, Lāhawr continued to serve at intervals as a centre of disaffection. Akbar had to march to its relief when besieged by his half-brother Muḥammad Ḥākim Mīrzā in 974/1566-7, and under his successors it was several times used as a base by aspirants to the imperial dignity: by Khusraw at the outset of Djahāngīr's reign (1015/1606), by Shāhriyār on the accession of Shāh Djahān (1037/1628), and by Dārā Shukōh on that of Awrangzīb (1068/1658).

Lāhawr's importance declined under Awrangzīb, who resided there less than his predecessors, though it continued to be styled *Dār al-salṭana* and the emperor was responsible for the construction of the *Djāmiʿ Masdjid*, with which the city's architectural history is usually assumed to have terminated. Bernier, however, visiting Lāhawr in 1665, gives the impression that it was already decaying and that large areas were in ruins. And with Awrangzīb's death, the region swiftly became a prey to the rising power of the Sikhs.

In 1123/1711 the Mughal emperor Bahādur Shāh I arrived at Lāhawr in the course of a campaign designed to crush the first Sikh insurrection under Banda, which was threatening the city, but died before he could achieve his object. The struggle for the succession between Djahāndār Shāh and ʿAẓīm al-Shaʾn in 1124/1712 was actually fought out in the vicinity of Lāhawr, and it was not until the reign of Farrukh-siyar (1124-31/1713-19) that further action could be taken against the Sikhs. They were ruthlessly suppressed in a series of expeditions mounted by the governors of the Pandjāb, ʿAbd al-Ṣamad Khān and his son and successor Zakariyyā Khān, the activities of the latter winning Lāhawr the nickname of *Shahīdgandj*. Zakariyyā submitted to Nādir Shāh [*q.v.*] in Shawwāl 1150/January-February 1738, but recovered his independence once the Persian monarch had withdrawn from India. After the governor's death in 1158/1745, however, his sons engaged in a struggle for power, as a result of which the Afghān Aḥmad Shāh Durrānī [*q.v.*] was able to launch his first invasion of the Pandjāb and occupy the city in Muḥarram 1161/January 1748. On his departure, the court of Dihlī entrusted Lāhawr to Muʿīn al-Mulk, surnamed Mīr Mannū, son of the *wazīr* Ḳamar al-Dīn, but he was shortly obliged to submit to the Afghāns; and following a further invasion by Aḥmad Shāh in the winter of 1165/1751-2, the Mughal emperor signed a treaty whereby Lāhawr passed into the Afghān sphere of influence. This did not prevent the Dihlī *wazīr* Ghāzī al-Dīn ʿImād al-Mulk from invading the Pandjāb in 1169/1756, seizing Lāhawr from Mīr Mannū's widow, who had endeavoured to secure recognition from both Dihlī and Kābul, and installing as governor Adīna Beg. Aḥmad Shāh was thereby provoked into reoccupying the city in the following winter and establishing there his son Tīmūr Shāh. During this time, the Sikhs are found assisting Adīna Beg and his allies the Marāṭhās against the Afghāns. Together they expelled Tīmūr in 1171/1758 and repulsed another Afghān attempt on the city in 1172/1759. When Aḥmad Shāh decisively crushed the Marāṭhās at Pānīpat [*q.v.*] in 1174/1761 and again took Lāhawr, it was the Sikhs who were the ultimate beneficiaries of the victory. On his withdrawal, they simply reoccupied the city, and did so again after each of two further Afghān invasions, finally securing it in 1181/1767. For the next thirty years Lāhawr was governed by a triumvirate of Sikh chieftains, whose rule was disturbed

only by two temporary Afghān occupations under Aḥmad's grandson Zamān Shāh in 1211/1796 and 1213/1798-9. During the second of these invasions, the Sikh chief Randjīt Singh negotiated with the Afghāns for the office of *ṣūbadār* of Lāhawr, but it was not until Ṣafar 1214/July 1799 that he was able to wrest it from its three Sikh lords, who had meanwhile retaken it in the wake of Zamān Shāh's retreat.

Under the rule of Randjīt Singh, proclaimed *mahārādja* of the Pandjāb in 1802, Lāhawr, as his capital, recovered something of its lost prestige. He repaired its walls, and embarked upon a programme of construction works which did much to rehabilitate the city. On his death in 1839, it passed among various members of his family until the accession of Dalīp Singh in 1843, but the Sikh government soon became embroiled in its first war with the British, and by the terms of the two treaties of Lāhawr, in March and December 1846, Dalīp Singh had to accept a temporary British garrison into his capital and a permanent British Resident in the person of Colonel Henry Lawrence. In March 1849, as a result of the second war with the British and Dalīp Singh's deposition, Lāhawr was formally incorporated in the British empire. The city remained comparatively quiet at the time of the Indian Mutiny in 1857, though it was the scene of numerous disturbances during the twenties and thirties of the present century, with the rise of the Congress Movement and the conflicting claims of the Muslim League. In the partition of 1947, despite Sikh hopes of separate statehood for the Pandjāb, the city and most of its district were allotted to Pākistān. From 1955 it was the capital of West Pākistān, and since 1970 it has been the capital of the new province of the Pandjāb.

During this century Lāhawr has undergone a considerable expansion. In 1901 its population stood at less than a quarter of a million, but at the 1961 census it had reached 1,296,477 and in 1971 was estimated at 1,985,800 (all these figures include the cantonment). It consists essentially of the old city, the Anglicised quarters and the cantonment (formerly called Miyān Mīr) added during the late 19th and early 20th centuries, and the industrial areas which have grown up over the last few decades. First linked by rail to Amritsar in 1861, Lāhawr is now well integrated into Pākistān's railway network, being situated on the main line from Karāčī to Peshāwar, and is also accessible by air. It is an important educational centre, possessing two universities.

Bibliography: Historical surveys are to be found in the standard descriptive accounts of Lāhawr: see *Imperial gazetteer of India* [2], Oxford 1907-9, xvi, 95-115; *Imp. gaz. of India. Provincial series. Panjab*, Calcutta 1908, i; S. M. Laṭīf, *Lahore: its history, architectural remains and antiquities*, Lāhawr 1892, 1-83, contains many chronological inaccuracies, and is in any case mostly derived from the earlier account of T. H. Thornton, dating from 1860 and reproduced in H. R. Goulding, "*Old Lahore*": *reminiscences of a resident*, Lāhawr 1924, 56-80; see now also M. Bāqir Malik, *Lahore past and present*, Lāhawr 1952 (Panjab University Oriental Publications, 34).

Jahrhundert)*, in *Akten des XXIV. Internationalen Orientalisten-Kongresses, München...* 1957, Wiesbaden 1959, 617-9; K. S. Lal, *Twilight of the Sultanate*, London 1963; *Camb. hist. of India*, iv, index; J. D. Cunningham, *A history of the Sikhs*, new ed. H. L. O. Garrett, Oxford 1918; Khushwant Singh, *A history of the Sikhs*, Princeton 1963-6.

(P. JACKSON)

2. Monuments. The architectural history of Lāhawr can be traced substantially from the Mughal administration. Tombs remaining from earlier periods have undergone such extensive alteration that their interest lies mainly in their inscriptions. Among these are the graves of Abu 'l-Ḥasan ʿAlī Hudjwīrī (d. 465/1072 [*q.v.*]), called Dātā Gandj-bakhsh, Ḳuṭb al-Dīn Aybak (d. 607/1210 [*q.v.*] near the Lawhārī (*sic*) Gate, Pīr Balkhī (d. 637/1239?), of which the small domed *ḥudjra* may be original, and Sayyid Ṣūf (d. 786/1384); the tomb of Sayyid Muḥammad Isḥāḳ Kāzarūnī, or Miyān Pādshāh (d. 788/1386) is preserved in the *ṣaḥn* of the Masdjid-i Wazīr Khān. Of the eighty-four tombs in the city listed by Čishtī, few in fact survive. No trace has been found, either, of the victory tower at the Fort and the mud-brick mosque known as Khishti Masdjid said by Fakhr-i Mudabbir to have been built by Maḥmūd of Ghazna [*q.v.*], or the Ḳaṣr-i Humāyūnī of Ḳuṭb al-Dīn Aybak. There is, however, an impressive *miḥrāb* from the Sultanate period which appears to have been the focus of an *ʿīdgāh* near Čāh Mīrān. The *pīshṭāḳ* [*q.v.*], 7.4 m high, is surrounded by a band of geometric interlace; the semidome within the arch is reticulated to match, as is its central arched recess, and the squinches on either side have simple nets of groins, with hoods in floral relief. This decoration, which shares some features with Tīmūrid work, is carried out in plaster on a brick core. Burnt brick is in fact typical of Lāhawr, as of the Pandjāb as a whole, for want of local stone: it is usually covered with a revetment of cut plaster or tilework which conceals the structure, while stressing its main lines.

The Fort (*Ḳilʿa*) which still dominates the city centre has been shown by excavations (1959 ff.) to rest on strata dating back to the Ghaznavid occupation; the fort of Ghūrid times, and those rebuilt by Balban and Mubārak Shāh in 666/1267 and 825/1422 were presumably on the same site near the northwest corner of the former city wall. The present structure was begun by Akbar (*ca.* 974/1566) while work at Āgrā Fort was still in hand. He extended the site to the bank of the Rāwī in the north, maintaining the level by an elaborate undercroft, and enclosing a rectangle of about 340 by 427 m with walls that still exist to the north, east, and south. The twin polygonal towers of the Masdjidī Darwāza (Pandjābī: Mastī Darwāza) are panelled in blind arches like the Dihlī Gate at Āgrā, here offset vertically, and their rhythm continues throughout the north wall. Of Akbar's palace we know only that its Dawlat-khāna-yi ʿĀmm had a courtyard enclosed by 114 bays (*īwān* [*q.v.*] or *aywān*). The Djharōkhā balcony which still overlooks the site may be of this date. Akbar also built the city wall with its thirteen gates, now largely demolished or replaced. The early phase of building at the Fort was completed by Djahāngīr in 1027/1618 with a courtyard of private apartments in the same trabeated style, with faceted pillars and intricately

carved surfaces of Mathurā stone; the *čhadjdjā* brackets with their profusion of elephants, lions and peacocks owe much to Hindu timber-work. The architect responsible for this complex, ʿAbd al-Karīm Maʿmūr Khān, appears also to have carried out the remarkable and unorthodox cladding of panels in mosaics of cut glazed tiles, on the north, and later the west walls, with the semi-octagonal Shāh Burj, between 1034/1624-5 and 1041/1631-2. Their brilliant colours, which extend the range previously used in the Pandjāb from dark blue, azure and white to include yellows, brown and green, depict courtiers, scenes of hunting, elephant fights, battle and myth. The Dīwān-i ʿĀmm of forty columns ordered by Shāhdjahān in 1037/1628 follows the pattern of its contemporary at Āgrā; its present form was reconstructed by the British in 1846, but fragments of two ceremonial railings survive. Shāhdjahān, dissatisfied with the existing scheme, raised the level of the earlier work, and built a new group of private apartments inside the Shāh Burdj, including the Shīsh Maḥall of white marble set off with *pietra dura* inlay of floral motifs, opening onto the court through five bays with paired columns supporting engrailed arches in the fully-developed marble style: it rises to double height, with a ceiling of convex glass set in gypsum plaster (*āyina-kārī*), the walls now being Sikh work. To its west is a marble pavilion, the Banglā (Nawlakha), that reproduces a Bengali hut with its gridwork walls and arching roof, again inset with semi-precious stones (*parčīn-kārī*). In 1043/1633 he had the Dīwān-i Khāṣṣ and Khʷābgāh replaced, the former with a marble hall five bays by five, anticipating that at Dihlī [*q.v.*] in layout, with open arcades surrounding an inner hall, and a parapet inlaid to simulate merlons. The Motī Masdjid (ca. 1645) makes finely restrained use of marble as the first of the three Pearl Mosques (cf. Āgrā 1648-54, Dihlī ca. 1660); its *pīshṭāḳ* frames a four-centred arch that contrasts with the cusped ones on either side, and the three domes rise from strong cavetto mouldings in a rounded profile recalling Humāyūn's tomb, though crowned with a small pointed lotus. The round towers of Awrangzīb's ʿĀlamgīrī Gate (1084/1673-4) rise vigorously from a swelling lotus-petal base in broad gadroons to leaf-like merlons, and each is capped with a light *čhatrī* to counter the upthrust.

The Mosque of Maryam Zamānī, built for Djahāngīr's mother in 1023/1614, follows the established scheme of a five-arched prayer hall, with a tall semi-domed *pīshṭāḳ*, and five domes supported on massive brickwork piers. Square towers at the angles carry domed lanterns. The stilted central dome, less overpowering than that at Fatḥpur Sīkrī, has an inner shell of stucco; extensive use is made of squinch nets and honeycomb squinches, and the interior has the finest floral painting in Pākistān, on incised plaster. The prayer hall of the Masdjid-i Wazīr Khān (1044/1634) is of the same type, with four-centred arches, double-shelled Lōdī domes—albeit of an improved shape—and deep piers separating the façade from the domes. The courtyard is much longer and arcaded with stout octagonal minarets, capped with *čhatrīs* and set on squared bases: the first use of such towers, it seems, for a Mughal mosque. The main gate is enlarged to house the domed, octagonal central chamber of a bazaar street. The brickwork is extensively panelled, and its grids house flat panels of cut mosaic tile [see KĀSHĪ] on the surfaces of the gates, prayer-hall and minarets, with flowers, trees, tendrils and inscriptions in an inventive but strongly Iranian display. The building achieves great distinction in contrasting this vivacious decoration with the robust composition of the structure. Inside, the mosaic is replaced by paint. A *ḥammām* of the same date, and Iranian in type, still exists near the Dihlī Gate. These elements are readjusted in the much smaller mosque of Dāʾī Angā (1045/1635), where the three frontal arches are engrailed, the domes articulated with cavetto mouldings well above the parapet, and the hall is limited at either end by the massive square bases for minarets with lanterns that have been rebuilt this century; exceptionally, tile mosaic is used inside as well as out. Its form is close to that of the mosque and its counter-image flanking the Tādj Maḥall (*ca.* 1632-47). The mosque of Muḥammad Ṣāliḥ [*q.v.*] the historian and calligrapher (1070/1659) is also tiled, and remarkable for its inscriptions. The Bādshāhī Masdjid (1084/1673), Awrangzīb's finest building, combines local tradition with experience from the Djāmiʿ Masdjid at Dihlī (1059/1649) [see DIHLĪ]. From the former come the octagonal minarets at the courtyard corners, the smaller ones at the angles of the prayer hall, and the recessed panelling; from the latter are drawn the plan, the raised plinth with steps and gateway, the bulbous domes, and the handling of the façade. The brick structure is faced throughout in red sandstone, and white marble for the domes; the interior is decorated with floral reliefs in lime plaster (*munabbat-kārī*), and painted, with almost Rococo delicacy.

Tombs. The tomb of Shaykh Mūsa Āhangar (*ca.* 1560?) whose squat dome on a cylindrical drum rests on a square, panelled cell, provides unique evidence of earlier tilework in the city: the dome is tiled in green horizontal courses, and the upper part of the walls in square tiles set diagonally, with floral motifs in blue and white. The squared mass of Djahāngīr's Tomb at Shāhdara (completed *ca.* 1046/1637) is derived from the base of Akbar's tomb [see ĀGRĀ], with the same number of arches and projecting bays at the centre of each side. Its red stone façades are inlaid with white and black marble in magpie elegance within the usual grid, and the tall octagonal corner towers are patterned in chevrons of white and yellow between four balconies. The absence of a central pavilion on the roof destroys the composition: the original arrangement is uncertain. A finely inscribed cenotaph lies in an octagonal central chamber with floor and walls all in superb *pietra dura*. This single-storey form is repeated at half-size in the tomb of his empress Nūrdjahān (d. 1055/1645) nearby, built by herself; no vestige of its original surface remains on the brickwork core. Dāʾī Angā's Tomb (1082/1671-2) in the Gulābī Bāgh is also square, with gridwork walls and a square *čhatrī* on each corner; the plan however incorporates a cross-shaped tomb chamber, with calligraphy by Muḥammad Ṣāliḥ in the coving, and an ambulatory with octagonal corner cells. A central dome shaped like those of Wazīr Khān's Mosque is patterned in chevrons of white and dark blue tiles, and its tall drum with floral motifs.

A series of octagonal tombs begins with that of Anārkalī (1024/1615), built by Djahāngīr for a former love. It has octagonal, panelled corner towers with *čhatrīs* at roof level, arched walls rising through two stories, and a dome of this same profile. It suffered various alterations when adapted for a church in 1851. Entrances formerly alternated with octagonal corner cells around a central octagon,

with the cenotaph, carved in bold relief, at the middle. The tomb of Āṣaf Khān (d. 1051/1641 [*q.v.*]) at Shāhdara has a single octagonal chamber, and a semi-domed arched recess on each external face around it. The reveals once had dados of square painted tiles, unique in this reign, and the squinch nets were enhanced with mosaic tile; the tall bulbous dome, now stripped of its white marble, was contemporary with that of the Tādj Maḥall. The cenotaph is modelled on that of Djahāngīr, below a *munabbatkārī* vault. ʿAlī Mardān Khān's tomb (*ca.* 1650), built for his mother, is similar in plan, but is crowned with a dome of the earlier type on a tall drum, balanced, Sūrī-style, by a *čhatrī* set above every angle of the octagon. Once more the veneers have been stripped by the Sikhs, but there are traces of a floral marble inlay on the dome. The Mausoleum of Sharaf al-Nisāʾ Bēgam (d. 1158/1745), called Sarwwālā Maḳbara, is a low tower, square in plan, whose walls are relieved by a frieze of cypress trees (*sarw*) 2.2 m high in glazed tilework around a tomb chamber at the upper level, surmounted by a *čhadjdja* and a hipped square dome. That of Sir Muḥammad Iḳbāl, designed by Nawwāb Zayn Yārdjang Bahādur in 1951, is a severe orthogonal cell with battered walls, set off by mouldings around a strong plinth and *čhadjdja*, and deep openings, reminiscent of Tughluḳ building yet somewhat Germanic; the white marble interior is carved in ornamental relief and lines from his *Zabūr-i ʿAdjam*.

The gardens associated with these buildings, all but obliterated and requiring extensive restoration on Lord Curzon's initiative, have lost their original planting, but still display the *čārbāgh* layout, with causeways patterned in local brickwork set between regularly-spaced cypresses. The first, planted by Mīrzā Kāmrān on the bank of the Rāwī (*ca.* 1530-40) has disappeared, but its summerhouse, a *bāradarī*, survives in midstream. Nūrdjahān's Bāgh-i Dilkushā, adapted for her husband's tomb at the centre, has each of the four quarters subdivided into four square plots, with canals and tanks at the intersections, within a huge walled enclosure. The Bāgh-i Shālimār [see BUSTĀN. ii], completed in 1052/1642, and like its namesake at Dihlī inspired by the eponym in Kashmīr [*q.v.*] was originally entered at the lowest terrace, allowing movement, as in the palace, through successively more private areas, past cascades backed by lamp-niches, a *takht-gāh* set in a tank, and 450 fountains. The Ḥaḍūrī Bāgh, formerly a *sarāy* built by Awrangzīb, is apparently Sikh work.

Three gateways clad in mosaic tile have survived the gardens to which they once led. The Čawburdjī (1056/1646), with four corner towers like those of Wazīr Khān's mosque, but more attenuated and lacking their *čhatrīs*, has cleanly-cut archways set in a gridded surface. The Gulābī Bāgh Gate (1066/1655) follows a similar scheme, but with angle-shafts in place of the towers, and with cusping of the upper arches. The undated gate at Nawānkōt (*ca.* 1650) has the panelled corners left unbroken as support for its twelve-pillared *čhatrīs*, remarkable for their gadrooned, green-tiled domes.

Bibliography: See HIND for general works including references to Lāhawr; of these Sir R. E. Mortimer Wheeler, *Five thousand years of Pakistan*, London 1950, 75-93, is the most comprehensive. For works on the city in particular, see T. H. Thornton and J. L. Kipling, *Lahore*, Lahore 1876; S. M. Latif, *Lahore: its history, architectural remains and antiquities*, Lahore 1892; H. R. Goulding and T. H. Thornton, *Old Lahore*, Lahore 1924. A more recent guide incorporating the latest information then available is by Muhammad Wali Ullah Khan, *Lahore and its important monuments*, Lahore, Dept. of Archaeology, 1961. Works in Urdu include a translation of Dārā Shikōh, *Sakīnat al-awliyāʾ*, Lahore, n.d.; Mawlwī Nūr al-Dīn Čishtī, *Taḥḳīḳat-i Čishtī*, repr. Lahore 1934; and M. Ṭufayl, *Naḳūsh*, Lahore 1962, on the inscriptions. Earlier work on inscriptions is in H. Cope, *Public inscriptions at Lahore*, in *JASB*, xxvii (1859), 308-13, and the latest in S. Mahmood, *Islamic inscriptions in Pakistani architecture to 1707*, unpublished Ph.D. thesis, Edinburgh University, 1981, 3 vols., ii, 427-566.

The pre-Mughal buildings are considered by M. A. Chaghatai, *Pre-Mughal architecture of Lahore (Ghaznavide Period)* in *Proceedings of the Pakistan History Conference II* (Lahore 1952), Karachi (1953), 230-34; idem, *Pre-Mughal art and architecture of Lahore (during the Ghori period)*, *ibid.* III (Dacca 1953), Karachi (1955); idem, *The oldest extant Muslim architectural relic at Lahore*, in *Journal of the Pakistan Historical Society*, xii/1 (1963), 60-81.

The works on the Fort include Nūr Bakhsh, *Historical notes on the Lahore Fort and its buildings*, in *Archaeological survey of India annual report* 1902-3, 218-24, including translations from Mughal historians; G. Sanderson, *The Dīwān-i ʿĀmm*, in *Lahore Fort*, *ibid.*, 1909-10, 33-9; J. Ph. Vogel, *The master builder of the Lahore palace*, in *Journ. Panjab Historical Soc.*, iii 1 (1914), 67-9; *idem*, *Tile mosaics of the Lahore fort* (1911-12), repr. with additional colour plates, Karachi n.d.; H. L. Srivastava, *The Lahore fort, its history and restoration*, in *Annual bibliography of Indian archaeology*, x (1935), 24-31, with a summary of the repair work; J. LAḤDJ, colloquially called Laḥidj, a town and area of south-western Arabia, now situated in the second governorate of the People's Democratic Republic of Yemen. The town, also known as

Early Moghal Buildings
Shah Jahan's Buildings

Fig. 1. Plan of the Fort. (Archaeological Survey of India)

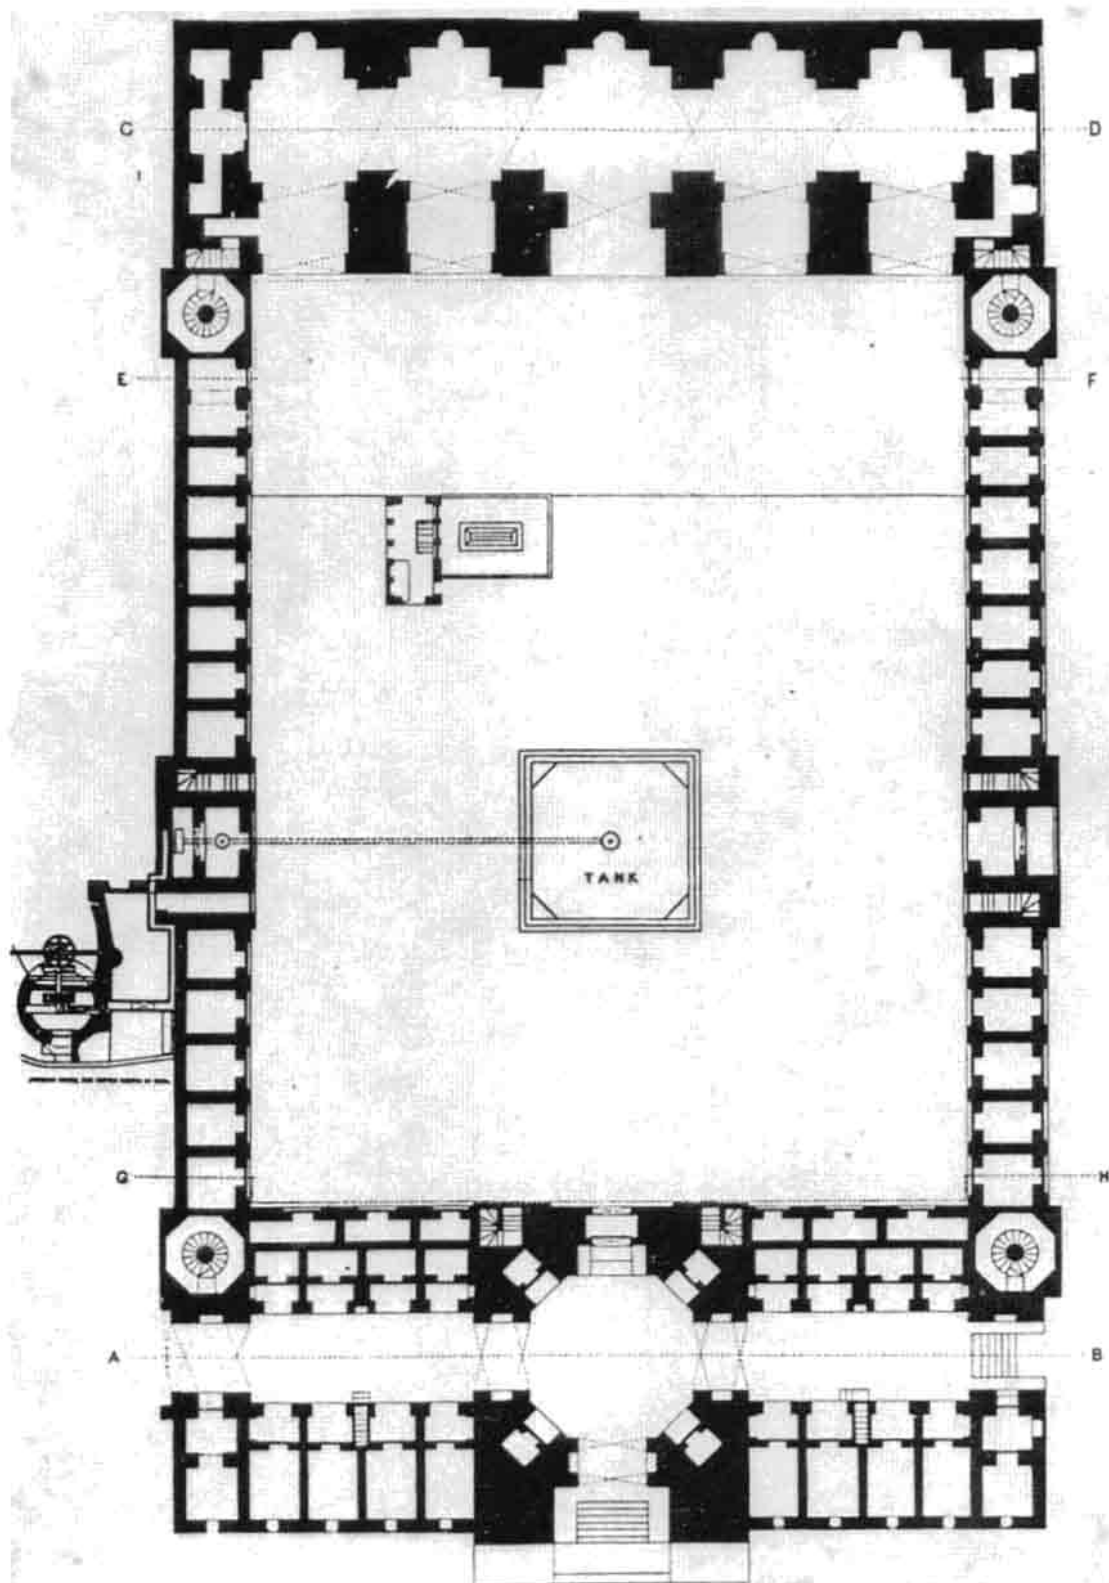
A B


Fig. 2. Plan of the Masdjid-i Wazīr Khān. (From M.A. Chaghatai, *The Wazir Khan Mosque, Lahore*)

al-Ḥawṭa, lies between the two tributaries of the Wādī Tuban, al-Wādī al-Kabīr and al-Wādī al-Ṣaghīr, about 25 miles north-west of Aden. The town is surrounded by a fertile area which is cultivated by means of an elaborate system of irrigation using the water of the wadis and also of wells. Date-palms abound, as well as cereal crops and vegetables. In fairly recent years too, cotton has become an important addition to the local agricultural economy.

Definition. In early Islamic, mediaeval and later times, Laḥdj comprised a whole area to the north and north-west of Aden and formed a joint fief with Abyan which at that time must have extended much further westwards to the north and north-east of Aden than the present-day area of the same name. Perhaps Laḥdj and Abyan in those times might have been divided by a line drawn due north from Aden, with the former on the western side and the latter on the eastern. It seems that the area of Laḥdj remained as described above until the late 19th century, when the then sultan of Laḥdj occupied the territories of the Ṣubayḥa, the tribal group inhabiting the territory between Laḥdj proper and Bāb al-Mandab. Thus the Laḥdj sultanate was composed of historic Laḥdj and Ṣubayḥī territory.

History. The genealogists connect the geographical name with the Ḥimyar, Laḥdj b. Wā'il b. al-Ghawth b. Katan b. ʿArīb b. Zuhayr b. Abyan b. al-Humaysaʿ.

After the Yemen had been won for Islam, Laḥdj shared the fortunes of this extensive province of the Arab empire. Laḥdj thus passed with the Yemen to the Umayyads and then to the ʿAbbāsids, though in early times governors in Ṣanʿā' and Ḥaḍramawt must have had little control in the area. In 203/818-19 the caliph al-Ma'mūn appointed Muḥammad b. ʿAbd Allāh b. Ziyād as governor of the Yemen. He was the founder of the Ziyādid dynasty and built the Tihāma town of Zabīd, which was to be their capital until 402/1011-12. Laḥdj, with Aden, Abyan, Ḥaḍramawt and al-Shiḥr, passed into the hands of the Banū Maʿn in the time of the Abyssinian slaves who ruled Ziyādid territory when the dynasty came to an end. In 454/1062-3, Aden came under the control of the Ismāʿīlī ʿAlī b. Muḥammad al-Ṣulayḥī, though the Maʿnids were left in effective control until his death in 473/1080-1, when his son, al-Mukarram Aḥmad, reclaimed the area. Aḥmad installed as rulers of Aden and the neighbouring area al-ʿAbbās and al-Masʿūd, the two Zurayʿids, in return for their past services to the Ismāʿīlī cause in the Yemen on behalf of the Ṣulayḥids. The Zurayʿids remained in power until the entry of the Ayyūbids from Egypt into the Yemen in 569/1173. Laḥdj, with Aden and indeed the rest of the Yemen, thus came under the control of the Ayyūbids (569-626/1173-1228) and their successors, the Rasūlids (626-858/1228-1454), who were followed by the Ṭāhirids (858-*ca.* 954/1454-*ca.* 1547).

The expeditionary force led by Ḥusayn al-Mushrif which the Mamlūk Sultan Ḳānṣawḥ al-Ghawrī sent at the request of the Ṭāhirid Sultan ʿĀmir b. ʿAbd al-Wahhāb to prevent the encroachment of the Portuguese in the Red Sea, and which conquered a great part of the Yemen, only paved the way for the Turks. In 945/1538 the Turkish governor of Kulzum, Sulaymān Pasha, set out with a fleet and took Aden, which thus belonged to the Turkish empire until in 1045/1635 the Turks had to leave the Yemen to the Zaydī Imāms.

In 1141/1728, however, the ʿAbdalī tribal leader, Faḍl b. ʿAlī b. Faḍl b. Ṣāliḥ b. Sālim, made himself independent of the Zaydīs and made Laḥdj the capital of his territory. Thus the area remained under the ʿAbdalī house down to the evacuation of south-western Arabia by the British in 1967. With the arrival of the British under Captain S. B. Haines in 1839, when the Laḥdj sultan also controlled Aden, the latter was ceded to the Government of Bombay. As already mentioned, the vast area of the Ṣubayḥa fell under their sway in the late 19th century. By the time of the formal signing of the agreement with the British Government to inaugurate the Federation of the Amirates of the South in 1959, the Laḥdj sultan Faḍl b. ʿAlī, as ruler of the senior state in the Western Aden Protectorate, held the key portfolio of Federal Minister of Defence and continued in that post until the collapse of the Federation and declaration of the new Republic in 1967.

LĀHĪDJĀN. 1. A town in the Caspian coastal province of Gīlān [*q.v.*] in north-western Persia, in long. 50° 0′ 20″ E. and lat. 37° 12′ 30″ N. It is situated on the plain to the east of the lower reaches of the Safīd-Rūd and to the north of the Dulfek mountain, and on the small river Čom-khala or Purdesar, but at some 14 miles/20 km. from the Caspian Sea shore.

Lāhīdjān does not seem to have been known as such to the earliest Arabic geographers, though legend was to attribute its foundation to Lāhīdj b. Sām b. Nūḥ. It does, however, appear in the Persian *Ḥudūd al-ʿālam* (372/982) as Lāfdjān, one of seven "large districts" (i.e. it was not yet a town) of the south-eastern part of Gīlān, that known locally as Biya-pīsh ("this side of the water", *biya* cognate with Avestan *vaidhi* "water-course") as opposed to Biya-pas ("beyond the water") on the north-western side of the Safīd-Rūd, which had Fūman [*q.v.*] and Rasht [*q.v.*] as its centres (tr. Minorsky, 137, § 32. 25, comm. 388-90; on this passage of the *Ḥudūd al-ʿālam*, see Barthold, in *Izvestiya Kavkaz. Istor.-Arkheol. Instituta*, vi [1927], 63-6). In ancient times, the Safīd-Rūd or Amardus River [see ḳizil uzen] had formed the frontier between the Amardoi or Mardi to the east and the Gelai or Kadusioi to the west; see F. C. Andreas, in Pauly-Wissowa, i/2, 1729-33, s.v. *Amardos*.

During the middle years of the 3rd/9th century, Lāhīdjān district formed part of the dominions, straddling Gīlān and the mountainous hinterland of Daylam [*q.v.*], of the Djastānid or Djustānid Wahsūdān b. Djastān (still alive in 259/873, according to al-Ṭabarī, iii, 1880; see also Sayyid Aḥmad Kasravī, *Shahhriyārān-i gum-nām*, Tehran 1335/1956, i, 25); the rulers of Biya-pīsh were generally able to extend

their power up from the plain into the mountains, and even at times over them to the south of the Elburz (as was to be the case with the Kar-Kiyā'ī Sayyids, see below).

There then arose in Biya-pīsh a family ruling from Kūtum or Hūtum in the Rān-i Kūh district, whose centre is Langarūd to the east of Lāhīdjān. This line was founded by the ʿAlid Nāṣir al-Dīn al-Ḥasan b. ʿAlī al-Uṭrūsh (d. 304/917) [*q.v.*], who introduced Zaydī Shīʿism into the Caspian region; the eastern part of Gīlān, sc. Biya-pīsh, thus became strongly affected by Shīʿism, whereas Sunnī doctrines, including Ḥanbalism, remained dominant in Biya-pas. The wider political authority of al-Uṭrūsh's family shrank during the middle decades of the 4th/10th century, and became concentrated more on Ṭabaristān or Māzandarān to the east, but the Nāṣirid Sayyids remained influential in the Caspian region because of their religious prestige. The history of Lāhidjān in the succeeding period is obscure; but it is probable that the Djastānids re-asserted their authority there after the highland region of Daylam had passed into the hands of the Musāfirids or Sallārids or Langarids (the latter form better than "Kangarids") of Ṭārum [see MUSĀFIRIDS and ṬĀRUM], and it was the Djastānid "king of Daylam" who submitted at Ḳazwīn to the incoming Saldjūḳ Ṭoghrïl Beg in 434/1042-3 (Ibn al-Athīr, ix, 348).

Subsequently, we find a family of local origin called the Nāṣirwands ruling Biya-pīsh from Lāhīdjān. The story of their origin from Maḥmūd of Ghazna's brother Nāṣir al-Dawla b. Sebüktigin retailed by Abu 'l-Ḳāsim ʿAbd Allāh b. ʿAlī Kāshānī in his *Taʾrīkh-i Öldjeytü* is wholly fanciful, and the name Nāṣirwand obviously relates to a connection, real or supposed, with Nāṣir al-Dīn al-Uṭrūsh's tenure of power there. In the time of the Mongol Il-Khān Hülegü, the Nāṣirwand Djamāl al-Dīn Ṣaʿlūk b. Ṣaʿlūk was ruler in Lāhīdjān; some decades later, in Öldjeytü's reign, the family was divided into two branches, that of Ṣaʿlūk b. Sālār in Kūtum, and that of Naw-Pādishāh or Shāh-i Naw in Lāhīdjān. The latter submitted to the Il-Khānid when he appeared in Gīlān and at Lāhīdjān specifically in 706/1306-7, receiving in marriage the daughter of a Mongol commander and being granted suzerainty over the other local princes of Gīlān; Rashīd al-Dīn also testifies to Naw-Pādishāh's riches and prestige at this time. Lāhīdjān itself flourished, and Ḥamd Allāh Mustawfī describes Lāhīdjān and Fūman as the two chief towns of Gīlān; in the vicinity of Lāhīdjān silk cultivation and weaving were actively pursued, and corn, rice, oranges and other sub-tropical fruits were grown (*Nuzhat al-ḳulūb*, ed. Le Strange, 162-3, tr. 158-9; R. B. Serjeant, *Islamic textiles, material for a history up to the Mongol conquest*, Beirut 1972, 71).

Biya-pīsh was racked by warfare between the various local chiefs during the course of the 8th/14th century, and by 792/1390 the rule of the Nāṣirwands, already once interrupted in Lāhīdjān, foundered completely, and Sayyid Hādī Kiyā became master of Biya-pīsh. The Kar-Kiyā'ī Sayyids ruled there from 769/1367-8 (with a brief revanche shortly after this by the last Nāṣirwands) till 1000/1592, the first of the family to make himself completely independent being Sayyid Amīr Kiyā (for a genealogical table of the family, see H. L. Rabino, in *JA*, ccxxxvii [1949], at pp. 322-3). His son Sayyid ʿAlī Kiyā, with the help of the Marʿashī Sayyids of Māzandarān, made himself master of all Biya-pīsh, and extended as far as Ḳazwīn, Ṭārum and Shamīrān; and Sayyid Raḍī Kiyā (d. 829/1426) chased out of the mountains south of Lāhīdjān the local family of Hazāraspids and the Ismāʿīlis. Likewise, Mīrzā ʿAlī b. Sulṭān Muḥammad Kiyā (883-911/1478-1506) at the zenith of his power controlled Ḳazwīn, Ṭārum, Sulṭāniyya, Sāwa, Zandjān, Fīrūzkūh, Tehran, Rayy and Warāmīn.

From the end of the 9th/15th century, the information of the local Caspian chroniclers like Ẓahīr al-Dīn Marʿashī may be supplemented by that of the Ṣafawid chronicles, the interest of the latter being focussed on the region because of the crucial role played by Mīrzā ʿAlī Kiyā in sheltering the young Ṣafawid Ismāʿīl b. Ḥaydar [see ISMĀʿĪL I]. The future ruling family of Persia already had close links with the Lāhīdjān district, for in the village of Shaykhānbar on the Lāhīdjān-Langarūd road lay the tomb of Shaykh Ibrāhīm Zāhid (d. 714/1314) the *pīr* and *murshid* of Shaykh Ṣafī 'l-Dīn Ṣafawī (cf. Sylvia A. Matheson, *Persia: an archaeological guide*, London 1972, 71). When Ismāʿīl was a fugitive from the Aḳ Ḳoyunlu in 899/1494, he fled eventually from Ardabīl to Lāhīdjān. Mīrzā ʿAlī welcomed him there, refused in 902/1497 to extradite him to the Aḳ Ḳoyunlu leader Rustam Mīrzā (allegedly after receiving a vision of the caliph ʿAlī enjoining him to protect the young prince), and assigned for his education a tutor, the Lāhīdjān scholar Shams al-Dīn. Then early in 905/later 1499, when he was still not quite 11 years old, Ismāʿīl left Lāhīdjān for the bid for power which was to end in the defeat of the Aḳ Ḳoyunlu and Ismāʿīl's conquest of Ādharbāydjān (see E. D. Ross, *The early years of Shah Ismaʿil*, in *JRAS* [1896], 249-340; W. Hinz, *Irans Aufsteig zum Nationalstaat im fünfzehnten Jahrhundert*, Berlin-Leipzig 1936, 98-100; Minorsky, *Tadhkirat al-mulūk, a manual of Safavid administration* (circa *1137/1725*), London 1943, Appx. II, 191 ff.)

During the 10th/16th century, Biya-pīsh and the Kar-Kiyā'īs became vassals of the Ṣafawids from 909/1503-4 till the region's final incorporation in the Ṣafawid empire in 1000/1592. At first, a Ḳïzïl-Bāsh [*q.v.*] governor was appointed to oversee the Kar-Kiyā'īs, and then in the middle years of the century, royal princes acted as governors, including a brother and two sons of Shāh Ṭahmāsp I (in 943/1536-7 and 985/1577-92). The Kar-Kiyā'ī Sayyid Aḥmad b. ʿAlī (943-75/1536-67 and 985-1000/1577-92) introduced at Shāh Ṭahmāsp's behest the official Ṣafawid Twelver or Djaʿfarī form of Shīʿism in place of the Zaydī one; but he fell from favour when he started intriguing with the Ottomans, inviting them to send troops into Shīrwān and to Lāhīdjān for an attack on Ḳazwīn, so that in 975/1567 Ṭahmāsp invaded Gīlān and deposed Aḥmad. He was restored nine years later, and was formally adopted in brotherhood (*akhawī*) by Shāhs Ismāʿīl II and Muḥammad Khudābanda. But he continued to have relations with the Ottomans, and in 1000/1592 Shāh ʿAbbās came to Lāhīdjān, whilst Aḥmad fled to Shīrwān and then Istanbul, where he ended his days (cf. Von Hammer, *GOR*, ii, 562, 576). All Gīlān was now placed under a centrally-appointed *wazīr*, and after the death of the grantee of the province Farhād Khān in 1008/1600, it became till the end of the Ṣafawid period one of the crown domains (*maḥāll-i khāṣṣa*); see K. M. Röhrborn, *Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert*, Berlin 1966, 19, 44, 83, 87, 93, 105, 121).

Since then, Lāhīdjān's history has been only sporadically eventful. Under Shāh Sulaymān I there took place in South Russia the Cossack revolt of

Stepan Razin (1668-71), with raids expected against Persian territory along the Caspian coasts; hence troops were mustered in Biya-pīsh, the *Ghāziyān-i Ṣūfī*. During the Russian occupation of Gīlān 1136-46/1724-34, the Russians built two forts at Lāhīdjān, and the town was once more under Russian domination during the local Soviet Republic of Gīlān in 1920-1. According to the traveller Gmelin, who was in Gīlān in 1772, Lāhīdjān had seven years previously submitted to Hidāyat Khān of Fūman. Ḳādjār control was subsequently established there, but the last hereditary governor of Lāhīdjān, Mīrzā Aḥmad Khān, Sālār-i Mu'ayyad, was dismissed by the constitutionalist government in 1907.

In recent times, Lāhīdjān has lost most of its administrative importance to Rasht, but still has considerable commercial importance as a centre for the local Gīlān silk and cotton industries and as a centre for citrus fruit growing; tea was first introduced into the Caspian region in 1914, and later, Riḍā Shāh Pahlavī employed Chinese experts to start new plantations near Lāhīdjān in the lower foothills adjoining the coastal plain (see *Admiralty handbook, Persia*, London 1945, 148, 464).

The antiquities of the town include various graves of the Kar-Kiyā'ī Sayyids. Administratively Lāhīdjān is now the centre of a *shāhristān* or district of the same name, in the first province of Iran; according to the 1966 census, it had a population of 25,725 and *ca.* 5,573 houses (see Razmārā, ed., *Farhang-i djughrāfiyā-yi Īrān*, ii, 270-1, and L. W. Adamec, ed., *Historical gazeteer of Iran*. i *Tehran and Northwestern Iran*, Graz 1976, 410).

2. Several districts in Persia have however derived from the stems *Lāh* and *Lār* [*q.v.*]: Lāhīdj, an important little town in Transcaucasia west of Shamākha [see shirwān]; Lāhīdjī, a village in the canton of Kurbāl in the province of Fārs; Lāhīdjān, a canton of Mukrī Kurdistān [see sawdj-bulāḳ], which the *Sharaf-nāma* of Sharaf al-Dīn Bidlīsī, ed. Veliaminof -Zernof, St. Petersburg 1860-2, i, 280, calls Lārdjān. There is a village of Lāhīdjān near Ilkhiči, south of Tabrīz, and a village of Lāridjān south of the Araxes about 12 miles above the mouth of the river of Ardabīl (Ḳara-Ṣu). The forms *Lāh* and *Lār* may both come from **Ladh* (cf. the Old Persian *Māda*, which gave *Māh* in Persian and *Mar-kh* in Armenian). According to the dictionaries (e.g. Vullers) the old name of the town of Lār [*q.v.*] was Lād/Lādh; the silk called *lādh* is also known as *lāh* (*lāh* however may equally well be explained by *lās*). The change of *d* (*dh*) to *r* is attested in the Caspian dialects (it is regular in Tātī; Melgunof, *Das südliche Ufer des Kaspischen Meeres*, 221). The fact that we have districts of Lāhīdjān and Lāridjān in the adjoining provinces of Gīlān and Māzandarān is remarkable, but still more significant is the fact that Lāhīdj of Shīrwān represents an island of Iranian Tāt surrounded by Turks (the Tāt are now found scattered throughout Dāghistān, the country round Tehran, Ādharbāydjān, etc.). Their present name has a rather general and vague character, see tāt. The colony of Lāhīdj may have retained the original dialect formerly spoken in the metropolis. The name of the silk *lādh/lāh* suggests the former existence of a place called Lād, which produced silk (cf. Yāḳūt, s.v. Lāhidj; he says that Lāhidj produces the silk called "Lāhidjī" which is not of high quality). With the suffix *-ič*, the word *Lāh-ič* would mean the people of Lād". It remains to be seen if the region of Lāhīdjān is not the ancestral home of numerous *Lāhidj* colonies. At the present day there is spoken in Lāhīdjān—although with certain local pecularities—the Gīlakī dialect, but this parent dialect has here exercised a levelling influence, of which the foreign Turkish was incapable in the case of the people of Lāhīdj of Shīrwān. As to Lāhīdjān of Kurdistān, we may recall the hypothesis of Andreas that the name "Dimla" by which the Zāzā call themselves (north of Diyārbakr) is a metathesis of Dēlam (Daylam). The emigrations from Gīlān, still very obscure, certainly penetrated far to the west. Finally, to the names mentioned one might add perhaps that of Ḳal'a-yi Lāhūdj in Khūzistān (?); cf. Mustawfī, *Ta'rīkh-i guzīda*, GMS facs., 240. (V. Minorsky)

LĀHĪDJĪ, the *nisba* of several eminent persons connected with Lāhīdjān [*q.v.*] in the Caspian region of Persia, among whom the following may be mentioned.

1. Shams al-Dīn Muḥammad b. Yaḥyā Gīlānī, theologian, mystic, and poet of the Tīmūrid-Ṣafawid period and a renowned *shaykh* of the Nūrbakhshiyya Ṣūfī order in Shīrāz. He joined his master Sayyid Muḥammad Nūrbakhsh in 849/1445, and during a period of 16 years, under Nūrbakhsh's spiritual direction, accomplished considerable progress along the Ṣūfī path. After the death of Nūrbakhsh (869/1464), or even slightly before then, Lāhīdjī retired to Shīrāz, where he founded a Nūrī (= Nūrbakhshī) *khānaḳāh* [*q.v.*], and spent much of his time in mystical exercises and teaching Ṣūfī doctrines. During this period of retirement, he was held in great respect not only by scholars such as Dawānī [*q.v.*] and Djāmī [*q.v.*], but also by the Ṣafawid Shāh Ismā'īl I, who paid him a visit at his *khānaḳāh* in 909/1503 in Shīrāz. Nevertheless, the biographical data which we can glean from his own writings are minimal: a six-months' stay in Tabrīz

prior to his master's death; a pilgrimage to Mecca in 882/1477; and a short sojourn in Yemen, where in the course of his way back home from Mecca, he made an investiture of Nūrbakhshī khirḳas to a couple of disciples—a father and son—in Zabīd, for whom he also wrote a concise idjāza in Arabic, with traditional Ṣūfī instructions. His death, according to an oft-cited chronogram (= *Mādda taʾrīkh*), occurred in 912/1506. Other dates, including 980/1572 (cited by Pertsch, *Persische Handschriften*, 830) and 869/1464 (H. Corbin, *Trilogie ismaélienne*, Tehran-Paris 1961, index) are definitely incorrect. Lāhīdjī's literary output, including his *Dīwān*, with Asīrī as his pen-name, and a didactic *mathnawī* called *asrār al-shudūd*, contains a theosophical prose work called *Mafātīḥ al-iʿdjāz* (an extensive commentary on the well-known *Gulshan-i rāz* of Maḥmūd-i Shabistarī [*q.v.*]), together with a number of shorter tracts with comments on the difficult verses of some old poets. His own poetry, although of considerable theosophical value, is of rather mediocre literary quality. His son Fidāʾī-yi Lāhīdjī (d. 927/1521), better known as Shaykhzāda, was also a poet and reportedly a Nūrbakhshī *shaykh* as well.

Bibliography: (in addition to works mentioned in the text): Nūr Allāh-i Shushtarī, *Madjālis al-muʾminīn*, lith. Tabriz, 306-9; Riḍā Ḳulī Khān-i Hidāyat, *Riyāḍ al-ʿārifīn* [2], 63; Maʿṣūm ʿAlī-Shāh, *Ṭarāʾiḳ al-ḥaḳāʾiḳ*, ii, 143; iii, 55-6; Ibn-i Yūsuf-i Shīrāzī, *Fihrist-i Kitābkhāna-yi Madrasa-yi ʿĀlī-yi Sipahsālār*, Tehran 1318/1939, ii, 559-60; Mudarris-i Khiyābānī, *Rayḥānat al-adab* [2], ii, 125-6; Kaywān-i Samīʿī, preface to his edn. of the *Mafatīḥ al-iʿdjāz*, Tehran 1337/1958. For an analysis of some of Lāhīdjī's personal mystical experiences, see H. Corbin, in *Eranos-Jahrbücher* (1959); the *Dīwān-i Asīrī-yi Lāhīdjī*, together with his minor tracts, edited by Dr. Barāt-i Zandjānī, is now in press.

2. ʿABD AL-RAZZĀḲ B. ʿALĪ B. ḤUSAYN GĪLĀNĪ, theologian, philosopher and poet of the late Ṣafawid period and a leading master of the so-called philosophical school of Iṣfahān. Although a favourite pupil and a son-in-law of Mullā Ṣadrā Shīrāzī, he did not share his master's philosophical teachings over several topics. Among these one may mention Mullā Ṣadrā's belief in the movement of substances (= *al-ḥarakat al-djawhariyya*) and his opinion on the basicality of being (= *aṣālat al-wudjūd*). Lāhīdjī spent the latter part of his life in Ḳumm, where he died in 1072/1661, leaving behind him a considerable literary output. His own philosophy was of a rather eclectic character, owing much to Ibn Sīnā's and Naṣīr al-Dīn Ṭūsī's thought. His works include the *Ḥāshiya-yi Kitāb-i Ishārāt*, being glosses upon Ṭūsī's commentary on Ibn Sīnā's *Kitāb al-Ishārāt wa 'l-tashbīhāt*, and the *Shawāriḳ al-ilhām*, a concise but original commentary on Naṣīr al-Dīn Ṭūsī's *Tadjrīd al-ʿaḳāʾid*. He wrote also a commentary on Shihāb al-Dīn Yaḥyā Suhrawardī's *Hayākil al-nūr*, along with other theological works. Among these are two Persian books dealing with the elements of Shīʿī theology: the *Gawhar-i murād*, which he dedicated to Shāh ʿAbbās II *ca.* 1052/1642, and *Sarmāyi-yi īmān* which he composed in 1058/1648 at the request of a friend. Lāhīdjī's poetical pen-name was Fayyāḍ, under which he composed a *dīwān* of no less than 5,000 verses. He is said to have had personal connections with contemporary poets, such as Ṣāʾib-i Tabrīzī and others. His own poetry contains gnostic ideas, though Lāhīdjī had no sympathy for the Ṣūfī *shaykhs* of his time. Although equally criticised by some fanatical *ʿulamāʾ* of his epoch, Lāhīdjī has been considered as in general more acceptable to orthodox Shīʿism than his teacher Mullā Ṣadrā was. Lāhīdjī's sons Mīrzā Ibrāhīm and Mīrzā Ḥasan were also theologians of some repute. The latter, who died in 1121/1709, left behind no less than twelve books on theological problems.

Bibliography: later authors have sometimes confused Shams al-Dīn Lāhīdjī and ʿAbd al-Razzāḳ Lāhīdjī, so that they have called the commentator of the *Gulshan-i rāz* ʿAbd al-Razzāḳ (see e.g. E. G. Browne, *LHP*, iv, 148), or Muḥammad ʿAbd al-Razzāḳ, which is but a forged name (see Corbin, *Histoire de la philosophie islamique*, Paris 1964, 56). Concerning the philosophical school of Iṣfahān, see Corbin, *En Islam iranien*, iv, Paris-Tehran 1972, 9 ff.; A. Bausani, *La Persia religiosa*, Milan 1959, 386 ff.; S. H. Nasr, in M. Sharif's *A history of Muslim philosophy*, 1966, ii, 904 ff. For an analysis of the philosophical teachings of ʿAbd al-Razzāḳ-i Lāhīdjī, see S. Dj. Āshtiyānī's *Anthologie des philosophes iraniens, textes persanes et arabes*, Introduction analytique par H. Corbin, Tehran-Paris 1972, i, index. For his life and works, see Brockelmann, II, 590; C. Rieu, *Cat. of Persian manuscripts, Suppl.*, 205-6.; Browne, *LHP*, iv, 408-9, 435; Mudarris-i Khiyābānī, *op. cit.*, iv, 361-3.

(A. H. ZARRINKOOB)

LAḤN AL-ʿĀMMA, "errors of language made by the common people", is an expression which characterises a branch of lexicography designed to correct deviations by reference to the contemporary linguistic norm, as determined by the purists. The treatises which could be classed under this heading, correspond, broadly speaking, to our "do not say ... but say...", the incorrect form generally being introduced by "you say" or "they say = one says" (*taḳūl, yaḳūlūn*) and the correct form by *wa 'l-ṣawāb*... "whereas the norm is..."; they are most often intitled *Kitāb Laḥn al-ʿāmma* or *Kitāb mā talḥan/yalḥan fīhi 'l-ʿāmma*, but may also be *Kitāb mā taghlaṭ fīhi 'l-ʿāmma*, *Kitāb ghalaṭāt al-ʿawāmm*, *Kitāb Tathḳīf al-lisān*, etc., although this range of titles does not necessarily imply a significant difference in the manner of presentation of linguistic facts or a particular method of choosing the material to be considered. These works give evidence of the development of current usage and can, to a certain extent, serve as a means of tracing the history of the language, especially from the time that a standardisation of the *ʿarabiyya* [*q.v.*] came into operation through the efforts of the philologists.

Under the heading AL-KHĀṢṢA WA 'L-ʿĀMMA, reference has been made to the *ʿāmma* of the grammarians, without any attempt to define it and determine its limits. ʿAbd al-ʿAzīz al-Ahwānī, who has considered this point (in *RIMA*, iii/1 [1376/1956], 133 ff.), relies quite rightly on a passage of al-Djāḥiẓ (*Bayān*, i, 137) who writes: "When you hear me speak of the *ʿawāmm*, I do not refer to the peasants, the lower orders, the artisans and the tradesmen, nor the Kurds of the mountains or those who dwell on the islands in the sea... the *ʿawāmm* who belong to our nation and our religious community and possess our culture and morals constitute a class endowed with intelligence and qualities superior to those categories cited above, without however attaining the level of our *khāṣṣa*. It should be noted, in addition, that the *khāṣṣa* is also divided into hierarchical strata". It will be seen from this passage that al-Djāḥiẓ, without making a decisive contribu-

tion to the problem posed by the definition of the *khāṣṣa* and of the *ʿāmma*, excludes from the latter, from a linguistic point of view at least, the lower orders of society and the foreign elements whose language was not regarded as belonging to the *ʿarabiyya*, as strictly defined, and he includes among the *ʿawāmm* a medium social class who, at a time when literary Arabic and dialectal Arabic, as we call them, had not been irretrievably divorced, were expressing themselves in a language which was already less formal, but still fairly close to that of the *khāṣṣa*, of the intellectual élite, or the upper echelons of the latter, theoretically guardians of the norm of the past, of the innate and spontaneously respected *faṣāḥa* [*q.v.*].

Al-Zubaydī provides a number of definitions in this context when he writes in the introduction to his *Laḥn al-ʿawāmm* (cf. al-Ahwānī, *art. cit.*, 133; G. Krotkoff, *The "Laḥn al-ʿawāmm" of Abū Bakr al-Zubaydī*, in *Bull. of the College of Arts and Sciences, Baghdad*, ii [1957], 6-7): "I have examined the language employed in our time and in our land (Muslim Spain) and here I have found phrases which are cited neither by Abû Ḥātim (al-Sidjistānī; see below) nor by other lexicographers; it is a question of alterations, owed to our *ʿāmma*, which has modified the pronunciation (of certain words) or adapted the meaning, and has been followed in this practice by a great many people, to the point where these incorrect usages have infiltrated into the works of poets, and the most eminent scribes and functionaries include them in their correspondence and make use of depraved expressions in their conversations. I have therefore decided it appropriate to draw attention, in my turn, to these faults, to indicate the correct form which corresponds and to devote a book to the inaccuracies which I have observed . . . while leaving aside those that are committed by the mass of the people... and concentrating on those which one may expect to find in the language of the *khāṣṣa*." His treatise is however intitled *Laḥn al-ʿawāmm*, and one gains the distinct impression that this last term, or its singular *ʿāmma*, in the titles considered in this connection, is pure euphemism designed to disguise the truth and spare the feelings of the *khāṣṣa*, while laying the responsibility for linguistic deviations upon the latter. In fact, if he was referring to the uneducated people of whom al-Djāḥiz speaks, the works which belong to this genre would be descriptions of dialects, of the type which are known today as *ʿāmmī* or *ʿāmmiyya*; now this is far from being the case, even if dialectal forms did infiltrate the usage of the scholars who constituted a faction of the *khāṣṣa*. Furthermore, authors are well aware that their works will not be read by "the man in the street" and it is not a part of their objective to induce illiterates totally separated from their roots, or, which is more to the point, arabophones of foreign origin, to express themselves like the Arabs of the Djāhiliyya who merit the qualifying adjective of *faṣīḥ*. In reality, all the treatises of which we shall attempt a fully inventory in due course address themselves to a fairly closely-defined *khāṣṣa* whose practices are in need of correction, and al-Ḥarīrī is one of the few authors who has the courage to break with tradition and tell the truth, when he intitles his book *Durrat al-ghawwāṣ fī awhām al-khawāṣ* (ṣ).

In this case, *awhām*, elsewhere *khaṭaʾ*, *ghalaṭ*/*ghalaṭāt* or *saḳaṭāt*—"errors, faults, lapses"—are often substituted, in the titles of treatises, for *laḥn*, which is the time-honoured term. This technical expression has been the object of a vigorous semantic study on the part of J. Fück, in an appendix to his history of the Arabic language, *ʿArabiya* (Berlin 1950, 128-35; Fr. tr. Cl. Denizeau, Paris 1955, 195-205). Apart from its ancient connotations such as "word with double meaning, obscure allusion", "intelligence" etc., between which a subtle line of association may be traced, *laḥn* also appears to have signified, originally, "manner of speaking", "use of a word or pronunciation of a phonem peculiar to an individual or an ethnic group", in such a way that it could be considered an equivalent of the word *lugha*, adapted by the grammarians to take on the technical meaning of "dialectical or regional variation". These peculiarities were not, in themselves, reprehensible, but they were observed and sometimes derided by Arabs who, rightly or wrongly, stimulated by a spirit of purism and regarding themselves as defenders of the *faṣāḥa*, judged them contrary to their instinctive conception of the norm. *Laḥn* was not slow, however, with the establishment of normative grammar, to be applied to any deviation with regard to the rule and, in the first instance, to the abandonment of the *iʿrāb* [*q.v.*], of which an illustration or a relic may be perceived in the use of the word *malḥūn* [*q.v.*] to designate a form of popular poetry. It is thus that *laḥn* takes on the sense of "deed of committing faults of language", then of "perverted use (solecism, barbarism, malapropism, etc.)", as opposed to idiomatic usage and simple regionalism. Having become a synonym of *khaṭaʾ*, it is with this meaning that it figures twice in the *Kitāb* of Sībawayh (i, 262, 349; see G. Troupeau, *Lexique-index du* Kitāb *de Sībawayh*, Paris 1976, 188). In the following century, the use of the term in this precise sense had become so widespread that al-Djāḥiz himself, commenting on a verse in which *laḥn* signified "word with double meaning, obscure allusion", spontaneously, but erroneously, gave it the meaning of "fault" (see Fück, *op. laud.*, 131-2; Fr. tr., 200-1; Pellat, in *Arabica*, xxi/2 [1974], 183-4).

The norm to which reference has been made above is nothing more than an ideal to which the various grammatical schools are at pains to pay attention in their application of criteria which sometimes lead to contradictory results. In addition to differences in viewpoint, there is no shortage of regional peculiarities, as is to be expected in a region as vast as the Arabic-speaking world, which serve to explain both the relative abundance of works of *laḥn al-ʿāmma* and the divergent tendencies of which they are sometimes the expression.

In the course of the last hundred years, more or less detailed inventories of these works have been compiled, completed, and corrected by both Eastern and Western scholars who have taken a particular interest in this branch of philological study. The earliest is that of H. Thorbecke who, in his introduction to the *Durrat al-ghawwāṣ* of al-Ḥarīrī (Leipzig 1871, 7-12) supplied a preliminary list which was soon to be enlarged by I. Goldziher (in *ZDMG*, xxvii [1873], 155-6); a few years later, the latter devoted an article to the question, *Zur Literaturgeschichte des Chaṭaʾ al-ʿâmma* (in *ZDMG*, xxxv [1881], 147-52). In publishing his catalogue of the Arabic mss. of Berlin (vi, 1894, 319), Ahlwardt was to put a considerable store of useful information at the disposal of Arabist scholars. Although two books on the *laḥn al-ʿāmma* were written during the subsequent period, a gap of some forty years elapsed before the appearance of a new inventory, this time

in Arabic, compiled by ʿĪsā Iskandar al-Maʿlūf (*al-Lahad̲j̲āt al-ʿarabiyya*, in the *Mad̲j̲alla* of the Academy of Cairo, i [1935], 350-68 and iii, 349-71). The following year, ʿIzz al-Dīn al-Tanūk̲h̲ī was to put forward, in the introduction to his edition of the *Takmila* of al-D̲j̲awālīḳī (in *MMIA*, xiv [1936], 169-226) a brief list, later to be completed by Ṣalāḥ al-Dīn al-Munad̲j̲d̲j̲id (in *MMIA*, xvi [1941], 287), Kurkīs ʿAwwād (*ibid.*, xvii [1942], 282) and ʿAbd al-Ḳādir al-Mag̲h̲ribī (*ibid.*, xxv [1950], 471-7). In 1953, the IFAO of Cairo published the anonymous *D̲j̲umāna*, preceded by an introduction by the editor, Ḥ. Ḥ. ʿAbd al-Wahhāb, and containing a list of Mag̲h̲ribī treatises. The most complete inventory is that with which U. Rizzitano prefaced his analysis of the *Tat̲h̲ḳīf al-lisān* of Ibn Makkī (*Studia et documenta orientalia*, 5, Centro di studi orientali della Custodia Francescana di Terra Santa, Cairo 1956); this work, which has lost none of its value, will be extensively utilised in the present article. In the same year, there appeared in Cairo a thesis presented in 1953 by Ḥusayn Naṣṣār, *al-Muʿd̲j̲am al-ʿarabī*, which also contains (96-115) a rather muddled list. The history of research on the *laḥn al-ʿāmma* up to the year 1957 has been traced by G. Krotkoff (*op. laud.*), who also corrects and supplements Rizzitano on points of detail. Apart from the editions to which attention will be drawn in due course, the most recent works on this subject are those of ʿAbd al-ʿAzīz al-Ahwānī (in *RIMA*, iii/1-2 [1376-7/1957], 133-7, 285-321), of Ramaḍān ʿAbd al-Tawwāb (*Laḥn al-ʿāmma*, Cairo 1961, and *Laḥn al-ʿāmma wa 'l-taṭawwur al-lug̲h̲awī*, Cairo 1967) and of ʿAbd al-ʿAzīz Maṭar (*Laḥn al-ʿāmma fī ḍawʾ al-dirāsāt al-lug̲h̲awiyya al-ḥadīt̲h̲a*, Cairo 1967); the studies of these three last-mentioned authors are based on the partial or complete editions which they had procured.

The earliest treatise dealing with the genre studied here could well be the *Kitāb mā talḥan fīhi 'l-ʿawāmm* (or *Risāla fī laḥn al-āmma*) attributed to al-Kisāʾī (d. 189/805 [*q.v.*]) and published by C. Brockelmann (in *ZA*, xiii, 31-46; cf. Nöldeke, *ibid.*, 111-15), later by al-Maymunī (in *T̲h̲alāt̲h̲ rasāʾil*, Cairo 1344/1968); this work comprises 102 entries in which the correct form is introduced by *taḳūl*—"you shall say . . ." and the incorrect form by *lā taḳūl* "you shall not say. . ." (see also Brockelmann, I, 115, S I, 178; Rizzitano, no. 18); the two editors, faced with the question of the legitimacy of the attribution of the text to al-Kisāʾī, finally decided in favour of its authenticity, but Fück (*ʿArabīya*, 50-1; Fr. tr. 77) has cast serious doubt on the issue; since Rizzitano indicates (no. 41) that *al-Naṣīḥa al-tāmma li 'l-k̲h̲āṣṣa wa 'l-ʿāmma* by a certain Muḥammad b. Aḥmad b. al-ʿAlāʾī al-Ḥanafī is a presentation in alphabetical order of the *Laḥn al-ʿāmma* of al-Kisāʾī, this fact would seem to be an argument in favour of authenticity (cf. Krotkoff, 12, n. 13).

In the list of the writings of al-Farrāʾ (d. 207/822 [*q.v.*]), there figures a *Kitāb* (*al-Bahāʾ fī-*) *mā talḥan fīhi 'l-ʿāmma*, now apparently lost (see Ibn al-Nadīm, Cairo ed., 100; Yāḳūt, *Irs̲h̲ād*, vii, 278 = *Udabāʾ*, xx, 13; Ḥād̲j̲d̲j̲ī K̲h̲alīfa, v, 357; al-Suyūṭī, *Bug̲h̲ya*, 411; Rizzitano, no. 4); Ibn K̲h̲allikān (*Wafayāt*, Cairo 1310, ii, 229) compares it with the *Faṣīḥ* of T̲h̲aʿlab (see below). In keeping with the chronological order of the authors, by dates of death, it is appropriate to mention next Abū ʿUbayda (d. 209/825) [*q.v.*]), who is also credited with a *K. mā talḥan fīhi 'l-ʿāmma* (Ibn al-Nadīm, 80; Yāḳūt, *Irs̲h̲ād*, vii, 169 = *Udabāʾ*, xix, 161; *Bug̲h̲ya*, 395; Ḥād̲j̲d̲j̲ī K̲h̲alīfa, v, 357; Rizzitano, no. 1) which has not been preserved. The same applies to an article by his compatriot al-Aṣmaʿī (d. 213/828 [*q.v.*]), bearing the same title and mentioned notably by Ibn Yaʿīs̲h̲ (*S̲h̲arḥ al-Mufaṣṣal*, Leipzig 1882-6, i, 8), Ibn K̲h̲ayr al-Is̲h̲bīlī (*Fahrasa*, 375), Ibn al-D̲j̲awzī (*Taḳwīm al-lisān*, 97, 175) and Rizzitano (no. 2) but omitted, perhaps inadvertently, from the lists of works of this prolific philologist. Abū ʿUbayd al-Ḳāsim b. Sallām (d. 224/838 [*q.v.*]) is said to be the author, according to the *LA* (root *ḥ-z-z*), of a *K. mā k̲h̲ālafat fīhi 'l-ʿāmma lug̲h̲āt al-ʿArab* (cf. Rizzitano, no. 5). The *K. mā yalḥan fīhi 'l-ʿāmma* of al-Bāhilī (d. 231/845 [*q.v.*]) has not yet been recovered (see Ibn 'l-Nadīm, 83; al-Ḳifṭī, *Inbāh*, i, 36; *Bug̲h̲ya*, 130; Rizzitano, no. 10).

A different title, *Iṣlāḥ al-manṭiḳ* (ed. S̲h̲ākir and Hārūn, Cairo 1949, ²1956; cf. *Oriens*, iii [1950], 325 ff.; Krotkoff, 13), was chosen by Ibn al-Sikkīt (d. 244/858 [*q.v.*]) to deal with the same subject. Al-Māzinī (d. 249/863 [*q.v.*]) reverted to the traditional title (Ibn al-Nadīm, 85; al-Anbārī *Nuzha*, ed. ʿĀmir, 112; *Inbāh*, i, 246; *Irs̲h̲ād*, ii, 388 = *Udabāʾ*, vii, 122; Ibn Makkī, *Tat̲h̲ḳīf*, 265; *Bug̲h̲ya*, 202-3; Rizzitano, no. 6), but his treatise is lost. The same fate has befallen that of Abū Ḥātim al-Sid̲j̲istānī (d. 255/869 [*q.v.*]), also intitled *Mā talḥan fīhi 'l-ʿāmma* (al-Zubaydī, *Laḥn al-ʿawāmm*, introd.; Ibn al-Nadīm, 87; *Inbāh*, ii, 62; Ibn K̲h̲ayr, *Fahrasa*, 348; *Bug̲h̲ya*, 265; Brockelmann, S I, 167; Yāḳūt, *Irs̲h̲ād*, iii, 87 = *Udabāʾ*, xi, 265; Rizzitano, no. 7).

It was no doubt a particular category of the intellectual *k̲h̲āṣṣa* which came under attack from ʿUmar b. S̲h̲abba (d. 262/877 [*q.v.*]) in his *K. al-Naḥw wa-man kāna yalḥan min al-naḥwiyyīn* (*Irs̲h̲ād*, vi, 49 = *Udabāʾ*, xvi, 61; *Bug̲h̲ya*, 361; Rizzitano, no. 7A); to judge by the title adopted, this work must certainly have covered a less extensive span than those mentioned so far, since the author was apparently obliged to draw attention to individual faults committed, in conversations and lectures, by certain grammarians identified by name in order to chastise them for the bad example that they were setting, not with the object of illustrating the evolution of the language and certainly not to justify a certain degree of informality and abandonment of the *iʿrāb*, as was done by his contemporary al-D̲j̲āḥiẓ. In imitation of the latter, even an individual as conservative as Ibn Ḳutayba (d. 276/889 [*q.v.*]) went on record as arguing "in favour of the introduction of the spoken, or more exactly, vulgarising style into the written language, when the context requires that the expression be enlivened or embellished" (G. Lecomte, *Ibn Qutayba*, 435); it is nevertheless true that this author, in the chapter intitled *Taḳwīm al-lisān* of his *Adab al-kātib*, also takes his place among the ranks of the defenders of the purity of the *ʿarabiyya*. His contemporary Abū Ḥanīfa al-Dīnawarī (d. *ca.* 281/895, see AL-DĪNAWARĪ) follows the now well-established tradition in writing a *K. Laḥn al-ʿāmma* or *mā yalḥan fīhi 'l-ʿāmma* (Ibn al-Nadīm, 116; *Inbāh*, i, 42; *Irs̲h̲ād*, i, 127 = *Udabāʾ*, iii, 32; *Bug̲h̲ya*, 132; Ḥād̲j̲d̲j̲ī K̲h̲alīfa, v, 358; Rizzitano, no. 8), as well as, according to al-Suyūṭī, an *Iṣlāḥ al-manṭiḳ* (which is perhaps none other than the *Laḥn al-ʿāmma*).

To T̲h̲aʿlab (d. 291/904 [*q.v.*]) there is attributed a *K. mā talḥan fīhi 'l-ʿāmma* (*Inbāh*, i, 150; Ḥād̲j̲d̲j̲ī K̲h̲alīfa, v, 357; Rizzitano, no. 9), but this title must apply, as is suggested by Krotkoff (*op. laud.*, 12-13, n. 15), to the well-known *Faṣīḥ* (ed. Muḥammad ʿAbd al-Munʿim K̲h̲afād̲j̲ī, Cairo 1949), which is

concerned with the genre being studied here; this work, with its object of establishing the norm, has given rise to a series of commentaries and supplements such as the *Fāʾit al-Faṣīḥ* of Ghulām Thaʿlab (d. 345/957 [*q.v.*]), the *Tamām Faṣīḥ al-kalām* of Ibn Fāris (d. 395/1004 [*q.v.*]) edited by A. J. Arberry, London 1951, the *Dhayl Faṣīḥ al-kalām* of al-Ghaznawī (d. 442/1050), the *Sharḥ al-Faṣīḥ* of Ibn Hishām al-Lakhmī (d. 577/1182 [*q.v.* in Suppl.]), the *Dhayl Faṣīḥ Thaʿlab* of ʿAbd al-Laṭīf al-Baghdādī (d. 629/1231 [*q.v.*]) edited with the *Sharḥ al-Faṣīḥ* of al-Harawī, etc. (see Brockelmann, S I, 181).

Abu 'l-Haydham (d. after 300/913) is likewise credited with a *K. mā talḥan fīhi 'l-ʿāmma* (Ibn al-Nadīm, 122; *Irshād*, vi, 209 = *Udabāʾ*, xvii, 21; *Bughya*, 382; Ḥādjdjī Khalīfa, v, 357; Rizzitano, no. 3). Ibn Durayd (d. 321/934 [*q.v.*]) wrote a *Taḳwīm al-lisān*, composed in imitation of Ibn Ḳutayba and left incomplete (*Irshād*, vi, 89 = *Udabāʾ*, xviii, 136), but his *K. al-Malāḥin* (Brockelmann, I, 112, S I, 173; Rizzitano, no. 19) is not to be taken into account in this context, since it deals with words of double meaning and not with errors (cf. Krotkoff, 13, n. 15).

As Krotkoff (14) quite correctly points out, reference to mistakes is made in a vast number of works, so that it is difficult to select those which belong to the category of *laḥn al-ʿāmma* without bearing this specific title or one of the equivalents so far encountered. As far as it is possible to judge, the preceding treatises are concerned essentially with oral usage and its more or less accidental repercussions as they affect the written language, but it is legitimate to include in the present inventory works which draw attention to faults of orthography and errors of transmission or reading which threaten to be repeated on a lasting basis and to damage the integrity of the *ʿarabiyya*; after all, authors whose object is undoubtedly to correct what they call the *laḥn al-ʿāmma* do not neglect to devote a chapter to *taṣḥīf* and to *taḥrīf* [*q.v.*], and it will be noted that even Ibn Makkī puts the *bāb al-taṣḥīf* at the head of his book. It will therefore be appropriate to mention here *al-Tanbīh ʿalā ḥudūth al-taṣḥīf* (ed. A. Talas, Damascus 1968) of Ḥamza al-Iṣfahānī (d. after 350/961 [*q.v.*]), which deals largely with erroneously transmitted verses (cf. Brockelmann, I, 145, S I, 221; Rizzitano, no. 20) and *al-Tanbīhāt ʿalā aghālīṭ/aghlāṭ al-ruwāt* of Abu 'l-Ḳāsim al-Baṣrī (d. 375/985), which deals with errors and inaccuracies of one stratum of the intellectual *khāṣṣa* (on the mss., see Brockelmann, S I, 176-7). Also belonging to the same category are the *K. al-Taṣḥīḥ/al-Taṣḥīf wa 'l-taḥrīf* of al-Dāraḳuṭnī (d. 385/995 [*q.v.*]), mentioned by Krotkoff (14), and the *Sharḥ mā yaḳaʿ fīhi 'l-taṣḥīf wa 'l-taḥrīf* (ed. ʿAbd al-ʿAzīz Aḥmad, Cairo 1963) of Abū Aḥmad al-ʿAskarī (d. 382/993, see AL-ʿASKARĪ), where there are studies of words whose similar *ductus* leads to errors of reading and pronunciation among the *khāṣṣa* as well as among the *ʿāmma*. Also deserving mention perhaps is the *Istidrāk al-ghalaṭ* of al-Zubaydī (d. 379/989 [*q.v.*]) which corrects the errors of the *K. al-ʿAyn* of al-Khalīl (ed. Guidi, in *Mem. Acc. Lincei*, vi [1890], 414-57).

We return to the subject as such with the *K. Laḥn al-ʿawāmm* or *K. ma yalḥan fīhi ʿawāmm al-Andalus* of the same Zubaydī; this work has been analysed by G. Krotkoff (*op. laud.*) before being published successively by R. ʿAbd al-Tawwāb (Cairo 1963) and ʿAbd al-ʿAzīz Maṭar (Cairo 1966, with the *Taḳwīm al-lisān* of Ibn al-Djawzī and the *Tathḳīf al-lisān* of Ibn Makkī; see below); for the first time, we encounter an Andalusian author who observes curiously that Abū Ḥātim al-Sidjistānī (see above) has found in the Orient faults which are not committed by his compatriots, but he adds that the latter are not immune to inaccuracies; it will be noted that another Andalusian, Ibn Hishām, does not hesitate to criticise his predecessor.

Abū Hilāl al-ʿAskarī (d. 395/1005, see AL-ʿASKARĪ) is credited, for his part, with a *Laḥn al-khāṣṣa* (*Bughya*, 221) which is mentioned several times by Ibn al-Djawzī, but which has not survived. We do however have the *K. Tathḳīf al-lisān wa-talḳīḥ al-djanān* of Ibn Makkī (d. 501/1108 [*q.v.*]) first analysed by U. Rizzitano (*op. laud.*), then edited by ʿAbd al-ʿAzīz Maṭar (Cairo 1966, see above). This Sicilian author, who was *ḳāḍī* of Tunis, makes statements analogous to those of al-Zubaydī with reference to the Orient and the Maghrib, and he takes up arms against the degradation of the *ʿarabiyya* which has become so accentuated that people who express themselves correctly are subjected to ridicule; in his opinion, even the few individuals who respect the norm when they read and write cannot resist using the informal language of the common people, that is, dialectal Arabic, in their speech.

The *Durrat al-ghawwāṣ fī awhām al-khawāṣ(ṣ)* of al-Ḥarīrī (d. 516/1122 [*q.v.*]) may be considered the most eminent work of this category (ed. H. Thorbecke, Leipzig 1871 and several oriental editions; numerous commentaries; see Brockelmann, I, 277, S I 488).

Salāma b. Ghayyāḍ al-Kaf(a)rṭāʾī (d. 533/1138) is the author of a *K. mā talḥan fīhi 'l-ʿāmma* which is now lost (*Irshād*, iv, 246 = *Udabāʾ*, xi, 234; *Bughya*, 259; Rizzitano, no. 12). Besides the celebrated *Muʿarrab*, al-Djawālīḳī (d. 539/1144 [*q.v.*]) wrote a *K. al-Takmila fī-mā yalḥan fīhi 'l-ʿāmma* published by H. Derenbourg (in *Festschrift Fleischer*, Leipzig 1875, 107-66, under the title *K. Khaṭāʾ al-ʿawāmm*), then by ʿIzz al-Dīn al-Tanūkhī (in *MMIA*, xiv [1936], 163-226, under the title *Takmilat iṣlāḥ mā taghlaṭ fīhi 'l-ʿāmma*); this is a supplement to the *Durrat al-ghawwāṣ* of al-Ḥarīrī (see introd. of Tanūkhī, 167-8) which al-Suyūṭī (*Bughya*, 401; cf. Rizzitano, no. 24) entitles in fact *Tatimmat Durrat al-ghawwāṣ*, also citing a *Mā talḥan fīhi 'l-ʿāmma*, which must be the same work. Besides the commentaries and supplements to which reference has been made above, the treatise of al-Ḥarīrī gave rise to several refutations, among which that of Ibn al-Khashshāb (d. 567/1171), the *Radd ʿalā Durrat al-ghawwāṣ* (*Bughya*, 276-7), is preserved in the Dār al-Kutub (*Madjāmiʿ*, 198). Al-Djawālīḳī (*Takmila*, ed. Tanūkhī, 167) mentions *al-Laḥn al-khafī* of Hishām b. Aḥmad al-Ḥalabī (d. 577/1182) also noted by al-Suyūṭī (*Bughya*, 406; cf. Rizzitano, no. 13).

Ibn Hishām al-Lakhmī (d. 577/1182 [*q.v.* in Suppl.]) revises the *Laḥn al-ʿawāmm* of al-Zubaydī and the *Tathḳīf al-lisān* of Ibn Makkī in searching out the ancient attestations of terms rejected by these authors and also corrects faults current in Spain in a work in two parts intitled *al-Radd ʿalā 'l-Zubaydī fī laḥn al-ʿawāmm* and *al-Madkhal ilā taḳwīm al-lisān*; ʿAbd al-ʿAzīz al-Ahwānī has extracted from it and published in the *Mélanges Ṭaha Ḥusayn* (Cairo 1962, 273-94) the chapter on popular proverbs drawn from more or less corrupt classical verses, and he has also devoted to this author two articles inserted in *RIMA*, iii/1-2 (1376-7/1957). On the problems posed by the revision of this

treatise and the successive summaries which have been made of it, see below and IBN HISHĀM in the Suppl.; in addition, al-Suyūṭī (*Bughya*, 20) cites a *Sharḥ al-Faṣīḥ* (of Thaʿlab) by the same author, considered to be of high quality.

Ibn Barrī (d. 582/1187 [*q.v.*]) takes issue, in his turn, with the *fuḳahāʾ*, but not without taking precautions since he entitles his article *K. Ghalaṭ/Aghlāt al-ḍuʿafāʾ min al-fuḳahāʾ* (ed. C. C. Torrey, in *Orient. Studien ... Th. Nöldeke*, Giessen 1906, 211-24). The *K. Ghalaṭāt al-ʿawāmm* of Ibn al-Djawzī (d. 597/1200 [*q.v.*]), published by Maṭar (*Taḳwīm al-lisān*; see above), is mentioned under a variety of titles.

Nothing is known of *al-Taṣḥīf wa 'l-taḥrīf* (Krotkoff, 14) of al-Balaṭī (d. 599/1202 [*q.v.* in Suppl.]), nor do we have any information on the refutation of Ibn Makkī by Ibn al-Adjdābī (7th/13th century [*q.v.* in Suppl.]), *al-Radd ʿalā Tathḳīf al-lisān*, mentioned in the introduction by Ḥ. Ḥ. ʿAbd al-Wahhāb to his edition of the *Djumāna* and in that by ʿIzzat Ḥasan to that of the *al-Azmina wa 'l-anwāʾ* (Damascus 1964, 22) by the Tripolitanian philologist (see also Rizzitano, no. 14).

Abū ʿAlī ʿUmar al-Sakūnī al-Ishbīlī (8th/14th century) is the author of a *Laḥn al-ʿawāmm fi-mā yataʿallaḳ bi-ʿilm al-kalām* (*Djumāna*, p. *yāʾ*, n. 9; Brockelmann, ii, 250; Rizzitano, no. 30), but this work deals with Ashʿarism and not with errors of language properly speaking (see J. D. Latham, *The content of the* Laḥn al-ʿawāmm *of Abū ʿAlī ...*, in *Actas del primer Cong. de Estudios Árabes e Islámicos*, Madrid 1964, 293-307; it has been published by ʿAbd al-Ḳādir Zamāma in *Revue des manuscrits arabes*, xvii/2 (1971), 235-76 and by S. Ghrāb, in *Ḥawliyyāt al-Djāmiʿa al-Tūnisiyya*, xii, (1975), 111-255). The father of the editor of the *Riḥla* of Ibn Baṭṭūṭa, Abu 'l-Ḳāsim Ibn Djuzayy (d. 741/1340), left a *K. al-Fawāʾid al-ʿāmma fi laḥn al-ʿāmma* (see *Djumāna*, p. *ṭ*, n. 6; al-Maḳḳarī, *Nafḥ al-ṭīb*, viii, 29; Rizzitano, no. 15). By another Andalusian, Ibn Hāniʾ al-Lakhmī (d. 733/1332), the *Irshād al-ḍawāl(l) wa-inshād al-sawwāl* is a revision of the work of Ibn Hishām al-Lakhmī (see above).

Ṣafī al-Dīn al-Ḥillī (d. 749/1348 [*q.v.*]) is the author of an article intitled *Aghlāṭī*, of which one ms. has survived (Derenbourg, *Mss arabes de l'Escurial*, 76, no. 123; cf. Brockelmann, II, 296), but it is unclear whether it fits into the category which concerns us (cf. Rizzitano, no. 31).

The *Taṣḥīḥ al-taṣḥīf wa-taḥrīr al-taḥrīf* of al-Ṣafadī (d. 764/1363 [*q.v.*]) is a criticism and a resumé of nine previous works (of al-Ḥarīrī, al-Djawālīḳī, Ibn Makkī, al-Zubaydī, Ibn al-Djawzī, in particular; see Rizzitano, no. 32); a ms. of it exists in the Dār al-Kutub (37 *lugha*) and it has been the object of an analysis by ʿAbd al-Ḳādir al-Maghribī (*K. Taṣḥīḥ al-taṣḥīf li 'l-Ṣalāḥ al-Ṣafadī*, in *MMIA*, xxv [1950], 471-7; see also al-Ahwānī, in *RIMA*, 1957/1, 133, n. 1).

Ibn Khātima (d. 770/1369 [*q.v.*]) restricts himself to a summary, in the *Īrād al-laʾāl fi inshād al-ḍawāl(l)* of the work done by Ibn Hāniʾ al-Lakhmī on the *Taḳwīm al-lisān* of Ibn Hishām al-Lakhmī, and his, abridgment has been further edited, anonymously, into the form of a brief article published by G. S. Colin (in *Hespéris*, xii [1931], 1-32). Another unknown western scholar of the 9th-10th/15th-16th century has left a treatise with the revealing title *al-Djumāna fi izālat al-raṭāna* which has been edited by Ḥ. Ḥ. ʿAbd al-Wahhāb (*PIFAO*, Cairo, ix, 1953).

The prolific Suyūṭī (d. 911/1505 [*q.v.*]) was not a man likely to omit a contribution to the genre, and there remains in Istanbul (see Rizzitano, no. 34) a ms. of his *Ghalaṭāt al-ʿawāmm*. The same title was given to the Turkish translation (*Terdjüme-i Ghalaṭāt al-ʿawāmm*) of *al-Tanbīh ʿalā ghalaṭ al-khāmil* (or *al-djāhil*) *wa 'l-nabīh* by Ibn Kamāl Pasha (d. 940/1533, see KEMĀL PASHA-ZĀDE), which concerned Arabic words disorted or badly pronounced mainly by the Turks [see also GHALAṬĀT-I MESHHŪRE]; the Arabic text of the *Tanbīh* has been published by R. ʿA. al-ʿUbaydī, in *al-Mawrid*, ix/4 (1401/1981), 551-98.

Raḍī al-Dīn al-Hanbalī (d. 971/1563) seems to a certain extent to take the opposite view from that of previous authors in his *ʿIḳd al-khalāṣ fi naḳd kalām al-khawāṣ(ṣ)* of which one manuscript exists in Istanbul (Rizzitano, no. 3) and his *Baḥr al-ʿawwām fi-mā aṣāba fihi 'l-ʿawām(m)* (ed. Tanūkhī, in *MMIA*, xv, 85-139, 165-215). Khusraw-zāde (d. 998/1590) summarises al-Farrāʾ, al-Aṣmaʿī, Abū ʿUbayda, al-Sidjistānī, Ibn al-Sikkīt, Ibn Ḳutayba, Thaʿlab, al-ʿAskarī, etc., in his *Ghalaṭāt al-ʿawāmm* (ms. in Istanbul; see Rizzitano, no. 38) and corrects some linguistic errors in his *Tanbīh al-anām fi tawdjīh al-kalām* (ms. in Berlin; see Brockelmann, ii, 423; Rizzitano, no. 39).

Whereas al-Djawālīḳī confines himself, in his *Muʿarrab*, to considering words borrowed from Arabic, al-Khafādjī (d. 1069/1659 [*q.v.*]) gives, in his *Shifāʾ al-ghalīl fi-mā fi kalām al-ʿArab min al-dakhīl*, numerous examples of commonly-committed errors.

Rizzitano further mentions (nos. 43-5) some anonymous *Saḳaṭāt al-ʿawāmm*, equally anonymous *Aghlāṭ al-ʿawāmm wa 'l-khawāṣṣ* (ms. in Istanbul) and *al-Tanbīh ʿalā 'l-laḥn al-djalī wa 'l-khafī* by Abu 'l-Ḥasan al-Rāzī (various mss.; on the difference between *laḥn djalī* and *laḥn khafī*, see al-Tahānawī, *Kashshāf iṣṭilāḥāt al-funūn*, iv, 1308).

The attitude of the authors cited above is by no means homogenous. Some of them show an excessive purism and lay down the law without reservation, whereas others take a more liberal line, accept variations and are content to define the form which they consider the most correct in terms of the *faṣāḥa*; the latter applies, in particular, to the work of Thaʿlab, in his *Faṣīḥ*. The study of those treatises that have survived enables us to make a few general remarks.

In the first place, as has been stressed above, the philologists are not concerned with purely dialectal usage, which they regard as an adaptation of the *ʿarabiyya*, of the perfect form of Arabic, and not at all as a survival and evolution of ancient speech-patterns influenced by the mixture of ethnic elements as well as by the language formerly spoken in that territory and the language of neighbouring areas. It is therefore quite interesting to see for example an Ibn Hishām going in search, to justify usages considered erroneous, of attestations of terms rejected by his predecessors with regard to the criterion of the *faṣāḥa*, but alive and well in the ancient Arabic dialects. The faults to which attention is drawn in the works in question do not however apply exclusively to elements of vocabulary, and usages which transgress the norm can be classified in five main categories: 1. The most common applies to phonetics (incorrect vocalisation; lengthening of a vowel; alteration of a consonant by lengthening, emphasis, disemphasis, sonorisation, deadening, etc.; metathesis; reduction of a dipthong, etc.); 2. Morphology gives rise to remarks on, for example,

the first person singular of the imperfective in *n*-, but does not figure significantly; 3. The same applies to syntax. 4. Orthography, especially of the *hamza*, is the object of a few observations; 5. But it is most of all vocabulary which interests these authors (shifts of meaning; neologisms and borrowings which are regarded as superfluous because a proper Arabic term exists; excessive use of dialectal forms, etc.).

The mediaeval authors of treatises of *laḥn al-ʿāmma* have in the present day some worthy successors, of whom there will be found in the introduction by Ṣalāḥ al-Dīn S. al-Zaʿbalawī to his work entitled *A**kh**ṭāʾunā fi 'l-ṣuḥuf wa 'l-dawāwīn* (Damascus 1358/1939, 3, 6-9) a critical list, which may be enlarged by a study of the reviews of the various Arab Academies and of publications concerned with the language. Using criteria similar to those of their mediaeval predecessors, these authors are at pains to correct errors current in the press, in administration and in literature; we shall confine ourselves to mentioning Ibrāhīm al-Yāzi**dj**ī (1847-1906), *Lu**gh**at al-**dj**arāʾid* (Cairo 1319/1901, Asʿad **Kh**alīl Dā**gh**ir, *Ta**dh**kirat al-kātib* (Cairo 1933), al-Zaʿbalawī (see above), and Maʿrūf al-Ruṣāfī (1875-1945) who, in his *Dafʿ al-hi**dj**na fi 'rtiḍā**kh** al-lukna*, draws attention to deviations from Arabic caused by the Turkish domination.

To judge by the way that the language has been degraded, works of *laḥn al-ʿāmma*, whether ancient or modern, do not seem to have born fruit, and the efforts of the purists continue to be vain in confrontation with the development of the written and oral usage of so-called "literary" Arabic, which hardly allows interested parties the time to polish their language, even assuming that they are capable of doing so. In addition, it may be asserted that there is a tendency to put into practice the old adage *li-kull maḳām maḳāl* and to consider that the *faṣāḥa* to which one refers is not intangible and that it has the right to evolve it (on this subject see R. Ḥamzāwī, *al-Faṣāḥa faṣāḥāt, aw al-daʿwa ilā ḍarūrat murā**dj**aʿat al-faṣāḥa* (*sic*), in *Ḥawliyyāt al-**Dj**āmiʿa al-Tūnisiyya*, xvi [1978], 45-63).

Bibliography: given in the article.

(CH. PELLAT)

LAHNDĀ, meaning "west" in Pan**dj**ābī, was first given wide currency as a linguistic term by Grierson in the *Linguistic survey of India*. Following this authority, the name is often applied to the Indo-Aryan dialects of the western Pan**dj**āb (Pākistān), as opposed to the PAN**DJ**ĀBĪ [*q.v.*] of the central and eastern districts. The more natural feminine "Lahndī" is now general in South Asian scholarly usage, but neither form has ever achieved popular local currency.

1. Status and dialects. Grierson distinguished the dialects of the westen Pan**dj**āb as belonging to a "Lahndā language" (L.), regarded by him as a pure example of his conservative "Outer Circle" group, from the immediately neighbouring dialects he assigned to Pan**dj**ābī proper (P.), described as a member of his innovating "Central Group", which had come to overlay territory formerly occupied by L., although still retaining several L. features. Both the failure of Grierson's division of Indo-Aryan into "Outer" and "Central" groups to find much later support and the absence of any cohesive local consciousness of linguistic unity suggest that L. is to be regarded less as a language than as a convenient linguistic label for a group of dialects. In the latter sense, L. may be quite properly be distinguished from P. on the basis of such features as the conservative retention of many irregular past participles, the extensive use of pronominal suffixes with verbs (suggesting a parallel with the immediately neighbouring Iranian languages), the presence of a distinctive form of the past substantive verb (L. *āhā, hā* "was", P. *sī*), the non-periphrastic formation of the passive (L. *suṅī-* "be heard", P. *suṅiā jā-*), or the sigmatic formation of the future (L. *suṅsī* "he will hear", P. *suṅēgā*); many basic lexical items may also be collectively distinguished, as in the common verbal stems L. *ghinn-* "take", ***th**ī-* "become", *wanj-* "go" (< Sanskrit *gṛhṇāti, sthīyatē, *vrañjati*), for P. *lai-, ho-, ja-* (< *labhatē, bhavati, yāti*). The recognition of such differences should not, however, be allowed to obscure the fact that the many similarities between L. and P. make them closer to one another than either are to their immediate neighbours, respectively Sindhī and western Hindī.

Grierson's internal division of L. into dialect-groups, based as it was on data of very uneven quality, has been rightly criticised (see bibliography). While much detailed work still needs to be done, at least four such groups probably need to be distinguished.

The main group is that which covers the south-western Pan**dj**āb on either bank of the Indus below the Salt Range, including Multān and Bahāwalpūr, also the districts of Dēra Ismāʿīl **Kh**ān and Dēra **Gh**āzī **Kh**ān. Apparently as the result of earlier Balūč migrations from the latter areas, it is also widely spoken in eastern Balūčistān and upper Sind. In Sind it is called Sirāikī (< Sindhī *sirō* "up-river, north"), and this term has recently come to be generally current in the Pan**dj**āb also, replacing such local terms as "Multānī", etc. The absence of separate enumeration in the censuses and the settlement of large numbers of P.-speaking Muslim refugees from India since 1947 in the area makes the number of Sirāikī-speakers impossible to estimate accurately, though a figure of 15-20 million is often suggested. Both the number of speakers and the fact that Sirāikī (Sir.) is the only variety of L. to have been seriously cultivated as a vehicle for literature (see § 2. below) go some way to support its claim to be considered a separate language. Linguistically, Sir. is the variety of L. most distinct from P., as may be most clearly illustrated from typical phonological features. Middle Indo-Aryan initial and medial geminate voiced unaspirates are retained as such in P. and other varieties of L., but become implosive in Sir., as in Sindhī, and are in phonemic contrast with the corresponding explosives (often as a result of Perso-Arabic loans, which are very extensive): historical aspiration, whether as *h* or in the voiced aspirate series, is retained as such in Sir., where it has been reduced to tonal realisation of the adjacent syllables in P.: and, while L. is collectively distinguished from P. by the retention of *tr-* as an initial cluster (L. *truṭṭ-, trōṛ-* "break", P. *ṭuṭṭ-, ṭōṛ-*), Sir. is further distinguished by retention finally also, without anaptyxis, so Sir. *putr* "son" (< *putra-*), but northern L. *puttur*, Pl. *puttar*. Three main dialects of Sir. may be distinguished, although the differences are not particularly marked: these are the northern Thalī, the central Multānī, and the southern Bahāwalpūrī.

To the north of Sir., in and above the Salt Range, a number of related dialects are spoken, of which only Awāṅkārī has been properly described. This group of dialects is distinguished phonetically by the retention of historical aspiration, or its realisa-

tion as a high-falling tone, but normally without the low-rising tone of P., and morphologically by the use of extension in -ē to mark the singular oblique of unextended masculine nouns. Immediately to the east of this "northern L." group (of which the Hindkō of Peshāwar may be regarded as a member having many innovating features) is found Pōthōhārī, the speech of the Rāwalpindī area, which appears to be an intermediate dialect between it and P. Finally, to the south of this, in the Shāhpūr area, a complex group, containing features of P., northern L., and Sir. is encountered. This is clearly a linguistic frontier area, and it is unfortunate that Grierson should have chosen it as his standard for the description of L. The number of all speakers of varieties of L. other than Sir. is impossible to estimate accurately, but may amount to about 7 million.

2. Muslim literature. While the L.-speaking region was one of the first in the sub-continent to fall under Muslim political dominance, and the area has long had a large majority of Muslims in its population (now almost total, since 1947), the predominant literary language was naturally always Persian until its replacement by Urdū in the last century. Sir. has, however, also been cultivated for some types of writing, leading to the creation of an interesting local literature.

The earliest record of Muslim poetry in the Pandjāb is in the *shalōk* and hymns attributed to Farīd in the Sikh *Ādi Granth* (1604). While their traditional ascription to Farīd al-Dīn Gandj-i Shakar (571-664/1175-1265 [*q.v.*]) is exceedingly doubtful, their language does suggest that a composite idiom, based on the Sir. of Multān, long important as the seat of influential Ṣūfī dynasties, and the P. of the political capital of Lahore, was already well established as a local Muslim literary language by the 16th century. This is confirmed by the more reliably transmitted works of such slightly later writers as Mawlawī ʿAbd Allāh "ʿAbdī" (d. 1075/1664), author of many versified treatises on Islamic law and dogma.

Only in the 18th century, with the collapse of centralised Mughal authority, does a linguistically distinctive tradition of Sir., as opposed to P., Muslim literature properly emerge. This literature is nearly all in verse, and most of its genres and themes are naturally very similar to the contemporary local literatures being cultivated both in P. and in Sindhī. The largest single category of writing was probably the versified teaching material produced in the form of short treatises on the tenets of Islam, or rhyming Persian-Sir. vocabularies, of little intrinsic literary interest. Adaptations of popular Persian *mathnawī*-themes were also made, the best-known of these poems (locally termed *ḳiṣṣa*) being the *Sayf al-Mulūk* by Luṭf ʿAlī of Bahāwalpūr (119/1781) and the *Yūsuf Zulaykhā* by ʿAbd al-Ḥakīm of Uč (1218/1803). Local legends were also treated in this form, the best early example being from Sind, in the *Sassī Punnūn* by Nabī Bakhsh Laghārī (1254/1838).

The chief glory of the literature is, however, its Ṣūfī lyrical poetry, whether in the form of the short *dōhṛā*, cultivated by ʿAlī Ḥaydar of Multān (d. 1201/1785), or the longer *kāfī*, a sung lyric with a refrain repeated after each verse, first brought to perfection by Saččal Sarmast (1152-1242/1739-1827) of Khayrpūr in Upper Sind, who wrote with equal fluency and immediacy in Sindhī also. The finest example of the Sir. *kāfī* are to be found in the *dīwān* of Khʷādja Ghulām Farīd (1845-1901), the head of an important Čishtī dynasty, who lived at Čāčṛān in Bahāwalpūr State. With their subtle blend of a sensitive handling of local desert scenery, and the most profound Islamic learning, these poems mark both the end and the culmination of Muslim writing in the local languages of the Indus valley.

Mention should be made of the Shīʿī elegies (*marthiya* [*q.v.*]) produced in great numbers from Multān since the mid-19th century. These represent interesting local adaptations of the vast store of Shīʿī legendary material found in the popular Persian sources, and are notable stylistically as being typically written in alternating sections of verse and prose (*taḳrīr*), thus directly reflecting the usual style of performance of the professional *dhākirs* at the local *madjālis-i mātam*.

Traditional genres continue to be cultivated, while in recent years a modern prose literature has begun to be created. The problem of a uniform adaptation of the Perso-Urdū *nastaʿlīḳ* script [see KHAṬṬ. 4. India] to record the many additional phonemes of Sir. has yet to be fully resolved. In Sind, no longer important as a centre for the production of original Sir. literature, older Sir. texts are published in the Sindhī *naskhī* script, with its many additional letters.

There is a much smaller Muslim literature in the northern L. Hindkō. Writings produced in the areas of Pōthōhārī and Shāhpūrī are hardly to be distinguished from the main stream of Muslim Pandjābī literature [*q.v.*].

Bibliography: 1. Language. G. A. Grierson, ed., *Linguistic survey of India*, viii, part I, *Sindhī and Lahndā*, Calcutta 1919, has a full bibliography of the earlier sources; H. Bahri, *Lahndi phonology*, Allahabad 1962, and *Lahndi phonetics*, Allahabad 1963, are excellent studies of Awāṅkārī and valuable correctives to Grierson; his criticisms are partially assimilated in the composite study of Yu. A. Smirnov, *Yazīk Lendi*, Moscow 1970 (tr. as *The Lahndi language*, Moscow 1975); C. Shackle, *The Siraiki language of central Pakistan*, London 1976, is a reference grammar of the modern language with a full bibliography of later sources; idem, *Problems of classification in Pakistan Panjab*, in *Trans. of the Philological Soc.* (1979) examines the internal divisions of L. more widely.

2. Literature. The best surveys of the literature (in Urdū) are Kayfī Djāmpūrī, *Sirāēkī shāʿirī, Multān* 1969; Fārigh Bukhārī, *Hindkō adab*, and Ḥassān al-Ḥaydarī, *Sirāēkī adab*, in *Tārīkh-i adabiyyāt-i musulmānān-i Pākistān ō-Hind*, ed. Fayyāḍ Maḥmūd, xiv, part II, Lahore 1971, 210-56, 257-343; there is a general survey of Sir. literature in C. Shackle, *Sirāikī and Sirāikī literature, c. 1750-1900*, in *Upper Sind and South-West Panjab*, University of London Ph. D. thesis 1972 (unpublished), while detailed aspects are considered in idem, *The south-western style in the Guru Granth Sahib*, in *Journal of Sikh Studies*, v/1 (1978), 69-87; *Styles and themes in the Siraiki mystical poetry of Sind*, Multan 1976; *The Pilgrimage and the extension of sacred geography in the poetry of Khwāja Ghulām Farīd*, in Attar Singh, ed., *Socio-cultural impact of Islam on India*, Chandigarh 1976, 159-70; *The Multani marsiya*, in *Isl.*, lv (1978), 100-28; and [Muḥammad Djamāl Multānī], *Nūr-e-djamal*, ed. Mahar Abdul Haq, tr. C. Shackle, Multan 1977. (C. SHACKLE)

LAHORE [see LAHAWR].

LĀHŪT and **NĀSŪT** (A.), two terms meaning divinity (or deity) and humanity, and forming a pair which plays an important role in the theology of certain Muslim mystics and in the theosophical conceptions of the extremist Imāmate.

1. **Philological considerations.** The termination *-ūt* of these two words may be traced to an Aramaic origin. It is also present in the words *malakūt* (which is Ḳurʾānic, XXXVI, 83), and *djabarūt* which appears in the *ḥadīth*: "Glory to the One to whom belongs Ruling Power (*djabarūt*) and Kingship (*malakūt*)." So *malakūt* was already Arabised in the time of the Prophet. It is a direct borrowing from Syriac (*malkūtō*), or Ethiopic (*malakôt*), where this word means divinity, the Semitic root *ʾl* (God) being lost and replaced by the composite noun *ʾĕgzīʾ abĕḥēr*? Is it a difficult question to settle. Muḥammad's known relations with Abyssinia would lead one to suppose a Geʿez influence. Whatever may be the case, Ibn Manẓūr, in *LA*, states, without posing the problem, that "*al-malakūt* comes from *mulk* (kingdom), just as *rahabūt* (terrifying nature) comes from *rahba* (terror)." As for *djabarūt*, he says that it is the *faʿalūt* form of *djabr*. Consequently, he seems to give these words in *-ūt* a right to be cited as Arabic. He is more precise with regard to *lāhūt*: "Sībawayh thinks that *lāh*[un] is the original form (*aṣl*) of the name of God (*Allāh*)", and he cites a verse of al-Aʿshā in which *lāh* is understood in the sense of *ilāh* ("god"). Then he adds: "As for *lāhūt*, if it is correct that it is a word drawn from the language of the Arabs, it is derived from *lāha*: *lāha 'llāh al-khalḳ, yalūhuhum* = *khalaḳahum* "He created them". The form of this word (*wazn*) is *faʿalūt* like *raghabūt* (e.g. *radjul raghabūt*: a man of desires, naturally carried away by desire) and *raḥamūt* ('compassionate nature')." Thus there are several examples in Arabic of words in *-ūt*. The question as to whether they are, as such, of Arabic origin, remains unsettled by the lexicographers. In any case, a Syriac text of Aphraatus (4th century) has *shem alohūtō*, followed by *shem malkūtō*, the noun of the Divinity and the noun of the Kingship, and further on *raḥmonūtō* (*Patrologie Syriaque*, i, 794). *Alōhūt* may be the equivalent of *lāhūt*, although Syriac preserved the *alif* which is in the name of God, *alōhō* = *ilāh*, and which forms part of the root (cf. the discussions of the grammarians on the formation of the name *Allāh*). Finally, one should note that in Syriac, *alōhūt* designates the essence or nature of God (*kyōnō*).

On the origin of *nāsūt*, by contrast, there is no information available. Al-Tahānawī in his *Dictionary of technical terms* has not devoted any article to it. Ibn Manẓūr does not cite this word under the root *nās* or under the root *ʾns* from which come *ins* and its pl. *unās*, as well as *insān*. Here, it is well-established, according to Abu 'l-Haytham, that the *alif* is radical (*aṣliyya*); this grammarian is also ingenious in showing how *nās* ("men") could have come from *unās*, by adding the article *al*: *al-unâs* > *alunās* > *annās* (*al-nās*), and, after the dropping of the article, *nās*. This laborious explanation shows that if the form *nās* raises difficulties, *a fortiori* the form *nāsūt*. But Syriac has a word ܐܢܫܘܬܐ (ʾ)*noshūtō* with an occulting stroke (*mᵉbᵏatlōnō*) under the *alif*, indicating that his letter must not be pronounced. There is the form *nōshō* without *alif*, which means "man". This can be compared, in Sermon xv of the *Liber graduum* (*P.S.*, iii, 379), with *per humilitatem hypostaseos ejus humanae* (*da-ḳnūmeh d-bar nōshō* "from the hypostasis of the son of man"). So the Syriac origin of the word *nāsūt* does not seem to be in doubt; it designates human nature. Doubtless it was also chosen because of its assonance with *lāhūt*.

2. ***Lāhūt* and *nāsūt* in Christian literature.** Al-Bāḳillānī in the *Tamhīd* (Cairo 1366/1947) speaks of the Christians who claim that the union of the Word with the *nāsūt* is a mixture and mingling (*ikhtilāṭ wa-'mtizādj*) like that of water with wine (the Jacobites) or with milk (the Nestorians). Some claim that the significance of the union of the Word with humanity (*nāsūt*) which is the body, consists in its taking it as a temple (*haykal*) and dwelling place (*maḥall*) (86). Further on, al-Bāḳillānī reports that for the Christians, the name Messiah has two meanings: *lāhūt*, God (*ilāh*) and *nāsūt*, created man (*insān makhlūḳ*): the prayers of Christ come from the man, his miracles come from God and not from the man. But, demands the Muslim theologian, could the same not be said of Moses? The production of his miracles comes from the divinity, to the exclusion of his humanity (*min al-lāhūt, dūn al-nāsūt*) (94). For his part, al-Djuwainī, in his *Kitāb al-Shāmil fī uṣūl al-dīn* (ed. al-Nashar, Alexandria 1969, 582), writes with regard to the Christian doctrines concerning the union (*ittiḥād*), that the Christians mean by it the manifestation of divinity in humanity (*ẓuhūr al-lāhūt ʿalā 'l-nāsūt*). But in the way in which they conceive of this manifestation, they are divided into three groups. Some say that an object placed in front of a polished body appears there and can be seen without being transferred there and without dwelling there (*wa-lam yaḥullah*); it is in this sense that divinity appears in humanity, thus without *ḥulūl*. Others take the example of the impression of a seal in wax; it is the seal itself which appears there, although there is no part of it which comes to dwell there. The last group say that the manifestation of divinity in Christ means the same thing as, for Muslims, God's sitting on the throne, all of them agreeing that contact is impossible. Furthermore, they express union with the image of an act of clothing oneself (*tadarruʿ*), as if they believe that it is possible and true that the divinity had taken the body of Christ as clothing (*dirʿ*). Reference may be made to what H. Corbin wrote (*En Islam iranien*, iii, 285, n. 102), on al-Simnānī (d. 736/1336). So it may be reasonable to suppose that the terms *lāhūt* and *nāsūt* were borrowed from the Christians who wrote in Arabic using Syriac sources and originals, particularly the Nestorians who had had, as we learn from al-Tawḥīdī, numerous relations with Muslim thinkers, especially in Baghdād. It is conceivable that the problem of the union of the divinity and humanity in Christ had been able to interest the mystics of Islam, who were faced with an analogous problem, *mutatis mutandis*. On this subject, the ideas of assuming a garment, indwelling and temple are present in the writings of St. John and St. Paul, and these images were applied not only to Christ, but also to the saints in whom God, Christ and the Spirit are said to reside. An echo is to be found in Syriac literature. Thus one can read in the *Liber graduum* (Sermon iii, *P.S.*, iii, 71): "And Christ dwells in them" (*w-ʿōmer b-hūn Mashīḥō*); they are "filled with God" (*metmalen men Alōhō*). One should note the translation of the passage of St. Paul: "You are the temple of God" (I Cor., iii, 16): *Haykᵉleh a(n)tūn d-Alōhō*. The Arabic language has the word *haykal* whose significance, according to the lexicographers, is that of an adjective which has the meaning of "corpulent", "large", "long or high". This qualification is applied to animals and plants, especially the horse when it is "high on its hooves" (*ṭawīl*). A building is called *haykal*, when it is raised like a horse on its hooves (*LA*); Ibn Manẓūr (*ibid.*) informs us that the *haykal*

"is stated as being, among the Christians, a temple (*bayt*) in which there is an idol in the likeness of Mary (*fīhi ṣanam ʿalā khalkat Maryam*) or even: "in which there is the effigy of Jesus and Mary". He adds that this name is sometimes given to Christian convents. Only lastly does he mention the meaning of an idol temple. So it seems indisputable that the use of the term *haykal* to designate the place where the *lāhūt*, i.e. the *nāsūt*, resides is of Christian origin. As for the image of clothing, in Christian literature, it has the two senses: the divine nature wears (*lᵉbesh*) the form (*ṣūrōt*) of the earthly man and we wear (*nelbesh*) the form of the celestial man (Aphraatus, *Démonstration* vi, 18, P.S., i). As for the Word, it wore (*lᵉbesh*) a body of dust, and it drew it to its own [divine] nature (*la-knyōteh*) (*Dém.* xxiii, 49, P.S. ii). But what is involved here is the Melkite doctrine of God made body (in Arabic: *ilāh mutadjassid*), meaning by body human nature, or even *Allāh al-mutaʾannis* (cf. St. Athanasius, *P.G.* 26, col. 804, where the incarnation σάρκωσις, is identified with "humanisation" ἐνανθρώπησις. According to the Nestorians, the divine nature of the Word wears an integral human nature and subsists as such in the union, this union being that of two concurrent wills (συνάφεια) in a *prosōpon* of union. In the *Book of Heraclides of Damascus* (French tr. F. Nau), Nestorius explaines his conception clearly (158, 212-13), and he expands in several ways on the image of the clothing which has its own nature, but which nevertheless is always and everywhere present with that which bears it, for example "on account of the One which is worn, I adore the clothing" (*ibid.*, 159). The image of the temple is also developed: "The temple is passive (παυητὸς ὁ ναός), but not God who gives it life" (*ibid.*, 207). In the same sense, Ibn al-Djawzī writes in *Talbīs Iblīs*: "the Christians maintain that Christ is two substances, the one eternal, the other created; that he had need of nourishment; that he was crucified; and that this was on account of his humanity" (*fuʿila hādhā bi-'l-nāsūt*). But, as a good Muslim, Ibn al-Djawzī asks "why did not the divine element in him (*lāhūt*) oust that from the *nāsūt*?"

The word *lāhūt* is used by Arabic-speaking Christians. Thus in the *History of the Twelve Patriarchs of the Church at Alexandria*, Severus, bishop of al-Ashmūnayn (towards the end of the 10th century), citing a letter from St. Cyril to Nestorius (*Patrologie orientale*, i, 434), reports that Christ "died on the cross in his body, while he is living by the force of his divinity" (*ḥayy bi-ḳuwwat lāhūtihi*). He confesses the Trinity by saying that there are three persons (*aḳānīm*), one unique nature (*ṭabīʿa wāḥida*) and one unique divinity (*lāhūt wāḥid*).

3. The pair *lāhūt-nāsūt* in the thought of al-Ḥallādj. The preceding discussion may clarify many difficult aspects of Ḥallādjian mysticism. According to L. Massignon (*Passion*², iii, 51), al-Ḥāllādj borrowed from the lexicon of the extremist Imāmī theologians the words *lāhūt* and *nāsūt*, "however, profoundly modifying their significance". In a note he states that it is unlikely that he had made this borrowing from the Christians, as was formerly believed: "for him, as for the Ghulāt, *nāsūt*, *nūr shaʿshaʿānī* ('resplendent light') and *amr* ('command') are synonyms, which is in no way Christian". But the argument does not stand up, for the question is that of the origin of the words and not of the origin of their significance; if, even by the confession of Massignon, al-Ḥallādj modified the significance of expressions which he took from the Imāmīs, why would he not have accomodated to his own thought some terms which he had taken from the Christians? ʿAfīfī, in his book *al-Taṣawwuf: al-thawra al-rūḥiyya fi 'l-Islām* (Alexandria 1963, 82-3), followed by Kāmil Muṣṭafā al-Shībī in his *Sharḥ Dīwān al-Ḥallādj*, has upheld the thesis of the Christian origin. But which Christians are concerned? If it is the Nestorians, it seems that, even going beyond words, similarities in ideas may be detected, allowing for the fact that in al-Ḥallādj there is no Christian christology. In fact, the Ḥallādjian *nāsūt* could be considered the equivalent of the *prosōpon* of union in which the will of God and the will of man are united, which justifies L. Massignon's important remark (*ibid.*, iii, 52): "The only aspect through which divine action takes part in transforming man is not *lāhūt*, the creative omnipotence ..., but this essential, intelligible word which is at the basis of every command of the Divine ...". *Nāsūt*, like *amr*, is actually the place where the wills of the One who commands and the one who obeys are united. As in Nestorianism, there is never any confusion between the divine essence, *lāhūt*, or as L. Gardet says (*Dieu et la destinée de l'homme*, 491), "the sealed world of the divine essence" and the human substance. To mark this irreducible distinction of the two natures, al-Ḥallādj uses the terms *lāhūtiyya* and *nāsūtiyya*: "My observance of what is properly Yours differs from Your observance of what is properly mine; in fact, Your observance of what is properly mine is divinity (*lāhūtiyya*) and my observance of what is properly Yours is humanity (*nāsūtiyya*), and even while my humanity (*nāsūtiyya*) is lost in Your divinity (*fī lāhūtiyyatika*) without being confused with it, at the same time Your divinity takes possession of my humanity without having any contact with it" (*Akhbār al-Ḥallādj*, no. 1, Arabic text, 8). "He who supposes that *lāhūtiyya* mingles with humanity (*bashariyya*), or the *bashariyya* mingles with divinity (*ulūhiyya*) is an infidel" (*ibid.*, no. 25). The synonymous *ulūhiyya-lāhūtiyya* and *bashariyya-nāsūtiyya* allow us an accurate understanding of the meaning of the two terms constructed from *lāhūt* and *nāsūt*. Let us note that Ibn al-Fāriḍ (*Tāʾiyya*, 455) uses *lāhūt* in the sense of *lāhūtiyya* and *nāsūt* in the sense of *nāsūtiyya*: "I am not diverted by *lāhūt* from the condition of the place of my appearance, and I do not forget, through *nāsūt*, the place of my wisdom's appearance." If, as for the Nestorians, there is no mingling of the two natures, by contrast, when al-Ḥallādj uses the image of clothing, it is to say "my temporality is beneath the clothing of Your eternity" (*ḥadathī taḥt mulābis ḳidamika*); (*Akhbār*, no. 1). "O All of my all ... The all of Your All is a clothing worn by my inner significance" (*Dīwān*, 7, v. 5: *wa kullu kullika malbūs bi-maʿnāʾī*). The act of wearing this All (*labs*), that Massignon explains by "the deiformity of the sanctified man" (*Passion*, iii, 356, n. 7), results in the all of the man containing the all of God with which he is clothed. "I contain in my all the All of Your All, O You, my sanctity. You are revealed to me to the point where it is as though You were within me" (*Dīwān*, 44, v. 1). Indeed, in the order of the stations of mystical ascension, *labs* comes immediately after *kashf*. Finally, there is also to be found in al-Ḥallādj the image of the *haykal* which is the corporeal form: "The *haykal* remains on earth, putrefied" (*Dīwān*, 63, v. 2). So it is not simply a question of the divine dwelling within him; he must also be transfigured. Al-Ḥallādj asked for "the destruction of the Kaʿba,

then its rebuilding with wisdom." The Kaʿba to be destroyed is the "temple of the human body", the *haykal* "whose transfiguration is to be hastened" (*Passion*, i, 689). As for myself, He does not veil Himself from me for a single moment, until my *nāsūtiyya* is lost in His *lāhūtiyya* and my body disappears in the lights of His essence" (*Akhbar*, 10; cf. *Passion*, iii, 52-3). *Nāsūtiyya* must then, in so far as it is purely human, be assumed by the *nāsūt*, the aspect of God in which union is realised: "Glory be to Him whose *nāsūt* manifested the secret of His dazzling *lāhūt*'s sublimity, in the form of a man who eats and drinks" (*Dīwān*, 9, v. 1).

The origin of the idea of *nāsūt* conceived by al-Ḥallādj must be looked for in the word that, in eternity before all creation, God addresses to man, the Word which is contained in the uncreated Ḳurʾān. To this idea of a pre-eternal conversation between God and man is linked all the Ḥallādjian dialectic of Me, You and Him, which underlies the relations between *lāhūt* and *nāsūt*, *lāhūtiyya* and *nāsūtiyya* as in the following example, "The Yourself which is a Him has borne witness to Me" (*awʿazta ilā shahīdika 'l-huwī*) i.e. that the dialogue between the divine You and the human me, on the level of the *nāsūt*, manifests the essence of God (*lāhūt*) in his ipseity (*huwiyya*).

4. The pair *lāhūt-nāsūt* in the thought of Ibn ʿArabī. For Ibn ʿArabī, the *lāhūt* is the divine aspect in the prophet and saint, as supposed to the *nāsūt* which is the human aspect. In a poem concerning knowledge of Jesus (*Futūḥāt*, ed. ʿUthmān Yaḥyā, iii, 41, 88-9), one can read: "His *lāhūt*, which was in the world of the Invisible, was his union (with God: *ṣihr*), was a spirit in whose image (*rūḥ mumaththal*) God made the secret appear." The term *ṣihr* (relationship through women) indicates, according to ʿUthmān Yaḥyā, that no natural parenthood is concerned, but the result of a divine choice. The spirit is a lifegiver; it is through it that Jesus brought the dead to life. Also, generally speaking, the *lāhūt* is the life infused in things, and the recipient that the spirit brings to life is called *nāsūt* (*Fuṣūṣ al-ḥikam*, ch. x, where it is Christ; tr. Burckhardt, 110). The same definition is to be found in ʿAbd al-Razzāḳ al-Kāshī (or al-Kāshānī [*q.v.*]): "The *lāhūt* among the Ṣūfis is life which flows into things, and *nāsūt* is its place (*maḥall*): it is the spirit" (cited by al-Tahānawī, art. *Lāhūt*). Ibn ʿArabī does not make systematic use of these two terms. There are equivalents in his theory of the relation between the two domains of the Kingdom (*Mulk*) and the Kingship (*Malakūt*), in that of the Light of Muḥammad (*Nūr Muḥammad*) and the Muḥammadan Tree, which is "the totalising, universal human Tree" (R. Deladrière, *Ibn ʿArabī: la profession de foi*, 62). The *Tadhkirat al-khawāṣṣ* (*ibid.*, 62, 133) also says: "The letters of the Muḥammadan Tree are the human nature of its intelligible truth and the veils of its significance...".

5. The pair *lāhūt-nāsūt* in Shīʿi thought. According to the Imāmī conception, different planes of the universe exist (cf. H. Corbin, *En Islam iranien*, i, 35): *lāhūt*, *djabarūt malakūt*, *nāsūt*, [see ʿALAM]. *Lāhūt* is the world of secrets (*ʿālam al-asrār*) and the Unrevealed (*ibid.*, 203). The mystical relations between *lāhūt* and *nāsūt* express the different aspects of the theophanic conception of the Imām. Al-Tahānawī, who discusses *lāhūt* in his article *djabarūt*, refers essentially to Persian texts. It is thus finally in Iranian thought that the two terms *lāhūt* and *nāsūt* received the widest reception, following what al-Ḥallādj and Ibn ʿArabī had written on this subject. If comparisons can be made with the Christological doctrines of Christianity, particularly with regard to the image of clothing (cf. H. Corbin, *op. laud.*, iii, 174-5), it must be stated that these two terms were henceforth perfectly integrated in Shīʿi imamology.

We shall mention in conclusion a curious etymology given by al-Tahānawī; *lāhūt* originally derives from the formula: *lā huwa illā huwa*: it is the custom of the Arabs when they use a complex formula in speaking to add something to it (*čīzī ziyāda kunand*, i.e. the final letter *tāʾ*, and to cut something off it (*hadhf kunand*: here *illā huwa*). The result is that *lāhūt* is the radiance of the essence (*tadjallī 'l-dhāt*).

Bibliography: given in the article.

(R. ARNALDEZ)

LĀHŪTĪ, ABU 'L-ḲĀSIM, Persian poet and revolutionary, was born in Kirmānshāh on 4 December 1887, the son of a petty shoemaker. As a youth he joined the struggle for constitutionalism in Persia, and in 1908 took part in the fight against the royalist troops in Rasht, following Muḥammad ʿAlī Shāh's attempt to reimpose autocracy. After the restoration of the Constitution in 1909 he entered the gendarmerie and was eventually promoted to the rank of major. There, charged with subversion, he was condemned to death, but he managed to escape taking refuge in the Turkish (now in ʿIrāḳ) border town of Sulaymāniyya. In 1915 he returned to his home town, and was drawn in the movement against Allied intervention in Persia. Around this time he also started the periodical *Bīsutūn* from Kirmānshāh, and founded a workers' party. In the period that followed, he again came into conflict with the authorities and migrated to Istanbul. While he was there he taught in a Persian school and issued the Persian-French periodical *Pārs*. Towards the end of 1921 he was allowed to return to Persia and was reinstated in the gendarmerie. Not long afterwards he headed an abortive revolt in Tabrīz and, after its failure, fled to the Soviet Union (February 1922).

In the Soviet Union, Lāhūtī's activities were connected mainly with the political and cultural life of Tādjikistān, where he took up residence after 1925. He served as deputy commissar of education, and was honorary president of the Tādjīk Writers' Union. The Soviet government awarded him several honours including the Order of Lenin. He died in Moscow on 16 March 1957.

Lāhūtī was the most outstanding Communist poet in Persian, and has been rightly acclaimed as one of the founders of Soviet Tādjīk poetry. His early political verse appeared in the periodicals of the Constitutional Period, such as *Ḥabl al-matīn*, *Īrān-i naw* and *Sharḳ*. In his poems written before 1922 he often displayed sentiments favouring workers and peasants. Thereafter, his permanent domicile in the Soviet Union strengthened his trend towards Communism, and his art became progressively identified with the literary and political assumptions of the Soviet government. The poem *Kreml* ("Kremlin"), composed in 1923, was the first notable indication of this development. It recalled Tsarist atrocities and condemned imperialism and capitalist exploitation, welcoming the triumph of the Communist Revolution in Russia. Lāhūtī's subsequent poems concerned themselves largely with his immediate environment, but themes dealing with Persia were not lacking. The poet employed both conventional and new forms,

and used non-traditional metres, which were apparently inspired by Russian literary models. He also composed songs, and wrote the libretto of *Kāwa-i āhangar* ("Kāwa the Blacksmith"), which was the first original opera to be performed in Tādjikistān. His literary endeavours extended to the field of translations, which he rendered from the works of such writers as Shakespeare, Pushkin, Gorky and Mayakovsky. His diction was simple and uncomplicated, and he used a language which almost verged on ordinary speech.

(MUNIBUR RAHMAN)

LAʿIB (LIʿB, LAʿB), the Arabic word for "play" (also used variously in Persian, against Turkish *oyun*), in the Muslim world as fundamental a concept of vast sociological and psychological implications as in other civilisations. Only a few of its aspects can be briefly discussed here. The "play" character of many important human activities (dance, theatre, music, etc.) does not come under our purview, nor do ritual games as survivals of pre-Islamic religiously-motivated customs. We find them occasionally mentioned, as, for instance, in references to New Year practices, cf. al-Bīrūnī, *Āthār*, ed. Sachau, 216, who also mentions the enactment of a Persian religious ceremonial played on seesaws; for a modern example from southern Morocco, see M.-R. Rabaté, in *Objets et Mondes*, x (1970), 239-62. The stress here is on children's games, but, in Islam as elsewhere, no clear dividing line separates the games of children from those of adults; there is no typological distinction, the only difference sometimes encountered being certain material factors. Al-Djāḥiẓ, *Ḥayawān*, Cairo 1323-5, iii, 79, may have been aware of this circumstance when he singled out playing with pigeons as best representing the easy potential transition in games from playfulness to seriousness. The various expressions of the human play instinct and the various types of games were all cultivated in the Muslim world. The constant use in literature of metaphors built upon combinations with the root "to play" attest to the concept's living strength.

The large role of "play" in Muslim life is all the more remarkable as it ran counter to firm religious objections. These objections have indeed greatly coloured the expressed Muslim attitude toward play. They were no doubt effective in curtailing the factual information on games available to us. The Ḳurʾān refers to play (and *lahw* "amusement") as a particularly insidious expression of human unconcern with man's true task in this world, which is working toward salvation in the other world. Much ingenuity was spent by Muslim intellectuals on condemning it, as attested in innumerable statements such as, for instance, many verses in the *zuhdiyyāt* of Abu 'l-ʿAtāhiya or ʿAlī's indignant rejection of being called a *tilʿāba timzāḥa* (al-Balādhurī, *Ansāb*, ii, ed. M. B. al-Maḥmūdī, Beirut 1394/1974, 151). Not dissimilar to the thought expressed by Anacharsis (Aristotle, *Nicomachean Ethics*, 1176 b 33), that playing should be tolerated only when it enhances a man's ability for serious occupations, is the idea that all work and no play dulls the sensitivity of even the greatest and most dedicated minds, and light relaxation, therefore, is to be tolerated (e.g. F. Rosenthal, *Humor in early Islam*, Leiden 1956, 5, and see AL-DJIDD WA 'L-HAZL), but the authors who quote statements to this effect would hardly have gone so far as to include simple games in what they meant by relaxation. Worldly wisdom required that rulers be warned against excess in playful activity. As a matter of fact, "play" in Islam came to be considered the exclusive prerogative of children, bracketed at times with women also in this respect. In the Greek tradition as represented by Bryson (ed. M. Plessner, Heidelberg 1928, 202; cf. also al-Ghazālī, *Iḥyāʾ*, *riyāḍat al-nafs*, Cairo 1352/1934, iii, 63) and used by such influential thinkers as Miskawayh, even children should be permitted moderate playing as relaxation only to be better able to tolerate the hardships of education, or (according to *al-Saʿāda wa 'l-isʿād*, ed. M. Minovi, Wiesbaden 1957-8, 360) to acquire serious skills. Sometimes, we find statements to the effect that future greatness is foreshadowed in childhood by a disdain shown for playing. References to children are often routinely associated with play. It was quite natural to have the youth killed in the story in Ḳurʾān, XVIII, 74/73, described as having been found playing with others (al-Bukhārī, *Ṣaḥīḥ*, cf. Ibn Ḥadjar, *Fatḥ al-bārī*, Cairo 1378-83, i, 232, xi, 25, 33; al-Ṭabarī, *Tafsīr*, *ad loc.*), or to worry that Yūsuf's playing in XII, 12 (the only morally neutral reference to "playing" in the Ḳurʾān) might implicate his adult brothers (I. Goldziher, *Die Richtungen der islamischen Koranauslegung*, Leiden 1920, 28 f.), or to explain *daʿāmīṣ* applied in the *ḥadīth* to Muslim infants in Paradise from their being similar to water bugs (?) because of their playing in the rivers of Paradise (al-Sharīf al-Raḍī, *Madjāzāt*, Cairo 1387/1967, 406). The Prophet as a child is said to have engaged in a game called *ʿaẓm* (*ʿuẓaym*) *waḍḍāḥ*, described as searching (in the dark) for a very white bone tossed far away, with the finder being allowed to ride upon his playmates (Lane, 2087b, 2947a; *Lisān al-ʿArab*, iv, 476; Ibn Ẓafar, *Anbāʾ nudjabāʾ al-abnāʾ*, Cairo n.d., 24); the Prophet's alleged participation in such a game could easily have struck strict interpreters of the doctrine of *ʿiṣma* as objectionable and is, in fact, mentioned only very rarely. The Prophet's uncle al-ʿAbbās is described as having played *ḳula* as a boy, a game mentioned in ancient poetry (ʿAmr b. Kulthūm, Labīd, cf. T. Nöldeke, *Fünf Moʿallaqât*, i, Vienna 1899, 47; *Sharḥ Dīwān Labīd*, Kuwait 1962, 81) and described as played with two small wooden boards, one twice as long as the other and the one being hit with the other (or with a *miḳlāʾ*), this being in an anecdote intended to show al-ʿAbbās's innate decency (Ibn Ẓafar, *Anbāʾ*, 52).

The most influential reference to child's play goes back to the biography of ʿĀʾisha, reported in

many traditions with only slight variations (for instance, *Concordance, s.v. l-ʿ-b*; Ibn Saʿd, 40-5; al-Balādhurī, *Ansāb*, i, ed. M. Hamidullah, Cairo 1959, 410-12). It happened when the Prophet saw ʿĀʾisha playing on a seesaw (*urdjūḥa, mardjūḥa*) that she first caught his attention, and he once, or on different occasions, came upon her playing with dolls. "Dolls" (*banāt* "girls", or *luʿba*, pl. *luʿab*, the typical "plaything") came thus to be discussed intensively in the legal literature. The gist of the Sunnī jurists' discussion and the problems of detail they chose to face can best be captured from Ibn Ḥadjar, *Fatḥ*, xiii, 143 f. In sum, dolls were usually given very reluctant approval as having educational value for training little girls to become good mothers. The obvious conflict between the prohibition of figurative representations [see EI [1] art. ṢŪRA] and the permissibility of dolls, although often they were not realistic representations of living beings, proved impossible to solve to everybody's satisfaction. The connection with idol worship was only hesitantly mentioned. The *ḥadīth* also informs us that dolls were made of wool (ʿ*ihn, Concordance*, iv, 409a, 16 f.) to be given to children who were made to fast, in order to divert them (as other toys, such as polo sticks, might be promised to children as incentives for studying, see Ibn ʿAḳnīn, *Ṭibb al-nufūs*, ms. Bodl. or Hunt. 518, 70b). Some of ʿĀʾisha's toys had, or were seen by the child's imagination to have, the shape of (winged) horses, with the wings made of rags. In this connection, al-Ghazzālī, *Iḥyāʾ, ādāb al-samāʿ*, ii, 245) speaks of the "imperfect forms" (of toys) fashioned by children from clay and rags as something tolerated by Shāfiʿis, as he also mentions elsewhere (*Iḥyāʾ, ādāb al-kasb*, ii, 60) animal toys made of clay given to children on festivals.

Numerous names of games were mentioned as being of philological interest and listed because of their strange forms or because of literary connections (e.g. al-ʿAskarī, *al-Talkhīṣ fī maʿrifat asmāʾ al-ashyāʾ*, Damascus 1389-90, 718-24, see F. Rosenthal, *Gambling in Islam*, Leiden 1975, 65). We also find references to such things as *diḥindiḥ, dirkila, daʿladja* (a running, and ? catching, game, al-Ḳālī, *Amālī*, Cairo 1373, ii, 315; *Lisān al-ʿArab*, iii, 97), or the putting of *fidjrim* into *uwaḳ* (al-Ḳālī, ii, 4 f.). Games are given at times names in the form of noun combinations or sentences, such as *al-muʿallim wa 'l-adjīr* "master and hired hand" (T. Hyde, *De ludis orientalibus*, ii, Oxford 1694, 234-6), *djiʾtukum khudhūnī* "I have come to you, seize me" (Hyde, ii, 240 f.), *khasā wa-zakā* for even-and-odd, (Turkish) *tut Leila* "catch Laylā" (H. Ritter, *Knabenspiele aus ʿAmāra*, in *Isl.*, xxvi [1942], 49-57), etc. Characteristically, the names of games change greatly in the course of time so that those found in Hyde from the 17th century and even more so those from modern times (e.g. K. L. Tallqvist, *Arabische Sprichwörter und Spiele*, Helsingfors 1897, or Ritter) are nearly all different from those known from the mediaeval literature, quite apart from local differences.

The philologians no doubt had often no personal experience of the games they sought to describe. Descriptions are often non-existent, or they are so brief as to indicate hardly more than the general type of a given game and to be practically useless; this is nothing peculiar to Muslim philologians but something worldwide, since the play instinct required to be satisfied by intricate and volatile rules hard to describe fully. Ambiguities of interpretation are always present. Similarities between modern and mediaeval names, in the rare cases in which they exist, do not necessarily indicate that the games are the same. Thus, the *laʿb al-khumaysa* mentioned by Ibn Ḳuzmān (E. García Gómez, *Todo Ben Quzmān*, Madrid 1972, i, 32/33, 36 n. 6) is hardly the *khemis* described by A. Robert from Algeria, in *Revue Africaine*, lxii (1921), 69. The ring (*khātam*) game of prestidigitators is no doubt the guessing game described by Robert, but hardly represents all the games thus designated (cf. Rosenthal, *Gambling*, 62; al-Sīmāwī, ʿ*Uyūn al-ḥaḳāʾiḳ*, ch. 11). The modern game called *bilbil* may be related to ancient *ḳula* as suggested by Ritter, but we have no way of knowing how far this relationship, if it in fact exists, extends to details.

Of the more important types of games, we may mention here (1) guessing games such as *kharidj*; (2) board games of the chess [see SHATRANDJ] and backgammon [see NARD] types and of the *manḳala* type which were usually, but not always, played on boards, involving the placing of chips into holes, as, for instance, the game of "fourteen" (*arbaʿata ʿashara*), the throwing of dice and, of greater antiquity in Arabia, of knucklebones (*kaʿb*, pl. *kiʿāb*), also in a way the walnut (*djawz*) game, see also KHARBGA; (3) skill and sports games, such as ball playing, the great favourite of children, often mentioned as done in the streets, also played with balls and (polo) sticks, see al-Ghazālī, *Iḥyāʾ, riyāḍat al-nafs*, iii, 53, further jumping games, catching games, the seesaw, imitation fighting games, the egg game, also tops (*duwwāma, khudhrūf*); dancing with a hobby-horse (*kurradj*) was apparently not practiced as a children's game, cf. M. Gaudefroy-Demombynes, in *Mél. Wm. Marçais*, Paris 1950, 155-60; and (4) "playing" with animals such as small birds, pigeons, dogs (add al-Djāḥiẓ, *Ḥayawān*, ii, 28, to Rosenthal, *Gambling*, 58 n. 242a), or reptiles, either as an innocent pastime or as a gambling, racing, and fighting sport.

Most children's games contain an element of gambling, inasmuch as they entail rewards for the winners and penalties for the losers [see ḲIMĀR]. This added to the scruples raised by the play concept in general and the *ṣūra* problem of dolls, and cast doubt in the eyes of jurists upon the legality of commercial transactions involving toys. In conjunction with prevailing economic conditions, it probably contributed to keeping toys used by children mostly simple and makeshift.

Bibliography: given in the article, in particular, Hyde, *De ludis*, and Rosenthal, *Gambling*. For board games, cf. H. J. R. Murray, *Board games*, Oxford 1952. (F. ROSENTHAL)

LAK 1. The most southern group of Kurd tribes in Persia. According to Zayn al-ʿĀbidīn, their name (Lāk, often Lākk) is explained by the Persian word *lāk* (100,000), which is said to have been the original number of families of Lak. The group is of importance in that the Zand dynasty arose from it. The Lak now living in northern Luristān [*q.v.*] are sometimes confused with the Lur (Zayn al-ʿĀbidīn), whom they resemble from the somatic and ethnic point of view. The facts of history, however, show that the Lak have immigrated to their present settlements from lands further north. The Lākki language, according to O. Mann, has the characteristics of Kurdish and not of the Lurī dialects [cf. LUR]. Čirikov, *Putevoi zhurnal*, St. Petersburg 1875, 227, says that "the Lur and the Lak speak different dialects, and hate one another".

The Lak appear in the *Sharaf-nāma*, i, 323, along-

side the Zand, among the secondary Kurd tribes, and as subjects of Persia. According to Rabino, the Lak were settled in Luristān by order of Shāh ʿAbbās, who wished in this way to create some support for the new *wālī* of Luristān, Ḥusayn Khān, whom he had chosen from among the relatives of the old Shāhwardī Atābeg (*Taʾrīkh-i ʿĀlam-ārā*, 369). Of these tribes, the Silsila had formerly lived at Māhīdasht (to the south-west of Kirmānshāh); the Dilfān take their name from Abū Dulaf [see AL-ḲĀSIM B. ʿĪSĀ], whose fiefs in the 3rd/9th century lay in the north of Luristān [see SULṬĀNĀBĀD]; the Bādjilān of Zohāb as well as Luristān say they come from al-Mawṣil and are evidently one tribe. The Luristān branch seem to have exchanged its Kurmandjī dialect for Lākki during its sojourn among the Lak in the time of Shāh ʿAbbās. Even after Shāh ʿAbbās there were several Lak tribes outside of Luristān. Zayn al-ʿĀbidīn (opening of the 19th century) mentions among the Lak: the Zand, the Māfī, the Bādjilān and the Zandi-yi kāla (?). To the last tribe (according to Houtum-Schindler: Begele) belonged Karīm Khān Zand (born in Pāriyā, the modern Pāri, about 20 miles from Dawlatābād on the Sulṭānābād road). When at Shīrāz, Karīm Khān sent for the Lak tribe of Barānwand. In 1212/1797 the Bayrānwand and the Bādjilān actively supported Muḥammad Khān Zand in his attempt to seize power from the Ḳādjārs (Sir Harford Jones Brydges, *A history of Persia*, London 1833, 46, 58; R. G. Watson, *A history of Persia*, London 1866, 116). Under the Kādjārs, several Lak tribes were broken up. The Zand have almost completely disappeared; in 1830 remnants of them were to be found among the Bādjilān of Khānikīn (Khurshīd-Efendi, *Siyāḥat-nāme-yi ḥudūd*, Russ. tr. 112, 221); there are still a few Zand families in the Dorā-Farāmān district to the south-east of Kirmānshāh (*RMM*, xxxviii, 39); a section of the ʿAmala of Pusht-i Kūn claims to be descended from the Karīm Khān tribe. At the present day, there are Māfī at Waramīn, Tehran and Ḳazwīn.

According to a good list compiled by Rousseau at Kirmānshāh in 1807 (cf. *Fundgruben des Orients*, Vienna 1813, iii, 85-98), there were considered as Lak the following tribes: Kalhūr, Māfī, Nānakī, Djalīlwand, Pāyrawand, Kulyāʾī, Ṣūfīwand, Bahrām-wand, Karkūkī, Tawalī, Zūyirwand, Kākūwand, Nāmīwand, Aḥmadwand, Bohtūʾī, Zūliya, Ḥarsinī and Shaykhwand.

According to O. Mann and Rabino, the Lak tribes of Luristān are as follows: Silsila (9,000 families), Dilfān (7,470). Tirhān-Amrāʾi (1,582 families), the Bayrānwand (6,000 families) and Dālwand (1,000 families) forming part of the Bālā-girīwa group, a total of about 15,000 tents. The Bayrānward and Djālwand live to the east of Khurramābād around the sources of the river which flows through this town; the Silsila and the Dilfān occupy the beautiful plains of Alishtar and Khāwa respectively, while the Tirhān (perhaps = Tarkhān, i.e. "exempt from taxes") live between the left bank of the Saymara and the lower course of its left-bank tributary from Khurramābād. The territory occupied by the Lak, and including northern and north-western Luristān is sometimes called Lakistān.

The cohesion of the Lak tribes is evident from the fact that even before 1914 the Silsila, Dilfān and Tirhān were united under the authority of Naẓar ʿAlī Khān of the Amrāʾī clan. In addition to the bonds of tribe and language, there is that of religion, for all the Dilfān and many of the ʿAmala of Tirhān belong to the extremist Shīʿa sect of the Ahl-i Ḥaḳḳ [*q.v.*].

Bibliographie: E. Beer, *Das Tarikh-i Zendije*, Leiden 1888, pp. xviii, xxvi; Zayn al-ʿĀbidīn Shīrwānī, *Bustān al-siyāḥa*, Tehran 1315, 522; O. Mann, *Skizze d. Lurdialecte*, in *SBAk. Wien* (1904), 1173-93; O. Mann, *Die Mundarten der Lur-Stämme*, Berlin 1910, pp. xxii-xiv; to the number of tribes speaking "Lākkī", the author adds the Kalhur of Kirmānshāh and the Mākī of the Pusht-i Kūh; Rabino, *Les tribus du Luristan*, in *RMM* (1916); Minorsky, *Notes sur la secte des Ahlé-Haqq*, in *RMM*, xl (1920), 56.

2. The name given to themselves by the Ghāzī-Ḳumuḳ, a people living on the eastern Ḳoy-su in central Daghistān (see the next article and ḲUMUḲ, also Erckert, *Der Kaukasus und seiner Völker*, Leipzig 1887, 248-57, and Dirr, *Die heutigen Namen der kaukasischen Völker*, in *Petermanns Mitteil.* [1908], 204-12).

On the other hand, the term Lêk in Armenian and Lek-i (plural Lek-ebi) in Georgian means the Lezgi/Legzi of Daghistān (where the *e* may certainly designate the value of *ä/a*: Lägzi). This last name seems to have been applied to the highlanders of Kürä, living in and around the sources of the Samur, and later to have been extended to all the people of Dāghistān, although no people of the Caucasus actually call themselves Lezgi/Legzi. Marquart, *Beiträge zur Geschichte und Sage von Eran*, in *ZDMG*, xlix (1895), has attempted to explain the Arabic al-Lakz by the addition of the Persian suffix *-zi* to the name Lek (or Lak), cf. Sag-zi, "inhabitant of Sīstān". (V. MINORSKY)

LAḲ (self-designation: Laḳ, Laḳuču; Russian variants: Lak(tsi), Kazikumukh(tsi); Avar: Tumaw, pl. Tumal; Lezg: Yakholshu; Dargin: Vuluguni, Vulečuni; other: Ḳaziḳumukh [from Arabic Ghāzī, warrior for the faith, and Ḳumukh, the political and cultural centre of the Laḳ territory, see ḲUMUḲ]), a Muslim people of the Caucasus.

The Laḳ language belongs with Dargin, Ḳaytaḳ and Ḳubači [*q.vv.*] to the Dargino-Laḳ (Laḳ-Dargwa) group of the Northeast-Caucasian language family. There are five dialects of the Laḳ language, Ashti Ḳuli, Balkhar, Vitskh, Vikhli and Ḳumukh. The Ḳumukh dialect forms the base of the Laḳ literary language, as Ḳumukh was, and is, the cultural and economic centre of the Laḳ territory. Laḳ was originally (since the late 19th century) written in the Arabic script; this was changed to the Latin script in 1928, since 1938 it has been written in the Cyrillic. Prior to the establishment of Laḳ as a written language, Arabic served as the literary language of the Laḳ people. Laḳ is at present one of the nine official literary languages of the Dāghistān ASSR, although it is no longer used as a medium of instruction in the schools (Laḳ served as a language of education among the Laḳs until the fifth year, between the late 1920s and the late 1960s; virtually all education since then has been conducted only in Russian).

The Laḳs are inhabitants of the mountainous central region of the Dāghistān ASSR. They live primarily in the basins of the upper Ḳaziḳumukh, Tleuserakh, and Khatar Ḳoysu rivers located in Laḳ and Ḳuli districts, and in separate settlements in the districts of Tsudakhar, Aḳusha, Rutul, Ḳurakh, Čaroda, and Dakhadaev. In 1844 many Laḳs were resettled in the steppes and foothills north of the Andi Ridge in what is now "Novo Lakskiy" ("New Laḳ") district of the Dāghistān ASSR. According

to the 1970 Soviet census, there were 85,822 Laḳs in the USSR, of whom 72,240, or 84.2%, lived in Dāghistān (1926 population, 40,380; 1959 population, 63,529). Although the Laḳs are reported to be the most Russianised of all Dāghistānis, according to the 1970 census only 3.7% of the Laḳ population considered Russian their native language, with 95.8% considering Laḳ their native language.

According to legend, the Laḳs were conquered by Abū Muslim in 777 [*sic*] and converted to Islam, making them the first Dāghistāni people to be Islamicised. However, it is more likely that the final conversion did not occur until the 13th century, with some Christian and Jewish traditions surviving up until the 15th century. The Laḳs are Sunnī Muslims of the Shāfiʿi school.

Legend has it that the Shah-Baala was the first Muslim ruler of all Dāghistān and founder of the Shamkhal dynasty, which reigned at Ḳumukh until the 17th century. At this time Ḳumukh, which had been established by Abū Muslim as the seat of the ruler of Dāghistān, was renamed Ḳaziḳumukh. In the 14th century, the rulers of Ḳaziḳumukh adopted the title "Shamkhal" (supposed etymology from Shām = Syria, suggesting descent from the former Arab governors). During the 15th and 16th centuries, at the time when the Shamkhals ruled a large part of central and coastal Dāghistān, a second capital, which also served as a winter residence, was established at Tarḳu in the Ḳumuḳ territory. In 1640 the Laḳs broke away from the rule of the Shamkhalate, replacing it with appointed *khakhlavai* (from Arabic *khalk* "people", and Laḳ *lavai* "supreme"). Although appointed administrators, their chief function was that of military leaders, and as such they received land and tribute as payment.

With the death of the last Ḳaziḳumukh khān, Agalar, the Laḳ territory was incorporated in the Dāghistān *oblast'*, and became an integral part of the Russian empire. By 1842 both the Laḳ territory and Avaristān had come under the control of Shamīl [*q.v.*] and his Murīds, and in 1877, during the Russo-Turkish War, the Laḳ beks, together with other Dāghistāni feudal lords, staged a revolt against Tsarist rule. This revolt was, however, put down, resulting in a greater integration of Dāghistān into the Russian empire.

The Laḳs are reported to have been the first mountaineer Dāghistāni people to establish a feudal system. Their feudal society was comprised of the khāns; the *bagtal* (beks), i.e. the khān's family and the nobility; the *cankri*, i.e. children of marriages between beks and women of lower social orders; the *uzdental* (*uzden*), i.e. free peasants (the numerically largest class); the *rayat* or serfs; and the *lag'art* or slaves. This feudal system coexisted with a system of free societies based on the patriarchal clan (*tukhum*), which was made up of one or more extended families. These free societies were ruled by the village *ʿadat*. Within the *tukhum*, there was mutual help in work and family affairs, as well as group responsibility in vendettas, which were under the jurisdiction of the *ʿadat*. Although exogamy was not forbidden, an endogamic marriage system prevailed.

The traditional economy of the Laḳs was based upon transhumance, with sheep and goat raising, and home industries (leather working, pottery, weaving, gold and metal smithing, etc.). These activities still play a large role in the village economies. Due to the lack of fertile land in the mountainous regions of the Laḳ territory, agriculture played only a minor role in the Laḳ economy, and migrant working was common (with the highest rate of migrant labour among any Dāghistāni people). In the steppe and foothills of the new Laḳ territory of northern Dāghistān, horticulture, vineyards, agriculture and silk production are important activities. In the larger towns in the Laḳ territory, there is a rising level of industrialisation (flour milling, printing, etc.).

The first written documents of the Laḳ people appear in the 15th century. A rich religious and didactic literature appears in the 18th and 19th centuries (ʿUmar of Balḳar, Ghāzī Saʿīd Ḥusayn, Ḥādjdjī Mūsā Ḥādjdjī, etc.), lyrical literature in the late 19th century (Yūsuf Ḳāḍī Murḳulinskii), as well as historical (Shāfiʿī Nitsovkrinskii). Laḳ literature of the Soviet period was established by Hārūn Saʿīdov, who was both the first Dāghistāni dramatic author and the author of the first Bolshevik Dāghistāni journal, *Ilči* ("The Messenger"). Other Laḳ authors include Saʿīd Gabiev, Abutalib Gafurov, Abdurahman Omarov, and Efendi Ḳapiev (who wrote in Russian only).

LAḲAB (A.) nickname, and at a later date under Islam and with a more specific use, honorific title (pl. *alḳāb*). For suggestions about its etymology, see L. Caetani and G. Gabrieli, *Onomasticon arabicum*. i. *Fonte-introduzione*, Rome 1915, 144-5; and for its place in the general schema of the composition of Islamic names, see ISM.

The *laḳab* seems in origin to have been a nickname or sobriquet of any tone, one which could express admiration, be purely descriptive and neutral in tenor or be insulting and derogatory. In the latter case, it was often termed *nabaz*, pl. *anbāz*, by-form *labaz*; cf. al-Bayḍāwī on sūra XLIX, 11, "In common usage, *nabaz* is particularised for an unpleasant *laḳab*". The grammarians, in their love for schematisation, divided *alḳāb* into simple (*mufrad*) ones, comprising only one word, and compound (*murakkab*) ones, comprising two or more words, but this division has neither historical nor semantic significance, beyond the obvious point that as Islamic society developed and became more complex, honorific titles tended to become lengthy and grandiloquent.

1. The pre-Islamic and the earliest Islamic periods. Already in these times, we have many examples of Bedouin leaders, poets, orators, etc. with nicknames, e.g. Ākil al-Murār, al-Abraṣ, al-Mutalammis, ʿĀʾid al-Kalb, Muḳabbil al-Rīḥ, etc., and from the ʿAbbāsid period we have Dīk al-Djinn, Ṣarīʿ al-Ghawānī, etc. These names might relate to physical characteristic or defects, to striking lines in a poet's verses, to incidents in the holder's life, but often to events whose significance is now lost in the mists of time. Explanation of the more unusual and bizarre names drew the authors of literary biographical works into much fanciful

theorising; cf. *Aghānī*, ed. Būlāḳ, xviii, 209, ed. Beirut, xviii, 480-1, on the origins of the name Taʾabbaṭa Sharran, and for a useful list of such names, together with explanations drawn from the sources, A.-C. Barbier de Meynard, *Surnoms et sobriquets dans la littérature arabe*, in *JA*, Ser. 10, ix (Jan.-June 1907), 173-244, 365-428, x (July-Dec. 1907), 55-118, 193-273.

The giving of nicknames was clearly widespread in early Arab society, where the number of personal names was limited and where there was, as in the Arab world today, keen observation of personal foibles, physical peculiarities, etc.; and from the Arabs, the practice spread to the Persian, Turkish and wider Islamic world. The personal connection of such nicknames is presumably behind the oft-quoted anonymous line of poetry, "It is rare that you see a man whose character is not revealed, if you consider the matter, in his *laḳab*" Al-Thaʿālibī, who devotes two out of the ten chapters of his *Laṭāʾif al-maʿārif* to the *alḳāb* of prominent literary and political figures, quotes this verse in reference to the philologist al-Mubarrad [*q.v.*], and makes the curious observation that the people of Baghdād and Nīshāpūr were celebrated for their facility in coining appropriate nicknames; he gives numerous examples from each town, some quite grotesque, but unfortunately omitting to explain—if he ever knew—the origins of the names (ed. I. Abyārī and Ḥ. K. al-Ṣayrafī, Cairo 1960, 46, 53-4, tr. C. E. Bosworth, *The book of curious and entertaining information*, Edinburgh 1968, 63, 66-7).

Some nicknames were clearly given as *nomina boni augurii*, aimed either at attracting a favourable future for the recipient or else at averting harm. Thus arose the practice of giving antiphrastic and apparently unpleasant names and nicknames in order to avoid attracting the evil eye [see ʿAYN] which might otherwise fix itself on something wholesome and perfect; whilst slaves and other persons of little importance might be given euphemistic and euphuistic names, such as those of flowers, jewels, perfumes, etc. Thus the caliph al-Mutawakkil called one of his slave concubines, the mother of al-Muʿtazz, Ḳabīḥa "the hideous one" because she was famed for her beauty. Euphuism is seen in such names as Yāḳūt (lit. "jacynth, ruby") and Djidjak (< Turkish *čiček* "flower", the slave mother of the caliph al-Muktafī), and a good example of antiphrasis in the name of Kāfūr al-Ikhshīdī [*q.v.*] (*kāfūr* "camphor" being white and fragrant, whereas Kāfūr was a black eunuch, proverbially noisome and malodorous [see KHAṢĪ. i. In the Central Islamic lands]). In these connections, there is an interesting passage in Ibn Durayd's *K. al-Ishtiḳāḳ*, ed. Wüstenfeld, 4-5, in which he quotes al-ʿUtbī as having once been asked, "How is it that the Arabs give their sons names which are considered unpleasant (*mustashnaʿa*), yet give their slaves names considered pleasant (*mustaḥsana*)?" Al-ʿUtbī replied that the Arabs gave their sons names with their enemies in mind, whereas they gave their slaves any names they wanted (i.e. without any ulterior motive). Ibn Durayd then goes on to give examples of names given to sons which would augur well against their enemies (*tafāʾulan ʿalā aʿdāʾihim*), expressing violence, harshness, bellicosity and endurance, e.g. Ghālib, Ẓālim, Muḳbil, Thābit, etc. (see further, M. P. Kister, *Call yourself by graceful names...*, in *Lectures in memory of Professor Martin B. Plessner*, Jerusalem 1970). We are here perhaps straying into the realm of the *ism* proper rather than the *laḳab*, although the names given to slaves and slavegirls may be considered as *alḳāb* replacing those persons' first given names.

The fondness of the Arabs, and of Ḳuraysh in particular, for giving satirical and opprobrious nicknames is condemned in Ḳurʾān, XLIX, 11, where there is a warning against the practice of groups of both men and women mocking at each other, "Do not scoff at each other or give each other derisory nicknames (*wa-lā talmizū anfusakum wa-lā tanābazū bi 'l-alḳāb*)". This sûra is accounted late Medinan, from a year or two before Muḥammad's death, by Nöldeke (*Gesch. des Qorâns*, i, 221) and Montgomery Watt (*Companion to the Qur'an*, London 1962, 237); it may be that the Prophet was feeling particularly aggrieved by nicknames given to him in the past by his opponents and by the Hypocrites, like that of al-Abtar "the childless one", even though the *sabab al-tanzīl* was, according to the commentators, the women's insults to Muḥammad's wife Ṣafiyya bint Ḥuyayy because of her origin from the Jewish tribe in Medina of al-Naḍīr (cf. Sale-Wherry, *A compendious commentary on the Qurán*, London 1896, iv, 70-1).

Yet whilst retaining for some time to come its derogatory and insulting aspects, the *laḳab* tended to be transmogrified into higher roles within Islamic society. In one direction, it evolved into the nom-de-plume of authors and artists, the *makhlaṣ* or *takhalluṣ* [*q.v.*], above all in the Persian, Turkish and Indo-Muslim worlds, such as we find in the name of the Persian poet Khāḳānī [*q.v.*] or the pseudonym adopted by the Ṣafawid Shāh Ismāʿīl I for his Azeri Turkish verses [see ISMĀʿĪL I. 2. His poetry]. Most significantly for the development of Islamic culture, the *laḳab* developed from being a nickname of praise or admiration (as in such examples as Mulāʿib al-Asinna "he who played with lances" for the pre-Islamic poet ʿĀmir b. Mālik, famed for his prowess in battle) into becoming an honorific title, conferring status and prestige on its owner, since it frequently implied a specially close relationship to the sovereign or the divinity or else a reward for personal bravery or services to the state. As such, the *laḳab* was to have an extended life-span in the Islamic world—more particularly, in those parts of lying between Egypt and India, though these honorifics were also to be found to a more limited extent in Muslim Spain and North Africa, see below, 3—right up to the 19th and early 20th centuries, when floridity and hyperbole went out of Islamic titulature just as they did from literature and other aspects of culture.

It is not difficult to discern why such titles became eagerly sought after; the desire to stand out above the rest of mankind is a universal one. Indeed, al-Ḳalḳashandī, in his *Ṣubḥ al-aʿshā*, v, 440, following the line of traditional Islamic *awāʾil* literature writers, traces what he calls the *alḳāb al-madḥ wa-nuʿūt* back to such figures as Abraham al-Khalīl "the friend of God", Moses al-Kalīm "the one who spoke with God", Jonah Dhu 'l-Nūn "the man in the fish", etc. Within a formalised, hierarchial society such as the Islamic one became in the ʿAbbāsid period, modes of address, insignia or rank and office, dress, etc. all contributed to the fixing of a man's status in society and the state, and as such were prized as the visible and audible symbols of success in the temporal world. In this process of the spread of honorifics, there were—as for other aspects of early Islamic culture—the precedents of

the earlier Near Eastern civilisations, the Romano-Byzantine and the Persian ones, to provide an element of continuity with the past.

The early Arabs knew from their contacts with the Byzantines on the Syro-Palestinian borders that a complicated system of honorific titles and modes of address existed for Byzantine civil and military dignitaries. Allies of the Greeks, such as chiefs of the Ghassānids [see GHASSĀN] like al-Ḥārith b. Djabala and his son al-Mundhir, were honoured by having the honorary title of *patricius* bestowed on them; this term found its way into general Arabic usage as *biṭrīḳ/baṭrīḳ* [see BIṬRĪḲ]. In Achaemenid Persia, the characteristic expression of pomp and magnificence (μεγαλοπρεπεῖα) through grandiloquent titles was familiar to Herodotus (i, 139), who further mentions (viii, 85) that meritorious servants of the state were enrolled in the list of "the king's benefactors" (ὀροσάγγης). Under the Sāsānids, the great men of state were likewise honoured by the award of a wide range of honorifics, e.g. the title *buzurg framadār* "chief executive" for the emperor's chief counsellor and minister; Mahisht "the greatest [of the ruler's servants]"; Hazārmard "[with the strength of] 1,000 men" for military commanders; and various compounds including the sovereign's name, e.g. Zhāyedhān Khusraw" "eternal Kh.", Hormuzd Varāz "wild boar of H.", and many with *tahm* "strong" like Tahm Shāpūr or Tahm Yazdigird. These honours were usually completed by the grant of robes of honour, the later Islamic *khilʿa* [*q.v.*] (see Nöldeke-Ṭabarī, *Geschichte der Perser und Araber zur Zeit der Sasaniden*, 8-9, 443 and n. 1; F. Justi, *Iranisches Namenbuch*, 318; A. Christensen, *L'Iran sous les Sassanides* ², Copenhagen 1944, 113-14, 326, 409-11).

2. The period of the caliphate. The wide dissemination of honorific titles in the Islamic world began at the top, with the adoption of regnal titles by the caliphs. Later historians, projecting backwards what had become common practice in their own time, attributed the use of such titles to the Umayyads and even to the Orthodox caliphs. Al-Masʿūdī, in his, *K. al-Tanbīh*, 335, tr. 431-3, cites pro-Umayyad traditions to the effect that the Umayyads had honorifics of the theocratic type which had by two centuries later become familiar from ʿAbbāsid practices, e.g. al-Nāṣir li-ḥaḳḳ Allāh for Muʿāwiya, al-Ḳāhir bi-ʿawn Allāh for Maslama b. ʿAbd al-Malik and al-Mutaʿazziz bi'llāh for Ibrāhīm b. Walīd b. ʿAbd al-Malik; but he rightly rejects these traditions as weak and uncorroborated by the historians and biographers (cf. E. Tyan, *Institutions du droit public musulman*. i. *Le califat*, Paris 1954, 486-7). Similarly, the epithets attributed to the Orthodox caliphs, such as al-Ṣiddīḳ "he who testifies to the veracity of the Prophet's mission" for Abū Bakr, al-Fārūḳ "the just" for ʿUmar and Dhu 'l-Nūrayn "possessor of the two lights" for ʿUthmān, are probably of early growth (cf. al-Khʷārazmī, *Mafātīḥ al-ʿulūm*, ed. van Vloten, 105), but must nevertheless have been applied only after the deaths of their owners.

Honorifics of a theocratic nature, expressing dependence on God, reliance on Him, or participation with Him in the work of ruling, are really an innovation of the early ʿAbbāsid period. B. Lewis has stressed the importance of the atmosphere of messianic expectation around the time of the ʿAbbāsid revolution, when the worldly *Realpolitik* of the Umayyads and their animus against the Prophet's kinsfolk, the ʿAlids, was replaced by what it was hoped would be the reign of divinely-guided justice; and these feelings favoured the adoption of religious-based titles by al-Manṣūr and his successors. The first ʿAbbāsid caliph, Abu 'l-ʿAbbās al-Saffāḥ, had no formal regnal title, though his partisans may well have attributed to him various names with messianic implications. His successor Abū Djaʿfar formally adopted the *laḳab* of al-Manṣūr bi'llāh "he who is helped by God to victory", and the chiliastic tone of early ʿAbbāsid titulature is especially clearly seen in the *alḳāb* of his successor al-Mahdī bi'llāh "the divinely-guided one" and then of al-Hādī ilā 'l-ḥaḳḳ "the one who directs towards the divine truth" (cf. Lewis, *The regnal titles of the first Abbasid caliphs*, in *Dr. Zakir Husain presentation volume*, New Delhi 1968, 13-22; F. Omar, *A note on the laqabs* (*i.e. epithet*) *of the early ʿAbbasid caliphs*, in *ʿAbbāsiyyāt, studies in the history of the early ʿAbbasids*, Baghdād 1976, 141-7). In subsequent ʿAbbāsid usage, the apocalyptic element is less prominent, but the honorifics still express reliance upon and submission to the deity, or confidence in His guiding power, e.g. al-Wāthiḳ bi'llāh "he who puts his trust in God" and al-Muṭīʿ bi'llāh "he who shows himself obedient to God" (cf. Tyan, *op. cit.*, 483 ff.).

It is notable that the ʿAbbāsid honorifics up to the later 4th/10th century and the period of Būyid control in Baghdād are formed essentially with participles or adjectives of a passive or reflexive character, thereby emphasising the supremacy of God's controlling power and the vital securing of His favour for the business of ruling in conformity with the *Sharīʿa*, the ideal, if not always the practice, of the ʿAbbāsids. A. Abel has noted that the ʿAbbāsids' great rivals in North Africa and Egypt, the Fāṭimids, had, in order to press their superior claim, as they saw it, to the caliphate and imāmate, to adopt a more aggressive and active form of titulature (*Le khalife, présence sacrée*, in *Stud. Isl.*, vii [1957], 38 ff.). This new type of titulature reflected the role assigned in Ismāʿīlī cosmogony to the *Imāms* in the hierarchy of intelligences emanating from the godhead, and it actively associated the holders of these titles with God's direct working in the world. Thus we have al-Ḳāʾim bi-ʿamr Allāh "he who takes charge of the execution of God's command" for the Mahdī ʿUbayd Allāh's successor Abu 'l-Ḳāsim Muḥammad; and from the time of al-Muʿizz's accession onwards (341/953), the honorifics of the Fāṭimids are all active participles or adjectives emphasising the ruler's decisive part in the implementation of God's will in this world, e.g. al-Ḥākim, al-Āmir, al-Ẓāfir, etc., usually with a complement like . . . *li-dīn Allāh* or . . . *bi-amr Allāh*.

Not surprisingly, the ʿAbbāsids strove from the latter years of the 4th/10th century onwards to emulate these activist forms of titulature, in order to emphasise their own position as upholders of the Sunna; whence titles like al-Ḳāʾim bi-ʿamr Allāh appear in the middle years of the 5th/11th century and ones like al-Nāṣir li-dīn Allāh and al-Ẓāhir bi-amr Allāh in the early 7th/13th one. In all these cases, the *laḳab* might be adopted as a new regnal title on the caliph's accession; but increasingly, the *walī 'l-ʿahd* or heir to the throne was given a *laḳab* as soon as he was invested formally as heir to the reigning monarch, with his own *kunya* and/or honorifics thereafter appearing on the coinage side-by-side with those of the actual caliph. This *laḳab* usually remained with the heir once he acceded to the caliphate proper; but occasionally, the *laḳab* adopted by such an heir-apparent was exchanged

for a different, often more grandiloquent one on his obtaining the throne. Thus al-Mutawakkil's original *laḳab*, during the period when he was his brother's heir, was al-Muntaṣir, but this was changed on the second day of his succession to the caliphate (232/847) by the chief *ḳāḍī* Abī Duʾād to al-Mutawakkil (al-Masʿūdī, *Murūdj al-dhahab*, vii, 189 = ed. Pellat, § 2872; cf. Tyan, *op. cit.*, 280, 486).

If the caliphs could assume splendid and sonorous honorifics themselves, it lay also within their power to confer titles on their servants and supporters, in the first instance to their viziers and secretaries and to their military commanders. The process dates from the early 3rd/9th century, and at least until the following century it was practised comparatively sparingly by the ʿAbbāsids. The Persian secretary al-Faḍl b. Sahl [*q.v.*], former protégé of the Barmakīs and eventually vizier to the caliph al-Maʾmūn, exercised the functions both of *wazīr* and *amīr*, and by 196/811-12 he is found with the honorific Dhu 'l-Riyāsatayn "possessor of the two executive functions", sc. of civil administration and military leadership. Around the same time, the Persian general Ṭāhir b. al-Ḥusayn [*q.v.*], founder of the line of Ṭāhirid governors in Khurāsān and ʿIrāḳ, received the *laḳab* of Dhu 'l-Yamīnayn "possessor of two right hands, the ambidextrous" (various explanations for this phrase are in fact given in the sources; it had already been used in the earliest Islamic times as a synonym for "liberal, open-handed", e.g. by the great poetess al-Khansāʾ [*q.v.*] when elegising her brother Ṣakhr); al-Faḍl b. Sahl's cousin ʿAlī b. Abī Saʿīd received that of Dhu 'l-Ḳalamayn "possessor of the two pens" (either alluding to the two principal government departments of finance and the army, or else to "the two modes of writing", sc. Arabic and Persian); whilst later in the century, in 269/885, the vizier Saʿīd b. Mukhallad was granted by al-Muwaffaḳ the title Dhu 'l-Wizāratayn "possessor of the two vizierates" (referring either to the two spheres of power, civil and military, or recognising Saʿīd's role as servant both of al-Muwaffaḳ and the titular caliph al-Muʿtamid) (see D. Sourdel, *Le vizirat ʿabbāside*, i, 201-3, 319-20, ii, 678, 681).

This type of *laḳab* containing a dual expression was, however, one known before this time, as is attested by the name Dhu 'l-Nūrayn for the caliph ʿUthmān and Dhu 'l-Shahādatayn, applied to the Companion and partisan of ʿAlī, Khuzayma b. Thābit al-Anṣārī (because the Prophet had promised him double the normal martyr's rewards, see Ibn Ḥadjar, *Iṣāba*, i, 425, and Ibn al-Athīr, *Usd al-ghāba*, ii, 114). The type was, indeed, to enjoy a long life in Islamic titulature, just as dual forms of the simple *ism* (Muḥammadayn, al-Ḥasanayn) have been current in the Islamic world until the present day. The ʿAbbāsids' successors in western Persia and ʿIrāḳ, the Būyids, continued the usage of the caliphs for their own ministers and secretaries; thus we find Rukn al-Dawla's great vizier Abu 'l-Fatḥ b. al-ʿAmīd with the *laḳab* of Dhu 'l-Kifāyatayn "possessor of the two capabilities" (i.e. of the sword and pen), though this title was in fact awarded directly by the caliph [see IBN AL-ʿAMĪD]. In the following period of the Saldjūḳs, titles in *al-Ḥadratayn*, referring to the separate courts of the ʿAbbāsid caliphs and the Saldjūḳ sultans, occur, e.g. Thiḳat al-Ḥaḍratayn "confidant of the two courts", and Niẓām al-Ḥaḍratayn "support of the two courts", the title held by the *Naḳīb al-Nuḳabāʾ* ʿAlī b. Ṭarrād al-Zaynabī in Baghdād during the latter decades of the 5th/11th century (Ibn Khallikān, ed. Iḥsān ʿAbbās, Beirut 1968-72, iv, 454, tr. de Slane, iii, 151). See for all these types of dual titles, I. Goldziher, *Ueber Dualtitel*, in *WZKM*, xiii (1899), 321-9 = *Gesammelte Schriften*, Hildesheim 1967-73, iv, 195-203, and Caetani and Gabrieli, *Onomasticon arabicum*, i, 167-9.

An interesting fact of usage has recently been highlighted by P. Balog. Pious invocations after names are familiar from the early use of the *taṣliya* after the name of the Prophet, the *taslīm* after those of earlier prophets, the *tarḍiya* after the names of the early caliphs, etc. From the latter Umayyad period (from the time of Yazīd II b. ʿAbd al-Malik [101-5/720-4] onwards, in regard to the evidence of inscriptions on glass weights and measure stamps from Egypt) onwards, pious invocations like *aṣlaḥahu Allāh* "may God set him in the way of righteousness!", *abḳāhu Allāh* "may God grant him long life!" and *akramahu Allāh* "may God honour him!" are consistently appended to the names of caliphs and of high officials and governors. It seems that a particular formula like those just mentioned remained with an official or governor throughout his career, unless he were awarded a fresh invocation of higher prestige. Such *adʿiya* (sing. *duʿāʾ*) may accordingly be approximated to *alḳāb* as expressions of particular honour awarded by the ruler to a faithful servant, and in the manuals of secretaryship from the Ayyūbid and Mamlūk periods (see below, section IV), the two types of honorific are often treated together. See Balog, *Pious invocations probably used as titles of office or as honorific titles in Umayyad and ʿAbbāsid times*, in *Studies in memory of Gaston Wiet*, ed. M. Rosen-Ayalon, Jerusalem 1977, 61-8.

Characteristic of the 4th/10th century was the appearance and then the growing popularity of compound honorifics including as their second elements the terms *dīn* "faith" and *dawla* or *mulk* "secular power", or less commonly, compounded with *umma* "religious community" and *milla* "religion". These titles have been studied in detail by M. van Berchem, *Eine arabische Inschrift aus dem Ostjordanlande mit historischen Erläuterungen*, in *ZDPV*, xvi (1893), 84-105; Caetani and Gabrieli, *op. cit.*, i, 199 ff.; J. H. Kramers, *Les noms musulmans composés avec Dīn*, in *AO*, v (1927), 53-67; and A. Dietrich, *Zu den mit addīn zusammengesetzten islamischen Personnamen*, in *ZDMG*, cx (1960), 43-54. The last three of these studies contain extended lists of these types of *laḳab*, for they were to enjoy a popularity which ran for almost a millenium, and Dietrich puts the total of *dīn* titles enumerated by Kramers and himself at 186. The *dawla* titles were the earliest to appear, but in the first place, were titles of great honour granted only exceptionally by the caliphs. Thus when al-Muktafī honoured his vizier al-Ḳāsim b. ʿUbayd Allāh of the Banū Wahb (vizier 289-91/902-4) by giving to him one of his daughters in marriage, he also awarded him the title Walī 'l-Dawla "friend of the state" as a special mark of intimacy (Sourdel, *Vizirat*, i, 356). In 330/941-2 the Ḥamdānid of Mawṣil Abū Muḥammad al-Ḥasan received from al-Muttaḳī, as a reward for his services against the *amīr al-umarāʾ* Muḥammad b. Rāʾiḳ, the *laḳab* of Nāṣir al-Dawla, whilst his brother Abu 'l-Ḥasan ʿAlī of Aleppo obtained that of Sayf al-Dawla. Shortly afterwards, in 334/945, the Daylamī Būyids entered Baghdād and took over the office there of *amīr al-umarāʾ*, and the three Būyid brothers Aḥmad ʿAlī and Ḥasan b. Būya received the honorifics of Muʿizz

al-Dawla, ʿImād al-Dawla and Rukn al-Dawla respectively. All the subsequent Būyid *amīrs* obtained from the caliphs titles of this type, sometimes with a greater degree of elaboration, e.g. the ʿAḍud al-Dawla wa-Tādj al-Milla of Fanā-Khusraw, the Sharaf al-Dawla wa-Zayn al-Milla conferred on Abu 'l-Fawāris Shīrzīl by the caliph in 376/986, and the Bahāʾ al-Dawla wa-Ḍiyāʾ al-Milla wa-Ghiyāth al-Umma of Abū Naṣr Fīrūz b. ʿAḍud al-Dawla (see Mez, *Die Renaissance des Islâms*, 133, Eng. tr. 135; L. Richter-Bernburg, *Amīr-malik-shāhānshāh: ʿAḍud ad-Daula's titulature re-examined*, in *Iran, Jnal. of the BIPS*, xviii [1980],; and BAHĀʾ AL-DAWLA in Suppl.).

It may be noted, in connection with the mention of Muḥammad b. Rāʾiḳ [see IBN RĀʾIḲ], that it is in the first half of this century that we have the formal constitution of the office of *amīr al-umarāʾ* [*q.v.*] as the concomitant of caliphal decadence. In fact, this title, or a similar form like *kabīr al-umarāʾ*, appears in the later years of the 3rd/9th century in reference to the commander-in-chief of the caliphal armies; but only with the caliphate of al-Rāḍī (322-9/934-40) did the holder of the *imārat al-umarāʾ* achieve a commanding grip on affairs, so that it seemed natural for the Būyids to step into the office a few years later (see Tyan, *op. cit.*, 531-41).

Especially interesting, in the light of the significance of the Būyids and the *dawlat al-Daylam* or "reign of the Daylamīs" for an attempted reconstruction, in Islamic form, of the ancient kingship of Iran, is their assumption of the ancient imperial title *Shāhanshāh* "emperor of emperors". ʿAḍud al-Dawla used it widely and with great pride in his titulature and protocol, and indeed the title became so characteristic of the Būyids that the Ghaznawid historian Bayhaḳī actually refers to them as the Shāhanshāhiyān (*Taʾrīkh-i Masʿūdī*, ed. Ghanī and Fayyāḍ [1], 41, 400, 438), but it seems possible that use of the title goes back to the very beginnings of the Būyids' seizure of power in western Persia and ʿIrāḳ, and was begun by ʿAḍud al-Dawla's father Rukn al-Dawla or even before that by his uncle ʿImād al-Dawla. Its assumption without caliphal permission clearly indicates a claim to temporal power by the Būyids independent of any caliphal act of delegation; but after ʿAḍud al-Dawla's death, his weaker and squabbling successors were compelled to seek caliphal support and hence pay more respect to the "caliphal fiction" by seeking validation for the title *Shāhanshāh* directly from the ʿAbbāsids. As is well-known, al-Ḳāʾim complied over this when asked by Djalāl al-Dawla, but when in 429/1038 the title was introduced publicly into the Baghdād *khuṭba* for the first time, a near-riot ensured, and the approval of the *fuḳahāʾ* of the three law schools of the East, the Ḥanafīs, the Ḥanbalīs and the Shāfiʿīs, had to be sought before this ostensibly blasphemous (at least in the eyes of the pious) title could safely be re-introduced from the pulpits (see H. F. Amedroz, *The assumption of the title Shâhanshâh by Buwayhid rulers*, in *Num. Chron.*, Ser. 4, vol. v [1905], 393-9, and the detailed and important study of W. Madelung, *The assumption of the title Shāhanshāh by the Būyids and "The reign of the Daylam* (Dawlat al-Daylam)", in *JNES*, xxvii [1969], 84-108, 168-83). Until approximately the time of the Mongol invasions, *Shāhanshāh* remained an exalted regnal title, e.g. the Ismāʿīlī Grand Master of Alamūt ʿAlāʾ al-Dīn Muḥammad III (618-53/1221-55) is called al-Mawlā al-Aʿẓam Shāhanshāh al-Muʿaẓẓam in one inscription (van Berchem, *Épigraphie des Assassins de Syrie*, in *JA*, Ser. 9, vol. ix [1897], 453-501). Subsequently, however, it declined from being a *laḳab* into an ordinary *ism* amongst Persian princes and those Turkish ones who at times adopted ancient Iranian nomenclature. As we have seen above in regard to dual titles, the Būyids likewise secured imposing honorifics for the great viziers and secretaries who served them. Notable here is the use of the element *kāfī* "capable one", and al-Bīrūnī singles out such *alḳāb* of Būyid officials as Kāfī 'l-Kufāt, al-Kāfī al-Awḥad and Awḥad al-Kufāt as "nothing but one great lie" (*al-Athār al-bāḳiya*, 134, tr. Sachau, *The chronology of ancient nations*, 131).

The Sāmānids [*q.v.*] in distant Transoxania and then Khurāsān were abstemious in the use of honorifics, and al-Bīrūnī, *op. cit.*, praises them for this, comparing them favourably with the Būyids. The epithets of al-Saʿīd, al-Sadīd, al-Ḥamīd, al-Riḍā, etc., seem to have been applied to them retrospectively after their deaths, and the only clear instance of a *laḳab* used by one of the Sāmānids in his own lifetime is that of the last of the line, Ismāʿīl b. Nūḥ (d. 395/1005), who styled himself al-Muntaṣir "the one rendered victorious [by God]", perhaps as a hopeful omen—vainly, as events turned out—for the restoration of his dynasty's fortunes. Yet although the Sāmānids, in practice independent, were usually punctilious in their deference to the ʿAbbāsids, they did in the second half of the 4th/10th century confer *alḳāb* unilaterally on their great commanders; thus Nūḥ b. Manṣūr (365-87/976-97) gave the title of Nāṣir al-Dawla to the commander of the Bukhārā *ghāzīs*, and the Sāmānids' Turkish commanders in Khurāsān received similar titles, e.g. Ḥusām al-Dawla for Tāsh Ḥādjib and ʿAmīd al-Dawla for Fāʾiḳ Khāṣṣa (see Bosworth, *The titulature of the early Ghaznavids*, in *Oriens*, xv [1962], 214-15).

The successors of the Sāmānids in eastern Persia and Afghānistān, the Ghaznavids [*q.v.*], departed, on the other hand, from the path of Sāmānid simplicity, and from the time of the line's founder, Sebüktigin, onwards, regularly sought from the caliphs numerous honorifics. Those of Sebüktigin were Muʿīn al-Dawla and Nāṣir al-Dawla or Nāṣir al-Dīn wa 'l-Dawla, perhaps commonly abbreviated to Nāṣir al-Dīn (cf. S. M. Stern, in *Paintings from Islamic lands*, ed. R. Pinder-Wilson, Oxford 1969, 14-16; the question of the exact form of the *laḳab* is of some importance for the first appearance of the compound *dīn*-type honorifics, see below). By the time of Ibrāhīm b. Masʿūd (451-92/1059-99), the sultans bore a dazzling array of honorifics, in this case Ẓahīr al-Dawla and some twelve others, as well as the ceremonial designation (e.g. for the coinage) of al-Sulṭān al-Muʿaẓẓam/al-Aʿẓam "highly-exalted sultan", a designation probably adopted under Saldjūḳ influence (details in Bosworth, *op. cit.*, 215 ff., and idem, *The later Ghaznavids: splendour and decay, the dynasty in Afghanistan and northern India 1040-1186*, Edinburgh 1977, 55-6).

Compound honorifics in *dīn* appear at a slightly earlier date than the *dawla* ones, and the award of Nāṣir al-Dīn wa 'l-Dawla to Sebüktigin would appear to be the earliest instance of a *dīn* title; it is certainly the only *laḳab* of this type listed by al-Bīrūnī in his *Āthār*, 133-4, tr. 130-1, under the heading "the holders of *alḳāb* granted by the caliphal court", the remainder being mainly compounded of *dawla*, *milla* and *umma*. (Kramers thought that the linking of *dīn* and *dawla* in titles—see further on this coupling, below—stemmed from a long Islamic tradition

in which these two strands of human existence were regarded as interdependent in this temporal life and their fortunes inextricably interwoven; he also thought that the combination of ideas came "incontestably" from Persia, see *Les noms musulmans composés avec Dīn*, 61.)

In the 5th/11th century, usage of the two types of *laḳab*, in *dawla* and in *dīn*, fluctuates, but the coming of the Saldjūḳs gave a great impetus to the spread of those of the second type. According to the Saldjūḳ historical sources, when Ṭoghrïl appeared in Baghdād in 449/1058 for the second time, the caliph al-Ḳā'im bestowed on him the honorifics of Rukn al-Dawla "pillar of the states" and Malik al-Mashriḳ wa 'l-Maghrib "king of the east and west" (see Bosworth, in *Cambridge history of Iran*, v, 47); but in practice, Ṭoghrïl was generally referred to, in the short period of life remaining to him and also retrospectively, as Rukn al-Dīn. *Dawla* titles seem to have fallen into disfavour under the Saldjūḳs, for the subsequent sultans of the 6th/12th century favoured titles with *dīn* or, instead of the frequent alliterative coupling of *dīn* and *dawla* in a title, a further alliteration of *dīn* and *dunyā*; Malik Shāh had the honorifics Djalāl al-Dawla (whence the name of the Djalālī era [*q.v.*]) and Muʿizz al-Dīn wa 'l-Dunya, whereas his son Muḥammad had that of Ghiyāth al-Dīn wa 'l-Dunyā. Whether the overshadowing of the *dawla* titles had any theological significance, as Kramers suggested—a preference for those in *dīn* stemming from the strongly orthodox religious atmosphere of the Sunnī reaction against political Shīʿism, and an avoidance of the non-Ḳur'ānic term *dawla*, with its connotations of the changes and vicissitudes of blind fate—is unproven, but seems unlikely. But if *dawla* titles became less popular, the Saldjūḳs had no hesitation in the use of compound titles with *mulk* for their viziers and high military commanders (e.g. ʿAmīd al-Mulk for Abū Naṣr Kundurī [*q.v.*] and Niẓām al-Mulk [*q.v.*] for Abū ʿAlī Ṭūsī); and the ʿAbbāsids themselves came to imitate the Saldjūḳs in the bestowal of titles expressing the idea of secular power, e.g. al-Muḳtafī's award of the title Sulṭān al-ʿIrāḳ, Malik al-Djuyūsh to his vizier ʿAwn al-Dīn Ibn Hubayra [*q.v.*] in 549/1154 as a reward for expelling the Türkmens from Wāsiṭ. Saldjūḳ practice was also the model for the Khwārazm-Shāhs of the 6th/12th and early 7th/13th centuries; see L. Richter-Bernburg, *Zur Titulatur der Ḫwārezm-Šāhe aus der Dynastie Anūštegīns*, in *Archaeologische Mitteilungen aus Iran*, N.F. ix (1976), 179-205.

The Shīʿī Fāṭimids, the Saldjūḳs' great opponents in the struggle for influence in the Syrian Desert region and its fringes of Syria and al-Djazīra, did not have this reluctance to use *dawla* titles, at least for their viziers and officials. A standard formula for their viziers was al-Wazīr al-Adjall "most exalted vizier", awarded for instance to Yaʿḳūb b. Killis by the caliph al-Muʿizz in 368/979, but at this same time, compound *dawla* and other titles appear for the Fāṭimids' viziers, e.g. Amīn al-Milla for Abū Muḥammad b. ʿAmmār, and for their commanders, governors and vassal princes, e.g. Sayf al-Dawla for the Zīrid Yūsuf Buluggīn in 361/972, and similar titles for Yūsuf's successors Bādīs and al-Muʿizz b. Bādīs (see H. R. Idris, *La Berbérie orientale sous les Zīrīdes Xe-XIIe siècles*, Paris 1959, ii, 509; when al-Muʿizz in 433/1041 transferred his allegiance to the ʿAbbāsids, the Fāṭimid caliph al-Mustanṣir awarded the *laḳab* of his former vassal, Sharaf al-Dawla, to al-Muʿizz's kinsman, the Ḥammādid al-Ḳā'id, who returned to the Fāṭimid allegiance); and Murtaḍā 'l-Dawla for the Ḥamdānid commander Lu'lu' s son Manṣūr in Aleppo in 399/1008 (see M. Canard, *Histoire de la dynastie des H'amdanides*, i, 710). An individual feature of Fāṭimid titulature for their viziers was the use of compound titles in *amīr al-mu'minīn*, e.g. Ṣafī Amīr al-Mu'minīn wa-Khāliṣatuhu for Abu 'l-Ḳāsim Aḥmad al-Djardjarā'ī, and Muṣṭafā Amīr al-Mu'minīn for Abū Manṣūr Ṣadaḳa b. Yūsuf al-Fallāḥī. Very soon the titulature of these Fāṭimid officials became remarkably luxuriant and pompous, heralding the later verbosity of Mamlūk titulature in Egypt; thus in 447/1050-1 the vizier Abū Muḥammad al-Ḥasan al-Yāzūrī enjoyed the titles of al-Wazīr al-Adjall al-Awḥad al-Makīn, Sayyid al-Wuzarā' wa-Tādj al-Aṣfiyā' wa-Ḳāḍī 'l-Ḳuḍāt wa-Dāʿī 'l-Duʿāt, ʿAlam al-Madjd, Khāliṣat Amīr al-Mu'minīn, to which were later added al-Nāṣir li 'l-Dīn, Ghiyāth al-Muslimīn, the ensemble denoting the wide extent of his powers, not merely as a vizier but also as chief *ḳāḍī* and chief *dāʿī*.

But in general, Fāṭimid procedure over the grant of honorifics was on similar lines to that of the ʿAbbāsids, as is attested by the texts of such awards (called technically *kutub al-tanwīh* "documents conferring eulogy") quoted by al-Ḳalḳashandī from the *Mawādd al-bayān* of the Fāṭimid author ʿAlī b. Khalaf (a work which was long believed lost, but which has recently turned up in Istanbul, see A. H. Saleh, in *Arabica*, xx [1973], 192-200, and IBN KHALAF in Suppl.). Here a sterotyped formula is set forth, in which the grant of titles is accompanied by other favours such as the gift of a standard, a sword and a fine mount (*Ṣubḥ al-aʿshā*, viii, 341). As in the Sunnī world, the awarding of honorifics was often proclaimed *urbi et orbi* by the Fāṭimids in Cairo, either before the caliphal palace or from the mosque pulpit; thus al-Ḥusayn b. Djawhar was in 390/1000 honoured by al-Ḥākim, receiving a robe of honour and having his newly-acquired title of Ḳā'id al-Ḳuwwād "supreme commander" read out from the *minbar* (al-Maḳrīzī, *Khiṭaṭ*, ii, 15; see further on Fāṭimid titulature in general, Ḥasan al-Bāshā, *al-Alḳāb al-islāmiyya fi 'l-ta'rīkh wa 'l-wathā'iḳ wa 'l-āthār*, Cairo 1958, 65 ff., 92 ff.).

After the Saldjūḳ period, sc. after the 6th/12th century, the dominance of *dīn* titles was firmly established, not only for rulers and their servants, but also, by what must have been unilateral adoption or else by the general consensus among religious groups, for outstanding spiritual leaders, Ṣūfī *shaykhs*, etc., e.g. Nadjm al-Dīn Kubrā, Muḥyī 'l-Dīn Ibn al-ʿArabī, Djalāl al-Dīn Rūmī and Muʿīn al-Dīn Čishtī [*q.vv.*]. In any case, by this time all pretence at the caliph's being the sole dispenser of these honours had been abandoned. A consequence of this was that honorifics began to be adopted according to a method of rough conformity with a person's original *ism*. Al-Ḳalḳashandī has a passage on this custom in *Ṣubḥ al-aʿshā*, v, 488-90, under the heading of *Fi 'l-alḳāb al-mufarraʿa ʿalā 'l-asmā'*, and the practise clearly dates back to early Mamlūk times, if not before. Thus among the Turkish mamlūks, ʿAlam al-Dīn went with the name Sandjar, Djamāl al-Dīn with Aḳ Ḳush, Ḥusām al-Dīn with Ḥasan or Ḥusayn, ʿAlā' al-Dīn with ʿAlī, Tādj al-Dīn with Ibrāhīm, etc. Even eunuchs had their characteristic combinations of *laḳab* and *ism*, e.g. Shudjāʿ al-Dīn with ʿAnbar, as had the Coptic officials of the administration in Egypt, e.g. Taḳī 'l-Dīn with Wahba (cf. a similar list in al-Suyūṭī's

Risāla fī maʿrifat al-ḥulā wa 'l-kunā wa 'l-asmāʾ wa 'l-alḳāb, ed. Ṣalāḥ al-Dīn al-Munadjdjid, *Une importante Risāla de Suyūṭī*, in *MFOB*, xlviii [1973-4], 352-4, and also Ḥasan al-Bāshā, *op. cit.*, 103-5). This type of usage was carried over into the Ottoman empire, especially amongst the *ʿulamāʾ* and *fuḳahāʾ*, e.g. Badr al-Dīn with Maḥmūd, and the already-mentioned couplings with Ḥasan or Ḥusayn, ʿAlī and Ibrāhīm; the alliterative effect often achieved was obviously a factor favouring the adoption of several of these (cf. F. Babinger, in *Isl.*, xi [1923], 20 n. 3).

Whilst the ʿAbbāsid caliphate was still a living organism (i.e. till the Mongol sack of Baghdād in 656/1258), the granting of honorific titles remained, at least in theory, a jealously-guarded privilege of the caliphs. Local rulers or provincial governors who maintained the "caliphal fiction" of Sunnī constitutional theory, that all executive authority derived ultimately from the caliph, sedulously sought a grant of honorifics at the outset of their reigns of governorships; and titles expressing personal closeness or a special relationship to the caliph, such as Mawlā Amīr al-Muʾminīn, Walī Amīr al-Muʾminīn and Ḳasīm Amīr al-Muʾminīn, were especially sought after (early examples of the designation *mawlā amīr al-muʾminīn*, say before the beginning of the 3rd/9th century, probably simply expressed a relationship of subordination and dependence, clientship or *walāʾ*, between the caliph and its bearer, rather than being the grant of an official title; O. Grabar thinks that the attribution of this phrase to the governor of Egypt Aḥmad b. Ṭūlūn [*q.v.*] in 265/878-9 still expressed dependence rather than a title of honour, cf. his *The coinage of the Ṭūlūnids*, ANS Numismatic notes and monographs no. 139, New York 1957, 39-40).

Recognition by the caliph, involving an investiture charter (*ʿahd, manshūr*), plus the other insignia of power such as honorifics, a richly-caparisoned charger and banners, might give a contender for power in a disputed succession the edge over his opponent. In 421/1030 the Ghaznawid prince Masʿūd b. Maḥmūd hurried eastwards from western Persia to Afghānistān in order to confront his brother Muḥammad, who had been proclaimed sultan by the army in Ghazna. At Nīshāpūr he received from the caliph al-Ḳādir an investiture diploma for the Ghaznawid empire plus a strong of honorifics, *nuʿūt-i sulṭānī* as Bayhaḳī calls them, Nāṣir Dīn Allāh, Ḥāfiẓ ʿIbād (or ʿUbbād) Allāh, al-Muntaḳim min Aʿdāʾ Allāh and Ẓahīr Khalīfat Allāh Amīr al-Muʾminīn. Masʿūd ordered that details of the award should be proclaimed and publicised in the towns of Khurāsān, and it proved to be a valuable propaganda weapon in his successful wresting of the sultanate from Muḥammad later that year (Bayhaḳī, cited in Bosworth, *The titulature of the early Ghaznavids*, 224-5, and idem, *The Ghaznavids, their empire in Afghanistan and eastern Iran 944-1040*, Edinburgh 1963, 54).

Not surprisingly, the ʿAbbāsids held on their privilege of granting these titles in the Sunnī world for as long as possible. The caliph personally was the fount of honours, and the precise form in which they were granted had to be rigorously observed; the Mamlūk author Ibn Faḍl Allāh al-ʿUmarī [see FAḌL ALLĀH] states, concerning the correct form of address used by kings for governors and lesser rulers. that there was an inflexible rule in ancient times "that no king was ever addressed except by the precise honorific granted to him from the caliphal *dīwān*, with no addition or omissions", *bi 'l-naṣṣ min ghayr ziyāda walā naḳṣ* (*al-Taʿrīf bi 'l-muṣṭalaḥ al-sharīf*, Cairo 1312/1894-5, 86-7). Conversely, the unilateral and unauthorised assumption of *alḳāb* by a person was an act of *lèse-majesté*, a virtual declaration of rebelion against the caliph or sovereign, as happened in Khurāsān during the late 4th/10th century; the ambitious military commander of the Sāmānids, Abū ʿAlī Sīmdjūrī, in 381/991 rose against his master Nūḥ b. Manṣūr, appropriated all the revenues of Khurāsān and styled himself (*talaḳḳaba*) Amīr al-Umarāʾ, al-Muʾayyad min al-Samāʾ "the heavenly-guided supreme commander" (ʿUtbī-Manīnī, *al-Taʾrīkh al-Yamīnī*, Cairo 1286/1869, i, 155).

Since the granting of such titles and honours created status and prestige for the recipients, it was natural that the ʿAbbāsids, in the period of penury into which they had fallen by the early 4th/10th century, should expect a return for this services; during the Būyid period in particular, when the caliphs were reduced to subsisting in straitened circumstances as pensioners of the Būyids, this sale of honours, normally in return for presents, became all the more vital for them. The grants seem to have become in time regulated by something like a fixed tariff. In Bayhaḳī's *Taʾrīkh-i Masʿūdī*, 293, there is an account of the detailed discussion at Masʿūd of Ghazna's court in 422/1031 about the presents to be sent to the new caliph al-Ḳāʾim, from whom the sultan expected confirmation of his territories plus a grant of fresh *alḳāb* and other insignia of royalty; much of this discussion revolved round what was the usual *rasm* or practice here, with the adducing of precendents from the Ṣaffārid period.

Inevitably, voices were raised against the over-lavish granting of honours and titles, with a consequent cheapening in their value. Already the poet and littérateur Abū Bakr Muḥammad b. al-ʿAbbās al-Khwārazmī (d. 383/993 or 393/1003 [*q.v.*]) had complained in a satire.

> What do I care that the ʿAbbāsids have thrown open the gates of *kunā* and *alḳāb*?
>
> They have conferred honorifics on a man whom their ancestors would not have made doorkeeper of their privy.
>
> This caliph of ours has few *dirhams* in his hands, so he lavishes honorifics on people.

(al-Thaʿālibī, *Yatīmat al-dahr*, Cairo 1375-7/1956-8, iv, 230; cf. Mez, *Die Renaissance des Islâms*, 78-9, Eng. tr. 86-8). Hilāl al-Ṣābiʾ (d. 448/1056) has a long passage in his *Kitāb al-Wuzarāʾ*, ed. ʿAbd al-Sattār Farādj, Cairo 1958, 166 ff., lamenting the changes between the time of the viziers Ibn al-Furāt and ʿAlī b. ʿĪsā (the latter of whom had refused to increase the designation of a certain governor above the simple wish "May God exalt him"!, although threatened for his obduracy), and even between the time of the viziers of ʿAḍud al-Dawla and Ṣamṣām al-Dawla, and the position at the end of his own lifetime. His main gravamen is that social and functional differentiation becomes impossible when titles lose their real meaning, and his conclusion is that "Inevitably, official positions have declined in status where they have been reduced to one level [in titulature], and have become cheapened when they have all been made equal. They no longer possess any glory which one can admire, nor any splendour to be prized. Indeed, I have heard our master the caliph al-Ḳāʾim bi-amr Allāh—may God prolong his reign!—says that there is no designation

left for a deserving person". Hilāl's contemporary al-Bīrūnī likewise moralisingly observes that when the ʿAbbāsids started rewarding their adherents with vain *dawla* titles, extending even to triple ones, their empire foundered: "In this way, the matter became utterly opposed to common sense and clumsy to the highest degree, so that he who mentions them gets tired before he has hardly begun, he who writes them loses his time and writing, and he who addresses [people] with them runs the risk of missing the time for prayer" (*al-Āt̲h̲ār al-bāḳiya*, 132, tr. 129). By the end of the 5th/11th century, the process of debasement had gone even further in the Muslim East, and the Sald̲j̲ūḳ vizier Niẓām al-Mulk complains volubly, in the section of his *Siyāsat-nāma* on titles (ch. xl, ed. H. Darke, Tehran 1340/1962, 189-200, tr. idem, *The book of government or rules for kings*, London 1960, 152-63) that "There has arisen an abundance of titles, and whatever becomes abundant loses value and dignity", and that "In these days, the meanest official gets agry and indignant if he is given less than seven or ten titles". In particular, Niẓām al-Mulk denounces the confounding of *dawla* titles, formerly reserved for military commanders and the Turks, with the *mulk* and other titles used by viziers, governors and other civilian and religious officials and dignitaries, so that there results the absurdity of a Turkish general, illiterate, tyrannical and totally ignorant of the *S̲h̲arīʿa*, being given titles like Tād̲j̲ al-Dīn "crown of the faith or Muʿīn al-Dīn "succourer of the faith". He places the time when the floodgates were opened in the Sald̲j̲ūḳ empire to the indiscriminate and incongruous granting of honorifics as being the years after Alp Arslan's death (sc. after 465/1072 and the accession of Malik S̲h̲āh; these strictures on the trends of the latter sultan's reign must be regarded as from a later hand than Niẓām al-Mulk's, perhaps from that of his copyist Muḥammad Mag̲h̲ribī).

3. The Muslim West. Most of what has been said so far relates primarily to the central and eastern lands of Islam, sc. Egypt and the lands further east. The vogue for honorifics followed a rather different course in the Muslim West. In general, their use was less developed in the more puritanical West, where there was a tendency to regard elaborate and fancy names and titles as effete and Persianising phenomena. Hence the term *alḳāb mas̲h̲riḳiyya* is not infrequently used by Mag̲h̲ribī writers in disparaging references to them, e.g. by al-Maḳḳarī and by the Mag̲h̲ribī traveller to Egypt and Syria just before the Ottoman conquest, ʿAlī b. Maymūn al-Idrīsī. This last shows himself, in his opuscule *Bayān g̲h̲urbat al-Islām bi-wāsiṭat ṣinfay al-mutafaḳḳiha wa 'l-mutafaḳḳira min ahl Miṣr wa 'l-S̲h̲ām wa-mā yalīhā min bilād al-ʿAd̲j̲am* (written in 916/1510, see Brockelmann, I ², 152, S II, 153), as particularly severe against the habit of the religious scholars (the first of the two classes mentioned in the title of his work) of taking honorifics like S̲h̲ams al-Dīn and Zayn al-Dīn, which he stigmatises as *bidʿī* "heretical" and *s̲h̲ayṭānī* "devilish", in preference to the plain good old *sunnī* names Muḥammad and ʿUmar, and of insisting on the use of these honorifics in addressing them (see Goldziher, *ʿAlī b. Mejmûn al-Magribî und sein Sittenspiegel des östlichen Islam*, in *ZDMG*, xxviii [1874], 306-10 = *Gesammelte Schriften*, vi, 14-18).

Already the Idrīsid *s̲h̲arīf*s of Morocco, with their claims to ʿAlid descent, had styled themselves *imāms*, and the K̲h̲ārid̲j̲ī Rustamids of Tāhart utilised not only this last designation but those of "caliph" and *amīr al-muʾminīn* also; these powers, of course, rejected the legitimacy of ʿAbbāsid rule, whereas the Ag̲h̲labids of Ifrīḳiya, faithful in theory at least to the Bag̲h̲dād connection, never took such liberties in matters of titulature. The rise of the Fāṭimid *daʿwa* in North Africa during the early years of the 4th/10th century nevertheless introduced fully to the Mag̲h̲rib a titulature with messianic implications and one wholly opposed to the ʿAbbāsid moral and constitutional position (see above, Section II), and the new trend inevitably had repercussions in Muslim Spain. A dynasty like the Spanish Umayyads, which had to defend itself on the cultural and ideological planes against both the distant ʿAbbāsids in Bag̲h̲dād and, more pressingly, against the aggressively S̲h̲īʿī Fāṭimids (on the propaganda offensive of the Fāṭimids directed against the Spanish Umayyads and its effects, see M. Canard, *L'impérialisme des Fatimides et leur propagande*, in *AIEO Alger*, vi [1942-7], 162-9), could not but be influenced by the political and religious propaganda value of honorific titles. When the greatest sovereign of the family, ʿAbd al-Raḥmān III, adopted after his victory at Bobastro over Ibn Ḥafṣūn in 315/927 the *laḳab* of al-Nāṣir li-dīn Allāh, together with the designations of "caliph" and "commander of the faithful", he thus placed himself firmly within what had now become the mainstream ʿAbbāsid tradition of theologically-oriented caliphal titulature. His lesser successors studiously followed his example till the end of the dynasty in 422/1031, so that we find e.g. His̲h̲ām II al-Muʾayyad, Sulaymān al-Mustaʿīn, etc., as did the Ḥammūdids who alternated with the last fainéant Umayyads, e.g. al-Ḳāsim al-Maʾmūn (see Lévi-Provençal, *Hist. Esp. mus.*, i, 132-3, ii, 21, 115-16). The *mulūk al-ṭawāʾif* who followed them during the period of the disorder and fragmentation in the middle decades of the 5th/11th century followed suit, with a disparity between the actual extent of their authority and the grandiloquence of their titles which attracted the satirical or ironic comment of contemporaries. Thus Ibn K̲h̲aldūn in two places in his *Prolegomena* quotes verses of the panegyrist of the Zīrids, Ibn Ras̲h̲īḳ [*q.v.*],

> What makes me feel humble in Andalus is the use of the names "Muʿtaṣim" and "Muʿtaḍid" there.
> Royal epithets (*alḳāb mamlaka*) not in their proper place, like a cat that by puffing itself up imitates the lion.

(*Muḳaddima*, ed. Quatremère, i, 281, 412, tr. Rosenthal, i, 316, 470, attributing the verses to Ibn S̲h̲araf [*q.v.*]; al-Muʿtaṣim and al-Muʿtaḍid were honorifics adopted by princes of the Ḥammūdids of Malaga and the ʿAbbādids of Seville respectively). In matters of titulature, the Naṣrids of Granada "demeurèrent fidèles à la tradition orientale adoptée par les Umayyades de Cordoue, fondée sur l'autorité absolue du souverain et sa caractère semi-religieux" (R. Arié) Like their contemporaries amongst the rulers of the Muslim West, they used the title of Amīr al-Muslimīn, known from Almoravid times (see below), although the Mamlūk chancery in Egypt simply addressed them in official documents as *Ṣāḥib Ḥamrāʾ G̲h̲arnāṭa*, according to Ibn Nāẓir al-D̲j̲ays̲h̲, cited by al-Ḳalḳas̲h̲andī in *Ṣubḥ al-aʿs̲h̲ā*, vii, 413. Certain Naṣrid rulers assumed, as Arié implies, *alḳāb* of the usual theocratic pattern, such as the dynasty's founder, Muḥammad I, called al-G̲h̲ālib bi'llāh, and on returning from a successful expedition against Castile, Muḥammad V assumed that of al-G̲h̲anī

bi'llāh (Arié, *L'Espagne musulmane au temps des Nasrides (1232-1492)*, Paris 1973, 185-7).

Yet although the trends of the East filtered through to the Iberian peninsula in considerable measure, the effect of these trends tended to operate at the highest level only, that of the monarchs themselves. The Spanish Muslim sovereigns were much more careful over the bestowal of honorifics to their servants, ministers and generals than were the eastern dynasts. Ibn Abī ʿĀmir of course assumed the title of al-Manṣūr [*q.v.*], for which his role in the state at the end of the 4th/10th century befitted him, on his return from the expedition against Leon in 371/981, and he was followed by his son ʿAbd al-Malik, styled al-Muẓaffar [*q.v.*]. Other isolated instances occured, such as the award by al-Ḥakam II of the title Dhu 'l-Sayfayn in 363/974 to the general Ghālib on his victorious return from a campaign in the Maghrib, and the bestowal of the title Dhu 'l-Wizāratayn in 367/978 to both Ghālib and Ibn Abī ʿĀmir, one borne previously only by the general charged with defence of the Spanish frontier against the Christians; and over three centuries later, the great vizier of the Naṣrids, Ibn al-Khaṭīb [*q.v.*], was to enjoy the *alḳāb* of Lisān al-Dīn and Dhu 'l-Wizāratayn (see Lévi-Provençal, *Hist. Esp. mus.*, ii, 194, 213, 215-16, 228-9).

North Africa remained faithful for a longer period to the puritanical ideals of an equalitarian, earlier form of Islam, in its disapproval of pompous titles, once the interlude of the rise of the Ismāʿīlī Fāṭimids was over and the domination of Mālikī orthodoxy was re-established under the Almoravids. The Almoravids originally recognised ʿAbbāsid authority, but to mark the reality of their own power in North-West Africa adopted—whether of their own accord or with the approval of Baghdād is unclear—the title of Amīr al-Muslimīn. Thus there was created, from the constitutional point of view, what van Berchem conveniently called a "sub-caliphate", whose rulers recognised an authority higher than their own and did not therefore adopt a titulature proclaiming their total independence and non-recognition of any superior power. The Almohads, however, came to power in the middle years of the 6th/12th century on a wave of messianic enthusiasm and under a charismatic leader, the Mahdī Muḥammad b. Tūmart [see IBN TŪMART], and took up again in some measure the pattern of titulature instituted in the Maghrib two centuries before by the Fāṭimids. During Ibn Tūmart's lifetime, his lieutenant ʿAbd al-Muʾmin was styled the Mahdī's *khalīfa* and Amīr al-Muʾminīn, sc. of the Almohad faithful, and on Ibn Tūmart's death, he became the *imām* of the community, with the title of al-Ḳāʾim bi-amr Allāh; from the reign of Abū Yūsuf Yaʿḳūb al-Manṣūr (580-95/1184-99) onwards, the Almohad sultans are found with honorifics of the familiar theocratic pattern (see van Berchem, *Titres califiens d'occident, à propos de quelques monnaies Mérinides et Ziyanides*, in *JA*, Ser. 10, vol. ix [1907], 263-79, and the important section on the title Amīr al-Muʾminīn in Ibn Khaldūn, *Muḳaddima*, i, 408-14, tr. i, 465-72).

The pattern of titulature was in this way established for the sovereigns of the three successor-states in the Maghrib and Spain to the Almohads, sc. the Naṣrids (for whom see above), the Marīnids of Morocco and the Ḥafṣids of Ifrīḳiya. The Ḥafṣids' eponymous ancestor was the Mahdī Ibn Tūmart's celebrated companion and partisan, Shaykh Abū Ḥafṣ ʿUmar, and the Ḥafṣids continued to use in reference to themselves the term al-Muwaḥḥidūn "those who proclaim God's unity" (an assumption admitted by the secretaries of the Mamlūk chancery in Cairo, who used the titles Zaʿīm al-Muwaḥḥidīn "chief of those proclaiming God's unity" and Ḳudwat al-Muwaḥḥidīn "exemplar of those..." in adressing them, *Ṣubḥ al-aʿshā*, vi, 51, 65). The most significant factor in the pattern of Ḥafṣid titulature, as it evolved in the 7th/13th century, was their claim to the caliphate, put forward by the second ruler of the dynasty, Abū ʿAbd Allāh Muḥammad (647-75/1249-77) in 650/1253. This was buttressed firstly by the attempts of the family's apologists to impute to them a Ḳurashī descent from ʿUmar b. al-Khaṭṭāb (whose *kunya* had been Abū Ḥafṣ), so that the sultans proudly termed themselves *ibn al-khulafāʾ al-umarāʾ al-rāshidīn*; and secondly by the recognition of the Sharīf of Mecca and, briefly, of the Mamlūks of Egypt even, after the extinction of the ʿAbbāsid caliphate in Baghdād by the Mongols and before its revival in Cairo. Whence also the Ḥafṣids' adoption of the characteristically caliphal designation of Amīr al-Muʾminīn (although their rivals, the Mamlūks, would only allow them the "sub-caliphal" one of Amīr al-Muslimīn), and of theocratic *alḳāb* on the exact ʿAbbāsid pattern (al-Mustanṣir and al-Mutawakkil being especially favoured by various members of the dynasty), in order to demonstrate the genuine nature of their caliphal claims and the continuity of their titulature with the older ʿAbbāsid practice.

Looking forward to what will be said below about the Ayyūbid and Mamlūk usage of such titles, we may also note that the Ḥafṣids, deeply involved in struggles with Christian powers such as Spain and France, seeking a foothold in North Africa, assumed titles reflecting their roles as leaders in the holy war, such as al-Mudjāhid fī sabīl Allāh "he who fights in God's way", and allowed themselves to be addressed impersonally by titles of respect like al-Maḳām al-ʿalī/al-aʿlā and al-Ḥadra al-ʿaliyya (the latter expression being used by the Bey of Tunis until the proclamation of the republic there as the equivalent of the European diplomatic forms "His Majesty", "Son Altesse", etc.). See on all these questions of Ḥafṣid usage, von Berchem, *Titres califiens d'occident*, 283-93; R. Brunschvig, *La Berbérie orientale sous les Ḥafṣides des origines à la fin du XVᵉ siècle*, Paris 1940-7, i, 40, ii, 7-17.

The Marīnids for long accepted the supremacy of the already-established Ḥafṣids, hence they (and also their neighbours of Tlemcen, the ʿAbd al-Wādids or Zayyānids) normally used the lesser title of Amīr al-Muslimīn rather than the fully caliphal one of Amīr al-Muʾminīn; many of the Marīnid sultans also bore theocratic-type *alḳāb* like the Ḥafṣids. But there were episodes when certain sultans did assume the higher title. For a short period of 9 month in 708/1308-9, Abu 'l-Rabīʿ Sulaymān adopted it on the coins which he issued conjointly with his Naṣrid ally Muḥammad III, apparently as an act of defiance to the Ḥafṣids. Furthermore, Abū ʿInān Fāris al-Mutawakkil (749-59/1348-59) seems to have employed the title as a lever to secure the deposition of his father ʿAlī, who had already styled himself in his official documents Amīr al-Muʾminīn and Ḳāʾid al-Muwaḥḥidīn, Almohad titles par excellence (and also Baḳiyyat al-Salaf al-Karīm in allusion to the Berber Marīnid's pretensions to an Arab genealogy). The mention in Ibn Khaldūn, *Muḳaddima*, i, 414, tr. i, 472, of the "Zanāta rulers", sc. the Marīnids, using the title Amīr al-Muʾminīn must be a reference to this episode, though subsequent

sultans reverted to the lesser title Amīr al-Muslimīn. The whole question of this alternation of titles was examined in great detail by van Berchem in his *Titres califiens d'occident*, 245-335.

With the decline of the Marīnids and their kinsmen the Waṭṭāsids, the Saʿdī S͟harīfs from southern Morocco rose to power in the early decades of the 10th/16th century on a wave of Moroccan enthusiasm for the expulsion of Turkish Algerian influence and of renewed Islamic maraboutist fervour for *d̲j̲ihād* against the Portuguese encroachers on the Moroccan coastlands. In an atmosphere which was thus fed on religious enthusiasm and popular messianic expectations of a new defender of the Muslims, it is not surprising that the first of these S͟harīfs of the Sūs, Muḥammad (d. 924/1517-13) assumed the chiliastic titles of al-Mahdī and al-Ḳāʾim bi-amr Allāh, reminiscent of Fāṭimid and then Almohad usage. Similarly religiously-motivated honorifics were adopted by several of his successors, e.g. Muḥammad al-Mutawakkil, Aḥmad al-Manṣūr, etc. One should also note the very characteristic forms of address used by both the Saʿdī sultans and their ʿAlawī successors, those of Mawlāy/Mūlāy "my master" and Sayyidī/Sīdī "my lord", as also by other high dignitaries, princely and religious, in the Mag͟hrib. The form Mawlānā "our master" had been used by the Naṣrids during the 8th/14th century, and the Christians of Spain in the 9th/15th century often referred to the ruler of Granada as Muley (Arié, *L'Espagne musulmane au temps des Naṣrides*, 187); whilst both Mawlānā and Sayyidunā had been early used by the Ḥafṣids in their official documents. The form with the first person singular pronoun affix, *mawlāyā* > *mūlāy* apparently appeared amongst the Ḥafṣids in the course of the 8th/14th century, but is only at first attested in Christian sources, e.g. the "Muley Bolabes" = Abu 'l-ʿAbbās Aḥmad II al-Mustanṣir of a Latin document of 1391 (cf. Brunschvig, *Ḥafṣides*, ii, 15-16).

4. The post-caliphal period. With the strengthening of the grip of Turkish and Kurdish dynasties over the central and eastern lands of Islam from the 5th/11th century onwards, regal, military and ministerial titulature increased in complexity and grandiloquence. After the extinction of the Bag͟hdād caliphate and the establishment by the Mamlūks of a puppet line only of ʿAbbāsids in Cairo, the granting of titles became in practice the responsibility of the Mamlūk chancery or *Dīwān al-Ins͟hāʾ*, so that this office became the concentration-point of a great deal of expertise in these questions. In any case, the correct ordering and recounting of all the various components of the titles of rulers and dignitaries had always been vital in epistolary and other official usages. The various manuals for secretaries and officials, stretching back to Fāṭimid times but reaching their full florescence in a great document-producing civilisation like that of the Mamlūks, devote much space to forms of address and titulature. In the most monumental of these manuals, al-Ḳalḳas͟handī's *Ṣubḥ al-aʿs͟hā*, the first *bāb* of the third *maḳāla* (v, 423-506, vi, 1-188, cf. W. Björkman, *Beiträge zur Geschichte der Staatskanzlei im islamischen Ägypten*, Hamburg 1928, 110-13) is devoted to the topic of names of all kinds, but with special reference to *alḳāb*, which are traced from the origins of Islam to the author's own time, the 9th/15th century. Al-Ḳalḳas͟handī has several lists of titles, e.g. of these which he calls "honorifics of more recent times", *alḳāb muḥdat͟ha*, such as *nāʾib, sāḳī, mus͟hrif, awd̲j̲āḳī, ustād al-dār, bunduḳdār, dawādār, amīr al-āk͟hur*, etc.—this last class of titles being descriptive of offices rather than *alḳāb* in the true sense of honorifics as we have been discussing them.

Of greater interest for our present purpose are al-Ḳalḳas͟handī's numerous pages on the protocol of correct address, when addressing the caliph or sultans downwards. Many delicate and subtle distinctions are stressed here: thus *al-mad̲j̲lis al-sāmī/al-sāmiyy* (with *yāʾ mus͟haddada*) is a higher designation than *al-mad̲j̲lis al-sāmī* (with single *yāʾ*); *al-mad̲j̲lis al-ḳaḍāʾī* is higher than *al-mad̲j̲lis al-ḳāḍī*, and al-*mad̲j̲lis al-ḳāḍawī* higher still (*Ṣubḥ al-aʿs͟hā*, vi, 141 ff.; cf. M. Gaudefroy-Demombynes, *La Syrie à l'époque des Mamelouks d'après les auteurs arabes*, Paris 1923, Introd. LXXXII ff.). Even heathen rulers and notables were not to be denied their honorifics, though these were naturally on a lower level than those accorded to Muslim equivalents; the Mamlūk chancery had, of course, a sphere of diplomatic contacts embracing many non-Muslim powers, from the Christian empire of Byzantium and the Latins of the Western Mediterranean to the still-pagan Turkish and Mongol rulers of Inner Asia. As an example, we might cite the titles used in addressing the Doge of Venice (Dūk al-Bunduḳiyya): "al-Dūk al-D̲j̲alīl, al-Mukarram, al-Mubad̲j̲d̲j̲al, al-Muwaḳḳar, al-Baṭal, al-Humām, al-Ḍirg͟hām, al-G͟haḍanfar, al-K͟haṭīr, Mad̲j̲d al-Milla al-Naṣrāniyya, Fak͟hr al-ʿĪsawiyya, ʿImād Bani 'l-Maʿmūdiyya, Muʿizz Pāpā Rūmiyya, Ṣādīk al-Mulūk wa 'l-Salāṭīn N.". If such titulature was used for infidels, the luxuriance of contemporary practice for Islamic addressees may be judged!

Only some of the salient features of Ayyūbid and Mamlūk honorific titulature can be mentioned here; the existing documentation is so rich that a whole monograph could easily be written on the topic, and indeed, much of the material used by Ḥasan al-Bās͟hā for his book derives from these two periods and from the Syrian and Egyptian milieux; such material from the Mamlūk period has further been used to good effect by Muḥammad Bāḳir al-Ḥusaynī in his study, based in the first place on coin legends, *al-Kunā wa 'l-alḳāb ʿalā nuḳūd al-Mamālīk al-Baḥriyya wa 'l-Burd̲j̲iyya fī Miṣr wa 'l-S͟hām*, in *al-Mawrid*, iv/1 (1975), 55-104.

All the Ayyūbid sultans, and following them the Mamlūk ones, bore honorifics of the *al-Dunyā wa 'l-Dīn* pattern—continuing here Sald̲j̲ūḳ practice —and these appear in inscriptions and offical documents, although for less formal usage a shorter form in *al-Dīn* only seems to have been current. Especially characteristic of the Ayyūbids was the use of an honorific composed of *al-Malik* plus a laudatory epithet (e.g. al-Malik al-Kāmil, al-Malik al-Muʿaẓẓam) beginning with Ṣalāḥ al-Dīn's title of al-Malik al-Nāṣir bestowed on him by the Fāṭimid caliph al-ʿĀḍid when he appointed Ṣalāḥ al-Dīn as his vizier in succession to Shīrkūh in 564/1169. Titles like these had been known in the Fāṭimid caliphate for some time, and al-Ḥāfiẓ's vizier Riḍwān b. Walaks͟hī had already in 531/1137 borne the titles of al-Sayyid al-Ad̲j̲all al-Malik al-Afḍal. The inscription on the K͟hān al-ʿAḳaba to the south-east of Lake Tiberias by its founder, ʿIzz al-Dīn Aybak, describes him as al-Malikī al-Muʿaẓẓamī "connected with al-Malik al-Muʿaẓẓam", sc. with S͟haraf al-Dīn ʿĪsā b. al-Malik al-ʿĀdil Sayf al-Dīn, at that time (610/1213-14) governor of Damascus for his father and not yet an autonomous Ayyūbid prince; these titles were not therefore confined under the Ayyūbids to reigning princes only (van Berchem, *Eine ara-*

bische Inschrift aus dem Ostjordanlands, 89). From the Ayyūbids, titles of this type spread to the Mamlūks, and were used by the sultans, e.g. al-Malik al-Muʿizz for Aybak and al-Malik al-Ḳāhir and then al-Ẓāhir for Baybars. Such titles were also adopted unilaterally by presumptous, often rebellious, *amīrs* and governors, e.g. that of al-Malik al-Mudjāhid assumed by ʿAlam al-Dīn Sandjar al-Ḥalabī after the murder of Ḳuṭuz in 658/1260, and the fashion spread to powers dependent upon or culturally influenced by the Ayyūbids and Mamlūks, such as the Rasūlids of Yemen, whose rulers, from al-Malik al-Manṣūr Nūr al-Dīn ʿUmar onwards in 626/1229, all had honorifics of this type (see al-Bāshā, 498 ff.).

The titulature of the Mamlūk rulers and of their *amīrs* was particularly complex. The title Sulṭān [*q.v.*], though certainly known in the Ayyūbid period, had not been widely used by the Ayyūbid monarchs, but was now extensively adopted by the Mamlūk ones. Each of the sultans bore honorifics of the characteristic Ayyūbid type compounded with *al-Malik*, as discussed above, and also titles in *al-Dunyā wa 'l-Dīn* (see also above). But because of their military slave origin, the Mamlūk sultans and *amīrs* usually further bore special *nisbas* relating to their ethnic or local origins, their early professional training or their affiliation to the household of their masters. Thus sultan Barḳūḳ [*q.v.*] had the *nisba* of al-Yalbughāwī because he had been the *mamlūk* of the general Yalbughā al-ʿUmarī, and Baybars [*q.v.*] that of al-Ṣāliḥī from his original master, the Ayyūbid al-Malik al-Ṣāliḥ Nadjm al-Dīn Ayyūb; the general Ḥusām al-Dīn Özdemür was called al-Mudjīrī from the slave dealer who had sold him; and both the sultan Ḳalāwūn [*q.v.*] and the *amīr* Shams al-Dīn Sonḳur were called al-Alfī because they had been bought for 1,000 (*alf*) *dīnārs*. Although these names are in form technically *nisbas*, they were not regarded as in any way derogatory, but were, rather, a source of pride to the holders and may in this wise be regarded as honorific titles.

One class of *laḳab* borne by some early Mamlūk sultans may be characterised as "quasi-territorial" or "quasi-ethnic", sc. those titles in which the ruler claims lordship over particular regions and/or peoples. Already al-Malik al-Ṣāliḥ Nadjm al-Dīn Ayyūb had grandiloquently styled himself Shahriyār al-Shaʾm Sulṭān al-ʿArab wa 'l-ʿAdjam Ṣāḥib al-Ḥaramayn al-Sharīfayn Malik al-Barrayn wa 'l-Baḥrayn Malik al-Hind wa 'l-Sind wa 'l-Yaman Malik Ṣanʿāʾ wa-Zabīd wa-ʿAdan Sayyid Mulūk al-ʿArab wa 'l-ʿAdjam Sulṭān al-Mashāriḳ wa 'l-Maghārib (*RCEA*, xi, no. 4308), and in certain inscriptions of the Mamlūks Baybars and Ḳalāwūn we find headship over al-ʿArab wa 'l-ʿAdjam extending to al-Turk and even al-Daylam (= the Mongols here?) (*ibid.*, xiii, no. 4817, etc.).

A notable feature of the Mamlūk age was the strongly orthodox Sunnī atmosphere, now that the very seat of the ʿAbbāsid caliphate had been transferred to Cairo and the Mamlūk rulers had become the principal defenders of Islam. This stress on orthodoxy appears naturally in the Mamlūks' external policy, against such assailants of the *Dār al-Islām* as the Mongols and the Christian Franks and Armenians, and in their internal policy as repressions of Muslim sectaries like the Nuṣayrīs and Ismāʿīlīs. Under the stimulus of an increased religiosity, both in official theological circles and in the sphere of popular religion and mysticism, the duty of *djihād* was exalted. Whence the frequency in Mamlūk titulature of designations like al-Mudjāhid, al-Muthāghir, al-Murābiṭ, al-Ghāzī, al-Mughāzī, etc., though these had already appeared under the Saldjūḳs, the Atabegs and the later Fāṭimids as a reaction to the landings of the Frankish Crusaders (cf. al-Mudjāhid as a title of the Börid Atabeg Ṭughtigin in a Damascus inscription of 524/1130, *RCEA*, viii, no. 3034, and also as a title of ʿIzz al-Dīn Aybak in the Khān al-ʿAḳaba inscription, van Berchem, *op. cit.*, 101-2). The proximity now of the seat of the caliphate and this atmosphere of religious exaltation and bellicosity probably gave an impetus also to the increased popularity of a type of *laḳab* already well-known, that compounded with one of the titles of the caliph or sultan, and expressing close dependence on the supreme ruler, the enjoyment of his favour or support for him and the furtherance of the faith. Thus Ṣalāḥ al-Dīn, at the time of his recognition as ruler by the ʿAbbāsid caliph, adopted the title of Khalīl Amīr al-Muʾminīn, and others of this type include Thiḳat Amīr al-Muʾminīn, ʿUmdat al-Mulūk wa 'l-Salāṭīn, Nuṣrat al-Islām wa 'l-Muslimīn, etc. Those titles which included as one of their elements the caliphal title *par exellence*, Amīr al-Muʾminīn, were naturally the highest-regarded, and al-Ḳalḳashandī arranges the different forms which this class of title took in a hierarchy of status. Ḳasīm Amīr al-Muʾminīn is the highest, and may only be borne by the sultan's sons or used in correspondence with certain neighbouring Muslim princes; ʿAḍud Amīr al-Muʾminīn is the highest title which can be used for the sultan's provincial governors; Walī Amīr al-Muʾminīn can be used by high civil officials and by religious scholars, and ranks above Ṣafī/Ṣafwat Amīr al-Muʾminīn; and so forth (*Ṣubḥ al-aʿshā*, vi, 108-9).

The type of honorifics classified by al-Bāshā, *op. cit.*, 83 ff., as "those indicating place and status". *alḳāb makāniyya*. were used as indications of reverence and humility in addressing or referring to the great. They had already been used in the heyday of the ʿAbbāsids, for in the vizierate of Ibn al-Furāt there had arisen the practice of addressing the caliph indirectly as *al-khidma*, in effect, "the one to whom service is due", and Hilāl al-Ṣābiʾ states that what had originally been just a formula of *ḳurba*, ingratiation, soon became a *sunna*, compulsory practice (cf. Tyan, *Institutions du droit public musulman*. i. *Le califat*, 488). By the time of the later ʿAbbāsids, we find the caliphs regularly referred to in epistolary style (e.g. in such sources as Abū Shāma and the Ḳāḍī al-Fāḍil) by such circumlocutions as al-Djānib al-Sharīf, al-Mawāḳif, al-Sharīfa, Maḳām al-Raḥma, etc. The Būyid and Saldjūḳ usage of al-Ḥaḍra (see above) is clearly a precursor of these expressions, although by the Mamlūk period, al-Ḥaḍra had declined from being a form of address suitable for caliphs, as in al-Ḥaḍra al-Sāmiya, into being used in addressing civil officials, infidel foreign rulers and the Coptic Patriarch in Egypt, according to al-Ḳalḳashandī, *Ṣubḥ al-aʿshā*, v, 498. These "honorifics indicating place or status" enjoyed a great expansion in Ayyūbid and Mamlūk times. That of al-Madjlis spread under the former dynasty downwards from the sovereign to the great men of state, so that by al-Ḳalḳashandī's time it was regarded as essentially a title for the "men of the sword and the pen", but somewhat below al-Djanāb. Hence towards the end of the Ayyūbid period, the ruler tended to adopt instead the forms al-Maḳām al-ʿĀlī or al-Maḳām al-Ashraf. This usage was followed by the Mamlūks, so that Ibn Shīth, for instance, says in

his *Maʿālim al-kitāba* that al-Maḳām and al-Maḳarr are the highest *alḳāb* and are exclusively royal (*ibid.*, vi, 495-6, where it is also stated that the reference in such titles is to the seat of the ruler's power or his capital).

Van Berchem's opinion was that the study of mediaeval Islamic honorifics was only of value for the study of administrative institutions, and that these titles only had historical significance in so far as they were linked with specific offices—"lose Ehrentitel haben so gut wie keinen Werth" (*op. cit.*, 105). As already noted above, Kramers combatted this negative view, suggesting that the nature of these honorifics reflected the religious and cultural atmosphere of their time, e.g. that the later predominance of *dīn* titles over *dawla* ones coincided with the Sunnī reaction against political Shīʿism and against external Christian pressure. Whether certain *dīn* honorifics did owe their popularity in the Iranian world to the fact that they resembled traditional names, e.g. Farīd al-Dīn and Farīdūn/Āfrīdūn, Bahāʾ al-Dīn and Behdīn, and Ḳiyām al-Dīn and Kāmdēn (*Les noms musulmans composés avec Din*, 63-5), seems impossible to prove or disprove.

5. The period of the great empires. The use of honorifics continued in the great empires of later mediaeval Islam, sc. those of the Indo-Muslim sultans, the Ṣafawids and the Ottomans, almost down to modern times.

The titulature of the first Muslim dynasties to be permanently established in the northern Indian plain, the Slave Kings of Dihlī and their successors, inevitably followed *grosso modo* the pattern set by their original master, the Afghān Ghūrids [*q.v.*], who had in their turn continued in the ways established by the power which they had overthrown in the later 6th/12th century, the Ghaznawids (for Ghaznawid titulature, see above, 3, and for that of the Ghūrids, the information given in the *Ṭabaḳāt-i Nāṣirī* of Minhādj-i Sirādj Djūzdjānī [*q.v.*], who is always careful to detail the titles of his Ghūrid forebears, as also those of the Dihlī sultans contemporary with him).

The Slave Kings, essentially the Turkish military commanders of the Ghūrid sultan Shihāb al-Dīn or Muʿizz al-Dīn Muḥammad (d. 602/1206 [see GHŪRIDS]), followed their old masters in favouring on the whole *alḳāb* in *dīn*, whence Ḳuṭb al-Dīn Aybak, Shams al-Dīn Iltutmush [*q.vv.*], etc. However, as both Djūzdjānī's information and the contemporary inscriptions show, there were many variants and elaborations. Thus Aybak appears in an inscription of the Ḳuwwat al-Islām mosque in Dihlī as Ḳuṭb al-Dawla wa 'l-Dīn, Amīr al-Umarāʾ, whilst Djūzdjānī gives Iltutmush's *laḳab* in full as Shams al-Dunyā wa 'l-Dīn. Basking in the glory of their extensive military conquests, various sovereigns of this period conceived of themselves as following in the footsteps of Alexander the Great. Already the Ghūrid Muʿizz al-Dīn Muḥammad is described on the Ḳuṭb Minār [*q.v.*] as Iskandar al-Thānī, a title imitated e.g. by ʿAlāʾ al-Dīn Muḥammad Shāh Khaldjī of Dihlī (695-715/1296-1316) on his coins, with such variants as Iskandar al-Zamān "the Alexander of the age". The geographical and ethnic extent of the empire ruled by these Turkish commanders is indicated by Iltutmush's adopting later in his reign (in an inscription of the Hānsī mosque) the title Mawlā Mulūk al-Turk wa 'l-ʿAdjam, whereas previously he had styled himself (on the Ḳuṭb Minār) by the conventional, but by then obsolete title for an eastern Islamic potentate of Mawlā Mulūk al-ʿArab wa 'l-ʿAdjam. Like other Turkish ruling dynasties of the East, being newcomers into the Islamic society and polity and as yet uncertain of their place within these last, the Indo-Muslim rulers sought to validate their rule by expressing their loyalty to the ʿAbbāsid caliphs (who were of course after 659/1261 puppets under the control of the Egyptian Mamlūks). Iltutmush, in the last decades of the independent ʿAbbāsids of Baghdād, usually styled himself Naṣīr or Nāṣir Amīr al-Muʾminīn, but in one instance at least, Ḳasīm Amīr al-Muʾminīn, the title favoured by the Ghūrids to demonstrate their fidelity to Baghdād. Later in the century, Ghiyāth al-Dīn Balban (664-86/1266-87 [*q.v.* in Suppl.]) followed the same tradition when he styled himself Yamīn Khalīfat Allāh as well as Nāṣir Amīr al-Muʾminīn. See J. Horovitz, *The inscriptions of Muhammad ibn Sām, Qutbuddin Aibeg and Iltutmish*, in *Epigraphia Indo-Moslemica*, 1911-12, 12-34; G. Yazdani, *The inscriptions of the Turk Sulṭāns of Delhi-Muʿizzu-d-dīn Bahrām, ʿAlāʾu-d-dīn Masʿūd, Naṣīru-d-dīn Maḥmūd, Ghiyāthu-d-dīn Balban and Muʿizzu-d-dīn Kaiqubād*, in *ibid.*, 1913-14, 13-46; Z. A. Desai, *The inscriptions of the Mamlūk Sultans of Delhi*, in *Epigraphica Indica, Arabic and Persian Supplement*, 1966, 4-18.

The Turco-Mongol successors of these first Turkish and Afghān Indo-Muslim rulers, the Mughals, brought to India Tīmūrid traditions in using the grant of titles and other marks of honour to strengthen the loyalty of their own Turkish commanders and to win over other groups, such as the great Afghān chiefs. Bābur mentions that, in India, permanent designations (*muḳarrarī khiṭāblar*) were given to highly-favoured *amīrs*, such as Aʿẓam Humāyūn, Khān-i Djahān and Khān-i Khānān (*Bābur-nāma*, tr. Beveridge, 537). Bābur's son Humāyūn followed a careful policy in the award of titles appropriate to services rendered or expected; thus the supreme distinction of Amīr al-Umarāʾ was bestowed on Amīr Hindū Beg, an old commander of Bābur's who had fought at Pānīpat [*q.v.*] in 932/1526 and who was, moreover, allowed the signal honour of sitting with the emperor in formal court sessions. Under Bābur's immediate predecessors in India, the Lōdīs, the titles of nobility had been (in ascending order) Malik, Amīr and Khān. In the course of the 10th/16th century, the title of Malik fell out of fashion and that of Beg, one of prestige under the first two Mughal rulers, subsequently declined in favour of Khān, so that under Akbar, Beglar Begi was a lower title than that of Khān-i Khānān. This last was the highest title of all, held e.g. by the young Akbar's *atālīḳ* or guardian Bayram Khān (d. 968/1561 [*q.v.*]), together with that of Amīr al-Umarāʾ. Other titles tended to be associated with specific affairs or functions; thus that of Āṣaf Khān was mostly conferred on civil officials acting as *wazīr* or as *wakīl* of the royal household, hence mainly on Persians; whilst Akbar conferred the Hindu title of *rādjā* not only on the hereditary successors to princely power but also on faithful Indian servants like the master-gunner Sabbahan. See Radhey Shyam, *Honours, marks and titles under the Great Mughals (Babur and Humayun)*, in *IC*, xlvi (1972), 101-17, and idem, *Honours, ranks and titles under the Great Mughals (Akbar)*, in *ibid.*, xlvii (1973), 335-53.

As the political and military power of the Mughals shrank in the post-Awrangzīb period, the conferring of titles became more and more widespread by the

emperors and by provincial Muslim dynasties, so that their social value declined; hence today, old titles like Mīrzā, Khān and Beg have in the modern subcontinent become nothing more than the equivalents of western surnames.

In Ṣafawid Persia, one notes first of all, in connection with the strongly Shīʿī basis of the state and the theocratic nature of the early Shāh's authority, a fondness for names and titles expressing devotion to or dependence upon either some venerated figure of Shīʿism, such as ʿAlī or his sons al-Ḥasan and al-Ḥusayn, or upon the sovereign himself, considered as the vicar on earth of God or the *Imāms*. In pre-Ṣafawid times, there had occasionally been used by rulers in Persia names compounded with the Persian word *banda* "slave, devotee", e.g. the Mongol Il-Khānid Muḥammad Khudābanda Öldjeytü (the *laḳab* being assumed when Öldjeytü became a Muslim; his pro-Shīʿī sympathies should perhaps be noted here). Under the Turkmen Ṣafawids, the equivalent Turkish word *ḳul* was commonly used, as in ʿAlī-Ḳulī, Imām-Ḳulī, Ṭahmāsp-Ḳulī, Ṣafī-Ḳulī, etc., especially in regard to military commanders and governors, although the Shāhs themselves retained simple regnal names. The usage of these titles in *ḳul* was imitated in Muslim India by certain of the South Indian sultans who were Shīʿī in faith and strongly under Ṣafawid cultural influence, e.g. the ruler of the Ḳuṭb-Shāhīs [*q.v.*] in Golkonḍa, Muḥammad-Ḳulī b. Ibrāhīm (988-1020/1580-1612).

Whilst the Shāhs themselves remained modest over the use of personal *alḳāb*, their subordinates enjoyed a rich titulature. It is under the early Ṣafawids, apparently towards the end of Shāh Ṭahmāsp I's reign *ca.* 976/1568-9, that the characteristic Ṣafawid title for the *wazīr*, that of Iʿtimād al-Dawla [*q.v.*] "trusty support of the state" appears; this title is much distorted in the travel accounts of contemporary western visitors to Persia, e.g. the "Athemadeulat" of Du Mans and the "Etmadowlett or prime minister" of John Bell. The late Ṣafawid administrative manual *Tadhkirat al-mulūk* (*ca.* 1137/1725) gives detailed information on this latter official and on the other important figure of the Ḳurčī-Bashī [see ḲŪRČĪ] (who was, in early Ṣafawid times, before the establishment of a regular, standing army, virtually the commander-in-chief, with the title of Amīr al-Umarāʾ), here called the Rukn al-Salṭana al-Ḳāhira, and on a host of lesser officials. The top fourteen officials of the administration had the title of *ʿālī-djāh* "exalted in rank", and there were groups of officials with the title of *muḳarrab al-khāḳān* "confidant of the supreme ruler" because of their special closeness to the throne, and with that of *muḳarrab al-ḥaḍra* "confidant of the royal presence". The first group included the head of the palace eunuchs, the royal physician (*ḥakīm-bashī*), the court astrologer (*munadjdjim-bashī*), the controller of assay (*muʿayyir al-mamālik*), the state secretary, who drew the royal *ṭughra* [*q.v.*] (*munshī 'l-mamālik*), the keeper of the seal (*muhr-dār*) and the keeper of the ink-holder (*dawāt-dār*). The second group, somewhat lower in status, included senior harem attendants, aides-de-camp (*yasāwulān*), the heads of various departments of the royal household and workshops (*buyūtāt*), including the master of the mint (*ḍarrābī-bashī*), etc. (*Tadhkirat al-mulūk*, ff. 8b, 12b, 30a-55a, tr. Minorsky, 44, 46, 55-69).

Under the Ḳādjārs, the title of Iʿtimād al-Dawla for the *wazīr* declined in currency, being replaced by that familiar in Ottoman usage also (see below), Ṣadr-i Aʿẓam. There was also a great expansion of honorifics in *dawla, mamlaka, salṭana*, etc. for the numerous princes of the Ḳādjār family and for other great officials, a process which the Amīr Kabīr [*q.v.* in Suppl.] endeavoured in the mid-19th century years to check, but one which continued with little abatement till the end of the Ḳādjārs in 1925. This rich array of titulature, with by now elaborate forms of address extending down the social scale as low as mere village headmen, inevitably came under fire from the reforming Riḍā Shāh Pahlawī. Muḥammad Riḍā had indeed already in the Fifth Madjlis, as *Sardār Sipāh* and before he had overthrown the Ḳādjārs, abolished the honorific titles which had been sold for the personal enrichment of the Shāh and court officials, even though this act had been an infringement of the monarch's prerogative. On 2 August 1935 there was issued a decree on the abolition of titles and on the terminology of social intercourse. The royal family was to receive new titles, with the Shāh himself to be Aʿlā-yi Ḥaḍrat-i Humāyūn Shāhanshāhī; high officials were to be addressed just as *djanāb*, and the old titles of *amīr, beg, khān, mīrzā*, etc. were to be abolished. In fact, although these reforms were honoured in the press and in public announcements, the old titles continued very much in common and spoken usage (see P. Avery, *Modern Iran*, London 1965, 267, 273; D. N. Wilber, *Riza Shah Pahlavi: the resurrection and reconstruction of Iran*, Hicksville 1975, 167, 171). When western-type surnames were introduced, some people turned the old *alḳāb* which went back to Ḳādjār days into family names, e.g. in the cases of Dr. Muḥammad Muṣaddiḳ, Prime Minister 1951-3, formerly Muṣaddiḳ al-Salṭana, and his contemporary the statesman and former Prime Minister in 1921 Aḥmad Ḳawām, formerly Ḳawām al-Salṭana.

A centralised and bureaucratic institution like the Ottoman empire, with from the late 8th/14th century onwards extensive diplomatic contacts, firstly with the Muslim beyliks of Anatolia and the Turkmen powers of the East, and then with the Christian states of the West, increasingly affected by Ottoman expansionism, evolved a complex and elaborate chancery procedure in which the careful recounting of honorific titles played a vital role. The immense bulk of surviving Ottoman diplomatic and administrative documents would make feasible a highly detailed study of this titulature, a task which remains however to be done. For the moment, it may be noted that Feridun Beg devotes the opening pages of his great collection of correspondence to an exposition of the *alḳāb* of the various classes of addressee, from the sultan at the top down to civil and military officials and members of the religious institution within the empire, and also of the *alḳāb* to be used in communicating with dependent rulers such as those of the Trans-Danubian principalities and with foreign potentates like the Doges of Venice (*Münsheʾāt al-selāṭīn*, Istanbul 1274/1857, i, 2-13). Also, L. Fekete devoted a section of his *Einführung in die Osmanisch-Türkische Diplomatik der Türkischen Botmässigkeit in Ungarn*, Budapest 1926, pp. XXXII-XXXVI, to an exposition of honorifics as found in administrative and diplomatic documents of the 10th/16th and 11th/17th centuries concerning relations between the Porte and local officials in Hungary or between the sultans and the Christian monarchs in adjoining lands. The luxuriance of the titulature of, for instance, Süleymān the Magnificent is seen in a letter of this sultan from 972/1565, where in the *intitulatio* of the document

Süleymān describes himself as Sulṭān-i Salāṭīn-i Shark wa Gharb, Ṣāḥib-Kirān-i Mamālik-i Rūm wa ʿAdjam wa ʿArab, Kahramān-i Kawn wa Makān, Narīmān-i Maydān-i Zamīn wa Zamān, Ak Deñiziñ wa Kara Deñiziñ wa Kaʿba-yi Muʿaẓẓama wa Madīna-yi Munawwaranīñ wa Kuds-i Sharīfiñ wa Takht-i Miṣr Nādira-yi ʿAṣrīñ wa Wilāyet-i Yaman wa ʿAdan wa Sanʿāʾnīñ wa Dār al-Sadād Baghdād wa Baṣr wa Laḥsānīñ wa Madāʾin Anūshīn-Rawānīñ wa Diyār-i Djazāʾir wa Ādharbāydjānīñ wa Dasht-i Kïpčak wa Diyār-i Tātārīñ wa Kūrdistān wa Lūristānīñ wa Kulliyyan Rūm Īlī wa Anāṭūlī wa Karamān wa Aflāk wa Bughdān wa Angarūs memleketleriniñ wa bunlardan ghayrī niče mamālik wa diyār ʿaẓīm al-iʿtibārīñ Pādishāhī wa Sulṭānī Sulṭān Süleymān Khān b. Sulṭān Selīm Khān (*ibid.*, p. XXXII).

The honorifics of the sultan's subordinates were naturally less florid, but considerable care was taken to differentiate niceties of rank, so that a *kāḍī* with a stipend of less than 150 *akčes* was addressed as Kudwat al-Kuḍāt al-Islām [*sic*], ʿUmdat Wulāt al-Anām, whereas a *kāḍī* of 150 *akčes* or more could add to the above titles that of Mumayyiz al-Ḥalāl ʿan al-Ḥarām (*ibid.*, p. XXXIV). The grand vizier was from the time of Süleymān onwards awarded the designation of Ṣadr-i Aʿẓam "most illustrious of the high dignitaries", and this title remained in use all through the Ottoman sultanate's existence, surviving the reforms in the bureaucracy of the *Tanẓīmāt* [*q.v.*], the last Ṣadr-i Aʿẓams being Dāmād Ferīd Pasha [*q.v.*] (till October 1920) and his successor Aḥmed Tewfīk Pasha (till November 1922) who served Meḥemmed VI Waḥīd al-Dīn. The vizier had several other epithets of distinction, such as *sāmī*, *āṣafī* and *ʿālī*, and he was entitled to the same form of address as the Khedives of Egypt in the 19th century, *dewletli fekhāmetli* (see further ṢADR-I AʿẒAM).

It was during the *Tanẓīmāt* period of the mid-19th century that some attempt was first made at rationalising and restricting the unchecked growth of titulature, as part of the institutionalisation on western lines of the old Ottoman bureacracy. It seems that the traditional titles were now bureaucratised. Thus Redhouse in his *Turkish and English lexicion*, s.v. *bey* (375a), has "5. The title given [to] the sons of Pashas, and of a few of the highest civil functionaries, to military and naval officers of the rank of colonel or lieutenant colonel, and popularly, to any persons of wealth, or supposed distinction"; s.v. *pasha* (434a) he has an explanation of the modern military and naval positions, of general officer and flag rank, entitled to use this designation; and s.v. *vezir* (2136a) he has the definition "a civil state functionary of the highest rank, with the title of pasha". Hence in the biography of Fuʾād Pasha [*q.v.*] given in Ibnülemin Mahmud Kemal Inan's *Osmanlı devrinde son sadrıazamlar* [4], Istanbul 1969, i, 159, he is referred to merely as Efendi in all official documents until he achieved the rank of vizier in Shaʿbān 1271/May 1955 and thereby acquired the title of Pasha. See for this period, S. Kekule, *Über Titel, Ämter, Rangstufen und Anreden in der offiziellen osmanischen Sprache*, Halle 1892, and the entries in M. Z. Pakalın's *Tarih deyimleri ve terimleri sözlüğü*, Istanbul 1946, s.v. *elkâb-ı resmiye*, *rütbe*, *mülkiye*, *vezir*, etc.

It seems that these bureaucratic gradations in titulature introduced under the *Tanẓīmāt* continued under the Young Turk régime in the early 20th century, but, as in the parallel case of Persia under Riḍā Shāh Pahlawī, Kemal Atatürk's secularising and reforming policies did not allow these titles to continue in official and public usage. According to the Law no. 2590 of 26 November 1934 "Concerning the abolition of appellations (*lâkap*) and titles (*ünvan*) such as Efendi, Bey and Pasha", these modes of address were swept away, and religious titles such as Hacı, Hafız and Molla were also banned (Kazim Öztürk, *Son degiçiklikleriyle gerekçeli anayasa* [2], Ankara 1975, 306; Bülent Dâver, *Türkiye cumhuriyetinde lâyiklik*, Ankara 1955, 175). Instead of Bey and Hanım, Bay and Bayan were introduced for "Mr" and "Mrs". But as in Persia, old conventions and speech habits die hard, and in popular speech, the old title survive: Paşa for generals, whether active or retired; Efendi for artisans and non-Muslims; Üstad for craftsmen, artists, etc.; Hoca for teachers, secular and religious; and so forth (cf. G. Lewis, *Turkey* [3], London 1965, 110-11).

(C. E. BOSWORTH)

LAKANT, the name of two places in al-Andalus. The first, which has now disappeared, was situated some 60 km. to the south of Mārida [*q.v.*] in the district where la Fuente de Cantos is at present to be found, on or near to the road connecting Mérida with Seville and followed by Mūsā b. Nuṣayr, and on the left bank of the Guadiana (see F. Hernandez Jiménez, *Ragwāl y el itinerario de Mūsā, de Algeciras a Mérida*, in *al-And.*, xxvi [1961], 106-13, and *La kūra de Mérida en el siglo X*, in *ibid.*, xxv [1960], 320, 361, 368). Yāḳūt (iv, 363) speaks of two fortresses dependent on Mérida, Lakant al-Kubrā and Lakant al-Ṣughrā, but this seems highly improbable, for one might more feasibly conclude that *al-kubrā* refers to the place mentioned above or the alternative, and that *al-ṣughrā* corresponds to Alicante (or the alternative) on the Mediterranean coast to the south of Dāniya [*q.v.*] or Denia.

Alicante, classical Lucentum, formed part of the *kūra* of Tudmīr [*q.v.*]. It was one of the six towns included in the pact with Theodomir, on the journey from Orihuela to Elche, six miles from the latter according to al-ʿUdhrī. Al-Idrīsī (*Maghrib*, text 193, tr. 235), copied by al-Ḥimyarī (*al-Rawḍ al-miʿṭār*, text 170, tr. 205), says that there was here a little town (*madīna ṣaghīra*) which was fairly prosperous, with a market, a great mosque and a *minbar*. The earth produced in abundance fruits and vegetables, figs and grapes, and the town was a port for shipping esparto to the Mediterranean lands, and a centre for the construction of shipping for commercial purposes and for fishing. It had a *kaṣaba* well-garrisoned with troops, on the summit of a mountain, Benacantil, which was difficult of access. At the time of Muḥammad I, it seems to have become an anchorage used by the seafarers of Pechina. In 316/928, the lord of Callosa de Ensarriá (Kalyusha) and of Alicante and its strongholds, Muḥammad b. ʿAbd al-Raḥmān al-Shaykh al-Aslamī, was subdued. In the 5th/11th century, Alicante became part of the *ṭāʾifa* of Denia, whose fortunes it followed. After the Almoravids had passed by there, it came within the possessions of Aḥmad b. Hūd Sayf al-Dawla and was governed by Ibn ʿIyāḍ. Subsequently, it fell under the domination of Ibn Mardanīsh [*q.v.*] and of the Almohads. After having recognised for some period of time Ibn Hūd's authority, and having known several confused years, whose history deserves to be studied more thoroughly, it passed under the control of James I of Aragon, on condition that the local Muslims might retain their lands.

(J. Bosch Vilá)

LAKHM, an Arab tribe, especially influential in the pre-Islamic period. With the exception of the Lakhmid family [see LAKHMIDS] in ʿIrāķ, so frequently celebrated in the old Arab poetry, the pre-Islamic history of this family is not well-known and is full of legend. According to the traditional genealogy, Lakhm was of Yemenī origin and was the brother of Djudhām and ʿĀmila [*q.vv.*]. Yemenīs and Maʿaddīs claimed descent from the powerful Lakhmid dynasty of ʿIrāķ.

Of the three sister-tribes, Lakhm was undoubtedly the most illustrious and the oldest also. Legend connects it with the descendants of Abraham. A Lakhmid is said to have taken Joseph out of the well into which his brothers had thrown him. But by the eve of the *hidjra*, the vigour of the Lakhm had been sapped, while the ʿĀmila and notably the Djudhām, who under the Umayyads played a leading part, had increased in importance. Two centuries before the *hidjra*, the surplus Lakhmid population had spread over the lands in the north of the peninsula in Syria and Palestine and in ʿIrāķ where they established the Lakhmid phylarchate of al-Ḥīra [*q.v.*, and also DJADHĪMA], continually at war with the Ghassānids of Syria. In Syria we find the Lakhm settled in the same districts as the Djudhām. Like the latter, they adopted Christianity, which also became latterly the official religion of the Lakhmids of al-Ḥīra.

However, the al-Namāra inscription, dated A.D. 328, has thrown much light on the history of Lakhm. It fully explains the presence of Lakhm or part of it in Syria after it emigrated from ʿIrāķ with its king, Imruʾ al-Ķays, who went over to the Romans. It was after its emigration to Roman Syria that Lakhm became associated with the "sister-tribes", Djudhām and ʿĀmila, and so the geneaology that related the three tribes to one another as descended from one ancestor is fictitious, and is merely the reflection of geographical and political conditions that obtained after the emigration of Lakhm to Roman territory and its settlement in the southern part of Syria, not far from where these two tribes had settled. The separation of Lakhm from the two "sister-tribes" genealogically tips the scales against Lakhm's being a non-Yemenī or South Arabian tribe and suggests a Mesopotamian origin. The re-appearance of the tribe in ʿIrāķ, and what is more, in al-Ḥīra, after a long interregnum may be explained by the possible return of part of it to ʿIrāķ after its disappointments with the Romans, or by the fact that part of Lakhm had not accompanied its king Imrūʾ al-Ķays when he went over to the Romans but had stayed on in al-Ḥīra.

When Islam appeared, the Djudhām had practically absorbed their relatives, the Lakhm of Syria, a peaceful absorption by mutal agreement. In the 1st century A.H. the two tribes were usually named together as forming one group, and even when reference is made to a "chief of Lakhm", we can hardly be wrong in thinking that he also ruled the Djudhām. The *nisba* "Lakhmī" becomes rare in comparison with "Djudhāmī." In the wars of Islam, during the conquest of Syria, at the Yarmūk, at Ṣiffīn, and later in the course of the campaigns under Yazīd I against the sacred cities of the Ḥidjāz, the two tribes fought under the same chiefs and under the same banner. "Lakhmī" became practically reduced to little more than a title of honour. Its archaic flavour, the glorious memories which it recalled of the phylarchs of ʿIrāķ, was socially impressive, but the tribe of Lakhm no longer had a separate existence from the Djudhām. When in the lands to the west of the Euphrates, we find them mentioned alone, the name must be taken to mean the Djudhām, and it is the latter that the chroniclers usually have in mind.

Only a last echo of the aristocratic connotation of the name "Lakhmī" is seen in the claim of the ʿAbbādids [*q.v.*], *mulūk al-ṭawāʾif* in al-Andalus during the 5th/11th century, to be of Lakhmid stock.

(H. Lammens-[Irfan Shahid])

LAKHMIDS, a pre-Islamic Arab dynasty of ʿIrāķ that made al-Ḥīra [*q.v.*] its capital and ruled it for some three centuries from *ca.* 300 A.D. to *ca.* 600 A.D. Strictly speaking, the dynasty should be called the Naṣrids after their eponym, Naṣr, Lakhm [*q.v.*] being the tribe to which they belonged. As semi-independent kings and as clients of the Sāsānids, the Lakhmids were the dominant force in the political, military, and cultural history of the Arabs during these three centuries before the rise of Islam.

1. History. The founder of the dynasty, whose *floruit* may be assigned to the last quarter of the

3rd century, was ʿAmr b. ʿAdī, the nephew of the Tanūkhid king Djadhīma [q.v.]. It was he who made al-Ḥīra the Lakhmid capital, whence he conquered far and wide in the Arabian Peninsula and, according to the Arabic tradition, warred successfully against Queen Zenobia of Palmyra. He appears as the protector of Manichaeism after it was outlawed in Persia. He was succeeded by his son, Imruʾ al-Ḳays, described in the famous al-Namāra inscription as "king of all the Arabs". He, too, was a warrior king who after conquests in Arabia went over to the Romans, died in A.D. 328, and was buried at al-Namāra in the province of Arabia. The defection of Imruʾ al-Ḳays to the Romans resulted in the first interregnum in the history of the Lakhmids. The sources speak of a certain Aws b. Ḳallām in the sixties of the 4th century, and he is given various tribal affiliations, but it is almost certain that the interregnum began long before the sixties and that the Ghassānids played an important role in the affairs of al-Ḥīra, now that more light has been shed on their early history. Certainty cannot be predicated of the names and reigns of the Lakhmid kings assigned by the Arabic tradition to this obscure period in their history, sc. the 4th century.

The 5th century is much better documented in the Greek and Syriac sources as well as the Arabic ones, which yield imporant data on three Lakhmid kings. The first is al-Nuʿmān, nicknamed al-Aʿwar ("the one-eyed"), and also al-Sāʾiḥ ("the wanderer"); according to the Arabic tradition he earned the latter for his having renounced the world. This is not improbable, since he is known to have visited the Syrian saint, Simeon, between 413 and 420. His name is associated with the building of the famous palace, al-Khawarnaḳ [q.v.], and with the two divisions in the Lakhmid army known as al-Shahbāʾ and al-Dawsar. He was succeeded by his son al-Mundhir, who is said to have reigned forty-four years, possibly 418-52. He took part in the Byzantine-Persian war of 421-2 and played an even more important role in the internal affairs of Persia by his support of Bahrām Gūr for the throne. Little is known about the Lakhmid kings that followed him, al-Aswad and al-Mundhir II, but much is known about the warrior-king al-Nuʿmān II. He took part in the Byzantine-Persian war of the period. In 498 he was beaten by the Byzantine commander Eugenius at Bithrapsos; in 502 he advanced against Ḥarrān, where he was first beaten by the Romans and then triumphed over them, but shortly after died of a battle-wound in the vicinity of Circesium. A second short interregnum takes place in this period, ca 500, associated with a certain Abū Yaʿfur.

Of the three centuries of Lakhmid rule in al-Ḥīra, the last is the best documented and the most important. It is dominated by al-Mundhir III, who reigned for a half-century, 503-54. Firstly, during his reign the Arabian Peninsula witnessed a reassertion of Persian power and al-Mundhir made his presence felt in it, both as an Arab king and as the vassal of Khusraw Anūshirvān, who entrusted him with the entire Persian sphere of influence in Arabia. He warred continually with the South Arabian kings; ca. 520 he received an embassy from the South Arabian king, Yūsuf Dhū Nuwās [q.v.] and ca. 540 he sent one to the new ruler of South Arabia, the Ethiopian Abraha [q.v.]. During his reign, probably in the twenties, took place a third interregnum, that of al-Ḥārith of Kinda [q.v.]. Secondly, throughout the Byzantine-Persian conflict he was the spearhead of raids and expeditions against the border provinces, especially in the twenties; ca. 520 he attained international fame when he received an embassy from the Byzantine emperor Justin; in 531 he conceived and in part executed the Persian campaign which ended in a great victory against Byzantium at Callinicum on the Euphrates; in 539 he engaged in a dispute with the Ghassānid al-Ḥārith, which was one of the causes for the outbreak of the Byzantine-Persian war of 539-44; in the forties he continued to war with the Ghassānids, but in 554 he was killed in an engagement with al-Ḥārith near Ḳinnasrīn, probably the Yawm al-Ḥiyār of the Arabic tradition.

He was succeeded by his son ʿAmr (554-69) whose mother was Hind, the Kindī princess and daughter of the same al-Ḥārith who ruled al-Ḥīra during the Kinda interregnum in the twenties, and it is by his matronymic, son of Hind, that ʿAmr, the son of the most famous of all the Lakhmid kings, is known to the Arabic sources. The Lakhmids and their adversaries, the Ghassānids, are mentioned in the treaty of 561 between Persia and Byzantium; according to one of its clauses, both were expressly forbidden from waging wars against each other which would involve the two world powers, and yet ʿAmr continued to make raids against the Byzantine frontier in the sixties as did his brother Ḳābūs, who appears associated with him as his general. In 569 ʿAmr died a violent death, killed by the poet ʿAmr b. Kulthūm [q.v.] and was succeeded by his brother Ḳābūs, who reigned for some four years (569-73). It was during his reign that the Ghassānid al-Mundhir scored, ca. 570, a victory in Lakhmid territory not far from al-Ḥīra itself, probably the battle of ʿAyn Ubāgh, but it was also in the same reign that the Persian occupation of South Arabia took place in 572; this turned the tide against Byzantium, and resolved in favour of Persia what might be termed the struggle for Arabia.

The short period that intervened between the death of Ḳābūs in 573 and the accession of the last Lakhmid king in 580 was punctuated by two interregna; that of the Persian Suhrāb may be assigned to 573-4, while the other, during which most probably ruled Ḳabīṣa, an Arab from the tribe of Ṭayyiʾ, lasted for a few months in 580, before the accession of al-Nuʿmān. Between the two interregna there ruled the unpopular al-Mundhir IV, during whose reign his namesake, the Ghassānid al-Mundhir, scored a decisive victory over the Lakhmid, this time capturing al-Ḥīra itself, ca. 578, and setting it afire.

The last Lakhmid king was al-Nuʿmān, the son of al-Mundhir IV, who ruled for some twenty years (580-602). He is the Lakhmid best known to the Islamic Arabs and the post-Islamic Arabic sources through the panegyrics of al-Nābigha al-Dhubyānī [q.v.] and through his relations with ʿAdī b. Zayd [q.v.]. Unlike the reign of al-Mundhir III, his is not memorable for its international relations but for those with the Arabs of the Peninsula and with his Sāsānid overlords. In his Peninsular wars he was unfortunate in a battle (the Yawm Tikhfa or Takhfa) with Djarbūʿ, a subdivision of Tamīm. His relations with the Sāsānids varied. Hormuzd gave him a splendid crown, while Khusraw Parvīz fell out with him, possibly because he was intolerant of Lakhmid pretensions to independence. After wandering among the Arab tribes seeking refuge, he surrendered himself to Parvīz, who had him killed in 602, and with his death the Lakhmid rule over

al-Ḥīra came to an end. In so doing, Parvīz destroyed the shield that protected Persia's flank against the Arabs of the peninsula. Some two years after the death of al-Nuʿmān, the battle of Dhū Ḳār [*q.v.*] was fought, in which the Arab tribe of Bakr scored a victory over the Persians, a foretaste of more dramatic victories in the thirties by the Muslim Arabs. Dhū Ḳār foreshadowed al-Ḳādisiyya [*q.v.*], both of which were splendid justification of Lakhmid al-Ḥīra as a bulwark for Persia against the Arabs of the Peninsula.

After the death of Nuʿmān, al-Ḥīra was ruled by an Arab from Ṭayyiʾ, Iyās b. Ḳabīṣa, assisted by a Persian, al-Nahīragān, for some nine years, 602-11. After this it became a Persian possession directly ruled by the Persians until it fell to Khālid b. al-Walīd in 633. The last Lakhmid prince known to the sources in this period is al-Nuʿmān, nicknamed al-Gharūr ("the deluder"), who took part in the *ridda* war in Baḥrayn and was defeated by al-ʿAlāʾ b. al-Ḥaḍramī in 633.

2. Culture. The geographical location of their capital al-Ḥīra and their special relationship to Sāsānid Persia determined for the Lakhmids the direction that their history took. In spite of a certain independence which they enjoyed, they were vassals of the Sāsānids, for whom they performed the following important functions: (a) they were their shield against the inroads of the nomads from the Arabian Peninsula; (b) they watched over their sphere of influence in Arabia, especially the Arabian littoral of the Persian Gulf, including Baḥrayn and ʿUmān, which they ruled for them; (c) they were their spear against Byzantium and the latter's client-kings, the Ghassānids; and (d) they protected their trade interests in the Peninsula, especially the caravan-route that connected al-Ḥīra with South Arabia.

Their fruitful association with Persia is reflected in the various forms of their military, political, and social life, and in their material culture: (a) the sources speak of five units in their army—al-Shahbāʾ, al-Dawsar, al-Waḍāʾiʿ, al-Ṣanāʾiʿ, and al-Rahāʾin, the first of which are said to have consisted of Persian troops; besides, there was the Khandaḳ Sābūr, "Shāpūr's Ditch", rebuilt by Khusraw Anūshirvān, a *limes* of some sort protecting al-Ḥīra and extending down to where al-Baṣra was to be in Islamic times; (b) the crowns of the Lakhmids were apparently bestowed on them by the Persian kings and with the crown came the word itself for crown, *tādj*, as a loanword into Arabic from Persian; and (c) the various aspects of their material culture must also have been dominated by the Persians in such areas as architecture, dress, food, drink, and music.

Zoroastrian Persia was also the determining factor in the attitude of the Lakhmids towards Christianity. The Sāsānids understandably frowned on their adoption of a missionary religion with universalist claims, especially after the conversion of their secular enemy, Rome, to that religion. The second Lakhmid ruler, Imruʾ al-Ḳays, adopted Christianity, which fact must at least partly explain his defection to the Romans. Only the last Lakhmid king, al-Nuʿmān, adopted it openly; but since it was the Nestorian form of it, in opposition to the Chalcedonian one adopted by Byzantium, it was acceptable to the Sāsānids. And yet their capital, al-Ḥīra, became the great centre of Arab Christianity and of its transmission to the Arabs of the Peninsula. The city was adorned with churches and monasteries, was the seat of a bishopric, and the refuge for many a persecuted ecclesiastic.

Important as their role was in the political and military history of the Arabs and of the Near East, it was their development of al-Ḥīra itself as the great Arab urban centre in pre-Islamic times that must be considered the major and enduring contribution of the Lakhmids. In the 3rd century A.D., the Arab cities of Hatra, Edessa, and Palmyra fell in rapid succession, and the rise of al-Ḥīra as the capital of the Lakhmids, almost immediately after the fall of Palmyra, ensured a certain continuity in Arab urban life in the Fertile Crescent.

For almost three centuries, al-Ḥīra stood almost alone as a metropolis radiating higher forms of culture to the Arabs of the Peninsula; and of all the elements of culture that mattered, the most important was undoubtedly the development of the Arabic script and of written Arabic, called for by the demands of an organised and stable urban life in al-Ḥīra [see ʿARABIYYA. A. The Arabic language (ii) (I)].

Bibliography: the main source for the history of the Lakhmids is Ṭabarī's *Taʾrīkh*, magisterially translated and commented upon by Th. Nöldeke, *Geschichte der Perser und Araber zur Zeit der Sasaniden*, Leiden 1879, repr. 1973; (see on this now, I. Shahid, in *IJMES*, viii [1977], 117-22); the standard work on the Lakhmids is still G. Rothstein, *Die Dynastie der Laḫmiden in al-Ḥīra*, Berlin 1899. In both these two works the scattered references to the Lakhmids in the Syriac and classical sources are discussed. Other important Arabic sources are: Masʿūdī, *Murūdj*, III, 181-214 = §§ 1036-75; Ḥamza al-Iṣfahānī, *Taʾrīkh*, ed. Beirut 83-97; Ibn al-Athīr, i, 340-51, 400-3, 410-11, 434-5, 437-9, 482-91, 540-7. For the monasteries of the Lakhmids and of al-Ḥīra, see Yāḳūt, *Muʿdjam*, ed. Beirut ii, 495-543; Bakrī, *Muʿdjam*, ed. Cairo ii, 570-607. On the al-Namāra inscription, see *Bibl.* to LAKHM. For further studies on the Lakhmids, see F. Altheim and R. Stiehl, *Die Araber in der alten Welt*, Berlin 1964-8, ii, 313-28, v/1, 358-73; I. (IRFAN SHAHID)

LAKHNAW, conventional English spelling LUCKNOW, the capital city of the Indian state of Uttar Pradesh (the United Provinces of British India). It is situated on the south bank of the winding Gumti river at lat. 26° 52′ N. and long. 80° 52′ E. It is the eleventh largest city in the country (population, 1971 census: 750, 512) and the second largest town of the State. Besides being the seat of the State government, the city also serves as the administrative headquarters of Lakhnaw district and division.

1. History. Though legend connects the origin of Lakhnaw to a mythical local mound called Lakshman Tīlā, a pre-historic stronghold built by Lakshmana, brother of Rama, king of Ayodhya, the known history of the city can be traced to the beginning of the 13th century A.D. when it was colonised by the *Shaykhs*, one of whose descendants *Shaykh* Muḥammad, better known as Shāh Mīnā, attained

great saintly renown, and his shrine, located with the confines of the historic Machhi Bhavan, is a place of pilgrimage for devotees all the year round, apart from being the oldest epigraphic monument of the city. During the Dihlī Sultanate [*q.v.*] period, Lakhnaw figured prominently in connexion with the revolt of ʿAʾīn al-Mulk, son of Māhrū, governor of Awadh, against Sulṭān Muḥammad b. Tughluḳ. Between 1394 and 1478, Lakhnaw became part of the Sharḳī kingdom of Djawnpur [*q.v.*]. After changing hands several times between different occupants of the Dihlī throne, Lakhnaw finally passed into the Mughal dominion under Humāyūn, after suffering from frequent Afghān incursions. The Emperor Akbar, under whom the district of Lakhnaw formed part of the *sarkār* of that name in the *ṣūba* of Awadh, had a special fascination for Lakhnaw, whose delightful surroundings, pleasant climate, flowers and fruits and different varieties of rice are highly spoken of by his court chronicler, Abu 'l-Faḍl. During Djahāngīr's reign, Lakhnaw blossomed into a *magnum emporium*. Awrangzīb's visit to the place is commemorated by a mosque which he built on the top of the said Lakshman Tīlā, the oldest site of the city.

As the fortunes of the Great Mughals dwindled, those of Lakhnaw rose, until a new and independent kingdom sprang up as an offshoot from the decayed tree of the Empire. The governors henceforth paid only nominal allegiance to the titular Dihlī king. Saʿādat Khān, who was appointed *ṣūbadār* by the Emperor Muḥammad Shāh in 1134/1722, became the founder of the dynasty of the Nawwābs of Awadh, with whose régime most of Lakhnaw's glorious past is intimately connected. The period of the fourth ruler, Nawwāb Āṣaf al-Dawla, marks the greatest height of Lakhnaw's prosperity. The extravagance and munificence of his court passed into a byword, and could be rivalled only by the Imperial court of Dihlī. Along with the Rūmī Darwāza and the adjacent mosque, the great Imāmbārā, whose central hall is one of the largest vaulted rooms in the world, forms the apotheosis of his building achievements. Lakhnaw was raised to the rank of a royal city in 1819 when Lord Hastings transformed the seventh and the last Nawwāb Wazīr, Ghāzī al-Dīn Ḥaydar, into the first king of Awadh. The puppet monarchy came to an end in 1856 when the territory was annexed to the East India Company territories and Wādjid ʿAlī Shāh, the last king, was exiled to Calcutta, where he lived a pensioner's life under British supervision till his death in 1887.

To the Englishmen, however, Lakhnaw is best known as the city where a regiment of British troops under Sir Henry Lawrence, joined by the local English inhabitants, put up a gallant defence of the Lakhnaw Residency for twelve weeks against heavy odds during the Sepoy Mutiny of 1857, when the city witnessed some of the fiercest fighting. The history of the Lakhnaw district after its annexation by the British is a history of a long chain of administrative changes caused by the exigencies of situations obtaining at different times. Later on, Lakhnaw had a conspicuous role to play in the political movements of British India, for the famous Lakhnaw Pact resulting from meetings held there in December 1916 between the Indian National Congress and the All-India Muslim League led to the Hindu-Muslim co-operation in the *khilāfat* movement and the Non-co-operation movement launched by Mahatma Gandhi in 1920.

With gilded domes and graceful minarets rising above its many mosques, *imāmbāṛās*, palaces and tombs, Lakhnaw gives the impression of fantastic splendour, characteristic of the capital of an eastern potentate. The fine Djāmiʿ Masdjid, the handsome Čhattar Manzil and the glittering Shāh Nadjaf mausoleum are, apart from Āṣaf al-Dawla's buildings, some of the finest speciments of the architectural glory of the prodigal Nawwābs. La Martinière, an impressive Christian landmark of Lakhnaw, symbolises the zeal and influence of General Claude Martin (1735-1800), a French soldier of fortune who amassed great wealth and position during the days of Nawwāb Āṣaf al-Dawla. The building is an exquisite memento of the synthesis of European and Indo-Saracenic architecture. "As regards learning" says Abdul Halim Sharar, the noted contemporary Urdu writer, "Lakhnaw was the Baghdad and Cordova of India and Nishapur and Bokhara of the East". The world famous *čikan* embroidery, the hallmark of Lakhnaw's craftsmanship since the days of the fastidious Nawwābs, has developed as the most flourishing industry. Another legacy of the Nawwābī era is the manufacture of good-quality *khamira* tobacco used for smoking and the *zarda* for chewing, which have acquired a reputation of their own.

With Lakhnaw's name is indissolubly associated a particular school of Urdū poetry which developed there under the benign patronage of the Nawwābs. Cultivation of delicacy and refinement, which characterised the city's social life, left an indelible mark on the Urdū poetry produced there. The Urdū language was purified almost to the point of perfection. The intensive interest of the Lakhnawi Muslims in Shīʿism brought about the sophistication of the poetical genre known as *marthiya* [*q.v.*] (martyrological epic mourning the tragedy of Karbalā), of which Anīs and Dabīr were the two great exponents.

Modern developments have made Lakhnaw a leading city of northern India. It occupies a central place in a rich farming region, producing and marketing wheat, barley, grain, mustard, mangoes and sugar cane. Paper and carpet, chemicals and pharmaceuticals, cigarettes and shoes, gold and silver wares, wood carving and leather goods, embroidery and perfumery are among the chief commercial and industrial products of Lakhnaw. It is a very important centre of the country's railway system. For its numerous parks and avenues, Lakhnaw is called a "garden city". There is a residential University founded in 1921, with a large number of boys' and girls' colleges, several private and technical schools and the provincial museum. A University of Indian music and two national research institutes, sc. the Central Drug Institute and the National Botanic Garden, are housed there, Nadwat al-ʿUlamāʾ, popularly known as Nadwa College, is universally regarded as the leading centre of Islamic studies in India.

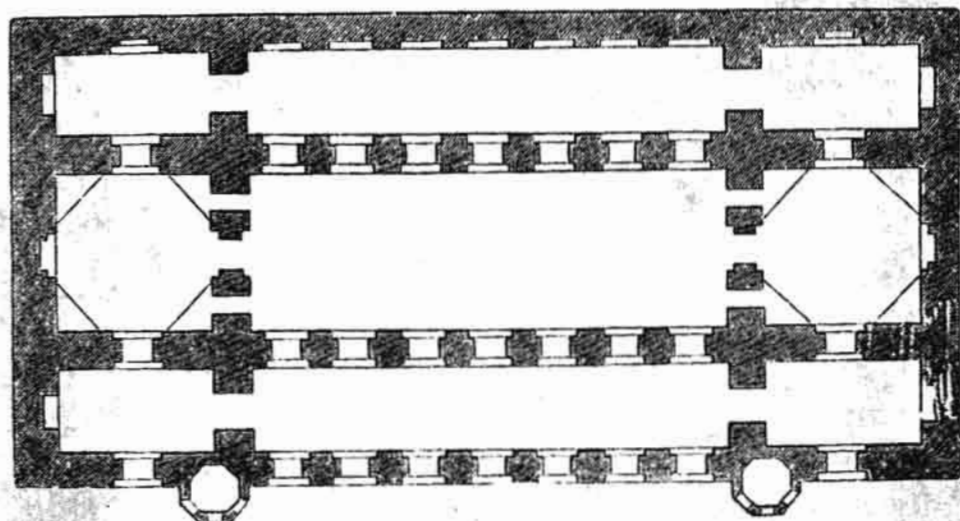
(ABDUS SUBHAN)

2. Monuments. The most noteworthy of the older sites is the tomb of Shaykh Muḥammad, known as Shāh Mīnā, dated 884/1479 (though biographies of saints give 870/1465-6). The tomb of Shaykh Ibrāhīm Čishtī, near the ʿAysh-bāgh, dated 961/1553-4 is a square limestone cell surmounted by blind merlons and a hemispherical dome set on a octagonal drum; the plain doorway arch, flanked by two small superimposed niches on each side, resembles Sultanate work at Dihlī. Two Mughal mausolea in the same area are close to work at Fatḥpūr Sīkrī [*q.v.*] in character, but undated. One, the Nadān Maḥall, apparently the tomb of Shaykh ʿAbd al-Raḥīm Khān, was built as a twelve-pillared open pavilion, but this was converted to a square cell with *djālī* lattices, and surrounded with a verandah of twenty pillars whose elaborate brackets, including elephant and birds, support a *chadjdja* pent. The parapets of this verandah, the cell, and the base of the dome carry brilliant tile mosaic ornament in dark blue, turquoise and yellow set in red plaster: a confirmation of detail to be seen on some contemporary book paintings (e.g. *Akbar-nāma*, V & A, IS 2-1896 113). The *mahāpadma* finial base is extended by a petal-like network of tilework lines. The red sandstone Sola Khambā preserves the open form, here rectangular, with sixteen columns surrounding a line of five cenotaphs, and supporting a florally carved ceiling above a finely panelled plinth. The details indicate the transition from the Akbarī to the Djahāngīrī style. The Mosque of Awrangzīb with three frontal arches to its prayer hall, and three domes, is flanked by massive octagonal minarets engaged to the front corners like the larger Djāmiʿ Masdjid at Dihlī, and lanterns at the rear; its *pīshṭāḳ* however incorporates new Baroque curvatures in the upper storey, with an arching *čhadjdja* and flanking *čhatrīs*. Following his transfer of the administration of Awadh from Fayḍābād [*q.v.*] in 1189/1775, Āṣaf al-Dawla built a complex including the Āṣafī Masdjid within the Mačhī Bhawan or Old Fort (Ḳilʿa) to relieve the famine in 1198/1784. This mosque follows the lines of the earlier one, but with a prayer hall of eleven bays, still with three domes, here bulbous, gadrooned, and reeded. The façade of plain arches set within engrailed arches on tapering engaged pillars is crowned with a deep foliated frieze, and a continuous register of delicate arches surmounted by tiny bulbous domes, a device already used in the mausoleum of the Nawwāb Ṣafdār Djang (d. 1168/1754) at Dihlī. The prayer court, flanked by arcaded ranges with octagonal pavilions, is approached by a long surge of steps. The same tradition is resumed in the Djāmiʿ Masdjid founded by Muḥammad ʿAlī Shāh (1837-42); there the *pīshṭāḳ* is no longer rectangular, but rises into a pointed arch, and within its *īwān*, where squinch nets are reduced to waving lines, there are three arched entrances. Secondary *pīshṭāḳ*s are introduced at the centre of each wing, rising in taller arcades. Luxuriant leaves spring round the dome bases, and the same foliation pervades the interior, where the *miḥrāb*, matching the entry, is triple. *Guldastas* of differing length are clustered on the skyline.

The *taʿziya* ceremonies [*q.v.*] required large halls, of which the greatest, the Baṛā Imāmbāṛā is in Āṣaf al-Dawla's complex of 1784 (see Fig. 1). The long range of the façade is handled like that of his mosque, but with niched piers, and triads of arches at each end marked off by domed octagonal pavilions in two storeys. The arches and domes of the parapet are reiterated in a second range above, set back with two more pavilions on the flat roof. The hall within, *ca.* 49 m by 16 m by 15 m high has a solid concrete vault carried on successive covings of converging groins, and the founder's tomb lies in the middle. The architect was Kifāyat Allāh. The third building of the complex, the Rūmī Darwāza, possibly so-named after its triple gateway, shares the rapid change of rhythm and the recession in levels, but the river elevation unexpectedly reveals a giant *īwān* framed within an arch with radiating *guldastas*, and capped by a *čhatrī*. The Ḥusaynābād Imāmbāṛā of Muḥammad ʿAlī Shāh again contrasts arches of different sizes with parapet arcades and *guldastas*, though in a light, lacy manner culminating in a gilded dome. The Ḥaḍratgandj Imāmbāṛā of Amdjad ʿAlī Shāh (1842-47) is comparatively plain, but its interior, like the other two, was once


Plan of the Bāṛā Imāmbāṛā, Lakhnaw (after J. Fergusson).

splendid with crystal chandeliers and precious shrines.

Besides the *imāmbāṛā* burials, the tradition of mausolea continued with those of Saʿādat ʿAlī Khān (1798-1814) and his wife Khurshīd-zāda, built by his successor Ghāzī al-Dīn Ḥaydar (1814-27). Both follow the organisation of Ṣafdar Djang's monument with corner turrets capped by *čhatrīs* around the main dome, but the *pīshṭāḳ* and *īwān* are absent, replaced in the former by a tetrastyle portico on each face (R. Smith, *Journal* 1832, V & A. IM 15/58-1915, pp. 581-2). Both have domes of a strongly European profile, with prominent finials and salient angles around a tall drum suggesting a derivation from Les Invalides (1693-1706); the accumulation of lesser domes and *banglā* vaults around the Queen's tomb also recalls Hindu massing. Ghāzī al-Dīn built his own tomb, the Shāh Nadjaf (Nadjaf Ashraf) dominated by a white, stupa-like dome and finial within an arcaded precinct. The garden at Ḥusaynābād contains two supposed replicas of the Tādj Maḥall for a daughter of Muḥammad ʿAlī Shāh and her husband, which however demonstrate complete lack of its classical balance.

The origin of European influences is apparent in domestic buildings. Initially Saʿādat Khan had taken over the Panč Maḥall built by the Shaykhzādas in the Fort; the buildings were improved on a grand scale by Shudjāʿ al-Dawla (1754-75), but by 1775 they still lacked unity (Modave, *op. cit.* 183). Both palace and fortifications were destroyed in 1857 and after. Āṣaf al-Dawla transferred the court to a new Dawlat Khāna including the Āṣafī Koṭhī, probably commissioned from Claude Martin, in 1782-9. Martin, who had arrived in Lakhnaw in 1776, rose to become advisor to the Nawwābs, whose taste he influenced, creating fine buildings for them and obtaining furniture from Europe. These included Mūsā Bāgh (Barowen) (1780-1804), a classical house with a bow front to the river, and a landward court sunk for coolness, and Bībīyapur Koṭhī, a much plainer building. His own town house, Farḥat-bakhsh (1781) shows the same combination of climatic ingenuity, strong defences, and wit; it was bought in 1800 by Saʿādat ʿAlī Khān, who used it as his residence at the centre of a new palace complex. Constantia (La Martinière (1795-1800) though influential was, as Martin's tomb, unsuitable for adoption, and continues in his endowment as a school. Dil-kushā (*ca.* 1805), built by Sir Gore Ouseley as a reinterpretation of Seaton Delaval back home in Northumberland (1729) became a favourite hunting lodge of Saʿādat ʿAlī, and provided the portico model for his tomb. By 1803 the Nawwāb had bought all the English houses but three, and himself constructed a fine new street of such houses, radically different from the Indian model, in Ḥaḍratgandj. The building of palaces continued with his domed Motī Maḥall and Lāl Bāradarī (Ḳaṣr al-Sulṭān), a throne room with *djālīs* as fine as the Nadān Maḥall. Ghāzī al-Dīn built the Čhattar Manzil, incorporating the Farḥat-bakhsh, for his harem, blending Martin's classicism with the local tendency to culminative recession, and domes with *čhadjdja* eaves, carrying gilded parasols. That these allusions were deliberate is confirmed in the Darshan Bilās, of whose four façades two are taken from Barowen, one from Farḥat-bakhsh, and one from Dil-kushā, much as the images in Urdū poetry (Jones, *op. cit.*, 224). The borrowing of Western motifs remained superficial, and even the use of such houses was not fully grasped. Such stylistic variety could be realised with ease in the local medium of stucco on brickwork. This was fully exploited in the vast palace of Ḳayṣar Bāgh built for Wādjid ʿAlī Shāh by Čhóṭā Miyān in 1848-50; the final, Rococo phase of Mughal architecture is combined with the gamut of Western elements with a splendid and theatrical disregard for rule, but little now remains.

Sharma, U.P. Revenue Dept. 1959, 391-405. For specific descriptions of buildings see G. Sanderson, *The Nadan Mahall, Solah Khamba, and the tomb of Ibrāhīm Chishti, Lucknow*, in *Archaeological Survey of India, Annual Report 1912-13*, Calcutta 1916, 132-5 (with excellent plates); Ziyaud-din Desai, *Mosques of India*, New Delhi 1971, 69-71; *Gazetteer of the province of Oudh*, 1877, ii, 373 ff. Of the more recent guidebooks, H. A. Newell, *Lucknow*, Bombay (?) n.d. (before 1928), is useful. (P. A. ANDREWS)

LAKHNAWTĪ (shortened form of Lakhanawatī, "home of Lakhan", which is a derivation from *Lakshmanā*, son of Dasarata and half-brother of Rāma Čandrā, and *watī*, meaning "home" or "habitation", the name of an ancient city which served as the principal seat of government in Bengal under Muslim rule for nearly four centuries. Its ruins are still found spread over a narrow and deserted channel of the River Ganges in lat. 24° 52′ N. and long. 88° 10′ E., 10 miles/16 km. south-west of the modern Mālda town (administrative headquarters of Mālda district in the State of West Bengal, India), from which it is reached by a macadamised road.

Though the date of the foundation of the city is shrouded in obscurity, tradition has it that it was built by one Sangaldīb of the Cooch Behar area of north Bengal, who had become unchallenged master of Bengal and Bihār after defeating Rādja Kedar Brahmin of the same region. But the recorded

history of Lakhnawtī does not begin until the Muslim conquest of western and northern Bengal in 594/1198 by Muḥammad Bakhtiyār Khaldjī, the military general of Ḳuṭb al-Dīn Aybak of Dihlī, who surprised and defeated Lakhan Sen, the ruling Hindu king, at Nadia (represented by the present Nabadwip town). After the fugitive king escaped into eastern Bengal, Bakhtiyār Khaldjī established his capital at Lakhnawtī, which thenceforth became the centre of Muslim power till the end of the 10th/16th century. The most ancient name of the city was Gawr, afterwards changed to Lakhnawtī, and subsequently called Gawr again. The city was also known by various names at different times, such as Fatḥābād, Ḥusaynābād, Nuṣratābād and Djannatābād, the last name, meaning "paradise", being given to it by the Emperor Humāyūn when he stayed there for three months in 1538. The earliest numismatic mention of Lakhnawtī as a mint town occurs in a coin of Sulṭāna Raḍiyya dated 634/1236. The nearest contemporary account of this early period is the *Ṭabaḳāt-i Nāṣirī*, whose author Minhādj-i Sirādj visited Lakhnawtī in 641/1245 within fifty years of its conquest by the Muslims. Under the Emperor Akbar, Lakhnawtī was one of the nineteen *sarkārs* in which Bengal was divided for administrative purposes. Abu 'l-Faḍl states in his *Āʾīn-i Akbarī* that the city was known in his time both as Lakhnawtī and Gawr.

After the lapse of three decades of the Khaldjī oligarchical rule, the Lakhnawtī kingdom passed under slave governors, during which it acquired so much influence and status that its governors used to be called *Malik al-Sharḳ*. But soon the palace intrigues and political squabbles of the Dihlī Sulṭanate emboldened the viceroys of Lakhnawtī to revolt against the central imperial authority, the distance from Dihlī being a greatly-contributing factor here. The greatest of these revolts took place during the reign of the strong-willed Sulṭān Ghiyath al-Dīn Balban [*q.v.* in Suppl.], who personally led a large army to Bengal to crush the rebel governor Sulṭān Mughīth al-Dīn Ṭughril, who was mercilessly put to death. Bughrā Khān, Balban's youngest son, became governor of Lakhnawtī in 681/1282. Baranī, the author of the *Taʾrīkh-i Fīrūz-Shāhī*, gave Lakhnawtī the name of "Bulghāḳpūr", meaning "place of sedition", in view of the insurrections which frequently occurred there ever since the inception of the Muslim rule.

With the passage of a century, the small principality of Lakhnawtī expanded into a redoutable Muslim kingdom, embracing in its fold Sunargaun (the present Dacca area), Sātgaun (present Hooghly area), the Brahmaputra valley and the marshy lands of southern Bengal. The founder of the Ilyās-Shāhī dynasty, Shams al-Dīn Ilyās Shāh, used to be called "Shāh-i-Bangāla". The process of the cultural identification with the Bengali people which had begun during 140 years of Ilyās Shāhī rule culminated during the next half-century's reign of the Ḥusayn Shāhī Sultans, who were particularly noted for their active patronage of arts and literature. The fame of the Lakhnawtī kingdom spread far and wide, and its sultans exchanged ambassadors with the potentates of China and Khurāsān. Sulṭān Ghiyāth al-Dīn Aʿẓam Shāh (795-813/1392-1419) established *madrasās* in the holy cities of Mecca and Medina and invited the famed Persian poet, Ḥāfiẓ Shīrāzī, to visit his court and elicited from him a celebrated panegyrical ode. The writ of the Sulṭān of Lakhnawtī was respected even beyond the frontiers of Bengal, within Orissa, Kamrup, Tippera and Arakan.

The prosperous condition of Lakhnawtī in the mediaeval times attracted the attention of foreign travellers. The Portuguese traveller, de Barros, writing before 1540, speaks of broad and crowded streets with trees planted in rows along the walls to give shade to the passers-by. Faria y Souza, visiting the city around 1640, describes the capital city lying on the banks of the Ganges as being three leagues in length, and well-fortified, and containing 1,200,000 families. Rennell, the cartographer, who visited Lakhnawtī in the third quarter of the 18th century, portrays the city as "not less than fifteen miles in length and from two to three in breadth".

On account of changes in the course of the Ganges, the capital was removed from Lakhnawtī to other nearby places several times in its long history. Twenty-six rulers from Bakhtiyār Khaldjī (1198) to Ḳadir Khān (1325) ruled from Lakhnawtī, while six kings of the Ilyās Shāhī dynasty had their capital at Pandua, 20 miles/32 km. away in the north-easterly direction, till 1414, when it was transferred back to Lakhnawtī in the reign of Sulṭān Djalāl al-Dīn Muḥammad (818-36/1415-32). In 1564, Sulaymān Karrānī subsequently removed the capital from Lakhnawtī to Tānda, lying still further to the south-west near the present village of Mahdīpur. The capital was again shifted back to Lakhnawtī in 1575 by Munʿim Khān Khān-i-Khānā, the first viceroy of Akbar, but excessive rains in that year caused a pestilence in which thousands of inhabitants perished, the viceroy himself falling a victim to the contagion. The few people that survived the epidemic left the deserted city, which never regained its old glory. The capital was hurriedly shifted to Tānda, from where it was later changed to Rādjmahal in 1589 by Rādjā Mān Singh, and then to Dacca in 1608 by Islām Khān, and finally to Murshidābād in 1704 by Murshid Ḳulī Khān.

Though Lakhnawtī was finally deserted towards the end of the 10th/16th century, its magnificent buildings withstood the ravages of time for another century, for as late as 1683 when William Hedges, governor of the East India Company, visited the place, the architectural remains of the historic city were fairly intact. But systematic human spoliation caused irreparable damage to the monuments, whose bricks and stones were carried away to adorn the palaces and houses of distant Rādjmahal and Murshidābād. According to Grant (*Fifth report*), the *niẓāmat daftar* of Murshidābād received Rs. 8000/- annually from the local *zamīndārs* of Lakhnawtī as fees for the privilege of demolishing the ruins and stripping from them their highly-prized enamelled bricks and basalt stones. Early in the 19th century, many carved stones, found in the ruined city, are said to have become prey of the Calcutta undertakers and others for ornamenting graves in Calcutta. Some of the important relics which are still extant are as follows:

The Sona Masdjid or Great Golden mosque, a massive rectangular mosque, built by Sulṭān Nuṣrat Shāh in 932/1526, is the largest as well as the finest of all the monuments of Lakhnawti. It is called golden because its domes were actually gilded, and *Barādarī* (meaning "audience hall") because it has a spacious court-yard resembling an audience hall. The Čhota Sona Masdjid, built during the reign of ʿAlāʾ al-Dīn Ḥusayn Shāh (899-925/1494-1519) is situated in that portion of Lakhnawtī which now forms part of the Rādjshāhī district of Bangladesh. Of the historic Fort of Lakhnawtī, which lay on the

banks of the Ganges and extended for about a mile from north to south, only the Main Gate, called the *Dākhil Darwāza*, and the Royal Entrance, commonly called *Luka Čūri*, are in existence today. The Fīrūz or Fīrūz Shāh Minār is a sort of a victory tower, 84 ft. high and 62 ft. in circumference, popularly supposed to have been built by Ṣayf al-Dīn Fīrūz Shāh (1488-90). The Ķadam Rasūl is a single-domed square building, constructed by Sulṭān Nuṣrat Shāh in 937/1531 and situated within the enclosure of the Fort. The actual relic, which comprises a small carved pedestal of black marble containing a stone representation of the footprint of the Prophet, is said to be preserved in a private residence nearby for reasons of security. Of the remaining important mosques, there are the Tāntīpārā Masdjid, erected around 1480, the Lattan Masdjid, built in 1475, and the Čamkattī Masdjid constructed by Sulṭān Yūsuf Shāh in 880/1475. In a spot known as Banglākot there existed the tomb of Sulṭān Ḥusayn Shāh (d. 925/1519), but it was destroyed in about 1846. The tomb of *Shaykh* Akhi Sirādj al-Dīn ʿUthmān, the famous saint who visited Lakhnawtī in the early 8th/14th century, is located in the north-west corner of the Sāgardighī, the enormous cistern, nearly 7 miles/10 km. south-west of Mālda town.

LAĶĪṬ (A.) "foundling", according to the definition of Mālikī law, a human child whose parentage and whose status (free or slave) is unknown.

It is a collective duty (*wādjib*) to pick up an abandoned or exposed child. A person finding such a child may not, having taken it up, replace it in the place where found. If two persons wish to take up the child, preference is given to the one finding it first; if they have both found the child together, it should go to the one best fitted to rear it, but if both are equally qualified, then lots may be drawn for it. The child's finder must swear in the presence of witnesses that he has found it, so that he may not subsequently claim that it is his own son or slave. The child's paternity must be established by regular means. A slave, even if liberated through *mukātaba*, and a married woman, may not pick up a child unless with the master's or husband's consent. A person who has picked up a child must be free, a Muslim, *sui iuris* (*rāshid*) and of good character.

The foundling is presumed to be of free status until proved otherwise, and is presumed to be a Muslim if found by a Muslim in a place populated by Muslims. If the local people are, however, all infidels, the child is presumed to be non-Muslim.

Looking after the foundling is the responsibility of the finder; the collective obligation (*farḍ kifāya*) is converted for him into a personal obligation (*farḍ ʿayn*). Nevertheless, certain authorities set the child's upbringing as a charge to the public treasury (the revenue derived from the *fayʾ*) or to special endowed foundations (al-Yaʿķūbī, *Historiae*, ii, 171). The finder administers the child's possessions, represents him in civil law and is responsible for the expenses of his upbringing, but he may have a remedy against the child's father for the cost of these expenses if it can be proved that the father voluntarily exposed the child and not through necessity. The child's upkeep is due until the end of puberty if it is a boy and until marriage if a girl. If the child dies, its inheritance belongs to the public treasury as representative of the Muslim community, but the *imām* may nevertheless make over the inheritance to the child's finder.

(A.-M. DELCAMBRE)

LAĶĪṬ AL-IYĀDĪ, pre-Islamic Arab poet. The name Laķīṭ does not necessarily mean that the person bearing it was a foundling; but in the present instance, whilst the genealogists know all the poet's ancestors (see Ibn al-Kalbī-Caskel, *Djamhara*, Tab. 174 and Register, ii, 377), the *ductus* of his father's name has given rise to divergent readings; MAʿBAD (Ibn al-Kalbī, *loc. cit.*; al-Djāḥiẓ, *Bayān*, i, 42, 43, 52; Ibn Durayd, *Ishtiķāķ*, 104; al-Āmidī, *Muʾtalif*, 175); MAʿMAR (Ibn Ķutayba, *Shiʿr*, 152-4; *LA*, s.v. *l-ķ-ṭ*); and YAʿMAR/YAʿMUR (al-Shammākh, *apud* al-Mubarrad, *Kāmil*, 829; Ibn al-Shadjarī, *Mukhtārāt shuʿarāʾ al-ʿArab*, 2-7; al-Bakrī, *Muʿdjam mā staʿdjam*, 71-5; *Aghānī*, xx, 23-5, ed. Beirut, xxii, 394-8; Ibn Khayr, *Fahrasa*, 398; Yāķūt, *Buldān*, iii, 125). This last reading seems to be the most correct; it even appears in the mss. of the *Dīwān* whose rescension is attributed to Ibn al-Kalbī, for whom, in his *Djamhara*, the poet was Maʿbad's son (see above). Such variation is easily explicable, but one nevertheless wonders whether two distinct persons have not been confused (see Ibn al-Kalbī-Caskel, Register, ii, 377; amongst Kināna, there was moreover a Laķīṭ b. Yaʿmar, cited by Ibn al-Kalbī, Tab. 36).

Ibn Ķutayba, *loc. cit.*, says that the Iyād [*q.v.*] established in ʿIrāķ had to flee for refuge in al-Djazīra under pressure from the troops of Anūshirwān (531-79 A.D.), who wanted to put a stop to their depredations. These last continued, and Laķīṭ, who happened to be in al-Ḥīra (or, according to Ibn al-Shadjarī and al-Bakrī, *loc. cit.*, was allegedly secretary for Arab affairs in the Sāsānid king's chancery), placed his fellow tribesmen on guard against an expedition which the Persians were preparing, in a poem in *-ādī*. But the Iyād remained deaf to this warning, persisted in their ways, and were scattered; it was then that Laķīṭ wrote a long poem in *-ʿā* exhorting them to take seriously the new threats against them and to choose a valiant chief to oppose their enemies.

The *Aghānī* (*loc. cit.*) places these events in the same sovereign's reign, after the battle of Dayr al-Djamādjim, during which the Iyādīs repelled the Persian cavalry sent against them (see Yāķūt, *Buldān*, s.v. Dayr al-Djamādjim; naturally, this was not the famous battle of 83/702 [*q.v.*]), and makes the poem in *-ādī* the prelude of the poem in *-ʿā*. Al-Bakrī (*loc. cit.*) also speaks of Dayr al-Djamādjim, whilst for Ibn ʿAbd Rabbihi, the incidents in question were contemporaneous with Dhū Ķār [*q.v.*], hence later, which seems very unlikely.

Al-Masʿūdī (*Murūdj*, ii, 176-7 = §§ 601-2) tells palpably the same story, but places it much further

back in time, since, for him, the poet was serving in the army (var. in *Tanbīh*, ed. Ṣāwī, 175: was languishing in jail) of Sābūr II (310-79 A.D.); this last exterminated the Iyād, and it was the fate wrought on the prisoners which, according to this tradition, gave Sābūr the sobriquet of Dhu 'l-Aktāf.

From all these pieces of information, the personality of Laḳīṭ remains highly confused, and it is hardly possibly exactly to fix the period when he was living, though it was probably during the second half of the 6th century A.D. Thanks to his two poems, the poet passed into posterity; in the 6th/12th century indeed, Ibn al-Shadjarī (d. 542/1148) thought highly enough of the poem in -ʿā to place it at the beginning of his *Mukhtārāt*, where it has 55 verses. It was set to music, and the passage in which the ideal war commander is sketched was especially famous (see al-Mubarrad, *Kāmil*, 497, 1166; Ibn Nubāta, *Sarḥ al-ʿuyūn*, 203). Laḳīṭ is placed on the same level as Ḳuss b. Sāʿida [*q.v.*] in some verses of Zayd b. Djundab al-Iyādī in praise of his tribe (al-Djāḥiẓ, *Bayān*, i, 42), and as a result, considered as the glory of Iyād. One editor of the *Dīwān*, Muʿīd Khān (see below), makes him "the first nationalist poet of pre-Islamic Arabia". This *Dīwān*, which contains no more than these two poems, is preserved in several mss. of a few leaves: Aya Sofya 3933, Fatih 1665, Chester Beatty 5474 and Berlin 1123, 1176, 1130. It was made the subject of an edition and German tr. by Th. Nöldeke (in *Orient und Occident*, i [1862], 689-718), an edition by Khalīl Ibrāhīm al-ʿAṭiyya (Baghdād 1390/1970) and an edition and English tr. by M. A. Muʿīd Khān (Beirut 1391/1971).

LAḲĪṬ B. ZURĀRA B. ʿUDUS B. ZAYD B. ʿABD ALLĀH B. DĀRIM, ABU NAHSHAL, poet and *sayyid* of the second half of the 6th century A.D.

His name apparently appears for the first time in a tradition concerning the assassination by his brother-in-law Suwayd b. Rabīʿa b. Zayd (see Ibn al-Kalbī-Caskel, *Djamhara*, Tab. 60, and Register, ii, 521) of a son (or of a young brother) Mālik, of al-Mundhir b. Māʾ al-Samāʾ, who had entrusted him to Zurāra, and the vengeance of ʿAmr b. Hind [*q.v.*], in the first place on the seven sons of the murdered man and then on the Banū Ḥanẓala b. Mālik (Ibn al-Kalbī-Caskel, Tab. 59), from whom he is said to have had about a hundred tribesmen burned; in a piece of verse, Laḳīṭ reproaches these last for having remained in the service of the king of al-Ḥīra (*Naḳāʾiḍ Djarīr wa 'l-Farazdaḳ*, ed. Bevan, 1084-7 *Aghānī*, ed. Beirut xxii, 190). In his article devoted to a mountain in the Ḥidjāz infested with lions and called Tardj, Yāḳūt (*Buldān*, i, 835-6) alludes to a "famous" *yawm Tardj* (cf. al-Maydānī, ii, 409; E. Meyer, *Der historische Gehalt der Aiyām al-ʿArab*, Wiesbaden 1970, does not mention this), in the course of which Laḳīṭ is said to have been captured by a certain Kumayt b. Ḥanẓala. Nevertheless, it is in the traditions about the "days" of Raḥraḥān (see Meyer, *op. cit.*, 47-50) and of Shiʿb Djabala (see DJABALA and Meyer, 65-71) that he is most often mentioned. In the course of the first battle, which took place after the death of Zurāra, the latter's son, Maʿbad chief of Dārim, was captured by a section of the ʿĀmir b. Ṣaʿṣaʿa commanded by al-Aḥwaṣ b. Djaʿfar (Ibn al-Kalbī-Caskel, Tab. 93). Laḳīṭ, now chief of Dārim, then offered his enemies 200 camels as the purchase price for his brother, alleging that Zurāra had forbidden his sons to go beyond that number so as not to incite their enemies to obtain large ransoms. Despite the prisoner's supplications, in which he offered 1,000 camels from his own herds, Laḳīṭ remained immovable and left Maʿbad to die of hunger and thirst in captivity (*Naḳāʾiḍ*, 227; al-Mubarrad, *Kāmil*, 424; Ibn ʿAbd Rabbihi, *ʿIḳd*, ed. 1346/1928, iii, 306; etc.).

As *sayyid* of Dārim, Laḳīṭ decided to avenge the death of his brother, and assembled a force of warriors from Tamīm (with the exception of the Banū Saʿd b. Zayd Manāt, according to Ibn Ḥabīb, *Muḥabbar*, 247, who accounts him one of the war leaders worthy of the title *djarrār*), from Dhubyān and Asad, as well as a contingent said to have been sent by al-Nuʿmān b. Mundhir, against the coalition of the ʿĀmir b. Ṣaʿṣaʿa and the ʿAbs. Exactly a year after the "day" of Raḥraḥān, *ca.* 580 according to Meyer, *loc. cit.*, the "day" of Shiʿb Djabala took place; during the clash, accompanied by the usual exchange of verses, Laḳīṭ, who was mounted, for the first time among the Arabs, on a horse caparisoned with brocade provided for him by the king of Persia, was felled by the blows of an opponent variously named in the sources (see e.g. al-Mubarrad, *Kāmil*, 194; Yāḳūt, *Buldān*, ii, 24) but who must have been Shurayḥ b. al-Aḥwaṣ (*Naḳāʾiḍ*, 663-5; *Aghānī*, xi, 135-7). He died the next day, not without having uttered once more some verses, and the leadership passed to his brother Ḥādjib [*q.v.*]. Since his enemies had yet again struck him after his death, this gratuitous action inspired some verses of his daughter (or his sister, according to *ʿIḳd*, iii, 309) Dukhtanūs, wife of his cousin ʿAmr b. ʿAmr b. ʿUdud (*Naḳāʾiḍ*, 665; *Aghānī*, xi, 137-9; Yāḳūt, *Buldān*, ii, 24).

Although al-Djāḥiẓ, in a rather obscure passage (*Ḥayawān*, ii, 93), seems to consider Laḳīṭ as a tyrant, the sources cite an anecdote in which one has his widow (a daughter of Hāniʾ b. Ḳabīṣa according to al-Mubarrad, *Kāmil*, 493, and al-Maydānī, *Amthāl*, ii, 231-2, or else a certain Muḳadhdhafa bint Ḳays b. Khalīl according to Yāḳūt, *Buldān*, iii, 372-3), who had remarried, eulogising Laḳīṭ and telling her new husband that he was certainly as [sweet as] water, though not however as sweet as that of the famous spring of Ṣaddāʾ—*māʾ wa-lā ka-Ṣaddāʾ*, an expression which became proverbial.

Al-Djāḥiẓ (*op. cit.*, iv, 382) considers that all the sons of Zurāra (Ibn al-Kalbī-Caskel, Tab. 60, cites ten of them) were poets, but their output hardly appears profuse, and only a small number of verses attributed to Laḳīṭ survive; these are brought together by Abkāryūs in *Rawḍat al-adab*, 258-9.

LĀLĀ [Owing to circumstances beyond their control the editors are unable to supply the article planned under this entry. They intend to publish it in the Supplement.]

LALA MEḤMED PASHA, grand vizier under Aḥmad I. He was a Bosnian by origin and a relation of Meḥmed Soḳollu Pasha. The year of this birth is not given. After having had higher education

in the palace, he was *mīr-ākhūr*, and became in 1003/1595 *agha* of the Janissaries. In the next year he took part in the Austrian wars as *beglerbegi* of Rūm-ili and was commander of Esztergom (Gran, Turkish: Usturghon) when this town capitulated to the Austrian army in Muḥarram 1004/September 1595. During the following years, Lala Meḥmed was several times *ser-ʿasker* in Hungary and when, in Ṣafar 1013/July 1604, the grand vizier Yawuz ʿAlī had died in Belgrade on his way to the Hungarian theatre of war, the sultan sent the imperial seal of office to Lala Meḥmed. Although peace negotiations were continually being resumed, the new grand vizier took in that year Waitzen (Turk. Wāč) but besieged in vain Esztergom. During next year's campaign, Esztergom was taken by Lala Meḥmed (29 September 1605), and in November he crowned the Hungarian Bocskay as king of Hungary (excepting the regions occupied directly by the Turks) and Transylvania. In that same year, the Turkish eastern army under Čighale Pasha was beaten by the Persians, while the troops sent to subdue the revolt in Anatolia were routed at Bolwadin. After his return, it was decided that the grand vizier should remain next year in the capital and lead the war on the two fronts and, if possible, bring to a successful end the long-drawn peace negotiations with Austria. The young sultan, however, changed his mind in keeping with the wishes of the Ḳapudan Pasha Derwīsh, who was intriguing against Lala Meḥmed. Accordingly, the latter was ordered to take command of the army against Persia. He had already put up his tent in Üsküdār, when overcome by sorrow because of the frustration of his plans, he was seized with an apoplexy and died three days afterwards (23 May 1606). He was buried near the *türbe* of Ṣoḳollu Pasha.

Bibliography: The *ta'rīkhs* of Pečewī who, as scribe, had served Lala Meḥmed on several occasions (cf. Babinger, *GOW*, 192), Naʿīmā and Ḥasan Beyzāde; ʿOthmān-zāde Tā'ib, *Ḥadīḳat al-wuzarā'*, 52 ff.; *Sidjill-i ʿothmānī*, iv, 140; von Hammer, *GOR*, iv. (J. H. Kramers)

LĀLE DEVRI, "The Tulip Period", the name given to one of the most colourful periods of the Ottoman Empire, corresponding to the second half of the reign of Aḥmed III (1703-30 [*q.v.*]) and more precisely to the thirteen years of the vizierate of Nevshehirli Ibrāhīm Pasha [*q.v.*]. The tulip which gave its name to this era had been exported from Turkey to Austria by Ogier Ghislain de Busbecq, the ambassador of Ferdinand I of Habsburg (1503-64) at the court of the Sultan, but it was in Holland that its cultivation was developed, through the efforts of the botanist Charles de l'Écluse (C. Clusius) (Arras 1526-Leiden 1609), who occupied the Chair of Botany at the University of Leiden. The predilection for tulips spread rapidly throughout Europe, but the mania for this plant adopted its most extravagant forms in Turkey. In fact, imported back to Turkey from Holland in the 17th century by the Austrian ambassador Schmid zum Schwarzenhorn during the reign of Aḥmed III, this flower became the object of extraordinary enthusiasm. The tulip fashion gave birth to an architecture, of which the elegant Lāle Djāmiʿ mosque, in Istanbul, is an example; to an art form, Ottoman baroque, inspired by French "rococo"; and to a literary genre, the poet Nedīm [*q.v.*] being the prototype here.

The promoter of this fashion was the Grand Vizier Ibrāhīm Pasha of Nevshehir, son-in-law of the Sultan. Coming to power at the beginning of 1718, he showed great diplomatic skill in the negotiations over the Treaty of Passarovitz (21 July 1718), putting an end to a state of continual war which had disrupted the economic structure of the Empire and devasted its rural areas. After Passarovitz, the Grand Vizier applied himself to pursuing the objective of peace, and his vizierate was to be marked by an initial period of absolute peace, followed by a period of euphoria induced by victorious campaigns in Iran, which was then in a state of anarchy as a result of the Afghān invasion. Agreeable and peace-loving by temperament, Aḥmed III had a strong hedonistic streak. He was a cultured man, a poet and calligrapher, but also a man of exceptional greed. Ibrāhīm Pasha was himself refined and cultured, an extrovert personality and a lover of peace and pleasure. Having similar tastes, the two men were well-suited to each other. Ibrāhīm Pasha was at pains to satisfy both the hedonistic nature and the avidity of the Sultan. By anticipating the latter's desires, he simultaneously reinforced his own status and ensured the relaxation and well-being of his master. The Sultan took no interest in any aspect of government and left all the responsibility of state to his vizier, who surrounded himself with close relatives and rid the court of all hostile elements. Until 1730, the entire administration of the state was under his control and all important posts were held by his appointees; this nepotism caused much resentment and earned him numerous enemies.

Overtures to the West. The Grand Vizier was a man of enlightened sympathies, and the years of his vizierate were marked by a series of approaches to the West. For the first time in the history of the Ottoman Empire, attempts were made to benefit from the political, economic and cultural structures of Europe. Diplomatic relations were fostered, especially with France: an ambassador, Yirmisekiz Čelebizāde Meḥmed Efendi, was accredited to the court of Louis XV, and was instructed to study those French institutions which might be adapted to the requirements of Ottoman lands (1719). Commercial relations with France were developed: each year, five hundred trading ships operated between France and Turkey.

Policies of progress, construction and innovation. In 1724, the first printing-press was installed in Istanbul, through the good offices of Ibrāhīm Müteferrika [*q.v.*], a Hungarian converted to Islam, aided by the son of the Sultan's ambassador to the court of Louis XV, who had accompanied his father to Paris. A French officer of engineers, de Rochefort, was invited to prepare plans for reforming the army on the Western model, while another French convert to Islam, Khumbaradjī Aḥmed Pasha [see AḤMED PASHA BONNEVAL], organised a corps of artillery. Yet another French convert to Islam, Gerček Dāwūd Agha, was responsible for the foundation of the first team of fire-fighters. A lover of arts and literature, the Grand Vizier surrounded himself with poets, musicians and artists. He prohibited the export of rare manuscripts and founded a society for the translation of Arabic and Persian texts. He established five libraries, in addition to that of the Sultan, of which the poet Nedīm was curator. He gave a fresh impetus to the manufacture of porcelain and earthenware, restoring the workshops of Izmid and Kütayha and founding a new one in Istanbul, that of Tefkūr Sarāyī. He founded a textile-mill. In the context of municipal engineering, the projects that he instituted include the construction of a dam to bring water from the Forest of Belgrad to the capital and the building of roads and

of harbour installations; he supervised the markets personally, regulating the sale of bread and the importation of coffee. He encouraged progress in medicine. Lady Mary Wortley-Montagu, the wife of the British ambassador to the court of the Sultan, states in her *Letters* that certain maladies were, better treated in Turkey than elsewhere and, in particular, she mentions the existence of a vaccine against small-pox. The Sultan was an enthusiastic promoter of construction projects: fountains, mosques and mausoleums sprang up in every corner of Istanbul; palaces, pavilions (*köshk* [*q.v.*]) gardens and places of recreation adorned the Golden Horn and the Bosphorus. Architects were brought in from Europe, and on his return from France in 1721, Yirmisekiz Čelebizāde Meḥmed Efendi brought with him the plans of palaces and gardens. The most famous of these palaces, that of Saʿdābād, was built at the base of the Golden Horn, at Kāghitāne. Given this name on account of an ancient paper-mill dating from the Byzantine era, it was to become a favourite place of promenade; the palace was erected in two months, according to the plans brought from France; the French ambassador, the Marquis de Bonnac, presented the Sultan with the forty orange-trees which adorned the façade; and the first feast was held there on 31 July 1722, of which Nedīm has left us an account. The Tulip Period was an era of progress and increased interest in art and culture, poetry and music being pre-dominant; in poetry, Nedīm was an innovator, introducing music into verse and popularising ballads (*sharkī*).

Entertainment. When wearied with affairs of state, Aḥmed III sought rest and recreation. Over a period of almost thirteen years, Ibrāhīm Pasha procured for him an ambience of continuous festivity, symbolised by the tulip. Gardens and window-frames were decorated with tulips; different varieties proliferated; 839 were enumerated in 1726. Competitions were organised. Bulbs became so expensive that the government was obliged to control prices in order to prevent speculation (*firmān* of Muḥarram 1140/ September 1722). A bulb in the possession of an ambassador went missing; town-criers appealed in vain for its return and houses were searched. At times when the flowers were in bloom, Aḥmed III used to change his place of residence, proceeding majestically to his *yalī*s (palaces built on the edge of the water). The people resorted *en masse* to the tulip promenades, and barges sailed to Saʿdābād and other places of recreation. Festivities were also held at night, and these were renowned for the spectacle, in the gardens of the Palace of Čirāghān, "Palace of Candles", at the mouth of the Bosphorus, of burning night-lights or candles under every tulip, hence the name given to this palace; in the illuminated gardens, tortoises were to be seen meandering over the beds of tulips, bearing night-lights on their shells. Nedīm has left us a reminiscence of these festivities in the lines: "Let us laugh, be glad, make merry/ . . . Come, slender cypress, let us set our course for Saʿdābād." When the tulip season was at an end and the rigours of the winter arrived, the round of entertainments continued unabated. The cold and the inclement weather were forgotten at the "feasts of *ḥelvā*"; poets, men of letters, musicians and singers were invited to these occasions, and the most intemperate nights of the winter were passed in convivial company, enlivened by a profusion of choice viands and confections; the banquet came to its climax with the arrival of the *ḥelvā*, brought in on copper plates and prepared in the presence of the guests, to the accompaniment of music and song. Besides the tulip feasts and the *ḥelvā* banquets, the ceremonies associated with the circumcision and marriage of the thirty-one princes and princesses, the children of Aḥmed III, were the occasion for interminable festivities. Such feasts sometimes lasted for as long as a week or ten days (for example, in April 1719, April 1720, May 1721). In 1727, there were *ḥelvā* banquets which lasted for a whole month; that same year, the month of Ramaḍān fell in May, giving rise to further festivities; between 1726 and 1730, the month of Ramaḍān fell in the spring, and was celebrated accordingly each year.

With the passage of time, the festivities became ever more extravagant: the Sultan's palace was crammed with tulips and pinks at the height of winter and also with odoriferous shrubs; thousands of birds sang in gilded cages; pleasure was the sole purpose of living; the Sultan and the Vizier, both of them poets and calligraphers, wrote love-poems addressed to each other. Under the influence of the court, a change in public morals was discernible, and a love of luxury and the pursuit of pleasure became more marked. In her *Letters*, Lady Mary Wortley-Montagu declares that Turkish women are more liberated than their English counterparts. Lines by Nedīm are an indication of the moral freedom of the time: "Ask permission of your mother, say that you are going to the Friday Prayer/ . . . Come, slender cypress, let us set our course for Saʿdābād." Wishing to rival the people of the court, the middle class also embarked on schemes of reckless expenditure, thus causing the ruin of numerous households. As a means of restraining such expenditure, the Grand Vizier was obliged to pass a law regulating clothing according to social class, especially in regard to decorative dress worn by women. But this moral laxity scandalised the public; the Sultan had swings built for the people's amusement, and the sight of swinging women pushed by young men was an affront to public opinion; in addition, members of the nobility, including the Grand Vizier himself, were accused of amusing themselves, during barge-trips on the water, by tossing gold coins into the corsages of the ladies; there was even an accusation levelled against the Grand Vizier that he had made continual advances to the attractive wife of the *Ḳāḍī* of Istanbul, Zülālī Ḥasan Efendi.

The end of the festivities. The unbridled expenditure by the court, the relaxation of morals, the taxes levied by the Grand Vizier to pay for ever-more costly entertainments, caused discontent among the people, in particular the fanatical and reactionary class of the *ʿulemāʾ*. The people felt that they had been let down. Although the Grand Vizier had made great efforts in the interests of cultural growth, had had done nothing to combat the fanaticism of the *ʿulemāʾ* and the ignorance of the masses. The Janissaries, ignorant and fanatical, whose income depended on pillage in time of war, felt themselves threatened by the military reforms advocated by the Grand Vizier. The latter had imposed new taxes on commerce, taxes which caused discontent both among the artisans and among the Janissaries, who engaged in smallscale trading during their leisure time. The *ʿulemāʾ* took it upon themselves to fan these grievances. However, the revolt was caused by political factors.

The foreign policy of Ibrāhīm Pasha consisted in the avoidance of war; however, the Tulip Period saw a temporary extension of Ottoman sovereignty, on account of the Afghān invasion of Iran. In the

anarchic conditions which prevailed, a new rivalry brought the Turks and the Russians into confrontation in the Caucasian provinces. Thanks to the mediation of the French ambassador, the Marquis de Bonnac, this tension was resolved in an amicable fashion and a Russo-Turkish treaty, signed 23 June 1724, divided the Iranian spoils between the two powers: the Turks occupied Tiflis, Erevān, Tabrīz and the territories to the west of a line from Ardabīl to Hamadān, while the Russians took possession of Derbend, Bakū and Dāghistān. This treaty was the occasion for fresh festivities, with exchanges of gifts between Turks, Russians and French, then control of affairs was delegated into the hands of the *wālīs* of the frontier regions, and the festivities continued. However, in Iran, the situation was soon reversed: Nādir Shāh succeeded in seizing power having overturned the Afghān dynasty and, in 1730, he compelled the Turks to restore the Iranian territory that they had occupied. There was news of the capture of Hamadān and the massacre of its Turkish garrison. The Grand Vizier tried to keep the defeat a secret and to settle matters peaceably through diplomacy, but Nādir Shāh refused to negociate. In order to stifle public unrest, it was necessary to prepare a campaign. On 17 July, the Ottoman army paraded at Üsküdār, where until 3 August it awaited the arrival of the uncommunicative Sultan. The latter finally joined his troops to conduct a grandiose procession which was nothing more than a show-off, all the soldiers returning to their homes at the end of the parade. But on 12 August, it was heard that the Iranians had taken Tabrīz and brutally massacred the Turks who had been stationed there. Again, Ibrāhīm Pasha tried to suppress the news, but Janissaries returning from the frontier regions spread the news of Iranian atrocities through the *ḥammāms*. Discontent mounted, and the Grand Vizier was held responsible for the setbacks. Janissaries and *ʿulemāʾ* fanned the fanaticism of the artisans. In his report dated 17 September 1730, the Marquis de Villeneuve, the French ambassador, speaks of hesitation to act on the part of the Sultan's court. This indecision was to prove crucial to the success of the revolt, which broke out on the morning of 28 September. The leading officials of the State were on holiday at the time: the Sultan and the Grand Vizier at Üsküdār, the governor of Istanbul, Ḳaymaḳ Muṣṭafā Pasha, son-in-law of Ibrāhīm Pasha, was busy tending his garden beside the Bosphorus, as was the Ḳapudan Pasha, another son-in-law of the Grand Vizier. The insurgents were able to act with total freedom. Their leader was Patrona Khalīl, an Albanian, formerly a *levend* [*q.v.*] on the Sultan's flag-ship *Patrona*, of whom we have a portrait painted by the artist of the Tulip Period, the Dutchman Vanmour (1656-1738); he was a man between thirty-five and forty years old, already an active veteran of numerous rebellions, a skilled demagogue and inciter of crowds, who made a precarious living, sometimes as an itinerant trader, sometimes as a town-crier or *ḥammām* masseur. The crowd which assembled at the Hippodrome Square (At meydānı) consisted of some thirty artisans, mostly Albanians, who were joined by the tradespeople from the bazaar and about three hundred Janissaries whose *Agha* had made his escape with great difficulty and had reached Üsküdār in disguise. Towards evening, the number of rebels had risen to 2,000 persons. The revolt was the work of a handful of ignorant artisans: Patrona Khalīl, Muslu the vegetable merchant and ʿAlī the coffee stall owner, but in fact it was skilfully directed by two individuals belonging to the *ʿulemāʾ* class: the preacher of Aya Sofya, Ispirīzāde Aḥmed Efendi, and the *Ḳāḍī* of Istanbul, the Albanian Zülālī Ḥasan Efendi, who had personal reasons for hating the Grand Vizier. According to the report of the Marquis de Villeneuve, dated 7 October, the tragic outcome was caused by the indecision of the Sultan. The court did not return to Istanbul until the night of 29 September, two days after the outbreak of the revolt. On the morning of the 30th, Aḥmed III sought to negotiate with the rebels: feeling themselves in a position of strength, the latter demanded that the Grand Vizier and his two sons-in-law, the Ketkhüdā Ḳaymaḳ Muṣṭafā Pasha and the Ḳapudan Pasha, be handed over to them. The Sultan tried in vain to rescue his favourite; in the night of 30 September, fearing for his own life, he ordered the strangling of Ibrāhīm Pasha and his two sons-in-law, and at dawn their bodies were surrendered to the rebels, on three ox-drawn hearses. But the insurgents, who had pillaged and sacked the palaces of the viziers, now insisted on the abdication of the Sultan. Zülālī Ḥasan Efendi and Ispirīzāde, acting in the name of the rebels, communicated the decision to Aḥmed III. In the night of 2 October, having received the guarantee that his own life and those of his sons would be spared, he abdicated in favour of his nephew Maḥmūd who was immediately enthroned. Soon afterwards, Maḥmūd I had the ringleaders of the revolt assassinated.

The age of festivity had come to an end: the tulip gardens, the palaces and the places of recreation had been destroyed. The tulips had gone: they left behind a sumptuous but tragic memory.

LĀLEZARĪ, S̲h̲ayk̲h̲ Meḥmed, Ottoman author of a work on tulips, the *Mīzān al-azhār* "Balance of flowers". This treatise on the cultivation of tulips was composed in the reign of Sultan Aḥmad III (1115-43/1703-30), who had given the author the title of *S̲h̲ükūfe-perwerān* "cultivator of blossoms" on the suggestion of the grand vizier Ibrāhīm Pas̲h̲a between 1718 and 1730.

LĀLEZĀRĪ, S̲h̲ayk̲h̲ Meḥmed Ṭāhir, Ottoman *ḳāḍī* and author of several theological works, often known as Ḳāḍī Meḥmed.

The date of his birth is unknown, but he was born in Istanbul and was presumably connected with the Lâlezār quarter near the Fātiḥ Mosque. He became a *mollā* and a *müderris*. In 1201/1786-7 he was *ḳāḍī* at Eyyūb, and then on 30 Muḥarram 1204/20 October 1789 he died at his house in Rumeli Ḥiṣār. None of his extant works has been printed, but these all exist in manuscript in Istanbul libraries. They include a series of theological commentaries, such as the *Mīzān al-muḳīm fī maʿrifat al-ḳisṭās al-mustaḳīm*, the *Dafʿ iʿtirāḍ Rāg̲h̲ib Pas̲h̲a fī ḥaḳḳ al-fuṣūṣ*, and one on the *Ḳaṣīde-yi nūniyye*, and various others on works of leading Sunnī scholars like al-Māturīdī, al-G̲h̲azālī, ʿAbd al-Ḳādir al-D̲j̲īlānī and al-Birgewī.

Bibliography: Ḥüseyn Aywānsarāyī, *Ḥadīḳat al-d̲j̲awāmiʿ*, Istanbul 1281/1864-5, i, 190; Bursalī Meḥmed Ṭāhir, *ʿOt̲h̲mānlī müʾellifleri*, i, 349; Meḥmed T̲h̲üreyyā, *Sid̲j̲ill-i ʿOt̲h̲mānī*, iii, 243; *IA*, art. *Mehmed Tâhir* (M. Münir Aktepe). (Ed.)

LĀLIS̲H̲, a valley some 30 miles/50 km north-north-east of Mawṣil in ʿIrāḳ, in the *ḳaḍāʾ* of S̲h̲ayk̲h̲ān and in a largely Kurdish mountain area, famed as the principal pilgrimage centre of the Yazīdī sect [see yazīdīs]. The *d̲j̲amāʿiyya* of the Yazīdīs is held from the 23th to the 30th September O.S. (6th to the 13th October N.S.) each year, and revolves round the shrine of the founder, S̲h̲ayk̲h̲ ʿAdī b. Musāfir [*q.v.*] and the tombs of other early saints of the sect. The first European to attend and describe the festival seems to have been Sir Henry Layard in 1846 and 1849; a valuable description of the ceremonies as they were held in the 1940s is given by C. J. Edmonds, *A pilgrimage to Lalish*, London 1967.

Bibliography: given in the article. (Ed.)

LALITPUR, the name of a town in the Bundelkhand region of Central India, administratively in the southwards-protruding tongue of the former United Provinces, Uttar Pradesh of the Indian Union. It is situated in lat. 24° 42′ N. and long. 78° 28′ E. on the Great Indian Peninsula Railway and on the Kānpūr (Cawnpore)—Saugor road. Tradition ascribes its foundation to Lalitā, wife of a Deccani Rād̲j̲ā, and till the early 16th century it was held by the Gonds. In the 17th century it fell within the Bundelā state of Čanderi. In the first half of the 19th century, it passed from Marāṭhā control to that of the British, and in 1844 the District of Čanderī was formed, with its name changed in 1861 to that of Lalitpūr; in 1891 it was absorbed into Jhānsi District. The Čanderī and Lalitpūr Districts were centres of fighting, under the leadership of Rād̲j̲ā Mardān Singh of Banpūr during the Indian Mutiny of 1857-8, and Lalitpūr town was temporarily abandoned by British troops. The antiquities of Lalitpūr include several Hindu and Jain temples, and there is an inscription of Sultan Fīrūz S̲h̲āh Tug̲h̲luḳ dated 759/1358.

LALLŪD̲J̲Ī LĀL, the most important translator of Sanskrit works into Brad̲j̲-bhās̲h̲ā prose at the Fort William College, Calcutta. Born at Āgra in 1763 of a family of Brahmin priests, in 1786 he sought employment with Nawwāb Mubārak al-Dawla of Murs̲h̲idābād and then settled in Calcutta, where he died in 1835.

In 1802 John Gilchrist, the Professor of Hindustānī (later known as Hindī and Urdū) at the Fort William College, appointed Lallūd̲j̲ī as an assistant in Brad̲j̲-bhās̲h̲ā. His primary duties were to help the Professor in his publications of a Hindustānī grammar and dictionary. Lallūd̲j̲ī also collaborated with the senior Muslim translators of Hindustānī in their works. Based on Lallūd̲j̲ī's interpretation, Kāẓim ʿAlī D̲j̲awān translated *S̲h̲akuntala*, the celebrated Sanskrit drama of Kālidāsa (*ca.* 375-455 A.D.). Lallūd̲j̲ī also translated a book on Hindū polity and wrote an elementary manual of Brad̲j̲-bhās̲h̲ā, but became infinitely more famous for his *Premsāgar*. This is a translation of the tenth book of the *Bhāgavata Purāna* or *Śrīmad Bhāgavatam*, containing the life story of Kris̲h̲na, especially of his boyhood. The original Sanskrit was first translated into Brad̲j̲-bhās̲h̲ā poetry by Čaturbhud̲j̲dās in 1510, and Lallūd̲j̲ī translated it into lucid Brad̲j̲ prose, which even the Muslims of that century praised highly, both for its content and its language.

Bibliography: In addition to references in the article Hindī, see T. Roebuck, *Annals of the College of Fort William*, Calcutta 1819; *Proceedings of the College of Fort William 1801-1805*, National Archives, New Delhi. (S. A. A. Rizvi)

LĀM, the 23rd letter of the Arabic alphabet, transcribed as *l*; numerical value 30 [see abd̲j̲ad].

Definition: *fricative, lateral, voiced*. It is called a *liquid* (H. Fleisch, *Traité*, i, § 3 b) because of the fluidity of its emission. This act of emission comes

normally from the two corners of the mouth, *l* bilateral; it can be made from one side only, with unchanged acoustic results, *l* unilateral (M. Grammont, 71 penult. This last was probably the case with the *ḍād* (a lateralised consonant [see ḌĀD]), called *al-ḍaʿīfa*, which was made from the right or left side of the mouth (Sībawayh, ed. Paris, ii, 452, ll. 17-18). J. Cantineau has placed *l* amongst those "consonants outside the classification scheme" (*Esquisse*, 183, and *Consonantisme*, 288), see A. Martinet's observations in *BSL*, xlix/1 (1953), 77. According to Arabic tradition, it is *bayniyya*, *dhawlaḳiyya*, *madjhūra*, and also called *munḥarifa* "incurvated" (see Fleisch, *op. cit.*, § 47 a, d, § 48, c, f, § 49, i, and Cantineau, *Cours*; 50).

The articulation described above is for the phoneme; for the phonological oppositions which define the phoneme *l*, see Cantineau, *Esquisse*, 172, and for the incompatibilities, *ibid.*, 200.

Lām is emphatic *ḷ* in the word *Aḷḷāh* when it is preceded by the vowels *u* or *a*, so that one says *ʿinda ḷḷāh*, but *li-llāh* (see references in Cantineau, *Cours*, 51 n. 1; for a study of its articulation, references in Fleisch, *op. cit.*, 224 n. 1). The treatises on *tadjwīd* set forth the rules according to which *ḷ* may be found in other words (Cantineau, *Cours*, 51).

Lām seems to continue an articulation which was similar to it in common Semitic (Cantineau, *Esquisse*, 172 n. 1); indeed, one may go further and add that "La liquide latérale *l* se trouve en correspondance régulière en sémitique, berbère et couchitique" (M. Cohen, *Essai comparatif sur le vocabulaire et la phonétique du chamito-sémitique*, Paris 1947, 182).

Alterations: (a) Exchange of phonemes: *l* > *n* in a fairly numerous groups of doublets. In several of these, the phenomenon does not seem to be conditioned, e.g. *ḳullat* and *ḳunnat* "mountain peak", and *l* > *r* in *ʿūd mutaḳaṭṭil* and *mutaḳaṭṭir* "a piece of split wood" (Fleisch, *op. cit.*, § 9 f, g).

(b) Assimilation. The *l-* of the definite article is assimilated when in contact with the "sun" consonants, sc. the dentals to the prepalatals (except for *dj*). For *-l* when it is final in a word, assimilation of the initial following consonant is especially notable in the case of the interrogative particle *hal* and of *bal* "nay, on the contrary" (*ibid.*, § 12 k); for the variations of the Ḳurʾān readers, see *loc. cit.* For the position in the dialects, see Cantineau, *Cours*, 53-4, to be completed for Egypt by the material in N. Tomiche, *Le parler arabe du Caire*, Paris-The Hague 1964, 27; and for Mauretania by that of D. Cohen, *Le dialecte arabe Hassaniya*, Paris 1963, 23-4. In regard to Lebanon one might add *mlīḥ* > *mnīh* "well", *ṣār-lna* > *ṣār-rna* "has been for us", and *-lna* > *-anna* "for us" (Fleisch, *Études*, 398), and for Aleppo (A. Barthélemy, *Dict. ar.-fr.*, Paris 1935-54 and 1969), assimilation at a distance, as in *lakhʾr* (750) and *rakhʾr*, *rakhri* and also *rəkhrāni* and *rəkhreni* (273) "other" or" another".

(c) Dissimilation. For this see Cantineau, *Cours*, 51, and for the dialects, *ibid.*, 53. To the nouns cited there one might add for Lebanon *karakol* > *karakon* and *karakūn* "police station" (Fleisch, *Études*, 361 and 188 *l.* 3, and the examples of J. Grand'Henry in his *Le parler arabe de Cherchell, Algérie*, Louvain 1972, 42; see also W. Fischer, *Die Sprache der arabischen Sprachinsel in Uzbekistan*, in *Isl.*, xxxvi (1961), 238.

Bibliography: Fleisch, *Traité de philologie arabe*, i, Beirut 1961, and *Études d'arabe dialectal*, Beirut 1974; Cantineau, *Cours de phonétique arabe*, *Esquisse d'une phonologie de l'arabe classique* and *Le consonantisme du sémitique*, in *Études de linguistique arabe*, *Mémorial Jean Cantineau*, Paris 1960; M. Grammont, *Traité de phonétique*, Paris 1933; Zadjdjādjī, in his *K. al-Lāmāt*, ed. Māzin Mubārak, Damascus 1389/1969, has gathered together all the uses of *lām* as a particle *-l*, *la-* and *li-*.

(H. Fleisch)

LĀM, Banū, a numerous and formerly powerful Arab tribe living on the borders of Iran and ʿIrāḳ, principally on the plain between the foothills of the Pusht-i Kūh mountains and the river Tigris. The easterly limit of the main tribal territory follows the course of the Rūd-i Karkha southwards from Pā-yi Pul to the area north of Ḥawīza where the river peters out into salt flats. The course of the Tigris between Shaykh Saʿd and ʿAmāra forms the westerly limit of that territory. Small and isolated groups of Banū Lām have been observed outside the main area—as far afield as Mandalī to the northwest and in the Rām Hurmuz district to the southeast.

The tribe is divided into numerous sub-groups which have varied over time in their size and relative importance (A. H. Layard, *A description of the province of Khuzistan*, in *Journal of the Royal Geographical Society*, xvi [1846], 45; J. G. Lorimer, *Gazetteer of the Persian Gulf, ʾOmān and Central Arabia*, Calcutta 1908-15, ii, 1081-4; Max Freiherr von Oppenheim, with Werner Caskel, *Die Beduinen*, Wiesbaden 1952, iii, 471-3, and H. Field, *Contributions to the anthropology of Iran*, Chicago 1939, *Anthropological Series of the Field Museum of Natural History*, xxix/1, 195-8). According to Lorimer (ii, 1085), all members of the tribe spoke Arabic, but a minority also knew and used Persian. The great majority of the tribe was, and remains, Shīʿī. In the past, different groups have followed sedentary, semi-nomadic and nomadic ways of life, but in the 20th century, particularly since the Second World War, the former has come to predominate. The Banū Lām have long had a reputation for being very good pastoralists. In former times they raised a wide range of animals—sheeps, goats, cattle, horses, donkeys and camels. Demand for some of the latter animals has declined sharply in recent decades, and most attention is now devoted to sheep. The Banū Lām also grow crops, chiefly for their own consumption; these include wheat, barley, oats and maize, but little attention is apparently given to rice.

It is impossible to give accurate figures for the population of the tribe either now, or in the past. One estimate made in 1840-1 put the total number of families at about 30,000 (Layard, *op. cit.*, 46). Some seventy years later Lorimer (ii, 1084) estimated the total population to be about 45,000. After fieldwork in 1934, the number of Banū Lām living in Persia was estimated to be about 5,700 families (H. Field, *op. cit.*, 196). Another source put the number of families in Persia at 10,650 in 1945 (Admiralty [Great Britain] Naval Intelligence Division, *Persia*, Geographical Handbook Series, London 1945, 379). A similar source for ʿIrāḳ noted that the Banū Lām were the most powerful tribe on the Tigris, but no figures were quoted (Admiralty [Great Britain] Naval Intelligence Division, *Iraq and the Persian Gulf*, Geographical Handbook Series, London 1944, 371).

The origins of the tribe remain obscure (see von Oppenheim, iii, 459-69, for a summary history of the tribe). Tradition relates that the name of the tribe derives from a certain Lām b. Ḥāritha, a leader of the Ḳaḥṭān tribe in the Ḥidjāz; and that one of his grandsons, Barak, led a migration to the Ḥawīza area of ʿIrāḳ. Later, Ḥāfiẓ al-Lām, a son of Barak, is reported to have quarrelled either with his father,

or with the *wālī* of Ḥawīza, who was also a leader of the Banū Rabīʿa. Ḥāfiẓ is then said to have taken control of the land between Shaykh Saʿd and ʿAmāra which had previously belonged to the Banū Rabīʿa and to have become the founder of the Banū Lām (S. H. Longrigg, *Four centuries of modern Iraq*, Oxford 1925, 8, and H. Field, *The anthropology of Iraq. The Lower Euphrates-Tigris region*, Chicago 1949, *Anthropological Series of the Field Museum of Natural History*, xxx/1 no. 2, 329-30). A putative date for these events would be about the end of the 10th/16th century (von Oppenheim, iii, 460 states that the Banū Lām were already living on the east bank of the Tigris in 1575).

The Banū Lām were reluctant to accept Ottoman control, and the *Pasha* of Baghdād, ʿUmar (who was in office 1088-92/1677-81) ordered the first of many Turkish campaigns which tried to compel their submission. ʿAlī Pasha (in office 1107/1695-6) personally led a punitive raid against them, and Ḥasan Pasha [*q.v.*] (in office 1116-36/1704-23) also mounted a series of expeditions against them beginning in 1116/1704 (Longrigg, *op. cit.*, 93-4, 124, 126). The Banū Lām sometimes acted in concert with other tribal groups in rebelling against Ottoman rule; for example, in 1138/1726 they joined with various groups of Lurs to attack Baghdād.

The rise to power of Ṭahmāsp Ḳulī Khān (later Nādir Shāh [*q.v.*]) provided further opportunities for insurgency on the part of the Banū Lām. In 1145/1733 Ṭahmāsp Ḳulī Khān laid siege to Baghdād and the leader of the Banū Lām, ʿAbd al-ʿAlī, joined forces with the Persians. He apparently agreed to cooperate with the Arab *wālī* of Ḥawīza in launching an attack on Baṣra, but the decision was not implemented (L. Lockhart, *Nadir Shah*, London 1938, 68). After the defeat of the Persian army by Ottoman forces under Ṭopal ʿOthmān Pasha [*q.v.*] in Ṣafar 1146/July 1733, the Banū Lām helped many of the survivors to return to their native country; for this, a Turkish force led by Aḥmad Pasha later inflicted punishment on the tribe.

The destruction and chaos brought about by the Persian invasion and retreat provided conditions in which tribal rebellion could flourish, and the Banū Lām were not slow to take advantage of them; "Les Muntefiks et les Beni Lames avoient donné plus de peine que les autres aux Paschas" (M. Otter, *Voyage en Turquie et en Perse*, Paris 1748, quoted in Longrigg, *Four centuries*, 156). In 1156/1743 Nādir Shāh's forces again invaded Turkish territory and they were joined by the Banū Lām, who this time did take part in the siege of Baṣra (*A chronicle of the Carmelites in Persia*, London 1939, i, 646-7). During the next century and a half, the pattern of rebellion followed by punitive Ottoman military expeditions was often repeated. Important Turkish campaigns were mounted against the Banū Lām in 1763, 1800, 1806, 1849, 1879 and 1911. In 1841 the Persian ruler Muḥammad Shāh sent an expedition to collect arrears of taxation from Muḥammad Taḳī Khān, the *ilkhānī* of the Bakhtiyārī. During this campaign, which was led by the governor of Iṣfahān, Muʿtamid al-Dawla, the Banū Lām were plundered by the Persian troops (Layard, *loc. cit.*). But in later years the tribe had relatively little to fear from Tehran; it seldom paid taxes to the Shāh (Lorimer, ii, 1085), and it retained a position of autonomy between the Ottoman empire and Persia.

The Banū Lām were often in conflict with their neighbours, particularly with the Lurs, the Āl Bū Muḥammad and the Muntafiḳ [*q.v.*]. De Bode, who visited the area in 1841, reported that it was only the existence of strife between the Banū Lām and the Muntafiḳ which prevented Dizfūl from being attacked (C. A. de Bode, *Travels in Luristan and Arabistan*, London 1845, ii, 198-9). At other times, the tribe was riven by internal feuds, and these too led to bloodshed and the intervention of Turkish forces.

Raids by the tribe not infrequently interrupted traffic on the Tigris, and this was seen as a serious menace to British lines of military communication during the First World War. The Banū Lām attacked both boats on the river and military outposts at this time, and British forces were involved in minor actions against them (A. T. Wilson. *Loyalties: Mesopotamia 1914-1917*, London 1930, 46, 79, 145; idem, *Mesopotamia 1917-1920: a clash of loyalties*, London 1931, 96). In the years immediately following the First World War, disputes between the Banū Lām and the *wālī* of Pusht-i Kūh were again frequent —particularly during the summer months when members of the tribe moved into Persia for better grazing (S. H. Longrigg, *Iraq 1900 to 1950*, London 1953, 107, 158). The rise to power of Riḍā Shāh Pahlavī and the establishment of effective central government in Iran reduced both the degree of migration and the incidence of such skirmishes.

Bibliography: substantially given in the article. Von Oppenheim provides many useful references to Arabic, Persian and Turkish works, as well as to the accounts of European travellers. Longrigg, *Four centuries of modern Iraq*, also has a useful survey of both types of sources. There are references to the tribe in Aḥmad Kasrawī, *Taʾrīkh-i pānṣad sāla-yi Khūzistān*, Tehran 1312/1934-5.

(V. Minorsky-[R. M. Burrell])

LAMAK, the Biblical personage Lamech. In Gen. iv, 21, the invention of music is attributed to Jubal, son of Lamech, but various Arabic sources give primacy here to Lamech/Lamak, of Cain's posterity. Bringing together the origin of the *ʿūd* with the invention of music, the story goes that Lamech had an only son in his old age, who died at the age of five, leaving his father full of grief. Not wishing to be separated from him, Lamech hung the corpse up until it decomposed. There then came to him the idea of making from his foot an *ʿūd*, on which he could accompany himself in his lamentations. The most detailed, and perhaps the oldest, version of this story occurs in the *K. al-Lahw wa 'l-malāhī* of al-Mufaḍḍal a-Ḍabbī, who in fact cites a lost source going back to the historian Hishām b. al-Kalbī. With variants, the story comes up again in several authors, notably in Ibn Khurradādhbih (*K. al-Lahw*), al-Bayhaḳī (*Maḥāsin*), al-Djāḥiẓ (*Tarbīʿ*), al-Masʿūdī (*Murūdj*), Ibn ʿAbd Rabbihi (*ʿIḳd*) and al-Adfūwī (*al-Imtāʿ bi-aḥkām al-samāʿ*). Elements of Hebrew legends and of the universal myths concerning the origins of music can be found in these stories.

On the other hand, al-Thaʿlabī retails in his *Ḳiṣaṣ al-anbiyāʾ* [*q.v.*] the Hebrew legend about Lamech, how the latter, when blind, inadvertently killed his father Cain and then his own dear son who was accompanying him out of hunting; after these events, he recited the first Biblical lament (Gen. iv, 23). This source, together with others, emphasises the connection of music, invented in the bosoms of the posterity of Cain, with the excesses and trickery of Satan.

Bibliography: See A. Shiloah, *The theory of music in Arabic writings* (*RISM*, BX), Munich 1979, index, s.v. Lamek.

(A. Shiloah)

LAMAS-ṢŪ, a small river of Southern Anatolia, descending from the Eastern Taurus and flowing into the Mediterranean, about 60 km. in length, whose canyon, carved deep in Miocene limestone, constituted in antiquity the border-line between lowland Cilicia and Trachoean Cilicia. Muslims and Byzantines often assembled on its banks for exchanges of prisoners, in the 3rd-4th/9th-10th centuries (see below). The flanks of the upper river, above Kızıl Geçit, are totally uninhabited; along the lower reaches a series of ancient ruins marks the edge of the plateau. At the mouth, the small township of Lamas retains the name of the ancient settlement of Lamos (a simple village according to Strabo, xiv, 6, not to be confused with the town of the same name situated much further to the west, between Gazi Paşa and Anamur; cf. W. M. Ramsay, *The historical geography of Asia Minor*, London 1890, 382, 455-6). Nearby are the important ruins of an aqueduct which carried the waters of the rivers as far as Ayas (Elaeûssa-Sebaste) at a distance of 14 km., and of a mediaeval fortress, held for a long period by the Armenians (Lamas Kalesi).

Bibliography: Among the numerous descriptions by travellers, see in particular F. X. Schaffer, *Cilicia*, Gotha 1903 (*Petermanns Mitteilungen*, Ergänzungsheft 141), 64-5; J. Th. Bent, *Explorations in Cilicia Tracheia*, in *Proceedings of the Royal Geographical Society* (1890); L. M. Alishan, *Sissouan ou l'Arméno-Cilicie*, Venice 1899, 413-14. (X. DE PLANHOL)

On the banks of the Lamas-Sū there took place, on numerous occasions, payment of ransoms and exchange of prisoners of war with the Byzantines.

The first of these arrangements, in the reign of the caliph Hārūn al-Rashīd and that of the emperor Nicephorus I, was effected in 189-90/805, in the name of al-Ḳāsim b. al-Rashīd, by a eunuch of the caliph named Abū Sulaymān; the exchange lasted 12 days, and 3,700 Muslims were freed. The second (*fidā' Thābit b. Naṣr*) took place under the same sovereigns in 192/808; it lasted 7 days, and 2,500 Muslims of both sexes were exchanged. The third (*fidā' Khāḳān*), in the reigns of al-Wāthiḳ and of Michael III, in Muḥarram 231/September 845, lasted 10 days and involved some 4,000 prisoners; the chief *ḳāḍī* Aḥmad b. Abī Du'ād [*q.v.*] sent an emissary to interrogate them on the question of the creation of Ḳur'ān, with instructions to leave in the hands of the Byzantines those who refused to comply with official doctrine. The fourth (*fidā' Shunayf*) was effected in the reigns of al-Mutawakkil and of the same emperor, in Shawwāl 241/February-March 856; it lasted 7 days and allowed the liberation of 2,000 men and 200 women. The fifth (*fidā' Naṣr b. al-Azhar wa-ʿAlī b. Yaḥyā*) took place in the reigns of the same sovereigns, at the beginning of Ṣafar 246/April-May 860; it lasted 7 days and involved 2,367 Muslims of both sexes. The sixth (*fidā' Ibn Ṭughān*) was effected in Shaʿbān 283/September-October 896, in the reigns of al-Muʿtaḍid and of Leo VI; it lasted 10 days and allowed the liberation of 2,500 or 3,000 Muslims of both sexes. The seventh took place in Dhu 'l-Ḳaʿda 292/September 905, in the reigns of al-Muktafī and of the same emperor; it lasted 4 days and 1,155 Muslims of both sexes were freed; Rustam conducted the negotiations, but this exchange is usually known by the name *fidā' al-ghadr* "the ransom of treachery"), because the Byzantines reneged on their guarantees and took several thousand prisoners. The eighth, also effected by Rustam, took place in Shawwāl 295/July 908, and 2,842 prisoners of both sexes were released; it bears the name *fidā' al-tamām* ("the ransom of completion") because it supplemented the preceding. The ninth (*fidā' Mu'nis*) was negotiated in Rabīʿ II 305/September-October 917 in the reigns of al-Muḳtadir and of Constantine II; it lasted 8 days, and 3,336 Muslims of both sexes were the beneficiaries of it. The tenth (*fidā' Mufliḥ*) was effected under the same sovereigns, in Radjab 313/September-October 925; it lasted 19 days, and nearly 4,000 Muslims of both sexes were freed. The eleventh, in Dhu 'l-Ḥidjdja 326/October 938, in the reigns of al-Rāḍī and the same emperor, was negotiated by Ibn Warḳā'; it lasted 16 days and 6,300 Muslims of both sexes regained their freedom, but 800 prisoners remained in the hands of the Byzantines and were subsequently freed in small groups. The twelfth was effected in Rabīʿ I/October 946, under al-Muṭīʿ and the same emperor, by Naṣr al-Thamalī, but in the name of Sayf al-Dawla (it also bears the name of *fidā' Ibn Ḥamdān*); 2,482 Muslims of both sexes were exchanged, and 230 remained in the hands of the Byzantines. Subsequent exchanges do not figure in the lists, since they cannot have taken place on the Lamas-Ṣū, henceforward situated in Byzantine territory; we may note in particular that of which Abū Firās [*q.v.*] was the beneficiary, in 355/966, at Samosata.

LAMASAR [see LANBASAR].

AL-**LAMAṬĪ**, an ethnic designation stemming from Lamaṭa, a quarter of the Moroccan town of Sidjilmāssa, borne in particular by two mystics:

1. AḤMAD AL-ḤABĪB B. MUḤAMMAD AL-GHUMĀRĪ B. ṢĀLIḤ AL-ṢIDDĪḲĪ (since he traced his genealogy back to ʿAbd al-Raḥmān b. Abī Bakr) AL-SIDJILMĀSSĪ, who belonged to the Shādhiliyya order [*q.v.*]; he had numerous pupils, including Abu 'l-ʿAbbās al-Hilālī [see AL-HILĀLĪ in Suppl.] and his cousin through his female relatives, Aḥmad b. al-Mubārak (see below). He died in the odour of sanctity at Sidjilmāssa on 4 Muḥarram 1165/23 November 1751.

2. ABU 'L-ʿABBĀS AḤMAD B. AL-MUBĀRAK B. MUḤAMMAD B. ʿALĪ AL-SIDJILMĀSSĪ, born at Sidjilmāssa *ca.* 1090/1679, settled at Fās in 1110/1698-9 and died there on 12 Djumādā I 1156/4 July 1743 after having acquired the title of *shaykh al-djamāʿa* given to the doyen of the professors. He was buried in the mausoleum of the Fāsī saint ʿAbd al-ʿAzīz al-Dabbāgh (1095-1131/1684-1719; see Lévi-Provençal, *Chorfa*, 309), with whom he had been connected and whose fame he had helped spread by devoting a work called *al-Dhahab al-ibrīz fī manāḳib al-Shaykh ʿAbd al-ʿAzīz* (lith. Cairo 1278/1861-2; printed Būlāḳ 1292/1875, Cairo 1304/1886) to his *manāḳib*. He was furthermore the author of several treatises, commentaries and glosses of a religious, grammatical, etc. nature (see mss. detailed in Lakhdar), of an *idjāza* containing some of his epistles and of a short work called *Djawāb ʿamman ḥalla bi-bilādihim ṭāʿūn: hal yadjūz lahum al-khurūdj minhu firārᵃⁿ am lā?* (ms. Rabat D 1348).

LAMBADIS, a name of unknown origin designating in general a group of tribal peoples, ancient nomads, who were active in western and southern India as salt carriers, cattle herders and porters of general merchandise. They were known by different names in different parts of southern India: Lambani, Brinjari, Boipari, Sugali and Sukali, as well as Lambadi.

The origins of the Lambadis are obscure, but appear to be similar to those of groups like the Koravar and Yerukala. All are ancient nomadic tribal groups, who maintained their freedom of movement by securing a place in the economic structure of pre-modern India as carriers, herdsmen and porters in an age when modern modes of transport and adequate roads were non-existent. Apart from their occupation as carriers, members of such groups were often found on the fringes of villages as hunters and distillers of toddy.

Edgar Thurston (see *Bibl.*) indicates that the Lambadis were mainly Hindus, and clung to their tribal rituals and mixed Hindu-animistic religious practices. However, some Lambadis, in the Telugu coastlands and the Mysore highlands, claimed to be Muslims and aspired to the title of Shaykh. Their numbers were very small, but nevertheless they represented a very basic level of Hindu-Muslim interaction within the Indian subcontinent. At one end of the spectrum were the orthodox Urdu-speaking Muslims of northern India, at the other end odd tribal groups caught in the transition from tribal identity to something more distinctly Muslim. Some groups of Lambadis fell into this category, as did the Ahir cowherds of the Andhra highlands and the Dudekula and Panjuvetti cotton cleaners of coastal Andhra and Tamil Nadu.

Such groups were generally despised by the main body of Muslims, and possessed few overt signs of being followers of Islam. The Muslim Lambadis spoke a dialect of Telugu strongly interlaced with Tamil and Kanarese words, followed no Muslim marriage rites and practiced circumcision. In dress, daily life-style, names and casual worship, however, they retained many tribal and Hindu rituals. Like the more numerous Dudekula, who were also of Telugu origin, the Lambadis were endogamous and rarely mixed with other Muslim groups, who regarded them with scorn.

The only settled groups of Muslim Lambadis found in southern India were located in the Anantapur district of the old Madras Presidency and in the region of Mysore. There are three recorded groups, all Telugu-speaking, with bards or priests known as Tamburian (or Thamburi), who appear to be the equivalent of the Hindu Lambadi priests or *bhat*. Most of these Lambadi Muslims claimed to have been forcibly converted by the Mysore Muslim prince Tīpū Sulṭān [*q.v.*] in the late 18th century, who found the nomadic Lambadis ideal espionage agents in his wars against the British in Madras. However, some in Anantapur also claimed descent from carriers who had accompanied Mughal generals in their invasions of southern India.

Until the 19th century, nomadic tribal groups like the Lambadis had a distinct function in the economic life of India; but with the evolution of modern modes of transport their status and fortunes declined. The Hindu Lambadis (and Karavars and Yerukala) probably suffered more than their Muslim counterparts, as the *jati* system made the changeover to alternative occupations very difficult. Many in fact took to brigandage and petty crime, and were officially classified as problem groups and habitual criminals. The Muslim Lambadis were far fewer in number, and appear to have made the transition to sedentary occupations, though generally they were ones of low social and economic status.

The Dudekulas, a similar Muslim marginal group, were more fortunate in that their traditional occupation—cotton cleaning—facilitated their absorption into the economy of modern India. By the early 20th century, they were merging into the mainstream of Islam in the subcontinent, with overtly Muslim practices and names replacing those of their pre-Islamic past.

By the middle of the 20th century, the Muslim Lambadis appeared to have all but vanished. They were no doubt absorbed into the surrounding body of Muslims, and probably can still be traced amongst the more impoverished and illiterate Muslims in remote areas of Andhra Pradesh in India.

Bibliography: The most detailed description of the Lambadi group can be found in E. Thurston's *Ethnographic notes on Southern India*, Madras 1906, and vol. iv of his *Castes and tribes of Southern India*, Madras 1909. Thurston, however, concentrated on Hindu Lambadis, with only an occasional reference to the Muslim ones. The same is true of the District Gazetteers, especially G. A. Grierson, *North Arcot*, Madras n.d., and W. Francis, *Bellary*, Madras 1904; W. Francis, *Anantapur*, Madras 1905, does mention the Tamburian priests. J. Dupuis, *Madras et le Nord du Coromandel*, Paris 1960, puts the Lambadis in their tribal and occupational perspective, whilst L. Dumont, *Une sous-caste de l'Inde du Sud*, Paris 1957, further explains the painful transition from porterage to crime for the nomadic tribal peoples in an excellent case study. G. A. Herklots, *Islam in India*, London 1832, makes a brief reference, perhaps the earliest, to Muslim Lambadis. In addition, there are a few isolated references scattered through the records of the British administration of the Madras Presidency.

In official publications and in Thurston's *Castes and tribes of Southern India*, the Dudekulas and Panjuvettis are far more prominent than the Muslim Lambadis, and references to them can be found in the following District Gazeteers: W. Francis, *Anantapur*, Madras 1905; idem, *South Arcot*, Madras 1906; F. R. Hemingway, *Godavari*, Madras 1907; C. F. Brackenbury, *Cuddapah*, Madras 1914; *Guntur* (statistical appendix), Madras 1915; A. F. Cox and H. A. Stuart, *North Arcot*, Madras 1895; W. Francis, *Bellary*, Madras 1904; F. R. Hemingway, *Trichinopoly*, Madras 1907; W. Francis, *Vizagapatam*, Madris 1907. See also references in *Census of India*, 1901, xv, 1911, xii, 1921, xiii. Brief references occur in T. W. Arnold, *The preaching of Islam*, repr. Lahore 1961; I. H. Qureshi, *The Muslim community in the Indo-Pakistan subcontinent*, The Hague 1962, and *Murray's handbook of the Madras Presidency*, London 1879. (K. McPherson)

LAMENTATION [see niyāḥa].

LAMGHĀNĀT, a district of eastern Af-

ghānistān, thus designated in the Islamic sources of the later mediaeval period, deriving its name from its urban centre Lamghān (later form, Laghmān). It comprises the fertile plain of the middle course of the Kābul River, much of it lying to the north and east of Kābul city [*q.v.*] itself. It is bounded on the north by the mountains of Kāfiristān [*q.v.*], modern Nūristān, and includes the lower reaches of the Alingār and Alishang Rivers; on the south and east, it adjoins, and was sometimes considered (e.g. by Bābur) to include the region of Nangrahar and the comparatively recent town of Djalālābād [*q.v.* in Suppl.]. Ethnically, the region includes Pushtūns and Tādjīks, and also a considerable proportion of Dardic-speaking Pashaʾīs [see DARDIC AND KĀFIR LANGUAGES], who are probably descended from the ancient Hindu and Buddhist population of pre-Islamic Kapiśá and Nangrahar; the ancient Iranian Parāčī language also lingers on in a few villages of the region [see AFGHĀNISTĀN, ii. Ethnography, and iii. Languages].

The town of Lamghān was already a flourishing one in the 4th/10th century. The *Ḥudūd al-ʿālam* (372/982) describes it as being situated on the middle stretch of the Kābul River (which the anonymous author in fact calls "the river of Lamḳān" [*sic*], regarding this, plus "the river of Dunpūr", Bābur's Adīnapūr, as constituting the modern Kābul River), and as a residence of merchants and an emporium for the products of India (tr. Minorsky, 72, 92 = §§ 6, 10, comm. 209, 252). Until the advent of the Turkish adventurer Sebüktigin and the Ghaznawids [*q.v.*] towards the end of that century, Lamghān was still part of the Indian cultural and religious world, and the *Ḥudūd al-ʿālam* specifically mentions the presence of idol temples there. It lay on the western marches of the extensive kingdom of the Hindūshāhīs [*q.v.*] of Wayhind, which spanned the middle Indus and lower Kābul River basins; ʿUtbī's *Yamīnī* describes how Sebüktigin twice defeated the Rādjā Jaypāl in the Lamghān region, annexed it to his dominions and implanted Islam there (M. Nāẓim, *The life and times of Sulṭān Maḥmūd of Ghazna*, Cambridge 1931, 30, 36, 86, 194). Islam was still however precarious there for some time to come, and the Muslim settlements were vulnerable to attacks by the pagan Pashaʾīs and Kāfirs to the north of the Kābul River. An anecdote in Niẓāmī ʿArūḍī Samarḳandī's *Čahār maḳāla* describes how the infidels raided and despoiled Lamghān during the reign of Sebüktigin's son Maḥmūd of Ghazna (388-421/998-1030), so that the vizier Aḥmad b. Ḥasan Maymandī had to remit that year's taxes (ed. Ḳazwīnī, 18-19, revised tr. Browne, 20-1). Yet a century or so later Lamghān was producing Muslim scholars, for Yāḳūt mentions a family of Lamghānī Ḥanafī *ḳāḍīs* and *faḳīhs* who had settled in Baghdād during the 6th/12th century (*Buldān*, ed. Beirut 1374/1955-7, v, 8, s.v. *Lāmghān*; Barbier de Meynard, *Dict. géographique, historique et littéraire de la Perse*, Paris 1861, 503).

During the early years of the 10th/16th century, the Mughal prince Bābur [*q.v.*] spent much time in this region, and in the *Bābur-nāma* he expatiates on the beauty of the forested hillsides (cypress, holm oak, etc.) and on the fertility of the valley bottoms (corn, rice, oranges, citrons, mulberries, and in one favoured spot, even date palms). It is in this source that we find the name given as Lamghānāt, and the area described as containing administratively five *tūmāns* and two *bulūks* of cultivated land; a "greater Lamghanāt" included the Muslim-settled parts of the lower Kāfiristān valleys, including the easterly one of the Kunār River (*Bābur-nāma*, tr. A. S. Beveridge, London 1922, 206 ff., 222, 424, 494, 510-11; cf. also G. Scarcia, *Ṣifat-nāma-yi Darviš Muḥammad Ḫān-i Ġāzī, cronaca di una crociata musulmana contro i Kafiri di Laġmān nell' anno 1582*, Rome 1965, Introd. pp. CXXXVIII-CXL). Lamghān was doubtless the base for many expeditions of *djihād* against the Kāfirs, and as such is frequently mentioned in the Kābulī Persian account of the crusade led by the Mughal Emperor Akbar's younger brother Muḥammad Ḥakīm, governor of Kābul, in 990/1582, cf. Scarcia, *op. cit.*, index to text, s.v.

The district of Lamghān is today an important food-producing area, supplying Kābul, Djalālābād and other centres with rice, cereals, fruit, etc., and it further produces textiles (J. Humlum *et alii*, *La géographie de l'Afghanistan, étude d'un pays aride*, Copenhagen 1959, 172-3, 327-8). Since the administrative reorganisation of 1964, a province specifically called Laghmān has come into being, and this comprises essentially the central part of Nūristān, with its centre at Meh Tarlam.

Bibliography: Given in the article.

(C. E. BOSWORTH)

LĀMIʿĪ, ABU 'L-ḤASAN B. MUḤAMMAD B. ISMĀʿĪL, Persian court poet, born about 402/1011, died some time after 460/1067, who left a *dīwān* of *ḳaṣīdas*, only some 1,100 *bayts* of which have survived.

Although Lāmiʿī was a contemporary of, and panegyrist to, such major historical figures as Ṭughrīl Beg, Alp Arslan and Niẓām al-Mulk, very little reliable information about his life and work has come to light. From his *Dīwān* we learn only that he was a native of Gurgān and that he went to Baghdād in the train of Ṭughrīl Beg in 447/1055. The *tadhkiras* of Dawlat-Shāh, Ādharbīkdilī and Riḍā Ḳulī Hidāyat state that he was a student of Muḥammad al-Ghazālī and a disciple of the poet Sūzanī, but Nafīsī has shown that these statements are fabrications (cf. *Lughat-nāma-yi Dihkhudā*, s.v.).

Stylistically, Lāmiʿī was an enthusiastic but unexceptional imitator of the great Ghaznawid court poets, ʿUnṣurī, Farrukhī and Manūčihrī, particularly the latter. His poems reflect none of the stylistic innovations that may be seen in the works of his contemporaries Azraḳī and Abu 'l-Faradj Rūnī [*q.v.* in Suppl.].

Bibliography: Lāmiʿī's *Dīwān* has been published twice, by Saʿīd Nafīsī in 1319/1941 and by Muḥammad Dabīr-Siyāḳī in 1353/1974, both times in Tehran. The only studies of his life and work are to be found in the introductions to these editions, the substance of which is repeated in the article on Lāmiʿī in the *Lughat-nāma-yi Dihkhudā* already cited. There is a brief chapter on Lāmiʿī's use of metaphor and simile in Muḥammad Riḍā Shafīʿī-Kadkanī's *Ṣuwar-i khiyāl dar shiʿr-i Pārsī*, Tehran 1350/1971. (J. W. CLINTON)

LĀMIʿĪ, SHAYKH MAḤMŪD B. ʿOTHMĀN B. ʿALĪ AL-NAḲḲĀSH B. ILYĀS, a celebrated Ottoman Ṣūfī writer and poet of the first half of the 10th/16th century. He was born in 877/1472-3 at Bursa, where he spent all his life. His grandfather, Naḳḳāsh ʿAlī Pasha, teacher of Fawrī [*q.v.*] and one of the great painter-carvers (*naḳḳāsh*) of his time, had in his youth been taken by Tīmūr to Samarḳand, where he perfected his art; after his return, he contributed masterly decorations to the Yeshil Djāmiʿ and the Yeshil Türbe in Bursa.

As the son of ʿOthmān Čelebi, the *defterdār* of Sultan Bāyazīd II's treasury, Lāmiʿī learnt Arabic and Persian, and received an excellent *madrasa*

education from the *mollās* Akhawayn and Muḥammad b. Ḥādjdjī Ḥasan-zāde. He aspired to the career of a jurist and theologian, but his father's death created difficulties (preface to *Farhād-nāma*, see A. S. Levend, *Lamiî'nin Ferhad ü Şirin'i*, in *TDAY Belleten 1964*, Ankara 1965, 87). He seems to have written worldly poetry and prose, until he became aware of his preference for the mystic path, *ṭarīḳa*, and took as his spiritual guide the Naḳshbandī Shaykh Amīr Aḥmad al-Bukhārī, who exerted a decisive influence on his life.

Lāmiʿī's success as a writer began when two of his works attracted the attention of Sultan Selīm I, who awarded him a pension of 35 *aḳčes* a day, and bestowed on him the revenues from a village. Sultan Süleymān, whose accession he celebrated in a chronogram, kept up this patronage; to his Grand Vizier Ibrāhīm Pasha [*q.v.*], who showed him the greatest favour, Lāmiʿī dedicated several of his *mathnawīs* as a mark of gratitude. Already in 918/1512 Lāmiʿī was able to found a *waḳf* of 4,000 *aḳčes*.

Occasional complaints over lack of money did not go unanswered: Ibrāhīm Pasha awarded him a stipend of 20 *aḳces* daily which Lāmiʿī needed for the education of his children. He had married early and had three sons and one daughter; among his descendants, his son Derwīsh Meḥmed Čelebi, known as Lemʿī, a *mudarris* and author of a work on prosody, and a grandson known as Lāmiʿī-zāde, are mentioned. In his private life, Lāmiʿī was described as outspoken, persistent in his opinions, witty and fond of literary jests. He died in 938/1531-2, and was buried in the graveyard of the (no longer extant) mosque built by his grandfather on the Citadel of Bursa.

The fact that Lāmiʿī, who never went to court, owed his livelihood to Ottoman sultans and one Grand Vizier, allows us to surmise that he conformed to the expectations of his patrons. Their declared aim was to blend the refinement of Persian poetry with the vigour of the Turkish style cultivated in Anatolia, while welcoming the best of Eastern Turkish poetry.

Significantly, Lāmiʿī took as his models two great near-contemporary poets of Tīmūrid Herat, the Persian Djāmī [*q.v.*] and his Turkish friend, the minister Mīr ʿAlī Shīr Nawāʾī [*q.v.*], both Naḳshbandīs like himself.

In a literary age which restricted any poet, Turkish or Persian, to conventional forms (allegory being the prevailing fashion), Lāmiʿī was encouraged by his Ottoman patrons to turn his efforts at originality in the direction of the themes. Passing by such well-worn stories as Laylā and Madjnūn [*q.v.*] or Yūsuf and Zulaykhā, Lāmiʿī concentrated his talent in introducing into Turkish literature fresh themes such as *Shamʿ u parwāna*, *Salamān u Absāl* and *Haft paykar*, incidentally preserving two themes that had virtually sunk into oblivion in Persian literature: *Wīs u Rāmīn*, for which one of the rare Gurgānī [*q.v.*] manuscripts could only be found after a long search, and *Wāmiḳ u ʿAdhrāʾ*, of which the Persian original by ʿUnṣurī [*q.v.*] is now lost.

Lāmiʿī developed the *munāẓara* genre and experimented, as had become customary for poets, with Čaghatay Turkish. It was Lāmiʿī's diversity and originality, and not only his renderings of works by Djāmī, which earned him the honorific epithet "the Djāmī of Rūm".

Lāmiʿī's "reasons for writing", *sabab-i taʾlīf*, and additions to his translations, are worth a special study (cf. Babinger, 264); this would reveal the independent and lively intellect of this writer, whose originality was achieved not by breaking out along new lines but by fusing new themes with the traditional conventions. About thirty of his works are known. He wrote eight *mathnawīs* and a great deal of other poetry, but is better known for his prose works. Viewed chronologically, his major works are as follows: (1) The *Laṭāʾif-nāma*, a collection of facetious and partly scandalous stories in prose, probably written from the time of his youth and continued over the years; the unfinished book, which contains valuable information such as that on the old poet Shayyād Ḥamza (see S. Buluç in *İA*, s.v.), was completed in 988/1580-1 by his son Lemʿī (P. N. Boratav in *Ph T Fundamenta*, ii, 55); — (2) *Sharḥ-i dībādja-yi Gulistān* (according to the *Farhād-nāma*, Lāmiʿī commented on the whole *Gulistān*, A. S. Levend, *op. cit.*), a commentary on the preface to Saʿdī's [*q.v.*] "Rose garden", completed in 910/1504; — (3) *Ḥusn u dil*, ("Beauty and the heart"), a translation in prose of Fattāḥī's [*q.v.*] allegorical work, dedicated to Sultan Selīm I, studied by R. Dvořák, *Ḥusn u dil, persische Allegorie von Fattâḥi aus Nîšâpûr*, Vienna 1889; — (4) *Shawāhid al-nubuwwa* ("Distinctive signs of prophecy"), an expanded and commented prose translation of the treatise of Djāmī, completed in 915/1509-10, printed 1293/1876 Istanbul, ed. 1958 Muzaffer Özak; — (5) *Gūy u čavghān*, ("Ball and bat"), Lāmiʿī's first *mathnawī*, for which, inspired by a religious dream, he made use of ʿĀrifī's (d. 853/1449) allegorical poem, studied by N. Tezcan, *Lâmiʿî'nin Gûy u Çevgân mesnevisi*, in *Ömer Asım Aksoy armağanı*, Ankara 1978, 201-25; — (6) *Farhād-nāma* or *Farhād u Shīrīn*: interestingly enough, Lāmiʿī used for his second *mathnawī*, written in honour of Selīm I, the Eastern Turkish version by Mīr ʿAlī Shīr Nawāʾī, who had introduced radical changes in the old theme, especially by replacing Khusraw as hero by Farhād [see FARHĀD WA-SHĪRĪN]. Lāmiʿī, who undertook the work on the request of Fenārī [*q.v.*] Djamāl al-Dīn Meḥmed Shāh, who had just acquired a *Khamsa* by Nawāʾī, claimed only to have altered the style (*uslūb*), but he made also alterations in the story (A. S. Levend, *op. cit.*, 88, 110 f.), tr. von Hammer, Stuttgart 1812; — (7) *Absāl u Salamān*, his third *mathnawī*, dedicated to Selīm I, is the first Turkish treatment of Djāmī's allegorical work with considerable additions; — (8) *Futūḥ al-mudjāhidīn li-tarwīḥ ḳulūb al-mushāhidīn* ("Conquests of the champions of Islam giving rest to the hearts of the spectators"), better known as *Tardjama-yi Nafaḥāt al-uns* ("Translation of the Breath of divine intimacy"), a translation of Djāmī's Ṣūfī biographies with important additions on more than thirty Anatolian Ṣūfīs, in prose, begun in 917/1512 and finished in Radjab 927/April 1521, on the eve of Süleymān's Belgrade campaign; the book was printed in Istanbul 1270/1853-4 and 1289/1872; — (9) *Shamʿ u parwāna* ("The taper and the moth"), his fourth *mathnawī*, written in honour of Süleymān after the conquest of Rhodes 929/1522, but sent to him later; it seems that Lāmiʿī used for this allegorical poem not the accepted Persian version of Ahlī-yi Shīrāzī, composed in 894/1488-9, but that of a certain Niyāzī (ʿAbd Allāh Shabustarī; G. K. Alpay, *Lāmiʿī Chelebi and his works*, [see *Bibl.*], 88 ff.), a second-rate author whom he need not mention in his preface; — (10) *Wāmiḳ u ʿAdhrāʾ*, his fifth *mathnawī*, translated at the request of Sultan Süleymān from the no-longer-extant Persian version of ʿUnṣurī; parts were very freely tr. by J. von Hammer, *Wamik und Asra, das ist der Glühende und die Blühende*, Vienna 1833; — (11)

Maḳtel-i Imām Ḥusayn ("Martyrdom of the Imām Ḥusayn"), his sixth *mathnawī*, for which no specific source is named; Lāmiʿī reacted here against the warnings of some *ʿulamāʾ* concerning the recital of these martyrdom narratives in public; illustrated copies have survived; — (12) *Shahrangīz*, a poem in praise of Bursa in expectation of a visit of Sultan Süleymān, published at Bursa 1288/1871-2, tr. A. Pfizmaier, *Die Verherrlichung der Stadt Bursa*, Vienna 1839; — (13) *Munāẓara-yi bahār u shitāʾ* ("Controversy between spring and winter"), an extensive poem using Bursa and the Keshish Daghl̄ as a stage-setting, Istanbul 1290/1873; — (14) *Munshaʾāt-i makātib* or *Niṣāb al-balāgha*, Lāmiʿī's letters; — (15) *Manāḳib-i Ḥaḍrat-i Uways al-Ḳaranī*, a prose legend; on the few mss., see G. K. Alpay, *op. cit.*, 82 no. 9; — (16) *ʿIbrat-nümā* or *ʿIbrat-nāma* ("The exemplar") written after the battle of Mohácz (932/1526), a prose work in two parts, legendary accounts of holy persons, and stories with moral significance; their agreeable literary style procured a wide popularity for this work, printed twice in 1273/1856-7 and 1327/1909; — (17) *Sharaf al-insān*, ("The nobility of man"), perhaps Lāmiʿī's best-known prose work, written in 933/1526-7. The theme, the contest of man with the animals, is taken from the *Rasāʾil Ikhwān al-ṣafāʾ*; — (18) *Wīs u Rāmīn*, his seventh *mathnawī*, in honour of Süleymān, appeared in the same year; Lāmiʿī uses Gurgānī critically and changes the tone drastically; "instead of expressing the intensity of human passions, Lāmiʿī tries to amuse and edify. The end of this poem is tinged with mystic reflections . . ." (V. Minorsky, who had not seen Lāmiʿī's work, in *Vis u Rāmin, a Parthian romance*, in *BSOAS*, xii [1947], 31-2); — (19) his *Dīwān* of about 10,000 verses, compiled in 936/1529; — (20) A work on the *mathnawī Haft paykar* ("The seven effigies") based on Hātifī's [*q.v.*] *Haft manẓar*, was interrupted by Lāmiʿī's death and completed by his son-in-law, Rūshenī-zāde.

A comprehensive description of Lāmiʿī's works, with reference to the manuscripts, is contained in G. K. Alpay, *Lāmiʿī Chelebi and his works*, in *JNES*, xxxv (1976), 73-93, to which should be added N. Tezcan's article *Lāmiʿī'nin Gūy u Çevgān mesnevisi* (see above).

(B. Flemming)

LAMLAM, a generic name given by mediaeval Arabic authors to the animistic African peoples, considered to be cannibals, living to the south of the Muslim sultanates of the Sudanese zone; other versions are Dahdam, Damdam, Iamiam, Limiyyia, Namnam and Temiam.

Al-Masʿūdī (before 356/957) places the Dahdam upstream from Gao and says of them "They fight amongst themselves. They eat people. They have a paramount king who has other kings under his authority. In his land there is an important fortress in which there is an image in the shape of a woman which they venerate and to whom they make pilgrimages" (tr. in Cuoq, *Recueil*, 61). This passage is repeated by al-Bakrī (460/1068), who speaks of the Damdam, and by al-Idrīsī (548/1154), who speaks of the Lamlam who are raided by the slave merchants of Takrūr and Ghāna. Ibn Saʿīd (before 685/1286) speaks of, as well as the Lamlam of the west, the Damdam to the south of Ethiopia and Nubia, and his information is repeated by Abu 'l-Fidāʾ (721/1321). Al-Dimashḳī (before 727/1327) mentions the lakes of the Tamīm and the Damdam, a name also borne by a river emptying into the Indian Ocean, and equally speaks of the Lamlam to the south of Ghāna. According to al-ʿUmarī (before 749/1349), the Damdam are a people employing horses and hostile to Mansa Mūsā (Mossi?). Ibn Khaldūn (784/1382) and al-Maḳrīzī (846/1442) repeat the information of Ibn Saʿīd about the Damdam invading Ethiopia and Nubia. Leo Africanus takes over from al-Maḳrīzī the name of Tamīm in order to make up a kingdom of Temiam, and it is under this form that knowledge of it came to European writers of the 16th century, such as Marmol 1573, Belleforest 1575 and Anania 1582 (Iamiam).

The 19th century explorers speak of them mainly in the form Yemyem or Niamniam (see Cooley, *loc. cit.*, below).

(R. Mauny)

LAMṬ, a word of obscure origin which denotes the oryx of the Sahara [see mahāt]. Now the word is obsolete and occurs only in a proverbial expression inspired by the speed with which it runs: "he runs like a *lamṭ*" (see M. Hadj-Sadok, *Description du Maghreb et de l'Europe au III*e*-IX*e *siècle* Algiers 1949, 103, n. 159). It is also used in northern Algeria, where Beaussier (*Dict.*, s.v.) found it applied to a mythical animal which, even though it had only one foot, was very swift.

Arab geographers of the Middle Ages referred to the *lamṭ* in association with the tribe of the Lamṭa [*q.v.*], who were particularly famous for the shields they made from the skin of this animal (*daraḳa lamṭiyya*). In this expression, the adjective could just as well have been derived from *Lamṭa* as from *lamṭ*, so the two terms may only be apparently related and the connection may be an arbitrary one.

The earliest mention of these shields (*daraḳ*) may be found in al-Yaʿḳūbī (*K. al-Buldān*, 345, tr. Wiet, Cairo 1937, 206, n. 1), who says simply that they were white in colour, or in Ibn al-Faḳīh al-Hamadhānī (*Mukhtaṣar K. al-Buldān*, 81, tr. H. Massé, Damascus 1973, 99; ed-tr. Hadj-Sadok, *op. laud.*, 33, 35), who is more explicit. He describes how the inhabitants of Anbiya and the Lamṭa soak them in milk for a whole year with the result that "a sabre rebounds off them, and if it does manage to penetrate, it sticks so hard that no-one can pull it out". Curing leather in milk makes shields (not only those made by the Lamṭa) better than those from India, where elephant hide is used. That was the opinion of al-Masʿūdī, (*Murūdj*, iii, 18 = § 859). Al-Zuhrī (*K. al-Djaʿrāfiyya*, ed. Hadj-Sadok in *BEO*, Damascus (1968), §§ 314-15, in his description of the *lamṭ*,

records that *lamṭiyya* shields were offered to the kings of the Maghrib and al-Andalus. It is in this last country that E. Lévi-Provençal (*Hist. Esp. mus.*, iii, 95) says that "the most desirable shields were those made from *lamṭ* leather". The name of the animal was certainly well-known, especially in Portuguese; it was called *lant*, *dant*, etc. Another point is made by al-Bakrī (*Description de l'Afrique septentrionale*, ed.-tr. de Slane, 1965², 171-231), who says that the best (and most expensive) shields were made from the hides of old females. The place where they were made is said by al-Idrīsī (*Opus geographicum*, Naples-Rome iii, 224, ed. H. Pérès, Algiers 1957, 37) to have been at Nūl (see Yāḳūt, *s.v.*), a centre for the Lamṭa near Joulimini; he says that "the Maghribīs use them in battle because they are light yet solid". More information is provided by the Egyptian Ibn Zunbul al-Maḥallī (10th/16th century), who also describes the *lamṭ* (*Tuḥfat al-mulūk*, tr. E. Fagnan, *Extraits inédits relatifs au Maghreb*, Algiers 1924, 179-80) and says that these shields "are special, because holes made by arrows or spears close up again by themselves and so they never lose their value as defensive weapons". Leo Africanus (*Desc. de l'Afrique*, tr. Épaulard, Paris 1956, 559, see also 452-3) has a paragraph devoted to the *lamṭ*, and says that in the summer it is easier to catch the animal because the heat of the sand affects its hooves. As far as the targes (*lamṭiyya*) are concerned, he provides more up-to-date information additional to the earlier accounts and says: "Nothing except bullets from fire-arms can pierce them, but they are very costly."

These defensive arms are probably no longer made except for tourists, but until recently the Touareg (at least, the Touareg nobility who had the sole right to carry them) still used them and they were "escutcheon-like in shape and significance; the decorative motifs have magical qualities associated with them." (H. Lhote, *Les Touaregs de Hoggar*, Paris 1944, 325-6, with illustrations; see also H. Bissnel, *Les Touaregs de l'Ouest*, Algiers 1888, 95). When P. de Foucauld was writing, the targes of Ahaggar had the same name as the animal, the hide of which was used to make them, *ihəm*, pl. *ihəmmən* (*Dict.*, ii, 602-3).

Monod, *Description de la côte d'Afrique de Ceuta au Sénégal par Valentin Fernandes (1506-7)*, Paris 1938, 159-61, n. 90; G. Ferrand, *Tuḥfat al-albāb*, in *JA* (1925), 43-4, 248-9; H. Lhote, *La chasse chez les Touaregs*, Paris 1951, 75-82; R. Mauny, *Tableau géographique*, etc., Dakar 1959, 256. (F. Viré)

LAMṬA, a large Berber tribe of the Barānis family. Its exact origin does not seem to have been known to the Arab and Berber genealogists, who simply make them brethren of the Ṣanhādja, Haskūra and Gazūla; others give them a Ḥimyarite origin like the Hawwāra and the Lawāta [*q.vv.*].

The Lamṭa were one of the nomadic tribes who wore a veil (*mulaththamūn*). One section lived on the south of the Mzāb, between the Massūfa on the west and the Târga (Tuareg) on the east; they even seem to have extended as far as the Niger. In the south of Morocco, in al-Sūs, where there were Lamṭa who led a nomadic life, in company with the Gazūla, the Lamṭa occupied the territory nearest to the Atlas. On the coming of the nomadic Arabs of the Maʿḳil family, the two sections of the Lamṭa were absorbed by the Dhawī Ḥassān; the remaining sections then joined the Shabānāt, another Maʿḳil tribe, to oppose the Gazūla who joined the Dhawī Ḥassān.

In the territory of the Lamṭa of al-Sūs at the mouth of the Wādī Nāl (now Wād Nūn) lay the commercial town of Nūl or Nūl of the Lamṭa, the first inhabited place one reaches on coming from the Sahara. Several Moroccan dynasties have struck coins there.

The jurist Uggʷag b. Zallū of Sidjilmāsa, a pupil of Abū ʿImrān al-Fāsī [*q.v.* in Suppl.], was a member of the tribe of Lamṭa; one of his pupils was ʿAbd Allāh b. Yāsīn al-Gazūlī, founder of the Almoravid empire [see AL-MURĀBIṬŪN].

The country of the Lamṭa was noted for the shields made at Nūl with the skin of the *lamṭ* antelope [*q.v.*].

Bibliography: Ibn Khurradādhbih, Ibn al-Faḳīh, Ibn Ḥawḳal, Yaʿḳūbī, Bakrī, Ibn Khaldūn, *K. al-ʿIbar*, indices, s.vv. Lamṭa and Nūl; Idrīsī, *Opus geographicum*, Naples-Rome, fasc. iii, 221-5; Leo Africanus, *Description de l'Afrique*, tr. A. Épaulard, Paris 1956, index (esp. 452-3, where H. Llote's long note should be regarded with care). (G. S. Colin*)

LAMTŪNA (in Leo Africanus: Luntuna or Lumtuna), a great Berber tribe belonging to the branch of the Ṣanhādja who led a nomadic life, and like other tribes of this branch forming part of the *Mulaththamūn* or "wearers of the veil" [see LITHĀM].

The Lamtūna nomadised over the western Sahara, where between the 2nd/8th and 5th/11th centuries they played a considerable political role. According to al-Bakrī (459/1067), the region covered by them stretched from the lands of Islam (i.e. the Maghrib) to those of the blacks. This is what this geographer says of the Lamtūna's way of life: "They are strangers to any manual work, to agriculture and even to bread. Their riches consist wholly of their herds. They live entirely off meat and milk". According to Ibn Khaldūn (d. 808/1406), the Lamtūna already formed a considerable kingdom at the time of the reign of ʿAbd al-Raḥmān al-Dākhil, founder of the amīrate of Cordova (138-72/756-88). This author plus Ibn Abī Zarʿ (d. between 710-20/1310-20) give the names of several kings of the Lamtūna from that time onwards. The first of these was a certain Talākākīn; the period of his power is unknown, but it is very probable that he lived towards the middle of the 3rd/8th century. His successor was Tīlūtān or Taywalūtān b. Tiklān b. Talākākīn, who died aged 80 in 222/836-7. He was a great ruler, and if Ibn Abī Zarʿ is to be believed, he reigned over all the desert (i.e. all the western Sahara), and the territory under his control stretched for three month's journey in both length and breadth, as far as the borders of the land of the blacks, of whom more than twenty of their kings were subject to him. Tīlūtān's successor was his nephew al-Athīr b. Bātin (also called Yalattān) who died aged 65 in 237/851-2, or according to another source, in 287/900. The fourth king of the Lamtūna was Tamīm (or Ramīm) b. al-Athīr who reigned over the tribe until 300/912-13; he was killed by the Ṣanhādja notables in a rebellion. His death heralded a time of troubles which lasted 120 years, i.e. until *ca.* 420/1029.

It seems that the state (or rather, the confederation of Berber tribes) created by the Lamtūna and which endured down to 306/918-19, was actually the state or rather confederation called Anbiya by the mediaeval Arabic writers. This existed already in the time of the astronomer al-Fazārī (*ca.* 172/788), who locates it as between the kingdom of Sildjilmāssa (in the western

Maghrib) and that of Ghāna in the western Sudan. We also owe a few details about the Anbiya to Ibn al-Faķīh al-Hamadhānī (*ca.* 290/903), whose information on Africa goes back to the middle of the 2nd/8th century. He relates that "the land of Anbiya is part of the Sūs al-Aķṣā (in the extreme south of present-day Morocco) and extends over seventy nights' march across the plains and deserts". One may further add that the historian and geographer al-Yaʿķūbī (d. 278/891) says as follows about the people of Anbiya: "It is by setting off from Sidjilmāssa southwards that one arrives in the land of the blacks ... It is reached via empty regions and deserts stretching for about fifty days' march. En route one meets a people called Anbiya, a part of the Ṣanhādja [who live] in the desert; they have no fixed abodes. They veil their faces, according to one of their customs. They do not wear a tunic, but cover themselves with pieces of cloth. Their food comes from camels, and they have no cereals or corn". On al-Yaʿķūbī's evidence, the Anbiya confederation was not, in the 3rd/9th century, the only great Berber power in the western Sahara. Indeed, he mentions also as existing in this desert and on the fringes of the land of the blacks a land (or a town) called Ghasṭ, identical with the Awdaghast of the geographers of the 4th-5th/10-11th centuries and situated in south-eastern Mauritania. According to al-Yaʿķūbī again, there was in this country a king who had no religion, who raided into the land of the blacks and who possessed numerous kingdoms.

It seems that the king of Awdaghast contributed to the fall of the confederation of the Lamtūna (or of Anbiya), and it may be in reference to him that Ibn Abī Zarʿ speaks when he mentions the revolt of the Ṣanhādja notables against the fourth king of the Lamtūna in 306/918-19. Hence the king Tīnazwā b. Wānshiķ b. Bīzār or Barūyān b. Wānshiķ b. Izār, who ruled, according to Ibn Khaldūn, over the Lamtūna and all the Sahara in the 4th/10th century, in the times of ʿAbd al-Raḥmān III al-Nāṣir (300-50/912-61) and his son al-Ḥakam II (350-66/961-76), belonged to the dynasty of Awdaghast and not to that of the Lamtūna. This name Barūyān b. Wānshiķ b. Izār appears merely to be a deformation of that of Tīn Yarūtān b. Wasīnū b. Nizār attributed to the king of Awdaghast (who reigned between 340/951 and 350/961) by the geographer al-Bakrī. It is the same person who is mentioned by Ibn Ḥawķal (d. *ca.* 378/988) under the name of Tanbarūtān b. Isfīshar and who was his contemporary; he says of him "Tanbarūtān b. Isfīshar ... was at that time king of all the Ṣanhādja ... He governed these last for twenty years ... Power belonged to this man's family in that tribe from time immemorial".

It appears that towards the end of the 4th/10th century or at the beginning of the next one, the kingdom of Awdaghast was destroyed by the king of Ghāna, who incorporated its capital (now the ruins of Tegdaoust) in his own kingdom, whilst leaving the tribe of Lamtūna their freedom. It was at this time, at the end of a period of 120 years during which "power was divided up amongst the Lamtūna", as Ibn Abī Zarʿ says, that there appeared amongst the Lamtūna a new king called ʿAbd Allāh (or Abū ʿUbayd Allāh) b. Tīfāwt, who brought about a union of all the Lamtūna. According to Ibn Abī Zarʿ, he was a man of religion and piety who made the Pilgrimage. He was killed, at the end of three years' reign, during a raid; al-Bakrī calls him Muḥammad Tāreshna and says that he carried on the holy war, in the course of which he was killed at a place called Ķanķāra (Gangara, the Mandingos) in the land of the blacks. Tāreshna (or Nāresht) al-Lamtūnī seems to have reigned between 426 and 429/1034-8, at the head of a confederation of Ṣanhādja tribes whose members included, as well as the Lamtūna, the Djudāla and perhaps the Massūfa too.

At the outset, the Lamtūna were pagans, and according to Ibn Khaldūn, only became Muslim during the 3rd/9th century. But most of the tribe's members were only nominally Muslim, apart from the *amīrs* and probably a section of the notables. Because of this fact, Yaḥyā b. Ibrāhīm al-Djudālī, the successor of Nāresht (Tāreshna) as head of the Lamtūna confederation, decided in the course of his Pilgrimage to Mecca, to bring from the Maghrib into the Sahara a pious and learned Muslim *shaykh* called ʿAbd Allāh b. Yāsīn, who was to work at the conversion of the Djudāla and Lamtūna to a genuine form of Islam. ʿAbd Allāh b. Yāsīn soon discovered that most of the people he was working amongst lived in ignorance; hence he quickly surrounded himself with true believers and declared holy war against the infidels of the two tribes, which he managed to convert to Islam after several raids. In this way came about the origin of the kingdom of the Murābiṭūn or Almoravids [see AL-MURĀBIṬŪN].

After the death of Yaḥyā b. Ibrāhīm al-Djudālī (*ca.* 434/1042-3), ʿAbd Allāh b. Yāsīn, by now the spiritual head of the new community, appointed as his successor the *amīr* Yaḥyā b. ʿUmar b. Talākākīn, who reigned until 449/1056-7. Then the latter's brother, Abū Bakr b. ʿUmar, also appointed by ʿAbd Allāh b. Yāsīn, reigned over the western Sahara. Abū Bakr b. ʿUmar was content to rule over the desert and to leave Morocco, whose conquest he undertook, to his nephew Ibn Tāshfīn. However, he kept the title of *amīr* of the Almoravids till his death. Apparently, after Abū Bakr's death (he was killed in 480/1087 during one of his raids against the blacks in the western Sudan) the Lamtūna still retained for some time their supremacy over the people of the western Sahara. Towards the middle of the 6th/12th century al-Zuhrī speaks of a Yaḥyā b. Abī Bakr, *amīr* of the Massūfa (*Lamtūna) who lived towards the year 496/1102-3 and who seems to have been the son of the *amīr* Abū Bakr b. ʿUmar al-Lamtūnī. During this time there took place the conquest of Ghāna by the Lamtūna and the conversion of that city to Islam. Later, the power of the Lamtūna grew feebler, but nevertheless, we know, thanks to the anonymous author of the *Kitāb al-Istibṣār* (*ca.* 588/1192), that the Lamtūna always possessed, at this period, an independent king as well as their own *shaykhs*. Subsequently, like the Massūfa and other Berber tribes of the southwestern Sahara, the Lamtūna were compelled to recognise the supremacy of the Sudanese kings of Mālī. If al-ʿUmarī (743-50/1342-9) is to be believed, the Lamtūna came under their control in the first half of the 8th/14th century; however, they still had their own *shaykh*. The later Arabic sources are silent about this people, whose importance became at that time almost nil.

A word should finally be said about the boundaries of the Lamtūna territories in the period from the 2nd/8th to the 8th/14th centuries. Originally, they extended, according to al-Bakrī, to the south of the mountain of Ayzal (Kedyet Ej Jell or Fort Gouraud on our maps), occupying all the eastern part of what is now Mauritania, as far as the fringes of the Sudan. They were separated from the Atlantic by the lands nomadised over by the Djudāla, who occupied western Mauritania and the south-western part of

that country (al-Bakrī, Ibn Saʿīd) to the north of the lower Senegal and as far as the fringes of the Djabal al-Lammāʿ (modern Cap Blanc). Towards the middle of the 5th/11th century, the Lamtūna occupied the Mauritanian Adrar previously inhabited by a non-Muslim Berber tribe. They built there a fortress called Āzukkī or Azukkī (Azougui near Atar on modern maps), which then became their capital and a very important stage along the commercial route connecting Sidjilmāssa with Ghāna. From the Mauritanian Adrar, the lands traversed by the Lamtūna stretched as far as the Sudan, more exactly to Tagant. In the second half of the 5th/11th century, the Lamtūna occupied the district of Nūl al-Aḳṣā in the south-west of modern Morocco and that of Tāzuggāght (Saguiet El Hamra on modern maps = al-Sāḳiya al-ḥamrāʾ), both of which belonged to the tribe in al-Idrīsī's time.

(T. Lewicki)

AL-LAMTŪNĪ, Abū Bakr b. ʿUmar b. Tāglāgīn al-Ṣanhādjī, war leader of the Almoravids [see al-murābiṭūn] and above all, the real founder of one of the historic capitals of Morocco, Marrakesh (Murrākish [*q.v.*]). He was the brother of Yaḥyā b. ʿUmar who became, at the death of the pious *ḥādjdj* Yaḥyā b. Ibrāhīm al-Gazūlī, *amīr* of the Berber confederation of Ṣanhādja nomads of the parts of the Sahara bordering on the Atlantic (Lamtūna, Gudāla and Massūfa). The two brothers were the first to rejoin, after his *hidjra*, the Mālikī reformer ʿAbd Allāh b. Yāsīn in his *ribāṭ* [*q.v.*] of Nā (?), situated on an island or a peninsula of the Atlantic coast of modern Mauritania. It was from this *ribāṭ* that the powerful movement which culminated in the establishment of the Berber Almoravid dynasty was launched.

In 448/1056 Yaḥyā b. ʿUmar was killed fighting the infidels in the western Sudan, and the *imām* ʿAbd Allāh immediately replaced him, as head of the armed forces, by his brother Abū Bakr, who was celebrated for his courage, religious enthusiasm and experience. The new *amīr* had his position legitimised by the people of Sidjilmāssa and struck coins of his own, and was then charged with the task of conquering, by word and by sword, the region of the Moroccan Atlas. In 449/1057-8 his successful campaign ended in the capture of the town of Aghmāt [*q.v.*], the Maṣmūda capital. With the support behind him of this urban centre, at the time one enjoying considerable prestige, the *imām* ʿAbd Allāh directed his troops against the Barghawāṭa [*q.v.*], the heretics of the central Moroccan Atlantic coast region; but having injudiciously rushed into the battle, he was killed in 451/1059. Abū Bakr now became the sole head of the Almoravids; he buried ʿAbd Allāh b. Yāsīn on the spot, went on to crush the Barghawāṭa and returned, laden with booty, to Aghmāt. There he established his centre of power and married the rich widow of the former governor of the town, the Tunisian lady Zaynab bint Isḥāḳ al-Nafzāwiyya, whose beauty was only equalled by her political astuteness.

Being probably now largely occupied with the administering of his native land and of his conquests, Abū Bakr at this point gave command of the army to his nephew and cousin, Yūsuf b. Tāshfīn [*q.v.*], who had come to prominence through his outstanding qualities, confirming him in this office and directing him to the conquest of northern Morocco.

However, life in Aghmāt became more and more difficult for everyone. Both the persons and the possessions of the local people suffered from the presence of their unpolished conquerors, and these latter, as Saharan nomads, felt little at ease within the walls which they had conquered but which were suffocating them. In the end, Abū Bakr was persuaded to found a new town, one better situated in all regards than the double city of Aghmāt. Following the advice of his expert counsellors, he decided to establish the new centre on the actual site of Marrakesh. The process of transfer took place, according to the Moroccan historian Ibn al-ʿIdhārī in his *Bayān*, on 23 Radjab 462/7 May 1070 and not in 1062 as indicated by Ibn Abī Zarʿ [*q.v.*] in his rather undependable *Rawḍ al-ḳirṭās*. The initial works, directed by the amīr personally, were concentrated on the construction of a *ḳaṣaba* [*q.v.*], the renowned Ḳaṣr al-ḥadjar "stone fortress", where the ruler's harem, treasury and armoury were deposited in safety over the following three months.

Soon afterwards, on a date which the *Bayān* fixes within Rabīʿ II 462/January 1071, Abū Bakr received some alarming news from the desert. In order to fly to the aid of his tribe, he left to Yūsuf b. Tashfīn the administration of the Almoravid conquests, the town in course of construction, a large part of the army and even his wife, who had herself urged him to divorce her so that she might, at the end of the waiting period required by Muslim law, legally marry Yūsuf and give him the benefit of her great experience of the Moroccan situation. The great role played by women in Almoravid society is of course well-known.

After having restored order within the desert, Abū Bakr did not return to Morocco till 464/1072-3. Well aware of what was happening at Marrakesh, he prudently installed himself at Aghmāt. He had

quickly learnt and realised that Yūsuf, strongly backed by Zaynab, would not give back to him the command entrusted to him earlier nor the town of Marrakesh, now expanding rapidly. After a pathetic interview between the two men, seated together on a burnoose in the open countryside, Abū Bakr had the sense to accept the very impressive presents offered to him, and with his face thus saved, returned to the land of his people in order to resume the holy war against the infidel blacks. This doughty hero of the faith, and founder of one of the great capitals of the Islamic world, was killed in 468/1075-6 in the massif of Tagant to the north of the Senegal River, where his gravestone and epitaph have been found.

His son Ibrāhīm then went to Morocco to reclaim his father's heritage of leadership, but wise counsels of prudence and substantial presents discouraged these ambitions and led to his definitive disappearance from Almoravid history.

(G. Deverdun)

LAMU, a town, island and archipelago, in lat. 2° S. off the Kenya coast, together with Pate and Manda islands [*q.vv.*] and some smaller islands, probably to be identified with the Pyralaae Islands mentioned in the *Periplus of the Erythraean Sea* of *ca.* A.D. 106 as an established resort of Arab and Egyptian sea traders. Nevertheless, the first archaeological evidence found on Manda does not antedate the 8th or 9th century A.D., nor on Lamu before the 13th century. The first reliable literary evidence is that of Ibn Taghrībirdī (later 9th/15th century), but the Swahili traditional history *Khabar Lamu*, and likewise the Swahili traditional histories of Pate, assert that it was founded in 77/695 by Syrians sent thither by the caliph ʿAbd al-Malik b. Marwān, and reinforced by a further contingent sent by Hārūn al-Rashīd in 170/786. Although not in themselves impossible, there is no contemporary literary or archaeological evidence to sustain these 19th century traditions. Syrian traders are not known to have penetrated farther south than the Ethiopian ports, and such late traditions are to be regarded with the greatest caution, if not scepticism. At the end of the 9th/15th century the island and the adjoining landfall are mentioned briefly by the celebrated pilot, Aḥmad b. Mādjid.

Ibn Taghrībirdī, quoting al-Maḳrīzī, makes only the curtest mention. The king is entitled to ambergris found on the beach. There are large banana trees, from which a kind of honey is made, and various preserves. The town is almost buried under the sands. This suggests that in the later 9th/15th century the town was in decline. Its fortunes seem to be aptly illustrated by a sequence of dedicatory inscriptions, all but one in the mosques. The earliest is dated 1370-1 A.D.; the next, with a remarkable wooden *minbar* unique in eastern Africa, where stone alone is used for this purpose, was not built until 1511-12. The 18th century saw the construction of four mosques, in 1733, 1753, 1760 and 1797. In this interval, from *ca.* 1506 to 1698, the town was under nominal Portuguese control, and the first tribute of 600 *mithḳāls* of gold was paid in Venetian *mocenigos*. In 1585 the town acknowledged Turkish suzerainty in the person of the Amīr ʿAlī Bey, for which the Portuguese deposed the sultan in 1587, hanging him in Goa on Christmas Day, 1589. Lamu supported the Mombasa rising of 1631 [see MOMBASA], for which the town was punished in 1634. Following another rising in 1678, the sultan of Lamu and four other neighbouring sultans lost their heads.

Lamu came under the nominal control of ʿUmān after the ʿUmānī capture of Mombasa in 1698, but this was not effectively exercised until 1812-13, in which year an inscription dates the building of the fort as a residence for the Bū Saʿīdī governor, always a member of the royal family until about 1901 [see ĀL BŪ SAʿĪD]. Under them the town grew considerably because of the expansionist trading policy of Sayyid Saʿīd of ʿUmān and Zanzibar and his successors. Lamu was an important centre for trade in ivory, mangrove wood (used universally at this epoch throughout southern Arabia for roofing) and, for a period, slaves. New mosques were dedicated in 1823, 1824 (two), 1845, 1849, 1865, 1876, 1877 and 1880-1. To the same period we may ascribe the pleasant two- and occasionally three-storeyed houses with their verandahs (Swa. *baraza*), which form the greatest part of the older town, so reminiscent of southern Arabia, but with a distinctive architecture which may be called "Zanzibari". Particularly attractive are their doors of carved teak. These and the so-called Lamu chests (Swa. *sanduku*), camphorwood clothes chests, used because that wood is resistant to the omnipresent white ant, were important local manufactures. Elaborate beds and chairs, of ebony inlaid with ivory, give some indication of the luxury of the merchant notables. This is echoed in poetry, and especially during the 19th century Lamu was celebrated for its numerous Swahili poets and literary men [see SWAHILI, Literature]. These included poetesses, of whom Mwana Kupona was the most famous. The poetry is written in the local dialect of Swahili, Ki-Amu. During the 1960s J. W. T. Allen identified no less than 30,000 pages of Swahili poetry in private hands in Lamu town, all in manuscript. Of these 10,000 pages have been photographed and the record deposited in the University Library, Dar es Salaam. It is estimated that as many pages were found of Arabic manuscripts, but at the present these have neither been photographed nor catalogued: they remain a challenge to the present generation of scholars.

With the growth of Mombasa as a deep-water port, the diminution in importance of the mangrove and ivory trades, and the disappearance of the slave trade, Lamu receded in importance, although recently it has achieved a certain popularity as a tourist centre. But more than anything it has been saved by emerging as the most important Islamic religious centre in eastern Africa. The Ribāṭ al-Riyāḍa, or Madrasat al-Riyāḍa, also commonly called the Mosque College of Lamu, was founded in 1319/1901-2 by Ḥabīb Ṣāliḥ b. Ḥabīb ʿAlawī b. Ḥabīb ʿAbd Allāh Djamāl al-Layl, the word *Ḥabīb* being used as an alternative to *Sayyid*. Of a well-known Ḥaḍramī family of *sayyids*, an ancestor had settled at Siu town on the neighbouring Pate island: from there another ancestor migrated to the Comoro Islands [see ḲUMR and PATE]. There Ḥabīb Ṣāliḥ was

born and brought up as a Swahili speaker: although his was a learned family, Arabic was not spoken in the home. There and from family connections he became learned in the religious sciences and in traditional Arab medicine, although he never left eastern Africa. Migrating from the Comoros to Lamu, he began to teach, and soon acquired a band of followers. Following quarrels with the more conservative Muslims in the town, and especially because of the use of the tambourine to accompany the reading of the Barzanji *maulidi* to celebrate the birth of the Prophet, Ḥabīb Ṣāliḥ first built a hut for use as a *muṣallā*, and subsequently the present mosque. This became a centre for the dissemination of the ʿAlawiyya *ṭarīḳa*, which soon attracted students from neighbouring African peoples, mainly the Pokomo, the Galla and the Bajun. By the 1950s the influence of the mosque had made itself felt throughout the eastern littoral of Kenya and the present Tanzania, and its pupils could be found teaching in numerous small Ḳurʾānic schools. In eastern Africa, all Sunnī mosques hold *maulidi* in honour of the Prophet during the month of his birth, the authorities in each neighbourhood arranging not to clash with each other's celebrations. The most important *maulidi* is that of the Ribāṭ al-Riyāda, attracting visitors from throughout Kenya and Tanzania, even as far as the border with Mozambique. Apart from the strictly religious ceremonies and the solemn procession to Ḥabīb Ṣāliḥ's tomb, Africans of different tribes also celebrate it with dances that are generally frowned upon as impious, if not heretical, by those of Arab descent. The tomb itself is in a flimsy wooden hut. If this is surprising, such simplicity in a holy tomb has its parallels not only in Tanzania but also in al-S̲h̲iḥr, the port through which the potent influence of the Ḥaḍramawt has chiefly percolated into eastern Africa.

LANBASAR (thus in Ras̲h̲īd al-Dīn and Mustawfī), popular pronunciation with assimilation Lam(m)asar < Lambasar, the name of one of the Ismāʿīlī fortresses in northwestern Iran taken over from a local chief by Ḥasan-i Sabbāḥ's lieutenant and eventual successor Kiyā Buzurg-Ummīd, according to D̲j̲uwaynī in 495/1102 [see ALAMŪT, ISMĀʿĪLIYYA]. Its still-extensive ruins lie on a site sloping at 30°, whose surface resembles in shape a truncated cone and which measures some 1,500 ft./480 m. by 600 ft./190 m., with easily defensible slopes, in the Rūdbār district of the upper S̲h̲āh-Rūd, tributary of the Safīd-Rūd [*q.v.*] in what was the mediaeval region of Daylam [*q.v.*], now in the central *ustān* of modern Iran. Its precise location is 30 miles/43 km. north-east of Ḳazwīn and 2 miles/3 km. north of the village S̲h̲ahristān-i Bālā, on the Nāyīn-Rūd stream, in lat. 36° 33′ N. and long. 50° 13′ 30″ E. The fortress's position guarded the approaches to Alamūt from the S̲h̲āh-Rūd valley, and it was accordingly an important unit in the network of Ismāʿīlī castles in Daylam. In recent times, the site and ruins have been visited and described by Freya Stark (1931), W. Ivanow (1958) and P. J. E. Willey (1960).

Lanbasar was besieged in vain in 511/1117 by the forces of the Sald̲j̲ūḳ sultan Muḥammad b. Malik-S̲h̲āh [*q.v.*]. At the time when the Il-K̲h̲ān Hülegü overran northern Persia, the last Ismāʿīlī Grand Master Rukn al-Dīn K̲h̲ūr-S̲h̲āh submitted to the Mongols, and some forty Ismāʿīlī strongholds passed into the invaders' hands. Lanbasar, however, held out against Hülegü's general Dayir-Buḳa for a year after the beginning of 655/1257, and another fortress, Girdkūh, for considerably later; it was presumably after its capture that Lanbasar was abandoned as a military centre.

LANGA [see LAS BELA, 2 Ethnography].

LANKORAN (Lenkoran), the chief town of the district of the same name in the region of Bākū. Lenkoran is the Russian pronunciation of the name, which was at one time written Langarkunān ("anchorage"), or perhaps Langar-kanān ("place which pulls out the anchors"), which is pronounced Lānkārān in Persian and Lankon in Tālis̲h̲ī. The ships of the Bākū-Enzelī [*q.v.*] line used formerly to call at Lankoran, which has an open roadstead, but at 8 miles north-east of the town is the island of Sarā, which has an excellent roadstead which shelters the ships in bad weather.

In the district of Lankoran, de Morgan found monuments of very great antiquity (dolmens, tombs, cases of exposure of bodies in the Mazdaean (?) fashion), but it is not known at what period the town of Lankoran was founded. Certain statements (cf. *Taʾrīk̲h̲-i ʿĀlam-ārā* under the year 940/1533 in Dorn, *Auszüge*, iv, 283; and S̲h̲ayk̲h̲ ʿAlī Ḥazīn [about 1725 A.D.], *Taʾrīk̲h̲-i Aḥwāl*, ed. Balfour, 157) suggest that the capital of Tālis̲h̲ was originally at Astārā; towards the end of the 18th century, Lankoran be-

came the capital of this khānate. The whole district was annexed by the Russians under Peter the Great (treaties of 1723 with Ṭahmāsp II, and 1729 with the Afghān Ashraf), but returned to Persia by the treaty of 1732. Retaken by Count Zubov in 1796, Lankoran was retaken in 1812 by the Persians who fortified it. On 9 Muḥarram (*ʿāshūrā*) 1228/1 January 1813, Lankoran was taken by storm by General Kotliarevski after a brave resistance of the Persians. This event hastened the conclusion of the Treaty of Gulistān (1813), by which Persia ceded to Russia part of Tālish to the north of the river Astārā. From 1846 Lankoran was the capital of the district. The fortress was dismantled in 1865. Since 1921 Lankoran has formed part of the Adharbāydjān S.S.R. in Soviet Transcaucasia.

The population of the town, which was 3,970 in 1867, had reached 11,100 in 1897. The district of Lankoran has an area of 5,000 sq. miles and in 1840 had 30,200 inhabitants and in 1861 99,082. Later, the district was reduced to 2,000 sq. miles; in spite of this, its population in 1897 was 125,895, of whom 46.5% were Azeri Turks, Iranian Tālish 46.2%, Russians 6.9% (in the north) and Armenians (0.2%). The district is composed of three zones: to the north, an eastern continuation of the steppes of Mūghān; to the east, a marshy littoral intersected by lagoons and covered with a rich subtropical vegetation; whilst to the west are wooded mountains running from 5,500 to 7,500 feet above sea-level which rise from the Russian frontier, forming the boundary with the Persian province of Ardabīl. The district is rich in forests and had good fishing.

The figures for the 1926 and 1931 censuses showed little change from the above figures, but by 1973 the town alone had a population of 42,300. The town has a number of schools and colleges, libraries and clubs, as well as a museum of local lore. During the 1930s, a newspaper was published in Ādharbāydjānī and Tālishī. The majority of the population of the province are Shīʿī, though there are substantial Sunnī communities in the south. The tomb of Shaykh Ibrāhīm Zāhid, teacher of Shaykh Ṣafī al-Dīn, eponymous ancestor of the Ṣafawī dynasty, is situated a few miles to the south of the town of Lankoran.

The chief local industries are associated with the processing of agricultural products (tea, fish, vegetables, wine).

(V. MINORSKY-[L. P. ELWELL-SUTTON).

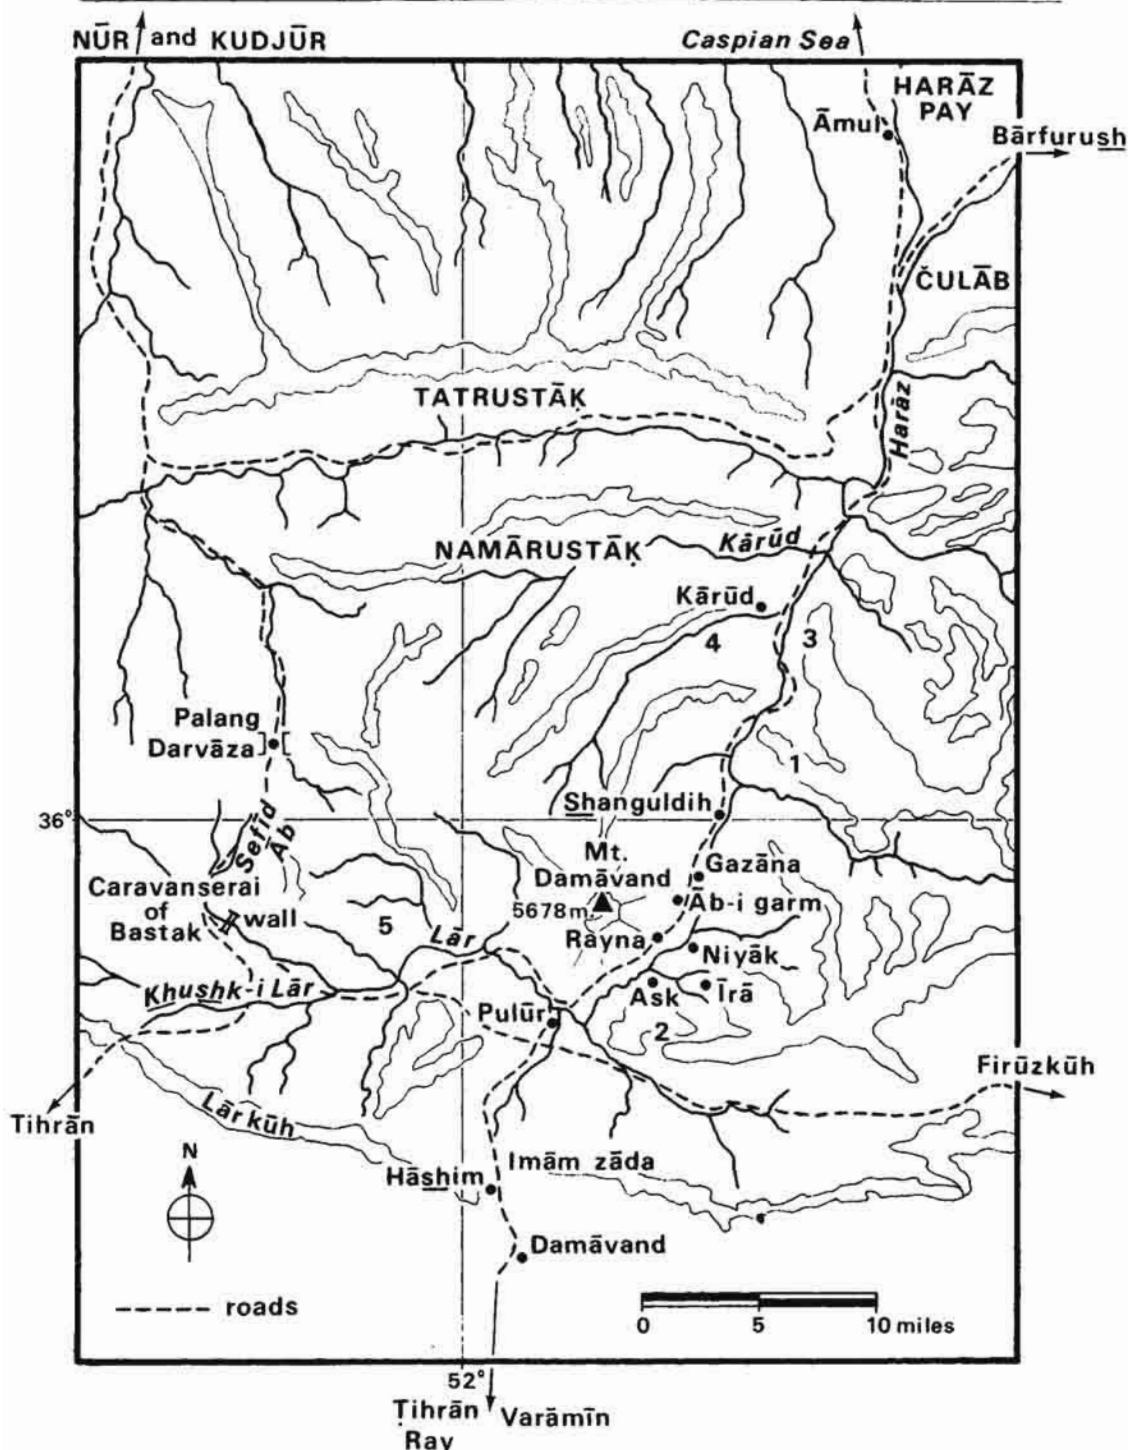
LĀR and **LĀRĪDJĀN**. Broadly attested outside southern Iran, the toponym Lār is applied to a characteristic region of northern Iran known by the name of Lārīdjān. Lār itself is the name of a watercourse, of its valley and of the pasture-lands which surround it. In different forms and local variants, it also refers to other sites or urban settlements of the Iranian lands.

1. *The high valley of the Lār.*

On the barren slope of the Elburz, not far from the conurbation of Tehran, the valley of the Lār constitutes one of the high points of nomadism. Situated at the foot of Mt. Damāvand—at 5,678 m (de Planhol), the highest peak of the Elburz and Iranian range—between the valleys of Nūr, Karadj, Djādj-i Rūd and Harāz, populated by Gīlakī peasants, today it supports no permanent settlement. Highly appreciated over a long period, not only by the nomads but also by the neighbouring village communities and by members of the royal household, its summer pastures have been the object of complex apportionments between these three contenders. Since the decade of the 1950s, the balance has been largely upset in favour of the nomads or semi-nomads, threatened in their turn by the process of modernisation.

Between its source in the vicinity of Kulūm/Kulūn-i Bastak and the elbow of Pulūr where it changes its name to that of Harāz, the Lār takes in the waters of numerous tributaries (names supplied by Rabino, 41-2; Karīmān, *Ḳaṣrān*, 120-1). It flows between mountains which, in the north as in the south, rise beyond the 3,000 m. mark; to the south, the peak of the Lār-kūh is at an altitude of 3,901 m. (12,797 feet according to an American map printed in 1957; *ibid.*, 116). On either side of the banks of the Lār, the pasture-lands extend over some 60 km. and over a breadth of 6 to 7 km. (*ibid.*, 122). The winters are long and extremely cold. The altitude does not fall below a level of 2,500 m.; even in summer, the temperature seldom rises above 24°C. At the eastern extremity of the valley, at Pulūr (see Lārīdjān, below), situated at 2,130 m., average temperature over the year is 5.8° C., rainfall is 547,7 mm. (Adle, chart; 569 mm. according to de Planhol, 23, n. 52, after Péguy).

Near the confluence of the Sefīd Āb and the Lār, a wall of dry rock blocks the entire valley. Situated, close by the so-called caravanserai of Shāh ʿAbbās, at a crossroads of caravan routes between Tehran and the north, in a locality dominated by the ruins of Ḳalʿa-yi Dukhtar, according to oral tradition this wall separates two villages (Hourcade, 42 and map). Indications of the existence of permanent settlement in the valley of the Lār are quite numerous; besides the remains observed by certain travellers (Wells, 2; Von Call-Rosenburg, 121; Stahl, 10), there is the oral tradition current among the Hedāvand nomads (Brugsch, i, 285, quoted by de Planhol, 21-2) among the Gīlakī villagers of the valley of Īrā (Hourcade, 42, n. 6) and most notably the tradition attested at Lāristān as in the villages close to the valley of the Lār, according to which, under a king of ancient Iran, the villagers of the Lār, unable to endure the rigours of the winter, are supposed to have emigrated to Lār of the Fārs (Fasāʾī, ii, 281 ff.; Kotschy, 51). This popular tradition should not be regarded as "quite fantastic" (de Planhol, 21) since numerous toponyms (Lār, Lārak, Elburz, Bastak etc.), are current in the north as in the south

Although it is impossible to follow the evolution of relations between nomads and settlers until after the beginning of the 19th century, it seems that the settled territory covered a greater area then than it does today. According to de Planhol, the "wall" across the valley separated nomads from


Lārīdjān (after Rabino) *Sub-districts:** 1 Amīrī or Pā'īn Lārīdjān, 2 Bālā Lārīdjān, 3 Bihrustāķ, 4 Dilārustāķ, 5 Valley of the Lār. * on 4 and 5, see our reserves and remarks in the article.

settlers. Since the decade of the 1830s, the encampments of the nomads and semi-nomads of the Lār have been amply described by travellers, diplomats, soldiers etc. These accounts describe to us the stability of these tribes (itineraries of migration, places of summer pasturing, etc.) of which the majority were transferred to the region of Tehran from the 18th century onward, for political reasons (Hourcade, 39). For at least a century, and until quite recently (1976), approximately 200,000 head of small livestock (sheep and goats) belonging to the nomads of the south slope of the Elburz have summered at the Lār. But the terms "tribes" and "nomads" are quite inappropriate to designate populations whose origins

remain obscure. Briefly, one encounters Hedāwand who speak the Lori language (having arrived in the 18th century); Kotī Arabic speakers (originally from Khuzistān?); the ʿAraba, poor and Persian speaking; the Kalmur or Kalhur, Gīlakī speakers, whose chiefs lived in Tehran (descended from the Kalmuk Mongols?); the Persian speaking Pāzukī ("Turks of Khurāsān", Kurds?); other small tribes or diverse groups: Turks (Sayl Sepur, ʿAlī Manṣūr, Kalʿaʾī, shepherds of the Turkish villages of Rūdahan); Kurds; "great nomads" (ʿAlī Kāʾī, Gīlakī speakers; Ḥasanlu, Turkish speakers; Sangsarī, who speak an Iranian dialect from the North-West): numerous details on these tribes (number of tents, migrations, summer pasturing etc.) in Hourcade, 40 ff.; de Planhol, 33 ff.; Hourcade and Tual, 23.

The use of Turco-Mongol terminology in nomadism reflects the acceleration of the process of bedouinisation in the region following the Mongol invasion. The term *yūrt* refers to the tent as well as to encampments (Stack, i, 98) or pastures and summer settlements (Rabino, 115). The summer pasturing (*yaylāḳ*) of the Lār was frequented by the Il-Khānids, the Tīmūrids, the Ṣafawids and the Ḳādjārs. Under Nāṣir al-Dīn Shāh (1848-96), the pastures were grazed in summer by horses from the Shāh's stables (de Planhol, 21). He often set up his summer camp there, to be followed by all the dignitaries and their families, military men, ambassadors (numerous references to the camp of Lār in the diplomatic archives in London, Paris etc., in the stories told by travellers, soldiers, sportsmen, etc.). Under the Pahlavīs (1925-79), the pastures to the west and south of Damāwand remained for the most part the property of the crown or of public services (national education, army, agriculture, etc.), who leased them to the nomads.

While profiting from the decline of sedentary mountain life, nomadism has recently suffered the impact of the expansion of the Tehran conurbation. Semi-nomadic groups adapted with varying degrees of success to the re-organisation of the milk and meat markets, becoming the salaried shepherds of large societies, "city-dwelling" nomads or villagers. But the trend towards sedentary living, utilisation of the motor-car, etc. have modified migratory practices. In some cases, nomadism has been replaced by pastoral migrations of the Alpine type (Hourcade, 44-5). Other factors have contributed to the decline of nomadism. The development of tourism and of sporting activities (mountaineering, trout fishing, also practised by the nomads, spa facilities and ski-ing activities in neighbouring areas) has led to the creation of cottage-industries and of construction projects; inevitable measures for the protection of the environment have brought about the extension of natural reserves to the detriment of the pasture-lands. But it is the construction of the dam of the Lār, designed to improve the water-resources of Tehran, which has had the profoundest impact on nomadism. With its foundations laid in 1975, this huge dam (105 m. in height; 1,000 m. long; reservoir of 30 square km. containing 960 million cubic m. of water) was due to become operational in 1980. Ecological constraints—particularly the erosion of the banks and terraces as a result of over-grazing—brought about the expulsion of the nomads from 1976 onward (*ibid.*, 45 f.). The abandonment of major industrialisation projects should in principle favour the renewal of the traditional economy and of nomadism which had been tending towards modernisation and self-destruction (*ibid.*, 47f.)

Rivalries between the nomads, the villagers and the state over the appropriation of pasture-lands are reflected on the administrative level. Originally belonging to the Ustān-i Markazī (*bakhsh* of Afdje, *shahristān* of Ṭihrān: *DG*, i, 196), the Lār has seen its southern area attached to the villages of the southern slope (Ustān-i Markazī) and the rest shared between the *dihistān* of Nūr and Lārīdjān (Ustān-i Māzandarān), the properties of the crown and the state lying between these two spheres of ownership (Hourcade, 38). Until the 19th century, its history is intermingled with that of Lārīdjān (see below), of which it often forms an integral part.

2. *Lārīdjān*

Geographical setting. Lārīdjān takes its name from the Lār (see above), a perennial river which flows down the southern flank of the Damāwand and constitutes the principal branch of the headwaters of the Harāz. The change of name takes place towards the elbow of Pulūr where the Harāz is swollen by the addition of the Delīčāy; in places where it crosses inhabited territory, the river is called Ghāzān-čāy (from the Turkish "river which bores", according to de Planhol, 17, n. 13; perhaps also in memory of the Il-Khān Ghāzān; see below).

Constituted of volcanic rocks thrown up in the Pliocene and Quaternary periods (clear trachytes and coloured andesites), the cone of Mt. Damāwand (400 km².) offers on its eastern slope—dissected by the Harāz and its tributaries and a multiplicity of deep valleys—conditions more favourable to human settlement than exist on its western slope, which is made up of a compact and inhospitable mass of andesites. The high valley of the Lār does not fall below a level of 2,500 m., although the more deeply excavated valleys descend towards a level of 1,300 m., the furthest limit of permanent settlement currently being in the region of 2,300-2,400 m. On the eastern periphery, the soil produced by the decomposition of volcanic deposits engenders a stretch of fertile and well-watered ground. These natural conditions explain the human dissymmetry of this volcanic massif, which gives to Lārīdjān its physical shape and its individuality (de Planhol, 17 ff.; on the morphology and physical geography of the Damāvand, see P. Bout, M. Derruau, J. Dresch and Ch. P. Péguy, in *Mémoires et Documents*, viii, CNRS, Paris 1961, 39-83; see also *CHI*, i, 44 ff., 189, 415).

Socio-economic outline. A remnant of one of the most ancient provincial nuclei of northern Iran, Lārīdjān is characterised by an exceptional density of villages, in contrast to the remarkable void existing upstream of the Lār towards Pulūr as well as in the down-stream valley, on the Caspian side. Life in the settled areas, in the main valley, is closely linked to that of the high pasturages of the Lār and of Lārīdjān. The traditional equilibrium is based on a minute system of balance between intensive agricultural exploitation of tiny plots, the pastoral life and complementary resources supplied by the winter emigration (on land use and irrigated and pluvial cultivation—corn, barley, lucerne, vegetables etc.—the agrarian structure and rustic landscape, the pastoral life and exploitation of the mountain—raising of small and large live-stock—see de Planhol, 22-8; also Hourcade and Tual, 34 ff.). The rigours of the climate and the lack of winter resources are the cause of the significant migrations. In winter, only the peasantry and the stock-breeders remain on the mountain. Some farmers possess arable land on the Caspian plains. Traders and artisans (manufacturers of felt) traditionally

emigrated towards the Caspian. Conversely, the people of the plain of Āmul used to spend the winter on the Lār. Some important resources were drawn from the transit of merchandise and from mule-traffic along the traditional highway axes: the Harāz valley route (Tehran-Āmul by way of the col of Imām-zāda Hāshim): the route of Nūr and Kudjūr through Afdje, via the valley of the Lār (Hourcade and Tual, 25 f.).

Having witnessed an expansion at the beginning of the century, sedentary rustic life has experienced a constant decline as a result of this migration towards the Caspian and towards Tehran, a new focus of attraction. In the decade of the 1930s, new migratory patterns are seen to emerge; in ever increasing numbers, the nomads establish themselves in the high altitude cultivated lands abandoned by the villagers (de Planhol, 32 f.). The improvement of roads, the reorganisation of the production and marketing of dairy and meat products, have transformed the pastoral life and nomadism (see above). The tourist excursions undertaken by a great many city-dwellers are capable of "rendering marginal" the migrations of villagers. Centres of seasonal commerce have been established along the major routes (Hourcade and Tual, 29 f.).

The uneven settlement of the land and the social contrasts are reflected in the appearance of dwellings (large houses belonging to farmers/stock-breeders; the small houses of the emigrants; more recently, summer resort chalets). Cave-dwelling is an ancient practice; caverns excavated in the calcareous rock are currently used for sheltering live-stock and fodder (de Planhol, 26, nn. 55, 56). Study of the system of ownership reveals a predominance of small properties. Quite complex contrasts exist between small-holders and exploitative farmers/stockbreeders. Although the standard of living is fairly low, it is possible to regard Lārīdjān as "a rural democracy, with a hierarchy, but without glaring inequalities" (de Planhol, 29 f.).

Lārīdjān is the point of departure for the ascent of Damāwand [*q.v.*] (Dumāwand/Dunbāwand/Dubāwand, etc.), a mountain which plays a significant role in the myths and legends of Iran (Ibn Isfandiyār, tr. Browne, index; Schwarz, 785 ff.), and in local folklore (Minorsky, *Lār*, in *EI*[1]). Nāṣir-i Khusraw (5th/11th century) relates that sulphur extracted from the crater was wrapped in the skins of cattle which were then rolled down the slopes (*Ṣafar-nāma*, ed. Dabīr-Siyāķī, Tehran 1344/1965, 7). Ibn Isfandiyār (writing in 613/1216) describes—following the *Firdaws al-ḥikmat*—how the ascent could be made in two days, starting from the village of Ask (i, 82-3; tr. 35-6). In the 19th century, two scientific ascents were made within a few days of each other in September 1837 (W. Taylour Thomson and E. d'Arcy Todd); subsequently, it became fashionable for Europeans (travellers, diplomats, explorers, mountaineers, etc.) to make expeditions to Mt. Damāwand (de Planhol, 19 ff.). Ascent by the north face being something of an exercise for experienced climbers, it is more easily accomplished by the south face starting from the village of Rayna/Reine (to the south-east, 2,200 m. in altitude) with the aid of mule-drivers well acquainted with the mountain (see de Planhol, in *Iran*, Nagel's Guide, Geneva 1973, 128-9).

As warriors of repute, the Lārīdjānīs have had occasion to defend their territory or to support the claims of local chieftains. After having fought against the Ķādjārs, they supplied them with appreciable help in the maintenance of order in the north as well as in the south of Iran (see below).

Administrative framework and demography. Although Lārīdjān has been able to extend its influence over the neighbouring regions, its borders have changed little in the course of time. They have probably not gone beyond those that it had in the Ķādjār period. This is how Rabino defines them (114-15, with the names of villages and pasturages; names given here in parentheses are those of the main places of permanent settlement):

(a) Amīrī or Pā'īn Lārīdjān (Shāhāndasht, Shanguldih)

(b) Bālā Lārīdjān (Ask, Āb-i garm, Gaynā, Gaznā, Gazānak, Īrā, Malār, Lāssim, Navā, Niyāk, Pulūr, Rayna)

(c) Bihrustāķ (Bāydjān, Nawsar/Nāssar)

(d) Dilārustāķ (Fīra, Ḥādjdjī Dilā, Kahr-rūd/Kuhrūd/Kārū, Kurf, Nāndal/Nunnal, Tihna/Tīna

(e) The valley of the Lār; besides the caravanserais of Surkhak, Bastak and Sefīd Āb on the road from Tehran to the Nūr via Lashkarak, there are no pasturages (see Hourcade, chart of the summering-sites of the Lār).

Although Dilārustāķ, on the northern slope of the Damāwand, has been capable of definition as "a separate regional subdivision" (de Planhol, 17), it is historically a part of Lārīdjān. With the exception of the valley of the Lār—which now depends to a large extent on the Ustān-i Markazī (see above)—Lārīdjān has preserved its other administrative divisions (see below).

The demographic evolution of the region is hard to trace. Having apparently benefited from the development of Māzandarān in the Ṣafawid era, the population of the region seems to have declined in the 18th century. The improvement and then the decline of the 19th century is reflected in the population of the regional centre, Ask: 1,000 to 1,500 houses in 1837 (d'Arcy Todd); 2,000 in 1860 (Brugsch); 500 in 1874 (Napier). Recent information indicates a decline at Ask (approximately 700 inhabitants in 1950, 424 in 1956) and a relative expansion at Rayna (200 houses in 1874 (Napier), 400 in 1958 (de Planhol)).

Attached to the Ustān-i Māzandarān, Lārīdjān constitutes a *bakhsh* of the *shahristān* of Āmul. It is divided into four *dihistāns*, as follows (*DG*, iii, 266; data from about the year 1950):

dihistān	*inhabited places*	*inhabitants*
Bālā Lārīdjān	18	7500
Bihrustāķ	7	900
Amīrī	10	2000
Dilārustāķ	10	1500

The censuses of 1956, 1966 and 1976 indicate a demographic decline, the inhabitants being progressively less numerous than the migrants (see Hourcade and Tual, 16 ff.).

Historical evolution. The toponym Lārīdjān is quite widely attested in Islamic sources. It derives from Lārīg: *Lār* + *īg* (a suffix which, in Pahlavī, serves to form adjectives of relation; however, its use in proper names in Pahlavī remains problematical: see Ph. Gignoux, in *Pad nām-i yazdān*, 63 f.). It should therefore be written with a long *ī* although, as in the case of Lāhīdjān, both ancient and modern authors most frequently write it with a short *i*. The use of Pahlavī, especially in coinage, epigraphy, seals, etc. was maintained for a long period in the Caspian region (on the Arabo-Sāsānid coinages of Ṭabaristān, see R. Curiel in *Pad nām-i yazdān*, 151-8).

The precise localisation of the urban settlement or the district known in ancient times by this name

remains uncertain. Its origin is lost in the myths and legends of ancient Iran which cannot easily be exploited from a historical point of view. Briefly, "Lārīdjān is the most ancient region of Ṭabaristān. Firīdūn (i.e. Thraetona/Frēton) was born in the 'village' (*dīha*, which can have a broader sense) of War which is the principal town (*ḳaṣaba*) of this region (*nāḥiyat*) and where the cathedral mosque (*djāmiʿ*) and the oratory (*muṣallā*) are situated" (Ibn Isfandiyār, i, 57). Waraka for War is an incorrect reading by Browne (tr. of Ibn Isfandiyār, 15), followed by Rabino, 40; Minorsky, art. *Lār* in *EI*[1] (who identifies Waraka/Warak/Varena with the village of Wāna in Lārīdjān); de Planhol, 20, etc. According to Āmulī (33), the birth-place of Firīdūn is Lārīdjān, *ḳaṣaba* of the region of the same name. According to Marʿas̲h̲ī (*TT*, 4), Gurgīn Mīlād, the "founder" of Gurgān, possessed the region of Ray: "in winter, his *ḳis̲h̲lāḳ* [*q.v.*] was at Karadj Rūd, in summer his *yaylāḳ* was at Lār (*TT*, 4; on Lār-i Ḳaṣrān, see below). More easily identifiable is S̲h̲alab/Čalab/Čalāw, at Dilārustāḳ, at the northern foot of the Dunbāvand/Damāwand, an area of rich pasturages where Firīdūn was brought up, went hunting mounted on a cow and devoted himself to training oxen as saddle-animals, and whence he set out to conquer ʿIrāḳ (Ibn Isfandiyār, i, 57 ff.; according to de Planhol (20, n. 34), there is in this myth an echo of the ancient mountain practice of riding oxen.

The fact that Lārīdjān designates sometimes an urban settlement, sometimes a district, does nothing to faciliatate the toponymic study of the region. Lārīdjān is the mountainous frontier zone where the Harhaz flows (*Ḥudūd*, 77). Probably because of the fairly late Islamisation of the region (by the ʿAlids), Lārīdjān is rarely mentioned by geographers who wrote in Arabic. In addition, their works contain ambiguities. Thus Lāriz (supposedly the ancient form of Lāridj), named as a village or a district of Ṭabaristān (Marquart, 127, 135) is not the present day Lāridjan (on Lāriz and Marquart's interpretation, cf. below, 3).

According to Yāḳūt (iv, 340-1) "Lārīdjān is a small town (*bulayda*) between Ray and Āmūl in Ṭabaristān; it lies at a distance of 18 *farsak̲h̲s* from each of these two towns; it is protected by a fortress often mentioned in the chronicles of the Buwayhids and of Daylam". Villages, fortified points, places allegedly situated in Lārīdjān are mentioned by various sources. The village of Īrā is mentioned under the name of Bāra/Yāra (al-Iṣṭak̲h̲rī, 210; Ibn Ḥawḳal, 271, quoted by Schwarz, 789; does this refer to Īrā near Ask, or to an ancient permanent village to the south of the valley of the Lār (see above); Ask (Ibn Isfandiyār, i, 83); Fulūl, Fulūl-i Lārīdjān, Ḳalʿa-yi Fulūl (Marʿas̲h̲ī, *TT*, 116; *TG*, 284); Ḳalʿa-i Lawandar (near Rayna) (Marʿas̲h̲ī, *TT*, 213-14); the *ḳalʿa* or the urban settlement of Kuhrūd/Kahrūd/Karū/Karūd (Āmūlī, 135; Ibn Isfandiyār, ii, 78, 99; Marʿas̲h̲ī, *TT*, 54, 213). This or the *ḳalʿa*s of Lār, without further definition, are also mentioned (Ibn Isfandiyār, i, 297-9; Āmulī, 109; Marʿas̲h̲ī, *TT*, 212). In the Sāsānid period, Lārīdjān must have formed part of the Padas̲h̲k̲h̲ʷargar, of which the sovereign was Māh gus̲h̲nasp (or Djus̲h̲nasfs̲h̲ah) at the end of the Arsacid period. Subsequently, this region belonged to the Sāsānid Kawād, then to his son Kāwūs. Later it came under the control of the Sāsānid family of the Ḳārinids [*q.v.*] (Marquart, 130 ff.; Karīmān, *Ḳaṣrān*, ii, 632). In a broad sense, Kūh-i Ḳārin or Djibāl-i Ḳārin designated the eastern Elburz. According to Rabino (2), it included present-day Lārīdjān, the Sawād Kūh and the Hazār-djarīb. But according to the *Djahān numā*, the Djibāl-i Ḳārin is also called Djibāl-i Rūnandj/Rūna (Rūyān) and the Dunbāwand/Damāwand does not form a part of this mountain (Muḥammad b. Nadjīb Bakrān, *Djahān-numā*, ed. Tehran 1342/1963, 58). At the time of the Arab invasion, the situation in the region is unclear, especially as regards the Lār (valley of the Lār), the southern limit of Lārīdjān, where ancient occupation is attested most notably by the presence of remains of sanctuaries dedicated, it is said, to Nāhīd/Anahita (Karīmān, *op. cit.*, 189, 632). The mountainous region to the north of the Ray was called Ḳaṣrān (Kūhsarān), and was divided into Ḳaṣrān-i dāk̲h̲il (or Ḳaṣrān-i darūnī) and Ḳaṣrān-i bīrūnī (Karīmān, *op. cit.*, 3 ff., with reference to al-Iṣṭak̲h̲rī, Ibn Ḥawḳal, al-Muḳaddasī, Zakariyā al-Ḳazwīnī, Yāḳūt, etc.). The Lār presumably belonged to the Ḳaṣrān-i dāk̲h̲il. Lār-i Ḳaṣrān is found in various sources (Ibn Isfandiyār, i, 56; Marʿas̲h̲ī, *TT*, 112, 124; Āmulī, 182 f., etc.). But reference to Lār ū Ḳaṣrān (e.g. Ibn Isfandiyār, i, 223) is also found, which gives grounds for supposing that one part of the Lār belonged to Ḳaṣrān and the other part to Lārīdjān. Furthermore, the mountains to the north-west of the Lār whose waterways flow towards the north, form part of the Rūd-bār-i Ḳaṣrān (Karīmān, *op. cit.*, 20 f.). It also appears that the Lār, endowed with at least one fortress, at times exercised a certain independence between Lārīdjān, Lawāsān and Ḳaṣrān. It may also be noted that—at least on the geographical level—the mountains of Rūyān formed a frontier with the mountains of Ray (Ibn al-Faḳīh, 304, and Ibn Ḥawḳal, *Ṣūrat al-arḍ*, 320, quoted by Karīmān, *op. cit.*, 18).

At the time of the conquest of Ray (which al-Ṭabarī locates in 22/643), the Maṣmug̲h̲ān (Mas-i Mug̲h̲ān, Grand Master of the Magi) who exercised jurisdiction over Dunbāwand, K̲h̲uwār, Lāriz and S̲h̲irriz, agreed conditionally to the payment of the *djizya* and *k̲h̲aradj* (Karīmān, *RB*, ii, 487, after al-Ṭabarī and Ibn al-At̲h̲īr). According to H. Karīmān (*Ḳaṣrān*, i, 71 ff.), the north of Ḳaṣrān and a part of Lārīdjān were in the hands of the Maṣmug̲h̲ān, but this is not stated clearly in the sources. The possessions of the Maṣmug̲h̲ān were conquered by Abū Muslim in 131/748 (Marquart, 127, after Ibn al-At̲h̲īr).

In the absence of indications in the sources which would permit an appraisal of the economic worth of the region, it may be said that, in mediaeval Iran, Lārīdjān exercised—as a result of its geographical position—control over a military, commercial and pastoral route, i.e. the Ray-Āmul axis towards the Caspian Sea and the transversal routes towards Ḳūmis and K̲h̲urāsān via Fīrūz-kūh to the east, towards Ḳazwīn and Ād̲h̲arbāydjān to the west. A highway also connects Ārim, in the Hazār-djarīb, to Lāridjān (Rabino, 115). Other transversal routes were added later (see below). This function would pre-suppose the existence of a stable local power. The latter was exercised by governors usually bearing the title of *marzbān* (the term Lārīdjān seems also to have had a patronymic connotation). Ibn Isfandiyār supplies us with a list of these *marzbān*s beginning with Faḍl b. al-Marzubān in 252/866 (the list has been partially reconstructed by Rabino, 147, up to the 7th/13th century). In the final third of the 3rd/9th century, Sahl b. al-Marzubān constructed across Lārīdjān the route which, in earlier times, had been impracticable both in winter and in summer, and he took steps to ensure its security (Ibn Isfandiyār, i, 122).

Like other chieftains of Ṭabaristān, the governors of Lārīdjān accorded a warm welcome to the ʿAlids. The chieftains of Lārīdjān and of Ḳaṣrān rallied to the support of the brother of Ḥasan b. Zayd known as al-Dāʿī al-Ṣaghīr (Ibn Isfandiyār, i, 233; Marʿashī, *TT*, 132). In 272/885-6, the *dāʿī* Muḥammad b. Zayd, brother of Ḥasan b. Zayd, attempted to take possession of Ray; on being defeated, he sought refuge in Lārīdjān (Ibn Isfandiyār, i, 252; Ibn al-Athīr, vi, 59). In the Saldjūḳ period, the phase of disorder which followed the deaths of Niẓām al-Mulk and of Malik Shāh (485/1092) had an effect on Lārīdjān. Having ordered his governors of Lārīdjān, of Rūyān and of Āmul to help him in the fight against the Ismāʿīlīs, Muḥammad b. Malik Shāh nominated as governor of Ray and of a vast area, including Lārīdjān, his young son Malik Aḥmad, whom he entrusted to the care of an *amīr* named Sunghūr-i Kučik. This Saldjūḳ policy, aimed at maintaining control of pro-Shīʿī regions, spread consternation among the Bāwandid Iṣpahbads (Ibn Isfandiyār, iii, 38). Nevertheless, Lārīdjān benefited —as did other regions of Iran before the Mongol ravages—from the decline of Saldjūḳ power. After a period of conflict with the Iṣpahbad Shāh Ghāzī Rustam I Bāwandī (534-58/1140-63) (see Ibn Isfandiyār, iii, 77; Āmulī, 126), Manūčihr, *marzbān* of Lārīdjān, turned Ḳalʿa Kuhrūd (in the down-stream area, later known by various names, including Kārū/Kārūd) into a place so prosperous that people of all professions, natives of India, of Egypt and of Syria, came and settled there (Ibn Isfandiyār, iii, 77 ff., 99); this *ḳalʿa* was destroyed in 783/1381-2 and later rebuilt (Marʿashī, *TT*, 213 ff.). Other fortified points are mentioned. The *ḳalʿa* of Lārīdjān (without further definition) is named in connection with various events (Ibn Isfandiyār, i, 297, 299; Āmulī, 109); Marʿashī mentions the *ḳalʿa* of Fulūl (*TT*, 19). Manučihr allied himself, with other chieftains of Ṭabaristān, to Shāh Ghāzī Rustam Bāwandī; his troops formed a part of the army which conquered Bisṭām/Basṭām and Dāmghān (Ibn Isfandiyār, iii, 94; Marʿashī, *TT*, 19; Āmulī, 131).

Abū Ḥarb, the eldest son of Manučihr, was a violent and irreligious man. He killed his father and his brothers (through trickery), renewed the alliance with Shāh Ghāzī Rustam, and fought alongside him against the *ustundār* Kay Kāwūs; after having been defeated, the latter went to war against the rebel Garshāsf. At the last military parade conducted by Shāh Ghāzī Rustam, Abū Ḥarb was among his army commanders (Ibn Isfandiyār, iii, 99 ff.; Marʿashī, *TT*, 22-3). Eventually, the people of Lārīdjān lost patience with Abū Ḥarb and his misdeeds, and killed him. His one-year-old son, Kīnkhʷār or Kīna-khʷār (i.e. "Avenger") was put into power by ʿAlī Lārīdjānī, the commander of Abū Ḥarb's army and of that of his father Manučihr. ʿAlī Lārīdjānī appointed himself *atābeg* and towards the end of his career he collaborated at Ray with the Saldjūḳ *atābeg* Ildegiz [see ILDEÑIZ] in carrying off "the treasures" of Lārīdjān (Ibn Isfandiyār, iii, 110-11; Marʿashī, *TT*, 107). The Lārīdjānīs rallied to the cause of the *iṣpahbad* ʿAlāʾ al-Dawla Ḥasan (surnamed "al-Malik al-Shahīd", 558-67/1163-71), maternal uncle of Kīnkhʷār. Shāh Ghāzī Rustam I and ʿAlāʾ al-Dawla controlled Ḳaṣrān, and, especially after the misconduct of Abū Ḥarb, Lārīdjān had practically lost its independence. Furthermore, "Amīr Lārīdjānī" incited the Saldjūḳ *atābeg* to recapture from ʿAlāʾ al-Dawla the *wilāyat-i Lārīdjān* "which had always been a part of ʿIrāḳ" (Ibn Isfandiyār, iii, 112). Under the *iṣpahbad* Ḥusām al-Dawla Shāh Ardashīr, a sizable portion of Lārīdjān formed part of the "darūn Tamīsha" (*ibid.*, 124). Ḥusām al-Dawla entrusted the government (*sardārī*) of Lārīdjān to the *iṣpahbad* Abū Djaʿfar Āsarb (Marʿashī, *TT*, 110).

At the turn of the 6th-7th/12th-13th centuries, the history of the region is poorly attested; the chronicles mention numerous journeys that passed through Lārīdjān, of which the *ḳalʿa* also constituted a refuge (for example for the mother, the wives and the children of Djalāl al-Dīn Muḥammad Khʷārazm-Shāh when he fled before the armies of Čingiz Khān: see Djuwaynī, *Taʾrīkh-i Djahān-gushā*, ed. Ḳazwīnī, *GMS*, xvi, ii, London 1916, 199). The relations between the Lārīdjānīs and the Ismāʿīlīs (energetically fought by Shāh Ghāzī Rustam I) and, in general, the politico-religious situation in the region on the eve of the Mongol invasion, remain obscure. It may also be noted that, according to Mustawfī, the *ḳalʿa* of Lār was included among the Ismāʿīlī fortresses conquered by Hūlāgū Khān in 654/1256 (*Taʾrīkh-i guzīda*, ed. Nawāʾī, Tehran 1339/1960, 527).

Following the Mongol invasion, the weakening of local powers resulted in the loss to Lārīdjān of part of its strategic importance (later Saldjūḳ, Mongol and Tīmūrid sources refer to the region by the name *wilāyat-i Lār*). It is, however, unknown to what extent the presence of the Mongols, experienced in operating in high-altitude areas, and the extension of nomadism which ruined the neighbouring districts, affected Lārīdjān (on these problems, see J. Aubin, *Réseau pastoral et réseau caravanier*, in *Le Monde iranien et l'Islam*, i, Paris-Geneva 1971, 105-30, at 116 ff.). It seems that the pasturages of the Lār were appreciated by the Il-Khāns. Arghūn Khān "had caused a fine palace (*kūshk-i ʿālī*) to be built at the summer resort of Lār, at the foot of Mount Damāwand; this place is now known by the name of Kūshk-i Arghūn" (Rashīd al-Dīn, iii, 229). This was no doubt the place where Ghāzān Khān solemnly adopted the Muslim faith in Shaʿbān 694/June 1295 (at least, this is the version given by some authors: d'Ohsson, *Histoire des Mongols*, Amsterdam 1852, iv, 131-2; ʿAbbās Iḳbāl, *Taʾrīkh-i Mughul*, Tehran 2536/1977, 256; J. A. Boyle, in *CHI*, v, 378). But details as to the site, the date, the number of Mongols converted on this occasion, etc., remain poorly defined in the sources. According to the leading chroniclers, it was at Fīrūz Kūh that, following the advice of his *amīr* Nawrūz, Ghāzān Khān was converted to Islam at the beginning of Shaʿbān 694/mid-June 1295 in the presence of the *shaykh* Ṣadr al-Dīn Ibrāhīm (Rashīd al-Dīn, *Djāmiʿ al-tawārīkh*, ed. Alizade, Baku 1957, iii, 294 ff.; Waṣṣāf, *Taʾrīkh*, Tehran 1338/1959, 316-17; Khʷānd-Amīr, *Ḥabīb al-siyar*, Tehran 1333/1954, iii, 144; Mīr-Khʷānd, *Rawḍat al-ṣafāʾ*, Tehran 1339/1960, v, 380). According to local tradition, it was in the valley of the Lār, at Kūshk-i Arghūn, that this conversion took place (Feuvrier, 239). It may also be noted that on numerous occasions Ghāzān Khān frequented the "Yāylāḳ-i Damāwand" (see Rashīd al-Dīn, *Taʾrīkh-i Rashīdī*, ed. K. Jahn, GMS, London 1940, index).

The Tīmūrids also thought highly of the pasturelands of the Lār. It was in the valley of the Lār that the Spanish ambassador Clavijo came, in June-July 1404, to visit the son-in-law of Tīmūr, Sulaymān Mīrzā, whom he found in the middle of his encampment of some three thousand tents (tr. Le Strange, London 1928, 169). Some days previously, on his way from Ardabīl, Tīmūr had broken his journey at the *wilāyat-i Lār*, in Kūshk-i Arghūn, which he

left for Fīrūz-kūh on 29 June (Yazdī, *Ẓafar-nāma*, ed. Calcutta, ii, 591, ed. Tehran 1336/1957, ii, 417).

As elsewhere in Iran, and especially in Māzandarān, Lārīdjān was affected in the 8th-9th/14th-15th century by the increasing power of socio-religious movements and of the *sayyids*. In 734/1333-4, Amīr Masʿūd Sarbadār forced the Il-Khān Tughā Tīmūr, governor of the Ḳaṣrān-i dākhil, to take refuge in the summer resort of Lār-i Ḳaṣrān (Āmulī, 182-3). In this period, the Marʿashī *sayyids* [*q.v.*] were all-powerful in Māzandarān. In the years 783-4/1381-3, Sayyid Fakhr al-Dīn, brother of Sayyid Kamāl al-Dīn, took possession of Ḳalʿa-yi Nūr; in two years, he took all the *ḳalʿas* from Ṭāliḳān to Lawāsān, including the *ḳalʿa* of the Lār and of Lārīdjān (Lawandar, near Rayna; Kārūd). Lārīdjān was then in the hands of Kiyā Ḥasan Kiyāʾī Ḍamāndar; Namārustāḳ, Daylārustāḳ, Tarīta Rustāḳ and Kārūd were under the control of Māzandarān (Marʿashī, *TT*, 213-14). In 795, Tīmūr exiled Sayyid Kamāl al-Dīn to Transoxania with his brothers and his sons. After his death, Shāhrukh allowed them to return to Māzandarān (Khwānd-Amīr, *Ḥabīb al-siyar*, iii, 22). In 821/1418, Sayyid Murtaḍā b. ʿAlī seized power in Māzandarān. He entrusted Namārustāḳ, Daylārustāḳ and Tarīta Ruṣtāḳ to his son Malik Kāwūs and gave him authority to wrest Lārīdjān from the hands of Kiyā-i Damāndar (Marʿashī, *TT*, 268). But other local potentates disputed control of the region with the *sayyids*, notably the Pādusbānids or Rustamdāriyya (who bore successively the titles of Iṣpahbad, Ustundār and Malik) and the Kiyā of Čulaw/Čalāb (see Rabino, 141 ff.). After the death of the Pādusbānid Malik Gayūmarth (857/1453), Rustamdār was shared between his sons Kāwūs and Iskandar, founders of the Banī Kāwūs (Nūr branch) and of the Banī Iskandar (Kudjūr branch). Under Malik Gayūmarth, Iskandar had been in control of Lārīdjān, Namārusṭāḳ and Kārūd. Conflicts between Kāwūs and Iskandar were numerous and prolonged; Djahān Shāh Ḳarā Koyūnlū intervened on a number of occasions, calling upon Amīr Kiyā Sayyid Muḥammad Gīlānī to settle the dispute between the adversaries (Mahdjūrī, ii, 75 ff.; Karīmān, *Ḳaṣrān*, 397-8).

In the 10th-16th century, the region remained under the control of the Pādusbānids. Under the Ṣafawid Shāh Ṭahmāsp I, it was shared between three cousins: Malik Bahman held Lārīdjān (formerly a dependency of Kudjūr), Malik ʿAzīz held Nūr and Malik Sulṭān Muḥammad held Kudjūr. At the beginning of the reign of Shāh ʿAbbās, Rustamdār was divided into three *nāḥiyas*: Malik Bahman holding Lārīdjān, Malik Djahāngīr b. Malik ʿAzīz holding Nūr, and Malik Djahāngīr b. Malik Sulṭān Muḥammad holding Kudjūr (*AAA*, ii, 399, tr. 696; 534, tr. 713). Malik Bahman was constantly at war with his neighbours, whom he endeavoured to dominate by force or by trickery. These internecine struggles inevitably gave encouragement to Shāh ʿAbbās I in his scheme to assert his power over the whole of Māzandarān. In 1000/1592, Malik Bahman welcomed to the summer resort of Lār a Ṣafawid expedition on its way to Khurāsān (Yazdī, fol. 58a). In 1001/1593, he laid siege to the *ḳalʿa* of Lawāsān, captured and then put to death the brother of Malik Sulṭān Ḥusayn Lawāsānī who was a favourite of Shāh ʿAbbās, and led away his wives and children to captivity in Lārīdjān (*AAA*, ii, 520-1, tr. 697, 714-15; Yazdī, fol. 65a). In the course of the second campaign in Māzandarān which Farhād Khān undertook on the orders of Shāh ʿAbbās I, he succeeded in capturing Malik Bahman (in 1005/1596-7), who was put to death (by Malik Sulṭān Ḥusayn Lawāsānī to avenge the blood of his brother, according to *AAA*, ii 522, tr. 698; by ʿAbd al-Ḳahhār Beg, son of Malik Sulṭān Ḥusayn, according to Yazdī fol. 73b; on Malik Bahman, see also Mīr Tīmūr Marʿashī, 273 ff.). Realising the futility of resistance, Malik Kay Khusraw, eldest son of Malik Bahman, surrendered. Shah ʿAbbās had commanded Muḥammad Beg Begdīlū Shāmlū to take possession of the *ḳalʿa* the brothers and the children of Malik Bahman, who were subsequently delivered to Malik Ḥusayn Lawāsānī; then he entrusted Lārīdjān as a *tiyūl* to a Ḳizilbāsh *ḥākim* (*AAA*, ii, 534-5 tr. 713-14). But the two Djahāngīrs of Rustamdār who had capitulated to Shāh ʿAbbās at the summer resort of Lār retained important functions: the Malik of Nūr was appointed governor of Sāwa; the Malik of Kudjūr at first retained his possessions as suzerain and became one of the trusted officers of Shāh ʿAbbās. Later, he rebelled as did other *maliks* of Rustamdār; their conspiracies were foiled and all were put to death. Thus was extinguished the power of the Pādusbānids (*ibid.*, 535-4, tr. 715 ff.).

The Ḳaṣrān-i dākhil and the summer resort (*yāylāḳ*) of the Lār were favourite haunts of the Ṣafawids. At the time when the Ḳizilbāsh *amīrs* enthroned Shah Ṭahmāsp I (931/1524-5), the *wakīl* Dīv Sulṭān Rūmlū established his summer quarters at Lār, before marching on Khurāsān which had been invaded by the Uzbeks (*AAA*, i, 46, tr. 78). On many occasions, Shāh ʿAbbās visited the *yāylāḳ-i Lār* (*ibid.*, ii, 399, 452, 854).

Although the history of Māzandarān and of Ḳaṣrān is relatively well-documented from the time of the Ṣafawids to the present day, points of reference concerning the Lār and Lārīdjān do not become plentiful until the Ḳādjār period. Ṭahmāsp II lived for two years in Māzandarān (1137-9/1724-6), in particular in Lārīdjān where he was joined by Fatḥ ʿAlī Khān Ḳādjār, who became his *sipah-sālār* (Mahdjūrī, 110 ff.; Iʿtimād al-Salṭana, *Mirʾāt al-buldān-i nāṣirī*, i 521). The chieftains of Lārīdjān and the potentates of Māzandarān took the side of the Zands against Muḥammad Ḥasan Khān Ḳādjār Ḳoyūnlū. Sabz ʿAlī Khān, leader of the dignitaries of Lārīdjān, prevented him from going to Āmul; the misconduct of Walī Khān, the envoy of the Ḳādjār chief, led to the revolt of "the people of the mountain and of the plain", under the command of Muḳīm Khān Sārawī, Afshārid governor of Māzandarān (Mahdjūrī, 123-4). After the death of Karīm Khān Zand (1193-1779), numerous Lārīdjānīs and Māzandarānīs allied themselves to Muṣṭafā Ḳulī Khān Ḳādjār, estranged brother of Āghā Muḥammad Khān (*ibid.*, 131). After defeating ʿAlī Murād Khān Zand and his coalition of Lārīdjānīs, Afghans and men from the Lur, Āghā Muḥammad Khān controlled the whole of Māzandarān and of Astarābād (end of 1194/1780). But in the conflicts in which he was continually at odds with his brothers, the Lārīdjānīs fought on the side of his enemies (Riḍā Ḳulī Khān, Mihdī Ḳulī Khān: *ibid.*, 132-3). Captured and then set free by Āghā Muḥammad Khān, Riḍā Ḳulī Khān again rebelled. With his Lārīdjānī *tufangčīs* (musketeers), he captured Āghā Muḥammad Khān, who was set free on the intervention of Murtaḍā Ḳulī Khān (*ibid.*, 133, Fasāʾī, i, 222; according to Sipihr, *Nāsikh al-tawārīkh*, i, 20-1, it was Djaʿfar Ḳulī Khān who liberated Āghā Muḥammad Khān). Beaten once more by the army of Astarābād, Riḍā Ḳulī Khān rallied to the cause of Ṣādiḳ Khān Zand. But

in 1196/1781-2, the Lārīdjānīs remained in the camp of the Zands. They joined forces with Amīr Gūna Khān, sent by ʿAlī Murād Khān to Māzandarān, on whom Āghā Muḥammad Khān inflicted a crushing defeat at Sabze Maydān: the cruelty of the Ḳādjār *khān* towards the Lārīdjānīs has remained proverbial in the region (Fasāʾī, i, 223; Mahdjūrī, 134). But in 1198/1783-4, Shaykh Ways Khān Zand, son of ʿAlī Murād, asserted his control over the whole of Māzandarān, Fīrūz-kūh, Lārīdjān and Rustamdar (i.e. Nūr u Kudjūr), Fasāʾī, i 224-5. The following year, Āghā Muḥammad Khān was obliged to recapture Māzandarān before proceeding to take possession of Tehran.

Under Muḥammad Shāh (1834-48), the *khān* of Lārīdjān enjoyed a quasi-independence. This semi-autonomy was founded upon control of the principal economic thoroughfare between Māzandarān and Tehran "in a fairly subtle equilibrium of forces and of services rendered with the sovereign who ruled not far from there" (de Planhol, 19, with reference to Aucher-Eloy, Thompson, d'Arcy Todd). Ask was at that time the local capital of the province. ʿAbbās Ḳulī Khān Lārīdjānī Sartīp (later Sardār) possessed a fine palace there (Buhse 229-30). This prince of Lārīdjān set about maintaining order in the region. He made himself a valuable ally of the Ḳādjār authority and of the *ʿulamāʾ* by quelling the Bābī insurrection [see BĀBĪS] of Mullā Ḥusayn Djināb-i Bāb al-Bāb at Shaykh Ṭabarsī/Ṭabrisī in 1265/1849 (see Mīrzā Ḥusayn Hamadānī, *Taʾrīkh-i Djadīd*, tr. E.G. Browne, London 1893, 52-3, 67 ff., and index; Mahdjūrī, 165 ff.). ʿAbbās Ḳulī Khān at that time occupied the highest rank among the officers of Māzandarān (Mahdjūrī, 176). The following year, he helped to re-establish order in Fārs with his Lārīdjānī horsemen; he entrusted the government of Kuhgīlūya and of Bihbahān to his Lārīdjānī officers and acted himself in the role of administrator (*ʿāmil*): Fasāʾī, i, 306-7. The prosperity of Lārīdjān is again indicated in 1860 (Brugsch, i, 295) and in 1862 (de Philippi, 256-9). At the start of the journey of Nāṣir al-Dīn Shāh to Māzandarān, in 1283/1866, ʿAbbās Ḳulī Khān presented himself to the *istiḳbāl* with all the officers of Māzandarān (Mahdjūrī, 177). Although the decline of the town of Ask became a constant process, at the time of Nāṣir al-Dīn Shāh's second visit to Māzandarān (1292/1875-6), Lārīdjān retained a degree of prosperity and still had its dignitaries (including *ʿulamāʾ* and *sayyids*): Mahdjūrī, 181 ff. But in 1875 an Italian general had under his command in Tehran a regiment recruited in Lārīdjān (von Call-Rosenburg, 142, quoted by de Planhol, 19, n. 23).

The last important figure of Lārīdjān in the Ḳādjār period was Mīrzā Muḥammad Khān, son of ʿAbbās Ḳulī Khān. Surnamed Amīr-i Mukarram, he was a senior functionary at the court of the Ḳādjārs. Outside Lārīdjān, he exercised jurisdiction over numerous villages of Āmul. During the upheavals of the Constitutional Revolution (1905-11), he was appointed governor of Astarābād and encountered hostility from members of the local *andjuman* (Mahdjūrī, 249). At the time of the dismissal of Muḥammad ʿAlī Shāh (1327/1909), he was obliged to confront his kinsman Amīr-i Aʿẓam Sangsarī and his coalition of religious activists and of Bakhtiyārīs. Amīr-i Aʿẓam plundered the treasures of Amīr Mukarram at Ask and carried them off to Tehran. In the course of a second expedition of Āmīr-i Aʿẓam to Lārīdjān, a large number of Bakhtiyārīs were killed (including their leader Imām Ḳulī Khān), *ibid.*, 258 ff. Although succeeding in retaining some of his influence, Amīr Mukar[...] Lārīdjānī was exiled to Kirmānshāh by Wu[...] al-Dawla in 1337/1918-9 (*ibid.*, 295). (J. Calmard)

LĀR, LĀRISTĀN, a Persian toponym which, in various forms (Lār, Lād, Lādh, Lāz, Alār, etc.) denotes an important town of Fārs and its surrounding region (Lār and Lāristān), an island and an islet in the Persian Gulf, and various villages and a region of pastures in southern Persia (Lār and Laridjān).

1. The town of Lār (lat. 27° 42′ N., long. 54° 20′ E.) is the chef-lieu of a *shahristān* (which has become a *farmāndārī*; see *Lāristān*, below) of the province of Fārs (*ustān-i Fārs*). It is situated on one of the roads connecting Shīrāz [*q.v.*] with the Persian Gulf ports and the Sea of ʿUmān (Daryā-yi ʿUmān), 366 km. from Shīrāz, 306 km. from Bandar Linga [*q.v.*] and 259 km. from Bandar ʿAbbās [*q.v.*]. Lār is an old station on the caravan route (9th-12th/15th-18th centuries), and lies at a height of 909 m. in a moderately mountainous region (*ca.* 1,000 to 2,000 m. high). Because of the region's aridity, the town's drinking water comes from wells and from cisterns for collecting rain-water (*birkas*). For irrigation, a network of *ḳanāts* [*q.v.*] is used. Unlike other towns in Fārs, and despite earthquakes, Lār has retained relatively well its former appearance, e.g. in its wind-towers (*bād-gīrs* [*q.v.* in Suppl.]), its labyrinths of streets, alleys, etc. Only a single new avenue, the Khiyābān-i Himmat, crosses the town from north to south. The most interesting monuments comprise:

(1) The stone-built fortress Azhdahā Paykar ("having a dragon's body") which dominates the town from a rocky spur. According to legend, its well contains an army and treasures belonging to the Ḳā'im-i Āl-i Muḥammad (see the extracts from the *Tuḥfat al-gharā'ib*, ms. of the B.L., Or. 10999, ed. J. Aubin in *Farhang-i Īrān-zamīn*, vi/2-3 [1337/1958], 177). The ancient castle of the kingdom of Lār is said to have been destroyed by an earthquake in 1593 (the ruins are mentioned by 17th century European travellers; see Calmard, 150). The region is full of fortified places, in particular, at Girāsh, most of them in ruins (on the *ḳalʿas* of Lār, see the *Mukhtaṣar-i Mufīd*, ed. Aubin, in *ibid.*, 174).

(2) The Bāzār-i Ḳayṣariyya ("imperial market") which forms, with the caravanserais surrounding it, a remarkable architectural ensemble. This is a covered bazaar of the *čahār sūḳ* type (i.e. cruciform, with four streets for merchants and artisans, or four sides), with an almost-square plan (117 m. E.-W., 124 m. N.-S.). It is built out of dressed masonry covered with stucco. Its dome (*ṭāḳ, gunbad*) is 18 m. high, and has a *bād-gīr* providing fresh air and ventilation. Inscriptions indicate various dates of building or reconstruction: under Shāh ʿAbbās in 1014/1605-6, by Ḥādjdjī Ḳanbar ʿAlī Beg Dhu 'l-Ḳadr (see Fasā'ī, ii, 283), and under Nāṣir al-Dīn Shāh in 1300/1882-3, by Fatḥ ʿAlī Khān, governor of Fārs. This *bāzār* was allegedly the model of the Bāzār-i Ḳayṣariyya of Iṣfahān (built 1029/1620) and of the Bāzār-i Wakīl of Shīrāz (see Allāh Ḳulī Islāmī, *Bāzār-i Ḳayṣariyya-yi Lār*, in *Hunar wa Mardum*, no. 139 [1353/1974], 70-3; this article makes no mention of the evidence from European travellers of the Ṣafawid period, for which see Calmard, 154, and below).

(3) The Masdjid-i Djumʿa, for which we have no exact, historical description. Ibn Baṭṭūṭa mentions a dervish convent (*zāwiya*, i.e. *khānaḳāh*) of the famous Shaykh Abū Dulaf Muḥammad. At the opening of the 17th century, there was situated near the Ḳayṣariyya bazaar "a very great mosque, the only one of the town"; it contained the marble tomb of a saint constructed "in a fine court outside the mosque" (Rebelo, 109). A marble *miḥrāb* of Gudjrātī style, allegedly dating from the 8th/14th century

Map 1. The routes from Shīrāz to the Gulf via Lār (1638-1706). (After Jacqueline Calmard, *Les routes de Chiraz au Golfe Persique.*)

and coming from Lār, is preserved in the Fārs Museum at Shīrāz. This *miḥrāb* poses an historical problem; was it brought to Persia in its present state? And were the inscriptions on it added in Persia? (see R. Howard, *The Lar mihrab*, in *Art and Archaeology Research Papers*, ix [April 1976], 24-5, with a photograph which does not permit the decipherment of the inscriptions).

Lār is divided into 14 quarters (*kuy*). Like most modern Persian towns, it now takes in several suburban areas. It has all the organs of civil administration, a military garrison, schools (a *dabīristān* and four *dabistāns*) and an airport (to the south-east of the town). Although the climate of Lār is relatively more tolerable than that of the Gulf coasts, various illnesses are rife there, in particular trachoma and filiarosis, both for long endemic in the region. The demography of the town has followed the evolving of the natural conditions and the historical and economic vicissitudes of the region (see below).

2. Lāristān. *Geographical sketch.* As a province of southern Persia on the Shīrāz—Bandar ʿAbbās axis, Lāristān is generally reckoned as part of the *garmsīrāt* or warm regions of Fārs, with which it was integrated at the opening of the 11th/17th century. Since its influence spread over the neighbouring regions (see Map 2), its natural borders have fluctuated. In general, they may be fixed as follows. In the north-east and north, the old regions of Sabʿa (centred on Furg) and of the Shabānkāra (centred on Īdj, now Iṣṭahbānāt; Lāristān takes in Djūyum, to the south of the Dārāb). In the east, along a line passing half-way between Djahrum and Djūyum and connecting with the Gulf littoral in the region of Gawbandī (embracing the lands of Bīd Shahr, Khundj, ʿAlāmarwdasht and Galladār). In the south, the Gulf littoral (ports and islands of the Gulf of ʿUmān, embracing Lashtān, from Cape

Map 2. Lāristān and its dependencies in the 19th century, after the *Fārs-nāma-yi Nāṣirī*.

* Bīkha, meaning a steep-sided valley, derived from *bīkh*, "river-bed", in Lāristānī (Iḳtidārī, *Farhang*).
** Fūmistān, from *fūm*, meaning "corn" in vernacular Persian.

Nāband to Bandar ʿAbbās. In the east, Kawristān. In former times, certain adjoining regions (such as Furg, Ṭārum and Hurmuz) have been on occasion attached to Fārs, on others to Kirmān; Kawristān/Kawuristān was taken over by the Shabānkāra in the 7th/13th century (see below, on history).

As noted by numerous travellers, this region has distinct geographical features. Nevertheless, it has never formed the object of detailed geological studies; as in regard to archaeology (see below), only the peripheral zones have been studied. The region is situated to the south of the main spine of the Zagros (the "Main Zagros thrust line", according to A. Ruttner and J. Stöcklin, in *Bull. Amer. Assoc. of Petroleum Geologists* [1968]), i.e. on the edge of the Arabian formation-level which juts forth a salient into the region of Bandar ʿAbbās. In certain marginal zones belonging to the Cretaceous period there are included some Eocene period formations, such as the "Ginau series" (at Kūh-i Ginaw; see Pilgrim [1924], 59 ff.). The autochthonous, marginal folds which make up the mountainous terrain which is characteristic of Lāristān are clearly marked out. With their east-west orientation, they are made up from a basis of an epicontinental sedimentation; their composition (calcareous rocks, marls and gypsums) suggests the existence of fairly shallow seas. In their immediate vicinity are often found domes of salt, generally considered as being of Cambrian origin. The main concentration of these domes of salt is located in one part and another of a line connecting Lār and Bandar ʿAbbās (see J. V. Harri-

son, in *Camb. hist. of Iran*, i, 179 with map). These marginal folds are closed on the south by the Kūh-i Khamīr (opposite the island of Kishm [*q.v.*]), which is made up of calcareous rocks described as "foetid or putrid" (hippuritic limestone) belonging to the structure bearing the special name of the "Khamīr series" (see Pilgrim [1924], 15, 60). The "Hurmuz series", conglomerates of rock found on the peripheries of most of these salt domes, stretch as far east as Ṭārum and Kirmān and possibly further in to Lāristān (Pilgrim classes them as Jurassic, *ibid.*, 16, and Harrison as Cambrian, *ibid.*, 115).

The orography of the region is characterised by a relief which is lower than elsewhere in Fārs (especially along the axes Shīrāz-Bushire and Shīrāz-Bandar Ṭāhirī) or further to the east in Makrān. Along the Djahrum-Lār road, the highest point is 2,100 m., and only along the edges of Lāristān is the 3,000 m. mark passed (Kūh-i Furgūn, 3,280 m.). Elsewhere, heights are more usually between, 1,000 and 2,000 m. Lāristān suffers from frequent earthquakes, some of which have been described or noted by chroniclers and travellers; six have been counted between 1953 and 1960. In 1960, one of them caused much destruction and numerous casualties at Lār and Girāsh (see photographs in the *National Geographic Magazine* [Jan. 1961], 68-9). The hydrography of Lāristān is very clearly marked by aridity. Except along the margins, snow does not remain long in winter, and the rainfall is feeble (at the most, 100-200 mm. per annum). The water intended for consumption or for irrigation is frequently brackish (see below). The rivers with a regular flow are very erratic; rainstorms gouge out ravines across crossing-routes, and floods are often the cause of catastrophes. The most important river—known, with local variants, as the Rūd-Khāna-yi Shūr Mihrān runs from west to east, from the *dihistān* of Farāmarzān to Bandar Khamīr. It is totally useless for agriculture; its flow is very feeble, and it can be forded at all seasons (Razmārā, *Farhang-i djughrāfiyā-yi Īrān*, vii, 208).

The region has a sub-tropical climate, hot and humid along the coasts, arrid and torrid in the interior (see A. H. Adle, *Regions climatiques et végétation en Iran*, Tehran 1960, Persian text 40-1, Fr. text 8-9). Although certain traces of a continental climate may be felt at Lār (untouched by the monsoons), the variations of daytime and nocturnal temperature are small, and towards the Gulf, the temperatures become torrid (Calmard, 94 ff.). Winter cold is only met with along the Lār-Djahrum route. In Lār, the houses are cooled by *bād-gīrs* (*ibid.*, 95), and beyond Kawristān, a drying wind called *bād-i samūm* ("poisonous") blows (*ibid.*, 97). There is a great contrast between the plains of the littoral affected by the monsoons (with a hot and humid climate) and the upland regions (mountains, elevated plains and desolate plateaux) of the interior which have a dry climate, with mild winters and very hot summers. The palm-groves of the interior offer, however, shelter for the coastal peoples at the period of greatest heat.

Socio-religious aspects. The story of the population of Lāristān is an extremely complex one. Heterogeneous groups have been subsequently added to an ancient Iranian stratum of agriculturists and pastoralists. Elements described as Mongol were still in course of sedentarisation in the Kurbāl district at the end of the 7th/13th century (Aubin, *Lar médiévale*, n. 24). The presence of Turkmens, who intervened in the affairs of Lār at the beginning of the 14th century, presents an historical problem (*ibid.*, 496, and below). From the 10th/16th century onwards, travellers mention the presence of numerous nomads. Kashkāʾī groups spent the winter in the Khundj district (*Le Fars*, 17, 21). Some Bahārlū had become sedentarised and lived in tents on the plain of Yazd-i Khʷāst (*ibid.*, 27). Some Bāṣirī spent the winter in the districts of Sarwistān and Kurbāl, and some Nafar occasionally passed the winter in Lāristān (*ibid.*, 31-2). Some nomadic or semi-nomadic families (*tīra*) of Turkish origin have been recorded at Durz, Sāyibān, Karmūsta(dj), Ṣaḥrā-yi Bāgh, Ashkanān, Bīd Shahr and Djūyum; and some Arabs and Bāṣirī at Djūyum, Harm, Kāriyān and Bīd Shahr (see the names in Razmārā, *Farhang*, vii, 209; Iḳtidārī, *LK*, 15). There are sedentary Arab elements along the coasts, at Bandar ʿAbbās, at Bandar Linga (Ḳawāsim [*q.v.*] known locally as Djawāsim) and in the interior (notably the Djahāngīriyya/Djuhūngīra, cf. the *shaykhs* of Bastak). The Banyans, Hindu merchants also called Multānīs (numerous at Bandar ʿAbbās and at Bandar Kung in the Ṣafawid period), used to play an outstanding commercial role, and there are still residual groups of Hindus in Lāristān. There used to exist an important Jewish community at Lār, Gilār, Djahrum and Hurmuz, and Lār was a centre of Hebraic learning. At the beginning of the 11th/17th century, a Jew from Lār became a convert to Islam, assumed the name of Abu 'l-Ḥasan Lārī and secured from the Shīʿī *ʿulamāʾ* the putting-into-force of discriminatory measures against the Jews. These measures were incorporated in a code to be applied to all the Jews of Persia, who had to wear special, distinctive clothing (a hat or piece of coloured cloth), and they underwent various persecutions under ʿAbbās I and his successors. In the 19th century, there were massacres, forcible conversions, expulsions, etc., and the Jews of Lār, Djahrum, Fasā, etc. emigrated to Shīrāz (the main items of bibliography about the Jews of Lār are to be found in L. Loeb, *The Jews of Southwest Iran, a study of cultural persistence*, diss. Columbia University 1970, 31 ff., with translations of the "restrictionary codes", Appx. I, and chronological lists of intimidatory measures, Appx. II; on Abu 'l-Ḥasan Lārī, see also Ḥabīb Liwī (Levy), *Taʾrīkh-i Yahūd-i Īrān*, Tehran 1339/1960, iii, 224 ff.).

Islam in Lāristān was notable for the preponderant influence of the Sunnī *ṭarīḳas* or dervish orders: the Isḥāḳiyya/Murshidiyya, the Dānyāliyya (at Khundj and Lār), the Banī ʿAbbāsī (at Bastak), etc. The Twelver Shīʿism imposed by the Ṣafawids only succeeded in implanting itself in Lāristān to a partial extent, and numerous troubles broke out in the post-Ṣafawid period, in the 18th and 19th centuries (see Aubin, *Les sunnites du Lārestān*, and below). The dichotomy thus created remains very apparent today, since the greater part of the urban and village communities are in majority Shāfiʿī Sunnīs. The sedentary Arabs of southern Lāristān are Sunnīs. Amongst the tribal groups, it appears that today, only the Turkish tribes are both nomadic and Shīʿīs (Aubin, *op. cit.*, 157 n. 8). Non-Islamic practices have been noted among the peoples of African origin along the coasts and in the islands (see below, on Lārak).

The population structure has been heavily affected by natural factors: earthquakes, floods, droughts, polluted water sources, locust-plagues, etc. These last have been the cause of dearths and illnesses: ophthalmia (from the sand storms), malaria, dysentery,

and above all the filiarosis peculiar to Lāristān, caused by a parasite present in particular in the stagnant water of cisterns, the guinea-worm or *Filaria medinensis*, *payaw/piyūk* in Persian and *peve* in Lāristān (see Iḳtidārī, *Farhang*, 67). Accidents of history have also been the cause of depopulation (destructions, sackings, massacres, exoduses, deportations, etc.). Despite the relative economic florescence of the region during the 14th-18th centuries, the Lārīs have continued to emigrate, above all towards Muslim India, where they have served in the army and in the administration.

Taking into account the lack of preciseness in the evidence, the demography of the region as a whole is difficult to delineate. The only data which are even a little sure concern the town of Lār itself, and these are given below (unless there is an indication to the contrary, these items of information pertain to the town or the urban agglomeration of Lār; one should reckon 6 persons per family or household): 4,000 heads of families in 1523 (Tenreiro); 4,000 households in 1638 (Mandelslo); 50,000 inhabitants at the beginning of the 18th century (English estimate); 15,000 inhabitants in 1808 (a figure given to Dupré, who found it exaggerated); 1,200 households in 1881 (information given to Stack, who estimated the population at 6,000 inhabitants); 2,500 families (1913); 11,656 inhabitants (*ca.* 1950); 14,188 inhabitants (1956); 17,000 inhabitants (1960 estimate). In 1966, the *s̲h̲ahristān* comprised 137,303 inhabitants and the town of Lār 37,198. The preliminary results of the 1976 census (the only information so far published) deal only with the *s̲h̲ahristān* of Lār, and give a population of 183,369, 52,465 being urban and 130,904 rural dwellers.

Language and literatures. In addition to Persian, Arabic (spoken on the coasts) and Turkish, Lāristān has its own particular dialect, which has been used by popular poets of the region; their verses have been partly gathered together in written form and studied (see the references in Minorsky's *EI*[1] article). Some proverbs in *lāristānī* have been published (Iḳtidārī, in *FIZ*, xi/2-3 [1333/1954], 233-53), as well as vocabularies: K. Kamioka and M. Yamada, *Larestani studies. i. Lari basic vocabulary*, Tokyo 1979 (not seen). Some works in Judaeo-Persian have been written at Lār, which must have been the centre for a school of scribes, translators, copyists, etc. (see Loeb, *op. cit.*, 49 ff.). The fate of the Jews of Lār has been put into Persian verses (mixed with dialectal terms) by the Jewish poets (on whom see Ḥabīb Liwī, *op. cit.*, 270-1), notably by Bābāʾī Luṭf Kās̲h̲ānī and Bābāʾī Farhād Kās̲h̲ānī (cited at length by Liwī, 224 ff.).

Numerous littérateurs originally from Lāristān have written in Persian in all the literary genres: poetry, grammar, philosophy, mysticism, *fiḳh*, historiography, etc. (see the lists cited by Rāzī, *Haft iḳlīm*, ms. India Off. Libr., cat. Ethé, i, 397, fol. 111a-b; Fasāʾī, ii, 284 ff.; Iḳtidārī, *LK*, 135-203. To these one should add Nīmdihī, a writer of the 9th/15th century, on whom see Aubin, in *REI* [1967], 61-81; Karāmatī [idem, *Les sunnites du Lārestān*, 155]; S̲h̲ayk̲h̲ Aḥmad Faḳīhī [*ibid.*, 170 n. 1]; etc.).

Economic aspects. Though generally considered as one of the poorest regions of Persia, Lāristān is not without natural resources. Sulphur is found in many places, and is fairly easily exploitable: in the coastal regions, at Bustāna (to the west of Bandar Linga) and at K̲h̲amīr (to the east of Bandar Linga); in the interior, at Karmūsta(d̲j̲), to the south-east of Lār, etc. In the 19th century, the sulphur mines of Lāristān were quite productive (see Pilgrim [1908], 155 ff., [1921], 343 ff.). Gypsum (*gač*) is frequent everywhere, and is easily exploitable along the littoral (Pilgrim [1908], 157-8). The iron ore and the salt of the "Hurmuz series" are more difficult to exploit. There is also some copper, unexploited, at "Karmoussah" = Karmūsta(d̲j̲), see Dupré, i, 431. Saltpetre, taken from nitrous lands and abundant in the region of Lār, yields material for gunpowder (at Girās̲h̲, to the east of Lār; Dupré, *loc. cit.*). On the minerals of Lāristān, see also Fasāʾī, ii, 338-9. After having been famous for its bows (see below), Lār was also famed for its firearms (Calmard, 157). Various manufactories existed at Evaz (*ca.* 30 km. north-east of Lār; see Dupré, *loc. cit.*; Karāmatī, 48-9).

The natural vegetation covering is fairly meagre. However, Lāristān is relatively well-wooded. There are to be found varieties of tamarisk, acacias, conifers (Adle, *op. cit.*, 10), and the jujube tree (*kunār*) is also to be found. The *gaz* wood, which is very hard and solid, is used for cabinet-making and for timber framing. Various spiny shrubs, such as the *kahūr*, are enjoyed by camels. The region falls completely within the date-palm zone, which is cultivated in the oases of the interior. The date harvest occupies a seasonal work-force, and as well as dates, cotton, tobacco (of good quality) and mustard are grown and exported (*Le Fars*, 163). In some places, opium poppies, sesame, etc. are cultivated. On the stony plains between Lār and Bandar ʿAbbās, asafoetida, the exudation from the roots of certain varieties of *Ferula foetida*, used in the pharmacopeia as far as in Europe, is gathered (Calmard, 115-16). Amongst products of an animal origin, the "bezoar" has been noted (see below). One should also note the raising of and trafficking in camels (Dupré, i, 441; *Le Fars*, 163); a similar trade in horses, exported to India (see below); and one in sheep, whose skins were the subject of an extensive trade throughout all of Lāristān (Dupré, i, 453).

The basic problem remains that of water-supply. The water from wells and watercourses is most often brackish. Cisterns for rain water (*birkas*), in various patterns (hexagonal, circular, etc.), are to be found in all the inhabited spots and at road stages. Except in certain regions of the north, in particular at those of D̲j̲ūyum and K̲h̲und̲j̲, where irrigation by *ḳanāts*, wells (*gāvčāhs*) and springs is found, dry farming is generally done (*daymī*, see Razmārā, *Farhang*, vii, 209). In the date-palm oases of the interior, these are often consumed on the spot. In addition to dates, the food supply comes, according to local possibilities, from cereals, products of market-gardening, citrous fruits, specimens of the gourd family, milk products (cows, goats, sheep), poultry, etc. Travellers have noticed the abundance of game (ibexes, mouflons, partridges, quails) and the excellent truffles of Lār. On occasion, grasshoppers are also appreciated (Calmard, 120-1). Along the coasts and elsewhere in Lāristān, fish is fed to animals, including to camels, asses and even to bovines and sheep (*ibid.*, 124). There is a condiment, peculiar to the region, made from a fish base and spices (*māhiāba* or *māyāba*, called *mahva* in Lāristānī; see Iḳtidārī, *Farhang*, 203-4, and Fasāʾī, ii, 283, where its making is described).

As well as the making of arms, local products include cotton cloths and carpets (*gilīms*, *ḳālīs*). Except in period of disturbance, the agro-pastoral sedentary and the nomadic economies complement

each other (i.e. exchange of agricultural products and manufactured goods for the products of stock-rearing, carpets, etc.).

The economy of Lāristān was relatively prosperous in the 9th/15th to the 12th/18th centuries, but suffered in the post-Ṣafawid disturbances and the interruption and ending of international trade (see below). The profession of caravaneer (coupled with the rearing of camels, mules, asses, etc.) used to occupy an important proportion of both the town and rural population. From this economic activity in the past, the people of Lāristān have retained an interest in the commerical life; one meets, above all along the Gulf shores, numerous peddlers (*pīlawars*). Also, the profession of arms (cf. the famous *tufangčis*) has continued to attract a good number of Lārīs.

Historical evolution. Lāristān or the land of Lār does not emerge clearly in Persian history till the 7th-8th/13th-14th centuries. Until then—apart from a few sparse items of information about the neighbouring regions or about certain small places (Yāḳūt speaks of "Djuwaym Abī Aḥmad", i.e. Djūyum)—its past belongs almost exclusively to the little-known history of the kingdom of Lār. There are doubts concerning the localisation of this last according to mythical or legendary history. Minorsky (*EI*[1] art. *Lār*) proposed to equate it with the land of the dragon Haftān Bokht (or the *Haftvād* of Firdawsī's *Shāh-nāma*) which Ardashīr Pāpakān killed. This dragon is said to have lived in the village of Alār in the *rustāḳ* of Kodjārān, one of the *rustāḳs* bordering on the Gulf of the province of Ardashīr Khurra (al-Ṭabarī, i, 820). The variants Gulār (*Kārnāmak*, tr. Nöldeke, 50), Kočārān (*ibid.*) or Kudjārān (*Shāh-nāma*, ed. Mohl, v, 308) do not help in identifying it. Alār is the name of an island (see below); Kudjār, in the *bulūk* of Galladār (Fasā'ī, *Fihrist*), borders on Lāristān (of which it forms part, in the large sense). At the present day, one finds several villages in Lāristān whose names might well be variants of Gulār (Iḳtidārī, *LK*, 46 n. 2; Gilār belongs to the *bakhsh* of Djūyum, Razmārā, *Farhang*, vii, 202). But there is also a Kulār in the *shahristān* of Bū-shahr (*ibid.*, 187), a Kūlār in the *bulūk* of Čahār nāḥiya (Fasā'ī, *Fihrist*), etc.

Thus the localisation of the land of the dragon Haftvād within the imprecise borders of Ardashīr Khurra (also called Īrāhistān) remains problematical. Moreover, a legend which could have some basis of genuineness places the home of Haftvād in the region of Bam (Aubin, *Lar médiévale*, n. 3). The place-name Marak-i Lārān appears in the *Bundahishn* (D. Monchizadeh, *Topographische-historische Studien zum iranischen Nationalepos*, Wiesbaden 1975, 141). A village called Lār exists in the *shahristān* of Čāh Bahār (in the old *ustān* of Kirmān wa Makrān), populated by Sunnī Balūčīs (pop. 220 in *ca.* 1950, see Razmārā, *Farhang*, viii, 383).

According to a *bayt* attributed to Firdawsī (lacking in the known editions of the *Shāh-nāma*, but cited in the *Burhān-i ḳāṭi'*, whence Vullers, *Lexicon*, s.v. *Lād*; Fasa'ī, ii, 283, etc.), the town or region of "Lād" was allegedly "given" to Gurgīn Mīlād by the Kayānid Kay-Khusraw when he renounced the world and distributed the Persian lands to his dignitaries. The passage from *d* to *r* is found in Armenian, in Tātī (Minorsky, *EI*[1] art. *Lār*; J. Darmesteter, *Etudes iraniennes*, i, 73) and in various Iranian dialects (see G. Lazard, *La langue des plus anciens monuments de la prose persane*, Paris 1963, 156). Previously, Lād seems to have had another name (*AAA*, tr. Savory, ii, 807).

According to a legend as generally current in southern Persia as in Lāristān, the people of Lār in Fārs are said to have come from Lār at Damāwand (see Lār and Lāridjān), whose cold climate in winter they were unable to endure (Fasā'ī, ii, 281 ff.). Although one can hardly use this legend as historical material, there are toponymical resemblances between the two places: Kūh-i Alburz in both places (to the south-east of Djahrum in Lāristān); a defile (*gardana*) Kulūn-i Bastak of Lār at Damāwand (Lāridjān) and the settlement of Bastak in Lāristān (Iḳtidārī, *LK*, 47, n. 4; Muwaḥḥid, *Bastak*, 6).

According to another tradition, the foundation of Lār came from one Balash (Valakhsh), son of Fīrūz (Pērōz), see Razmārā, *Farhang*, vii, 209, and Dihkhudā, *LN*, s.v. Lār.

Archaeological information gives us only very imprecise material on the past of Lāristān. Investigations have revealed numerous "Sāsānid" traces, above all in the western border district. On Galladār (formerly Khundjūfāl), see Sir Aurel Stein, *Archaeological reconnaissances in North-Western India and South-Eastern Iran*, London 1937, 213-25; on the *čahār-ṭāḳs* of Kāriyān and of Maḥallča, near Fishvar, see L. Vanden Berghe, in *Iranica Antiqua*, i (1961), drawing, 196, and maps; Aubin, *Lar médiévale*, n. 3; idem, *Survie de Shilāu*; and for an archaeological survey in southern Lāristān, see Stein, in *GJ*, lxxxiii/2 (1934), 130 ff.

The list of princes of Lār, from Gurgīn Mīlād up to the 16th century, has been partially reconstructed by J. Aubin from the Ṣafawid sources (above all, from Ghaffārī, *Djahān-ārā*, ms. B.L. Or. 141, Add. 7649/1; Rāzī, *Haft iḳlīm*, ms. I.O.L. (cat. Ethé, i, 397) and ms. B.N. Paris, Suppl. persan, 357; Ḥasan Beg, *Aḥsan al-tawārikh*, ms. B.L. Or. 1649; Münedjdjim-Bashī's *Ṣaḥā'if al-akhbar* (cf. Iḳtidārī, *LK*, 69-71) add nothing to this list, which replaces that of Minorsky in *EI*[1] art., based on a single ms. of the *Djahān-ārā*). Information on this princely family only becomes reliable after 594/1198. Between the 7th/13th and 10th/16th centuries fifteen *amīrs* followed each other, son succeeding father. But the list has some vague points; Ibn Baṭṭūṭa's evidence (according to him, the sultan of Lār was a Turkmen and not a descendant of Mīlād) and that of other sources does not tally. Also, the chronology becomes uncertain for the last five reigns, in the 10/16th century, *Lar médiévale*, 496 ff.).

As Aubin has pointed out, the problem of the "rise" of Lār in the 13th and 14th centuries can only be approached indirectly, as a reflex of the establishment of a new route Hurmuz-Lār-Shīrāz (*op. cit.*, 491). This particular problem is connected with the more general one of the evolution of the maritime outlets of Fārs and Kirmān. The ruin of Sīrāf (5th/11th century) and its problematical survival linked to the development of the island of Ḳays/Kīsh [see ḲAYS] (6th-8th/12th-14th centuries) caused an eastwards displacement of the ports and routes of the Persian Gulf. New towns grew up in the *garmsīrāt* of Fārs: first of all Fāl/Bāl, a place to which the Sīrāfīs, menaced by the Gulf pirates and the tribes of the interior, could fall back, and then Khundj, situated at the crossroads of the *garm-sīrāt* routes, on the Ḳays-Shīrāz axis and the transversal axis towards Lār and Hurmuz. In the 7th-8th/13th-14th centuries, a complicated play of interests brought the various socio-economic small groups and local powers into conflict. Around 700/1300, the dervishes of Khundj secured from the Ṭībī merchants the cession of the isle of Djarūn to the princes of Hurmuz,

and these last acknowledged them till the time of the Portuguese domination (Aubin, *Princes d'Ormuz*, 94-5; *Survie de Shilāu*, 26). Around 700/1300 also Ḳays was occupied by the Ormuzis, and henceforth, the international transit trade via Hurmuz and the Ḳays-Shīrāz route was abandonned.

Although Lār is described in the 8th/14th century as a prosperous town (by Ibn Baṭṭūṭa, see below), it does not seem to have played any important political role nor to have excited the envy of its neighbours in mediaeval Persia. The sole exception to this state of affairs seems to have been the annexation in the 7th/13th century of Lār by the Shabānkāra, its northern neighbours who controlled eastern Fārs and who had spread into Kirmān. According to Aubin (*Lar médiévale*, 499-500), this involved an episode in the fight between the Shabānkāra and Salghurid Fārs. From the beginning of his reign, the Salghurid Abū Bakr b. Saʿd (628-58/1231-60) began a policy of dominating the Gulf. In this kind of race to the sea, he clashed with other local powers: Muẓaffar al-Dīn Shabānkāraʾī and, over control of the island of Ḳays, the prince of Hurmuz. It was probably in 628/1230-1 that Muẓaffar al-Dīn seized Lār; the territories annexed extended to the Gulf shores (not precisely delimited in the west, but to Kawristān, the frontier with the kingdom of Hurmuz, in the east, see Aubin, *op. cit.*, 500). Lār's orientation towards the Gulf and its prosperity in the 8th/14th century are confirmed by various sources. Mustawfī —who does not use the term Lāristān but that of *wilāyat-i kinār-i daryā* "region along the sea-coast"— says that most of its inhabitants are merchants who travel by sea and land, and corn, dates and cotton are grown there (*Nuzha*, 139, tr. 138). Ibn Baṭṭūṭa's words, who visited Lāristān (probably in 748/1347), pose certain problems, especially in regard to dating (see I. Hrbek, in *ArO*, xxx [1962], 446 ff., and Aubin's remarks, *Survie de Shilāu*, 23, n. 20, 29, n. 68, 31, n. 92). He describes Lār to us as "a large town with springs, considerable streams and gardens". It had large, well-built bazaars. He lodged in a *zāwiya* of Shāfiʿī dervishes, who welcomed travellers. Not only the dervishes but also the brigands of Lāristān were organised for trading (Aubin, *Lar médiévale*, 500; Ibn Baṭṭūṭa, ii, 240-1, tr. Gibb, ii, 405-6).

We know from other sources, complementing Ibn Baṭṭūṭa's information, that the hereditary *shaykhs* of the *zāwiya* of Lār came originally from Khundj (Aubin, *Survie de Shilāu*, 32, n. 98). The religious situation at Khundj in the 8th-9th/14th-15th centuries is unclear. In the 7th/13th century, this little town became the seat of a *khānaḳāh* [*q.v.*] whose *murshid* was Shaykh Dāniyāl, affiliated to the Isḥāḳiyya or Murshidiyya order. In addition to the rich *zāwiya* of Shaykh Abū Dulaf Muḥammad (Sh. Dāniyāl's successor), Ibn Baṭṭūṭa saw at Khundj another Shāfiʿī *zāwiya* of an imprecise nature. It seems that in the 9th/15th century the *khānaḳāh* of Sh. Dāniyāl fell into decline, whilst that of Abū Nadjmī (that visited by Ibn Baṭṭūṭa? In 1347?) was more flourishing (Aubin, *op. cit.*, 30 ff.). According to Muwaḥḥid, *Bastak*, 29-30, the one visited by Ibn Baṭṭūṭa was that of the *shaykh* of the Banī ʿAbbāsī, Ḥādidjī Shaykh ʿAbd al-Salam Khundjī, known under the *laḳab* of Ḳuṭb al-Awliyāʾ (d. aged 85 in 746/1345-6).

According to various sources, two Indian princes are said to have invited the poet Ḥāfiẓ Shīrāzī [*q.v.*] to their court. At the invitation of the Deccani sultan Maḥmūd Shāh of the Bahmanids, Ḥāfiẓ proceeded to Hurmuz via Lār with the intention of setting sail for India by ship; but since a storm blew up at the time of his departure, he is said to have abandoned the plan (see Browne, *LHP*, iii, 285-7). Some coins struck in Lār (a gold piece of the Muẓaffarid Shāh Shudjāʿ, and some Tīmūrid (and Čaghatayid?) coins) testify to the interest of certain princes in the town during the 8th/9th/14th-15th centuries (references given by Minorsky in his *EI*[1] art.).

In the 8th/14th century, the *garmsīrāt* of Fārs were divided into two antagonistic politico-administrative groupings, the *bilād Lār* and the *bilād Khundj-ū-Bāl* (cf. Ibn Baṭṭūṭa) "de structure interne différente et de visées extérieures opposées" (Aubin, *Survie de Shilāu*, 23). Khundj-ū-Fāl had amicable relations with the principality of Hurmuz, whilst the principality of Lār employed an aggressive policy towards this last and even tried to annex it (see below). Although Khundj-ū-Fāl possessed—in the same manner as Shīrāz or Hurmuz—a class of numerous, experienced notables, one only finds there, at a late date, a powerful family (that of the *raʾīs Fālīs*) who, well after the decline of Khundj-ū-Fāl, became viziers at Hurmuz at the end of the 9th/15th century and remained there till the end of the period of Portuguese domination (Aubin, *op. cit.*, 36). As for the principality of Lār, despite its feeble resources, its lack of an intellectual élite and the emigration of its traders and its soldiers to India, it had a family of *maliks* who assured to the town a continuity of princely power during the 8th-9th/14th-15th centuries. Gradually, in the course of the second half of this latter century, a class of educated notables took shape there (*ibid.*, 32).

The causes of the decline and then of the deflection of the Khundj-ū-Fāl route remain little known (political upheavals, the loss of influence by a certain or group or family and natural catastrophes have been suggested, *ibid.*, 35). The ruin of Kārzīn (on the Khundj-Shīrāz axis, earthquakes and floods *ca.* 1440), the development of Djahrum as an intellectual and religious centre in the second half of the 9th/15th century and the founding nearby of a community of dervishes (by Ḳuṭb al-Dīn Muḥammad b. Muḥyī al-Dīn Kushknārī, called Ḳuṭb-i Muḥyī, at Ikhwānābād or Ḳuṭbābād, at the crossroads of the routes from Shīrāz, Fasā and Lār, favoured the use of the Hurmuz-Lār-Djahrum-Shīrāz axis (see Map 1). At the end of the 8th/14th century, Djahrum was a stage on the Shīrāz-Lār road (Aubin, *Lar médiévale*, 501). Whilst the Hurmuz-Shīrāz route via Ṭārum, Furg and Fasā continued to be used, that via Djahrum was regularly employed from the second half of the 9th/15th century onwards (Aubin, *ibid.*, and *Survie de Shilāu*, 33-4).

In the *garmsīrāt*, only the family of the *raʾīs Fālīs*—who held Shilāw and retained some influence in the Gulf—succeeded in maintaining Fāl as a petty urban centre, despite the growing pressure of the princes of Lār. The latter in fact drew benefit from the new position of their town-staging post on the Hurmuz-Shīrāz axis by extending their power towards the coast and the intervening high valleys (*ibid.*, 35-6). The inevitable conflict between Lār and Hurmuz—which had become economically complementary through their dependence on the Indian trade—broke out in 904/1598-9, when the prince of Lār tried to exploit an outbreak of discontent amongst the Bedouins of Djulfār. The naval expedition against the island of Djarūn led by Abū Bakr Lārī was checked by Khʷādja ʿAṭāʾ, a *ghulām* of Salghur Shāh (Aubin, in *Mare*, i, 102-3). The intrusion of the Lārīs in the affairs of Hurmuz revived

after the death of Salghur Shāh (1505) with a further attack on Djarūn. But the new lord of Hurmuz, Khwādja ʿAṭāʾ, put an end to this, at the same time removing the young ruler issued from a union between Salghur Shāh and a princess of Lār (*ibid.*, 104-5). Nevertheless, the princes of Lār continued to expand towards the shores. Their vassals, the *amīrs* of Ilūd, brought pressure to bear on the Lashtān region (the land behind the island of Ḳishm at Nāband); one of them seized the district of Lashtān in 1546 (Aubin, in *Mare*, ii, 142-3; on Ilūd, see *ibid.*, n. 367 and *Lar médiévale*, n. 22). Yet despite the decline of Fāl, Lārīs and Fālīs followed parallel paths in their relations with Hurmuz even after the advent of the Ṣafawids.

At the end of the 9th/15th century, commercial traffic was enough to stimulate Lār's prosperity. The prince levied no taxes on goods in transit. At the beginning of the next century, at the time when the Portuguese appeared, Lārī merchants and mercenary soldiers took an active part in affairs of the Deccan. The famous silver coin of Lār, the *lārī* or *larin* [*q.v.*], circulated through all the markets of the Indian Ocean shores (Aubin, in *Mare*, ii, 142; Steensgaard, 420-1). Like Lārī warriors, the bows of Lār were celebrated, and were exported to ʿIrāḳ and India (Aubin, *op. cit.*, 177-8). After Fāl (*Dār al-Ṣafāʾ* "abode of purity") and its twin Khundj (*Dār al-Awliyāʾ* "abode of saints", Lār could boast the *laḳab* of *Dār al-Maʿdala* "abode of equity".

In 914/1508 envoys from Hurmuz and Lār came to give allegiance to Shāh Ismāʿīl at Shīrāz (*AAA*, tr. Savory, i, 57-8). The prince-governors of Lār became tributary to the Ṣafawids with the title of *Amīr-i Dīwān* (*ibid.*, ii, 806). Around the turn of the 15th-16th century, pieces of information on Lār become more numerous. The travellers who passed through it in the 15th century did not give any details on their itinerary (Afanasiy Nikitin, *Khozhenye za tri morya*, Moscow 1958, 89; Girolamo S. Stefano, see Aubin, *Survie de Shilāu*, 33, nn. 106-7). Gil Simões, secretary of the Portuguese embassy to Shāh Ismāʿīl who, in 1515, returned from Shīrāz to Hurmuz via Lār, tells us nothing further. Other Portuguese, however, were more informative. The embassy of 1523-4 passed through Lār. Though sometimes difficult to trace, the itinerary of this embassy is described in detail by António Tenreiro (*Itinerário*, Lisbon 1971, 16 ff.; for a critical study of this text and of the parallel account of Fernão Lopes de Castanheda, see Aubin, in *Arquivos*, iii (1971), 238-52, with 245-6 on Lār itself. Tenreiro gives us some important information about Lāristān, especially on Kawristān/Kawuristān, the frontier region between Lār and Hurmuz (cf. Aubin, in *Mare*, ii, 104), on the caravanserais and cisterns constructed along the road by pious donors, on the town of Lār (its protective wall built from stone and with plaster decorated with tiled squares; the Lārīs' clothing; the Lārī bows; the agricultural products (dates and barley); the local Jews; the money there (the *larin*); the muleteers-caravaneers; etc.), on the date-palm groves, the rearing of mares and the export of horses to India via Hurmuz, and on the mountain goats which produced the *bazar* (bezoar, i.e. *bāzahr* [*q.v.*]; this famous antidote to poisons of which there existed spurious imitations, was produced in Persia in Khurāsān and in the land of the Shabānkāra, see C. Elgood, *A medical history of Persia*, Cambridge 1951 369 ff.). Tenreiro also describes the road from Khundj to Kārzīn at a time when it had become a secondary track (Aubin, *Survie de Shilāu*, 33-4).

In 1540, under Shāh Ṭahmāsp I, the Venetian Michele Membré travelled from Shīrāz to Hurmuz via Lār, giving a description of the latter (*Relazione di Persia (1542)*, IUON Naples 1969, 53-4). According to him, the town was surrounded in two halves by stone walls. It had a higher part, that with the citadel, and a lower part, and "outside the town there are other houses which are not walled". Membré and his retinue lodged in a caravanserai outside the town walls. He noted the numerous cisterns for collecting rain water built by pious Lārīs both in the town and at two-league intervals along the Lār-Hurmuz route. At Lār, there were even some fountains for the prostitutes. The gold and silver smiths were "gentiles from India", "all gathered together in one street". At Lār, both Turkish and Persian were spoken. The king, a vassal of the "Sofi", was called "Soprassi" (?), and wore the "cap" of the Sofi (the external sign of adhesion to Twelver Shīʿism, according to the Ḳizilbash. The shops, piled high with merchandise, hardly needed protection at nights against thieves "because the said king of Lār exercises great justice".

Soon after Membré's passage through Lār, the prince [Anūshirwān] b. Abī Saʿīd b. ʿAlāʾ al-Mulk, called Shāh ʿĀdil, was assassinated (29 Ṣafar 948/24 June 1541; see Aubin, *Lar médiévale*, 495). Under his successor Ibrāhīm Khān, the relations of Lār with the Ṣafawid authority deteriorated. He omitted to go and give allegiance to Shāh ʿAbbās I when he went to Shīrāz, ill-treated the Shāh's tribute-collectors and levied extraordinary taxes on merchants and travellers. The Shāh's anger was aroused, and he sent two punitive expeditions against Lār in 1010-11/1601-2 under the command of Allāh-Verdī Khān, the *beglar-begi* of Fārs. In the course of the second one, the latter seized Lār, carried off Ibrāhīm Khān and his entourage back to Shīrāz and confiscated their possessions. Ibrāhīm Khān and the "treasures of Lār", including the famous crown of Kay Khusraw, were then taken off by Allāh-Verdī Khān to Shāh ʿAbbās's court, then engaged on a campaign in Bādghīs near Harāt. In the course of the expedition against Balkh, Ibrāhīm Khān died of an epidemic which affected a large number of the troops. The administration of Lār was entrusted to Ḳāḍī Abū 'l-Ḳāsim Lārī, a devoted Shīʿī (*AAA*, tr. Savory, 807-8; cf. Yazdī, fol. 99a ff.).

During the whole of the 11th/17th century, until the decline of the Ṣafawids, the Persian Gulf routes via Lār were followed by numerous traders, diplomats, travellers, men of religion, etc., who have left us lively first-hand accounts. A few months after Allāh-Verdī Khān's seizure of Lār, the Augustinian friar António de Gouvea passed through the town, where he mentions the recent destructions (on Gouvea's mission as mediator in the conflict between the Portuguese and Shāh ʿAbbās, see Steensgaard, 230-1; on Lār, 231). In a parallel version to the *Itinerário* of Gaspar de S. Bernardino, Nicolau da Orta Rebelo gives us a long description of Lār and Lāristān dated August-September 1606 (on S. Bernardino's narrative, see Aubin, in *Arquivos*, i [1969], 208-15; on Lār, ed. Lisbon 1842, 136-47). Rebelo noted the numerous charitable works (cisterns and caravenserais), the security of the roads (the Hurmuz-Lār road and above all the entry into Lār was very well policed "because of the war between the Sofi and the king of Ormuz") and the freedoms and the liberalities which the Persians and the travellers enjoyed (see below). He further noted the

abundance and low price of the *bāzār* products (fruits, textiles, poultry such as partridges, and sheep) and the rebuilding works undertaken after the Ṣafawid conquest, in particular, the fortress dominating the town and the bazar (i.e. the Bāzār-i Ḳayṣariyya, see above) rebuilt at that time by Ḳanbar ʿAlī Beg, who also erected a sumptuous caravanserai on the Lār-Shīrāz road (Rebelo, ed. Serrao, 101-12).

After the Ṣafawids achieved direct control of Lār, its affairs were continuously affected by the question of Hurmuz, which brought into play the colonial rivalries (essentially those of Spain and Portugal, now united under one crown, against the English), the Persians' own interests, those of the Arab merchants and the Gulf pirates, etc. (Steensgaard, 253 ff.). After the conquest of Lār, the Persians had —at least temporarily—taken off the protection payments ("mocarrerias", i.e. *muḳarrarī*) made by the ruler of Hurmuz to that of Lār (*ibid.*, 249). Ḳanbar ʿAlī Beg tried to reimpose these levies on Hurmuz and occupied the island of Ḳishm (*ibid.*, 250 ff.). The khān of Shīrāz, the *beglar-begi* of Fārs Imām Ḳulī Khan, seized the port of Gombron/Gombroon (Portuguese Comorão) in December 1614 (*ibid.*, 291 ff.), and in spring 1622 Persian troops commanded by Imām Khān were helped by an English naval force (*AAA*, tr. 1200-4; Steensgaard, 305 ff.). The negotiations begun by the second "Spanish" embassy of Sherley (1617-22) and the presence of a Spanish ambassador at the Persian court and a Persian one at the Spanish court since 1617 were unable to prevent the Portuguese from losing "the key to the Land of India". Much held back in his mission (cf. Steensgaard, 312 ff.), the Castilian ambassador Figueroa has left behind for us an itinerary (lacking details) of his journey through Lāristān in 1618.

After the fall of Hurmuz, the English, and then the Dutch, and then later the French, were authorised by the Ṣafawid government to set up their factories at Gombrun, now renamed Bandar ʿAbbāsī. In 1630, the Portuguese gained the same permission to use Bandar Kung (8 km. to the east of the modern Bandar Linga), which began to fill up with Arabs and Persians (and then with Banyans and Portuguese) and became an important town in the years 1630-40 (Steensgaard, 357-8). Despite the difficulties of the routes into the interior, Djāsk/Djāsak and Bandar Kung became significant rivals of Bandar ʿAbbāsī (on the rivalry of Bandar Kung and Bandar ʿAbbāsī, see Calmard, 86-7).

From this time onwards, the routes through Lāristān are described in detail by the travellers. We have important items of information from Sir Thomas Herbert about the embassy of Sir Dodmore Cotton to Persia in 1628-9 (tr. Paris 1663, 205 ff.; Calmard, illustration 1), and the parallel account of Robert Stodart (ed. Denison Ross, London 1935; on Shīrāz-Lār-Gombroon, see 78-85). Mandelslo, a member of the Duke of Holstein's embassy, passed through Lār in February 1638, and he gives us a fairly detailed description of his route from Shīrāz to "Gamron" (tr. Wicquefort, Paris 1659, Book i, 91 ff.). With the development of the commerce of the trading Companies, journeys and accounts of them abound. Putting together a synthesis of all the items of information from 1638 to 1706, a map is here given showing the chronological divisions of the routes from the Gulf to Shīrāz via Lār (Map 1; the travellers who only describe Bandar ʿAbbāsī, Bandar Kung, etc., have not been included here). As this chronology shows, the dates of movements across Lāristān were a function of the movements of ships, hence of the monsoons, and the climatic conditions in the interior of the country: there were few journeys in mid-summer, because of the extreme heat and the "poisonous winds" (*bād-i samūm*), or in winter, because of the snow along the route Lār-Shīrāz (Calmard, 23 ff.). The travellers give us first-hand information on the routes followed (which varied little from the 17th to the 19th centuries, except on the Lār-Shīrāz section), on travelling conditions (state of the roads, bridges and fords; the security provided by the *rāh-dārs*, "road-guards"; tolls, customs-dues; etc.), on the natural habitat and the populations (climate, plants, animals, local inhabitants, habitats, illnesses and urban communities), on the political rivalries in the Gulf and in Persia between the central and local powers (including the topic of pirate activity) and between the different European Companies, etc. (see the *Bibl.* for travellers of the 17th-18th centuries).

Although the Dutch remained the most firmly-implanted group along the Hurmuz-Lār-Shīrāz-Iṣfahān axis (they had factories or "houses" in each of these towns) and derived great profits (above all, from the illegal trade in gold which weakened the Persian economy), the Portuguese continued to strengthen their presence at Bandar Kung (used by the Portuguese, Italians and other travellers). At the turn of the 16th and 17th centuries, an attempted Portuguese-Persian alliance against the "Arabs" (i.e. Muscat or ʿUmān) was cut short because of the internal situation in Persia (see Aubin, *L'ambassade de Gregório Pereira Fidalgo*, Introd.). This did not prevent the taking shape of threats from the ʿUmānīs (aided by the Ḳawāsim [*q.v.*] and Arabs from Ḳaṭar) against the islands and the ports along the Lāristān coast (see L. Lockhart, *The fall of the Safavid dynasty*, Cambridge 1958, 115-16, and below, on Lārak). During this period of troubles, the Lāristān government was a kind of family enterprise: the *shāhbandar* of Bandar Kung was the brother of the Bandar ʿAbbāsī one and the Khān of Lār's one (Calmard, 187). According to Pereira Fidalgo, the Khān of Lār had under his jurisdiction Bandar Gombron, Bandar Kung and Bandar Rīg (Aubin, *op. cit.*, 36-7).

Despite the repeated attacks of Arab pirates and of the Balūčīs (who seem to have allied with the ʿUmānīs in their threats to the ports and to Lār; see Aubin, *op. cit.*, 79), Lāristān resisted longer than the Iṣfahān-Shīrāz axis against the Afghān invasion. In practice, when Shīʿism became implanted along the Shīrāz-Lār-Bandar ʿAbbāsī commercial route, the south and part of the north of Lāristān (except for the town of Lār) had remained Shāfiʿī. Certain lines of *shaykhs*, in particular at Evaz and Bastak, occupied the dominant places of Sunnī Lāristān. Despite the support of the *tufangčīs* or musketeers of the Sunnī *garmsīrāt*, the Afghāns were unable to establish an effective control over Lār, which was held in turn by a Balūčī chief, a local notable, a Ṣafawid general and the *sardār* of Fārs Muḥammad Khān Balūč (see Aubin, *Les sunnites du Lārestān*, 159 ff.). In the latter's rebellion against Nādir (the later Nādir Shāh), Muḥammad Khān Balūč was supported by the Sunnīs of Lāristān. Nādir's revenge there was merciless: the executions of Muḥammad Khān and Shaykh Aḥmad Madanī, fines, extensive deportations, etc. (*ibid.*, 168 ff.).

Taking advantage of this period of troubles and its aftermath, the brigand chief Naṣīr Khān Lārī was able to establish—in the first place with the

help of his brother Ḥādjdjī Khān—control over the Bulūk-i Sabʿa (i.e. the region between Lāristān and Kirmān), and then over Lār. After an abortive expedition against Shīrāz in 1163/1750, in which Ḥādjdjī Khān died en route, Naṣīr Khān extended his jurisdiction over the Gulf littoral (i.e. over the Arab *shaykhs*) and his expensive protection over the East India Company at Bandar ʿAbbāsī. Nevertheless, he had difficulties in controlling this latter port, and moreover, fell inevitably into conflict with Karīm Khān Zand. During the years 1754-66, he fought on two fronts, against the governor of Kirmān on the north-east and against the penetration of the Zands on the west. He even planned joint attacks against Karīm Khān in Shīrāz in concert with the Ḳādjār chief, Muḥammad Ḥasan Khān (in 1756 and 1758). It was Ṣādiḳ Khān Zand who in the end captured the town of Lār and reduced Naṣīr Khān's fortress there in 1179/1766 (on these events, see Perry, 117-22, based on the English and Dutch archives and on the main Persian sources; add to these Rustam al-Ḥukamāʾ, *Rustam al-tawārikh*, Tehran 1348/1969, 373-4; Muwaḥḥid, *Bastak*, 38-9).

It seems that, contrary to what Fasāʾī asserts (followed by Minorsky, *EI*[1] art, and Perry, 122), the administration of Lāristān did not remain in a more or less autonomous fashion in the hands of Naṣīr Khān's family (till 1845, according to Minorsky, till 1858 according to Perry). This same family adopted towards the Zands and then towards Agha Muḥammad Khān Ḳādjār an at least rebellious attitude (Fasāʾī, i, 229; Dupré, i, 369). Furthermore, Karīm Khān Zand and Luṭf ʿAlī Zand handed over the government of Lāristān and the ports of the Gulf to the *shaykhs* of Bastak (now promoted to *khāns*). Under Fatḥ ʿAlī Shāh, the government of Lāristān and the Bulūk-i Sabʿa reverted to this same family; it was given to three sons of ʿAbd Allāh Khān (at Furg, Ṭārum and Lār respectively), with ʿAbd Allāh himself residing at Shīrāz at the side of the Ḳādjār prince-governor (Dupré, i, 361 ff.). Having become *beglar-begi* of Lāristān, one of his sons, Naṣīr Khān Lārī, was in 1247/1831-2 deposed from office and the governorship of Lāristān entrusted to Aḥmad Khān Bastakī (Fasāʾī, i, 280). In the next year, Naṣīr Khān was re-appointed *beglar-begi* of Lāristān and the Sabʿa (*ibid.*, i, 281). In 1262/1845, after dissensions had arisen amongst the *khāns* of Lār, the *wālī* of Fārs put an end to this and appointed at Lār a mere *kalāntar* [*q.v.*], Karbalāʾī ʿAlī Riḍā Girāshī, and then his son (Fasāʾī, ii, 284). Naṣr Allāh Khān Lārī, jailed in Shīrāz for his misappropriations, managed to escape and to stir up a revolt in the region of Sabʿa. He could not be suppressed by force, but hid in the mountains; in the end, he went to Shīrāz and was in 1275/1858 granted a pension (Fasāʾī, i, 318-19). In 1276/1859-60 the governorship of Lāristān was given to the Ḳādjār prince Mahdī Ḳulī Mīrzā, who put down the revolt of Muṣṭafā Khān-i Bastakī (*ibid.*, i, 321).

In view of the extreme difficulties of the Ḳādjārs in keeping control of Fārs and the Gulf ports (in particular, Bandar ʿAbbāsī, the governorship of which had to be handed over to the Imām of Masḳaṭ (Muscat) until 1284/1868), the governorship of Lāristān kept its considerable importance. In 1284/1868 and in 1293/1877, it included the regions of Sabʿa and Bandar ʿAbbāsī, to which were joined (in 1297/1880 and 1299/1881-2) jurisdiction over the Five Tribes (Khamsa [see WILĀYAT-I KHAMSE]) and over Dārāb (*ibid.*, i, 326, 336, 340, 345). Towards the end of the Ḳādjār period, Lāristān found itself more and more under the control of the Ḳawāmī, a powerful vizieral family of Fārs stemming from the descendants of Ḥādjdjī Ibrāhīm Khān Iʿtimād al-Dawla Shīrāzī. In 1294/1877-8, Iḥtishām al-Dawla and Mīrzā ʿAlī Muḥammad Khān Ḳawām al-Mulk restored order in the coastal districts of Lāristān (*ibid.*, i, 337-8). In 1299/1882, the governorship of Lāristān, Sabʿa, Dārāb, Khamsa and Fasā was entrusted to Ḳawām al-Mulk, who in fact died the next year. The plan for the administrative reorganisation of Fārs in 1913 proposed no longer to attach "Lāristān and ʿAbbāsī" to the Ḳawāmī sphere of influence nor to the *wilāyat* of the Khamsa tribes (*Le Fars*, 161). Under the Pahlavīs, Lār became a *shahristān* comprising five *bakhsh*s: Markazī, Bastak, Linga, Gawbandī, and Djūyum and Bunārūya (the result of the administrative reform of 1317/1938-9, see Razmārā, *Farhang*, vii, 209). With the reform of 1334/1955-6, the Farmāndārī-yi Lāristān comprised the following *bakhsh*s: Evaz, Lāmard, Djūyum and Ḥumā. The coastal districts and their hinterlands now form part of the Ports and Islands of the Persian Gulf. Bastak, shorn of two *dihistāns*, is one of the five *bakhsh*s of Bandar Linga (Muwaḥḥid, 8-9).

The fighting between Karīm Khān Zand and Naṣīr Khān Lārī for control of the ports and the routes through Lāristān accelerated the economic ruin of the region (Perry, 152 ff.). Already rather little-used in the Ṣafawid period (over and above the Gulf routes via Lār), the Shīrāz-Bandar Rīg route (facing the island of Khārg) was envisaged by the East India Company as an alternative to the Shīrāz-Bandar ʿAbbāsī one (*ibid.*, 259). The troubles in Lāristān amongst the local powers led to the Companies moving further north up the Gulf: the English to Bushire (Bū-Shahr) and the Dutch to Khārg (*ibid.*, 154 ff.; Stiffe, in *GJ*, xvi [1900], 211-15). Hence Lār retained henceforth only a regional importance.

Lāristān once again suffered from brigandage (the pillaging expedition of the Balūčī Mihrāb Khān, *sardār* of Bampūr, at the opening of the 19th century, see Pottinger, *Travels in Beloochistan*, London 1816, 163, Fr. tr. Paris 1818, i, 325 ff. (on the Balūčī raids of 1810, see Sykes, *Ten thousand miles in Persia*, London 1902, 105). Around 1256/1840, Lār seems to have been occupied by Āḳā Khān Maḥallātī, head of the Nizārī Ismāʿīlīs in revolt against the Shāh (Houtum-Schindler, *Eastern Persian Irak*, London 1897, 94; on Āḳā Khān's revolt, see H. Algar, in *SI*, xxix [1969], 55-18). Despite its comparative isolation, Lār continued to trade with the Gulf ports (in particular, with Bandar ʿAbbāsī, Bandar Linga and Bandar Ṭāhirī (the former Sārīf), see Stiffe, in *GJ*, vi (1895), 166-73.

In 1881, Stack found Lār in a fairly wretched condition (i, 133-45). But the action of its governor Fatḥ ʿAlī Khān (a person whom he describes at length) and his son allowed the town's buildings to be restored (see above, on the Ḳayṣariyya *bāzār*), noted as being in excellent condition in 1907. Bandar Linga was at that time the main port of Lār (via Bastak; see A. T. Wilson, in *GJ* [February 1908], 152-70). The comparative development of Bandar Linga under the Ḳawāsim/Djawāsim Arabs favoured the hinterland, and notably Bastak. At the end of the Ḳādjār period (*ca.* 1900-15), the Gulf ports, including Bandar ʿAbbās and Bandar Linga, were increasingly controlled by Belgian officials (Lorimer, iiA, 14). In 1335/1916-17, Bandar ʿAbbās was considered to be wholly under British influence (Kabābī, 541).

3. **The island of Lār** (see Map 2). This Gulf island is generally considered as being that called

Abū Shuʿayb (Bū Shuʿayb, Shaykh Shuʿayb or Djazīrat al-Shaykh, situated to the south-east of Bandar Nakhīlū and belonging to the Shīb-i Kūh-i Lāristān (at 3 *farsakhs*' distance from the coast, according to Fasāʾī, ii, 315). Since the identification of this island is not made easy by utilising the classical and early Islamic sources, one finds numerous errors in both old and modern writers, and some of them have mixed up the island and the kingdom of Lār (Iḳtidārī, *LK*, 128-9). Nearchus must have touched on it in the course of his periplus. It could possibly be the island of pearls (Nesos Margaritis) of Orthagoras (see Tomaschek, in *SB Ak. Wien*, cxxi [1890], 55, and Minorsky, *EI*¹ art. s.v.). The geographers writing in Arabic give it various names: Lāwān (Ibn Khurradādhbih, al-Iṣṭakhrī); Lār (Yāḳūt, Abu 'l-Fidā); whilst the variants Alār, Lān, Allān (Lārān) are given by Schwarz, 87, Le Strange, 261, and Minorsky, *loc. cit.* Ibn al-Balkhī (*Fārs-nāma*, ed. Le Strange, 241) connects the island with Ardashīr Khurra (Īrāhistān). Muḥammad b. Nadjīb Bakrān calls this island Lādh (*Djahān-nāma*, ed. Muḥammad Amīn Riyāḥī, Tehran 1342/1963, 43). The toponym Lādh (cf. Lād, the ancient name of the town or the kingdom of Lār) could be applicable to the place called Laz/Laza or to Lāz/Lāza/Lazā, the most important settlement in the eastern part of the island. The Portuguese called it Ilhe de Lazão or Laracoar (Lār-Shatwār, from the name of the islet Shatwār/Shitwār/Čitwār at its eastern extremity; see Aubin, in *Mare*, ii, 97, n. 115).

According to Yāḳūt (iv, 341), Lār is a large island situated between Sīrāf and Ḳays, lacking any settlement or village; there were pearl fishers, i.e. divers; its circumference was said to be 12 *farsakhs* round. Because of the insecurity from Gulf piracy, the island was thinly peopled. According to Duarte Barbosa, it formed part of the dependencies of Hurmuz (Aubin, in *ibid.*). It is situated, in relationship to the coast, which makes an outward salient at Raʾs Nakhīlū, 14 to 15 miles from the coast; from east to west it is about 15 miles long, and about 3 miles wide. It is 120 feet high at the centre, and low plains of one to two miles extend towards each extremity. It has virtually no vegetation, but the water from its well is of good quality (Lorimer, iiB, 1813). Its geological formation is identical with that of the island of Ḳays and Hindarābī (Pilgrim [1908], 142).

Shaykh Shuʿayb is attached to the *dihistān* of Badawī in the *shahristān* of Bandar Linga (Razmārā, *Farhang*, vii, 61, which places it 23 km. to the south-east of Bandar Maḳām and gives its dimensions as 24 x 5 km., with its highest point *ca.* 37 m.). Drinking water comes from wells and from cisterns to catch rain-water. There is cultivation of dates, cereals and some market-garden produce. Fishing, for fish and for pearls, is carried on. At the beginning of the 20th century, it had 10 villages or hamlets, the most important being Laz (70 houses). It had a total of *ca.* 300 houses for 1,500 inhabitants, Shāfiʿī and Sunnī Arabs of various tribes (Lorimer, iiB, 1814-15). In *ca.* 1950, it had 7 small settlements and 730 inhabitants, both Sunnī and Shīʿī, speaking Arabic and Persian (Razmārā, *Farhang*, *loc. cit.*, which mentions its liability to malaria). The population seems to have varied little (800 in *ca.* 1976, according to the *Farhang-i Muʿīn*, v, 948).

4. **The island of Lārak** (see Map 2). This is an island of the Gulf 20 miles south of Bandar ʿAbbās and partially closing the approach to this port between Ḳishm and Hurmuz. The channel between Lārak and Ḳishm, to the north-east, is 6 miles wide; between Lārak and Hurmuz, to the north-north-east, it is 11 miles. Slightly smaller than Hurmuz, Lārak is oval in shape, measuring 6 miles (from east-north to west-south-west) by 4 miles. It is surrounded by deep water except at the western side. The interior is a mass of sharp, sandstone hills mixed with salt domes and domes of red iron oxide (a typical formation of the "Hurmuz series", see Pilgrim [1908], 141, [1924], 16). Except for a few date-palms, it is almost bare of vegetation. The highest point reaches 510 feet. Except for the well of Salmī (in the west), water comes from cisterns (Lorimer, iiB, 1086; see also Fasāʾī, ii, 317). There are many gazelles and rabbits, the former living off a spiny plant called the *kittaw* which stays green in winter as well as summer (Kabābī, 98, who states that the island is 13 miles in circumference, 18 miles from Bandar ʿAbbās, 28 miles from Kūh-i Musandam, 8 miles from Shahr-i Ḳishm, and 16 to 17 miles from Hurmuz).

The sparsity and the vagueness of the older sources has given rise to many hypotheses. Lārak, literally "little Lār", has been take—by Kabābī, 291—for the ancient island of Lār (wrongly, because the depths do not allow pearl-fishing). The island seems to have occupied, made useful and cultivated by a fairly important (to judge by the remains of buildings and irrigation works) non-Muslim population (according to the orientation of numerous tombs, see Lorimer, iiB, 1087, and Kabābī, 698). Amongst the ruins, the latter author mentions those of a rectangular fortress like the one of the island of Ḳishm. Lorimer records two ancient forts: a ruinous one at the place called Kharābistān, in the interior of the island (i.e. Lārak-i kūhī), and the other, in a better condition, at Labṭiyāb on the northern coast. According to this same authority, the fort is said to be Portuguese, but according to Curzon, ii, 413, Dutch. According to Iḳtidārī, the *ḳalʿas* of Lārak and Ḳishm are Portuguese, whilst that of Khamīr is possibly Dutch. The Lārak *ḳalʿa* is made from dressed stone covered with mortar, with three floors, four towers and a look-out walkway (*Āthār*, 740 ff., with photographs). Only the foundations remain of the East India Company's telegraph house. Among the remains of the cemetery have been found lamps for the dead from baked earth (*ibid.*, with photograph at 742).

The anchorage of Lārak was much appreciated by sailors, especially the Portuguese, who called it Lareka/Lareca. They sheltered there in February 1625 when making an attempt to recover Hurmuz (see Steensgaard, 352). The ambassador Pereira Fidalgo stopped there in 1696 (ed. Aubin, 29). In 1717, Lārak was captured by the Imām of Masḳaṭ aided by the Ḳawāsim and Arabs from Ḳaṭar (Perry, 158).

According to the *Mukhtaṣar-i Mufīd* (17th century), Lārak was inhabited by Arab fishermen. The boat from Bandar Rīg called there sometimes (ed. Aubin, in *FIZ*, vi/2-3 [1337/1958], 175). At the beginning of the 20th century, the population of *ca.* 200 was made up of Dhahūriyyīn linked by marriage with the Banū Shatayr Shiḥūḥ of Kumzār (the region of the Ruʾūs al-Djibāl in ʿUmān) who spoke *kumzārī* (Lorimer, iiB, 1086). In addition to the Kumzārīs, Kabābī notes 30 heads of families, five of them from Bustānū-yi ʿAbbasī, and he states that the soil of the island is good for agriculture. The people live by extracting salt (exported to the ʿUmānāt and Ḳishm), fishing and a little bit of stock-rearing (sheep and goats). In summer, most of them migrate to the oasis-palm-groves of Mīnāb (Kabābī, 96). Formerly, the island depended administratively on

the *kalāntar* of Ḳis̲h̲m. Persian authority was only established after 1905-6 with the building of a customs-post (Lorimer, iiB, 1087; Kabābī, 97). One of the interesting peculiarities of Lārak is that it possesses—in company with other places of the coasts and islands of Lāristān—*zār* [*q.v.*] adepts and practitioners. Called locally the *ahl-i hawā* "people of the wind", they have as the officiating persons men (the *bābās*), women (the *māmās*) and some *s̲h̲ayk̲h̲s*, most of them of African origin (see G̲h̲ulām Ḥusayn Sāʿidī, *Ahl-i hawā*, Tehran 1345/1966, index *s.v.* Lārak).

LARACHE [see AL-ʿARĀʾIS̲H̲].

LĀRANDA, Larende or Karaman in modern Turkish usage, earlier Turkish Ḳaramān or Dārende, a provincial town in Anatolia, is the seat of one of the thirteen districts of Ḳonya [*q.v.*]. The district of Karaman is the largest (4,647 km²) *ilçe* in Turkey. The town lies outside the earthquake zone at lat. 37° N, long. 33° 10′ E, at an elevation of 1,038 m., on the plateau at the northern end of the pass leading through the Taurus Mts. to the Göksü (ancient Kalykadnos, or Saleph) river valley. The main road from Ḳonya (at 110 km.) to Silifke (at 148 km.) passes through the district. The town has a station on the railway line from Ḳonya to Eregli, a stretch of the former Istanbul-Bag̲h̲dād railway. The population grew from 8,182 in 1927 to 28,113 in 1965 and to 51,208 in 1980, when the *ilçe* counted 113,408 inhabitants.

1. HISTORY

Excavations at prehistoric sites in the Ḳonya-Lāranda area, especially at Čatal Hüyük and Čan Hasan, have revealed an advanced Neolithic culture and substantial towns dating from *ca.* 7000 B.C. (See J. Mellaart *et alii*, in *Cambridge ancient history*; idem and D. French, in *Anatolian Studies*, x (1960); U. B. Alkım, in *Anatolia* i (1968); D. Magie, *Roman rule*; W. Ramsay, *Hist. geogr.*, 45; F. Taeschner, *Wegenetz*).

The Byzantine Laranda (τά Λάρανδα, cf. Pauly-Wissowa, xii, col. 793) fell to the Sald̲j̲ūḳs after the battle of Manzikert (463/1071), and islamisation must have taken place early. After having been under Dānis̲h̲mendid [*q.v.*] rule, it was retaken around 560/1165 by the Sald̲j̲ūḳ sultan Ḳılıd̲j̲ Arslān II [*q.v.*]. Taken briefly in 586/1190 by emperor Frederick Barbarossa, and in 1210 by Leo II of the Armenian kingdom in Cilicia, it was regained by the Sald̲j̲ūḳs in 1216 and used as a frontier fortress against the Armenian kingdom. In 623/1226 the area was organised as the *wilāyat-i Arman* (*Histoire des Croisades, Doc. Arm*, i, 360; *Cambridge history of Islam*, i, Cambridge 1970, 234 ff.). Around 625/1228, the family of Mawlānā D̲j̲alāl al-Dīn Rūmī [*q.v.*] settled in the town. D̲j̲alāl al-Dīn was married there and extols its delights in his poetry (A. Göl-

pınarlı, *Mevlana Celaleddin*, Istanbul 1959, 4, 41 ff.). It is claimed locally that the great folk poet Yūnus Emre [*q.v.*] is also buried there (idem, *Yunus Emre, hayatı*. . ., Istanbul 1963; M. C. S. Tekindağ, in *Belleten* xxx (1966), 117, 59-90; *Procs. of the 1971 Istanbul Symposium on Yunus Emre*). Lāranda also claims as its native sons the chronicler Neshrī [*q.v.*], the Grand Vizier Ḳaramānī Meḥmed Pasha [*q.v.*], the medical writer Lārendeli Siyāḥīzāde Dervīsh, and others (Gibb, *Ottoman poetry*, index; Babinger, *Geschichtsschreiber*, index; V. L. Ménage, *Neshrī's History of the Ottomans*, London 1964; A. A. Adıvar, *Osmanlı Türklerinde ilim*, Istanbul 1943). In 626/1228 the Türkmen dynasty of the Ḳaramān-oghullarī [*q.v.*] emerged in the Ermenek-Lāranda region, and in 628/1231 the town was given as a temporary *iḳṭāʿ* to Ḳushlu Sankum, a Khwārazmian chief. In 654/1256 Lāranda became the capital of the Ḳaramānids under Ḳaramān-oghlu Güneri Beg and was able to maintain itself against the combined forces of the Saldjūḳs and their supporters, the Īl-Khānid Mongols. In 687/1288 Lāranda was burned by the Īl-Khānids, and lost temporarily again to them in 691/1292, but heavy destruction and loss of population did not stop the Ḳaramānids from rising to great political power. The town grew in importance and was enriched with many buildings. (See section 2, below). After 1300, the name Lāranda was replaced by the new name Ḳaramān. Even when the Ḳaramānid princes expanded their dominions and were able to make the prestigious royal city of Ḳonya their capital in 712/1312, the old residence remained important as a seat of lesser members of the dynasty. The town remained somewhat distant from the battle front during the Ḳaramānids' struggle with the competing powers in Anatolia, including the Mongols and later the Ottomans, the heirs of the Saldjūḳ sultans. According to F. Sümer (art. ḲARĀMĀN-OGHULLARĪ, Vol. IV, 622a), Ibn Baṭṭūṭa's account of his visit to Ḳonya and Lāranda, and of his meeting the Ḳaramānid begs, is based on hearsay. In 799/1397 the Ottoman sultan Bāyazīd I Yīldīrīm [*q.v.*] occupied Lāranda and conquered nearly all the dominions of the Ḳaramān-oghlu *amīr* ʿAlāʾ al-Dīn, who was himself killed. The *amīr*'s widow, the Ottoman princess Nefīse (Melek Khātūn), and her two sons Meḥmed Beg and ʿAlī Beg, were deported to Bursa in 800/1398. This was seemingly the end of the principality. Tīmūr, however, restored the Ḳaramānids to power after the battle of Anḳara (804/1402), and they maintained themselves in the face of the Ottoman restoration in 817/1414 and 818/1415. Next to Ḳonya, Lāranda remained the main centre of the Ḳaramānid state and flourished greatly. At this time, however, the Mamlūks invaded the country and occupied Lāranda in 822/1418-19 for a short time, the region becoming tributary to them. The town's lords then changed several times because of civil warfare. In 826/1423, Meḥmed Beg was killed at the siege of Anṭālya and buried in Lāranda. The town saw its last decades of glory as a capital under Ḳaramān-oghlu Ibrāhīm Beg (827-69/1424-64). When de la Brocquière traversed the lands of "the Grand Karman" in 836/1432, he attended an audience with sultan Ibrāhīm in his court at Ḳonya after having visited Lāranda. He remarked on the great extent of the Ḳaramānid domains, the dignity and wealth of the court and flourishing trade of both towns. Another conflict brought the Mamlūk army to Lāranda again, and it was set on fire (861/1456-7). After Ḳonya was lost to the Ottomans, the Grand Vizier Maḥmūd Pasha took Lāranda in 873/1468, the last Ḳaramānid chiefs continuing their resistance against the forces of Sultan Meḥemmed the Conqueror. Part of the inhabitants, especially the craftsmen, were deported in 1471 to be settled in Istanbul in the so-called Büyük Ḳaramān quarter (the present Çarşamba). In Lāranda a number of monumental buildings, sacred and profane, were destroyed by the new Ottoman rulers (including by Gedik Aḥmed Pasha [*q.v.*]). The castle was repaired with the architectural débris. In 881/1476 the first Ottoman registration of land, property and pious foundations took place, and the town's tithe tax (*ʿöshr*) was made into a *waḳf* for the benefit of al-Madīna. By this time, the rule of the Ḳaramān-oghullarī in Lāranda had virtually come to an end (Tekingdağ, 1963, 61; Konyalı, 100-2, 405). The town became the first Ottoman *shehzāde* (prince's) *sandjaḳ*, governed from Ḳonya under princes Muṣṭafā and Djem [*q.vv.*]. In 888/1483 Bāyazīd II had the Ḳaramānid territory organised as a regular Ottoman province as the *eyālet* of Ḳaramān, with Ḳonya as capital and seat of the *beglerbegi*.

From now onwards, Lāranda was of only secondary importance. With its castle, it must have played a role in the Ottoman campaigns to suppress revolts fomented by Ḳaramānid chiefs and Ṣafawid agents till *ca.* 1501. The rebel Ḳulī Shāh seized the town briefly in 916/1510, while in 917/1511 the area was taken by prince Aḥmad in his fruitless effort to succeed Bāyazīd II. Turmoil was caused in 933-5/1526-8 by the Ḳalandar [*q.v.*]. Until 923/1517, the town was part of the fortified frontier with the Mamlūk dominions, and it became a *ḳaḍāʾ* in the *sandjaḳ* of Ḳonya. During a short period in the 11/17th century, it probably held the rank of *sandjaḳ* itself. The name of Ḳaramān came now more and more in use. The importance of the trade route passing through Lāranda was probably reduced by the extension of the Ottoman empire to the east. The tax registers dated *ca.* 929/1523 show that the population of Lāranda counted 664 *khānes* = 464 *nefers* or tax payers (Konyalı), or 493 *khānes* = 693 *nefers* (Jennings), or 576 *khānes* = 693 *nefers* (Faroqhi). The registers of 992/1584 and 995/1587 show 2,027 *nüfus* (Konyalı), 2,048 *nefers* (Jennings), and 1,423 *khānes* = 2,048 *nefers* plus 625 *müdjerreds* (Faroqhi). The number of *maḥalles* had increased in 1587 from 34 (Konyalī: 33) to 39. Thirteen of those quarters still exist at the present. The growth of population seems to point to secure living conditions. From other sources it is known, however, that Lāranda was one of the centres of the well-known *softa* or student revolts against the central government's financial policy in the years 985-1002/1577-94. In 1596 the Djelāli [see DJALĀLĪ in Suppl.] revolts ravaged the province of Ḳaramān. Lāranda's population seems to have remained loyal to the government during the following years, at least till 1011/1603. The presence of the Janissary garrison must have had an influence here (cf. M. Akdağ, *Celâlî isyanları (1559-1603)*, Ankara 1963, index s.v. Karaman (Lârende)). Ḳara Yazīdjī [*q.v.*], one of the Djelālīs, was bought off by the office of *muḥāfiẓ* of Ḳaramān.

From the taxation data of the 10th/16th century, Lāranda appears as a flourishing interregional market town in an important agricultural region. The building activity during the same century seems to bear this out. The town contained, around 929/1523, 1 *ʿimāret*, 4 *djāmiʿ*s, 25 *mesdjids*, 7 *medreses*, 1 *dār al-ḥadīth*, 10 *tekkes*, 7 *ḥammāms*, 264 *dükkāns*

and 65 *ṣandīḳs* ("trading booths"). The castle was manned by a garrison of 39 men under a commander (*dizdār*) and a *kāhyā*. Its armament must have included some pieces of artillery (Konyalı, 176, 178). Tenth/seventeenth century Lāranda is described by Ewliya Čelebi (*Seyāḥāt-nāme*, ix, 311-15) and Kātib Čelebi (*Djihān-nümā*, 1145/1732, 614 f.). In 1867, Lāranda/Ḳaramān was incorporated in the new *wilāyet* of Ḳonya as a *ḳaḍāʾ* in the central *sandjaḳ*.

Traditional economy, based mainly on dry farming, live-stock, textiles and the production of the well-known *Ḳaramān-bulguru* (wheat), has been diversified and enlarged. Lead, zinc and chrome are in limited production and there are minor iron ore deposits in the area. In the early 1960s, 400 workers from Karaman went to Germany in the first group of Turkish labourers. For further details, see Ibrahim Rıfkı Boynukalın, *Karaman'ın iktisadi ve sosyal gelişimi*, Istanbul Üniversitesi Edebiyat Fakültesi, Istanbul 1968.

2. MONUMENTS

The archival sources for the monuments of Lāranda/Ḳaramān—the *waḳf* review of Khwādja Muṣliḥ al-Dīn dated Muḥarram 881/January 1477 (= Ankara, Kuyud-i kadime 665; facsimile and commentary, Feridun Nafız Uzluk, *Fatih devrinde Karaman eyâleti vakıflar fihristi*, Ankara 1958); and *waḳf* reviews of Bāyazīd II, dated 906/1500-1 (= Ankara, Kuyud-i kadime 565, old number 255) and Süleymān I, dated 929/1522-3 (= Başvekâlet Arşivi 387)—give a more varied picture of the 14th-16th century monuments of Ḳaramān and can be used to supplement the data of those still extant, though the unusually diverse nomenclature of the monuments makes some identifications subject to caution. The present review is, therefore, concerned primarily with standing buildings. In one respect, however, the sources are significant: they provide singularly little evidence for the 13th century architecture of the town.

Sherd finds from the Citadel or Içkale are evidence for 13th century habitation, though the existence of a Saldjūḳ palace remains to be demonstrated. Saldjūḳ blue and white tiles were also reused in the Hatuniye Medrese (see below), and two fragments in the Victoria and Albert Museum (355-6. 1906) have been shown (M. Meinecke, *Fayencedekorationen Seldschukischer Sakralbauten in Kleinasien*, i-ii [= Deutsches Archäologisches Institut. Istanbuler Mitteilungen, Beiheft 13], Tübingen 1976, ii, 483-4) to have Ḳaramān as their likely provenance. But there is no architectural evidence for major buildings in the 13th century, and the only surviving 13th century monument is a small *masdjid* * (Monuments marked with an asterisk bear dated inscriptions), much restored in 645/1247-8 by Saʿd al-Dīn ʿAlī b. Abū (*sic*) Bakr (Meinecke, *op. cit.*, ii, 483-4; İ. H. Konyalı, *Abideleri ve kitabeleri ile Karaman tarihi*, Istanbul 1967, 347-50), a domed square with an adjacent flat-roofed *iwān*. It contains multiple burials, but the only dated tombstone is that of Saʿd al-Dīn Muḥammad b. Madjd al-Dīn ʿAlī, dated Djumādā II 700/March 1301. The area was evidently a cemetery at the time it was built.

Fortifications. Of the original triple enceinte, little remains. The outermost walls have disappeared entirely. The middle enceinte, to which Ewliyā Čelebi attributed nine gates and from which Christian and pre-Christian spoliae have been retrieved, is now reduced to a single gate and a few fragments of rubble walls. The Citadel or Içkale (Fig. 1) which, doubtless by mistake, he describes as surrounded by a deep moat, is rectangular, with eight round, faceted or rectangular towers. The walls contain many heterogeneous re-used Islamic blocks (Fig. 2), perhaps from the monuments which, Shikārī states (M. Koman, *Şikârı'nın Karaman oğulları tarihi* [= Konya Halkevi Tarih ve Müze Komitesi Yayınları, I.2], 1946, 112), were destroyed by Gedik Aḥmad Pasha [see AḤMAD PASHA GEDIK] on the Ottoman occupation of Ḳaramān (*inter alia* the Djāmiʿ-i Sulṭān, the Djāmiʿ-i Kāshī and the Djāmiʿ-i Niẓāmshāhī); and from the Great Mosque, the mosque of the Ḳaramānid ʿAlāʾ al-Dīn Beg and the mosque of Ḳaramān Shāh. None of the reused fragments bears a foundation inscription, so that Shikārī's assertion is difficult to evaluate. However, since all are fairly near ground level, the Citadel was evidently rebuilt shortly after the Ottoman conquest. It was radically restored in 1965.

The pre-Ottoman fortifications cannot be identified, though the Citadel mound is evidently man-made and the fortress played an important role as late as the end of the 15th century. Nor can the water supply be traced; in the absence of wells or aqueducts, the Citadel must have been supplied by cisterns. However, their presence remains to be established.

Mosques. The Great Mosque, now restored out of all recognition, was a flat-roofed aisled construc-

tion with wooden columns and stalactite capitals (Konyalı, *op. cit.*, 359-63). No Great Mosque is mentioned in the *waḳf* register of Muḥarram 881/January 1477, which thus indirectly corroborates Shikārī's assertion that it was destroyed in or after the Ottoman capture of Ḳaramān. The only evidence, moreover, for the existence of a Great Mosque in the 16th century is the foundation inscription of a *maktab* * associated with it dated 940/1533-4. The façade of the Hacıbeyler Camii (Konyalı, 294-8), a rectangular building now with a pyramidal gabled roof, has also evidently been substantially rebuilt, save for the entrance in a projecting rectangular moulded frame bearing a foundation inscription dated 902/1496-7 (cf. the anonymous foundation inscription of the heavily restored Arapzade or Araboğlu Mosque dated 899/1493-4). However, a block built into the wall to the left of the porch bears the foundation inscription of a mosque dated 757/1356. This is evidently a re-use, and it is unclear whether the present building occupies the site of an earlier mosque.

The Dikbasan Mosque in the bazar (Meinecke, ii, 175-7), identified by Konyalı, (281-8) with the Fasih Camii of the *waḳf* registers of the reigns of Bāyazīd II (906/1500-1) and Süleymān I (929/1522-3), is a flat-roofed, four-aisled construction with a carved stone *miḥrāb* in the central bay. The brick minaret is rebuilt. The interior contains a two-line chronogram, read variously as 899/1493-4 (Konyalı, *loc. cit.*) and 920/1514-15 (E. Diez, O. Aslanapa and Mahmut Mesut Koman, *Karaman devri sanatı*, Istanbul 1950, 40), and a re-used fragment of relief tile on a cobalt ground with traces of gilt dated Djumādā II 840/January 1437, perhaps from an earlier building on the site which was then rebuilt about 1500. The most imposing Ottoman mosque, however, is that of Nūḥ Pasha, a native of Ḳaramān, built while he was governor of Konya and dated 1005/1596-7. Against the inside wall of the three-domed narthex is a wooden gallery, the soffits of which have an applied revetment of gilt and painted wooden strapwork, probably contemporary.

Madrasas. The *madrasa* of the Amīr Mūsā (Konyalı, 455-60; Aslanapa-Diez-Koman, 50-4; Meinecke, ii, 158-64) was destroyed in 1927 (Fig. 3). The building was, however, photographed by both Sarre and Van Berchem, and Sarre was able to draw a plan of the building (F. Sarre, *Konya. Seldschukische Denkmäler* [= *Denkmäler Persischer Baukunst*, IV], Berlin 1910, Plate 30, misidentified as that of the Hatuniye Medrese). This shows a central dome on pendentives, lateral ranges of four cells fronted by arcades or re-used marble columns, and an axial *īwān* flanked by domed chambers with a *miḥrāb* housed in its side wall. To either side of the shallow recessed entrance and inner porch were rectangular corner rooms and annexes, that to the right housing the stair-well of the minaret. This was cylindrical on a square base, with a shaft, divided, like that of the *ʿImāret* of Ibrāhīm Beg (see below), by projecting mouldings into registers, and a single stone balcony on a corbelled stalactite base. The porch was a barely-decorated moulded frame with a shallow stalactite canopy on corner pilasters with doubled polyhedral capitals. The foundation inscription, which has now disappeared, occupied the course above the doorway and was flanked by further pilasters and capitals. The *waḳf* review of Muḥarram 881/January 1477 gives the *madrasa* of the Amīr Mūsā in seventh place. Its precise designation is problematic. Mūsā Beg (d. 758/1356-7) is buried in the Tol Medrese * (740/1339-40) which he built at Ermenak [*q.v.*]. The present foundation was also funerary, however, and Konyalı (*loc. cit.*) has identified the tombstones of Fakhr al-Dīn Aḥmad Beg b. Ibrāhīm b. Maḥmūd b. Ḳarāmān (*sic*) (d. 7 Dhu 'l-Ḳaʿda 750/17 January 1350) and his brother Shams al-Dīn Beg (d. 753/1352-3) from it. These give a terminus for its construction; and a third burial, of Durkhwānd Khātūn bint Badr al-Dīn Beg (d. 12 Djumādā I 813/13 September 1410), testifies to its later frequentation by the Ḳaramānids.

The Hatuniye Medrese * (783/1381-2) (Fig. 4), the finest decorated building of Ḳaramān, was founded by Sulṭān Khātūn, daughter of Murād I Khudāwandigār and wife of the Ḳaramānid ʿAlāʾ al-Dīn Beg (Aslanapa-Diez-Koman, 55-66); Konyalı, 461-82; Meinecke, ii, 165-70). The building is symmetrically planned, with small domed rooms to either side of the entrance block, side ranges of three domed cells and a rectangular vaulted *dars-khāne*, and an axial *īwān* flanked by domed chambers, one a mausoleum. The entrances to these have high relief-carved limestone frames (Fig. 5). The projecting entrance block has been heavily restored several times: the entrance is recessed in an elaborately-carved and profiled bi-coloured marble frame, continuing a tradition of Saldjūḳ porch decoration—the Çifte minare Medrese, Erzurum (*ca.* 1242), the Gök Medrese, Sivas * (670/1271-2) and the Eşrefoğulları Camii, Beyşehir * (699/1300)— and although on a smaller scale than these, is particularly close in conception and execution to the Gök Medrese at Sivas (cf. S. Ögel, *Bir Selçuk portelleri* (sic) *grubu ve Karaman'daki Hatuniye Medresesi portalı*, in *Ilahiyât Fakültesi Dergisi. Yıllık Araştırmaları Dergisi 1957* [Ankara 1958], 115-9 and Figs. 6-7). It bears a craftman's signature, Khwādja Aḥmad b. Nuʿmān b. Aḥmad (Meinecke, *op. cit.*, ii, 166, correcting the "Muḥammad" in Mayer, *Architects*, 112), which also continues the Saldjūḳ tradition of signed façades. The remarkably exact copying on a smaller scale of both profiles and decoration suggests strongly that forms of projection were known to the builders of 14th century Anatolia, though there are no literary attestations for the popularity of the prototype, and the other cases of parallelism have not been established beyond the Saldjūḳ period (cf. K. Erdmann, *Das Anatolische Karavansaray des 13. Jahrhunderts*, ii-iii, Berlin 1976, 148). The marble revetment of the façade, like the columns inside, is entirely re-used.

There is no trace of any tile mosaic *miḥrāb*, but Meinecke, *loc. cit.*, has established that the *īwān* and the mausoleum both had dadoes of dark turquoise-green hexagonal tiles. The cenotaphs have disappeared but these also may well have been tiled. The Hatuniye has also yielded a re-use Saldjūḳ tile inscription, evidently from a pious foundation, in white relief *naskhī* on a cobalt ground, in the name of Abu'l-Fatḥ Kaykhusraw ... b. al-Saʿīd Ḳilīdj Arslān (= *RCEA*, 4817), now in the Islamic Museum in East Berlin (No. I. 563). The inscription is defective and the ruler, therefore, indeterminate, but Meinecke, *loc. cit.*, has argued for Kaykhusraw I (second reign 601-7/1205-11) or for Kaykhusraw II (634-44/1237-46) [*q.vv.*]. Kaykhusraw III (663-81/1266-84) [*q.v.*] may be eliminated, since from 1261 the amīrate of Ḳaramān was independent, and the titulature of a Saldjūḳ Sulṭān would not have appeared unmodified in foundations at Ḳaramān of the later 13th century.

The foundress has been identified with Malak Khātūn, whose *waḳfiyya*, appointing herself as

mutawallī with her descendants after her, dated Rabīʿ I 787/May 1385, is resumed by Konyalı, 475-82, and appears in précis above the entrance to the mausoleum. This designates the foundation as a Ḥanafī *madrasa*, to which the family mausoleum was to be attached, with the provision that a S̲h̲āfiʿī *mudarris* might be appointed if no-one better was available. On the foundation were two *muʿīds*, five *faḳīhs*, a *nāẓir*, a *muʾad̲h̲d̲h̲in*, a sweeper and a porter. The endowments are almost exclusively agricultural property and the national income therefore fairly small. No students on the foundation are mentioned; and the *madrasa* is so small that some of the staff, anyway, must have lived out.

K̲h̲ānkāhs. The *tekke* of Siyahser or Karabaş Veli, otherwise known as the *k̲h̲ānḳāh* of S̲h̲ayk̲h̲ or Sulṭān ʿAlāʾ al-Dīn (Konyalı, 316-22; Aslanapa-Diez-Koman, 85-7) consists of a flat-roofed, three-aisled covered mosque with transverse arcades and a minaret of Ottoman type, possibly a later construction, at its north-east corner (Fig. 8). On its north-west side is a symmetrically-planned building, following Anatolian custom in not being *ḳibla*-oriented, with a central sunken area with a large fountain and roofed by a dome on pendentives. Of the three *īwāns*, each has lateral annexes, while on the south-east side an arcade or loggia serves as a narthex to the mosque. The masonry and plan suggest a foundation date of about 1460. Both *tekke* and mosque have entrances on the east. Outside is a cemetery with late burials and a ruined undated octagonal canopy tomb (Fig. 9).

The complex no longer bears a foundation inscription, but has been associated with a K̲h̲alwatī *s̲h̲ayk̲h̲*, known variously as Mawlānā or S̲h̲ayk̲h̲ or Sulṭān ʿAlāʾ al-Dīn Rūmī or Aswad, whose tombstone (Konyalı, 316), dated S̲h̲awwāl 870/June 1466, was recorded in the canopy mausoleum in 1943. The confusion of names suggests that the monument was colonised by later *s̲h̲ayk̲h̲s*. The mosque was evidently ruined by the end of the reign of Meḥemmed II, since it does not appear in the *waḳf*-register of Muḥarram 881/January 1477; and in the register of the reign of Bāyazīd II dated 906/1500-1, the *waḳfs* are stated to be at the disposal (*dar taṣarruf*) of another, unidentified *zāwiya*, that of S̲h̲ayk̲h̲ Pīrī K̲h̲alīfa.

A building, known variously as the Aktekke, Mevlevī *tekke*, *tekke* and tomb of "Mader-i Mevlânâ" and the Valide Sultan Camii, seems to be an adaptation of a 14th century Ottoman mosque plan, consisting of a large, partially-domed rectangular area containing twenty-one undated cenotaphs, with an exterior portico preceded by a narrow courtyard with ranges of cells to either side (Konyalı, 229-53; Aslanapa-Diez-Koman, 44-9). The foundation inscription records the foundation by the Ḳaramānid ʿAlāʾ al-Dīn Beg of a *zāwiya* for a *s̲h̲ayk̲h̲*, whose *laḳabs* are given as D̲j̲alāl al-Milla wa 'l-Ḥaḳḳ wa 'l-Dīn, in Rabīʿ I 772/October 1370. The foundation was evidently associated with another *zāwiya*, the *waḳfiyya* of which in the name of ʿAlāʾ al-Dīn Beg and dated 769/1367-8 (Konya, Yusuf Ağa Kütübhanesi No. 10389) has been resumed by Konyalı, 252-3. This was in favour of the descendants of a *s̲h̲ayk̲h̲*, D̲j̲alāl al-Ḥaḳḳ wa'l-S̲h̲arīʿa wa 'l-Milla wa '-Dīn, whose *nisba* is not given. The conclusion that the *s̲h̲ayk̲h̲* in question was D̲j̲alāl al-Dīn *Rūmī* is unwarranted; there is no evidence in either foundation inscription or *waḳfiyya* that a Mevlevī foundation was envisaged; and the popular association of the *tekke* with the Mevlevī order must, therefore, be based on a late colonisation of the *tekke* by Mevlevī dervishes.

Though the details of its organisation are obscure, the so-called *ʿImāret* of Ibrāhīm Beg (Konyalı, 405-52; Aslanapa-Diez-Koman, 67-84; Meinecke, ii, 170-5) belongs architecturally among the *tekkes* of Ḳaramān. It was a multiple foundation, enclosed by a wall of which there is now no trace, consisting of the *ʿimāret*, a mausoleum attached and a fountain opposite (Fig. 10). The *ʿimāret* has a domed, central courtyard surrounded on three sides by two storeys of rooms, with a *ḳibla*-oriented axial *īwān* flanked by domed chambers. The minaret salient and traces of the springing of arches on the façade show that originally the building was intended to have an arcaded exo-narthex. The *ʿimāret* plan has several remarkable features, including the fan-pendentives below the dome which derive from the brick architecture of 13th century Konya, though with the exception of re-used marble blocks for the lintel and consoles of the main entrances and the tympana of the outside windows the building is entirely of local stone. The upper storey consists of long galleries, evidently store-rooms or places of assembly. The central area is poorly lit and barely decorated in a style deriving from the internal stone carving of the Çifte Minare Medrese at Erzurum (*ca.* 1242) and the Hospital at Divriği (626/1228 onwards), and the decoration is concentrated on the exterior-grilled windows and their tympana, soffits, door frames and a cylindrical minaret shaft divided by projecting mouldings into registers sparingly decorated with bi-coloured stone (*ablaḳ*). The main entrance is framed by mouldings of Anatolian Sald̲j̲ūḳ origin, but without concern for their canonical disposition, and their carved decoration, particularly the markedly chinoiserie foliate elements in the spandrels of the porch, is more indebted to the decorative renaissance of the 1420s at Bursa than the Sald̲j̲ūḳ tradition. The Bursa style is also apparent in the carved marble hood of an exterior window, a single carved block with an arabesque-palmette design, deriving from the marble hoods of the Green Mosque at Bursa.

The tomb, at the southern corner, is also *ḳibla*-oriented, a domed square surmounted by an eight-sided pyramidal canopy on an octagonal drum (Fig. 11). Inside there are two floors: a crypt or burial chamber just below ground level and an upper chamber with a carved porch reached by a double staircase. The porch has a shallow stalactite canopy and carved frame with marble jambs, and a lintel with voussoirs set as a flattened broken arch of Bursa type. The upper chamber contains three damaged moulded plaster cenotaphs (Fig. 12), of Ibrāhīm b. Muḥammad b. Ḳaramān (d. 868/1463-4), ʿAlāʾ al-Dīn b. Ibrāhīm (d. 870/1465-6) and S̲h̲āh Ḳāsim b. Ibrāhīm (d. 888/1483-4). Meinecke, *loc. cit.*, remarks that the first two are evidently from the same mould and that the third may well be contemporary. The plaster shows traces of gilding and may also have been painted.

The interior of the *ʿimāret* still contains traces of hexagonal turquoise tiles alternating with cobalt triangles set directly on the rubble walls. The most important decorative feature, however, was a monumental tile *miḥrāb*, now in the Çinili Köşk in Istanbul, old number 136 (E. Kühnel, *Die Sammlung Türkischer und Islamischer Kunst im Tschinili Köschk* [= Meisterwerke der Archäologischen Museen in Istanbul III], Berlin-Leipzig 1938, Fig. 24). It is of polychrome tiles, partially gilt after

firing, with black or red contours of earth colours to prevent the glazes from running. Though not identical to the tile-work of the Green Mosque and Tomb at Bursa (822/1419-20) or the Muradiye at Edirne (*ca.* 1433), it is markedly similar. Meinecke, *loc. cit.*, considers the *miḥrāb* to have been a special order, while assigning comparable fragments in Konya, Berlin and the Victoria and Albert Museum to a refection of the tomb of D̲j̲alāl al-Dīn Rūmī at Konya in 783/1381-2. Also from the *ʿimāret*, doubtless from the main entrance, is a wooden door, now in the Türk ve Islâm Eserleri Müzesi, Istanbul (Çinili Köşk, old number 16; *not* No. 238 as in Aslanapa-Diez-Koman, *loc. cit.*), carved by a craftsman, ʿUmar b. Ilyās al-Ḳaramānī (Mayer, *Woodcarvers*, 66), combining high-relief foliate motifs and silhouette carved lions and gryphons, in a style much closer to stone carving than was Anatolian woodwork of the Sald̲j̲ūḳ period.

The *ʿimāret* and mausoleum are rich in inscriptions. That over the main entrance is dated Muḥarram 836/August-September 1432. Over the entrances to the domed chambers flanking the axial *īwān* are two undated extracts from the *waḳfiyya*. The basic *waḳfiyya* text, dated S̲h̲awwāl 835/July 1432, bears two addenda of the same year and further addenda of 843/1439-40, 849/1445-6, 851/1447-8 and 870/1465-6 (facsimile and commentary by İsmail Hakkı Uzunçarşılı, *Karamanoğulları devri vesikalarından Ibrahim Beyin Karaman imareti vakfiyesi*, in *Belleten*, i [1937], 65-164). The richest foundation of Ḳaramān, was it endowed as *waḳf ahlī* according to the Ḥanafī *mad̲h̲hab*, with a staff of twelve Ḳurʾān readers, from among whom the officials of the foundation were to be appointed with appropriate supplements to their basic stipends of 225 silver *dirhams*, and servants to work in the kitchens to provide three days' free food and lodging for reputable visitors. Its designation is slightly ambiguous. Uzunçarşılı describes the foundation as *dār ḳurrāʾ*, *maṭbak̲h̲* and *masd̲j̲id*. However, the foundation inscription and the first of the two extracts from the *waḳfiyya* inscribed inside describe it merely as *hād̲h̲ihi ʾl-ʿimāra al-mubāraka* (non-descript "foundation"); while the *waḳfiyya* also mentions a *dār al-ḥuffāẓ*. None of this is sufficient to characterise the foundation as a novelty in institutional organisation. The *mutawallī* was to be Ibrāhīm Beg during his lifetime, and thereafter his descendants. Nothing is said of the disbursement of surplus revenus; but the express conditions that one-quarter of the income should go to the upkeep of the foundation and that *waḳf* property be kept in good repair look forward to the terms of Ottoman *waḳfiyyas*.

Mausolea. The distinction between attached and unattached mausolea is probably artificial, since the cemeteries have suffered considerably from recent urban expansion. Photographs, for example, taken prior to the restoration of the ʿAlāʾ al-Dīn Türbe (Fig. 13), close to the no longer extant *madrasa* of Mūsā Beg (see above) show the springing of the arches of an adjoining building on its south-east side; while a tomb, probably early 15th century, popularly associated with the Zaynī *ʿālim* and *faḳīh*, S̲h̲ams al-Dīn Meḥmed Fenārī, who was actually buried at Bursa [see FENĀRĪ-ZĀDE] (d. 834/1430-1), was also attached to a *zāwiya* or *masd̲j̲id*. Of the tombs in the cemeteries, only three are now of architectural importance. The ʿAlāʾ al-Dīn Türbe (designated as such in the *waḳf* survey of Muḥarram 881/January 1477) is an undated octagonal construction of the 14th century with a fluted pyramidal roof following a brick prototype (cf. the mausoleum * of Sayyid Maḥmūd K̲h̲ayrānī at Akşehir [621/1224-5], *RCEA*, 3920) with a recessed entrance and diminutive stalactite canopy (Fig. 14). A ruined octagonal tomb with a set-back octagonal transitional zone and a recessed entrance in a shallow, broken-arched niche, known (Konyalı, 499-501) as the Demirgömlek Türbe and identified on the basis of the 881/1477 *waḳf* survey as the mausoleum of a late Ḳaramānid official, Amīn al-Dīn, appears to be a development of a tomb type characterised by the Hüdavend Türbe at Niğde (712/1312-13). Comparable is the Kızlar Türbe, an undated construction of cut stone with bi-chrome (*ablaḳ*) designs on alternate facets and a recessed entrance set in an arched canopy. The evidence (despite Konyalı, 364-77) that the tomb of Yunus Emre—fervently believed by the local population to have died at Ḳaramān—is in the Kirişçi Baba Mosque is inconclusive.

Baths and fountains. Most of the baths of Ḳaramān were seriously damaged in an earthquake in 1299/1881-2. None is dated, but the plan of a bath given by Aslanapa-Diez-Koman, 49, which, they suggest, might have been founded by the Ḳaramānid Süleymān Beg, is of recognisably traditional type. There are no recorded double baths, so the buildings must have been used alternately by men and women. Many must occupy the sites of baths mentioned in 16th century Ottoman *waḳfiyyas* and may well be older, since Sauvaget has remarked that waterworks, for obvious reasons, tend to persist even though the superstructure is rebuilt. However, there is a clear relation between the construction of new baths in the outlying quarters of the town and the building of fountains in the 18th—19th centuries.

The numerous fountains of the quarters of Ḳaramān (Konyalí, 625-35) are of uniform type, with the outflow inset in an arched, normally undecorated, recess, with small *maṣṭabas* or seats at the sides. Those in the centre of Ḳaramān have, like the baths, been the object of frequent, mostly unrecorded, repairs and restorations, often re-using stone from other constructions. Thus the foundation inscription of a *dār al-ḥuffāẓ* * dated Rabīʿ II 855/May 1451 built into the Hoca Mahmud fountain (Konyalı, 637-8) is no evidence that the fountain was associated with any *dār al-ḥuffāẓ* founded by K̲h̲ʷād̲j̲a Maḥmūd. Likewise with the marble foundation plaque of an *ʿimāra* of the Ḳaramānid ʿAlāʾ al-Dīn Beg's Supervisor of Waterworks (*mīr-i āb/āv*), dated Rabīʿ II 777/October 1375, built into the so-called Şahruh Çeşmesi (Konyalı, 351). The earliest standing fountain is thus that opposite the main entrance of the *ʿImāret* of Ibrāhīm Beg (836/1432), set in a well-decorated, carved frame. The fountains of the Ottoman period, except for the Kadıbudak and Kilçi Çeşmes (both 958/1551), are mostly associated with mosque foundations. To judge from the surviving inscriptions, few were built in the 17th century. However, the large number of construction or restoration inscriptions covering the period 1790-1850 on the fountains of the peripheral quarters is evidence for considerable urban expansion in the late Ottoman period.

Conclusion. Despite the disappearance of important monuments over the past hundred years, the surviving monuments (of which only the most important have been considered) seem a typical sample of the original constructions of the Ḳaramānid

and Ottoman period. To judge from the earliest Ottoman *waḳf* registers, many buildings were already *kharāb* and their *waḳfs* appropriated by other foundations. Calculation of the revenues of the major Ḳaramānid constructions is difficult, since the scale of the endowments is not recorded. However only the largest foundations, the *madrasa* of Mūsā Beg (*ca.* 1340, no longer extant) the Hatuniye Medrese * (783/1381-2) and the *ʿImāret* of Ibrāhīm Beg * (836/1432), have whole villages specified among their *awḳāf*. Even allowing, therefore, for the decay of Saldjūḳ foundations and their endowments through the 14th century and their tacit absorption by the later Ḳaramānid foundations, the *waḳf* registers tend to show that even at the height of the Ḳaramānids' power, building was no more extensive at Ḳaramān than at other centres of the amīrate—Niğde, Ermenak, Ereğli and Aksaray—and considerably less than at Konya, Akşehir, Beyşehir and Aksaray under the Saldjūḳs.

LĀRĪ [see LARIN].

AL-LĀRĪ, MUḤAMMAD B. ṢALĀḤ B. DJALĀL B. KAMĀL AL-ANṢĀRĪ (or al-Nāṣirī), known as Muṣliḥ al-Dīn al-Lārī, Persian scholar and historian, was born *ca.* 1510 in Lār, to the south of Shīrāz. Following his family's tradition, he entered upon a scholarly career and studied under Mullā Ṣadrā's son Mīr Ghiyāth b. Ṣadr al-Dīn Shīrāzī and Mīr Kamāl al-Dīn Ḥusayn, a pupil of Djalāl al-Dīn [see AL-DAWĀNĪ]. It is transmitted that Lārī's father proceeded openly against the Shīʿī heretics (*rawāfiḍ*).

During his later journeys, al-Lārī was at first received honourably by the Mughal emperor Humāyūn (1530-56), who granted him the title *ustād* and became his pupil. Because of the unrest after Humāyūn's death, he left the country to go first on a pilgrimage to Mecca. According to the Persian source quoted below, four hundred of his books were lost at a shipwreck. After the pilgrimage, from 964/1556-7 (rather 1557) onwards, he stayed for a while in Aleppo, where he apparently tried to establish himself as a merchant. His erudition stood out in discussions with learned men, among whom was Aḥmad Ḳazwīnī, who did not dare to answer Lārī's objections against his recently-composed *Ithbāt al-wādjib*. It is not known how long Lārī stayed in Aleppo; he probably lacked there means of subsistence. His next station was Istanbul, where he obtained admittance to the Muftī Abu 'l-Suʿūd [see ABU 'L-SUʿŪD]. But he declined the offer of a professorship, endowed with 50 *aḳčes* daily; he might have thought that such a position was rather unimportant in comparison with his previous situation at the Mughal court. In this connection, the Ottoman historian ʿĀlī speaks of breach of faith of the Muftī *vis-à-vis* Lārī (H. Sohrweide in *Isl.*, xlvi [1970], 286). Disappointed, he left Istanbul and found his final home in Āmid (now Diyarbakır), where Iskender Pasha, the Ottoman governor, appointed him professor at the Khosrew Pasha *madrasa* and teacher of his children. After being accepted among the *mewāli-yi Rūm*, he then also met with recognition by the Porte. He died over 60 years old in Dhu 'l-Ḥidjdja 979/April-May 1572.

He was originally a follower of the Shāfiʿī *madhhab*, becoming later a Ḥanafī; also, he had a certain inclination towards mysticism. He wrote numerous annotations and commentaries of well-known works on philosophy, astronomy, *tafsīr* and *ḥadīth*. His few experiments as a poet met with no approval, but his *Mirʾāt al-adwār wa-mirḳāt al-akhbār*, a universal history in Persian, dedicated to the Ottoman sultan Selīm II (974-82/1566-74) on the occasion of his accession to the throne, became widely known. The work consists of ten chapters, and is a compilation from fifty Arabic, Persian and a few Turkish works, which are mentioned in the preface. Possibly between 974/1566-7 and 978/1570, Khōdja Saʿd al-Dīn (d. 1008/1599 [see KHŌDJA EFENDI]) undertook, at the order of the Grand Vizier, an adaptation in Turkish of the first nine chapters. He left out the tenth chapter, on the Ottomans; as is well-known, they were the subject of his own work, the *Tādj al-tewārīkh*. In the 19th century, the official historiographer Esʿad Efendi [see ESʿAD EFENDI, ṢAḤḤĀFLAR-SHEYKHĪ-ZĀDE SEYYID MEHMED] also made a partial translation.

(H. Sohrweide)

LĀRIDA, name denoting, in Arabic texts, the former Ilerda, an episcopal see, currently Lérida, provincial capital in Spain, to the west of Barcelona, on the Segre.

It was a district (*ʿamal*) centre of the Upper March (*al-Thaghr al-alʿā*) to which other towns and a large number of fortified strongholds were subordinate. Situated on a fertile plain, it is surrounded by numerous gardens and orchards. One of its main sources of wealth was constituted by the plantations of fine quality flax which were farmed commercially throughout the March. There used to be gold in large quantities in the river of Lārida. The district included rich farmlands on the banks of the Cinca (*nahr zaytūn*) with olive-groves and vineyards. There were numerous agricultural estates (*ḍiyāʿ*) comprising cereal and pasture land. Al-Ḥimyarī notes as a special feature the fact that each rural grouping (*ḍayʿa*) had at its disposal a fortified look-out tower (*burdj*), or underground galleries (*sirdāb*) where the farmers could take refuge in the event

of attack. Situated on the main strategic route of the Upper March, Lārida was an obligatory transit point of armies and a site of the utmost importance in the defensive system of the Marches. Conquered by the Muslims at some time after the capture of Saragossa and Tarragona (whose inhabitants capitulated without resistance, if al-Rāzī is to be believed), the territory of Lārida underwent pillage and destruction, in the 2nd/8th century, at the hands of Franks—the armies of Louis—and of Cis-Pyrenean Christians and renegades. Governed by *wālīs* granted military prerogatives on account of its distance from Cordova, it succeeded on many occasions in eluding the authority of the *amīrs*. The Banū Ḳasī, the Banū Mūsā or Banū Lubb on the one hand, the Banū ʿAmrūs, and the Banū S̲h̲abrīṭ or Banū Ṭawīl, on the other, as well as the Banu 'l-Muhād̲j̲ir or Tud̲j̲ībīs [*q.v.*], dominate the entire history of Lārida and its region in the 3rd-4th/9-10th centuries.

The name of Ismāʿīl b. Mūsā b. Mūsā b. Ḳāsī who, in 270/883-4, reconstructed and fortified Lārida and its surrounding territory, deserves a special mention. His sons were obliged, in *ca.* 277/890, to fight against Muḥammad al-Ṭawīl of Huesca, who vied with them for possession of the Barbitania (Barbastro and Litera, in the Ribagorza). The *wālīs* of Lārida, with their own troops or with reinforcements from Cordova, fought on more than one occasion with the Christians of Pallars and of the Barcelona region. The superb Grand Mosque built by Lubb b. Muḥammad b. Ḳasī in the upper part of the fortress dates from the beginning of the 4th/10th century. In the final third of the 4th/10th century, the role of *ḳāʾid* appears to have been occupied by Ras̲h̲īd al-Barg̲h̲awāṭī, who was instructed to restore to Hās̲h̲im b. Muḥammad b. Hās̲h̲im al-Tud̲j̲ībī the district of Lārida, which continued to be controlled by his family for a number of years. In the 5th/11th century, the fate of Lārida and its region was linked to that of the Arab family of the Banū Hūd [see HŪDIDS], who in 431/1039 replaced the Tud̲j̲ībī family in controlling the valley of the Ebro and in the *ṭāʾifas* of Saragossa and Lārida. Yūsuf b. Sulaymān b. Hūd al-Muẓaffar—like the *ḥād̲j̲ib* Mund̲h̲ir at a later stage—governed the town, from a time prior to the death of his father (438/1046) and was in disagreement with his brother Aḥmad al-Muḳtadir of Saragossa, who held him responsible for the loss of Barbastro in 456/1064 [see BARBAS̲H̲TURU]. Under the control of members of the family of the Banū Hūd, sometimes dependent on Saragossa and in a precarious state in the 6th/12th century in the face of the Christian advance, the town survived under the authority of *wālīs*. It was compelled, when the fortresses of the defensive perimeter were taken, and Armengol VI of Urgel and Ramon Berenguer IV of Barcelona entered into alliance with other Catalan chieftains, to capitulate on 19 D̲j̲umādā II 544/24 October 1149, when it was at that time being governed by the *wālī* al-Muẓaffar b. Sulaymān.

(J. BOSCH VILÁ)

LARIN (P., *lārī*), a silver coin current in the Persian Gulf and Indian Ocean in the 16th and 17th centuries. It takes its name from the town of Lār [*q.v.*], the capital of Lāristān at which it was first struck; cf. Pedro Texeira (*Travels*, Hakluyt Soc., London 1902, 341): "There is also the city of Lar... whence are called laris, a money of the finest silver, very well drawn and current throughout the East", and Sir Thomas Herbert speaking of Lār in 1627 (*Some years' travels*, London 1665, 130): "near this byzar the larnes are coyned, a famous sort of money." The larin weighed about 74 grains (4.9 grammes) and had a high reputation for the purity of its silver. It was worth ten pence in English money (Herbert) or one-fifth of a French crown (Tavernier) or 60 Portuguese reis.

The larin is in shape quite unlike any other coin. It is a thin silver rod about 4 inches long, doubled back and then stamped on either side with inscriptions from dies like any other coin. It is admirably described by William Barret in his account of the moneys of Baṣra in 1594 (Hakluyt, *Principal voyages*, Glasgow 1904, vi, 12): "The sayd larine is a strange piece of money, not being round like all other current money of Christianitie, but is a small rod of silver of the greatnesse of the pen of a goose feather where with we use to write and in length about one eighth part thereof, which is so wrested that the two ends meet at the juste halfe part and in the head thereof there is a stamp Turkesco and these be the best current money in all the Indices and six of the larines make a ducate".

The kingdom of Lār ceased to issue these coins after its conquest by S̲h̲āh ʿAbbās the Great of Persia (Chardin, *Voyages*, Amsterdam 1735, iii, 128), but its popularity led to this type of coin being adopted by other states of the Indian Ocean. The kings of Hormuz of the latter half of the 16th century issued larins, as did the S̲h̲āhs of Persia at S̲h̲īrāz and the Ottoman Sultans at Baṣra. In India, they

were struck in the 17th century by the ʿĀdil Shāhī dynasty of Bīdjāpūr and other rulers, and the frequent finds of larins in Western India show how extensive was their circulation there. In the Maldive Islands in the early 17th century, the king struck his own larins, as we know from the *Voyage* of F. Pyrard de Laval (Hakluyt Soc., 1887, i, 232-3). In Ceylon they were also struck, not only by the natives but also by the Portuguese merchants at Colombo; in this island they were twisted roughly into the shape of a fish-hook, whence the term "fish-hook" money. These pieces are either uninscribed or bear rude imitations of the Arabic script. In Ceylon the "fish-hook" money survived into the 18th century. A degenerate descendant of the larin existed till recently (H. St. J. Philby, *The heart of Arabia*, London 1922, ii, 319) on the Arabian side of the Persian Gulf, in Ḥasā, where it is known as a *ṭawīla*, i.e. the "long" [coin]. It is only an inch long and of very base silver, if not copper, without any trace of inscription. It is described by Palgrave (*Narrative of a year's journey through Central and Eastern Arabia*, London 1865, ii, 179) who adds that there is a proverb "like a Ḥasā *ṭawīl*", applied to any one who, like the local currency, is of no use away from home. H. R. P. Dickson, *The Arab of the desert*, London 1949, still registers in his *Glossary*, 643, the *ṭawīl* as a copper bar coin current in Ḥasā.

LARISSA [see YENISHEHIR]

LAS BĒLA, a former native state of the British Indian empire. It lies in the south-east of Balūčistān, along the coast to the west of Karachi, between lats. 24° 54′ and 26° 39′ N. and longs, 64° 7′ and 67° 29′ E. It is bounded on the west by Makrān [*q.v.*] (of which western Las Bēla forms indeed a part), on the north by the Jhalāwān district of the former Kalāt native state [see KILĀT] and on the east by the former province of Sind; its area, both as a former native state and as a modern District of Pakistan (see below) is 6,441 sq. miles.

1. Geography. The central part of the state is a flat, arid plain (*las* = "plain"), but in the western part of the state there is the Makrān coastal range running parallel to the sea, and ranges like the Mor and Pab ones run north-southwards in the eastern part of the state and separate Las Bēla from the lower Indus plains. The central lowland area is drained by the Porāli, Tītiyān and other streams, and it is here that the main settlements lie. Much of the terrain of Las Bēla is desolate and scrub-covered, and because of the exiguous rainfall (7″/17.5 cm. per annum), agriculture depends essentially on irrigation from floods coming down from the hills after the summer rains; this water is collected by dams across watercourses, and *kārīzs* [see ḲANĀT] are used for conveying water to fields. The coastal population depends on a small amount of coastal navigation, and especially on fishing, the whole Makrān coastland being known in classical times as one inhabited by Ichthyophagoi; with the suppression of piracy in the Persian Gulf and the Arabian Sea during the 19th century, these fisheries expanded considerably, and salted fish was exported from the Makrān coasts as far as Zanzibar, Bombay and the Malabar coast.

2. Ethnography. The main Lasī tribes claim descent from the Sūmrā and Sammā former rulers of Sind, and seem from their names (cf. the frequent element *potra*) to be of Indian Rādjput origin, Las Bēla being the only part of Makrān where an originally Indian ethnic element has apparently maintained itself against the Balūč incomers. There are five principal tribal confederations, of which the Rūndjha held the chieftainship of Bēla before 1742, and the Djāmots after them. A group called the Gadrās, of negroid features, clearly descend from an imported slave population, and another low-caste group is constituted by the Langas, mainly employed as domestic servants. The overwhelming majority of the population is Sunnī Muslim in faith, with some Khōdja Ismāʿīlī traders in the towns. The worship of local *pīrs* or saints is widespread, with especially important shrines, formerly visited by Hindus from quite distant parts of the subcontinent as well as by Muslims, at Hinglādj, Shāh Bilāwal and Lāhūt-i Lāmakān. Three-quarters of the population speak the Djadgālī or Djagdālī (lit. "Djat language") form of Sindhi, but Makrānī Balūčī is spoken generally in the west and Brahūī in the extreme north.

3. History. Las Bēla has virtually no separate history before the 18th century; for the history of the region before then, see in general MAKRĀN. Alexander the Great must, however, have passed through what became Las Bēla when in 326 B.C. he left Pattala on the lower Indus and marched westwards via the land of the Oreitae to Gedrosia or Makrān and then Persia.

Various local tribes exercised power in Las Bēla until in 1742-3 Djām ʿAlī of the Djāmot tribe (see above) established his authority there with the help of a Brahūī force from the ruler of Kalāt Maḥabbat Khān; the chieftainship henceforth remained with this family, who were known by the Rādjput title, formerly used in Sind, of Djām but who came to claim a spurious descent from the Arab tribe of Ḳuraysh. Las Bēla thus became a dependency of Kalāt, whose Khān at first drew half the revenues of Bēla as his share and later required on occasion a troop contingent in lieu; also, Las Bēla's northern frontier adjoining Jhalāwān remained for long undefined. Henry Pottinger passed through Bēla in 1810 and found that town enjoying considerable prosperity under the benevolent rule of Djām Mīr Khān I (1776-1818); a colony of 250-300 Hindu merchant families carried on trade there (*Travels in Beloochistan and Sinde; accompanied by a geographical and historical account of those countries*, London 1816, 14-29). It was during this Djām's reign that conflict arose over the Makrān port of Gwādar [*q.v.* in Suppl.], which had been transferred to the sultans of ʿUmān in 1784 by Mīr Naṣīr Khān of Kalāt, but captured at one point by Mīr Khān I. In the middle decades of the 19th century, Djām Mīr Khān II (1830-69), who was beginning his reign as a child when Charles Masson was in Bēla in the 1830s (*Narrative of various journeys in Baluchistan, Afghanistan and the Panjab*, London 1842, ii, 17-18, 25-30), came to covet the territories of his father-in-law Khudādād Khān of Kalāt, and allied on various occasions from 1865 onwards with the Khān of Khārān [*q.v.*] in north-western Balūčistān and the Brahūī *sardārs* or chiefs of Jhalāwān. After 1869 he lost the chieftainship of Las Bēla, however, and was an exile in British India; his son and ultimate successor as Djām ʿAlī Khān III in 1876 recognised the suzerainty of Kalāt

in the general settlement at Mastung arranged by Sir Robert Sandeman (T. H. Thornton, *Col. Sir Robert Sandeman, his life and work on our Indian frontier*, London 1895, 46). Irreconcilable disputes within Las Bēla broke out between father and son, with Djām ʿAlī Khān exiled to Quetta in 1886. When Djām Mīr Khān II died in 1888, Sir Robert Sandeman, then Agent to the Governor-General in Balūčistān, in 1889 installed Djām ʿAlī Khān III in Bēla (*ibid.*, 199-203). After this latter ruler's death in 1896, there were disputes among his sons, but Djām Mīr Kamāl Khān assumed the chieftainship, and in the ensuing decades, events in Las Bēla were less eventful.

After British India was partitioned, Las Bēla, like Kalāt and Khārān, acceeded to Pakistan (1948), and after 1952 became part of the Balūčistān States Union, with the Djām no longer an independent ruler but receiving a privy purse from the central government. In 1955 all the provinces of West Pakistan were merged into one unit, with Las Bēla as a District of Kalāt Division under a Deputy Commissioner; but after 1960 Las Bēla District was transferred to Karachi Division. According to the 1961 census, Las Bēla District had a population of 90,826, excluding non-Pakistanis, and the town of Bēla one of 3,139 (*Population census of Pakistan 1961. District census report*, Las Bela, Karachi n.d.)

LASHKAR, the Persian equivalent of the Arabic *ʿaskar*, *djund* [*q.v.*], or *djaysh* [*q.v.*], and the term normally used by the Indian Muslim rulers for army. Though armies were generally organised according to the Perso-Turkish military traditions of the Ghaznawids and the Saldjūḳids, Mongol traditions were also assimilated later into the subsequent plans for the reorganisation of the *lashkar*.

Composition and organisation. The *lashkar* of the Dihlī Sulṭāns, that of the 9th/15th century provincial dynasties, and that of the Mughals was divided into the cavalry, infantry and the elephant corps, the cavalry forming its backbone. Following the Ghaznawid, Ghūrid and Saldjūḳid traditions, both the Sulṭāns and the Mughal emperors maintained a multi-racial professional cavalry, not neglecting to include even the leaders of the Hindu racial and ethnic groups.

In the 7th/13th century, the Dihlī cavalry, or the standing army at the capital, was variously known as the *ḥashm-i ḳalb*, *afwādj-i ḳalb*, *ḳalb-i sulṭānī*, or simply *ḥashm*. Some Sulṭāns also recruited a slave corps personally loyal to themselves, but they invariably proved disastrous to their successors. The *djāndārs* (king's body-guards) performed both military and police duties and were counted as members of the military force. Apart from the *ḥashm*, the *iḳṭāʿ* [*q.v.*]-holders also recruited cavalry from the regions in which they were posted, or from the garrisons under their command. The army of the *iḳṭāʿ*-holders was known as the *ḥashm-i aṭrāf*, or later, as the *ḥashm-i bilād-i mamālik*.

A separate army was kept at strategic points, both in old and newly-built forts along the River Indus in order to stop the Mongol incursions. Sulṭān Balban [*q.v.* in Suppl.] built strong forts even at Djalālī, Patiyālī, and in other predominantly Hindū areas east and north of Dihlī, in order to open up roads and communication with Oudh or Awadh [*q.v.*]. He manned these forts with Afghāns, who were given fertile land to farm. The commanders of the forts remained as *iḳṭāʿ*-holders, but the soldiers were encouraged to develop a personal interest in the land as landowners.

Bughrā Khān, a son of Balban, is said to have informed his own son Kayḳubād, who succeeded his grandfather Balban as the Sulṭān of Dihlī, that a *sar-khayl* should be in control of ten horsemen; a *sipah-sālār* should command ten *sar-khayls*; an *amīr* should be a commander of ten *sipah-sālārs*; a *malik* should have authority over ten *amīrs*, and a *khān*'s forces should control contingents of ten *maliks* (cf. Ḍiyāʾ al-Dīn Baranī, *Taʾrīkh-i Fīrūz Shāhī*, Bibl. Ind., Calcutta 1860-2, 145). This is not to say, however, that the armies were organised according to a decimal system, but it was an ideal which the Sulṭāns wished to implement, because of their growing awareness of the decimal chain into which the Mongol army was divided. Sulṭān ʿAlāʾ al-Dīn Khaldjī, however, did re-organise his army on that basis, and the Tughluḳs are known to have continued the decimal system, for we are told by al-ʿUmarī's *Masālik al-abṣār fī mamālik al-amṣār* that, in Muḥammad b. Tughluḳ's reign, the *khān* commanded 10,000 horsemen, the *malik* 1,000, the *amīr* 100, and the *sipah-sālār* less than 100.

The head of the military administration was known as the *ʿāriḍ-i mamālik*, or the *ṣāḥib-i dīwān-i ʿarḍ* [see istiʿrāḍ, ʿarḍ]. As a minister, he was second only to the *wazīr* or the Prime Minister. In the reign of Balban, the *ʿāriḍ-i mamālik* was known by the title *rāwat-i ʿarḍ*, the first word being of Hindī origin. Amīr Khusraw's maternal grandfather, ʿImād al-Mulk (pillar of the state), was Balban's *rāwat-i ʿarḍ*, and had a very keen sense of his responsibility. Later, in Fīrūz Shāh's reign, the *ʿāriḍ-i mamālik* was given the title ʿImād al-Mulk.

The *ʿāriḍ-i mamālik* was the principal recruiting officer for the Sulṭān's standing army (*ḥashm-i ḳalb*); he inspected the armaments and horses of the cavalry at least once a year, kept their descriptive rolls (*ḥilyat*), and recommended promotions or punishments accordingly. The *ʿāriḍ-i mamālik* was also responsible for the internal organisation and the discipline of the *ḥashm-i ḳalb* and the commissariat. The leading *iḳṭāʿ*-holders appointed their own personal *ʿāriḍs*.

Fakhr-i Mudabbir [*q.v.* in Suppl.] tells us how the *ʿāriḍs*' assistants were required to note down the name and *ḥilyat* of both the troopers and the foot-soldiers. As an inspection of the army was invariably held before its march to a campaign, the *ʿāriḍ* on such occasions was not expected to be too harsh, for disheartened troopers, according to Fakhr-i Mudabbir, were not very dependable (Fakhr-i Mudabbir, *Ādāb al-ḥarb wa 'l-shadjāʿa*, ed. A.S. Khwānsārī, Tehran 1346/1966, 276-8).

It would seem that the system of *dāgh* (branding of horses) which was known in the reign of the Ghaznawids had been abandoned by Iltutmish. It was reintroduced by Sulṭān ʿAlāʾ al-Dīn Khaldjī, but Sulṭān Fīrūz Tughluḳ abolished the practice, as well as that of recording *ḥilyats*. The latter was reintroduced once again by Sikandar Lōdī, while Shīr Shāh also made *dāgh* compulsory [see dāgh u taṣhīḥa in Suppl.].

A remarkable change took place in the military organisation when Akbar introduced his monolithic military and civil service organisation, known as *manṣabdārī*. Although the system became more complex in

the reign of Shāhdjahān, the basic framework of the *manṣabdārī* system as instituted by Akbar endured. According to the *Āʾīn-i Akbarī* of Abu 'l-Faḍl, the Emperor divided the *manṣab* (rank) of the *manṣabdārs* from the *dah-bāshī* (commander of ten) to *dah-hazārī* (10,000), reserving commands of 5,000 and above for his owns sons. He intended to limit the *manṣabs* to sixty-six, representing the value of letters in the name of Allāh, but in fact there were only ever thirty-three grades. Akbar himself relaxed the rule about higher ranks, promoting Prince Salīm to a *manṣab* of 12,000 and two nobles to the ranks of 7,000. All *manṣabdārs* were required to maintain horsemen, horses, elephants, camels and carts, as fixed by their respective *manṣabs*.By 1010/1602 the *manṣabs* were divided into *dhāt* and *suwār* and the institutions of *yak-aspah, dū-aspah* and *sih-aspah* were also introduced. *Manṣabdārs* of the rank of 500 were called *amīrs* and those holding higher ranks were given other appropriate titles. Later in Shāhdjahān's reign, only those who held the rank of 1,000 were known as *amīrs* (rendered as *Omrahs* by Bernier and other foreign authors).

The personal rank of *manṣabdārs* called *dhāt* was meant for calculating one's salary according to the sanctioned pay scale, and the *suwār* rank indicated the number of troopers and horses the *manṣabdārs* were ordered to maintain; for example, a *manṣabdār* with a *suwār* rank of 5,000 was ordinarily required to produce 1,000 horsemen at muster. Troopers who were required to provide one horse were called *yak-aspah*, while those who undertook to provide two horses were called *dū-aspah*. Those obliged to provide three were known as *sih-aspah*. The *manṣabdārs*' and *amīrs*' contingents contained all three types of troopers proportionate to the salaries they drew. Salaries were not allowed for the full twelve months; some drew them for much shorter periods. For example, a *manṣabdār* with a *suwār* rank of 5,000 drawing his salary for twelve months was required to muster a contingent of 1,000 troopers, of whom 300 were *sih-aspah*, 600 *dū-aspah* and 100 *yak-aspah*, i.e. a contingent containing 2,200 horses. If, on the other hand, he were to draw his salary for only five months in a year, he would need to muster only *yak-aspahs*.

The contingents of the *manṣabdārs* were multiracial, the number of recruits of different martial races being predetermined. Only the Rādjpūts and Mughals were allowed to recruit troopers exclusively from their own racial groups and tribes.

Troopers wishing to enter the army had first to find a patron who generally belonged to the same race as himself, but as the empire expanded, the racial exclusiveness in the *manṣabdār*'s contingents broke down. The candidates had to furnish their own horses of a standard breed, as well as armaments, but the patron *manṣabdārs* also gave them horses for which deductions were made from the troopers' salary. The *manṣabdārs*' troopers were known as their *ṭābīnān* ("followers").

The appointments of the *manṣabdārs* from the lowest to the highest rank were approved by the emperor, and all of them were technically speaking directly subordinate to him. The head of the military administration was called the *mīr bakhshī*, the Mughal name given to the *ʿāriḍ-i mamālik*. The *mīr bakhshī* also held the status of a minister, and in that capacity was next to the prime minister. However, even the ministers' contingents were examined by the *mīr-bakhshī*'s department and, the fact that their salary depended on the maintenance of those contingents meant that even the prime minister's salary was dependent on the *mīr-bakhshī*'s approval. The *bakhshī*'s department also recorded the descriptive roll (*čihra*) of the *manṣabdārs*, their troopers and horses. The breeds and the quality of their horses were examined and those that were approved were branded with different marks (*dāgh*). A muster of troopers and horses was held periodically for physical checking and verification (*taṣḥīḥa*). Those who failed to muster their troops forfeited their pay or were heavily fined. The *mīr-bakhshī* was assisted by two other *bakhshīs* who helped to check the evasion of rules, and to prevent fraud. The Mughal government, which depended mainly on the troopers of the *manṣabdārs* for their conquests and for the suppression of rebellions, remained efficient only so long as the monarchs were strong. Unfortunately, under the incompetent Mughal emperors who succeeded Awrangzīb, the government began to disintegrate.

There was a second group of troopers, superior to the *ṭābīnān*, who were known as *aḥadīs* (from *aḥad*, "one"). An *amīr* was commissioned especially to introduce suitable candidates for the *aḥadī*-ship, and a separate *bakhshī* was assigned to examine their horses, brand them, and compile their descriptive rolls. The *aḥadīs*' salaries were some 75% higher than those of the *ṭābīnān*, and their horses and arms were thus of a superior kind. During Akbar's reign, the *aḥadīs* acted as his immediate servants. They were also assigned to non-military duties. The *wālā shāhī* ("belonging to the exalted king"), referred to as the "emperor's slaves" by Manucci, worked as body-guards or defenders of the imperial person, and were also picked from amongst the *aḥadīs*.

Another category of horsemen were known as *bārgīr-suwārs*. They neither owned horses nor were enrolled as *ṭābīnān*. However, as they were fit for cavalry service, in times of emergency they were provided with horses and went into action. They were not, however, part of the regular cavalry.

Abu 'l-Faḍl also makes mention of a large army consisting of 384,558 cavalrymen maintained by the *zamīndārs* [*q.v.*]. Some *zamīndārs* made their contingents available to the emperors for suppressing rebellions; they also kept their localities free from robbers, and performed police duties in the villages, but in no way did this big army form a part of the Mughal regular fighting forces.

The foot-soldiers who were maintained within their infantry contingents by the Dihlī Sulṭāns were known as *pāyaks*, and were mostly Hindūs. They were good archers and were generally arrayed in front of the lines of horses, or around the elephants in order to prevent them from fleeing. As body-guards and palace-guards of the emperors and princes, the *pāyaks* were deeply loyal to their masters and are known to have rendered singular services to Sulṭān ʿAlāʾ al-Dīn Khaldjī and Ḳuṭb al-Dīn Mubārak Shāh. Shīr Shāh presented them with matchlocks, and Akbar's infantry contained 12,000 matchlockbearers [see BĀRŪD. vi. India]. They were divided into four grades with different salaries. Akbar also recruited into the infantry a caste of Hindū highway robbers called *māwīs*, and named them *khidmatiyyas* (serving men). Their officer was called the Khidmat Rāy. The *khidmatiyyas* were required to guard the palace and to control highway robbery. Members of many other hill tribes and Hindū martial clans were also induced to join the Mughal infantry. The matchlockmen and the archers formed a formidable corps of the Mughal army. For administrative purposes. Akbar used to assign contingents of foot-soldiers, paid by the imperial treasury, to some high *manṣabdārs*. They were

known as *piyāda-i dā<u>kh</u>ilī* and were classified as *nīma-suwārān* (half-troopers) in the descriptive rolls. One-fourth of the *dā<u>kh</u>ilī* foot-soldiers, used matchlocks, and the rest were archers.

Auxiliary tradesmen such as carpenters, blacksmiths, cotton-carders, stonemasons, leather workers, firework-makers, turners, diggers, miners, axemen, farriers, and *kahārs* (bearers of different kinds of litters) were also classed as infantry. Indispensable as they were for constructing defensive works, pontoon bridges and helping in siege operations, they were also included in the infantry and trained in swordsmanship in order to defend themselves in times of need.

Elephants imported from India formed a formidable corps of the <u>Gh</u>aznawid army [see FĪL. As beasts of war, and ḤARB. v. Persia]. The Dihlī Sultans were also highly impressed with the utility of elephants in war. Balban considered each elephant as equal to 500 horsemen, and the Dihlī Sulṭāns lost no opportunity in obtaining the choicest elephants for their *pīl<u>kh</u>āna* (elephant stables). They also strove to keep those areas that supplied the best elephants, such as Bengal and Deccan, in their possession. One hundred and twenty war-elephants arrayed against Tīmūr's army by the feeble Tu<u>gh</u>luḳ Sulṭān are known to have struck panic even into that world-conqueror's army [see also ḤARB. vi. India].

Elephants were an asset to the army in battering the gates of strongholds. The warriors shot arrows or matchlocks from their positions on the elephants' back; the commanders who were seated on the elephants could be seen from a distance by the rest of the army and were able to instil confidence into their soldiers. However, when panicstricken, or severely wounded, the elephants became uncontrollable and would often trample their own army underfoot.

The Muslim rulers in India did not neglect the artillery [see BĀRŪD. vi. India]. The Deccan Sulṭāns of India, who had close contact with the Ottoman Turks, were pioneers in establishing firearm factories. The Gu<u>dj</u>arāt Sulṭāns followed their example, and Sulṭān Maḥmūd and Bahādur <u>Sh</u>āh made good use of the Turkish gunners in their service. Bābur, the founder of the Mu<u>gh</u>al empire in India, secured a decisive victory over Ibrāhīm Lōdī, mainly due to the efficiency of his artillery. In India, he took a keen interest in having heavy guns cast by those gunners trained under the Ottoman Sulṭāns who were now in his service. Akbar also took a personal interest in casting guns, and recruited even Portuguese to develop his artillery. Many new types of guns were invented by the Persian Fatḥ-Allāh <u>Sh</u>īrāzī in Akbar's reign. From the middle of the 11th/17th century, European adventurers drawing exceptionally high salaries began to hold superior positions in the artillery of the Mu<u>gh</u>als and other rulers. In the 12th/18th century, the British and French gunners made radical improvements in the casting of cannons and heavy guns, but the blacksmiths invariably remained Indians.

All the heavy guns were given pompous names, and some of them were so heavy that it took as many as twenty oxen to haul and several elephants to push them. Naturally, they could not cross boat-bridges and were only with great difficulty transported along the rugged routes. The light artillery consisted of several types of guns, variously known as *gadjnāl* or *hathnāl* (guns transported on elephants), *<u>sh</u>uṭernāl*, *zambūrak* and *<u>sh</u>āhīn* (swivel-gun or wall-piece). A special type of light artillery known as the "artillery of the stirrup", which François Bernier mentions, consisted of "fifty or sixty small field-pieces, all of brass; each piece mounted on a well-made and hand somely painted carriage, containing two ammunition chests, one behind and one in front, and ornamented with a variety of small red streamers" (*Travels in the Mogul empire*, ed. A. Constable, Oxford 1841, 217-18).

The *Dārū<u>gh</u>a-i tūp-<u>kh</u>āna*, or *mīr ātas<u>h</u>* ("head of the artillery department"), performed duties similar to those of the *ba<u>kh</u>s<u>h</u>ī*, insofar as the recruitment of artillerymen and the supervision of guns were concerned. With the growing importance of artillery, the *mīr ātas<u>h</u>* in the 12th/18th century became one of the most influential officers of the empire.

The Indo-Muslim rulers did not, however, take any interest in developing their navy. Maḥmūd of <u>Gh</u>azna is known to have fought against the <u>Dj</u>āts in 418/1027 by launching a flotilla of 1,400 boats on the River Indus. The Dihlī Sulṭāns used boats provided by Hindū chieftains only for transporting goods and men. The Gu<u>dj</u>arāt Sulṭāns fought naval battles against the Portuguese. Bābur had enormous boats constructed and Akbar also constructed an impressive flotilla of huge boats some being shaped in the forms of different animals. Bengal, Ka<u>sh</u>mīr, Thatta, Lahore and Allāhābād were the main boatbuilding centres. Akbar also employed seamen, had pilgrim ships built, but was unable to establish a genuine navy. Early in Awrangzīb's reign, Mīr <u>Dj</u>umla [*q.v.*] fought successful river battles against the races of Kūč Bihār and Assām, who had complete mastery over their rivers. The only navy that the Muslims possessed belonged to the Ḥab<u>sh</u>īs who ruled the rocky island of <u>Dj</u>an<u>dj</u>īra [*q.v.* in Suppl.], 45 miles south of Bombay. They were most daring seamen, and until 1730 were victorious both against the English and the Marāṭhās [see further ḤAB<u>SH</u>Ī].

Numbers. The strength of the army of the Dihlī Sulṭāns can only be roughly estimated and many of the figures in the sources seem to be exaggerated. We are told by Minhā<u>dj</u>-i Sirā<u>dj</u>-i <u>Dj</u>ūz<u>dj</u>ānī [*q.v.*], that in 658/1260, Sulṭān Nāṣir al-Dīn Maḥmūd had collected 50,000 troopers and 200,000 foot-soldiers from Dihlī and its vicinity to demonstrate his strength before Hūlāgū's ambassadors. Balban recruited a considerable number of trained soldiers into the corps of the *suwārān-i ḳalb* and made his standing army very strong. Troopers in ʿAlāʾ al-Dīn <u>Kh</u>al<u>dj</u>ī's army numbered 475,000. Muḥammad b. Tu<u>gh</u>luḳ's cavalry is said to have consisted of 900,000 troopers, some being stationed in the capital and the others in the provinces. In 730/1329-30 he is known to have recruited 370,000 troopers for his <u>Kh</u>urāsān expedition. The army he sent against Ḳarā<u>dj</u>īl consisted of 100,000 troops and a large infantry. On his first Bengal expedition in 754/1353-4, Fīrūz Tu<u>gh</u>luḳ commanded 90,000 troopers. Again, Fīrūz <u>Sh</u>āh marched against Bengal with 80,000 troopers, 470 elephants and an exceedingly large number of foot-soldiers.

According to Bābur, Ibrāhīm Lōdī had resources enough to have brought into the field 500,000 men, but actually took only 100,000 men and 1000 elephants with him. Bābur's army, on the other hand, consisted of only 12,000 men. Humāyūn fought the battle of Ḳanaw<u>dj</u> against <u>Sh</u>īr <u>Sh</u>āh with 100,000 troopers, while <u>Sh</u>īr <u>Sh</u>āh commanded only half that number.

The total strength of the army of <u>Sh</u>īr <u>Sh</u>āh consisted of nearly 300,000 horsemen and 100,000 infantry, comprising matchlockmen and archers. Of this army, 150,000 troopers, 25,000 horsemen and 5,000 elephants were commanded by the king himself, the

rest serving at cantonments and in strategic places. The contingents of *iḳṭāʿ*-holders were also requisitioned whenever needed.

The Persian sources do not help us in calculating the number of Akbar's *manṣabdārs*, but their number at the Emperor's death, given by De Laet as 2,941, seems approximately correct. According to Father Monserrate, there were "forty-five thousand cavalry, five thousand elephants and many thousand infantry, paid directly from the royal treasury" (J.S. Hoyland and S. N. Banerji (trs.), *The commentary of Father Monserrate, S.J.*, Oxford 1922, 89).

Bernier says that the total number of cavalry in India was incredible, but he considered that the effective cavalry commonly about Awrangzīb's person, including that of the *rād̲j̲ās* and Afg̲h̲āns, amounted to 35 or 40,000 which, added to those in the provinces, formed a total of more than 200,000 troopers.

In 1057/1647, S̲h̲ād̲j̲ahān's army consisted of 8,000 *manṣabdārs*, 7,000 *aḥadi* and *barḳ-andāz* troopers, and 185,000 troopers (*tābinān*) belonging to the princes, important *amīrs* and *manṣabdārs*. This army did not include the troopers under the *parganā* officers. Of the infantry of S̲h̲āhd̲j̲ahān, which included matchlockmen and others who discharged heavy and light artillery, 10,000 were always with the Emperor.

Training and physical exercises, and uniforms. Before their admission into service, both the troopers and foot-soldiers had to pass a severe test of their competence. Fak̲h̲r-i Mudabbir gives the rules for training horses and for horsemanship in considerable detail, and works on archery as well as swordsmanship have also survived. This same author further discusses the advantage of different kinds of sports, such as wrestling, boxing, weight-lifting, disc-throwing and fencing for military training, and gives a detailed account of the advantages which the manoeuvering of stick, ball and horse in polo offered to the troopers. After entering into service, the soldiers had to maintain rather than improve their military skills through regular physical exercises, horse-racing [see FURŪSIYYA] and polo [see ČAWGĀN]. Balban took with him 1,000 horsemen and 1,000 foot-soldiers, expert in archery, during his regular hunting expeditions; Fīrūz Tug̲h̲luḳ used to array his army in battle formation, even on his hunting expeditions. These expeditions and polo were an indispensable part of the life of the Mug̲h̲al soldiers, officers, princes and emperors. The military parades and proper battle array were not possible without some training in combined movements, but regular drills of the soldiers do not seem to have been common.

The troopers are not known to have worn any uniforms. In the miniatures depicting the reign of the Mug̲h̲als, they are seen wearing clothes of different colours, but in the 12th/18th century, some nobles seem to have introduced uniforms. The contingents were generally identified by the special marks with which their horses were branded.

Pay. Maḥmūd of G̲h̲azna and his immediate successors paid their army in cash, but in the 7th/13th century the Dihlī Sulṭāns assigned *iḳṭāʿ*s (assignments of revenue of different regions) to their commanders for their personal maintenance and for that of the troops (*ḥas̲h̲m-i aṭrāf*) under them. Sulṭān S̲h̲ams al-Dīn Iltutmis̲h̲ assigned the revenue of the villages around the capital and in the Doʾāb to the *ḥas̲h̲m-i ḳalb*, and the latter were also called *iḳṭāʿ*-holders. By the time of Balban, the surviving troopers of the *ḥas̲h̲m-i ḳalb* and their descendants had become the hereditary owners of the villages. Balban ordered the resumption of the *iḳṭāʿ*s of old men, widows and orphans into the *k̲h̲āliṣa* [*q.v.*] (= territory whose revenue was reserved for the Sulṭāns' treasury), but later abandoned the scheme for emotional reasons. However, Balban's own *k̲h̲āliṣa* had expanded, and he was able to pay his own body-guards and troopers a handsome salary in cash.

The K̲h̲ald̲j̲īs and the Tug̲h̲luḳs reorganised their revenue system and determined the salary of the commanders and their troopers in cash. They then assigned its equivalent in the form of the revenue of territories in lieu of the salary. Al-ʿUmarī states that the Syrian and Egyptian *iḳṭāʿ* system differed from that of India in the mode of making payment to the troopers. In Egypt and Syria, commanders assigned land directly to their troops instead of salaries, while in India the troopers were paid in cash. ʿAlāʾ al-Dīn K̲h̲ald̲j̲ī resumed all the smaller *iḳṭāʿ*s into the *k̲h̲āliṣa* and paid cash to his large army, recruited to meet the Mongol threat to his kingdom and to ensure further conquests. Two hundred and thirty-four *tankas* [*q.v.*] were paid annually by the Sulṭān to a well-trained and equipped trooper with one horse, 78 *tankas* extra being granted to troopers with two horses. To ensure that the troopers lived satisfactorily on their low salaries, he fixed the prices of all commodities, from horses to articles of daily use, making sure that supplies were not withheld.

Sulṭān G̲h̲iyāt̲h̲ al-Dīn Tug̲h̲luḳ also paid his large standing army in cash, and issued strict orders to the *iḳṭāʿ*-holders to refrain from reducing the salaries of troopers fixed by him. Sulṭān Muḥammad b. Tug̲h̲luḳ made his commanders further dependent upon the local treasuries for their salaries, sometimes by appointing his own officers, and sometimes revenue farmers to collect the revenue from the *iḳṭāʿ*s. Fīrūz Tug̲h̲luḳ made all civil and military posts hereditary and paid them by assigning *iḳṭāʿ*s, the revenue from which was known as *wad̲j̲h*.

The Afg̲h̲āns found Fīrūz's policy highly compatible with their own tribal system, and assigned hereditary *iḳṭāʿ*s to their commanders, who in turn sub-assigned smaller areas to their subordinates, who then paid the troopers by making similar sub-assignments. However, the monthly salary of ordinary troopers was fixed and the *iḳṭāʿ*s were granted to the commanders on the basis of the total number of troopers and their monthly salary. S̲h̲īr S̲h̲āh, who in his youth had managed his own father's sub-assignment, was fully conversant with the abuses of the system. He reverted to the system of ʿAlāʾ al-Dīn and paid his standing army in cash, personally supervising the recruitment and the fixation of the soldiers' salaries, which were paid in cash. Fraudulent practices were eradicated by making payment only to those whose horses were branded. The big *iḳṭāʿ*s corresponding to provinces were managed by the Afg̲h̲ān tribal chiefs, but they were also ordered strictly to enforce the central government regulations in their respective administrative charges, including monthly cash payments to the troopers and the branding of horses.

Akbar and his successors paid their *manṣabdārs* mostly by assigning them revenue from territories, called by the Mug̲h̲als *d̲j̲āgīr* [*q.v.*], although the term *iḳṭāʿ* was also used. Some *manṣabaārs* were paid in cash, others partly in cash and partly in *d̲j̲āgīr*. The salary schedules of *manṣabdārs* were carefully prepared on the basis of their *d̲h̲āt* and *suwār* ranks

(including *dū-aspah* and *sih-aspah*) [see further MANṢABDĀR]. The available pay certificates of the *manṣabdārs* of Shāhdjahān's reign explicitly mention the amount of salary which they were allowed to draw to maintain themselves, their families and their personal establishments (*khāṣṣ*), and the amount meant to be paid to the *ṭābīnān*. For example, in 1060/1650, Rā'o Karan was allowed to draw 4,700,000 *dāms* for his *dhāt* rank of 2,500 and 16,000 *dāms* for *ṭābīnān* in his *sūwār* rank of 2,000. His fixed salary totalling 20,700,000 *dāms* was to be drawn from the revenue of *parganās* [*q.v.*] mentioned in the certificate (*Selected documents of Shādjahān's reign*, Daftar Dīwānī Haydarābād 1950, 176-7). In Shāhdjahān's reign, the *manṣabdārs* from 5,000 to the lowest rank were subdivided into three grades in their *dhāt* rank, the *manṣabdārs* of the first grade drawing the highest salary.

The salary of the troopers was fixed according to the breed of horses they maintained. According to the *Ā'īn-i Akbarī* a *yak-aspah* troopers was paid according to the following rates. If his horse was an ʿIrāḳī, he received 30 rupees *per mensem*: if *mudjannas* (nearly equal to ʿIrāḳī, half-breed), 25 rupees; if Turkī, 20 rupees; if a *yābū* (the Indian-bred offspring of Turki horses), 18 rupees; if a Tāzī (Indian cross-Arab breed inferior to *yābū*), 15 rupees; and if a *djangla* (Indian-bred, inferior to *tāzī*), 12 rupees. According to Bernier, early in the reign of Awrangzīb the troopers with one horse did not draw a salary of less than 25 rupees per month. However, the *manṣabdārs* could pay an even higher salary, and in order to attract efficient troopers into their service, many *manṣabdārs* did so Manucci strongly criticises discrepancies in payments to troopers, some of whom received 20 to 30 rupees, others forty, fifty, or a hundred. This inconsistency can be ascribed partly to the fact that Manucci's comments relate to the last years of Awrangzīb's reign, and partly to the fact that he does not appreciate the fact that troopers maintaining more than one horse naturally received a higher salary.

The *manṣabdārs* were authorised to deduct 5% from the salary of the *ṭābīnān* for miscellaneous administrative charges. A further deduction of one month's salary was made annually for the cost of horse and equipment supplied by the government to the troopers until the amount of the loan was paid off. The price of a trooper's horse charged by the government used to be 50% higher than their cost price, but since the government bought horses at competitive prices, the troopers did not suffer any loss, according to Abu 'l-Faḍl.

The *manṣabdārs*, *ṭābīnān* and other government servants received rewards for their good work in the form of increments in salaries, cash prizes and additions to the *djāgīrs*. Akbar introduced the system of granting loans to officers for their urgent needs. A rate of interest which doubled the original loan in ten years was charged. This usury was known as *musāʿadat* ("assistance"). The *manṣabdārs* who violated the rules and neglected their duties, for example by failing to muster horses of the breed for which they drew salaries, or by omitting to produce the number of horses stipulated for their *sūwār* rank, were fined according to a fixed schedule. Checks and counterchecks were introduced to prevent defalcation of government money through a machinery of rules and regulations requiring close co-ordination between the state departments and the department of the *mīr bakhshī*.

Since the armies of both the Dihlī Sulṭāns and the Mughals were paid by the state, they were not entitled to receive the four-fifths of the *ghanīma* (booty) sanctioned by the *Sharīʿa*. Fīrūz Tughluḳ is known to have distributed this portion of the *ghanīma* taken at Djādjnagar and Akbar took only one-fifth into the imperial treasury, requesting the officers (*fawdjdārs* [*q.v.*]) to distribute the rest equitably amongst the army. However, as the booty gained by the *fawdjdārs* in local wars was never very great, the amount received by the troops was minimal.

Horses and elephants. The Indian Muslim rulers maintained the superiority of their cavalry, not only by acquiring superior breeds of horses through sea and land routes, but also by devoting their full attention to improving Indian horse breeds. From the Persian Gulf, Baḥrayn and the ports of the coast of southern Arabia were imported ʿIrāḳī, Persian, Syrian and Arab horses. Overland trade brought in Tātārī or Central Asian horses from the territories lying between the steppelands of southern Russia and the Oxus. The horses from Ghazna to Peshāwar compared favourably with these animals. The territories between the eastern Pandjāb to north-western India, and from north-eastern India to upper Burma, contained the best horse-breeding grounds, although horses from these areas were considered inferior to those imported from foreign lands, and were sold at a lower price. Ibn Baṭṭūta says "The people of India do not buy them [horses] for [their qualities in] running or racing, because they themselves wear coats of mail in battle and they cover their horses with armour, and what they prize in these horses is strength and length of pace. The horses that they want for racing are brought to them from al-Yaman, ʿUmān and Fārs, and each of these horses is sold at from one to four thousand [silver] *dīnārs* (*Riḥla*, ii, 374, tr. Gibb, ii, 479). This same author states here that the price of the cheapest Tātārī horse in Muḥammad b. Tughluḳ's reign was 100 silver *dīnārs*, while the exceptional ones were sold for 500. Racehorses were therefore very dear.

Akbar reorganised the purchase of horses of foreign breeds by providing improved living conditions for the merchants and the horses they came to sell. Horses from ʿIrāḳ, Arabia, Persia, Turkey, Turkistān, Badakhshān, Shirwān, the lands of the Ḳirghiz, Tibet and Kashmīr were acquired for the imperial stables. Soon, Indian breeding techniques were so greatly improved that the Indian horses could hardly be distinguished from ʿIrāḳī or Persian breeds. Among the new horse-breeding regions, Kaččh began to produce horses which exceed the Arab imports. Horses from the region between the Indus and the Jhelam were similar to those from ʿIrāḳ. The horses in Akbar's stables numbered 12,000; the imperial stables were classified into several categories and the quantity of the beasts' fodder, the quality of their outfits, and the salaries of officers and servants appointed to look after them were fixed.

Under the Dihlī Sulṭāns, the superintendent of the royal horses was known as the *ākhūrbeg*, there being one for each wing of the army. Under the Mughals, this officer was known as the *ātbēgī* or *ākhtabēgī*. Akbar appointed a noble of ʿAbd al-Raḥīm Khān-i Khānān's [*q.v.*] status as the *ātbēgī*. *Manṣabdārs* from the rank of 5,000 down to the senior *aḥadīs* were appointed as the *darūghas* (superintendents) of different stables. A big staff, which included senior officers on the list of *aḥadīs*, was appointed to carry out miscellaneous duties related

to the maintenance and improvement of the stables [see further, IṢṬABL. v. India].

The Ghūrid conquest of India was achieved by the exploits of the cavalry. The elephants in the *pīlkhāna* (elephant stables) were acquired mainly as booty. However, it was after the Deccan conquests that the *pīlkhāna* of Sulṭān ʿAlāʾ al-Dīn Khaldjī came to consist of *ca.* 1,000 war-elephants. The numbers increased during the reign of Muḥammad b. Tughluḳ, and the elephants seem to have been bought even from Ceylon. Fīrūz also added to the number of elephants in his stable, but under his successors they were rapidly lost, to the extent that the last Tughluḳ Sulṭān faced Tīmūr with only 120 war-elephants. In Akbar's reign, elephants were hunted in the forests of Āgra and Allāhābād provinces, besides being acquired from Bengal and Orissa. The best elephants were to be found in the forests of Panna, near Būndī in Rādjasthān. Djahāngīr seized 69 elephants from Gudjarāt, but they could be bought from all over India; in Shāhdjahān's reign, the first white elephant was bought from Pegu. Akbar introduced the breeding of elephants, abandoning the ancient superstitious belief that to do so was unlucky, and his successors continued to follow his lead. He also classified elephants into seven categories, and framed rules for their feeding and general improvement.

Under the Dihlī Sulṭāns, the *shaḥna-yi fīl* was the supreme head of the *pīlkhāna*. Again, there was one for each army wing, and the *shaḥnas* were each assisted by a large staff. From the reign of Akbar, the elephants were classified into *ḥalḳa*s "circles" or "rings") of tens, twenties and thirties, and placed under the control of superintendents known as *fawdjdārs*, who were also ordered to train them to stand firm at the sight of fire and in the noise of artillery. Several *ḥalḳa*s of elephants were placed in the care of some important nobles, and 101 chosen elephants known as *khāṣṣa* elephants were placed in the care of one such person, with the expenses being met from the imperial treasury.

LASHKAR-I BĀZĀR, the name given to a complex of military encampments, settlements and royal palaces in southern Afghānistān which apparently flourished in the 5th/11th and 6th/12th centuries. The site (lat. 31° 28′ N. and long 64° 20′ E.) is an extensive one, stretching along the left bank of the Helmand River [see HILMAND] near its confluence with the Arghandāb with the mediaeval Islamic town of Bust [*q.v.*], modern ruins of Ḳalʿa-yi Bist, at its southern end, and the modern, new town (named after the mediaeval complex of buildings) of Lashkar-gāh at its northern one. The western edge of the complex is thus bounded by the river and also protected by a cliff running down to the water.

1. History. The existence of ruins on this site was vaguely known to H.W. Bellew in the mid-19th century, probably from hearsay when he was travelling in the region; but its existence was only made known to the academic world through the discovery in 1948 and the subsequent five seasons of excavations in 1949-51 by the Délégation Archéologique Française en Afghanistan.

The complex is not unmentioned in mediaeval geographical and historical sources. Al-Muḳaddasī, 304-5, says that "half-a-*farsakh* [from Bust], in the direction of Ghazna, there is something like a town, called al-ʿAskar, where the ruler (*al-sulṭān*) resides". Since al-Muḳaddasī completed his *Aḥsan al-taḳāsīm* in 375/985, although later additions may have been made to it, it seems that Lashkar-i Bāzār was an early creation of Sebüktigin, built to secure his newly-

acquired province of Zamīn-Dāwar and Bust—the founder of the Ghaznawid line had seized this from the Turkish *ghulām* ruler there, Baytuz, in 367/977-8 (see Bosworth, *The Ghaznavids, their empire in Afghanistan and eastern Iran 994-1040*, Edinburgh 1963, 37)—but it is not excluded that Baytuz himself had buildings on this site, and a coin of his dated 359/969-70 has been found there, see Gardin, *Lashkari Bazar*, ii, 170-1. Whether Muḳaddasī's *al-ʿAskar* is responsible for the form *al.y.n.* of the *Ḥudūd al-ʿālam*, 110, § 24.11, "a small district between Bust and Zamīn-Dāwar", as suggested by Minorsky, comm. 345, is uncertain. However, our site must be that mentioned by the Ghaznawid historian Bayhaḳī, *Taʾrīkh-i Masʿūdī*, ed. Ghanī and Fayyāḍ[1], Tehran 1324/1945, 149, Russian tr. Arends[2], Moscow 1969, 221, when he speaks of the building operations of sultan Masʿūd b. Maḥmūd (421-32/1031-41): "At Bust, by the polo-ground of the military encampment (*lashkar-gāh*) of his father the *amīr*, he had several additional constructions made; some of these are still visible today" (sc. in *ca.* 451/1059).

The main, or southern palace, shows signs of two successive burnings; after the first one of these, there was a general restoration, but after the second, the whole palace was definitely abandoned. It seems reasonable to assume, with Schlumberger, that the first conflagration was the work of the vandalistic Ghūrid sultan ʿAlāʾ al-Dīn Ḥusayn b. ʿIzz al-Dīn Ḥusayn, called Djahān-sūz, in *ca.* 545/1150, when he sacked Ghazna, temporarily expelled the Ghaznawid sultan Bahrām Shāh to India, and then marched back to Ghūr via Zamīn-Dāwar and Bust; Djuzdjānī states that he devastated the palaces and public buildings of the Ghaznawids at Bust (see Bosworth, *The later Ghaznavids, splendour and decay: the dynasty in Afghanistan and northern India 1040-1186*, Edinburgh 1977, 118-19). When, soon after these events, the last Ghaznawid sultans abandoned their Afghān possessions and retreated to the Pandjāb, the Ghūrids or their governors doubtless restored the buildings at Lashkar-i Bāzār and installed themselves there in the Ghaznawids' stead. Schlumberger dates certain alterations even to the post-Ghūrid period, that of the Khʷārazm-Shāhs. The second and fatal burning thus probably dates from the ravages of the Mongols in southern Afghānistān in spring 617-18/1221; Nasawī, *Sīrat al-Sulṭān Djalāl al-Dīn*, ed. Houdas, 64-5, tr. 109-10, speaks of a siege by the Mongols of Ḳandahār at this time (doubted, however, by Barthold, *Turkestan down to the Mongol invasion*[3], 438). Yet undeniably, life no longer continued on any discernible scale at Lashkar-i Bāzār.

2. The buildings. Lashkar-i Bāzār includes three palace buildings along the cliffs of the Helmand, the most impressive of which is the southernmost one, constructed of unbaked brick on foundations of fired brick and with wooden bonding; fired brick was also used in the reception hall and for doorways. The palace is built round a vast central rectangular courtyard with four *īwāns*. After the first burning of the palace, modifications and repairs were made to the palace and the fire-blackened remains of the original main entrance were masked by a new entrance with decoration of geometric panels and epigraphic bands, on one of which are the remains of a date, 55x/1155-64, probably indicating a reconstruction by the penultimate Ghaznawid sultan, Khusraw Shāh, the last of his family to reign in Afghānistān, or by his Ghūrid successors.

At the north of the palace, backing on to the Helmand, is the very interesting reception hall of the palace, the most monumental of the rooms in style and the most richly decorated, including with panels of brick ribbon work with stucco insets. But especially important from the viewpoints of cultural and artistic history is the fact that the friezes running round the inner faces of the brick piers in the hall contain mural paintings (these have now been removed, for safety, to the Kabul Museum). The remains of 44 figures are visible, and with those probably to be found on the missing north side, must have numbered some 60 all told. They depict frontal views of the bodies of what must have been the royal guards, the corps d'élite of Turkish military slaves of sultans Maḥmūd and Masʿūd [see GHULĀM. ii. Persia]. These warriors wear rich tunics and boots, and bear the shafts on their left shoulders of what may well have been maces, the mace (*gurz*) being a favourite weapon of Masʿūd himself, according to Bayhaḳī, and a weapon of heroes in the *Shāh-nāma*. The faces are unfortunately badly damaged, but a painted fragment found elsewhere in the palace shows a beardless, smooth-faced youth with what are generally regarded as "Mongolian" (here, of course, "Turkish") features. The appearance of these figures accords remarkably well with the literary descriptions in e.g. Bayhaḳī of the rich uniforms, bejewelled weapons, etc. of the royal *ghulāms* when paraded on ceremonial occasions such as the reception of envoys and ambassadors.

Leading to the southern palace was the street of the army bazaar, 500 yds./half-a-kilometer long and lined with shops; judging from the absence of post-Maḥmūd coins found there, this bazaar may well have been abandoned after that sultan's death. Also to the south of the palace was the great mosque (the southern palace itself contains a small, richly-decorated mosque, obviously for the private use of the sultans and their entourages), constructed originally from good-quality fired brick, but rebuilt, like the southern palace, after the first burning in a less careful manner. Schlumberger places the original mosque within the early Ghaznawid period, and it is of obvious interest as one of the very few pre-Mongol period mosques in Afghānistān.

The placing of all these buildings of the Lashkar-i Bāzār complex in their proper architectural and art historical contexts raises many problems, and a full evaluation can only begin to be made now that we have the long-awaited volume in the DAFA Mémoires series on the architecture of Lashkar-i Bāzār (see *Bibl.* below). Schlumberger was reminded of the plans of Sāmarrā palaces ("l'architecture de Lashkari Bazar apparaît, à plus d'un égard, comme un représentant provincial et tardif de celle de Abbasides"), but noted eastern Iranian features, such as courtyards with four *īwāns* and the ornamental use of brick (*Syria*, xxix [1952], 268-9). J. M. Rogers has noted the early appearance in the southern palace (the early Ghaznawid construction) of the angular, interlacing strapwork in stucco characteristic somewhat of Saldjūḳ decoration (*The 11th century—a turning point in the architecture of the Mashriq?*, in D. S. Richards, ed., *Islamic civilisation 950-1150*, Oxford 1973, 221-3). The mural paintings reminded Schlumberger again of Achaemenid representations, but he observed also that the heritage of the Buddhist art of Gandhara and northern India, much nearer in place and time to 5th/11th century Zamīn-Dāwar, should clearly be taken into account. Finally, it should be noted that the pottery finds at Lashkar-i Bāzār give a valuable conspectus of

local artistic trends in this field for the period *ca.* 1000-1220.

AL-LĀT, name of one of the three most venerated deities of the pre-Islamic pantheon, the two others being Manāt and al-ʿUzzā [*q.vv.*].

The deep attachment felt by the Thaḳīf towards al-Lāt, the Aws and the Khazradj towards Manāt and the Ḳuraysh towards al-ʿUzzā, constituted the greatest obstacle in the path of the peaceful implantation of Islam in the regions of the Ḥidjāz. This obstacle was so difficult to overcome that the Prophet seems, for a brief period, to have consented to the continuation of the cult of these three deities, called *al-gharānīḳ al-ʿulā* (see T. Fahd, *Panthéon*, 88-90, but cf. AL-ḲUR'ĀN, B, *in fine*).

The cult of al-Lāt, the deity of the Thaḳīf, descendants of the Thamūd (*Aghānī*[1], iv, 74, 76; al-Ṭabarī, i[2], 937), is attested over a vast area of the pre-Islamic Near East. She was at the same time the goddess of shepherds, from the Ḥidjāz to Ṣafā, and that of caravan-travellers, from Mecca to Petra and to Palmyra. Her name is recorded in the most remote antiquity, and it is to be found, in various forms, in the works of Herodotus (cf. *EI*[1] s.v. *Alilat*), also in Akkadian texts (*Al-la-tum*: Tallqvist, *Götterepitheta*, 259; J. Bottéro, in *Le antiche divinità semitiche*, 56). Safaitic texts (R. Dussaud, *Pénétration*, 56 ff.), Palmyran texts (D. Schlumberger, *La Palmyrène du Nord-Ouest*, 63, 71, 73), Nabataean texts (M. de Vogüé, *Palm.*, 119; W. R. Smith, *Kinship*, 292 ff.; J. Wellhausen, Reste[2], 32), Aramaic texts (Pognon, in *MFOB*, v [1911], 77-8). The Arabic form of her name dates back, at least, to the time of the Khuzāʿī ʿAmr b. Luḥayy, the reformer of the idolatrous cult in Mecca at the beginning of the 3rd century A.D., a period for which there is evidence of the cult of al-Lāt in Nabataea, in Ṣafā and in Palmyra. Now it is known that this reformer spent some time in the land of Moab, whence he would have brought back statues of various divinities, including that of Hubal [*q.v.*].

The precise meaning of the name of al-Lāt remains unclear. Two interpretations deserve consideration.

The first derives it from the root *l-t-t*. Arab lexicographers are unanimous in considering that al-Lāt is derived from the verb *latta*, "to mix, or knead, barley-meal (*sawīḳ*)." It has been shown, in *Panthéon* (112 ff.), that this interpretation emerges from a revealing association with the "idol of jealousy" erected in the temple of Jerusalem (Ezekiel, v, 15), which can be none other than Astarte (cf. II Kings, xxi, 7; xxiii, 6-7, 13-14; see Dussaud, in *Syria*, xxi [1940], 359-60; Ch. Virolleaud, in *JA*, ccxxxiv [1943-5], 418-19). The "oblation of jealousy", offered by the husband who suspected his wife of infidelity, was made with barley-meal. Now Ibn al-Kalbī, *K. al-Aṣnām*, 10, speaks of a *lātt al-sawīḳ*, "kneader of barley-meal", who was a Jew and after whom was named the square rock of Ṭā'if, symbol of al-Lāt. From this it may be deduced that a ritual similar to the Hebraic ritual of the "oblation of jealousy" was practised in the vicinity of the sacred stone, symbolising al-Lāt, and that the latter was regarded as one of the multiple incarnations of the Semitic Baʿla of which Astarte was the most eminent. This is further evidence of the Semitic tradition of the anonymity of gods, to whom epithets were given reflecting the sites or the forms of worship dedicated to them.

The second, treating al-Lāt as consort of Allāh or of his prototype Il or El, simplifies the problem, taking al-Lāt to be a feminine form of Allāh or al-Ilāh, unnamed god of the pre-Islamic Arab pantheon (*Panthéon*, 41-4).

Either of these etymologies is possible: the first responds best to Arab traditions, the second is more in line with Semitic tradition in general (cf. details in *Panthéon*, 111-20).

Al-Lāt is seen at Ṭā'if displaying the most primitive attributes of the Semitic Baʿla. Originally, she was represented by a white stone, in contrast to the black stone of Mecca; subsequently, she was associated with a sacred tree; then a sanctuary was erected for her, and this became a place of pilgrimage. But the rivalry between Ṭā'if and Mecca and the commercial and economic predominance of the latter prevented the goddess of the Thaḳīf from making Ṭā'if a centre of assembly for all the Arabs. The Mecca of Ḳuṣayy, the reformer of the pilgrimage and architect of the Ḳuraysh confederation, rapidly eclipsed the other metropolises of the Arabian Peninsula. Thus al-Lāt was unable to preserve anything of her former prestige other than the epithets *rabba* "mother of the gods", in her role as goddess of fertility, after the manner of Baʿla, of whom she is an incarnation, and *ṭāghiya*, "pre-eminent goddess", an epithet still reflecting the important cultic role that she had played among the Arabs of the Nabataean, Safaitic and Palmyran regions, as goddess of war (see refs. in *Panthéon*, 111, n. 2).

In order to consolidate the economic power of Mecca and to reinforce its role as holy city of the Arabs, Ḳuṣayy brought together in the Kaʿba all the divinities of Arabia. The triad which emerged, namely Manāt, goddess of the northern Arabs, al-Lāt, goddess of the Arabs of the Nadjd, and al-ʿUzzā, goddess of the Ḳuraysh confederation, represent the three political forces which co-existed in central and northern Arabia, from the period of Ḳuṣayy (5th century A.D.) to the advent of Islam. These three deities correspond to the theophanies of Venus, morning star and evening star, very often confused with the Semitic Baʿla and worshipped by the Arabs since time immemorial.

Although al-ʿUzzā was the last-born of the triad, she soon became the most important, in her role as tutelary goddess of the sanctuary of Mecca (see details in *Panthéon*, 118 ff.). In a parallel development, the three sacred trees (*samurāt*) which stood before the sanctuary of al-ʿUzzā at Nakhla, on the road leading towards ʿIrāḳ and Syria, were assimilated to the three divinities (*Panthéon*, 164).

The predominance of al-ʿUzzā over Manāt and al-Lāt is expressed by the dual al-ʿUzzatān[1], "the two ʿUzzās", which designated them (*Ḥamāsa*, 190, l. 15; *Panthéon*, 118, n. 3). This predominance is also apparent in the Nabataean region, where al-Lāt had been a favourite goddess, as a result of the

expansion of Meccan commerce inside Nabataea, the birthplace of Ḳuṣayy.

LAṬĪFĪ, ʿAbd al-Laṭīf Čelebi, a Turkish biographer, littérateur and poet who lived in the 10th/16th century. Born in Kastamonu in 895/1491, according to his own statement (*Tadhkira*, Istanbul 1314/1896-7, 135, 297), he belonged to an old and a noble family called the Khaṭīb-zādeler and his forefather, Ḥamdī Čelebi, was a poet who lived in the time of Meḥemmed II, the Conqueror. He states in his *Tadhkira* (298) that he started writing poetry when he was seven years old. He began to receive his education in Kastamonu, but soon gave it up (ʿĀshıḳ Čelebi, *Mashāʿir al-shuʿarā*ʾ, ms. Istanbul Üniversitesi, TY. 2406, f. 132b), and worked as an accountant and a secretary. But at the same time, he spent much effort to educate and train himself, and acquired a considerable reputation in poetry, and especially in the high culture of his time. He came to Istanbul in his youth, and was at once appointed secretary to the ʿ*Imāret* (sc. the public kitchen for the poor) in Belgrade. After a long stay in Rumelia, he returned to Istanbul (950/1543), and served again as a secretary for some ʿ*imārets*. At that time Sehī had written his *Tadhkira*, which had aroused great interest among the literary circles, and with the encouragement of his friends (*Tadhkira*, 229) and following ʿĀshıḳ Čelebi's ideas, Laṭīfī completed his *Tadhkira*, clearly his most important work. In 953/1546 Laṭīfī presented this work to Süleymān the Magnificient, and as a result was appointed secretary to the *waḳf* of Abū Ayyūb al-Anṣārī, the trustee of which was Tashlidjali Yaḥyā, the famous Turkish poet, and in 960/1553 he was occupying this post (ʿĀlī, *Künh al-akhbār*, Ist. Universitesi, TY. 9959, f. 416a). Later he worked in similar jobs in Rhodes and Cairo. ʿĀshıḳ Čelebi, who completed his own work in 974/1566-7, relates that Laṭīfī spent his time composing poetry and belles-lettres, and above all in religious duties. Having changed the introduction of his *Risāla-yi awṣāf-i Istanbul*—which in fact had been composed in his youth—he presented it to Murād III in 982/1574, expecting some gifts, but it is not certain whether he was recompensed. Laṭīfī spent his declining years in Istanbul (Ḥasan Čelebi, *Tadhkira*, ms. Ist. Üniversitesi, TY. 1737, ff. 265 b, 266a). He must have died on 25 Ramaḍān 990/23 October 1582, probably on his way to Mecca for pilgrimage. He had been in Egypt, and his ship was wrecked on its way to Yemen (Kafawī, *Rāz-nāma*, ms. Ist. Üniversitesi, TY. 4098, f. 105a, and a letter written to Masīḥ-zāde, who survived the disaster). Laṭīfī says in his *Risāla-yi awṣāf-i Istanbul* (f. 60b) that he was 35 years old when he finished this book, i.e. this was in 931/1524-5; hence his birth date must have been 896/1490-1, making him 94 lunar years old when he died.

All through his life Laṭīfī complained that he had never been appreciated properly. He did not have a comfortable life, for he had never been pushing and sycophantic; but he expected that others would have realised his literary ability.

Although Laṭīfī mentions in his *Tadhkira* that he composed twelve books, treatises and literary compositions, only the following seem to be extant: (1) the *Tadhkirat al-shuʿarā*ʾ; his most important work, generally considered as the second finest biographical work (after ʿĀshıḳ Čelebi's) in Ottoman literature. He states that ten biographical works were composed in his time, but none of them received attention and fame or were widely read (*Tadhkira*, 301). Probably they were all incomplete, pioneering attempts in this field. The *Tadhkira* consists of an introduction, three chapters and a conclusion. In the first chapter, he mentions poet-*shaykhs* of Anatolia who were brought up in or emigrated to Anatolia. In the second, he speaks about Ottoman sultans who engaged in poetry. In the third, the main part of the work, Laṭīfī mentions, in alphabetical order, the names of 300 poets (*Tadhkira*, 372) who lived from the reign of Murād II (824-55/1421-51) until 950/1543. The book is arranged alphabetically (*muʿdjam*), a method which Laṭīfī initiated in Turkish biographical works, whereas Sehī's and Nawāʾī's had been arranged by *ṭabaḳāt* or generations, so that Laṭīfī's *Tadhkira* became the bridge between the two types. Laṭīfī took this idea from ʿĀshıḳ Čelebi, but applied it in his book before him. Some criticisms were, however, made about his work. One was that Laṭīfī did not include poets of his own time in the *Tadhkira*. From the early copies of the work (e.g. Kayseri, Râşid Efendi Libr. 1160, copied before 957/1550, and another one which stems from the above, Ist. Üniversitesi, TY. 2564, copied in 968/1561), it can be deduced that two redactions of the work were in existence and that the early copies did not have Laṭīfī's autobiography. The author later included it, as well as notices of some other poets not previously included. By doing so, he improved the text and also replied to the criticisms of those whom he calls *ikhwān-i ḥikd u ḥasad*, "the hateful and the jealous ones". ʿĀshıḳ Čelebi relates that Laṭīfī's work also became nicknamed the *Ḳasṭamonu-nāma* (f. 133a), for the author found ways to connect some poets to Kastamonu, whether or not they had been born in the city; but he adds that Laṭīfī's *Tadhkira* is most valuable and quite different from Sehī's one. Ḥasan Čelebi regarded the style as rather dull (Ḥasan Čelebi, *Tadhkira*, f. 265b); Hence ʿĀlī took it upon himself to answer all unfair criticisms (*op. cit.*, 415b). The work is undoubtedly important, not only because of its form, but also because of the fact that, with this work, for the first time literary criticism and assumptions were dealt with in this Ottoman poetic biographical genre. It accordingly soon became a very popular reference book, considered to be reliable. It was edited by Aḥmed Djewdet under

the title of *Tadhkira-yi Laṭīfī* (Āthār-i aslāf series, no. 9, Istanbul 1314/1896); H. Theodor Chabert summarised it in German (*Laṭīfī oder biographische Nachrichten von vorzügliche Türkischen Dichtern nebst einer Blumenlese aus ihren Werke*, Zürich 1800); another translation into German was done by O. Rescher (*Laṭīfīs Tadhkira*, Tübingen 1950; this last translator referred to 9 old mss. of the work, together with the edited text. (2) *Risāla-yi awṣāf-i İstanbul*. As the title indicates, the work is a brief description of the natural beauties, the historical buildings and monuments, etc. of Istanbul, in short, a physical description of the city and its spiritual life in the 10th/16th century, written in an artistic style. The work is quite valuable in that Laṭīfī's observations reflect the thoughts and the feelings of his youth. As he says in the *khātima* or conclusion, he was then spiritually in confusion; at times acting like a vagabond and at others behaving piously. The text is adorned with poetry, and Laṭīfī claimed that he had invented a new style in prose writing; Istanbul was the most proper topic for such a purpose, in order to display a successful sample of his creative style (*Tadhkira*, 300-1). He later revised the work, and with a new introduction, presented it to Murād III. (3) *Fuṣūl-i arbaʿa* (*Munāẓara*; *Muḥāwara?*), an artistic description of the specialities of the four seasons, written in a mixture of prose and poetry. It was first published in the *ʿAṣīr* newspaper in instalments and then as a book under the title *Munāẓara-yi Laṭīfī* (Istanbul 1287/1870). (4) *Ṣubḥat al-ʿushshāḳ*, a Turkish translation of 100 *ḥadīths*, composed in verse. (5) A Turkish translation of 40 *ḥadīths*, also in verse, having much subject-matter in common with the previous one (ms. in Şehid Ali Paşa Libr. 272, f. 99b-105a). (6) *Naẓm al-djawāhir* (*Laʾālī-i manthūra wa-djawāhir-i manẓūma*), a versified Turkish translation of 207 speeches of ʿAlī b. Abī Ṭālib (Istanbul Arkeoloji Müzesi Libr., 341, ff. 40b-66b). (7) *Asmāʾ suwar al-Ḳurʾān*, a poem giving the names of the sūras of the Ḳurʾān in 29 couplets (ms. Ist. Üniversitesi, TY. 902, f. 115b-116a). The following works are now known only by name: (8) *Dīwān* (*Tadhkira*, 300). (9) *Rabʿiyya-yi azhār* (ʿĀshiḳ Čelebi, *op. cit.*, f. 133a, ʿĀlī, *op. cit.*, f. 415b), very likely the first chapter of the *Fuṣūl-i arbaʿa*. (10) *Aḥwāl-i Ibrāhim Pasha* (ʿĀshiḳ Čelebi, *loc. cit.*), possibly the same work about the grand vizier Ibrāhim Pasha, *Waṣf-i Āṣaf-nāma*, which ʿĀlī enumerates. (11) *Anīs al-fuṣaḥāʾ* (*Tadhkira*, 301).

From the contents of his works, Laṭīfī was apparently not a first-class poet, but a very good critic who had the power of discernment, wide knowledge in his field and, above all, a fine literary taste. As he states in the *Tadhkira* (300-1), he brought into being a new style in prose by adorning the text with proverbs, parables and phrases, etc., just as Nadjātī had done in verse a century before. His works are in fact good examples of rhymed prose, displaying a mature style, with balanced sentences, ordered thoughts and fluent language, without such defects as *taʾkīd* or obscurity, *tatābuʿ* or concatenation and *ghayr-i maʾnūs* or unaccustomed words.

(Nihad M. Çetin)

LATITUDE AND LONGITUDE [see djughrāfiya, ḳubbat al-arḍ]

LAWĀTA, an important Berber ethnic group belonging to the family of Butr and whose eponymous ancestor was Lawā the Young, son of Lawā the Old. They are distant descendants of the Lebu (Lebou) of the Egyptian documents of the 13th century B.C., of the Lubīm or Lehabīm of the Bible, the Libues (Libyans) of the ancient Greeks, of the Laguantan of Corippus and the Leuathae of Procopius (6th century A.D.). It is probable that the Lebu (Lebou) of the Egyptians lived on the Mediterranean coast of Africa, between Egypt and the Gulf of Syrtes. As for the Libues, they were for Pindar (518-438 B.C.) natives of Cyrenaica, but later their name became among the ancients a name for all the indigenous peoples who lived in the littoral zone of North Africa, from Egypt as far as the Atlantic coast inclusive. However, it appears that the real Lebu (Lebou) survived in the tribe of the Liburakhae who lived, according to Ptolemy (2nd century A.D.), in the north of Marmarica, immediately to the east of Cyrenaica. Another section of the Libues properly so-called, apparently Egyptianised, were the Libuaegyptii whom Ptolemy places in Mareotis, i.e. in the region of Lake Mareia in Egypt, Mariut (Maryout) on our maps. It should further be added that some Greek and Latin authors, such as Polybius, Diodorus, Strabo, Pliny and Ptolemy mention still another branch of the Libues, namely the people of the Libyphoenicians who were probably Libyans mixed with the Punic people, and who lived most probably, if one is to believe Pliny, in the province of Byzacena in present day Tunisia. Later on in the 6th century A.D. the Libues properly so-called appear under the name of Laguantan (*Lawatan), Ilaguas (*Ilawa-s), Hilagnas (*Ilawa-s) or Leuathae (*Lewatae) in Tripolitania and in Tunisia. Procopius speaks of the massacre of the chiefs of the Leuathae at Leptis Magna (Lebda) in 543 by Sergius, Byzantine governor of Tripolitania, and he speaks of the penetration of this people from Tripolitania into Byzacena and of its alliance with the Berber king of this land, Antalas. This time, the Leuathae advanced as far as the town of Lares (Larbous on our maps), which they besieged. Procopius also speaks of a second invasion of this tribe into Byzacena in 548. On this occasion, the Leuathae occupied southern and central Tunisia, as far as the confines of the Proconsulate.

According to the ancient Arabo-Berber traditions, the Lawāta first established themselves after their arrival from Palestine in the Maghrib, in the period of Biblical David (*sic*), in the territory of Barḳa (Cyrenaica). It was this land which they occupied at the time of the invasion of the Arabs (in 21/641-2), at the time when the Islamisation of the Maghrib began. The Arabic sources tell us of the peace treaty that ʿAmr b. al-Āṣ concluded in this year with the Lawāta of Barḳa. However, it is certain that some sections of this people, distant descendants of the ancient Libuarkhae and Libuaegyptii, also lived in

this period in Egypt, and it is very probable that other Lawātan sections, who were descended from these Laguantan or Corippus and the Leuathae of Procopius and were established in the 6th century A.D., in Byzacena, continued to live, in the 7th century, in the southern part of Tunisia. Later on, from the 8th century A.D., branches of the Lawāta expanded into some regions of Algeria and Morocco.

If we set aside the powerful peoples of Mazāta and Sadrāta, to whom some Berber genealogists attribute a Lawātī origin, but who already constituted, in the 9th century A.D., separate ethnic groups, the Lawāta properly so-called were subdivided in the Middle Ages into several branches of which we know the names, thanks especially to the works of al-Yaʿḳūbī and Ibn Khaldūn. They are as follows: 1. Māṣila or Māṣala ماصلة (al-Bakrī writes this name by error فاضلة Fāḍila); 2. Ḳaṭūfa; 3. Maghāgha; 4. Wāhila; 5. Marāwa (this name might be identifiable with that of the Libyan tribe of the Mareotae living in the south of Lake Mariut in Egypt); 6. مصعوبة Maṣʿūba (to be corrected as Maṣghūna; Ibn Ḥawḳal, Masghūna); 7. Zanāra; 8. زكودة Zakūda (Ibn Ḥawḳal: اكودة Akūda); 9. Maḳarṭa (al-Yaʿḳūbī, Mafraṭa); ʿAtrūza, and 11. Djadāna (this tribe was a branch of the Lawātan group of Kaṭūf or Kaṭūfa). It is also highly likely that the following Berber tribes of Barḳa belonged to the Lawāta: 12. فطيطة Faṭīṭa (Ibn Ḥawḳal, فرطيطة Farṭīṭa); 13. Siwa (al-Maḳrīzī, Sīwa) and 14. Masūsa. This constitutes the evidence concerning this collection of Lawātī groups and their geographical situation, going from east to west, evidence which the mediaeval Arab authors, of the 2nd to the 9th/8th-15th centuries, have bequeathed to us.

Egypt. The numerous Lawātī groups dwelt in a nomadic fashion near to Alexandria and Cairo, to the west of these cities. Among these groups who paid the *kharādj* to the Egyptian government, Ibn Ḥawḳal mentions, in the 4th/10th century, a branch of the Lawātī group of Māṣila (Māṣala). It was apparently these Lawāta whom al-Idrīsī mentions as a tribe who ravaged the western banks of the Nile to the north of al-Bahnasā. Later on, in the 8th/14th century, the plains extending from Alexandria to Cairo which constituted the province of al-Buḥayra were inhabited by another branch of the Lawāta, the Zanāra, a people who were nomadic, but who stopped in al-Buḥayra to sow their seeds at the approach of winter, as they passed through the environs of Barḳa. The Zanāra themselves paid a tax to the Egyptian government; Ibn Khaldūn says that, in a slightly later period (probably towards the end of the 8th/14th century), the chief of the Zanāra of al-Buḥayra called بذر Badr (or more likely يدر Yedder) b. Salām revolted against the Egyptian government, but after having been beaten by the Mamlūks, he took refuge in Barḳa. According to Ibn Khaldūn, some remnants of the tribe of Lawāta were also to be found, in his own time, i.e. towards the second half of the 8th/14th century, in Upper Egypt, where they pastured their flocks and cultivated the land. One should also note that the present locality of Maghāgha situated on the road leading from Cairo to Asyūṭ, 180 km. south of Cairo, probably owes its name to the Lāwātī tribe of Maghāgha. A numerous Lawātī population occupied, in the 4th/10th century, the oases of Egypt, where the Lawāta created a state. According to al-Masʿūdī, the Lawātan master of the oases in 332/943-4 was called ʿAbd al-Malik b. Marwān; he had under his command several thousand riders on horses and camels. According to Ibn Ḥawḳal, who wrote at a slightly later period than that of al-Masʿūdī, the kings of the oases who belonged to the tribe of Lawāta, mistress of this region, traced their origin to the dynasty of Āl ʿAbdūn (= ʿAbd al-Malik). Al-Bakrī also speaks of the Lawātī tribes established in the Egyptian oases. It appears that these Lawātī tribes of al-Buḥayra and the oases were distant descendants of the Libuaegyptii of the ancients. It is perhaps due to this Lawātī branch that Ibn Ḥazm attributes to the Lawāta a Coptic origin. Moreover, to the west of Alexandria, in Marmarica, al-Bakrī mentions the existence of about a thousand tents belonging to the Māṣila or Māṣala (al-Bakrī writes this name by error Fāḍila) and to the Banū ʿAḳīdān, a Berber tribe who probably belonged to the group of Lawāta. A section of the tribe of Siwa or Sīwa who probably belonged to the group of Lawāta lived, in the 9th/15th century, in the oasis of Sīwa, the oasis of Ammon of the ancients and Santariyya of al-Idrīsī. The oasis of Sīwa owes its name to this people.

Barḳa. This land was inhabited, in the 1st-4th/7th-10th centuries, almost exclusively by Lawātī groups. One of these groups, namely the tribe of Māṣila (Māṣala), was placed by al-Yaʿḳūbī in the eastern part of Barḳa; they lived, in the 4th/9th century, alongside other peoples, probably Berbers. They were also to be found in the coastal region, mixed with other Lawātī groups, such as Zanāra, *Masghūna, Marāwa and Faṭīṭa (Farṭīṭa), in the great *manzil* of Wādī Makhīl, which resembled a town and which may be identified with El-Mechili on our maps. The dwellings of the *Maṣghūna and some other groups of the Lawāta, such as Marāwa, *Maḳarṭa and Zakūda, were also to be found near the road which linked Wādī Makhīl to the town of Barḳa, el-Merdj on our maps. The tribe of Marāwa left its name to present-day Maraua, a locality situated about 50 km. to the east of el-Merdj. Further to the south-west, in the Djabal al-Gharbī (probably Dahar al-Ahmar and Dahar al-Abyad on our maps), al-Yaʿḳūbī also places Berber groups of the tribe of Lawāta. In the second of these chains of mountains lived, according to this geographer, the Lawātī tribes of Zakūda, *Maḳarṭa and Zanāra. It is also in this region that there lived a section of the tribe of Ḳaṭūfa which gave its name to Ḳaṣr Ketof, a locality mentioned by H. Barth (*Wanderungen*, 356). Further to the west, in the environs of Bernīḳ (ancient Berenike, Benghazi on our maps) lived three Lawātī tribes, namely Maghāgha, Wāhila and Djadāna, as well as the tribes of Siwa and Masūsa, who themselves traced their origin from Lawāta. The territory of the tribe of Masūsa extended from Benghazi towards the south and south-east. Indeed, the name of this tribe is to be connected with the Wādī Masūs mentioned by Ḳudāma b. Djaʿfar (d. 337/948-8) and by al-Bakrī who wrote a century later. According to the latter, there are in this valley "several ruined vaults and cisterns, to the number, it is said, of three hundred and sixty." In our opinion, it is to be identified with Msous (Msus) on our maps, a centre of encampments situated near an homonymous *wādī*, about 80 km. east of Solouk. A section of the Masūsa also lived in the town of Adjdābiya (Adjedabia on our maps), alongside Lawātī groups of Zanāra, Wāhila, Siwa and Djadāna. The latter constituted the majority of the inhabitants of this town.

Tripolitania. The inhabitants of Adjdābiya constituted in the second half of the 3rd/9th century, if one can believe al-Yaʿḳūbī, the westernmost group

of the Lawāta of Barḳa. However, it appears that the ethnic situation of this part of Libya was a little different a century earlier, under the domination of the Ibāḍī Imām Abu 'l-Khaṭṭāb ʿAbd al-Aʿlā b. al-Samḥ al-Maʿāfirī who, in 140-4/757-62, was master of the whole of eastern Barbary. Indeed, it is known that an Ibāḍī chief belonging to the tribe of Lawāta, one named ʿUmar b. Imkaten al-Lawātī, lived at first near the great road which led, following the coasts of this country, to the town of Maghmadās (ancient Macomadas Syrtis or Macomades Selorum), i.e. in eastern Tripolitania properly so-called. Then he went to settle in the Djabal Nafūsa, in western Tripolitania. It is also known that he became governor of the province of Surt (Syrtis) in eastern Tripolitania on behalf of the Imām Abu 'l-Khaṭṭāb and that he commanded a Lawātī brigade, the only one in the army of this *imām*. It may be supposed that these Lawāta of eastern Tripolitania constituted, in the 1st-2nd/7th-8th centuries, the remnants of the Leuathae, whose chiefs had been massacred at Leptis Magna in 543 A.D., by Sergius, Byzantine governor of Tripolitania, and whole main body then retired towards the south of Tunisia.

Tunisia. Al-Yaʿḳūbī mentions the Lawāta (who are descendants of the Leuathae of Byzacena) in the town of Ḳābis (Gabès). According to al-Bakrī, the Lawāta were also found, in the 5th/11th century, in the environs of this town. Ibn Khaldūn places, in the 8th/14th century, some Lawātī groups in the mountain called Djabal Lawāta situated to the south of Ḳābis. It is to this branch of Lawāta that the family of Banū Makkī, who were rulers of Gabès in the 8th/14th century, traces its origin. Another group of the Lawāta lived in the district of Nafzāwa, whose Ibāḍī population remained, towards the middle of the 3rd/9th century, under the government of Miyāl b. Yūsuf al-Lawātī. We know it thanks to al-Shammākhī (10th/16th century), who also mentions the existence of a section of the tribe of Lawāta in the town of Ṭurra (probably the ancient Turris Tamalleni) in the district of Nafzāwa. Another section of the Ibāḍī Lawāta lived, according to the same author, at Ḳanṭrār in Bilād al-Djarīd. The Lawāta were also found among the Berber tribes who were exterminated, in 224/838-9, by the Aghlabid general ʿĪsā b. Rayʿān al-Azdī. This took place between the towns of Ḳasṭīliya (Tozeur) and Ḳafṣa (Gafsa). Another branch of the Lawāta of Tunisia, probably the descendants of this branch of the Leuathae who appear alongside the Lares (Lorbous) from the 6th century A.D., were found among the Berber-Ibāḍī tribes who followed, in 144/761-2, ʿAbd al-Raḥmān b. Rustam, the old Ibāḍī governor of Ifrīḳiya, in his flight from al-Ḳayrawān (Kairouan) to the central Maghrib, before the army of the ʿAbbāsid general Muḥammad b. al-Ashʿath.

Algeria. An important section of the Lawāta lived, if Ibn Khaldūn is to be believed, in the vast massif of the Awrās (Aurès on our maps), alongside other semi-nomadic, semi-sedentary populations of shepherds and cultivators. They were already mentioned in the period of the Ibāḍī-Nukkārī chief Abū Yazīd Makhlad b. Kaydād (d. 335/947), who rebelled against the Fāṭimid dynasty. Hence the Lawāta of the Aurès rallied to this chief. They continued to live in the Aurès until the 8th/14th century at least and, at this period, they kept in subjection the Berber groups of the Hawwāra and Ketāma who lived alongside them. At this time, they were able to put into the field a thousand cavalry and a large number of infantry. The Lawāta of the Aurès preserved their independence, apart from two sections of this branch, namely the Banū Riḥān and Banū Badīs, who for several years paid tribute to the dynasty of the Banū Moznī of the Zāb. Later on, the Banū Badīs seized plains in the environs of the town of Niḳāwus (Ngaous or N'Gaous in the plain of the Hodna, north-west of the Aurès). It is very probable that the Lawāta of the Aurès were simply the remnants of the Lawāta of southern Tunisia who succeeded in retiring to this massif after the extermination of the Berber tribes of this latter region by the Aghlabid general ʿĪsā b. Rayʿān al-Azdī which took place, as mentioned above, between Tozeur and Gafsa in 224/838-9.

Another section of the Algerian Lawāta occupied, according to al-Bakrī, the surroundings of the town of Madjdjāna (Medianae of the ancients) which was situated near Wādī Mallāḳ (Mellegue, south of the ancient town of Madauras (Mdaourouch on our maps), on the road which led from Ḳayrawān to Baghāya. The history of this group is unknown to us; however, it is not impossible that we are concerned here with descendants of these Leuathae who besieged the town of Lares (Lorbous) in 543 A.D.

Ibn Khaldūn mentions a branch of the Lawāta settled in the plain of Tagrert, in the environs of Bougie. This branch cultivated the land and pastured its flocks. In the 8th/14th century, it was subject to the government of Bougie.

There was no lack in the 4th-6th/10th-12th centuries, if one can believe al-Shammākhī, of small groups of Lawāta in the oasis of Sūf (Souf) and in that of Rīgh. According to this author, a Lawātī settled in this latter oasis had come from Barḳa. However, it appears that the majority of these Lawāta traced their origin to Nafzāwa and the Bilād al-Djarīd in southern Tunisia.

An important group of Lawāta who accompanied, according to Ibn Khaldūn, the Ibāḍī governor of Ḳayrawān ʿAbd al-Raḥmān b. Rustam in his flight from Ifrīḳiya to the west in 144/761-2, settled to the south of Tāhert, capital of the Ibāḍī state founded by this emigrant. If Ibn Ṣaghīr is to be believed, the Lawāta already lived there towards the end of the 2nd/8th century and at the beginning of the 3rd/9th, in the reign of his successor, the Imām al-Aflaḥ b. ʿAbd al-Wahhāb. They owned a fortress there and often involved themselves in the affairs of the Rustamid *Imāms*. According to al-Bakrī, the Lawāta inhabited, in the 5th/11th century, the region situated to the south of Tāhert and also the fortress of Izmāma situated on the road which linked this latter town with the town of al-Masīla. Ibn Khaldūn supplies us with several details on this section of the Lawāta. According to this historian, they frequented the valley of Mīnas. At the beginning of the 4th/10th century, the chief of this Lawātī section was in the service of the Fāṭimid ʿUbayd Allāh, but later these Lawāta revolted against al-Manṣūr, the third Fāṭimid caliph, who defeated them and drove them out into the desert. There were also wars between the Lawāta of Mīnas and a Zanāta tribe who lived on the other side of this valley. Following these wars, the Lawāta of Mīnas went to settle on the mountain called Darrādj, where they extended their settlements towards the interior of the tell and as far as the mountain which dominates the Mitīdja. According to Ibn Khaldūn, this branch of the Lawāta was, in the 5th/14th century, liable for tax.

Morocco. According to the early Arabic sources, there were also some Lawāta in Morocco. It is possible that they may have come from eastern

Barbary towards the middle of the 2nd/8th century, probably with the Ibāḍī and Ṣufrī chiefs who took refuge in the west of the Maghrib before the ʿAbbāsid armies. In any case, when Idrīs I b. ʿAbd Allāh founded the state of the Idrīsids in the Maghrib al-Akṣā, among the Berbers of the north of Morocco who rallied to his cause (in 172/788-9) there was also a section of the Lawāta. This people probably lived to the south and west of Fās. Ibn Saʿīd al-Gharnāṭī notes there, in fact, the territories occupied by this people. These are probably the Lawāta settled on the Sebou River who owned the fortress called Lawāta Madyan. This fortress was situated on the road which linked the town of Sidjilmāsa to Fās, Another group of Lawāta lived in the north-west of Morocco, south of the town of Aṣīla (Arzila), the territory of which also belonged formerly to this people. In the province of Tādlā, south of the Oued Umm al-Rabīʿ, there lived, among the Arabs of the tribe of the Banū Djābir, the Lawātī tribe of Zanāra.

Mauritania. A certain number of people belonging to the tribe of Lawāta, probably merchants, lived in the south of Mauritania, in the town of Awdaghast which was an ancient centre of commerce. It is possible that they may have come from Tāhert, or more likely from southern Tunisia.

Sicily. According to Amari, the Berbers of the tribe of Lawāta appear in the Middle Ages in the diplomas of Palermo as amongst the inhabitants of this town. There was also in Sicily a colony of the Lawātī sub-tribe of Maghāgha. It is, indeed, from the name of this tribe that the name of the town of Magagi is derived (in Arabic al-Maghāghī), mentioned in a Sicilian diploma of 1182.

AL-LAWĀTĪ, Abū Muḥammad ʿAbd Allāh b. Muḥammad b. Nāṣir b. Miyāl b. Yūsuf, noted Ibāḍī-Wahbī historian, traditionist and biographer. He was descended from Yūsuf al-Lawātī, the vizier of al-Aflaḥ b. ʿAbd al-Wahhāb, the third Ibāḍī *imām* of the Rustamid dynasty (208-50/823-71). According to the biographical notices about him given in the works of al-Dardjīnī and al-Shammākhī, he was born in the first half of the 5th/11th century in the province of Barḳa (Cyrenaica). His *nisba* indicates that he was from the Berber tribe of the Lawāta [*q.v.*], of which several sections were adherents of the Ibāḍiyya. In 450/1058-9, when he was 18 years old, he left his natal Barḳa and went to settle at Adjlū, a town situated in the oasis of Arīgh (modern Oued Righ), and he apparently died there in 528/1133-4 at an advanced age. Nothing is known of his life, except that he travelled to the Ḳalʿa of the Banū Ḥammād and that he had visited two places not very far from the Oued Righ, sc. Waghlāna (modern Ourlana) in the north, on the road from the Oued Righ to Biskra, and Wārdjlān (Ouargla) to the south of the Oued Righ. One may also note that his family had connections with the town of Sadrāta (the modern ruins of Sedrata) in the Ouargla oasis. Indeed, his maternal uncle, the learned *shaykh* Abū Muḥammad ʿAbd Allāh b. Muḥammad al-Sadrātī, was probably a native of that town.

Ibāḍī tradition rightly accords al-Lawātī a place of honour. He was not only an eminent historian and traditionist, but also a remarkable poet. He wrote a work on the history of the North African Ibāḍiyya which was used by the anonymous author of the *Siyar al-mashāyikh*, who used al-Lawātī's autograph. He also taught Ibāḍī history and *siyar* to numerous pupils. One should mention three of these, who are accounted amongst the most celebrated historians and biographers of the 6th/12th century: Abū ʿAmr ʿUthmān b. Khalīfa al-Ṣūfī, Abu 'l-Rabīʿ Sulaymān b. ʿAbd al-Salām al-Wisyānī and Abū Nūḥ, all of whom took from al-Lawātī many narratives, to be used in their own works or else to be transmitted to the traditionalists of the following generation. Amongst other works, whose authors used al-Lawātī's traditions and stories, may be mentioned, in addition to the *Siyar al-mashāyikh*, the *K. Ṭabaḳāt al-mashāyikh* of al-Dardjīnī and the *K. al-Siyar* of al-Shammākhī.

It is interesting to remark that Abū Muḥammad also devoted time to the explanation of collections of Ibāḍī traditions written in Arabic for adherents who were only Berber speaking. Thus for instance, in the course of an academic session at Adjlū in the Oued Righ, he gave an exposition of the Arabic text of the *Āthār* of al-Rabīʿ b. Ḥabīb, an Ibāḍī traditionist of the East who flourished in the second half of the 2nd/8th century.

Al-Lawātī was also a poet, and al-Shammākhī speaks of his poetic *dīwān*.

LAWḤ (A.), board, plank; tablet, table. Both ranges of meaning are found in other Semitic languages such as Aramaic, Hebrew, Syriac and Ethiopic, and Jeffery thought that, whilst the sense "board, plank" might be an original Arabism, the second sense was almost certainly from the Judaeo-Christian cultural and religious milieu (see *The foreign vocabulary of the Qur'ān*, Baroda 1938, 253-4).

The word occurs five times in the Ḳur'ān. The first meaning is found in sūra LIV, 13, where Noah's ark is called *dhāt alwāḥ*. The second meaning is that of *lawḥ* as writing material, e.g. the tablets of the *lawḥ* (sūra VII, 142, 149, 153, where the plural *alwāḥ* is used; see *LA*, iii, 421). *Al-dawāt wa 'l-lawḥ* (Bukhārī, *Tafsīr al-Ḳur'ān*, sūra IV, bāb 18) correspond to our "paper and ink". The expression *mā bayn al-lawḥayn* "what lies between the two boards" is found in *Ḥadīth*, to describe the whole Ḳur'ān (Bukhārī, *Tafsīr*, sūra IX, bāb 4; *Libās*, bāb 84); cf. *mā bayn al-daffatayn* (Bukhārī, *Faḍā'il al-Ḳur'ān*, bāb 16). In modern Arabic, *al-lawḥ* also means a school-child's slate and a blackboard.

Al-lawḥ thus means the tablet kept in heaven, which in sūra LXXXV, 22 is called *lawḥ maḥfūẓ*, usually translated as the "safely preserved" tablet. But it is not certain whether the words in this passage are really syntactically connected. If we read *maḥfūẓ^un*, the word does not go with *lawḥ^in* but with the preceding *ḳur'ān^un* and the translation is: "Verily it is a Ḳur'ān, famous, preserved on a tablet" (see the commentaries); "safely preserved", i.e. against alteration.

In the commentaries on sūra XCVII, 1, the tablet is again mentioned: "We sent it down (sc. the Ḳur'ān) in the night of the decree"; this refers either to the first revelation made to Muḥammad or to the descent of the Ḳur'ān from that tablet which is above the seventh heaven, to the lowest. The tablet as the original copy of the Ḳur'ān is thus identical with *umm al-kitāb*.

The decisions of the divine will are also written on the *lawḥ* with the pen, *ḳalam* [*q.v.*], and the particulars contained as a whole in God's consciousness are transmitted by this last, so that on the *lawḥ* are inscribed the archetypes of all things, past, present and future. The popular mind represented the *lawḥ*, following an *ḥadīth* of the Prophet given by al-Bayhaḳī, as created from a white pearl, with its upper and lower surfaces of jacynth. We have therefore to distinguish two quite different conceptions:

a. The tablet as the original copy of the Ḳur'ān. This idea is found in the pseudepigraphical literature. In the *Book of Jubilees*, iii, 10, it is said that the laws relating to the purification of women after childbed (Leviticus xii) are written on tablets in heaven. Jub. xii, 28-9, says the same of the law regarding the "feast of booths" (Lev., xxiii, 40-3) and Jub., xxii, 15, of the law of tithes (Lev., xxvii).

b. The tablet as the record of the decisions of the divine will is also found in the *Book of Jubilees*. In Jub., v, 13 it is said that the divine judgement on all that exists on earth is written on the tablets in heaven. Enoch prophesies the future from the contents of these tablets (Book of Enoch, xciii, 2; lxxxi; ciii, 2; cvi, 19). The "scripture of truth" is mentioned as early as Daniel, x, 21, the contents of which Daniel announces in prophetic form. These ideas are connected with the Babylonian conception of "tablets of fate".

From these passages, it is evident that in the pseudo-epigraphic literature also, the tables in heaven are also regarded as the originals of revelation, sometimes as tablets of fate. This is sufficient to explain the double meaning of *lawḥ* in Muslim literature.

For other passages, cf. the index to Charles, *The apocrypha and pseudepigrapha of the Old Testament*, s.v. "Tablets"; it cannot always be said definitely to which of these two conceptions a statement belongs.

In Ṣūfī mysticism and in esoteric philosophy and cosmology, the *lawḥ* has an important place. The pantheistic mystical writer ʿAbd al-Karīm al-Djīlī [*q.v.*] (d. in the first half of the 9th/15th century) explains in his *al-Insān al-kāmil* how God's creation is first given shape occultly in the divine knowledge, and only later given objective individualisation by the pen or divine intelligence, which distinguishes the created from the Creator and imprints its form of existence on the tablet as the mind imprints ideas on the soul (R. A. Nicholson, *Studies in Islamic mysticism*, Cambridge 1921, 111-12 n.). Esoteric works identified various forms of the tablet with the primal intelligence (as above), the *ʿaḳl al-awwal*; with the expressive, universal soul (*al-nafs al-nāṭiḳa al-kulliyya*) = the preserved tablet; with the particularising soul; and with the *lawḥ al-hayūlā* or material tablet, which receives the forms of the supersensory world (cf. al-Djurdjānī, *Taʿrīfāt*, ed. Flügel, Leipzig 1845, 204). Mystically-inspired persons, it was held, might have glimpses of the entirety of God's decrees inscribed on the tablet and normally hidden from human comprehension, either by dreams or by a sudden flesh of divine revelation (*ilhām*), removing the veil (see D. B. Macdonald, *The religious attitude to life in Islam*, Chicago 1909, 253-4, 264-5). Finally, it may be noted that the 19th century Persian religious leader Bahā' Allāh [*q.v.*] promulgated, at different points in his career, various "tablets" containing homilectic counsels and prophetic instructions for his followers, such as the *lawḥ al-amr* "tablet of command" issued in 1280/1863 and ostensibly from the divine pen, giving an exposition of his mission (a document which contributed to the schism with his rival Mīrzā Yaḥyā Ṣubḥ-i Azal); the *lawḥ-i bashārāt* "tablet of good tidings"; etc. (see E. G. Browne, *Materials for the study of the Bābī religion*, Cambridge 1918, 17, 21-2, 29-31, 187).

AL-LAWḤ AL-MAḤFŪẒ [see AL-LAWḤ]

LAWN (A.), "colour". One of the distinctive features of the Arabic language is the great richness of its chromatic vocabulary. It is as if the smallest detail, the most minute nuance, was deemed to require a nomenclature *sui generis*.

In the first part of this article, we shall undertake a morphological and semantic analysis of the names of colours. Subsequently we shall see how Muslim thinkers, theologians and philosophers, have analysed perception of colours. The final part will be devoted to the symbolic dimension of colours.

For a proper understanding of the subject, some clarifications and definitions are required, however: the colour of an object is observed, on the purely perceptive level, with its three sensory variants of tonality ("colour" in the strict sense), luminosity (the "quality", the extent to which the object reflects or transmits light) and saturation ("vivacity", "intensity" of the colour). White is an achromatic colour, as is black. Just as, in physics, a white body diffuses equally all the visible radiations that it receives, so a perfectly black body, for its part, absorbs all radiations totally and transmits none. The achromatic colours have a zero saturation. The complementary colours are those which neutralise each other and which when combined produce white: indigo/yellow, blue/orange, violet/yellow-green, red/blue-green. Finally, of the seven colours of the spectrum, only three, blue, yellow and red, are fundamental: they serve to elaborate the other colours.

Morphological study. The morphology of adjectives of colour is characterised by the fact that they are, in the majority of cases, formed on the diptote paradigm *afʿal* in the masculine, *faʿlāʾ* in the feminine. The *afʿal* theme is a theme of intensity, which also supplies the elative; this common formulation of the intensive and of the adjective of colour is apparently not coincidental, and it is asserted that, semantically, the latter may have been regarded, at a certain stage in the evolution of the language, as an intensive: that which we translate as "red" may, originally, have signified "more red than ...". The evolution of the language would have led to the ellipse of the second term of the comparison. (In this context see *LA*, ed. Beirut, ii, 122-3, root *b-y-ḍ*. As M. Guillaumont has commented (*Problèmes de la couleur*, 345), "it is a fact that in Semitic, there is a particularly narrow line separating names of colours and intensive themes. In Aramaic, names of colours are specifically formed on the pattern *fʿʿl*. In Hebrew there also exists a series of names of colours formed on an intensive pattern characterised by the doubling of the last two radicals (*fʿlʿl*) ...".

Alongside this *afʿal/faʿlāʾ* construction, which is not only that of the majority of adjectives of colour, but also that of all the fundamental colours, other forms are encountered, admittedly rare, to which we nevertheless, draw attention, while not forgetting that some of them are doublets of the form *afʿal*, or combine to form doublets of their own. We may mention the following themes: *fāʿil* (*ḥāniḍ*), *mufaʿʿal* (*mudjazzaʿ*), *faʿl* (*djawn*), *faʿīl* (*faḳīʿ*), *faʿal* or *faʿil* (*shahab*, *lahiḳ*) and *mufʿil* (*muḳrif*). Less common are adjectives of the patterns *faʿlūl*, *fuʿāl*, *fuʿālī*, *fuʿayl*, *fiʿāl*, *faʿālī*, *fāʿilī*, *faʿūlī* and *fuʿill*. There exists an undoubted link between certain of these themes and a certain chromatic nuance: *fāʿil* and saturation, *mufaʿʿal* and mixture, *faʿil* and blending. Others of these themes are in fact relative adjectives terminating in *ī*, an indirect manner of denoting colour to which Arabic frequently has recourse. Some adjectives of colour (often borrowed words) are defined by relation to an object which represents this colour and which serves as a support. Thus *wardī* derives from *ward* "rose", *banafsadjī* from *banafsadj* "violet", *kuḥlī* from *kuḥl* [*q.v.*] "collyrium". It is most probable that there exists a connection between the form of the adjective and its meaning. Thus, from the one root *f-ḳ-ʿ*, the following are derived: *faḳʿ* "of a simple yellow", *fuḳāʿ* "very red" (of human complexion), *faḳiʿ* "red or white', and *afḳaʿ* "very white"—so many bright nuances.

Nouns of colour are *maṣdars* which generally have the form *fuʿla*. This is the only abstract element in chromatic terminology. By *ḥumra* or *ṣufra*, Arabic expresses "the state of being red", "the state of being yellow". As with the adjectives of colour, but within a less varied spectrum, the nouns of colour, although being *maṣdars*, are capable of borrowing the following themes: *faʿal*, *faʿl*, *faʿāl* (the last applying, apparently exclusively, to white and black, of which the roots are "hollow"), *fiʿl*, *tafʿīl*, *fiʿla*. For nouns of colour of the theme *fuʿla*, and for these alone, it seems that these *maṣdars* cannot be called "verbal substantives", since, as we shall see, the verbs of colour which correspond to these *maṣdars* are denominative in origin.

Of the derived forms of the Arabic verb there are two—those of the paradigm *ifʿalla* and *ifʿālla*—which have a particular quality: they express states (colour or deformity); they do not derive from the "bare form" *faʿala*, but are denominative in origin, formed from adjectives of the paradigm *afʿal* expressing the states cited above; and they denote an intensive aspect which is illustrated by the doubling of the final radical. The XIth form (*ifʿālla*), less common than the IXth (*ifʿalla*) seems to be a doublet of it, still more intensive. Thus we have, besides *ibyaḍḍa* and *iswadda*, meaning respectively "to become white", "to become black", *ibyāḍḍa* and *iswādda*, for "to become pure white", "to become black as ebony". All verbs of the IXth and XIth forms are verbs of colour or of deformity. It does not, however, follow that all verbs expressing a notion of colour belong to one of these two forms. Besides the latter, which could be described as "essential verbs of colour", we encounter others which borrow all the verbal forms, "bare" or derived, and which in general express colour through derivation of sense.

Finally, attention should be drawn to non-triliteral forms and loan-words. The following paradigms are encountered: *faʿlal*, *fiʿlāl*, *fuʿlul*, *faʿlalī* and *fiʿlil* among the former. As for loan-words, the most used are: *ardjawān* "purple", *ziryāb* "yellow", *zardjūn* "red and gilt", *firfir* "violet", *samānghūnī* "sky-blue", and *nīladj* "indigo"; these are terms derived from Persian or Greek.

Semantic study. To express the concept of "colour", Arabic uses the general term *lawn* which, besides this precise sense, also denotes "shade", "aspect", "type", "dish (of food)", etc. In addition to this general term, we also have the following words: *būṣ* (stressing a notion of brightness, of clear colour), *ṣabīb* (liquid colour or tincture, also applied to the object which it colours) *suḥna* (applied to the colour of the complexion), *layṭ*, *naḍir*, *khuṭba* (applied to a dirty colour, a mixture of two blended colours); *kharadj*, *khaṣaf* and *naṣīf* (all three referring to a mixture, a combination of two colours sometimes regarded as opposites).

It would seem useful, as preliminary to a semantic survey, to discover how the Arabs perceived the colours of the rainbow [see ḲAWS ḲUZAḤ], and how they subsequently transcribed their perceptions. Since this atmospheric phenomenon displays a very wide spectrum of colours, it is of the utmost interest to determine, for each people, the names that they have given to what they have seen. We know that the Greeks and Romans attributed three colours to the rainbow. In his *Meteora* (iii, 4, 373) Aristotle lists red-brown (*alourgon*), green (*prasinon*) and purple (*phoinikon*) in which he sees a progressive weakening of the light. Plato shows, in the *Timaeus*, that it is possible to reconstitute all shades with

four fundamental colours: black, blue, red, and the colour of light. Comparative study of languages belonging to very diverse cultural areas show that the divisions of the spectrum are far from always coinciding. They are arbitrary, and differ according to situations and the existing resources of the language. The great dictionaries and encyclopaedias of classical Arabic present, under the heading *ḳaws ḳuzaḥ*, almost unanimously, the following formula: "the rainbow consists of strips in a circular arc, coloured yellow, red and green". Here too—green replacing blue with which it is often confused—we again find the three fundamental colours.

The primary term used to denote the colour white is the adjective *abyaḍ*. The same root supplies the word for "egg", *bayḍa*. *Al-abyaḍ* also denotes saliva, a sword, money, and, paradoxically, in Africa, coal. In the Ḳurʾān, the terms *abyaḍ* and *aswad* appear consecutively, expressing the contrast between light and dark, rather than that between white and black. Many examples could be quoted where *abyaḍ* refers to a tonality rather than a colour. There exists a host of other terms to denote white: *ādam*, *t͟hāg͟him*, *d̲j̲awn* (which denotes white as well as a dark tonality), *as͟hyab*, *ṣiḳlab*, *ẓalm*, *ag͟harr*, *faḳiʿ* (a bright white as well as a bright red), *aḳmar*, *ḳuhābī*, *ḥaḍḍī*, *aḥamm* (which displays the same peculiarities as *d̲j̲awn*), *ḥawārī*, *k͟hāliṣ*, *azhar*, *lahaḳ*, *amraḥ*, *nāṣiʿ* (brightness of white, yellow, red), *yaḳaḳ*, etc.

The principal term used to denote black is *aswad*, of which the root implies the notion of power, of might. The antonym of *abyaḍ*, sc. *aswad*, has the same characteristics: very often it applies to a dim or dark tonality, rather than to the colour black itself (cf. Ḳurʾān, II, 187, III, 106, XVI, 58, XXXIX, 60, XLIII, 17). The substantive *al-aswad* can refer to such diverse objects and creatures as the snake, the scorpion, dates, etc. The *maṣdar* "*sawād*", referred, quite uniquely, to a region of ʿIrāḳ especially rich in palm-trees and orchards.

The range of terms used in reference to black is also extremely wide. Worthy of mention are *bag͟hs*, *mutaḥham*, *d̲j̲awn*, *aḥtam*, *ḥunbūb*, *ḥindas*, *ḥulba*, *ḥālik*, *aḥamm* (white, black, or dark red), *aḥwaz*, *aḥwā* (a perfect example of the concept of darkness: black, red, green; cf. Ḳurʾān, LXXXVII, 5) *adbas* (dark), *add̲j̲an*, *adʿad̲j̲*, *adkan*, *adlam*, *adham* (dark: cf. Ḳurʾān LV, 64), *asḥam*, *asfaʿ*, *muẓlim*, *g͟hudāf*, *g͟hirbīb* (the association between the crow and the colour black is very wide-spread; we may recall that the root *ʿ-r-b* serves to denote black in Hebrew and in Aramaic), *afḥam*, *ḳātim*, *ḳātin*, *ḳāḥim*, *akḥal*, etc.

Grey, a fusion of black and white, does not have a precise colour. It does not have a primary term in Arabic. We may mention the designations *s͟hāhib* and *as͟hhab*, *ag͟ht͟ham*, *aḳhab*, *adsam*, *arbad*, *armad*, *armak*, *ag͟hbat͟h*, *awraḳ*, *aṭḥal*, *ḳahd*, *aklas*, *anmas*, *amlaḥ*, *amhaḳ*, etc.

The Arabs rarely mention violet. The principal term, borrowed from Persian, is *banafsad̲j̲ī*. Also encountered are *k͟hubbāzī*, *samāng͟hūnī*, *firfirī*, evidently non-Arabic words, and all of them adjectives of relation. The same applies to indigo, of which the colouring material, a plant, is called *k͟hiṭr*, *sadūs*, *mus͟hayṭir*, *ʿiẓlim*, *nuʾūr*, *nīl*, *nīla* or *nīlad̲j̲* and *wasma*. On the rare occasions when the colour indigo is mentioned, it is through paraphrases: as the colour of the indigo, or through adjectives of relation ending in *ī*.

Blue, on the other hand, is one of the essential colours of nature. The usual word denoting it is *azraḳ*, a term which also has the sense of livid, haggard (cf. Ḳurʾān, XX, 102). The plural, *zarāḳim*, designates snakes. The terminology of this colour is relatively limited, and this could be connected with the symbolic nature of blue, which we shall examine in due course. We may cite *samāwī*, *kaḥl*, *as͟hhal*, *ʿawhaḳ* and *amḳah* (three terms of a pejorative nature), and *amlaḥ*.

Green is synonymous with nature. It is the basis of life. The usual term is *ak͟hḍar*, an adjective also associated with the notion of darkness, since it sometimes denotes black, dark, grey. We also find *al-k͟haḍrāʾ* as a reference to the sky: a further illustration of the link between blue and green, often confused in antiquity. The Greeks, the Chinese, the Melanesians, the New Caledonians, the Romans, among others, used the same term to denote these two colours. Without having the extreme richness of those of black and of white, the terminology of green is fairly extensive. We shall confine ourselves to mentioning *ḳāniʾ*, *aḥwā*, *ak͟hḍab*, *ak͟hṭab*, *adlas*, *raḳiḳ*, *ʿas͟hraḳ* and *ag͟hyan*.

Yellow is denoted, most often, by *aṣfar*, a word whose relationship with the name of the saffron plant (borrowed from Persian) is striking. Arab historians applied the designation *Banu 'l-Aṣfar* [*q.v.*, lit. "the Yellow Ones"] to the Greeks and the Byzantines, while they called themselves "the Blacks" (or "the Masters"?) and applied the designation "the Red ones" to all non-Arabs. The terminology of yellow is extensive. The principal terms are *ḥibr*, *d͟hiryab*, *zabraḳ*, *zabrad̲j̲*, *ziryāb*, *zahr*, *aṣham*, *afḳaʿ* (see *faḳiʿ* for bright white and red), *ḳalad̲j̲*, *amlad̲j̲*, *nāṣiʿ* (the same remark as for *afḳaʿ*) and *wāris*.

Orange, like violet and indigo, is indicated by means of the adjective of relation applying to the object which represents the colour: *burtuḳāl* "orange", supplies the adjective *burtuḳālī*.

Red evokes the notions of blood, flesh, fruits, life. The two "opposed" and complementary colours, green and red, are also the colours of all vegetable and animal life. Red has always occupied a position of particular significance, in almost every sector of humanity. It has always enjoyed a privileged status in vocabulary. All its shades are represented, in virtually all languages. Black, red and white form the trilogy of colours that are the best recognised and the richest in terminology and symbolism. The usual word, in Arabic, is *aḥmar*, deriving from a root with the sense of ardour, violence, intensity. Red is the colour for which Arabic terminology is the richest. We shall confine ourselves to citing *ādam* (already encountered as a word for white, and perhaps the term for red in ancient Semitic), *bat͟hag͟h*, *abḳam*, *t͟haḳīb*, *d̲j̲awn* (already encountered as a word for white), *aḥlas*, *ḥāniṭ*, *adbas*, *madmūm*, *adhas*, *adhan*, *arbad*, *rādinī*, *zabraḳ*, *zāhir*, *azhā*, *aslak͟h*, *aslag͟h*, *as͟hraḳ*, *ṣubāḥī*, *aṣhar*, *ṣayʿarī*, *ṣiḳlāb*, (already mentioned for white), *ṣamʿarī*, *aṣhab*, *adrad̲j̲*, *ʿānik*, *ʿanamī*, *g͟hasīḳ*, *g͟hadb*, *mag͟hlūḳ*, *fadm*, *fadn*, *firās*, *firṣad*, *afḍaḥ*, *faḳiʿ* (already mentioned for yellow), *ḳurrāṣ*, *aḳraf*, *ḳirmizī* ("crimson"), *ḳas͟har*, *ḳāniʾ* (especially denoting saturation), *akt͟haʿ*, *karik*, *kalf*, *kamit*, *mātiʿ*, *amʿar*, *mamkūr*, *nakaʿ*, *ward* (cf. Ḳurʾān, LV, 37) and *yāniʿ*.

Brown and pink have a limited vocabulary. It is logical, on the other hand that russet-fawn should be precisely observed and distinguished by a people whose origins lie in the desert. We may mention *bahram*, *aḥsab*, *ḥidār*, *as͟hk͟haḥ*, *as͟hḳar*, *aṣhar*, *aṣhab*, *aʿyas*, *aklaf*, *kumayt* and *ward* (already mentioned for red). Purple is denoted, in the principal Semitic languages, by terms deriving from one single quadriliteral root *r-g-w-n*. Arab lexicographers claim

that the Arabic *arghawān* is a loan-word from Persian. *Firfirī* and *birfirī* obviously derive from the same etymology as the Greek *porphyra* and the Latin *purpura*. For lessened colours other than brown, the terminology often relies on variants of terms designating dust, ashes and earth.

The vocabulary of mixtures and blendings of colours is very extensive. One is struck by the frequency of the consonant *sh* in the formation of terms designating flecked, mottled, striped, spotted colorations. In addition—which is scarcely surprising—the hides of horses and camels are differentiated, down to the slightest nuance, by dozens and dozens of term (see the articles by Hess and Shihābī, cited in the *Bibl.*). The striking fact, in this context, is the large number of terms (*adbas, addjan, adkham, adraʿ, adʿas, adghath, adgham, adlam, adhas, adham*, etc.) with *d* as the first radical.

We close this brief survey of the semantics of colour with the remark that doublets and loan-words are particularly frequent here.

Tonality, luminosity and saturation. The three psycho-sociological components which were cited at the beginning of this study are three unevenly-perceived sensory variants. It does not appear that tonality, in its sense of specific colour, was of fundamental importance to the Arabs when they evoked, in their literature, the colour of a landscape, a garment or any object belonging to their regular lives. It was rather a case of indistinct touches conferring a general impression. On the other hand—and this feature is determined by that mentioned above—luminosity, and saturation even more so, impressed them particularly. This is to be expected of a people living in a sun-drenched environment. These two notions of luminosity and of intensity seem in addition to be confused in the semantic quality of the innumerable adjectives which the Arabic language possesses, and which could be called "intensives of colour". The latter are used to qualify a "classical" adjective of colour, such as *abyaḍ, aswad, akhḍar* and *aḥmar*, and to indicate that this colour has attained its highest degree of luminosity or of intensity. While the substantives, *al-shabʿ, al-tashrīb, al-taḥkīk* and *al-yaḳīʾ*, specifically denote saturation; and while, on the other hand, brightness has the names *al-barīḳ, al-laṣīf* and *al-raʿfīf*; it is nonetheless true that the intensives *fāḳiʿ, nāṣiʿ, khāliṣ, nāḍir* and *ʿātik*, previously encountered in this survey, and all of them active participles: (a) imply, when they govern an adjective of colour, the notions of saturation and luminosity, indicating that the colour is intense and striking; and (b) are capable of being applied—originally at least—to any colour whatsoever. Apparently it was at a later stage that Arab grammarians assigned to each of these intensives a specific adjective of colour to qualify.

Colour in the works of Aristotle and his Arab translators. The Arab philosophers, in their analysis of the problem of colour and of its perception, were, to differing degrees, influenced by Aristotelian theory on the subject. It is important therefore to identify the major themes of the theses expounded by Aristotle, especially in his *De anima* (ii, 418a-419a) and his *De sensu et sensib.* 437b-440b).

The Greek philosophers were struck by the indissoluble link between light and colour on the one hand, and transparency on the other. The eyes, the most transparent part of the human body, are the meeting point of light or of external colour, and of their interior equivalent, a fact which favoured the theory of emanations. What is visible, says Aristotle, is colour; and colour is that which is on the surface of what is visible by itself. The basis of all the phenomena of colour is the transparent. The latter, represented especially by air and water, carries and determines colour, and colour is not visible without the aid of light, since it is only in the light that the colour of any object may be perceived. Where transparency is only potential, there is darkness. Light is like the colour of what is transparent, when the latter is realised in entelechy. The receptacle of colour must be what is colourless. The quiddity of colour is the ability to move the transparent in fact; and the transparent has the property of transmitting, instantaneously, the colour of the visual object to the eye, independently of any notion of time or space. One sees it; it is a qualitative and not a quantitative transmission. Aristotle rejects categorically the theory of emanations, developed by Empedocles, revised by Plato in his *Timaeus* (458 ff.) according to which we see by means of "rays of the nature of fire", which issue from the eye and meet the luminous emanation from the object perceived. Aristotle and all those who followed him, including the *falāsifa* [*q.v.*], insisted on the aqueous and non-igneous nature of the eye. All the same, the Master rejected the idea, propounded by Democritus, Leucippus and Epicurus, that vision is only the reflection of an object, as in a mirror. Every object, even opaque, contains, in varying proportions, air and water; and to the extent to which bodies contain transparency, they are susceptible to being coloured. The colour of a solid body is the limit, the surface, not of the body itself, but of the transparency that is within it. The nature of transparency extends, in addition, throughout the whole of the body. Colours are the defined transparencies which reside in bodies and which approximate, more or less, to white or to black, according to whether they contain more or less fire (luminosity and active transparency), or earth (the opaque in the absolute), the shining element or the obscure element. The essence of colour is the act of determining a qualitative change in the light, which is, itself, active transparency. The intermediate colours—that is, those other than black and white—exist neither through juxtaposition of a white and black particle, nor by superimposition of one colour perceived over another. They result from a total, effective blending, of bodies entailing the blending of their colours. Such is the determinant cause for the existence of a multiplicity of colours. But their number is limited, since it is confined within the two extremes of white and black. Finally, Aristotle distinguishes between darkness and blackness. Darkness is the absence of actualisation of the transparent. It has no existence *per se*.

Some eminent Arab authors and translators, like ʿAlī b. Rabban al-Ṭabarī (d. 240/855) and Ḥunayn b. Isḥāḳ (d. 260/873) were influenced by Greek theories of colour, as they became known to them through the medium of the commentators of the early Middle Ages. According to al-Ṭabarī, white is evidence of the predominance of the dry element over the humid within bodies; the exact converse applies to black. For him, red results from the synthesis of heat with dryness and humidity. Such are the three fundamental colours from which the others derive. Yellow is the intermediary between red and black, green the intermediary between red and white. In the former, humidity is greater than in the latter. Other chromatic nuances are determined by varying quantities of dryness, humidity and heat. Ḥunayn,

for his part, is complimentary towards Aristotelian theories regarding the perception of colours. He insists on the fact that light is neither a form of fire nor a rarified body, as some of Aristotle's predecessors had claimed, but a contingency borne by a body. Colour is the perfection (entelechy) of limpid and diaphanous bodies—namely, water, air and all other similar substances—which receive the real colour of the objects surrounding them. The transparent body has no colour *per se*; but it absorbs the colour of the object which it envelops: it thus has potential colour. Colours transform the transparent: from being potentially coloured, it becomes actually coloured. Light, by its presence in the air, renders it capable of receiving colour.

Colour according to the Muʿtazilīs. In its defence of the articles of faith by means of rational argumentation, the theologico-political school of the Muʿtazilīs was led to take an interest in the problem of physical bodies and of their perception; but they took divergent views on the problem of colour. While al-Naẓẓām (d. *ca.* 230/845), starting with the postulate that accidents cannot be visible, classed colours among the substances, the corruptible bodies, Bis͟hr b. al-Muʿtamir (d. *ca.* 220/835), his contemporary Muʿammar and the majority of the disciples of the school, considered colours as accidents due to the action of men alone, or produced by the very nature of the things that they affect. Thus they are not subject to divine creation, but God remains the determinant cause of the accidental determination of substances. God created substances (bodies, atoms), capable of producing, by their own nature, well-determined accidents, and colour is one of these. Directly following this reasoning, His͟hām al-Fuwaṭī (beginning of the 3rd/9th century) declared that colour does not constitute proof of the existence of God, but is a simple form of physical bodies. Muʿammar, the theoretician of *maʿnā* ("entity", "nature"), according to which "God creates a thing by virtue of a cause which, itself, derives from another cause, which is the fruit of another cause . . .", postulated that it is through the effect of a *maʿnā* that blackness differs from whiteness, and through another *maʿnā* that a certain body is black and another white. In fact, according to him, every "accident" (movement, colour, taste), requires the existence of an infinite chain of determining *maʿnās*, of which the initial cause is the Creator. "If God colours a body, it is because this body is by nature susceptible to colour. The same applies for other accidents" (Nader, *Système*, 161). Abū Hās͟him al-D̲j̲ubbāʾī (d. 321/933) classed colouration (*al-lawniyya*), like substantiality, corporality, and accidentality, among the real things which do not actually exist. He considered that substance is not coloured necessarily, but that any substance endowed with colour is incapable of losing it. Abu 'l-Ḳāsim al-Balk͟hī (d. *ca.* 319/931) declared, for his part, that substance has always been endowed with colour. But the two masters agreed in stressing the fact that substance and colour are two distinct things: the first depends on divine action, while the second is engendered by the substance which bears it.

In fact, the *Maḳālāt* of al-As͟hʿarī (392-3) echo the controversy which developed within the school concerning these questions. From the perception of a coloured object, can one abstract the colour, knowing that the latter cannot be perceived, but only known? Or indeed, can one at the same time perceive whiteness and white, blackness and black? Or again, does one see only the colour and not the object, as al-Naẓẓām suggested? Opinions differed on the above points. As regards sensible awareness of the exterior world, al-Naẓẓam borrowed from the pre-Aristotelian philosophers their sensualist thesis, and their theory of "pores" and "emanations". According to him, colour, form, flavour, taste etc., are each perceived only through the medium of an opening of a certain kind, by which the senses are affected. Each of these sensations is a rarified body: it emanates from a sensible object, penetrates through the specific apertures of the sensory organs, and thus reaches the consciousness of the being that senses it. Al-ʿAllāf (d. after 226/840) spoke of a divine intervention in the operation of man's awareness of sensible objects; but other Muʿtazilī theoreticians, like Muʿammar, regarded the perception of sensible objects as a natural act of the sensory organs, as an engendered act (*muwallad*), free from any divine initiative.

Colour according to the *falāsifa*. At the meeting-point of Muʿtazilism and of *falsafa*, of which he was one of the major initiators, al-Kindī (d. *ca.* 259/873) was greatly interested in the "physical sciences" and, consequently, in the theory of light, of colour, and of their articulation. In his work, as in that of his most eminent successors, the influence of Aristotelian theories, as they had been transmitted to the Arabs through the contemporary Neo-Platonism, is manifest. For "the philosopher of the Arabs", colour is a "general accident, since it affects numerous things". An accident perceived by the first of "the two noble sensory perceptions" (*al-ḥassayn al-s͟harīfayn*), sight and hearing. Just as the active intellect has the function of actualising potential intelligibles, the light which strikes opaque objects transforms potential colours into actual colours. The truly diaphanous body has no colour of its own, since it is the vehicle of the colour of the objects situated behind it. Of the four elements of the universe, only earth is not transparent: it is thus the only bearer of colour in this sublunar world. For an object to be affected by light and thus, a bearer of colour, it must be circumscribed, not fluid, compact, and it must form an obstacle (*yaʿtariḍ*) to visual rays. The colours which we believe that we perceive in fire are in fact the colours of terrestrial particles which are mixed with the fire. The latter—like air and water—is totally colourless. At the same time, our senses give us the illusion that the sky is azure (*lāzawardī*) in colour, although it is not so at all. In fact, the colour that we believe we see in the sky is an artificiality: it is the colour of the vaporous and terrestrial particles of which the air is full. The stars, on the other hand, are circumscribed and compact bodies, as is proved by the fact that they eclipse one another. That is why they may be coloured.

Al-Fārābī (d. 339/950) was also interested in colours. The latter, he tells us, occur on the surface of bodies, under the effect of a luminous source, since they do not exist in themselves. They are thus accidents provoked by this source of light. The chromatic differences are provided by the different dispositions of the lighted bodies. Colours only affect the sublunar world, the world of generation and of corruption. The heavenly bodies, the primary elements (*usṭuḳus-sāt*), the simple bodies, have no colour. The colour of terrestrial bodies derives from the fusion of the elements composing each one of them. The presence of the fire element brings a tendency towards white, that of the earth element a tendency towards black. The intermediary colours result from the proportions in which these two primary elements are blended.

Repeating an Aristotelian formula, al-Fārābī defines colour as "the surface of the diaphanous body, in the measure of its transparency". White is not the negation of black, nor black that of white: these opposite do not annihilate each other.

The Ikhwān al-Ṣafā' [*q.v.*] (2nd half of the 4th/10th century) authors of a collective encyclopaedia clearly influenced by Neo-Platonian emanationism, considered colour one of the complementary attributes of the body. It is a "spiritual accident", a "form which the soul puts into the body". Light is bound up with the souls and spirits that circulate within it. While traversing diaphanous bodies ("the purest bodies are diaphanous") in the same way in which the soul circulates in the human body, light carries colours up to the pupil, preserving their purity intact. At the level of the pupil, the visual faculty perceives the colours, then transmits them to the imaginative faculty. Light and darkness are "spiritual colours". On contacts with bodies, they transform themselves, respectively, into white and black, which are "corporeal colours". Colours, defined as "the brightness of the rays of bodies" appear only on the surface of the latter. There exist seven simple colours: white, black, red, yellow, green, blue and "the dull colour" (*al-kudra*, violet?). Black derives from an earthy humidity which prevents light from reaching vision. Black is the absence of light. It causes convergence of the visual cluster. At the opposite extreme, white is the manifestation of light in its full purity. For its part, it entails a divergence of the visual cluster. The other colours are intermediaries between these two extremes; each one being characterised by the respective part played by the quantity of white and of black which it contains. An object appears yellow when an obstacle prevents light from appearing pure. Red can derive from "putrefactive causes" (through excess of humidity) or from "liquefactive causes" (through excess of heat). Green draws near to black, in the sense that, here too, an earthy humidity is dominant, constricting the passage of light and of the visual rays. Blue belongs to the chromatic family of green. God made the air blue and the plant green to accommodate the interest of His creatures. In fact, these two colours possess the virtue of being salutary for the vision. The colours of the rainbow are four in number: red, yellow, green and blue: each of these colours corresponds to one of the four primary qualities, namely, heat, dryness, humidity and cold; and to one of the four elements, namely, fire, air, earth and water. Finally, these authors reject the theory of emanations. Such a thesis, they declare, could only be supported by people having no "experience of the things of the spirit and of nature".

Ibn Sīnā (d. 428/1037), like Aristotle, classed the psychology of the sensory apparatus among the physical sciences. He devoted an entire chapter of his *Shifā'* to the problems of vision and of colour. Light is a quality affecting diaphanous bodies; and colour, opaque bodies. The latter are coloured potentially. Colour can exist without being visible; but actual colour occurs only by virtue of its clarity. Colours do not exist, in fact, in bodies. A black, dark body, is potentially coloured. An object that is coloured when it is lit up, will be colourless in the dark: it is deprived of actualised colour. The actively transparent (air, water, the celestial sphere) is a diaphanous medium, and at the same time a vehicle. The illuminating body approaches the coloured body, without any change, any alteration, affecting the diaphanous medium. The existence of light makes the potential transparent an actualised transparent. As light increases, so the manifestation of colour increases also. Ibn Sīnā followed the views of Aristotle in regarding as absurd the theory of emanations, in rejecting the theory that assimilated vision to a reflection similar to that transmitted by a mirror, and in distinguishing between darkness and blackness. He rejected the theory according to which only whiteness is a colour, and blackness is darkness, since, he tells us, black is illuminated, and it gives light to things other than itself. Consequently, colour is not whiteness alone. Absolute, generic colour, is not light; but the latter is the cause for the apparition of the former, and the cause of its transmission. Light is thus a constituent part of the visible entity which we call "colour". Effective colour results from the encounter of light with potential colour. The intermediary colours result from the blending of black and white. White can turn into black in three different ways: (a) through grey of increasing darkness; (b) through red tending increasingly towards brown; and (c) through green and indigo. These diverse processes are the reflection of the diversity of composition of the intermediary colours.

Ibn al-Haytham (d. 430/1039), in his *Optics*, took issue with those scholars who denied the real existence of colour, and declared that it was only an apparition situated between the eye and the source of light. According to him, if it is true that the appearance of colour is affected by the quality of the light which carries it, and that the same colour can be transformed according to the degree of light which it is given, it nonetheless remains a fact that colour has an existence of its own. His commentator Kamāl al-Dīn al-Fārisī (d. 720/1320) explored the fundamental connection between light and colour. In darkness, colours are presented, potentially, in coloured bodies. They are transformed into actual colours when light affects these bodies.

Ibn Ḥazm (d. 456/1064) devoted a paragraph of his *Fiṣal* to colour. Here we read that the air is invisible, because it has no colour; whereas water is visible, because it is white. Similarly, fire also is colourless in its sphere; the colour that we see in burning wood, in the wick of a lamp or in any other body that is consumed by fire, derives from the measure of humidity contained in these bodies. In burning, the latter is transformed into igneous air; and the colour which each of these burning bodies adopts is determined by the materials of which it is composed. It is also particles of humidity which give rise to the rainbow. The scholar of Cordova subsequently sets out to refute the theses of the "Ancients", according to whom white results from a divergence of the visual cluster, and black from a convergence of this cluster. According to him, black is invisible, because perception exists only through an extension of vision. Since the eye sees only that which is coloured, black is not a colour. It is, in fact, only darkness, the non-being, privation of colour and eye sight. When we believe that we "see" black, we are subject to an optical illusion. It is purely a matter of convention and metaphor when we describe a person, a crow or a garment, as black. In fact, each of these bodies has its own colour, which is not black. As for the difference between a matt black and a shiny, bright black body, this derives not from the black itself, but from the lustre, the brightness and the scintillation, which are distinct and constitute a colour in its own right, which affects all the chromatic nuances. We may recall that Plato counted

"the colour of light" among the four fundamental colours. One could, says Ibn Ḥazm, just as well say that the dull is a specific colour, since the vision perceives it. Such is also the case with brightness, with luminosity. It is evident that the Ẓāhirī master was particularly aware of the sensory variants of colour. He goes on to establish a hierarchy in the vividness of perception of colours, whose order is as follows: white, yellow, red and green. It is to be noted that he shows a great deal of circumspection in the declaration of his statements, since he is careful to follow them, invariably, with the formula "God alone knows!", or even "May God assist us!"

Ibn Bādjdja (d. 533/1139), elaborated a whole doctrine of colour in his *Treatise on the soul*. The influence of Aristotle, in particular of his *De sensu et sensib.* is evident; a fact which the author makes no attempt to conceal, as he quotes from the latter work on more than one occasion. The postulate is that the primary sensory element of vision is colour. The seeing soul (*al-nafs al-bāṣira*) is the faculty which exists in the eye and which enables it to perceive colour. It is localised in the vitreous humour, which the Arab philosophers called the glacial humour (*al-ruṭūba al-djalīdiyya*). Colour is, in substance, a form. It is perceptible only through the intermediary of the air; and when a coloured object is placed directly before the eye, the latter is incapable of perceiving it. The air only discharges its function as a vehicle for colour when it is lit by a luminous source. Two hypotheses could thus be formulated: (a) colours, in darkness, are potential only, and have no effective existence; (b) the air absorbs colours only through the influence of the optical image in which these colours reside. For Ibn Bādjdja, the potential existence of colour in darkness is in no doubt. Proof of this existence lies in the different tonalities of the same colour, depending on the quality of the surrounding light, which includes penumbra. He adds that this was demonstrated well by Aristotle (see *De sensu et sensib.*, iii, 440a, 7-13). As for the phosphorescence and the sheen of certain objects and animals, these are determined not by colour but by impressions affecting the eye. The property of colour, endowed by the fact that it derives from the blending of the lighted with the coloured body, is that of being, itself, a dispenser of light, and of moving the air. Colour therefore contains light. It promotes a movement in the lighted body, in that it is lighted; for this body is, itself, a vehicle for colour. In addition, colour puts the diaphanous into effect, by reason of the fact that the latter only accepts colour because it is lighted. Democritus was mistaken in declaring that vision in a vacuum would be purer than through the diaphanous. Just as colour cannot be perceived in the absence of light, so the latter is only perceptible when associated with colour.

The eminent commentator on Aristotle, Ibn Rushd (d. 595/1198), also undertook to expound a theory of light and of colour, as far as possible consistent with the spirit of the Peripatetic science, as transmitted through the intermediary of Alexander of Aphrodisium, Themistius and Jean Philiponus. He sets out his theory in his Great Commentary on *De anima* and his *Epitome* on *Parva naturalia*. Colour exists on the surface of a certain body. It is the entelechy (actualisation) of a limited transparency, in that it is a limited transparency, while light is the entelechy of an unlimited transparency. Resulting from a blending of fire with diaphanous body, colours find in the light, not the cause of their transmission of the visual organ, but a genuine essence and existence. We have seen that Ibn Bādjdja supported the theory according to which colours exist, *in potentia*, in bodies, whether the latter are lighted or not. Unlike his compatriot from Saragossa, the master of Cordova claims that they can exist effectively, even when they are not perceived. They only become visible under the effect of light. "It is evident that light is necessary for colours to be visible; whether because it gives to colours the form and the manner of being (*malaka/habitus*) by which they impinge upon the transparent; or because it gives the transparent the form by which it receives the action of the colours; or else both can be achieved" (*apud* L. Gauthier, *Ibn Rochd*, 133).

For his part, Averroes maintains the following connection: light gives to the transparent the manner of being which enables it to be influenced by colour. Light and colour coexist in the diaphanous milieu. They derive, the former from a body which is luminous in itself; the latter from a body which is coloured in itself. Light brings about the actualisation of potential colour, in such a way that it is capable of moving the diaphanous; which is transformed from the potentially diaphanous to the effectively diaphanous; and can, as a result, absorb colour and transmit it to the eye. Thus the objective existence of colours, and their effect on the eye, depends on light. But visibility is not a condition for the existence of colour. It follows that, contrary to the view of Ibn Bādjdja, colour as such does not contain light. When light acts upon the diaphanous, then, according to the intensity of this light, and its degree of transparency, different colours are produced. White derives from a blending of pure fire, that is, solar light (in its capacity as a luminous element) with air (in its capacity as the most diaphanous element). Black derives from a blending of turbid fire (that which is located above the elements and below the spheres) and earth (in its capacity as the most opaque element). The two absolute colours are thus "the primary elements" (*usṭuḳussānʿ*) of the colours. All the other colours are situated between these two extremes. They result from an infinity of proportioning of the chromatic pair white/black. To the extent to which an intermediate colour (green, red, yellow, etc.) tends towards white, it loses, in proportion, the ingredient of black which it contains, and *vice versa*. In common with Aristotle, his Arab commentator believes that the blending of colours consists, not in a juxtaposition or a superimposition, but in a total union of constituent elements, in the event, of fire and diaphanous bodies.

It is evident that, while the Arab theologians and philosophers did not neglect the subject of colour, they were concerned essentially with the manipulation of theories inherited from the Greeks and translated, since the 3rd/9th century, by men like Yaḥyā b. al-Biṭrīḳ, Ḥunayn b. Isḥāḳ, Isḥāḳ b. Ḥunayn or Bishr b. Mattā. There was, strictly speaking, no Arab-Muslim doctrine of colour, and, as far as we know, no monograph devoted to this question.

A mystical vision of colour. It is hardly necessary to stress the universal nature of the spiritual experience of colours. In this context, the works of H. Corbin enable us to appreciate the interest which certain Muslim mystics, like Nadjm al-Dīn Kubrā (d. 618/1226) and al-Simnānī (d. 737/1336) took in the phenomenon of colours, and in the synchronism between them and the interior vision. Taking up the theory of "physiological colours" dear to Goethe, which the German master espoused in his *Farbenlehre* (1808), to refute the hitherto un-

challenged theses of Newton, the Iranian theosophist al-Kirmānī (d. 1870) laid stress on the difference to be established between the existence (*wudjūd*) and the manifestation (*ẓuhūr*) of colour; a difference which has nothing to do with the classic distinction drawn by the *falāsifa* between potential and actual existence. His hermeneutic of colours "sets in motion ... a symbolism based on an integral spiritual realism" (Corbin). Colour is the language of souls. The eye—the meeting point between exterior light and interior light—does not reflect passively the world which is presented to it; it participates in the perception of things, and produces its own colour. Deriving support from certain verses of the Ḳur'ān which, like XIII, 16 and XXXV, 20, make forceful statements such as "Are the blind man and he who sees equal; are darkness and light equal ...?", al-Kirmānī considers that the colours perceived by our eye are those of bodies, not those of rays of light, and that they exist in the supra-sensible worlds. "Light is the abstract of colour, or colour in the abstract state ... Light is the spirituality of colour; and colour is the corporality of light ... It is through the medium one of the other that they enter our field of vision" (Corbin). Without light, colour is still present, but is similar to a body deprived of its spirit. Every compound, whether it belongs to the sensible or to the supra-sensible world, therefore has a colour. The colour of the world of Intelligence is white; that of the world of Spirit is yellow; that of the world of the Soul is green; that of the world of Nature is red; that of the world of Matter is an ashen colour; that of the Imaginary world is deep green; that of the material body is black. In the same spiritual context, we may recall the famous formula of Novalis: "Colour is an attempt by matter to become light"; and this comment by Rudolph Steiner: "Colour is not only a quality applied to the surface of objects, but a light flashing from the soul of things to reveal itself to our soul".

These reflections lead us on to the symbolism of colour.

The symbolism of colour. Colours are capable of acting, on the human being, independently of the optical system; and the sensation of colour, essentially, is an individual thing before it is a collective thing. The link between human perception, power of evocation and psychism, does not need to be proved. Also, since time immemorial, peoples have used colours as a system for the communication of thought, and as "signs" and symbols of abstract ideas. Although each colour does not denote, incontrovertibly, a universal quality, a number of invariants have been isolated by comparative study. Colours have played a role of considerable importance in ritual, in magic and in superstition. Nor are the psychological, physiological and physical effects of colour to be ignored: this "language of colour" in which is expressed, in art, the ineffable role of the chromatic nuances, whose faculty of interaction is essential for painting.

One quotation from the Ḳur'ān will suffice to prove that this was also the case with the Arabs. In XVI, 13 we read: "... in that He has disseminated various colours upon the Earth, here, truly, is a certain sign for a people that is edified ..." (see also XVI, 6; XXX, 22; XXXV, 27, 28; XXXIX, 21).

One of the most striking manifestations of the symbolic connotations of colours among the Arabs, is the phenomenon of opposites (*al-aḍdād* [*q.v.*]). We have seen, in studying the semantic value of certain adjectives of colour, that they were sometimes capable of embracing two diametrically opposite meanings. This phenomenon is particularly to be noted in the case of white and black, which have common adjectives. To signify wine, the Arabs used a number of euphemisms, of the type "the fair drink", "the golden one", etc. It seems to have been the same reasoning that led them, superstitiously, to avoid the use of certain terms, and to evoke them either by sufficiently eloquent imagery, or by antiphrasis, in cases where the context rendered the sense unequivocal. Even today, in certain parts of the Orient and the Maghrib, in order to avoid pronouncing the word "black" (the accursed colour, the colour of Hell), opposites are used. In Morocco, *al-abyaḍ* sometimes denotes tar or coal. It has been observed, in addition, that some adjectives occasionally qualify two colours which, while being different, nonetheless present certain affinities. In the collective unconscious where humanity's roots are laid, it does not seem that our ancestors felt the need to establish a tight partition between colours which may be regarded as being close, as they offer similar attributes of luminosity or of intensity, such as blue and green in the former instance, yellow and red in the latter. The same conclusion holds good for the Arabs. For them, the symbolic value of white, does not seem to have been much different from that which it was for the majority of peoples, for certain latent associations are universal. The colour of brightness, of loyalty, of royalty, sc. white, most often symbolises purity, joy, chastity and virginity in popular psychology. White, the confusion of all the colours, is unity, the very image of divinity. The body of the archangel Gabriel is snow-white. The white bird is the emissary sent from Heaven to tell good news. The white cock is held to be the incarnation of an angel. It was a white cock that Allah sent to indicate to Adam the times of prayer (*Ḳiṣaṣ*, 13, 66-7, 126, 200). By reference to the white hand of Moses, when he accomplished the miracles recounted in the Ḳur'ān, the expression *yad bayḍā'* symbolises potency, power, authority. In the colloquial speech of Syria, "a white heart" designates a person of good companionship, of noble nature; "a white standard", a good reputation; "white tidings", a joyful message. In Egypt, a fine day is compared to milk or to a white flower. But, as in the Far East, and as in Europe for a long time, white can also be the colour of grief and of mourning. Death is livid and white in contrast to the redness of life. The shroud is white. White hair is the forerunner of death. In Spain, in Morocco, in eastern Persia, white was also the colour of mourning (cf. Pérès, *Poésie andalouse*, 298-9). The popular subconscious has, furthermore, also been aware of this affinity between white and death, and the end of life is characterised by rhetorical figures such as "white death", sudden and natural death, death in which human knowledge is powerless towards the unknowable.

Aswad and *sayyid* present an etymological relationship that is loaded with meaning. The Arabs sensed that black was a dominant colour, exercising over them a fascination that was mingled with fear. Black, darkness, the night, mystery—all of these demand respect. The Black Stone of the Kaʿba is a pillar of spiritual influence. Black is the coat of "the unknown journey", of mourning and of all sadness. It is also the joint symbol of vengeance and revolt (cf. the black flag of the ʿAbbāsids). In the history of superstition in the lands of Islam, black occupies a privileged position. By a kind of homeopathic magic, it is used as a charm against "the evil eye". The black

cat is endowed with enormous magic power: it is a creation of Satan, and anyone who eats its flesh is immunised against illness; its spleen, when applied to a woman, stops menstruation. For the Muslims, as for so many other peoples, the black crow exercises a baleful influence; meeting the bird is an unfavourable omen, since the bird is the herald of separation; is it not assumed that the Prophet said that the crow must be killed, since it is wicked and perverse? The chains of Hell are black. A black cloud is a sign of divine wrath. Cain killed Abel with a black rock (*Ḳiṣaṣ*, 8, 108, 121, 186-7, 193-4, 298). *Al-sawdā'* is the black bile, source of sorrow and fear. "Black liver" is a term applied to a sworn enemy; "black heart" is a degenerate and vulgar personality; "black news" denotes a calamity; "black life" is unfortunate; a "black face" belongs to a discredited person; "black death" is reserved for that caused by strangulation.

Blue, at the opposite extreme from red, is a cold, fleeting, profound, immaterial colour. The sky and the sea are blue; anyone who plunges into them is lost to infinity, since their depth is immeasurable. Metaphysical fear is a "blue fear". The Arabs considered this colour magical, inauspicious and disturbing. Blue eyes are a source of bad luck; and miscreants are depicted with them in the *Ḳiṣaṣ al-anbiyā'* (117, 121, 123). In Egypt, as a defence against the "evil eye", blue-coloured grains of alum (*s͟habba*) are hung at the neck of children and adults. Blue stone possesses a share of the sacred force, by virtue of its celestial colour. The magical power of blue is at the same time the dispenser of ill fortune and a defence against it. The "blue enemy" is an inveterate and mortal enemy. In Syrian parlance, when it is said of a person that "his bones are blue", this means that he is of cunning, vindictive nature. Blue is the colour of haggard, livid, frightened people. In the only Ḳur'ānic passage where the root *z-r-ḳ* occurs (XX, 102), it is used to describe the guilty ones on the Day of Last Judgment. This is why, as with black, the Arabs took pains to avoid mentioning this colour. In certain regions of Egypt, one says "green" rather than "blue". A disagreeable or fretful day is also described as "a black day" or "a blue day". We may note that in Sanskrit, the term *nīla* serves to denote both blue and black, two colours regarded as maleficent. In Egypt, *nīla* (indigo) is a sign of misfortune, of failure.

Equidistant between infernal red and celestial blue, green has a medium role, a form of equilibrium dear to Islam. For the Arabs, as for many other peoples, it is the symbol of good luck, of natural fertility, of vegetation, of youth. For Islam, the green standard of the Messenger of Allah and the green cloak of ʿAlī have become the very emblems of the Religion. As a beneficent colour, green belongs so naturally to the popular spirit of the Arabs that their colloquial language is full of expressions where this colour symbolises joy, gaiety or success. In Syria, a "green hand" is used in describing a lucky person. To wish somebody a good year, one uses the expression "green year", and when one takes up residence in a new dwelling, green leaves of beet are hung there as a token of good luck. In Morocco, the expression "my stirrups are green" means "I bring the rain when I travel into an area where it is awaited". Muḥammad himself declared: "The sight of green is as agreeable to the eyes as the sight of a beautiful woman (cf. al-D͟jāḥiẓ, *Tarbīʿ*, 137). The archangel Gabriel has two green wings. The Heavenly Throne is carved from a jewel green in colour. Abraham is clothed, in Paradise, in green garments. The Preserved Tablet [see LAWḤ] is made of emerald (*Ḳiṣaṣ*, 7, 13, 139, 220). The title "Green Bird" is the name given to a number of saints. One should not ignore the special place reserved by the doctrine of *d͟jihād* to the *s͟hahīd*, "the martyr in the Way of Allah"; while the corpses of these martyrs remain in their tombs, their souls, on the other hand, are entitled to privileged treatment: "Allah puts their souls into the bodies of green birds, which quench their thirst in the rivers of Eden, and eat of its fruits", says a famous *ḥadīt͟h*. In symbolism and the occult sciences, the emerald, a beautiful green stone, is seen as endowed with an esoteric significance and a regenerative power. The *Emerald table* is the title of a work, which appeared in the Middle Ages, containing all the laws of occultism and the Kabbala, and attributed to Hermes Trismegistus. "The colour green", said al-Simnānī, "is the most appropriate to the secret of the Mystery of Mysteries". In Islamic cosmology, *Ḳāf* [*q.v.*] the mountain encircling the terrestrial world, is made of green emerald, whose colour is reflected by the celestial vault. The image "green death" refers to the action of clothing oneself in rags or patched garments, as do the dervishes and the Ṣūfīs. It is thus the most gentle of deaths, accepted willingly and endowed with spiritual worth.

The colour of gold and of the sun, of butter and honey, but also that of sulphur and the flame that consumes, yellow presents a wide ambivalence on the symbolic level, and not only for the Arabs. It can, according to the nuances applied to it, refer just as easily to cowardice or treason as to royal power and glory. The sight of the Angel of Death gives to Adam sweat "the colour of saffron". At the time of the "descent of Jesus" and the Last Judgment, the guests of Paradise will have white faces, those of Hell black; as for the people condemned to undergo "the ordeals of the tomb" their faces will be "the colour of saffron" (*Ḳiṣaṣ*, 75, 308). The link between bright yellow and youth, love, waiting, separation, is widespread in human psychology. For the Andalusian poets, the yellow of the narcissus is the symbol of the lover who pines away for unrequited love. The colour yellow symbolises the pain of separation. *Al-ṣafrā'* denotes bile. In the parlance of the Levant, "a yellow smile" denotes a smile full of envy. On the other hand, we may note that in the ʿAbbāsid period, the Muslim East displayed a definite predilection for yellow. Even food was coloured yellow through the use of saffron.

Red is the colour of fire and of blood, of passion, of impulse and of danger. It is fundamentally linked to the vital force, and to the warlike qualities. It is a gushing colour, hot and male, unlike blue and green The name of the first man, Adam, signifies "red" in Hebrew. As with yellow, its symbolism is ambivalent, both divine and infernal. The Burning Bush has its equivalent in the Furnace. The red sulphur (*kibrīt aḥmar*) of Islamic esotericism denotes Universal Man, the product of the action of hermetic red. It is said that at the battles of Badr and Ḥunayn, the angels who assisted the faithful against the infidels wore red turbans or belts. But, on the other hand, when the Eternal decreed the destruction of Saba' and of its dam, He sent red rats to undermine the edifice (*Ḳiṣaṣ*, 280, 286). The Arabs qualified with "red" the form of death caused by the emission of blood. In popular speech, an unlucky year is called "a red year". In Syria, the expression "his eye is red" applies to a cruel person; and "his wool is red" means that he is accursed.

We see that the problem of colours, of their transmission and their perception, is quite complex. There has been a definite evolution in chromatic perception since the origins of humanity. In early antiquity, man was, apparently, above all sensitive to the light, and very little to colour as strictly defined. Gradually, psychism—and, consequently, semantics—learned to distinguish the nuances and to designate them. The infinite richness of the colours emerged slowly in the course of the centuries. The apprenticeship of colour took place in the milieu surrounding each people. Language and perception have interfered, without ever totally covering all aspects of the question. Symbolism has entered into the element of subjectivity and ambivalence inherent in every perception of colour, while the human brain has extended its field of reflection, the range of its thought, and rendered its transsion more flexible, by learning how to nuance it.

(A. Morabia)

LAWSHA, Spanish Loja, a small town of al-Andalus, 35 miles to the south-west of Granada, on the left bank of the Gemil at the foot of an imposing limestone mountain, the Periquestes. It has now rather less than 30,300 inhabitants, but was probably more important during the Arab period. It was the birthplace of the famous Lisān al-Dīn Ibn al-Khaṭīb [*q.v.*], who wrote an enthusiastic description of it. The walls of the *ḥiṣn* which commanded the town during the Arab period can still be seen. It was repopulated in 280/893 during the reign of the *āmīr* ʿAbd Allāh b. Muḥammad. This "key of Granada" was besieged in 1486 by the Catholic kings, who captured it on 25 Djumādā I 891/29 May 1486.

(E. Lévi-Provençal)

LAYL and NAHĀR (Ar.), two antithetical terms which designate respectively night and day, but do not have exactly the same status and are not parallel.

Layl is treated as a collective noun without dual (except in poetry where the use of this incorrect form is justified by the requirements of metre), or plural; it possesses, as would be expected, a noun of unity, *laylat*[un] "one night", of which the plural *layālī*[n] and the seldom used diminutive *luyayliyat*[un], are something of an embarrassment to philologists, who are inclined to consider them as formed either on **layliyat*[un] or on **laylāt*[un]. *Nahār*, for its part, applies to the "day" which extends from sunrise to sunset; like *layl*, it has neither dual, nor plural (since the forms *anhur*, *nuhur* and, in dialect, *nahārāt*, are secondary and judged inadmissible by the grammarians, who can only account for them as an aberrant transfer from the generic to the particular, from *djins* to *nawʿ*); but it is not a collective and, for this reason, it has no noun of unity and cannot itself supply this function. Thus the correlative of opposition to *layl*, *nahār*, cannot be opposed to *laylat*[un], of which the antonym is *yawm* (pl. *ayyām*), signifying "day" (of twenty-four hours). So one says *layl*[an] *wa-nahār*[un] "night and day, by night and day" (e.g. Ḳurʾān, LXXI, 5), but *yawm wa-layla*, "a day and a night" is twenty-four hours and not thirty-six; the famous battles of the pre-Islamic Arabs, which did not take place at night, are known by the expression *ayyām al-ʿArab* [*q.v.*], generally translated as "the days of the Arabs". On the other hand, *nahār* is sometimes a substitute for *yawm*, as in Moroccan dialect where, in stories, "one day" is always *wāḥd ən-nhāṛ* and one even encounters *wāḥd ən-nhāṛ ... f-əl-līl* (e.g. G. S. Colin, *Chrestomathie marocaine*, 87). On the other hand, *ayyām* and *layālī* are, in certain cases, interchangeable. While the "borrowed days", each one of which effectively lasts twenty-four hours, are known in Arabic as *ayyām al-ʿadjūz* [*q.v.*], the very cold period which begins in December and ends

forty days later is always called *al-layālī al-sūd* "the black nights", while the forty "mottled" days which, in two series of twenty, immediately precede and follow it and during which the cold is less severe, are sometimes called *al-ayyām al-bulḳ* (e.g. in the *Calendrier de Cordoue*, sometimes *al-layālī al-bulḳ* (especially by al-Ḳalḳashandī, *Ṣubḥ*, ii, 384).

Similarly, the distances which we express in "a days' journey" are measured by the Arabs in stages (*marḥala*, pl. *marāḥil*), translated either as "days" (*ayyām*) or as "nights" (*layālī*, even in reference to a country where day-time travel is practicable). While the day of the month can be expressed by means of *yawm* followed by an ordinal number up to 19, an ordinal and a cardinal from 20 upwards (*al-yawma 'l-thālitha wa 'l-ʿishrīna min Ṣafar* = 23 Ṣafar), a calculation based on nights is used in preference, most often with elision of the word *layla* or *layālī*, but with the feminine form of the numerical noun (whereas *yawm* or *ayyām* would demand the masculine), for example: *li-arbaʿa ʿashrata khalat/khalawna min Muḥarram* = "fourteen (nights) having elapsed of Muḥarram = the 14th of the month (not the 15th, since the official day begins at sunset), or: *li-ʿashr baḳiyat/baḳīna min Muḥarram* = "ten (nights) remaining of Muḥarram" the 20th of the month. (In this context, in calculating correspondence with the Julian or Gregorian calendars, it is important to know if an event dated on a certain day happened before midnight, in which case the corresponding date indicated by the tables should be put back one unit.)

Being accustomed to look to the sky for guidance while travelling at night, and to use the stars [see ANWĀʾ] and the phases of the moon [see ḲAMAR] for the measurement of time, the ancient Arabs divided the lunar month into ten periods of three nights bearing names chosen for the most part as references to the different shapes of the moon or to the degree of its brightness: 1-3: *ghurar* (or *ghurr*, *ḳurḥ*); 4-6: *nufal* (or *djuhar*, *shuhb*); 7-9: *tusaʿ* (or *zuhr*, *buhr*); 10-12: *ʿushar*; 13-15: *bīḍ*; 16-18: *duraʿ* (or *durʿ*); 19-21: *ẓulam*; 22-24: *ḥanādis* (or *nuḥs*, *duhm*); 25-27: *daʾādiʾ* (or *ḳuḥam*); 28-30: *ma/i/uḥāḳ*. These three last nights were qualified with, respectively, *daʿdjāʾ*, *dahmāʾ* and *laylāʾ*, but the 30th also bore the names *sa/irār*, *sarar*, *naḥīra*, *daʾdaʾ*, *falta*. The first and the last days of the month, in historical works and correspondence, are also designated by terms connected with the moon: *ghurra* for the first and *munsalakh* or *sarār* for the last. There also exists a different nomenclature in which nights from the 13th to the 21st bear the same names as those detailed in the scheme above, but the others are: 1-3: *hilāl*; 4-6: *ḳamar*; 7-12: *nufal*; 22-27: *ḥanādis*; 28-29: *daʾādiʾatānⁱ*; 30: *ma/i/uḥāḳ* (for all these names, see Ibn Ḳutayba, *Anwāʾ*, § 159; al-Masʿūdī, *Murūdj*, iii, 429-31 = §§ 1316-18; *Calendrier de Cordoue*, 18; al-Bīrūnī, *Chronologie*, 63-4; Ibn Sīduh, *Mukhaṣṣaṣ*, ix, 30-1; Ibn al-Adjdābī, *al-Azmina wa 'l-anwāʾ*, 85-7; M. Rodinson, *La lune chez les Arabes et dans l'Islam* in *Sources orientales. La lune, mythes et rites*, Paris 1962 163-4).

The ancient Arabs possessed a host of epithets to describe a dark night but it is scarcely possible to establish a gradation between them. The majority of these terms, some of which are quite expressive (e.g. *mushankik*, *muṭlakhimm*), have fallen into disuse; we shall mention only the following: *layla ẓalmāʾ muẓlima*, *mudlahimma*, *daydjur*, "very dark"; *muʿlankisa*, *bahīm*, "where one can see nothing"; *ṭakhyāʾ*, *dādjiya*, "overcast and moonless"; *sadaf*, *ghaṭash* "penumbral"; *layl musdjahirr* or *mudjrahidd*, "long night" (see Ibn Sīduh, *op. laud.*, ix, 37-41).

From the whole of this rich vocabulary, attested in ancient poetry or compiled by *ruwāt* and reproduced scrupulously, though without much enthusiasm, by lexicographers, only the most current elements (in particular those derived from the root *ẓ-l-m*) figure in the Ḳurʾān, where day and night are items of considerable importance; we may in fact count a total of 57 occurrences of *nahār*, 79 of *layl*, 7 of *layla* and 4 of *layālī* (compared with 36 of *yawm*, 27 of *ayyām* and 69 of *yawmaʾidhⁱⁿ*). The day and the night, naturally created by God and put at the disposal of mankind (XIV, 37/33) are signs (XVII, 13/12, XLI, 37) of divine power; they are mutually concurrent (XXXI, 28/29, XXXIX, 7/5, LVII, 6), and God brings forth the day from the night (XXXVI 37; see also VII, 52/54); complementary (VI, 13, 60, XXV, 49/47, XXVII, 88/86, XXX, 22/23, XXXIV, 32/33, XXXVI, 40, XL, 63/61), they succeed one another regularly, with emphasis placed on this succession (*ikhtilāf al-layl wa 'l-nahār*, II, 159/164, IV, 187/190, X, 6, XXIII, 92/80, XLV, 4/5), which is sometimes treated by translators as a contrast between two creations which renew themselves constantly (hence the term *al-djadīdānⁱ*, "the two new ones"). The two words appear together in a total of 24 verses.

The word *sāʿa*, which occurs 47 times in the Ḳurʾān (in 33 cases to designate the [Last] Hour) meant nothing more than "a moment, a brief lapse of time", for the ancient Arabs apparently did not divide the day in 24 hours; this usage, a perfectly understandable one, is retained in the classical language, where expressions are encountered such as *summᵘⁿ sāʿatⁱⁿ* "instantly fatal poison". The concept of the hour was, however, introduced into Arab culture at an early stage, for it was indispensable to astronomers, who distinguished between equal or average hours (*sāʿāt muʿtadilāt*) and unequal or true hours (*zamāniyyāt* or *muʿwadjdjāt*, and Islamic civilisation was at quite an early stage familiar with various types of clock [see ḤIYAL, in Suppl.] which were evidently not at the disposal of the majority of peoples. However, references in historical texts to events which took place, for example, at the third hour of the day or of the night, lead one to suspect that this notion was more widespread than is generally thought; it is thus possible that in a period which cannot be precisely identified, the day and the night were divided into twelve hours, the relative proximity of the equator making fluctuations in their duration according to the seasons a matter of small account. This method of reckoning is still in use in Arabia, where, now that the possession of watches is widespread, it causes a certain amount of confusion.

The night begins immediately after sunset, which marks the start of the official day; this is why, when one talks of the previous night, the Arabic expression is *al-laylata* "this night", if the time is before midday (but *al-bāriḥata* "[the night] that has passed" if the time is after midday). The divisions of the night were not precisely defined, in spite of the rich vocabulary which is to be found, for example, in the *Mukhaṣṣaṣ* (ix, 44-8) of Ibn Sīduh who mentions, following Ḳuṭrub (ix, 37) five parts (*adjzāʾ*) named respectively: *khudra*, *mudḳa*, *sudfa*, *hadjma* and *yaʿfūr*; these expressions do not seem to have been in widespread use and, in any case, they are not defined in a satisfactory manner. However, the need to fix the hours of the three canonical prayers which take place during the night obliged the Muslims to interpret precisely

the meanings of certain ancient terms and to establish with accuracy the times to which they apply. Among the many words denoting the beginning of the night, *shafaḳ* has been sanctioned by usage; in the Ḳur'ān (LXXXIV, 16), Allāh swears by the *shafaḳ*, interpreted as meaning either "twilight" or "day", as opposed to the night which figures in the oath contained in the following verse, but it is agreed that this term designated "the evening twilight", the time at which the *maghrib* prayer should be performed [see MĪḲĀT]. Some authors distinguish two twilights, of which the first is characterised by the redness of the sky and the second by its pallor (e.g. Ibn al-Adjābī, *op. laud.*, 118), but this distinction is secondary. The astronomic twilight lasts for as long as it takes the sun to descend 18° below the horizon (or 1 hour, 12 minutes, since 15° = 1 hour), and Muslim scholars adopt the average figure of 17°; it is however quite certain that the real duration of the *shafaḳ* varies according to lattitude, season and meteorological conditions; this is why the calendars indicate it regularly to enable the faithful to perform the prayer within the required time; one might naturally ask on what observations are based the figures supplied for example by the *Calendrier de Cordoue*, where this duration (and that of the morning twilight, the *fadjr*, which is reckoned to be identical) varies from 1 hour 1/7 on the 1st of January to 2 hours 1/8 on the 21st of June. As regards the *maghrib* prayer, it is said in the Ḳur'ān (XVII, 80/77): *aḳimi 'l-ṣalāta li-dulūki 'l-shamsi ilā ghasaḳi 'l-layl*, and the end of the *shafaḳ* effectively marks the start of the *ghasaḳ* (which was also known by other names: *ẓalām*, even if the moon was shining, *iḳtiḥām al-layl*, etc.); the beginning of the latter period is the time for the prayer of *ʿishā'*, which some call incorrectly *al-ʿishā' al-akhira*, as opposed to a *ʿishā' ūlā* = *ṣalāt al-maghrib*, and which the Bedouins were reproached for calling *ṣalāt al-ʿatama*, after the first third of the night during which they customarily performed the milking (*istiʿtām*) of their camels. Although we know of a considerable number of terms designating any part of the night (see *Mukhaṣṣaṣ*, ix, 45), only a few words seem to be at all precise, in spite of differences in interpretation; thus, *ʿashwa*, *siʿw*, *had'* and variants = 1/4 of the night; *ḳiṭʿa* and variants = 1/3; *dhuhl* and variants = 1/3 or 1/2; *hilā'*, *haziʿ*, *thabadj*, *mawhin* and variants = 1/2 approximately. The middle of the night was called *djawz*, *usṭumm*, *djarsh*, but astronomers rendered "midnight" simply by *niṣf al-layl* (in the same way they called "midday" *niṣf al-nahār*) and the modern language uses the expression *muntaṣaf al-layl*. The *ʿasʿasa* precedes the third third, the *saḥar* or *saḥr*, which matches the *ghasaḳ* and is immediately followed by the morning twilight, the *fadjr*; for the Muslim astronomers, this twilight begins at the moment that the sun is 19° below the horizon, but the real duration of it is indicated, as has been seen above, in the calendars. It is during this final part of the night that the morning prayer (*fadjr* or *ṣubḥ*) is performed. Since their territory did not extend as far as latitude 48°, the Arabs did not know that at the summer solstice there is no complete night (the *layl alyal* of the astronomers) at this latitude.

Night travellers experienced a certain relief when they observed the first lights of dawn, and they tended to include the *fadjr* in the *nahār*; a reflection of this conception is also found in the works of lexicographers who normally place the *ṣubḥ* (or *ṣabīḥa* or *ṣabāḥ*) at the end of the night and are furthermore inclined to make it the beginning of the day, calling *ghudwa* or *bukra* the time which elapses between the *fadjr* prayer and the sunrise (see *Mukhaṣṣaṣ*, ix, 48-52). Although the prayers which punctuate the Muslim's life obliged the *fuḳahā'* to fix with a degree of exactitude the time of the *ẓuhr* and of the *ʿaṣr* (let alone the *ḍuḥā*), the divisions of the day lack precision. The *nahār* begins at the moment that the upper edge of the sun appears on the horizon, just as the night and the official day begin when the opposite edge, now uppermost, disappears. The first part of the day, up to the moment when the sun has traversed a quarter of the diurnal arc, is called *ḍuḥā*; the period corresponding to the sun's progress over the second quarter of the arc is known as *ḍaḥā'*; it comes to an end at midday (*zawāl*), which is marked, for the astronomers, by the sun crossing the meridian and, for the simple faithful, by the displacement of the shade which moves from the west (where it is called the *ẓill*) to the east (where it takes the name *fay'*). It is at this moment that there begins the period, varying according to the judicial schools [see MĪḲĀT], during which the midday prayer (*ẓuhr*) must be performed. A number of terms referring to the heat which then reigns are employed (*ẓāhira*, *hādjira*, *ḳā'ila*, *ghā'ira*), without designating a precise lapse of time. Some calendars indicate, at the beginning and the end of each month of the solar year, the altitude (*irtifāʿ*) in degrees of the sun at midday (e.g. the *Calendrier de Cordoue*, or, to enable the faithful to calculate for themselves the hour of the *ẓuhr*, the length of the shadow either in feet, as in the *Risāla* of Ibn al-Bannā', or in height (*ḳāma*), once again as in the *Calendrier de Cordoue*, where the shade varies from a quarter of the height of an object on the 16th of June and the 1st of July, to one and five-sixths on the 16th of December. The period which follows that of the *ẓuhr* and also extends between limits determined by the length of the shadow, but variable according to the *fuḳahā'*, is that of the *ʿaṣr* (see I. Goldziher, in *Archiv für Religionswissenschaft*, ix 293 ff.; transl. in *Arabica* vii/1 [1960], 26 ff.); this term is thus precisely defined in Islam, although diverse and much less definite interpretations are retained. *Aṣīl* was used in reference to the time which elapses between the *ʿaṣr* and sunset, but this word tends to be employed, in the contemporary language, for the evening twilight; *masā'*, which had the same meaning, is today applied to the evening, as opposed to *ṣabāḥ*, "morning", and also comes to designate the period which begins at noon and encroaches upon the night; the word *ʿashiyya* (and variants) is also taken in the sense of "evening", although it used to be as precise as *maṣā'* and *aṣīl*, designated the end of the *nahār* and was the opposite of *ḍuḥā* (e.g. Ḳur'ān, LXXIX, 46: *illā ʿashiyyatan wa-ḍuḥāhā*).

The calendars to which reference has been made often attach importance to the length of the day and of the night, which some of them indicate twice a month, either in degrees of the sun's arc, or in hours. Since the authors who supply these figures are not usually astronomers, they give the impression of borrowing these numerical data from their predecessors, without perhaps taking account of differences in latitude, especially in view of the fact that, when addressing themselves to their fellow-citizens, they do not take the trouble to establish the name, and the position relative to the Equator, of the place concerned. It would nevertheless be possible to calculate the latitude of this place if one could rely on the accuracy of the data relating to the length of the longest and shortest days and nights of the year, but in this

respect great uncertainty remains. It is furthermore to be noted that the geographers, heirs to the Ptolemaic tradition, divide the zone reckoned to be inhabited in the northern hemisphere, as far as approximately latitude 50°, into seven climates [see IKLĪM], of which the lower and upper limits are constituted by parallels separated one from the other by a distance corresponding to a difference in half-an-hour in the length of the longest day of the year.

Bibliography: Given in the article.

(CH. PELLAT)

LAYLĀ AL-AKHYALIYYA, Arab poetess of the 1st/7th century of the tribe of the ʿUḳayl (ʿĀmir b. Ṣaʿṣaʿa group) whose *nisba* came to her from an ancestor, Akhyal, or from several of the Akhāʾil. Literary tradition attributes to her an elegy on the murder of ʿUthmān and speaks of her as having been familiar, late in life, with the caliphs Muʿāwiya and ʿAbd al-Malik, and the redoutable governor al-Ḥadjdjādj: it follows that the pinnacle of her career should be placed at around 650-60 A.D. She is well-known for her romantic saga, of ʿUdhrite type, concerning her relationship with the bandit-warrior Tawba b. Ḥumayyir, also of the ʿUḳayl tribe. He loved her, and although he was prevented from marrying her, he always maintained a chivalrous devotion to her. When he was killed in the course of one of his raids, Layla mourned him in a number of touching elegies, fragments of which are available to us from literary sources (as far as is known, they were never collected in a *dīwān*) which show Laylā resembling a Muslim al-Khansāʾ [*q.v.*]. In fact, these funereal elegies, like those of the most famous poetess of the Djāhiliyya, are still imbued with a purely pagan spirit, lauding the warlike and beneficent virtues of their heroes (for al-Khansāʾ, her two brothers; for Laylā, her sweetheart Tawba), without any hint of faith or Muslim piety. The genre of the *rithāʾ* [see MARTHIYA], was henceforth perpetuated in an established form in the new milieu of Islam. As with the poetess of Sulaym, the sincerity of Laylā's sorrow and her fidelity to a long and unrequited love come through the conventional *topoi* of the elegy, as in the accounts of her conversations with the caliphs.

Besides these *marāthī*, there is attributed to Laylā a poetic exchange in *hidjāʾ* form, fairly coarse as is typical of this genre, with the poet al-Nābigha al-Djaʿdī. This is all that is known of her life (she was married to a certain Sawwār b. Awfā al-Ḳushayrī). On the date and place of her death, there is conflicting evidence. According to a highly romantic tradition, she died very close to the tomb of Tawba, in circumstances which would corroborate certain well-known verses of her friend in this respect; more plausible perhaps are other traditions which put her death in Iran (at Sāwa or Rayy), in the course of a journey which she had undertaken in her old age through the *barīd* of al-Ḥadjdjādj, to visit her cousin Ḳutayba b. Muslim [*q.v.*], who was then campaigning in Khurāsān. In any case, the date would be in the early years of the 8th century A.D. (end of the 1st century of the Muslim era). Her historical authenticity is not in any doubt, unlike that of her more famous namesake, Laylā of Madjnūn.

(F. GABRIELI)

LAYLĀ KHĀNİM (? - 1847), Turkish poetess of the first half of the 19th century. Very little is known about her life. Born in Istanbul the daughter of the *ḳāḍī-ʿasker* Moralī-zāde Ḥāmid Efendi, she was educated by private tutors, particularly by her maternal uncle ʿIzzet Mollā [*q.v.*], whom she eulogised in an elegy. Her short-lived marriage and her gay and unscrupulous way of life gave rise to gossip about her being a lesbian. Her poems, not particularly original, are written in a comparatively simple and unadorned style avoiding the articialities and affectation of many of her contemporaries. She excelled in *münādjāt* and *merthiyes*. Her *dīwān* was printed at Būlāḳ in 1844, with second and third editions made in Istanbul in 1851 and 1883 respectively. Laylā Khānīm was a Mewlewī adherent, and is buried in the garden of the Galata Mewlewī convent.

İnal, *Son asır Türk şairleri*, v, İstanbul 1938, 875-9 (with further bibliography); Ibrahim Alaettin Gövsa, *Türk meşhurları ansiklopedisi*, Istanbul n.d. [1946], s.v.

(FAHIR İZ)

LAYLĀ KHĀNİM (Modern Turkish LEYLA SAZ 1850-1936), Turkish poetess and composer. She was born in Istanbul, the daughter of Dr. Ismāʿīl Pasha (1812-71), originally a Greek from Chios, who served as imperial surgeon under Maḥmūd II and as governor, minister and Palace physician under ʿAbd al-Medjīd and ʿAbd al-ʿAzīz. From early childhood, Laylā Khānīm frequently lived in the imperial harem or in close association with it. She was privately educated and was married to a civil servant from Crete, Sirrī Efendi (later Pasha, 1844-95), who served as a governor in various parts of the empire. Laylā Khānīm, who accompanied him, included interesting travel notes in her famous memoirs (see below). She died in Istanbul on 6 December 1936.

As a composer, she followed the classical Turkish tradition, although the influence of Western music which had entered the Ottoman Palace in the mid-1800s is noticeable in her works. She is the composer of over 200 works to which she wrote the words, including some famous and very popular *sharḳ* and marches.

Her early poems published in the *Khazīne-yi ewrāḳ* in the 1880s are in the *dīwān* tradition. Later, she wrote in the manner of the *Tanẓīmāt* modernists, particularly of ʿAbd al-Ḥaḳḳ Ḥamīd. She occasionally used syllabic metre and a simple language for her *türküs*. Only a small portion of her compositions and poems survived the fire which destroyed her villa in Bostāndjī near Istanbul (see Mustafa Rona, *Yirminci yüzyıl Türk musikisi*², Istanbul 1970, 25-31, where 45 of her compositions are given). Her scattered poems were collected and edited by her son Yūsuf Rāḍī in 1928 as *Solmush čičekler* ("Faded flowers"). They seldom rise above the average.

Laylā Khānīm's most important contribution is her invaluable memoirs, which mainly cover her experiences in the harem. This is a unique first-hand report of Palace life from the inside. The memoirs describe in great detail everyday life in the Palace, its décor and furnishings, and particularly the harem, its customs, fashions, ceremonies, special occasions, training and life of princes, princesses and slave girls, etc., together with character studies and sketches of interesting types. She began to write her memoirs in 1897 and completed them in 1920 at the age of 70; and she published the first part, on the harem, in the daily *Waḳt* (beginning 20 January 1921) and the second part, on women's life, in the 19th century, in the daily *Ileri* (from 25 April 1921). As Istanbul

was under Allied occupation at the time and the press under strict control, some passages were omitted by the censor. The memoirs were translated by her son and published under a pseudonym, that of Mme. Adriana Piazzi (Delcambre), *Le Harem impérial et les sultanes au XIXe siècle: souvenirs*, adaptés au français par son fils Youssouf Razi. Préface de Claude Farrère, Paris 1925. Both parts of the memoirs have now been edited in one volume by Sadi Borak as Leyla Saz, *Harem'in içyüzü*, Istanbul 1974.

Bibliography: given in the text, but see also Ibnülemin M. K. İnal, *Son asır Türk şairleri*, v, Istanbul 1938, 880-5. (FAHIR İZ)

LAYLĀ Ū MADJNŪN [see MADJNŪN WA-LAYLĀ]

LAYLAT AL-BARĀʾA [see RAMAḌĀN]

LAYLAT AL-ḲADR [see RAMAḌĀN]

AL-LAYTH B. AL-MUẒAFFAR, Arab philologist and jurisprudent, grandson of the Umayyad governor of Khurāsān Naṣr b. Sayyār al-Kinānī al-Laythī (d. 131/748, 85 years old [*q.v.*]). Sometimes he is identified as the son of the latter or even as the son of an alleged third son of his grandfather, Rāfiʿ, who might be confused with the well-known Rāfiʿ b. Layth b. Naṣr b. Sayyār [see HĀRŪN AL-RASHĪD].

The biographical information about al-Layth (or Layth) is meagre. He studied grammar and lexicography under the versatile scholar and *ḳāḍī* of Kūfa, Ḳāsim b. Maʿn (d. 175/791?), and was held in high repute as a secretary with the Barmakids. It seems that his relationship with the master of the *ʿarabiyya*, al-Khalīl b. Aḥmad (d. 175/791? [*q.v.*]), who was not much older than himself, was trustful and close. We learn that from traditions, some of which are embellished by anecdotes, and we furthermore learn that he revised and completed the *Kitāb al-ʿAyn* of al-Khalīl, according to some sources after the latter's death. Al-Layth may have finished this work at the beginning of the eighties of the 2nd century A.H. (about 800 A.D.) and died soon afterwards, in other words, just before the fall of the Barmakids in 187/803. Later philologists consider him as the actual author—and recent investigations confirm this view, especially in regard to the bulk of the material—or else they leave this question undecided, speaking of the *ṣāḥib Kitāb al-ʿAyn*; whereas others attribute the misunderstandings and the mistakes which they thought to have discovered in the first Arabic dictionary mainly to that revision. (Concerning the works which have been written before the background of such criticism, cf. J. Kraemer, in *Oriens*, vi [1953], 208 f.)

Bibliography: in addition to the works mentioned in the article KHALĪL B. AḤMAD, see G. Flügel, *Die grammatischen Schulen der Araber*, Leipzig 1862 (repr. Nendeln 1966), 39-42; E. Bräunlich, in *Islamica*, ii (1926), 69 f., 85 ff.; P. Anastase (al-Karmalī), in *Isl.*, xv (1926), 296; S. Wild, *Das Kitāb al-ʿAin und die arabische Lexikographie*, Wiesbaden 1965, 14, 16; H. (R. SELLHEIM)

AL-LAYTH B. SAʿD B. ʿABD AL-RAḤMĀN AL-FAHMĪ, ABU 'L ḤĀRITH, traditionist and jurisconsult, belonging to the class of the great *tābiʿūn*. He was born and died in Egypt (Ḳarḳashanda, Shaʿbān 94/May 713—Miṣr, 14 Shaʿbān 175/16 December 791. At the cemetery in Cairo, may be seen the tomb of "El Imam El Leis"). This "scholar of Egypt" (of Persian origin) is ranked unanimously among the leading authorities (*fuḳahāʾ al-amṣār*) on questions of religious knowledge in the early years of the Islamic empire, these being: Abū Ḥanīfa, Sufyān al-Thawrī and Ibn Abī Laylā (Kūfa), Ibn Djurayḥ (Mecca) Mālik and Ibn al-Mādjishūn (Medina), al-Awzāʿī (Syria), and finally, al-Layth b. Saʿd (Egypt). With his vividly critical attitude towards the law schools (the Mālikī one in particular), the Ẓāhirī Ibn Ḥazm regards all these individuals as the worthy successors of Mālik in respect of erudition, intelligence and moral severity (*al-Iḥkām fī uṣūl al-aḥkām*, ii, 138). Al-Layth is also held in high esteem by the *imām* al-Shāfiʿī, in whose opinion the study of tradition rests, essentially, on the authority of these three masters Mālik, Sufyān al-Thawrī and al-Layth b. Saʿd.

Only fragmentary information is available concerning the career of al-Layth (cf. the article devoted to him in *Taʾrīkh Baghdād*, xiii, 3-14). His training in the discipline of *ḥadīth* was both Meccan (with Ibn Shihāb, Nāfiʿ and ʿAṭāʾ b. Rabāḥ among others) and Medinan (Mālik). He travelled to Baghdād in Shawwāl 161/July 778, where his teaching of *ḥadīth* was an outstanding success and earned him the patronage of Hārūn al-Rashīd. His humility is said to have prevented him from soliciting honours and appointments of state. On returning to Egypt, he devoted himself to teaching and also to the management of what seems to have been a considerable fortune. He was credited with an annual income of the order of 25,000 *dīnār*s, which he utilised with such generosity that he was left with practically nothing which could justify the payment of *zakāt*. Al-Layth was, throughout his life, a much-courted and honoured man (no doubt because of his fortune). According to a man familiar with him over a period of twenty years, he was never seen lunching or dining unaccompanied by numerous associates. He lived in a grand scale and knew how to enjoy his wealth. If such a life-style allowed him a certain amount of leisure for participation in public life, or for daily sessions of *ḥadīth*, it was hardly compatible with long and exacting periods of work. In addition, the written work of al-Layth seems to be less than prolific (see *Bibl.*) in comparison with that of Mālik (93-179/711-95) who was able, in the rustic setting of Medina, to lead a much more productive scholastic life.

The biographers of al-Layth often compare him with Mālik, with the object of attributing superiority in numerous areas to the former. Without doubt, subjectivity plays a major part in these judgments, when dealing with an individual whose special success and munificence inspired much respect. In the doctrinal sphere as such, the personal contribution of al-Layth is far from comparable with that of the *imām* Mālik. It is significant in this context that classical authors discussed the legitimacy of whether al-Layth should be accorded the title of *imām*, taking into account not only his piety and his virtues, but also the importance and impact of his doctrine as measured on the scale of the *umma* (*Taʾrīkh Baghdād*,

xiii, 13). The verdict of posterity is negative on this point; all that need be quoted here by way of a tribute is the opinion recorded by al-Khaṭīb al-Baghdādī (d. 463/1071): "If Mālik had not existed, the superiority of al-Layth would have been universally recognised" (*Taʾrīkh Baghdād*, xiii, 7). Having been a pupil of Mālik, al-Layth was in a position to assert his independence with regard to his eminent contemporary, while maintaining a relationship with him marked by courtesy and a willingness for intellectual co-operation (cf. his *Risāla ilā Mālik b. Anas*, in Ibn Ḳayyim al-Djawziyya, *Iʿlām al-muwaḳḳiʿīn*, iii², 94-100). If in the sphere of religious law (*fiḳh*), the influence of al-Layth is decidedly slight, his name nevertheless remains connected with the discipline of *ḥadīth*, where the classical authorities unanimously attribute to him a well-proven competence and integrity.

Bibliography: Sezgin, *GAS*, i, 520, no. 7, where the work of al-Layth (1. *Ḥadīth*; 2. *Madjlis min fawāʾid al-Layth*; 3. the above-mentioned *Risāla*) is to be supplemented by *Kitāb masāʾil fi 'l-fiḳh*, cited in the *Fihrist* of Ibn al-Nadīm (199); al-Khaṭīb al-Baghdādī, *Taʾrīkh Baghdād*, Cairo-Baghdād 1349/1931, xiii, 3-14 (article no. 6960); Muḥammad b. ʿAbd Allāh al-ʿUmarī al-Tabrīzī, *Mishkāt al-maṣābīḥ*, Damascus 1380-2/1961-2, iii, 745; R. G. Khoury, *al-Layth ibn Saʿd (94/713-175/791), grand maître et mécène de l'Égypte, vu à travers quelques documents islamiques anciens*, in *Festschrift Nabia Abbott*, *JNES*, xl/3 (1981), 189-202.

(A. MERAD)

LAZ, a people of South Caucasian stock (Iberic, "Georgian") now dwelling in the southeastern corner of the shores of the Black Sea, in the region called in Ottoman times Lazistān.

1. History and geography. The ancient history of the Laz is complicated by the uncertainty which reigns in the ethnical nomenclature of the Caucasus generally; the same names in the course of centuries are applied to different units (or groups). The fact that the name Phasis was applied to the Rion, to the Čorokh (the ancient Akampsis), and even to the sources of the Araxes, also creates difficulties.

The earliest Greek writers do not mention the Laz The name Λαζοί, Λᾶζοι is only found after the Christian era (Pliny, *Nat. hist.*, iv, 4; *Periplus* of Arrian, xi, 2; Ptolemy, v, 9, 5). The oldest known settlement of the Lazoi is the town of Lazos or "old Lazik" which Arrian puts 680 stadia (about 80 miles) south of the Sacred Port (Novorossiisk) and 1,020 stadia (100 miles) north of Pityus, i.e. somewhere in the neighbourhood of Tuapse. Kiessling sees in the Lazoi a section of the Kerketai, who in the first centuries of the Christian era had to migrate southwards under pressure from the Zygoi (i.e. the Čerkes [*q.v.*]) who call themselves Adighe (Adzighe); the same author regards the Kerketai as a "Georgian" tribe. The fact is that at the time of Arrian (2nd century A.D.), the Lazoi were already living to the south of Sukhum. The order of the peoples living along the coast to the east of Trebizond was as follows: Colchi (and Sanni); Machelones; Heniochi; Zydritae; Lazai (Λᾶζαι), subjects of King Malassus, who owned the suzerainty of Rome; Apsilae; Abacsi [cf. ABKHAZ]; Sanigae near Sebastopolis (= Sukhum).

During the centuries following, the Laz gained so much in importance that the whole of the ancient Colchis had been renamed Lazica (Anonymous Periplus, *Fragm. hist. graec.*, v, 180). According to Constantine Porphyrogenitus, *De administrando imperio*, ch. 53, in the time of Diocletian (284-303), the king of the Bosporus, Sauromatus, invaded the land of the Lazoi and reached Halys (N. Marr explained this last name by the Laz word meaning "river"). Among the peoples subject to the Laz, Procopius (*Bell. Got.*, iv, 2, 3) mentions the Abasgoi and the people of Suania and Skymnia (= Lečkhum). It is probable that the name Lazica referred to the most powerful element and covered a confederation of several tribes. The Laz were converted to Christianity about the beginning of the 6th century. "In the desert of Jerusalem" Justinian (527-65) restored a Laz temple (Procopius, *De aedificiis*, v, 9), which must have been in existence for some time before this. The Laz also sent bishops to their neighbours (Procopius, *Bell. Got.*, iv, 2). In Colchis the Laz were under the suzerainty of the Roman emperors, who gave investiture to their kings, and the latter had to guard the western passes of the Caucasus against invasions by the nomads from the north. On the other hand, the monopolistic tendencies of the commerce of Rome provoked discontent among the people of Colchis. In 458 King Gobazes sought the help of the Sāsānid Yazdagird II against the Romans. Between 539 and 562 Lazica was the scene of the celebrated struggle between Byzantium under Justinian and Persia under Khusraw I Anūshirwān.

According to Procopius, who accompanied Belisarius on his expeditions, the Laz occupied both banks of the Phasis, but their towns (Archaeopolis, Sebastopolis, Pitius, Skanda, Sarapanis, Rhodopolis, Mochoresis) all lay to the north of the river, while on the left bank, which was desert land, the lands of the Laz only stretched for a day's march to the south. Nearer to Trebizond were the "Roman Pontics", which only means that the inhabitants were direct subjects of the Roman emperor and not of the Laz kings; from the ethnic point of view, the "Roman Pontics" could not have been different from the Laz. This strip of shore continued longest to shelter the remnants of the Laz.

In 1204 with the aid of troops lent by queen Thamar of Georgia, Alexis Comnenus founded the empire of Trebizond, the history of which is very closely connected with that of the southern Caucasus. Nicephoros (v. 7) says that the founder of the dynasty had seized "the lands of Colchis and of the Lazes". In 1282 John Comnenus received the title of "Emperor of the East, of Ivoria and of the lands beyond the sea". In 1341 the princess Anna Anakhutlu ascended the throne with the help of the Laz. The lands directly under the authority of the emperors of Trebizond seem to have extended as far as Makriali, while Gonia was under a local dynasty (cf. the *Chronicle of Panaretes*, under the year 1376).

In 865/1461 the Ottoman Sulṭān Meḥemmed II conquered Trebizond, and as a result the Laz came into contact with Islam, which became their religion in the form of the Shāfiʿī *madhhab*. The stages of their conversion are still unknown. The fact is that, even in the central regions of Georgia (Akhaltsikhe), Islam seems to have gained ground gradually from the 13th century onwards (N. Marr, in *Bull. of the Acad. of St. Petersburg* [1917], 415-46, 478-506).

In 926/1519 Trebizond, with Batum, was made a separate *eyālet*. According to Ewliyā Čelebi, who went through this region in 1050/1640, the five *sandjaḳs* of the *eyālet* were: Djanikha (Djanīk = Samsun?), Trebizond, Güniya (Gonia) and Lower and Upper Batum. The modern Lazistān was governed from Gonia, for among the *ḳaḍāʾs* of this fortress we find Atina, Sumla, Witče/Biče (= Witse) and Arkhawi

(Ewliyā and the version of the Djihān-nümā in Fallmerayer, *Original-Fragmente*, in *Abh. d. Bayer. Akad.* [1846]). Ḥādjdjī Khalīfa and Ewliyā Čelebi, deceived by the similarity in sound of Caucasian names (as also was Vivien de St. Martin), proposed a theory of the identity of the name Lezgi and Laz. Ewliyā calls Trebizond the "former Lezgi *wilāyet*". Ḥādjdjī Khalīfa, after enumerating the peoples of the district of Lezgi as Mingrelians (Megril), Georgians, Abkhaz (Abaza), Čerkes and Laz, adds that the latter are those who live nearest to Trebizond. To the south-east of Trebizond in the Čepni mountains he mentions the Turks who "worship as their God (*ma'būd*) the Shāh of Persia (i.e. are extreme Shī'īs) and are associated (*mushtarik*) with the Laz". Ḥādjdjī Khalīfa and Ewliyā do not agree on the number of the fiefs of Trebizond; Ewliyā only says that the value of the *eyālet* has depreciated through the unruliness of many of its 41 *nāḥiyes* (*Djihān-nümā*, 429; Ewliyā, ii, 81, 83-5).

The first serious blow to the feudal independence of the *derebey* of Lazistān was only struck at the beginning of the 19th century by the Ottoman Pasha of Trebizond; but Koch, who visited the country after his expedition, still found most of the hereditary *derebeys* in power, although shorn of some of their liberties. He counted fifteen of them: Atina (two), Bulep, Artashin, Witse, Kapiste, Arkhawe, Kisse, Khopa, Makria (Makriali), Gonia, Batum, Maradit (Maradidi?), Perlewan and Čat. The lands of the three latter lay, however, on the Čorokh behind the mountains separating this valley from the river of Lazistān in the strict sense. On the other hand, among the *derebeys* of Lazistān was the lord of Hamshin, i.e. of the upper valleys of Kalopotamos and of Fortuna, inhabited by Muslim Armenians. According to the Armenian historian Levond, tr. Chahnazarian, Paris 1826, 162, the latter with their chief Hamam of the Amatuni family had settled in the district in the time of Constantine VI (780-97) (the old Tambur was given the name Hamshin < Hamamshen, "built by Hamam"). It is evidently this region that Clavijo (1403-6), ed. Sreznewski, St. Petersburg 1881, 383, calls "tierra de Arraquiel". He adds that the people, dissatisfied with their king Arraquiel (Arakel?), submitted to the Muslim ruler of Ispir. The Hamshin are now Muslims, and only those of Khopa have not forgotten Armenian. A Hamshin lexicon was published by Kipshidze.

With the institution of the *wilāyets*, the *sandjak* of Lazistān became part of the *wilāyet* of Trebizond. Its capital was at first Batum but, after the Russian occupation of Batum in 1878, the administration of the *sandjak* was transferred to Rize (Rhizaion), detached for this purpose from the old central *sandjak* of Trebizond. That part of Lazistān lying to the west of the Ottoman-Russian frontier occupied a strip of coast 100 miles long and 15 to 20 miles broad. The *ḳaḍā*'s of the *sandjak* were: Khopa, Atina and Rize, subdivided again into 6 *nāḥiyes* (Sāmī-Bey, *Ḳamūs al-a'lam*, v, 3966). Cuinet, *La Turquie d'Asie*, i, 118-21, mentions Of as a fourth *ḳaḍā*' and gives 8 (7) *nāḥiyes* (Hamshin, Ḳaradere, Mapawri, Waḳf, Kurā-yi sab'a, Witse, Arkhawi). In 1880 there were in the *sandjak* 364 inhabited places with 138,467 inhabitants, of whom 689 were Orthodox Greeks and the rest Muslims (Laz, Turkicised Laz, Turks and "Hamshin"). The number of true Laz cannot be more than half the total population.

The term Laz is used in the west of Turkey to designate generally the people of the country round the south-east of the Black Sea, but in reality the people calling themselves by this name and speaking the Laz language now live in the two *ḳaḍā*'s, modern *ilçes*: Khopa (between Kopmush and Gurup) and Atina (between Gurup and Kemer). Laz is spoken in 64 of the 69 villages of the *ḳaḍā*' or *ilçe* of Atina. To these should be added the very few Laz who used to live in Russian territory to the south of Batum. These Laz were incorporated in Turkey by virtue of the Turco-Soviet treaty of 16 March 1921, which moved the Turkish frontier to Sarp (to the south of the mouth of the Čorokh). Rize and Batum are now outside the Laz country proper.

Due to its remoteness and to its proximity to the Russian frontier, Lazistān has only been marginally affected by the modernisation of Turkey in recent years. Communications are poor, and roads largely unmade. The ancient port of Hopa, which is the end of the line for passenger and mail steamers from Istanbul, has been equipped with a modern harbour which includes two massive artificial moles. At Sarp, which is only about 10 miles from the important Soviet port of Batum, there is a flourishing tea factory surrounded by the highly-productive plantations of this bush.

The Laz have traditionally been regarded as very conservative in their Islamic religion, and the old Turkish shadow theatre (Karagöz [*q.v.*]) and popular theatre (Orta oyunu [*q.v.*]) often portrayed the Laz as slow-witted rustics; a Turkish proverb stated that "a Muslim does not eat Laz jelly", ***Lazların termonu müsülman yemez onu*** (*termoni* < Greek θέρμος). In fact, despite a long-established reputation for brigandage and for smuggling goods across the Turco-Russian frontier, the modern Laz are highly intelligent. They are skilled tillers of the soil, and were in the past often to be found in the towns of eastern Turkey as gardiners. Today they are to be found in towns all over Turkey in their traditional calling of bakers and pastrycooks; before the First World War many Laz went to Russia to work as bakers, and often returned with Russian wives who became converts to Islam. They are shrewd and enterprising businessmen, and have secured a large portion of the real estate market in Istanbul. When modern educational opportunities are available to them, they readily respond to this stimulus. They are also excellent sailors, and form a large proportion of the crews of many Turkish vessels.

2. Language. The Laz language is closely connected with Mingrelian (which is a sister language of Georgian), but N. Y. Marr found in it sufficient peculiarities to consider it a Mingrelian language rather than a dialect. In the Lazo-Mingrelian group he believed that he could find resemblances to the more Indo-European elements in old Armenian (Grabar). There are two Laz languages, eastern, and western with smaller subdivisions (the language of the Čkhala). Laz is very full of Turkish words. It has no written literature, but there are local poets (Rashīd Ḥilmī, Pehliwān-oghlu, etc.). The Laz are forgetting their own language, which is being replaced by the Turkish patois of Trebizond (cf. Pisarev in *Zapiski VOIRAO* [1901], xiii, 173-201), in which the harmony of the vowels is much neglected (cf. a specimen in Marr, *Teksti i razīskaniya*, St. Petersburg, vii, 55).

The Georgians call the Laz Č'an, but the Laz do not know this name. "Č'an" is evidently the original of the Greek name Sannoi/Tzannoi, and it survives in the official name of the *sandjak* of Samsun (Djanīk). From the historical point of view, the separation of the Laz and Č'an seems to have taken place, in spite

of the close relationship between the two of them. In the time of Arrian, the Sannoi were the immediate neighbours of Trebizond. In an obscure passage in this author (cf. the perplexed commentary of C. Müller, in *Geogr. graeci minores*, ad *Arriani Peripl.*, 8), he places on the river of the frontier between the Colchians (Laz?) and the θυαννιαη (?). Koch mentions the interesting fact that the people of Of speak a "language of their own", and according to Marr, the people of Khoshnishin (near Atina) speak an incomprehensible language. Procopius places the "Sannoi who are now called the Tzannoi" on the area adjoining the mountains separating Čorokh from the sea (the Parayadres range, the name of which survives in the modern Parkhar/Balkhar). Marr's researches showed that the Č'an (Tzannoi) had at first occupied a larger area, including the basin of the Čorokh and its tributaries on the right bank, from which they were temporarily displaced by the Armenians and finally by the Georgians (K'art'li). The chronicles of Trebizond continue to distinguish the Laz from the Tzianids (ζιανίδες). The latter in alliance with the Muslims attacked the possessions of Trebizond in 1348, and in 1377 were punished by the Emperor. At this period the Tzianids must have been in the southwest of Trebizond (besides, the *sandjak* of Djanīk is to the west of this port). Thus the Georgian application of the name Č'an to the Laz may be explained by the confusion of the two tribes one of whom (the true Č'an living to the south and west of the Laz) was ultimately thrust to the west of Trebizond.

(V. Minorsky-[D. M. Lang])

LAZARUS, the name in the Gospels of (1) the poor man who finds compensation in Abraham's bosom for the misery of this world (Luke, xvi, 19-31); and (2) the dead man whom Jesus raises to life (John, xi). The Kur'ān mentions neither the one nor the other, but among the miracles with which it credits Jesus is included the raising from the dead (III, 43/49). Muslim legend with its fondness for the miracle of resurrection is fond of telling of the dead whom Jesus revives, but rarely mentions Lazarus. Al-Ṭabarī in his *Ta'rīkh* talks of these miracles in general. According to him, Hām b. Nūḥ is revived by Jesus (i, 187). Al-Kisā'ī only mentions Sām son of Nūḥ amongst those restored to life by Jesus. Al-Thaʿlabī relates, closely following St. John's Gospel: "al-ʿĀzir died, his sister sent to inform Jesus, Jesus came three (in the Gospel, four) days after his death, went with his sister to the tomb in the rock and caused al-ʿĀzir to arise; children were born to him". In Ibn al-Athīr the resurrected man is called "ʿĀzir", the *el* of Elaʿzar was taken for the article, as in al-Yāsaʿ (Elisha) and Alexander (al-Iskandar) or in Āzar, the father of Abraham in the Kur'ān, whose name Fraenkel derives from Eliezer. In Ibn al-Athīr we find Muslim legend endeavouring to increase the miracle; Jesus raises not only ʿĀzir (Lazarus) but also his wife (children are born to them), and Sām (son of Nūḥ), the prophet ʿUzayr and Yaḥyā b. Zakariyyā (John the Baptist).

Fraenkel, in *ZDMG*, lvi (1902) 71-3; J. Horovitz, in *Hebrew Union College Annual*, ii (1925), 157, 161; idem, *Koranische Untersuchungen*, Berlin 1926, 12, 85, 86. (B. Heller)

LEBANON [see LUBNĀN]

LĔBARAN, the name generally used in Indonesia for the ʿĪd al-Fiṭr [*q.v.*], originally means "end" or "close", in this case specifically the end of the fast (Indonesian *puasa*). Combining it with the Javanese word *garĕbĕg* ("procession"), people in Java also use the term *garĕbĕg puasa*, the court festival at the end of the fast. Ignoring the original meaning of the word *lĕbaran*, the expression *lĕbaran haji* is sometimes used for the ʿĪd al-Aḍḥā [*q.v.*], the "major festival" according to Islamic law.

Just as in other Islamic countries, the festival after the month of fasting is also celebrated in Indo-

nesia as the greatest festival of the year. The way of celebrating it does not differ greatly from other countries [see ʿĪD and ʿĪD AL-FIṬR]. An exception must be made for the principalities of Central Java, where this festival has a special character because of its connection with the court and the influence of elements from pre-Islamic Hindu culture. For a description of the background and meaning of the ceremonials and practices surrounding the *garèbèg puasa* in Yogyakarta, the reader is referred to the literature mentioned below.

As a result of Islamic reformism, as well as the independence of Indonesia (with the Ministry of Religious Affairs trying to influence religious developments), Muslims have been encouraged to participate in Islamic observances in conformity with Islamic law, whereas ceremonials and practices such as those connected with the *garèbègs* in Yogyakarta are relegated to the sphere of custom and folklore.

Bibliography: Besides the passages on *Lèbaran* in the books by Juynboll and Snouck Hurgronje mentioned in the bibliography to ʿĪD, mention must be made of two monographs on the festivals in Yogyakarta, namely J. Groneman, *De garèbèg's te Ngajogydkartâ*, The Hague 1895, and R. Soedjono Tirtokoesoemo, *De Garebegs in het Sultanaat Jogjakarta*, Jogjakarta 1931.

(B. J. BOLAND)

LEFF, an Arabic term used in the Berber-speaking regions of central and southern Morocco (a different term is used in a similar way in Berberophone regions of northern Morocco, and the term *ṣoff* appears to be its equivalent in Kabylia) to denote a kind of political alliance or party.

The term or the notion acquires its importance, however, from its prominence in the literature on the social and political organisation of the Berbers, notably in the work of R. Montagne, who extended it to the totality of North African, and eventually also to Middle Eastern societies, including even urban and minority ones; thus he later claimed to find similar institutions amongst urban Jewish communities in Morocco, and also in Arabia.

In Montagne's hands, the word in effect became a technical term of political analysis, though with the definite suggestion that the theory formulated by means of the *leff* (*lleff* in Berber) or by an equivalent was already present in the minds of, and above all put in practice by, the indigenous users of that word. According to this theory, and to the associated explication of the indigenous significance of the term, *leffs* were alliances with the following properties. They were very stable over generations. The units which entered into them were themselves communities, whether genealogically or territorially defined. They were binary; in a given region there would be two and only two such *leffs*. They were invoked, like military alliances, when violent conflict occurred: members of the same *leff* were expected to give support to each other, when any one of them became involved in conflict with opponents from the other *leff*. These alliances were hereditary, and transitive, in the sense that membership of the same *leff* by A and B, and by B and C, implied that A and C were likewise of the same alliance. Finally, these *lfuf* were supposed to be arranged in a kind of chessboard pattern on the map; a community (say a village or valley) would belong to an alliance other than that of its immediate neighbours but the same as that of its neighbours-but-one.

The significance of the notion of *leff* arises above all from the great importance of the theory based on it. The problem which this theory attempts to solve is that of the nature of the maintenance of order in areas in which central government is absent or ineffective, notably in the *blād es-siba*, the dissident regions of pre-colonial Morocco [see MAKHZEN], though also in other similar areas. The *leff* theory maintains that the crucial institution for furthering the maintenance of order in such conditions was, precisely, the balanced opposition of two moieties, deployed chequerwise over the countryside. This theory has a certain affinity to that of "segmentary opposition" as developed by E. Evans-Pritchard (and foreshadowed by E. Durkheim, partly on the basis of Algerian material), but differs from it in various important respects. Segmentation, as understood by Evans-Pritchard, was not necessarily binary, but it was of its essence that it operated at a number of levels of size: the "opposition" of "balanced" segments operated simultaneously between, say, intra-village lineages, entire villages, and clusters of villages grouped as "clans", etc. Conflict at one level did not preclude co-operation at another. By contrast, the *leffs* of Montagne were, in any one region, articulated at one level of size only. In Montagne's hands, the theory was combined with another important thesis: that this balance-of-moieties mechanism occasionally broke down, and was replaced by ephemeral tyrannies such as those of the "great caïds" of the Moroccan South, but that these temporary crystallisations of personal power in turn gave way to a re-establishment of the original system, in a kind of cyclical pattern.

The theory of the *leffs* has been subjected to various criticisms, both empirical and theoretical. Subsequent researchers have not always found them even in areas where Montagne claimed they were most at home (e.g. J. Berque), or have doubted whether they in fact contribute to the maintenance of peace (e.g. A. Adam); or they have pointed out that the problem posed, that of order-in-anarchy, is only solved by the theory for those units which are of the size at which these leagues are articulated, whereas in fact the problem also arises at all other levels of size at which conflict is liable to occur (and at those other levels, the theory offers no solution). There is also reason to suppose that in regions where groups were less stable, and territorial units less well-defined than in the Western High Atlas and Anti-Atlas which inspired Montagne, *leffs* were more fluid and opportunistic than his work would suggest. Nevertheless, his work, which is heavily centred on the notion of *leff*, remains one of the high points of the political sociology of North Africa.

(E. GELLNER)

LEFKOSHA, Grk. Leukosia, the town of Nicosia in Cyprus [see KUBRUS].

The town was under joint Arab-Byzantine rule from 688 A.D. to 965 when Nicephorus Phocas seized it (R. J. H. Jenkins, *Cyprus between Byzantium and Islam, A.D. 688-965*, in *Studies presented to D. M. Robinson* ..., St. Louis 1953, ii, 1006-14). The Venetians occupied it in 1489, the Ottomans in 1571, the British in 1878, annexing it in 1914. The town was sacked by Mamlūk forces of Sultan Barsbay in 1426. The Ottomans captured the town after a fifty-day siege in 1570, after much suffering on both sides and thousands of casualties. There is a good account of this conquest in *Türk silahlı kurretleri tarihi*. iii. *Kıbrıs seferi (1570-1571)*, T. C. Genelkurmay Harp Tarihi Başkanlığı Resmi Yayınları. Seri no. 2, Ankara 1971.

Western visitors to Lefkosha during the Ottoman period report the town as being severely underpopulated and devoid of evidence of its former wealth and luxury. They attributed that plight to the tyranny and extortions of Ottoman officials whom the Porte would not or could not control, to plague, virulent fevers, and hordes of locusts, and to the fatalism and lethargy of Muslim and eastern Christians. Few knew that the town had reached the peak of its wealth and population late in the Lusignan period. Never under the Venetians or the Ottomans did it regain that fame and splendour, though both made sporadic efforts to revitalise and repopulate it.

By 1211 the Lusignan capital had become a first-class town. W. von Oldenburg said "It has inhabitants without number, all very rich, whose houses in their interior adornment and paintings closely resemble the houses of Antioch" (C. D. Cobham, *Excerpta Cypria*, 14). By the end of the 13th century the town had fallen behind Maghōsha [*q.v.*] or Famagusta in wealth and trade, although the simple Westphalian priest Ludolf (1350) saw Lefkosha as "another great city ... in a fine open plain with an excellent climate", where lived the king, bishops and prelates, princes and nobles, barons and knights who in Cyprus "are the richest in the world" (Cobham, 20; *Archives de l'Orient Latin*, ii, 336. Cf. Jacobus de Verona [1335] in Cobham, 17; *Revue de l'Orient Latin*, iii [1895], 176 f.). The pilgrim Martoni (1394) judged the town larger than Aversa, with many gardens and orchards, some six acres in size (Cobham, 26; *ROL*, iii [1895], 634).

In 1435 the astute Pero Tafur attested that Lefkōsha again surpassed Maghōsha: "This is the greatest and most healthy city of the kingdom where the kings and all the lords of the realm always live" (Cobham, 31; *Andanças é Viajes* ..., Pt. 1, 67, in *Coleccion de Libros Espanoles raros o curiosos*, viii, Madrid 1874). Lefkōsha had become the trading emporium of the eastern Mediterranean; the Dominican monk Felix Faber (1483) admired the "... great city ... surrounded by fertile and pleasant hills ... Here are merchants from every part of the world, Christians and infidels. There are stores, great and precious, for the aromatic herbs of the East are brought here raw, and are prepared by the perfurmer's art" (Cobham, 41f.; *Evagatorium in Terrae Sanctae*, ed. C. D. Hassler, in *Bibliothek des Literarischen Vereins in Stuttgart*, iv [1849], 230).

The Venetian patrician Fra Francesco Suriano (1484) saw the town, "twice as large as Perugia", with palaces, houses, and churches, destroyed by a disastrous earthquake of 1480 (Cobham, 48; *Il Trattato di Terra Santa*, ed. P. G. Golubovich, Milan 1900, 219 n.), but by then it had passed its economic and demographic peak; to Peter Mésenge (1507) only a quarter of the town appeared occupied (C. Enlart, *L'art gothique*, ii, 523).

Savorgman (1562) found empty tracts and dusty disordered streets with no good houses (Sir George Hill, *A history of Cyprus*, iii, 811, 844 ff., 851 f.). However, the nobles had not given up their prerogatives, as the pilgrim Fureri (1566) perceived: in that town, "of some size and beauty", lived the French nobles who "... keep their vassals, who are called *Parici*, in the state of slaves ... The nobles are greatly given to amusements, especially hunting and hawking ... [with] solemn games and banquets with great cost and splendour" (Cobham, 78-9; C. Fürer von Haimendorf, in Cobham, 78-9; *Reis-Beschreibung*, Nuremburg 1646, 302).

The Lusignans had fortified their capital expertly. Early in the 13th century, walls 4, 7 or 9 miles in circuit were built high to resist attacks in the style of Crusader warfare. In 1567, to resist the heavy pounding of Ottoman cannon, the Venetians had large sections of the walls dismantled and rebuilt them thicker and lower, with a circumference of only three miles, yet apparently still large enough to accommodate the existing population. A deep moat was excavated around the circular walls; all structures outside the new walls were methodically levelled, the rubble being used as fill for the new walls. Writing in 1572 just after the Turkish conquest, the priest Étienne de Lusignan celebrated a town he remembered with 250 to 300 churches, 80 of which had been destroyed completely when two-thirds of the town was levelled. "In this city lived all the nobility of Cyprus, Barons, Knights and Feudatories, nearly all of whom died in this affair [i.e. its fall], with townsfolk to the number of twenty thousand: all men devoted to the service of God most High, and of their sovereign. The remnant of the souls ... were all made slaves." (Cobham, 120-1; *Description*, 32, 262).

Local agriculture and commerce, as well as local and international trade, boosted the economy of the town. In good times it produced a marketable surplus of cotton, wool, and silk, which were sold raw or processed or manufactured into a variety of cloths. As long as Cyprus remained close to the terminals of the silk and spice trades as the easternmost outpost of the western Christian world in the Mediterranean, Lefkōsha would remain a centre of trade. Nevertheless, the town could not escape the changes in the international socio-economic order which saw the Mediterranean world gradually lose its commercial and cultural pre-eminence to northwestern Europe.

Porcacchi (1576) reported that great quantities of camlet and cotton cloth were made in that "very pleasantly and beautifully situated" town "healthfully and pleasantly" supplied with running water. The camlets were good and the "cotton wolles" "the best of the Orient", according to Sandys (1610) (Cobham, 164-5; *L'isole* ..., Venice 1572, 22 f.; Padua 1620. Cobham, 208; *A relation of a journey*, London 1615, 220).

Pococke (1738), a careful observer of Cyprus, found the trade of Lefkōsha still substantial: "There is a great manufacture of cotton stuffs, particularly of very fine dimities, and also half sattins of a very coarse sort: they have here the best water in Cyprus ...". Cottons were sold to Holland, England, Venice and Livorno and "a great quantity of yellow, red, and black Turkey leather" to Istanbul (Cobham, 260, 268-9; Pinkerton, ed., *A general collection of ... voyages*, London 1811, x, 582-3). According to

Mariti, the covered market (*bedestān*), the former church of St. George next to Aya Sofya, was the gathering place of the chief Turkish, Greek and Armenian merchants, of whom the last were the richest. At large bazaars and *khāns* local villagers as well as townspeople sold the cotton that they had spun; dyeing skins and stamping cloth were other major industries (*Travels in the Island of Cyprus*, tr. C. D. Cobham, 42-5). W. M. Leake (1800) was completely negative: "The flat roofs, trellised windows, and light balconies of the better order of houses, situated as they are in the midst of gardens of oranges and lemons, give together with the fortifications, a respectable and picturesque appearance . . . at a little distance, but, upon entering it, the narrow dirty streets, and miserable habitations of the lower classes, make a very different impression upon the traveller; and the sickly countenances of the inhabitants sufficiently show the unhealthiness of the climate"; but W. Turner (1815) reported that every house had a well-cultivated garden with fig, olive, mulberry, orange, lemon and pomegranate trees; all the houses were of mud and the streets, though clean, were unpaved (Cobham, 339, 436-7).

Since the Lusignan period, Aya Sofya, as cathedral and mosque, had been the centre of the city, with the main bazaars adjacent. In the 19th century the entire road from Tahta Kale and Baf gate to Baghōsha gate was lined with merchants' booths; the Friday bazaar of women has existed at least since then. In the 1870s there were 25 quarters inside the walls, 14 Muslim, 7 Greek Orthodox, 1 Armenian, 1 Latin and 2 mixed (Bazar and Phaneromene) (Jeffery, *Cyprus monuments*, 32-3, with map).

Lefkōsha, located near the centre of the island, lies on the Pediyas, the longest and largest seasonal "river" in Cyprus, only 12 miles from the perennial springs of Deghirmenlik, the largest on the island, from where water is easily brought by aqueduct. The immediate hinterland is fertile grainland; its villages produced grain adequate for the town's needs except when drought or, more frequently, hordes of locusts appeared. The Lusignan rulers built summer palaces in the northern mountains for relief from the intense summer heat; many Latin nobles took refuge in the Trodos mountains, just as the British colonial government did later. Spring and fall are long and pleasant, while winter is short and mild. Lefkōsha was by no means free of the malaria and plague which long decimated the island's population, but those diseases were less severe there than along the marshy littoral. Stochove (1631) said the town had the best air in Cyprus, although Turner (1815) observed that even there "fevers" occurred constantly in the summer (Cobham, 216, 430, 436). According to J. Bramsen (1814), the fever season was June to October (*Letters of a Prussian traveller* . . ., London 1818, 304).

In 1571 Lefkōsha, with a *ḳāḍī* of the third class, was made the capital of a large *beglerbegilik* which included all of Cyprus and the Anatolian *sandjaḳs* of ʿAlāʾiyye, Ičel, Silifke, Ṭarsūs, and Sīs on the south side of the Taurus. Originally, Ṭarābulus al-Shām was included too. Despite several changes in administrative organisation which greatly reduced the importance of the province, Lefkōsha always remained the administrative centre. Foreign consuls lived at Larnaka or its port Tuzla, where they served foreign merchants at a comfortable distance from the *pasha*.

A study of the Lefkōsha judicial records (*sidjill*) surviving from the period 1580-1640 reveals some urban activities. Lists of official prices (*narkh*) indicate a busy market in comestibles. The rich and varied agricultural produce of Cyprus found its way to the bazaars of Lefkōsha, including yoghurt, cheese, meats, grapes and other fruits, and olives. Cotton cloth and raw cotton were the leading goods in commercial transactions, but wool and woollen cloth were important too. Lending and credit were an integral part of the town's economic life, both for Muslims and for the *dhimmīs* (i.e. Greek Orthodox). In intercommunal credit, the Muslims were disproportionately the lenders. Interest was openly charged (*ḳarḍ-i ḥasan*, or *ḳarḍ-i sherʿ*), although bankruptcy (*iflās*) seems to have been uncommon. Muslims and *dhimmīs* interacted frequently. They worked in the same quarters, bought and sold land and even houses from one another, and made business partnerships. About one-third of the judicial cases involved *dhimmīs*, and 20% of the cases were intercommunal. Conversion to Islam was very common, probably increasing in frequency between 1580 and 1600 but then falling off considerably; there is no evidence of wholesale conversion. Converts had to declare their conversion publicly in court. Besides the Greek Orthodox majority, a handful of Armenian Gregorians and of Maronites had churches, and there was a very small community of Jews. Women used the court very frequently (almost a quarter of all cases), where their property, inheritance, and domestic claims were apparently handled like those of men. More than 20% of the property mentioned belonged to women.

Although Lefkōsha has been the residence of the autocephalous archbishops of Cyprus since the Lusignan period, the office has never been associated with a particular town. Ottoman rule relieved the Orthodox clergy from their long subordination to the Latin hierarchy (cf. R. Janin, art. *Chypre*, in *Dictionnaire d'histoire et de géographie ecclésiastiques*, xii, 791-819; J. Hackett, *A history of the Orthodox Church of Cyprus*, London 1901.

Most estimates of the town's population between 1510 and 1560 range between 15,000 and 20,000 people (Hill, iii, 875). Visitors to Lefkōsha during the Ottoman period often remarked about the population of the town. According to A. M. Graziani, 20,000 people were put to death in eight days of plundering when the town fell to the Ottomans; Porcacchi reported that all the people were "cut to pieces" and Sandys wrote of "an incredible slaughter" (Cobham, 170, 207). Dandini, who visited there in summer 1596 and spring 1597, estimated that the large, well-built town had at least 30,000 inhabitants, of whom only 4,000 or 5,000 were Turks (Cobham, 182), J. Cotovicus (1597-8) reported the town full of ruins, Sandys (1610) "defaced by the Turks"; for the latter, the town, once equal in beauty to the chief towns of Italy, is now half-destroyed (Cobham, 195, 207). In 1683 de Bruyn observed that the population was almost half-Greek (Cobham, 239; *Reizen van Cornelis de Bruyn*, Delft 1698, 371). Cyprianos gives a fairly official estimate of 755 Christian families for 1777 (Cobham, 366). In 1806 ʿAlī Bey estimated the town's population at less than 1,000 Turkish and 1,000 Greek families, although Lefkōsha could easily hold 100,000 people within its walls (Cobham 393; *Voyages*, Paris 1814, ii, 82 ff.). J. M. Kinneir (1814) reported on the authority of the archbishop 2,000 Muslim families, 1,000 Greek Orthodox families, 40 Armenian, and 12 Maronite (Cobham, 417; *Journey*, London 1818, 190 ff.). An estimate of 12,000, including 8,000 Turks, 3,700 Greek Orthodox and 50 Armenians was attributed to the governor

Ṭalʿat Efendi in 1841 (L. Lacroix, *L'Univers. Histoire et description des tous les peuples. Îles de la Grèce*, Paris 1853, 88). A census just before the island was handed over to the British in 1878 reportedly found 10,879 people, of whom 5,628 (52%) were Muslims (*Correspondence respecting the Island of Cyprus*. No. 3. Sir G. Wolseley to Marquess of Salisbury, 1879).

A census held in the third year of British rule (4 April 1881) showed the population of Lefḳōs̲h̲a at 11,513, of whom 5,653 were Greek Orthodox (49%), 5,397 Muslims (47%), 181 Roman Catholics, 78 Maronites, 88 Armenian Gregorians, 94 Church of England and Protestants, and 22 Jews. Although the population of the town had increased 9% to 12,515 in 1891, the number of Muslims declined slightly to 5,351, 43% of the population (*Cyprus Gazette*, 16 October 1891). A census of 1901 shows a population of 14,752, a 28% increase over 1881. The Muslims numbered 6,013, up only 11% in two decades, while the Greek Orthodox had increased 41% to 8,739 (*Cyprus Gazette*, 26 April 1901; 30 August 1901). Almost 40% of the population of the six leading towns lived in Lefḳōs̲h̲a. The town contained only 6% of the population of the island, although 12% of the Muslims lived there.

Initially, British policy in Cyprus was to preserve the existing Ottoman political, social and economic systems, except in a few specific areas of public health; extensive official English translations of recent Ottoman *waḳfiyyes* and cadastral records were prepared. In 1893, £662 of the £1,510 in municipal revenues from Lefḳōs̲h̲a were from slaughter house fees, £351 from market tolls and rents, and £246 from weighing and measuring taxes. The municipality established in 1884 even had a "censor of markets". *Awḳāf* still provided the water supply: 300 measures from the Arab Ahmet and 170 measures from the Siliktar aqueduct were sold annually, while another 100 measures were donated to mosques, churches and schools (*Cyprus Blue Book*, 4 January 1895. See also *Statute laws of Cyprus, 1878-1923*, 633-41, "Nicosia water supply"). Eleven Muslim schools, supported by *awḳāf*, mosque funds and grants from the Porte, had 574 students in 1889-90 and 633 students in 1892-3, about 23% of them girls (*Cyprus Blue Book*, year 1889-90). Cotton and silk remained the major industries. Nearly every village in the district had cotton looms, and many houses in the larger villages had hand looms for manufacturing cotton and silk stuffs. In 1889 the town also had a tannery, 3 tobacco factories, 3 steam-powered flour and cotton mills, calico printers, copper, silver, and goldsmiths, and 5 distilleries (*Cyprus Blue Book*, 1889-90, 1892-3). The proposed railway between Lefḳōs̲h̲a and Larnaka was never attempted, but in 1906 a railway connected Lefḳōs̲h̲a and the new harbour of Mag̲h̲ōs̲h̲a.

In 1946, 10,330 of the 34,485 inhabitants were Mulsims, including 9,314 of 24,967 within the walls and 1,016 of 9,518 outside them. Besides 20,768 Greek Orthodox, there were 2,252 Armenians, 160 Maronites and 30 Jews; each of the 24 quarters was mixed.

Monuments. The Venetians levelled much of the Lusignan town in rebuilding the walls. Although the town walls are essentially the creation of the Venetians, the Ottomans repaired them extensively in the 1570s. Virtually all the monumental buildings date from the brilliant Lusignan period; neither the Venetians nor the Ottomans added religious or other public buildings, for many already stood empty after the population began to decline (these are discussed with illustrations by C. Enlart, 67-187, and pls. 1-12). Cf. G. Jeffery, *Description*, 18-100, and *Cyprus monuments. No. 7. Historical and architectural buildings. The mosques of Nicosia*, Nicosia 1935; F. Çuhadaroğlu and F. Oğuz, *Turkish historical monuments in Cyprus*, in *Rölöve ve Restorasyon Dergisi*, ii (1975), 1-76; Oktay Aslanapa, *Kıbrıs'da türk eserleri*; Cevdet Çağdaş, *Kıbrısta türk devri eserleri*, Lefkoşa 1965. The finest Ottoman constructions are the Mawlawī *tekke* inside Girne gate (pre-1600), the Büyük K̲h̲ān (pre-1600), and the small ʿArab Aḥmed Pas̲h̲a mosque. Many aspects of the Ottoman town are preserved within the walls of the Turkish quarter: narrow streets, overhanging balconies, stone-walled houses and gardens, and bazaars. A very few stone-cut houses, or their foundations, survive from the Venetian period, as do several fine houses from the Ottoman period. Sadly, there is little appreciation of this cultural heritage, and they are gradually being eliminated.

Until this century, the town has been confined within the walls. The main buildings of the Ottoman period, like the Büyük K̲h̲ān and the so-called Ḳumārd̲j̲ïlar K̲h̲ān, date from early in the Ottoman occupation. Occupance of the town has been a conservative one, with few changes in the main centres and a preservation of old quarter names and locations from earliest times.

LEGACY [see MĪRĀTH]

LEGEND [see ḤIKĀYA, ḲIṢAṢ AL-ANBIYĀʾ, ḲIṢṢA]

LEGISLATION [see TASHRĪʿ]

LEH (له or ليه), the ancient Ottoman Turkish term for the Poles and Poland (from *Lęch*, Polish tribal name later extended to comprise all the nation, with the original nasal *ę* ousted by *e*, as in Byz. Λεχοι "the Poles" and Λεχία "Poland". In Turkish, Poland was also called *Leh wilāyeti* (*memleketi*), the Poles *Lehlü* and the Polish language *lehdje*. From the 12th/18th century, the Turks also called the country *Lehistān* (Pers. *Lahistān*, from which is derived Pers. *ahl-i Lahistān* "Poles" and *zabān-i Lahistānī* "the Polish language"). In the hitherto unpublished Crimean Tatar documents from the late 10th/16th century, the word for Poland is *Lakh* (the Ukrainian-Russian form of the Polish *Lech*) or *i-Lakh* (لاخ and ايلاخ; Archiwum Główne Akt Dawynch, Warsaw, Arch. Koronne, Dz. tatarski, kartony 60, 65). The term *Köräl*, which is attested in the same sources (كورل or كورال; from the Ukr.-Rus. *korol* "king"), means "the kingdom"—Poland, including her southeastern provinces, i.e. Ruthenia and the Ukraine (قورول *Korol* as it occurs in Ewliyā Čelebi, *Seyāḥat-nāme*, vi, 366, 368 *et passim*, wherever the lands, the Ruthenians-Ukrainians and their language are mentioned). (On *Köräl*, see also E. Schütz, *Eine armenische Chronik von Kaffa aus der ersten Hälfte des 17. Jahrhunderts*, in *AOrH*, xxix [1975], 164-5; this term is not so clear there as in the said documents.) The mediaeval Islamic authors called Poland by names derived from Lat. *Polonia*: Ar. *Bulūniya* (T. Lewicki, *Polska i kraje sąsiednie w świetle "Księgi Rogera" geografa arabskiego z XII w. al-Idrīsiego*, i, Cracow 1945, 125 and 1); Pers. *Polōniya* (M. D'Ohsson, *Les peuples du Caucase ou voyage d'Abou el-Cassim*, Paris 1828, 269). The latter name was equally used by the Ottoman author Remmāl Khōdja (d. 975/1567-8) in his *Taʾrīkh-i Ṣāḥib Girey khān* (A. Muchliński, *Zdanie sprawy o Tatarach litewskich . . .*, Vilna 1858, 9). Since the 13th/19th century, the terms *Polonya* (Ital. *Polonia*), *Polonyalı* and *Polonya dili* are in use in Turkey. In modern Arabic, Poland is called *Būlanda*, *Būlāndā* (Eng. *Poland*) and *Būlūniyā* (Ital. *Polonia*), the Poles *Būlūnī* and Polish *al-lugha al-būlandiyya* (*al-būlāndiyya, al-būlūniyya*).

Poland was known to Islamic peoples from the account written by Ibrāhīm b. Yaʿḳūb (if not earlier) about the Slavonic lands (354/965-6), which, however, contained no reference to the name of the country, mentioning only the Polish ruler MSHKH (from Pol. *Mieszko*). Poland has been long since connected with Islamic countries by animated trade relations, the numerous early Islamic coins found now on her territory bearing an undeniable witness to the fact.

With regard to political relations between the Polish-Lithuanian monarchy and the world of Islam, they appear to have been established first with the break-up of the Golden Horde and the khānates which arose from their downfall (see BATUʾIDS). After a period of peaceful and friendly contacts with the Crimean khān Ḥādjdjī Girey I and his successor Nūr Dewlet, the long years under Mengli Girey I were a period of unrest and strife. The khān vacillated between support for Poland-Lithuania and for Muscovy, which challenged the Jagellons in disputes over the regions of western Russia, Bĕlorussia and the Ukraine. Poland-Lithuania emerged successfully from this period, but it was under an obligation to the khānate to pay specified sums in return for military aid against Muscovy (see K. Pułaski, *Stosunki z Mendli Girejem chanem Tatarów perekopskich. 1469-1515*, Warsaw 1881; L. Kolankowski, *Problem Krymu w dziejach jagiellońskich*, in *Kwartalnik Historyczny*, xlix [1953], 279-300). But the Tatar attacks into the Polish region were endless. Invasions by the Tatar Cossacks (*Tatar ḳazaḳları*, *bizim ḳazaḳlar* of the Crimean sources) drew revenge from the Zaporozhians (*Özi/Özü ḳazaḳları*). The Crimea, which since 1475 had been a vassal state of the Porte, was often used in the political battles of the Porte against the Poles; the Tatars took part in Turkish invasions of Poland in 1498, 1521-4, 1620, etc. In 1628 khān Meḥmed Girey III and ḳalgha Shāhīn Girey Sulṭān took an oath of allegiance to Poland for her help in their struggle against the Porte and khān Djānībek Girey. The next year, however, Poland's striving to gain sway over the Crimea finally failed. The refusal of king Władysław IV to give the "presents" to the Crimea because of the Tatar violations of the peace led Islām Girey III into an alliance with the Zaporozhians and to the Crimean-Tatar-Ukrainian united war against Poland, 1648-54 (Hażzy Mehmed Senai z Krymu, *Historia chana Islam Gereja III*, ed. Z. Abrahamowicz, Warsaw 1971). The treaty between B. Chmielnicki and Moscow in 1654 made the Tatars change their standpoint radically. With renewed Tatar support for Poland in her war in the Ukraine, Meḥmed Girey IV was to undertake diplomatic intervention in Denmark in her favour after the Swedish invasion into Poland in 1655 (J. Matuz, *Krimtatarische Urkunden im Reichsarchiv zu Kopenhagen . . .*, Freiburg 1976), and in 1656 his troops fought successfully in Poland against the Swedes. Pursuing them, the Tatars advanced as far as Eastern Prussia. These events are the historical roots of the "journey" narrated by Ewliyā Čelebi, *op. cit.*, vi, 364-78, to Denmark, Sweden, etc., with 40,000 Crimean Tatars after the Turkish conquest of Uyvar-Neuhäusel (Nové Zámky, in Slovakia) in 1663; there, he must have met some of the Tatar expedition against the Swedes fighting in Poland (see *Księga podróży Ewliji Czelebiego. Wybór*, Warsaw 1973, 193-208, 423-7—a collective work by several authors, foreword by J. Reychman, translation of the relevant text and commentary by Z. Abrahamowicz). The Tatars took a part in the Turkish war against Poland in 1672, sometimes acting as mediators between Poland and Turkey. The plans of King John III Sobieski for a Polish-Russian war against the Crimea and for a joint division of the khānate proved impracticable. The danger presented by the Tsarist empire to Poland and the Crimea in the 12th/18th century reconciled the two countries once again.

Witold (*ca.* 1352-1430), Archduke of Lithuania, who played a prominent part in the domestic struggle which was going on within the Horde, then undergoing a process of disintegration, on his return in 1397 from an expedition to the banks of the Don brought a large number of Tatar families and settled them in his land. This gave rise to a strong Tatar colonisation in Lithuania, since 1385 united with Poland, and on Polish territory as well [see LIPKA].

The diplomatic ties between Poland and the Ottoman Empire extend back to 1410. When King Ladislas III of Poland (I of Hungary) disregarded the warnings of his Polish advisers, the tragedy of the Battle of Varna (1444) ensued; it was to be a terrible event for Poland to remember, and a pointer to her future association with the Turks. By this time, she was no longer disposed to engage in elaborate plans for a papal-imperial attack on Islam; she was at peace with the Turks and had a good defence against the territorial ambitions of the hostile Hapsburgs. After the Turkish attack on Kaffa [see KEFE] and the khānate of the Crimea (1475) and the Turko-Tatar conquest of the Black Sea ports of Kilia and Aḳkerman (1484), which were so vital to Poland, a ceasefire was arranged between King Casimir IV Jagello and Sulṭān Bāyezīd II (22 March 1489). The Moldavian campaign of King John Albert (1497) and the subsequent Turko-Tatar attacks on Poland (1498) had shown that there was a military equilibrium between the two powers, and peace was again restored between them in 1499. Following the armistice of 1525 and that of 1528, Süleymān the Magnificent made in January 1533 a life-long peace treaty and alliance with King Sigismund I and his son Sigismund Augustus who, in 1529, was crowned as his father's successor. This treaty, which Sigismund Augustus had renewed in 1553 with the old sultan, in 1564 with Sulṭān Selīm as the heir to the throne, and in 1568 had renewed with the Pādishāh Selīm II, was the basis of relations between Poland and Turkey in the 10th/16th century. During this period, these relations were on the whole favourable, but not without certain difficulties (C. Backvis, *La difficile coexistence pacifique entre Polonais et Turcs au XVI^e siècle*, in *Mélanges d'islamologie dédiés à la mémoire de A. Abel*, ii, Brussels 1975, 13-51). Poland did not concur with the insinuations made by Süleymān and his Ruthenian wife Khurrem Sulṭān [*q.v.*] against the Hapsburgs, and in 1569 Sigismund Augustus also rejected the Turkish plan for a Polish-Turkish alliance against Moscow. During the first two elections of kings after the death of the last Jagellon king, the Porte intervented vigorously to prevent the choice of a Hapsburg. Moreover, Süleymān already appeared to be favourably disposed to Poland when he heard the false news of the death of both Polish kings in 1535 (Z. Abrahamowicz, *Katalog dokumentów tureckich*, Warsaw 1959, no. 39; K. Beydilli, *Die polnischen Königswahlen und Interregnen von 1572 und 1576 im Lichte osmanischer Archivalien*, Munich 1975). The Polish-Turkish War of 1620 (Poland was defeated at Cecora) and 1621 (the victory for Poland at Chocim [see KHOTIN]) was not only caused by Poland's attempt to force the Ottomans out of Moldavia but also by the strife stirred up by the excesses of the Tatars and Zaporozhians (R. Majewski, *Cecora. Rok 1620*, Warsaw 1970). It ended with the peace of 1623. The self-willed assault on Kamieniec undertaken in 1633 by Abāza Meḥmed Pasha [see ABĀZA] did not lead to a deterioration of mutual relations. However, the borderland skirmishes steadily grew in number. This even led King Ladislas IV to construe, beginning from 1645, plans for joint Polish and Venetian attack against Turkey, with the support of the Zaporozhians (W. Czermak, *Plany wojny tureckiej Władysława IV*, Cracow 1895). These plans did not come to be fulfilled, as Ladislas IV died in 1648, and the war of the Cossacks and Tatars against Poland broke out the same year. The Porte very much valued Poland's role in maintaining the balance of power in their struggle against the Hapsburgs, and in 1648, when Poland was defeated in the war with Islam Girey III and the Zaporozhians, it intervened on Poland's side, thus provoking the anger of the Tatars (Abrahamowicz, *Katalog* ..., nos. 339-41; Senai, *op. cit.*, fol. 25-26). In view of her agreements with Poland, the Porte was also rather reluctant to adopt the plan suggested by B. Chmielnicki of placing the Ukraine under the sultan's patronage, even though this plan seemed to promise the liberation of Turkish lands from the threat of Cossack attacks. The theory of an alliance of the Porte with the Hetman in 1648 (O. Pritsak, *Das erste türkisch-ukrainische Bündnis (1648)*, in *Oriens*, vi [1953]) cannot be supported, considering the carefully-guarded attitude of the Turks towards him in 1651 (J. Rypka, *Weitere Beiträge zur Korrespondenz der Hohen Pforte mit Bohdan Chmel'nyćkyj*, in *ArO*, ii, and Abrahamowicz, *Katalog* ..., no. 344). Even when in 1065/1655 Sulṭān Meḥmed IV had taken the Cossacks formally under his patronage, he hastened to declare to King John Casimir that he nevertheless wished to maintain his good relations with Poland (A. N. Kurat and K. V. Zetterstéen, *Türkische Urkunden*, Leipzig 1938, no. 1). In the years that followed, the period of the "Flood", Turkey lent Poland also considerable support against the threat to her by Carl X Gustavus of Sweden (1656) and George II Rákoczi (1657).

The balance of power was first destroyed by the Grand Vizier Köprülüzāde Fāḍil Aḥmed Pasha [see KÖPRÜLÜ II] when, in 1669, he granted the Cossack Hetman P. Doroszenko, who since 1666 was in revolt against Poland, the supreme authority of the Pādishāh; as a result, the Grand Vizier directly attacked Poland in 1672. The splendour of his success included the capture of Podolia, compelling Poland to pay tribute, etc. But this faded quickly with the defeat of the Turks at Chocim in 1673 (J. Sobieski was still only Royal Chief Hetman) and then again at Żorawno in 1676 (Sobieski was then King; the attack was repelled, the tribute imposed in 1672 was repealed and it was never paid by Poland).

The Porte was now involved in a difficult war with Russia over the Ukraine. The successor of the Grand Vizier, Merzifonlu Ḳara Muṣṭafā Pasha [*q.v.*], adopted an inflexible attitude to his next treaty with Poland (1678), and an additional threat to Poland came from the south in consequence of his 1682 alliance with E. Thököly. He had occasion to deplore his rash step when, at the battle for the relief of Vienna on 12 September 1683 and in the subsequent war in Hungary, the Polish king "was the first one to drive his horse against the Muslims and then to draw his sword" and "caused so much harm that it was he who gave the greatest help and support [for the Emperor Leopold I] and had many Muslims taken prisoner" (Djebedji Ḥasan Esīrī, and eyewitness of the events of 1683, in *TOEM*, iii, 1016; in general, see Z. Wójcik, *King John III of Poland and the Turkish aspect of his foreign policy*, in *Belleten*, xliv, no. 176 [1980]). The fruits of the victory of John

III, the commander-in-chief of the allied Christian armies in this battle, fell to Austria alone, and the territory taken from Poland in 1672 was only restored by the Porte in 1699.

The turning point in the relations between the two neighbours was the Treaty of Carlowitz [see ḲARLOVČA]. Poland, who had once been so proud of her epithet *antemurale christianitatis*—against Islam—was now, in the face of the common threat of Russia, drawing nearer to Turkey, particularly after the partitioning of the country by Catherine II with the help of Austria and Prussia (W. Konopczyński, *Polska a Turcja. 1683-1792*, Warsaw 1936). A manifestation of the Turkish sympathies towards the Poles in this time can be found in the *Sefāret-nāme-yi Fransa* by Meḥmed Emīn Weḥīd Pas̲h̲a, the Porte's envoy to Napoleon I in 1807. Turkey never recognised the division of Poland, but offered Polish patriots continuing protection after the failure of their national uprising in 1831, and they supported Polish efforts to attack the empire of the Tsar from the south. The greatest Polish poet, A. Mickiewicz, had gone to Constantinople to organise the Polish Legion, and he died there in 1855. Countless Polish refugees performed all kinds of work there to further the modernisation and europeanisation of the country and of Ottoman society and the army. K. Borzcęki-Muṣṭafā D̲j̲elāl al-Dīn Pas̲h̲a was the first to rouse a spirit of national identity within the Ottomans (B. Lewis, *The emergence of modern Turkey*, Oxford 1961, 28, 339). S. Chlebowski, court painter to Sulṭān ʿAbd al-ʿAzīz, painted a series of scenes from Ottoman history for the new Dolmabag̲h̲če Palace (A. Lewak, *Dzieje emigracji polskiej w Turcji (1831-1878)*, Warsaw 1935). Polish specialists and advisers even penetrated the intimate society of Kemāl Pas̲h̲a Atatürk. This resulted in friendly relations between the new Poland and the Turkish republic from its inception. In spite of its complicated political situation, Turkey gave Poland vital help during the Second World War. After the war, both countries developed their co-operation in economic and cultural fields. An active link between the two is Polonezköyü, founded in 1835 by Prince Adam J. Czartoryski, and thereafter called *Adampol* in Polish. It is a colony of Polish immigrants on the Asiatic side of the Bosphorous near Istanbul, who still maintain their national character.

Venetian-Persian attempts to win over Poland to the idea of an anti-Turkish coalition in 1474 and 1475 faded under the careful direction of King Casimir IV (J. Długosz, *Historiae Polonicae libri XII*, v, Cracow 1878, 601, 602, 626). Sigismund III Vasa (1536-1632) also remained deaf to similar suggestions from S̲h̲āh ʿAbbās I; the dispute with Sweden and later with Muscovy was more important to him. The first delegation from the S̲h̲āh led by Sir Anthony Sherley had not been, incidentally, allowed by the Tsar Boris Godunov to enter Poland because of his hostile attitude to the king. Afterwards, in 1601, Sefer Muratowicz, an Armenian merchant from Warsaw, travelled to Kās̲h̲ān to buy carpets for the king (T. Mańkowski, *Wyprawa po kobierce do Persji w roku 1601*, in *RO*, xviii [1951]). In doing so, he came into personal contact with ʿAbbās I (see his travel narrative in A. Walaszek (ed.,), *Trzy relacje z polskich podróży na Wschód muzułmański w pierwszej poowie XVII wieku*, Cracow 1980, 35-47), and then other Polish envoys travelled to Persia, though sometimes for the purpose of trade. Serious plans for an anti-Turkish alliance with Persia were cherished by the Polish Kings Ladislas IV and John III, but proved impossible (St. Chowaniec, *Z dziejow polityki Jana III na Bliskim Wschodzie*, in *Kwartalnik Historyczny*, xi [1926]). In the 11th/17th century the kings of Poland supported the Catholic Mission to Iran, vainly hoping to convert her to Christianity. In the 13th/19th century, Poles also came to Persia, some as refugees from the army of the Tsar in Central Asia and some as political agents from Paris t owork among them, and some came as merchants and industrialists from the Russian-occupied regions of Poland. Friendly alli ances between Poland and Persia after 1918 won the help of the S̲h̲āh, Muḥammad Riḍā, who favourably received numerous Polish military and civilian personnel in Persia during the Second World War. This also led to active agreements between the two states after the war.

In May 1551 a legation from Buk̲h̲ārā was staying in Cracow. The business discussed there probably included the provision of experts in the production of gunpowder and also artillery advisers for these Sunnī allies of the Ottoman Empire which was peacefully co-existing with Poland. This was a difficult time for Poland, because the king was mourning the death of his beloved wife. The fact that there is no mention of any later similar delegation suggests that there was no favourable outcome for this mission (AGAD, AK, Rachunki poselskie, and information obtained from Professor B. Baranowski; the documents referring to this episode were partly destroyed in Warsaw during the last war).

At the beginning of the 11th/17th century, there was Polish intervention in Moscow concerning the impostor Dmitri, and on this occasion a temporary rapprochement between the Poles and the Ḳāsimov [*q.v.*] Tatars took place. During the 13th/19th century, there was contact between those Poles who had been deprived of their state and the Islamic peoples of the Russian Empire; on the one hand, there were scientists and technologists, etc., employed by the Russians, and on the other hand the political outcasts, victims of Tsarist administration. Polish patriots from Paris had contacts, through Constantinople, with the anti-Tsarist insurgents in Dāg̲h̲istān under the leadership of S̲h̲amīl (L. Widerszal, *Sprawy kaukaskie w polityce europejskiej w latach 1831-1864*, Warsaw 1934).

Polish relations with Arabic countries had begun with pilgrimages to the Holy Land. In 1645 King Władysław IV made an endeavour to reach an agreement with Morocco. The reply by Sulṭān Muḥammad II, extant in an Italian translation only, the unique piece of evidence for these contacts, is too scanty a record to establish their purport. In any case, Poland's attempts, if there had been any, to gain Moroccan support in the struggle against Turkey, proved fruitless (B. Baranowski, *Próby nawiązania stosunków polsko-marokańskich w polowie XVII wieku*, in *RO*, xvii [1953], 212-19). It was not until the 13th/19th century that the contacts with the Arab nations grew closer. After 1918, those contacts had attained the status of diplomatic ties which again, after the Second World War, developed into a lively co-operation in economic, technical and cultural spheres with different states of that region.

Under the strong influence of Islamic culture, Poland was shown to be a borderland between the Christian West and the Islamic East. This was particularly evident in material culture, for the products of these Islamic craftsmen (Turkish, Persian and to some extent Crimean Tatar) reached Poland either by trade or as the spoils of war. They shed an oriental

influence on Polish national costume, domestic furniture, the conduct of war, and arms and equipment. These artifacts spread beyond Poland to other countries (e.g. Persian carpets were known in the West as "tapis polonais"), and they were later imitated in Poland (T. Mańkowski, *Sztuka islamu w Polsce w XVII i XVIII wieku*, Cracow 1935; idem, *Le tapis persan dit cracovien-parisien de la cathédrale de Cracovie*, in *RO*, xvi [1953]). This attracted a number of Oriental words and terms into Polish (A Zajączkowski, *Studia orientalistyczne z dziejów słownictwa polskiego*, Wrocław 1953). Polish museums contain authentic art treasures from Islamic countries, especially weapons, Ottoman standards and tents. There are Persian carpets bearing the Polish eagle which S. Muratowicz brought from Kās͟hān for the Royal Castle in Warsaw in 1602 and which are now in the Residenzmuseum, Munich. The activities of the art-loving Stanislav Augustus, the last Polish king (1765-95), of many Polish magnates in the 18th century as well as various Polish emigrants to the East in the 19th century, led to the formation of rich collections of Islamic art in Poland.

Moreover, Poland was not averse to the intellectual culture of the Islamic East. The most important work in this connection is the translation by Samuel Otwinowski of the *Gulistān* by Saʿdī in the mid-17th century (following an Ottoman version; it appeared in print only in 1879). The 18th and 19th centuries, the Romantic Period, brought new oriental influences to bear on Polish literature. These traditions are maintained by modern Polish orientalists of the post-war period, who translate into Polish the literature and historiography of the Islamic world.

The travel descriptions by many a Pole journeying to the Islamic East of the 10th/16th century have contributed much to the knowledge of that world in Europe (A. Broniovius, J. Łaski, Michalo Litvanus, A. Taranowski, M. Radziwiłł). Similarly, the career of Fr. Mesgnien-Meninski as an Ottoman scholar in part stemmed from his stay in Poland where, for some years, he was engaged as court-interpreter.

LEMNOS [see LIMNI]

LEO AFRICANUS, the name by which the author of the *Descrittione dell' Africa* is generally known, who was in fact originally called al-Ḥasan b. Muḥammad al-Wazzān al-Zayyātī (or al-Fāsī). He was born in Granada between 894 and 901/1489 and 1495 into a family which had to emigrate to Morocco after that city's fall [see GHARNĀṬA], and was brought up in Fās, where he received a good education and very soon entered the service of the administration there. Whilst still a student, he was employed for two years in the mental hospital, which he describes in detail (*Description*, tr. Epaulard, i, 188 [see BĪMĀRISTĀN. ii]). He then accompanied to Timbuctu one of his uncles, who had been sent there as an ambassador (*Descr.*, i, 136), travelled across Morocco on various diplomatic and commercial missions on behalf of the sultan of Fās, Muḥammad al-Burtuḳālī [see WAṬṬĀSIDS], and already displayed a precocious intellectual curiosity by collecting, in the course of his travels, funerary inscriptions, of which he made a collection (*Descr.*, i, 231). He later returned to Timbuctu, and from there, crossed by the land route to Egypt, whence he returned home by sea. In 921/1515 he undertook a last mission, which took him to the East, via Debdū, Tlemcen, Algiers, Bougie, Masīla, Tunis (where he gathered information on economic and social life there, see R. Brunschvig, *Ḥafsides*, p. xxxv) and Tripolitania. From Cairo, where he found himself in 1517, he travelled up to Aswān, made the Pilgrimage to Mecca, and even claimed to have gone to Constantinople. During his voyage homewards by sea, he was captured at Djarba by Sicilian corsairs, who took him to Naples and then Rome, where they presented him to Pope Leo X, Giovanni de' Medici. By the end of the year, the Pope had persuaded him to become a Christian; he baptised him on 6 January 1520 and gave him his own name, Johannis Leo de Medicis (the latter rendered his name in Arabic as Yuḥanna al-Asad al-Gharnāṭī; the editor of the *Descrittione* calls him Giovanni Leone Africano, and current usage generally refers to him by the second of these Christian names).

Apart from the autobiographical details which can be gleaned from the *Description*, we know little of his life; all that is known is that, before 1550, he went to Tunis, and probably spent the last years of his life in his ancestral faith.

During his stay in Italy, he learnt Italian, taught Arabic at Bologna and, in addition to his *Description of Africa*, conceived the further plan of describing similarly the part of Asia which he claimed to have visited, and also Europe (see *Descr.*, ii, 537-8). He certainly put together in 930/1524, for the physician Jacob ben Simon, an Arabic-Hebrew-Latin vocabulary, of which the Arabic part is preserved in the Escorial (no. 598; see H. Derenbourg, *Cat. des manuscrits arabes de l'Escurial*, Paris 1884, i, 410). He also left behind a treatise on prosody (see A. Codazzi, *Il trattato dell' arte metrica di Giovanni Leone Africano*, in *Studi orientalistici in onore de Giorgo Levi Della Vida*, Rome 1956, i, 180-98), and there is attributed to him a biographical work completed in 1527 and translated into Latin under the title *Libellus de viris quibusdam illustribus apud Arabes* (ed. J. H. Hottinger, 1664, and then by J. A. Fabricius, 1817). Nevertheless, his main fame rests on his *Descrittione dell'Africa*, completed on 10 March 1526; written in poor Italian on the basis of notes in Arabic, it was edited and published by G. B. Ramusio, in *Navigationi e viaggi*, Venice 1550, i, 1-130a (and several later editions). It was translated, as early as 1556, into French by Temporal (ed. Schefer, Paris 1896-8) and into Latin by Florian(us), as *J. Leonis Africani de totius Africae descriptione* (Antwerp 1556). On this latter translation were based an English version by John Pory (*Historie of Africa*, 1600; ed. Browne, London 1896), a Dutch one by Leers and a German one by Lorsbach. The original ms. of the *Descrittione* was rediscovered in 1931 and placed in the National Library at Rome (no. 953); it was to have been edited by Sra. A. Codazzi, put publication of this hardly seems worthwhile now that A. Épaulard has been able to compare it with the Ramusio edition and has brought to the *textus receptus* some improvements and corrections, utilised in his French translation, *Description de l'Afrique*, Paris 1956, which has been edited by H. Lhote, with a copious commentary by A. Épaulard, Th. Monod, H. Lhote and R. Mauny. It has been possible to identify the majority of the place-names, deformed in the Italian text, and the notes, which are generally accurate, throw useful light on the work's information.

The *Description* contains nine sections: (1) generalities about Africa; (2) south-western Morocco (in particular, Marrakesh, with errors—see G. Deverdun, *Marrakech*, Rabat 1959, p. xiv and index); (3) the kingdom of Fās (a very extended treatment, one more accurate and confident); (4) the kingdom of Tlemcen; (5) Bougie and Tunis; (6) southern Morocco, and the southern parts of Algeria and Tunisia, followed by Libya; (7) the land of the blacks; (8) Egypt; and (9) the rivers, animals, plants and minerals of Africa. This work remained for centuries a major source on the Islamic world, and is still cited by historians and geographers of Africa. Although it is not free from errors—certainly exusable if one takes into account the conditions in which it was put together—it provides first-hand items of information on the situation at the beginning of the 10th/16th century in the lands visited, on the ethnog-

raphy and the institutions of their various inhabitants, and in particular, on political, economic and social life in North Africa.

LERIDA [see LĀRIDA]

LESH (Ottoman لش, from the Albanian, Italian Alessio), a minor port, military stronghold and administrative centre in northern Albania, 30 km. to the south of Shkodër/Scutari, which was part of the Ottoman empire between 1478 and 1912.

Lesh, the classical Lissus, is one of the oldest urban centres of the country. It is built on the banks of the river Drin not far from its estuary, and is overlooked by two isolated hills, each carrying the ruins of ancient fortifications. This setting largely determined the history and the function of Lesh; it was a military strongpoint in periods of danger and a harbour in more peaceful times. During antiquity, both hilltops and the lower town on the river were surrounded by an enormous wall, parts of which still survive. This large city was destroyed during the invasions of the Barbarians (592 A.D.), and never recovered again. Anna Comnena mentions Lissus in her *Alexiade* as a strong Byzantine fortress and as fairly well-inhabited. In the 13th century, Lesh was included in the Serbian state, together with Shkodër. During the dismemberment of the Serbian empire, after the mid-4th century, Lesh became a part of the minor Albanian principality of Dukagin, but its lord ceded Lesh to the Republic of Venice in 1393. The citadel on the lower of the two hills (the old Acropolis on the higher hill had been left in ruins since classical times) was in ruins in the Venetian period. The Signoria decided only to rebuild the walls of the lower town on the river, which was done between 1404 and 1430. An enormous conflagration destroyed most of the settlement in 1440. In 1451 the new city wall was ready, partly paid for by Venice, partly by the local inhabitants.

In 1468 the famous rebel against the Ottomans and national hero of the Albanians, George Kastriotes Skanderbeg, died in Lesh and was buried in the Gothic cathedral of St. Nicolas in the lower town, an event described in detail by the chronicler Marin Barletius. Ten years later, during Sultan Meḥemmed Fātiḥ's campaign against Shkodër (known to the Ottomans as Iskenderiyye), Lesh was captured and incorporated in the Ottoman realm. Before they fled with wives, children and property to the ships that were waiting in the river, the inhabitants of Lesh set fire to the city. The conquest is related by Ṭursun Beg in his *Ta'rīkh-i Abu 'l-Fatḥ* and by Sa'd al-Dīn in his *Tādj al-tawārīkh*.

It was long before the ruined town recovered. At first, Lesh seems to have been included in the *sandjaḳ* of Elbasan, but later (after 1485 and perhaps after the Venetian interlude) it was added to that of Iskenderiyye. In 1501, during Bāyezīd II's short war with Venice, Lesh was taken by Venetian forces, who kept it for a short period. When they retreated, they had the town walls destroyed. The Ottomans recaptured a totally wrecked town. They decided to rebuild the citadel on the hill, a site which offered better chances for defence than the place along the river. The work was finished in 928/1522, as is attested by a monumental Ottoman inscription—now preserved in the Lesh Historical Museum—which mentions the name of Sulṭān Süleymān, the date in numbers and in the form of a chronogram, and the name of the architect as Derwish Meḥmed, the son of Skura. The latter must have been a member of the well-known Albanian noble family of that name.

In the first half of the 16th century, Lesh remained a small place. The Idjmāl defter no. 367 of 1530-6, preserved in the Başbakanlık Arşivi in Istanbul, mentions it as a village in the *liwā'* of Iskenderiyye, having 144 households. The Mufaṣṣal defter T.K. 63 of the *liwā'* of Duḳagīn, preserved in the Tapu ve Kadastro Gen. Müd. in Ankara (fols. 5a-6b), from 999/1590-1 (dated by internal evidence), mentions Lesh as an urban settlement (*varosh*) in the *sandjaḳ* of Duḳagīn. The latter was set up in the thirties or forties of the 16th century and had Peć (Ipek) as its chef-lieu, although the *sandjaḳ-begi* resided sometimes in Lesh. Western sources mention in 1553 a figure of 80 houses of Turks in the castle on the hill (which is called "Castel Nova"). The lower town (il-Borgo) is described as a predominantly Christian place. The latter developed slowly into a centre of trade.

In the thirties of the 16th century, a strong impetus to this function of the town was given by the Ottoman governor of Shkodër (later also in Thessaloniki and Prizren), Ḳuḳli Meḥmed Beg of Prizren. At his expense, the caravan road through the mountains from Lesh to Prizren in the interior was safeguarded by a chain of caravanserais. Two of them were built in Lesh itself, together with 50 shops, which were part of the *waḳf* property of Ḳuḳli Beg's foundations in Prizren and its surroundings.

The Mufaṣṣal defter T.K. 63 mentions that a part of the inhabitants of Lesh were "outside the old register", which means that they had moved in from elsewhere. They gained their living as workers in the harbour and had the Filuri status as concerned taxes and paid only a lump sum of 52 *aḳčes* yearly. The register mentions 141 Christian households of them and six of Muslims, all living in the newly-founded suburb of "Ishula" (Ishull Leshë) which was formerly a *mezra'a*.

In or around 1580, the old cathedral of St. Nicolas was confiscated by the Ottomans and turned into a mosque, this being reported in the visitation report of the bishop of Bar (Antivari) Marino Bizzi in 1610. In 1614 the open town is said to have numbered 500 Turkish (read: Muslim) households. Ḥādjdjī Khalīfa mentions Lesh as a part of the *sandjaḳ* of Duḳagīn and situated near the district of Zadrima, whose inhabitants were rebellious Albanians. Ewliyā Čelebi visited Lesh in 1072/1661-2 on his way to Shkodër. At that time, Lesh was a *voyvodelik* in the *sandjaḳ* of Duḳagīn and the seat of the provincial administration of the area. In the castle, built on a steep rock, was a garrison under command of a *dizdār* and only a few houses of civilians. An Ottoman budget of the year 1079/1669-70 has 126 men as garrison for the "Castle of Lesh in the *liwā'* of Duḳagīn". The 17th century Lesh cannot have been very prosperous. Ewliyā mentions that its houses were rather poor. The church-mosque was deserted in the

thirties or forties of the century, and left in ruins for more than a hundred years.

In the last decades of the 18th century, Sulṭān Selīm III concerned himself for the reconstruction of the building. At that time, it received the form it stil had in our time (1978). The Armenian geographer Inciciyan describes Les̲h̲ in the last decades of the 18th century as a place with a thousand houses.

During the administrative reforms of the 19th century (1862), the old *sand̲j̲aḳ* of Duḳagīn was dissolved and added to the *wilāyet* of Shkodër. The *Ḳāmūs al-aʿlām*, v, 3991, describes it towards the end of the last century as a *ḳaḍāʾ* in the above-mentioned *wilāyet*, with 5,300 inhabitants, 80 shops and four mosques. The *Is̲h̲kodra wilāyeti sālnāmesi* of 1310/1892-3, mentions Les̲h̲ as being the chef-lieu of a *ḳaḍāʾ* with 32 villages with a total of 5,510 (male) inhabitants, of whom 1,500 were Muslims and 4,000 (Roman Catholic) Christians. The district contained 31 churches, and eight mosques but had only three schools, two for Muslims and one for Christians.

In the seventies of the 20th century, Les̲h̲ was still a minor town. Its centre was modernised, the old cathedral of St. Nicolas—Mosque of Sulṭān Selīm III, was restored. In the spring of 1978, the tomb of the legendary Skanderbeg was discovered by Albanian archeologists, as being situated in the middle of the old church, just as Barletius wrote. Shortly afterwards, the town and the church suffered badly during an earthquake. What remained of the church was consolidated into a huge, concrete-built memorial to Skanderbeg. The remains of the castle of Sulṭān Süleyman still overlook the little town.

LETTER [see barīd, ḥarf, risāla]

LEVANTE [see s̲h̲arḳ al-andalus]

LEVKAS, Greek Leukas, Santa Maura, Aya Mavra, Turkish Levkada, the name of a mountainous (up to 1,158 m. above sea level) island on the coast of western Greece with a total surface of 304 km². It is also the name of the only town on the island. The name means "White Island" in Greek, and goes back to antiquity. The fortified part of the town, an Ottoman naval base which was since about 1550 [see ḳarlī-ili] a part of the province of the Ḳapudan Pas̲h̲a and a much-feared pirates' nest, was situated on a small, flat island in a shallow lagoon between the mainland of Acarnania and the island. It is connected with both of these through causeways and bridges across the lagoon. Today the old walled town is an empty shell; the entire civil population of Levkas town (in 1961, 6,552) has been since the end of the Ottoman period (1684) concentrated on a sandy spit on the north-eastern tip of the island. The Ottoman geographers (Pīrī Reʾīs, Menemenli Meḥmed Reʾīs, Kātib Čelebi, Ewliyā Čelebi, etc.) called the island Levkada (لفكاده or لفقاده), and the town Aya Mavra (ايامورة). The history of the town and the island are inseparably connected with each other. In Ottoman times, the town of Levkas (Aya Mavra) was the largest urban settlement in the *sand̲j̲aḳ* of Ḳarlī-Ili. In the second half of the 16th and most of the 17th century it was an Islamic centre of some importance, and possessed two of the largest works of Ottoman civil and military architecture in the Western Balkans, viz. the aqueduct of Sultan Süleymān and Prince D̲j̲ihāngīr and the castle, re-built by Ḳilič ʿAlī Pas̲h̲a under Selīm II.

The history of the town of Levkas goes back to the 8th century B.C., when it was founded as a colony of Corinth. The town of antiquity lay a few miles to the south of the present site. It disappeared during the migration of nations through the Balkans into Greece. The island was a possession of the Despotate of Epirus until the extinction of the native house, after which it became a possession of the Frankish house of the Orsini. Around 1300, John I Orsini built a small castle on a small sandy island in the mud bay between the island of Levkada and the mainland of Acarnania in order to protect the settlement there, until that time an open one. In 1362 island and town were included in the possessions of the Italian ducal house of Tocco. Duke Carlo Tocco (1381-1403) made the town the capital of his dominions (which since around 1400 also included a part of the mainland). Carlo greatly enlarged the walled town. Open settlements are reported to have existed on both sides of the walled town. The open town of Levkas of today is of later origin. In 1430 the Ottomans placed most of Epirus under their direct rule. In 1449 they drove away the Toccos from the large city of Arta, only 50 km. from Levkas. The last Tocco, Leonardo, was maintained as a vassal of the Sultan and was connected

to him by family ties because of his marriage with Milica Branković, a niece of the much-respected stepmother of Meḥemmed II, Carica Mara (widow of Murād II). Milica died in 1464. In 1477 Leonardo remarried, this time with Francesca Marzano, a princess of the Aragonese house of Southern Italy, the bitter opponents of the Ottomans. Two years later an Ottoman fleet under Gedik Aḥmed Pas͟ha, then Bey of Avlonya (Valona), occupied the islands of Zakynthos (Zante), Cephalonia and Levkas (Cephalonia and Zante were lost to Venice in 1481; in 1485 the Ottomans re-acquired Cephalonia by treaty, but lost it definitively to Venice in 1500). Leonardo and Francesca, bitterly hated by their Greek subjects because of their ruthless exploitation, fled to Italy, where King Ferrante of Aragon gave them new possessions. Gedik Aḥmed is said to have deported the population of the islands, or at least a part of them, to Istanbul as part of Sultan Meḥemmed's policy of repopulating his capital Istanbul. Very likely there were also strategic grounds.

During the Ottoman-Venetian war over the last bases of the Signoria on the Greek shores [see ḳoron, modon, aynabak͟htī], the Venetians under Bernadetto Pesaro captured Levkas in August 1502. It was returned to the Ottomans as a result of the treaty with Venice, in which the Sultan recognised the Venetian occupation of Cephalonia. Levkas was to remain Ottoman for almost two centuries.

Ottoman Levkas (i.e. the town) became the seat of one of the two *ḳaḍā*'s into which the *sand͟jaḳ* of Ḳarlī-Ili was divided during the greater part of the 16th century. The town was the largest of the *sand͟jaḳ*, and possessed by far the most important castle, containing a strong garrison. The *ḳaḍā*ʾ of Aya Mavra was relatively thinly populated. An Ottoman census register (Tapu defter 367 in the BBA) from the years between 1523-36 shows that the town of Levkas/Aya Mavra numbered 194 households, 28 bachelors and 20 widows, perhaps giving a total civil population of a thousand souls. The *ḳaḍā*ʾ had at that time two towns (the second town was Vonitsa, with 90 households, 27 bachelors and 15 widows), and comprised 43 villages, five monasteries and a total population of 2,234 households, 309 bachelors, 199 widows (or a total population of about 12,000 souls). These notes from the census register make clear that the *ḳaḍā*ʾ of Aya Mavra not only comprised the island of Levkas but also a considerable part of the mainland of Acarnania. The bulk of the population of the *sand͟jaḳ* of Ḳarlī-Ili lived in the *ḳaḍā*ʾ of Engili-ḳaṣrī (= Angelokastro, Ottoman between 1460 and 1832), further inland. Engili-ḳaṣrī itself, which was officially the seat of the *sand͟jaḳ begi*, numbered according to the same register 144 households, but the *ḳaḍā*ʾ contained no less than 253 villages with 9,009 households, 290 bachelors and 954 widows (perhaps 46,000-47,000 souls). The register mentions that the garrison of Levkas town contained 111 soldiers and nine gunners. The castle of Angeli-ḳaṣrī, safely inland, had only 25 soldiers (*merdān-i ḳalʿe*), Vonitsa, more exposed than Engili-ḳaṣrī but less dangerously situated than Levkas town, had 25 soldiers and two gunners. Not a single Muslim household or individual is mentioned in the entire *sand͟jaḳ* of Ḳarlī-Ili. There were only three mosques in this province, those in the three castles, serving the needs of the garrisons. The register of 1523-36 mentions in the entire *sand͟jaḳ* only three *imāms*, two *k͟haṭībs* and two *müʾed͟hd͟hins*. Thus Islam in Levkas was in the first half-century of Ottoman rule only represented by the military and administrative machinery. This was to change notably in the subsequent years.

Because of the constant lack of fresh water in the fortified town, due to its setting on saltings surrounded on all sides by the waters of the lagoon, the Ottomans were forced to carry out important hydraulic works. Good drinking water was brought from the interior of the island to the fortified town by an aqueduct of 3 kms. long, which was carried over the lagoon for almost a mile on an aqueduct with several hundreds of arches (Ewliya Čelebi, viii, 636, gives 366 arches, Coronelli, *Mémoires, etc. de la Morée*, Amsterdam 1686, 146, has 360 arches; Henry Holland [in 1812], *Travels in the Ionian Islands*, London 1815, 61, has 366 arches). Over the aqueduct ran a narrow path offering a much shorter way to the island than that over the saltings. A note in Mühimme defter no. 6 in the BBA in Istanbul contains the extract of an order of the *ḳāḍīs* of Engili-ḳaṣrī and Aya Mavra that the aqueduct currently under construction in Aya Mavra had to bring the water firstly to the walled town and then to the open town on the island, and not to the walled town alone, as had previously been ordered. The inhabitants of the town had pointed out to the Porte that the open town (*varos͟h*) did not contain 200 houses, as was thought in Istanbul, but 700 to 800 houses. Hence the need for more water. The order states that the aqueduct was built by "His Majesty". It is dated 17 Rebīʿ al-Evvel 972/24 October 1564, thus in the reign of Süleymān the Magnificent. Mühimme defter no. 5, containing a part of the orders of the year 973 (*sic*), has an imperial order from 6 Red͟jeb to the Beg of Ḳarlī-Ili and the *ḳāḍī* of Aya Mavra requesting the repair of the fortress works and ordering the subject people from the nearby villages to assist the garrison in the work. An order of some months later (11 Ramaḍān 973) urges the *ḳāḍī* to begin the work and to finish it as soon as possible.

During the crisis of Lepanto (1571), the fortress of Aya Mavra was besieged but held out. After the siege the Ottoman government ordered the total reconstruction of the old fortress works. This work was carried out under supervision of Ḳapudan Ḳīlīč ʿAlī Pas͟ha between the years 980-1/1572-4. The Mühimme defters 19, and 21 contain some dozen of orders demanding carpenters and masons from Tirhala, Aynabak͟htī and Yanya to go to Aya Mavra, and Yürüks and Tatars from Selānīk and Tirhala and timariots from Üsküb (Skopje) to assist with the work. This new fortress has the form of an irregular hexagon which is at its longest 220 m and 150 m wide. It is strengthened by nine round bastions of various sizes, all equipped with domed and vaulted casemates for guns and an open artillery platform on top. The mediaeval castle of the Orsinis was maintained at the north-eastern corner, as a kind of Ič Ḳalʿe.

The works of the Ottoman geographers contain little information about this outpost of Islam in the far west of the Balkans. Pīrī Reʾīs in his *Baḥriyye* describes in a few lines the setting of the fortified town, as being situated on an island in a shallow lagoon and accessible only by two drawbridges that only opened to let ships pass through. Ḥād͟jd͟jī K͟halīfa (*Rumeli und Bosna geographisch beschrieben*, Vienna 1812, 128) merely copies this information. Meḥmed ʿĀs͟hīḳ in his *Menāẓir al-ʿawālim* does not discuss this section of the Balkans. A wealth of information, on the other hand, is found in the *Seyāḥat-nāme* of Ewliyā Čelebi (viii, 631-7). Ewliyā visited Levkas in 1081/1670-1, at a time when Islam

had made considerable progress. After a detailed and fairly correct description of the works of fortification, he tells us that there were five Friday Mosques in the town, among which was the Khünkār Djām'i, a converted old church (this church-mosque was seen in 1863 by D. T. Ansted, *The Ionian Islands*, London 1863, 139-40, but has since disappeared). Besides these mosques there was a fine newly-built *mesdjid*. Other Muslim buildings were a *medrese*, two *mektebs*, a *ḥammām* and six *česhmes*, of which one was erected by a certain Aḥmed Agha in 1028/1619, with an inscription in Turkish giving the date in numbers in the form of a chronogram. In the walled town were 200 stone-built houses remaining from the times of the unbelievers. These houses were exclusively inhabited by Muslims. Due east of the walled town as an open suburb called "Shehīdlik Varoshī", with forty or fifty wooden houses inhabited by Muslims and Christians. Just outside the west gate of the walled town, on the sandy flats stretching towards the island, was a larger suburb, called "Ṭashra Varosh". It contained 300 houses built of wood (for strategic reasons). In this suburb was a wooden mosque with a stone-built minaret, a *mesdjid*, a *tekke*, a *mekteb* and two *khāns*. The Christian inhabitants of this suburb possessed seven tiny churches. This part of town was full of winehouses, frequented by the irregulars of the garrison and the fleet.

At a distance of two miles across a shallow sea was the island of Lefkada, whose fertility was praised by Ewliyā. It had innumerable gardens and orchards and twenty prosperous villages, all inhabited by unbelievers. The island was reached by a path on top of the aqueduct which Ewliyā attributes to "the brother of Sultan Selīm II, prince Djihāngīr" (1531-53). It is possible that there is a confusion with the son of Selīm II, also called Djihāngīr, who must have reached manhood at the time when the order in the Mühimme defter 6 was written. This Djihāngīr died in 983/1575 (cf. *Sidjill-i 'Othmānī*, i, 29).

The fourth part of the "agglomeration" of Levkas was the "Varosh-ī Lefḳada" containing no less than 700 prosperous houses, all inhabited by Greeks, and having 20 churches. This information is in blatant contradiction to what we find in the *Megale Ellinike Enkyklopeideia*, xvi, 28, art. "Leukas", where a pitiful story of decay and stagnation is told and the great suburb on the island is said to have been "a few fisherman's huts." This part of town was long known as Amaxiki, a name that slowly fell into disuse in the 19th century.

The whole urban settlement of Levkas thus had 1,250 houses, or about 6,250 inhabitants. Six years after Ewliyā, Jacob Spon and George Wheler (*Italienische, Dalmatische, Griechische und Orientalische Reise-Beschreibungen*, Nürnberg 1681, i, 29 [also tr. into English and French]) noted that in the citadel and the suburbs together lived 5,000 or 6,000 inhabitants, mostly Greeks and Turks.

The strength of the garrison of Aya Mavra as given by Ewliyā (633), is perhaps exaggerated. He mentions 1,085 *ḳal'e neferān*, but an official Ottoman budget of the same year as his visit (published by Ö. L. Barkan in *Iktisat Fakültesi Mecmuası*, xvii [1955-6], 278) has only 285 *ṭopčīyān ve rü'esā ve 'azabān ve suvāriyān-ī ḳal'e-yi Ayamavra* ("gunners, captains, soldiers and cavalry of the castle of A.") on the pay list.

The halcyon days of Muslim Levkas ended during the war of 1683-99 against the Christian coalition. In the summer of 1684 the Venetian fleet under Morosini captured the town after a bombardment of 16 days. The garrison and the Muslim civil population got a safe conduct to the Ottoman mainland. Morosini turned the walled town, denuded of its inhabitants, into a citadel and removed its houses. He also evacuated and demolished the two suburbs just outside the castle and turned them into a glacis for the fortress. The deported inhabitants were helped building new houses on the island. Since that time the town was solely confined to the former Varosh (= Amaxiki) on the island itself. All the Muslim buildings except the fortress works and the aqueduct were removed by the Venetians.

The Treaty of Karlowitz (Ḳarlofča [*q.v.*]) assigned the town and the island definitely to Venice, which in the first years of the 18th century modernised the Ottoman castle. On that occasion, the Ič Ḳal'e of 1300 disappeared and the east front of the castle, facing the mainland that had remained Ottoman, the ramparts and bulwarks, were replaced by modern works, including two bastions, a ravelin and a couvre-face in the wet moat and an enveloppe all around. Two separate works came to cover the flanks. Some Latin inscriptions mention the name of the commander under whom the work was carried out and the date of completion, viz. Augostino Sagredo, 1713.

During the Corfu compaign of the Ottomans against Venice (1716), the modernised fortress was strongly defended. It was captured by the Ottoman army but was to return to the Venetians a year later. The Venetian rule lasted until 1797 (Treaty of Campo Formio) and was only interrupted by a revolt of the Greeks in 1769, after which date the fortress was again repaired (long Latin inscription.). In 1797 the island was occupied by the French, who kept it till 1800, when after a brief action of the combined Ottoman-Russian forces the island became part of the so-called Republic of the Seven Islands. The French returned in 1807, but were driven away from these islands by the British in 1809-10. In the first decade of the 19th century, the mainland of Acarnania was controlled by Tepedilenli 'Alī Pasha, the able but treacherous Vizier of Yanina (Yanya), who in 1807 invested Lefkas unsuccessfully. On a rocky foreland commanding the only road from the mainland to the island he erected in the year a strong fortress. This was the site of the Khalwetiyye *tekke* of Dizdār Ḥasan, extensively described by Ewliyā in 1670. Hence the name of that new work, *Kastro tis Tekkes*. Six km. further south, on a cape commanding the southern entrance to the lagoon of Levkas, 'Alī Pasha constructed another, large, castle, now called "Castle of St. George". Both forts still exist today.

The mainland of Acarnania was included in the new Greek kingdom in 1832. In 1864 the British ceded Levkas and the other Ionian islands to Greece. The repeated changes of master did not stimulate the expansion of the town. When Henry Holland visited it in 1812, the town numbered but 5,000 inhabitants. Until the sixties of the present century, the populations of island and town have remained stationary (the island in 1863, 24,000; in 1961, 26,000). The great Ottoman aqueduct was wrecked during an earthquake in 1825, together with most of the town (Ansted, *Ionian Islands*, 144). It was not rebuilt, but served further as road until in this century it disappeared completely under the modern causeway. The town was rebuilt with wooden houses to minimise the damage of the very frequent earthquakes (list

of dates in *M. E. Enkykl.*, xvi, art. "Leukas"). The now decayed and deserted three Ottoman castles remain the only visible link with the Islamic past.

Bibliography: The Ottoman sources mentioned in the article are unpublished. A comprehensive history of Ottoman Levkas, based on Ottoman and Western sources, is still a task for the future. Fragments of information can be pieced together from *inter alia*, E. Kirsten and W. Kraiker, *Griechenlandkunde. Ein Führer zu Klassischen Stätten*, Heidelberg 1962; W. Miller, *The Latins in the Orient*, London 1908 (repr. 1964); idem, *Essays on the Latin Orient*, London 1921; idem, *The Ionian Islands under Venice*, in *EHR*, xliii (1928); F. Babinger, *Mehmed der Eroberer*, Munich 1953, 421-3; idem, *Beiträge zur Geschichte von Qarly-eli vornehmlich aus osmanischen Quellen* (most accessible in *Aufsätze und Abhandlungen*, Munich 1962, 370-7); D. N. Nicol, *The Despotate of Epirus*, Oxford 1957. For the confused accounts in the Ottoman chroniclers, see KARLÎ-ILI above. It should be added that the chronicler Oruč Beg (German tr. R. F. Kreutel, *Der fromme Bayezid*, Graz 1978, 152), has little-known details on the Ottoman capture of 1502. A Western travel account contemporary with Ewliyā Čelebi (1675-6) is J. Spon-G. Wheler, *Italienische, Dalmatische, Griechische und Orientalische Reise-Beschreibung*, Nuremburg 1681 (also in English, *A journey into Greece*, Amsterdam, 1686); cf. also H. Holland, *Travels in the Ionian Islands, Albania, Thessaly and Macedonia*, London 1815 (repr. New York 1971), 58-64; W. M. Leake, *Travels in Northern Greece*, London 1835, i, 10 ff.; Leake has also accounts of the actions of ʿAlī Pasha on the mainland and his endeavour to capture Levkas fortress (with a good topographical sketch-map of the various parts of town, the forts and the aqueduct); D. T. Ansted, *The Ionian Islands in the year 1863*, London 1863 (Santa Maura on 125-228, with much on history, economy, topography, etc.). See also K. G. Machairas, *I Levkas epi Enetokratias (1684-1797)*, Athens 1951, and idem, *I Levkas, 1700-1864*, Athens 1958; P. Rontogiannis, *Istoria tis nisou Lefkados*, i, Athens 1980.

The first detailed plan of the Ottoman castle of Selīm II and Ḳîlîč ʿAlī is given in the work of Vincenzo Coronelli. For an old drawing of the aqueduct, see A. Grasset St. Sauveur, *Voyages dans les îles et possessions ci-devant vénétiennes du Levant*, Paris 1800, 337 ff. For details on the fortress, see Machairas, *To en Levkádi frourion tis Aghias Mavras*, Athens 1956 (100 pages, but nothing serious on the Ottoman actions. Very good plans of the walled town before and after the Venetian reconstruction and large-size map of the area). For the Ottoman aspects of the castle, see for the time being, M. Kiel, *Leukas/Santa Maura, een Turks-Venetiaanse grensvesting*, in *Jaarboek Stichting Menno van Coehoorn*, 1976, 58-64 (with photographs and plan of the castle).

For a modern survey of the history of the entire Ionian archipelago, see M. Pratt, *Britain's Greek empire*, London 1978. (M. KIEL)

LEWEND, the name given to two kinds of Ottoman daily-wage irregular militia, one sea-going (*deñiz*), the other land-based (*ḳarā*), both existing from early times.

The word may derive in its maritime sense from the Italian *levantino* (Sh. Sāmī, *Ḳāmūs-i Türkī*), used originally by Venetians for soldiers recruited from their Levantine possessions, and then passing into Ottoman Turkish as a term for mercenaries recruited from the Mediterranean regions, especially the eastern lands and islands of Greece, Dalmatia and western Anatolia. Some claim its more common use as "a rough-and-ready cavalryman" came from Persia (cf. Redhouse, *Turkish and English lexicon*, s.v., and Uzunçarşılı, 46). By 966/1558 the Ottoman government clearly distinguished mounted *lewends* from corsairs (*Mühimme defteri*, iii, 163, and *Silāḥdār taʾrīkhi*, i, 152).

1. *Deñiz lewend*. In the hey-day of Ottoman maritime expansion, demands for unskilled labour could be met by hiring Muslim or Christian (Rūm) *lewends* for a period of the campaign, paid in early times by booty, in later times a daily wage through the admiralty. These *lewends* acted as rowers, guardsmen, marines for shore invasion, but above all as seagoing musketbearers. Muslim *deñiz lewends* wore distinctive blue baggy trousers with a yellow sash; *Rūm lewends* a cloak with cowl, a blue-and-white sash, and white baggy trousers. For those whose labour the Admiralty needed during the winter in the Bosphorus arsenal, special quarters (*khān*) were built on the Rūmeli side in the early 12th/18th century, known to this day as *Lewend čiftligi*. By the mid-12th/18th century, Muslim *lewends* took over many of the specialised naval duties previously pursued by *Rūm lewends* (who no longer enjoyed absolute trust), to serve permanently as *ḳālyondju* or galleon sailors. Their apparently exciting life as semi-official pirates, corsairs, and adventurers on the sea lived on into the modern Turkish language, in which *levend* still means a bold, good-looking, dashing young man.

2. *Ḳarā lewend*. Trained musketmen, discharged from Ottoman armies or the fleet, acting in concert with other jobless and homeless personnel (such as *sekbān*, *gönüllü*, and *ʿazab* [*q.vv*]), created mischief in Ottoman lands. Those who acted as cavalry were called *ḳarā lewend*. Any man with a horse might join one of the many official or outlaw bands which swarmed in Anatolia, particularly after the 10th/16th century. *Ḳarā lewends* fell into three categories: (a) *ḳapîlî lewend*: irregular cavalry attached and paid by a *beglerbegi* or a provincial *wālī*, for special services in peace or war, such as guarding fortresses, civil police duty, and honour guards. *Ḳapîlî lewends* generally followed Ottoman military rank-order, led by a *bölükbashî*, and included Anatolians, sc. Arabs, Kurds (Rafeq, 37) and Turks, together with Rumelians, sc. Albanians (Turan, 168), Hungarians (Orhonlu, 100) and probably many others. *Ḳapîlî lewends* wore colourful but not particularly uniform apparel, their respective employers supplying clothing suitable to their particular affectation (Cezar, 294-6); (b) *ḳapîsîz lewend* (sometimes *bashî-bosh*, "independent"): any *lewend* discharged from the service of his *beglerbegi* or *wālī*, who in theory returned to civilian pursuits. Anatolian social and economic conditions being in serious dislocation after the 10th/16th century, most *ḳapîsîz lewends* moved quickly into wandering groups of brutal marauders, many of whom took part in the Djalālī revolts [*q.v.* in Suppl.]; and (c) *mīrī lewend*: those hired by the government as musketmen or cavalry for a specific campaign and paid for by the central treasury.

To the end of the 12th/18th century, *lewends* found employment in Anatolia and Rūmeli, often terrorising rather than protecting those officially in their charge. In Dubrovnik in 1000/1592 they were "brigands" (*ehl-i fesād ve lewendāt*) (Biegman, 82); in Cairo in 1008/1599 a visitor called them "unscrupulous scum"

(Tietze, 40); an observer in Ankara in 1029/1619 saw them as tyrants over the citizens (Andreasyan, 162); in 1069/1658 they supported Abāza Ḥasan Pasha's [*q.v.*] massive rebellion, crushed by Köprülü Meḥmed Pāshā (Naʿīmā, vi, 347-9). By 1131/1719 a *fetwā* had abolished the *lewends* from the empire, but a new war with Persia demanded an extension of their enrolment by eastern frontier governors until 1136/1726 (Uzunçarşılı, 47). Two decades later, 10,000 *lewends* deserted Yegen Meḥmed Pasha in his ill-fated battle against Nādir Shāh (*ibid.*); the Ottomans reacted angrily and those caught were executed, but many continued the sale of their services to any provincial officer or man of wealth (*aʿyān* [*q.v.*]) who could pay. By 1190/1776 the government again ordered the *ḳarā lewends* to be abolished; most were absorbed into acceptable military units by the turn of the century. Others fled to Syria, where they found employment with Djazzār Aḥmad Pasha of Sidon, Muḥammad Pasha al-ʿAẓm of Damascus, acceptance among the local Kurdish *lewends* (*lewend al-aḳrād*, Rafeq, 37), and work in Palestine as mercenaries (Cohen, 282). By the beginning of the 13th/19th century, most *ḳarā lewends* had been eliminated from the empire or had been absorbed into the modernised armies of Selīm III and Maḥmūd II.

Bibliography: References to *lewends* may be found in many official documents (*Mühimme defterleri*, the *İbnülemin tasnifi*, the *Cevdet tasnifi*: *askeri*, *dahiliye*, *maliye*, and others) in the Baş Vekâlet Arşivi, Istanbul. Many references occur in standard Ottoman historians like Muṣṭafā Naʿīmā, *Taʾrīkh*, Istanbul 1280/1863, and *Silāḥdār taʾrīkhi*, Istanbul 1317/1899, as well as the other chroniclers of the period, both published and manuscript. The emphasis on *lewends* as seagoing irregulars may be studied in Hammer-Purgstall, *Staatsverfassung*, ii, 234 ff.; Zinkeisen, iii, 307 f.; and M. d'Ohsson, *Tableau général de l'Empire Othoman*, iii, Paris 1825, which includes pictures, 416, 432. Several encyclopaedias and dictionaries give pertinent information, the best being İ. H. Uzunçarşılı, art. "Levend", in *İA*; also M. Pakalın, art. "Levend", in ii, 358-9; and Midhat Sertoğlu, art. "Levend", in *Resimli Osmanli tarihi ansiklopedisi*, Istanbul 1958, 188-9. The only major work devoted to the subject is Mustafa Cezar, *Osmanlı tarihinde levendler*, Istanbul 1965, which follows Uzunçarsılı's general outline and includes many useful photographed archival materials and their transliteration into modern Turkish. The major work explaining the social conditions of Anatolia (990-1020/1582-1611) in which *lewends* flourished is Mustafa Akdağ, *Celâlî isyanları*, Ankara 1963. Translations of contemporary observations of *lewends* as well as documents include H. D. Andreasyan, *Polonyalı Simeon'un seyahatnâmesi, 1608-1619*, Istanbul 1964; N. H. Biegman, *The Turko-Ragusan relationship, according to the firmāns of Murād III (1575-1595) extant in the State Archive of Dubrovnik*, The Hague 1967; Cengiz Orhonlu, *Osmanlı tarihine âid belgeler telhîsler, 1597-1607*, Istanbul 1970; A. Tietze, *Muṣṭafā ʿĀlī's description of Cairo of 1599, text, translation, notes*, Vienna 1975. Münir Aktepe, *Patrona isyanı, 1730*, Istanbul 1958, related the history of a *lewend* who precipitated the downfall of an Ottoman sultan and his government. General works referring to the activities of *lewends* include Şerafettin Turan, *Kanunî'nin oğlu Şehzade Bayezid vak'ası*, Ankara 1961; Abdul-Karim Rafeq, *The province of Damascus, 1723-1783*, Beirut 1966; A. Cohen, *Palestine in the 18th century, patterns of government and administration*, Jerusalem 1973; V. J. Parry and M. E. Yapp, eds., *War, technology, and society in the Middle East*, London 1975, esp. chs. by H. İnalcık, 195-7 and by A.-K. Rafeq, 285, 291; and S. J. Shaw, *History of the Ottoman empire and modern Turkey. i. Empire of the Gazis: the rise and decline of the Ottoman Empire, 1280-1808*, Cambridge and New York 1976, index.

LEXICOGRAPHY [see ḲĀMŪS]

LEZGH (self-designation: Lezghi, pl. Lezghiar; Russian variants: Lezgintsy, Kyurintsy; others: Lezg, Lezgin, Kürin), a Muslim people of the Caucasus.

The Lezgh language belongs with Agul, Rutul, Tsakhur, Tabasaran, Budukh, Khinalug, Ḳrīz, Dhzek, Khaput and Udi to the Samurian group of the Northeast-Caucasian (Čečeno-Lezgian) language family. The Lezgh language is comprised of three closely-related dialects, all of which have been strongly influenced by the Azeri Turkish language, sc. Kürin (Günei) and Akhtī, spoken in southeastern Dāghistān, and Ḳuba, spoken in northeastern Ādharbāydjān. The Kürin dialect forms the basis of the Lezgh literary language, since it is the most widespread of the three, and since it is the dialect spoken in Ḳurakh (the most important cultural and economic centre in the Lezgh territory, and former seat of the Khānate of Kürin.

Lezgh became a written language in the late 19th century (using the Arabic script), although it did not replace Arabic as the common literary language among the Lezghs until after the Russian Revolution (in the late 1920s). Early attempts at using the Cyrillic script (1904-5) for writing the Lezgh language met with utter failure. In 1928 the use of the Arabic script was abolished, and writing in Lezgh was changed to the Latin, and in 1938, to the Cyrillic script. Lezgh is at present one of the nine official languages of the Dāghistān ASSR, although it is no longer used as a medium of instruction in the schools. Formerly (between the late 1920s and 1960s) Lezgh served as a language of instruction among the Lezghs of Dāghistān (and between the late 1920s and 1939 among the Lezghs of Adharbāydjān) up to the 5th grade. Lezgh was also the official language used among the Aguls between the late 1920s and 1950s. Since that time, all education among the Lezghs has been in Russian in Dāghistān, and in Azeri in Ādharbāydjān. The term "Lezgin" had been used by Russian authors to refer not only to the Lezghs proper, but also at times to all mountaineer Dāghistānīs, or only the southern Dāghistānīs (including all the peoples in the Samurian group).

The Lezghs inhabit for the most part the southeastern portion of Dāghistān (Akhtī, Doḳuzpara, Ḳasumkent, Ḳurakh, Magaramkent and Rutul *rayons*) and contiguous northeastern Ādharbāydjān (Ḳuba, Nukha and Shemākha *rayons*). The 1970 Soviet census listed 323,829 Lezghs residing in the USSR. Of them, 50.2% lived in the Dāghistān ASSR and 42.4% in the Ādharbāydjān SSR. Of the Lezghs, 93.9% considered Lezgh their native language, while 3.7% considered it to be Russian and 2.4% other languages (mainly Azeri).

According to legend, the Islamic religion was originally introduced among the Lezghs by Arab conquerors in the 7th and 8th centuries. The final conversion of the Lezghs to Islam came in the middle of the 15th century with the conquest of the Lezgh territory by the Shāh of Shirvān-Khalīl Ulloi.

Although the bulk of Lezghs are Sunnī Muslims of the Shafiʿī school, there is a sizable minority of Shīʿīs in Ādharbāydjān.

As a result of the long influence of the Turkish Khānates of Ādharbāydjān on the Lezghs, a Lezgh feudal principality—the Khānate of Kürin—was formed in 1775 with its centre in Kurakh. This Khānate, however, included only a relatively small part of the Lezgh territory and exerted only a minor influence on the Lezghs. The majority of Lezghs continued to live in free societies, while others lived at different times under the Khanates of Kuba, Derbend and Kazikumukh. In 1812 the Kürin Khānate became a Russian protectorate, and in 1864, with its abolition, the Lezgh territory became an integral part of the Russian Empire. In the mid-19th century, under the leadership of Shamīl and his Murīds, the Lezghs took part in the Caucasian wars against the Russians.

Although a weak feudal structure had developed in the region of Kurakh, the majority of the Lezghs lived in free societies made up of patriarchal clans and extended families. These free societies were ruled by the village *ʿādat*. Within the clan or extended family there was mutual help in work and family affairs, as well as group responsibility in vendettas, which were under the jurisdiction of the *ʿādat*. The Lezghs maintained a strict clan endogamic marriage system.

The traditional economy of the Lezghs was based primarily on home industries (weaving, rug making, leather working, pottery, smithing, etc.) and transhumance sheep and goat raising. These activities still play a major role in the village economy. In the foothill and lowland areas, cereal crops, gardening and horticulture are important. Winter pastures of the Lezghs were found primarily in Ādharbāydjān, and there was a long tradition of seasonal (winter) migratory labour among the Lezgh men to the cities of Bākū, Shemākha and Kuba (all in Ādharbāydjān). As a result of this migration, as well as the long cultural and political ties with Ādharbāydjān, the Lezgh culture and language have been profoundly influenced by the Ādharbāydjānīs; but this strong assimilatory force exerted on them has been sharply weakened during the Soviet period.

The Lezghs have a relatively long literary tradition though little pre-Revolutionary literature was written in the Lezgh language, since the dominant tongues here were Arabic or Azeri or Persian. Among the more renowned writers of Lezgh origin are the theologian Saʿīd of Kočkhur, the mystical poet Etim Emīn, the Azeri historian Ḥasan Alkadari and the poets Sayfullāh Čobānzāde, Emīr Arslān and Ḥādjdjī of Akhtī. Soviet literature began with Sulaymān Stal'skii (the "national poet of Dāghistān"), and he has been followed by Ṭāhir Alimov of Khurug, ʿAlībek Fatahov, Shāh Emīr Maradov, etc.

(R. Wixman)

LIʿĀN (A.), in Islamic law, an oath which gives a husband the possibility of accusing his wife of adultery without legal proof and without his becoming liable to the punishment prescribed for this, and the possibility also of denying the paternity of a child borne by the wife. "In the language of the *Sharīʿa*, evidence given by the husband, strengthened by oaths, by which the husband invokes the curse (*laʿna*: from this the whole process is *a potiori* named) and the wife the wrath of Allāh upon themselves, if they should lie; it frees the husband from *ḥadd* [*q.v.*] (the legal punishment) for *ḳadhf* [*q.v.*] (accusation without proof of infidelity by persons "of irreproachable character") and the wife of *ḥadd* for incontinence" al-Tahānawī, *Dictionary of the technical terms used in the sciences of the Musulmans*, ed. Sprenger and Lees, Bibl. Indica, Old Series, ii, 1309). On the technical use of the related verbal forms, cf. the Arabic lexica and Dozy, *Suppl. aux dict. arabes*, s.v.; al-Ḳasṭallānī, commentary on al-Bukhārī, *Ṭalāḳ*, 25, at the beginning; al-Zurḳānī, commentary on the *Muwaṭṭaʾ*, *Bāb mā djāʾa fi 'l-liʿān*, at the beginning.

1. The following Ḳurʾānic passage is the basis for the regulations regarding the *liʿān* (XXIV, 6-10): "As to those who accuse their wives [of adultery] without having other witnesses than themselves, the man concerned shall swear four times by Allāh that he is speaking the truth and the fifth time that the curse of Allāh may fall upon him if he is lying, but the woman may avert the punishment from herself if she swears four times by Allāh that he is lying and the fifth time that the wrath of Allāh may fall upon her if he is speaking the truth. If Allāh were not gracious and merciful towards you and wise and turning lovingly towards you . . .".

These verses belong to a part of the Ḳurʾān, apparently composed at one time, containing various regulations about adultery and consisting of XXIV, 1-10, 21-6; verses 11-20, which certainly belong to the year 5, were inserted later, so that our verses must therefore be older (cf. Nöldeke-Schwally, *Geschichte des Qorâns*, i, 210-11; H. Grimme, *Moḥammed*, ii, 27, puts the sūra between the battles of Badr (2 A.H.) and Uḥud (3 A.H.)).

They form a regulation in favour of the husband, an exception to the punishment strictly laid down in Ḳurʾān XXIV, 4 (cf. also verses 23-5) for *ḳadhf* and are therefore, like this penalty, primarily Muslim and have no affinities in Arab paganism, in which an institution like the *liʿān* had no place at all (contrary to D. Santillana, *Istituzioni di diritto musulmano*, i, 221 below). The word *liʿān*, which comes from the Ḳurʾān, is unknown to pre-Islamic poetry.

The *ḥadīths* concerning *liʿān* are almost entirely (the oldest probably exclusively) exegetical, and profess to give the occasion of the revelation of the Ḳurʾānic verses in question; they are to some extent contradictory (attempts to harmonise them are found in al-Zurḳānī, commentary on the *Muwaṭṭaʾ*, *Bāb mā djāʾa fi 'l-liʿān*), systematised and unreliable (cf. Nöldeke-Schwally, etc., where further references are given, to which may now be added those in A. J. Wensinck, *Handbook of early Muhammadan tradition*, 55-7 [to 56 ult. may be added, Tir. 44, sūra 24]). Four types may be distinguished among them: (1) the husband (unnamed) laments his sad case to the Prophet in covert language, whereupon the verses are revealed (oldest form); (2) ʿUwaymir b. Ḥārith asks in the same way, first through the intermediary of a friend and then directly of the Prophet (a development of the first type); (3) Hilāl b. Umayya accuses his wife of adultery and is to be punished with *ḥadd* for this, when Allāh saves him at some point by the revelation of the verses (this type, probably a development of the first, in which Saʿd b. ʿUbāda also

is often involved, who had previously with scornful criticism called attention to the possibility of the dilemma which has now actually happened, has of the three the most schematic and unoriginal appearance); and (4) someone marries a young woman and finds her not a virgin, while she disputes his assertion; the Prophet therefore orders *liʿān* (not exegetic). There are of course other transitional and mixed forms. In so far as the *ḥadīth*s yield nothing new about *liʿān*, this brief outline is sufficient; they are only of importance when they afford evidence for the oldest juristic adaptation of this Ḳur'ānic institution.

2. The first subject of the earliest legal speculation was the question, not touched upon the Ḳur'ān, whether *liʿān* makes separation between the husband and wife necessary. In many *ḥadīth*s this question is so expressly (sometimes polemically) affirmed that there must have been a school which approved the continuity of the marriage after the *liʿān*. The statement that al-Muṣʿab b. al-Zubayr is said to have held this view (Muslim, Nasā'ī) is, however, based only on an inadmissible interpretation of another *ḥadīth*, in which he appears as a contemporary; on the other hand, that ʿUthmān al-Battī held it may be considered sufficiently proved (al-Zurḳānī on the *Muwaṭṭa'*). Among the oldest representatives of the other view, which later became predominant, that a continuance of the marriage was impossible after *liʿān*, may be included with some probability ʿAbd Allāh b. ʿUmar and with certainty al-Zuhrī, in whose time it was already *sunna*, and Ibrāhīm al-Nakhaʿī (*Kitāb al-Āthār*); the tracing of this opinion back to ʿAbd Allāh b. ʿAbbās, which we find in the *ḥadīth*s, must however be regarded as unhistorical.

Next arises the question how this annulment of the marriage as a result of *liʿān* is to be carried through, whether by a triple *ṭalāḳ*, which the husband has to pronounce against his wife, or by the decision of the judge before whom the *liʿān* is taken, or by the *liʿān* itself. The first view is undoubtedly based on a large number of traditions, while no trace of its use in law has survived; these traditions are rather interpreted in favour of the second view (cf. the *ḥadīth* of al-Zuhrī in al-Ṭabarī, *Tafsīr* and al-Bukhārī, *Ṭalāḳ*, *bāb* 30 and *Ḥudūd*, *bāb* 43; the tradition in Aḥmad b. Ḥanbal, v, 330-1, forms in its abbreviated form only an apparent exception; a polemic against the first view in al-Ṭayālisī, no. 2667). The second opinion survives in the later legal *ikhtilāf*; apart from the ample testimony to it in *ḥadīth*, its oldest representatives known with probability or certainty are ʿAbd Allāh b. ʿUmar; al-Zuhrī, in whose time it appears as *sunna*; and Ibrāhīm al-Nakhaʿī (*Kitāb al-Āthār*); its ascription to ʿAbd Allāh b. ʿAbbās is again not historical. For the third there is no evidence in tradition; it is only found after the rise of the *madhāhib*. We seem therefore to have a tendency to development in a particular direction.

Other prescriptions about *liʿān* in tradition going beyond what is laid down in the Ḳur'ān, are of less importance. Thus when the question is raised at all, it is unanimously laid down that the husband can never marry the wife again at a later date, that a *liʿān* may take place during pregnancy (legal *ikhtilāf* is later attached to their interpretation of this *ḥadīth*), that the child has only relationship with its mother as regards kinship or inheritance, i.e. is considered illegitimate. Other *ḥadīth*s say that the *liʿān* must be taken in a mosque and attribute the formula to be spoken there by the *ḳāḍī* to the Prophet. We are also brought into contact with questions of detail, which play a part in the latter *ikhtilāf* by a tradition according to which the Prophet did not allow *liʿān* unless the husband and wife were on equal terms as regards Islam and freedom; a series of older authorities who held the contrary view is quoted in the *Mudawwana*.

Details of the further teaching of Ibrāhīm al-Nakhaʿī on *liʿān* are given in the *Kitāb al-Āthār*. Two more general pronouncements in Mālik and al-Shāfiʿī bring us to the period of the rise of the *madhāhib*. Mālik states definitely that it was the *sunna* of Medina, about which there is no doubt and no *ikhtilāf*, that the husband and wife after the *liʿān* has taken place could never marry one another again, and al-Shāfiʿī says that with *liʿān*, divorce of the pair and denial of the paternity of the child was *sunna* of the Prophet.

3. The teachings of the separate *madhāhib* develop the views of their earliest representatives, not entirely on the same lines (e.g. from the *Muwaṭṭa'*; it is to be assumed with probability that Mālik followed the second view regarding the element in *liʿān* which annulled the marriage (cf. above), while his school later held the third opinion entirely). The most important regulations of *fiḳh* regarding *liʿān* that go beyond what has been so far discussed are as follows; if the husband accuses the wife of adultery or denies the paternity of his child without being able to prove it in the legally-prescribed fashion and she denies his charge, recourse is had to the process of *liʿān*. If the husband refuses to pronounce the formulae prescribed to him, he is punished with the *ḥadd* for *ḳadhf*; according to Abū Ḥanīfa, however, he is imprisoned until he pronounces the formulae, whereby he is set free or is declared to have lied, whereupon he is liable to *ḥadd*. If the wife refuses to pronounce the corresponding formulae, she is punished with the *ḥadd* for adultery; but according to Abū Ḥanīfa and the better tradition of Aḥmad b. Ḥanbal, however, she is imprisoned until she pronounces the formulae, whereupon she is set free or confesses her transgression and is then liable to *ḥadd*. On the question whether *liʿān* is possible if one partner is or both are not Muslims or not free or not *ʿadl*, there is a wealth of *ikhtilāf*, which cannot be detailed here; the same applies to the possibility of *liʿān* during the pregnancy of the woman, with the object of denying the paternity of the child. On this point, the strength of the principle that the marriage decides the descent of the child, is remarkable, as is the distinction between two objets of *liʿān* (accusation of the wife of adultery and denial of paternity), which is only a result of later developments. In the whole of the earlier period these two objects coincide from the juristic point of view. The divorcing element in *liʿān* is, according to the Mālikīs (on their presumed divergence from Mālik himself on this question, cf. above), and a tradition of Aḥmad b. Ḥanbal, the *liʿān* of the wife, according to al-Shāfiʿī that of the husband; but according to Abū Ḥanīfā and the better tradition of Aḥmad b. Ḥanbal, however, it is the verdict of the judges pronounced after the *liʿān* of both. Opinions also differ regarding the legal consequences of a later withdrawal of the *liʿān* by the husband; according to Abū Ḥanīfa and one tradition of Aḥmad b. Ḥanbal, a new marriage of the two people is possible in this case, but according to Mālik, al-Shāfiʿī and the better tradition of Aḥmad b. Ḥanbal, it is not; among older authorities, only Saʿīd b. Djubayr is in favour of the first view, while ʿUmar, ʿAlī, ʿAbd Allāh b. Masʿūd, ʿAbd Allāh b. ʿUmar, ʿAṭā' and al-Zuhrī are quoted as in favour of the second (not all have historical

confirmation), which was also held by al-Awzāʿī and Sufyān al-Thawrī. Finally, it is a disputed question whether the *liʿān* can only be performed orally or (in the case of a dumb person) by gestures; al-Bukhārī devotes ch. 25 of his *Kitāb al-Ṭalāḳ* to the discussion of this question and the reasons for his attitude to it.

4. It is easy to understand that the resort was only had to the *liʿān* in extreme cases. Thus we find a scholar of Cordova in the 4th/10th century pronouncing the *liʿān* against his wife simply in order to revive this *sunna* of the Prophet, which had fallen into oblivion (I. Goldziher, *Muhammedanische Studien*, ii, 21, Eng. tr. ii, 33). But it has only begun to fall into disuse with the introduction of modern legal codes into the Islamic countries and the creation of legal mechanisms for the adjudication of disputes over paternity. Thus the natural substitute for it, proof of non-access at the time of the child's conception, was introduced into Egypt in 1929 by the device of restricting the competence of the Sharīʿa courts in questions of maintenance and paternity; hence the courts were forbidden to entertain disputed paternity suits where either non-consummation of the marriage, or the birth of the child more than one year after the last physical access between wife and husband, could be established. In some countries, e.g. Tunisia or Morocco, procedures have been introduced whereby a husband can repudiate a child with which his wife is pregnant, or has already given birth to it, without recourse to the *liʿān* procedure. In the Arabian peninsula, however, it remains in force, whilst in the Indo-Pakistan subcontinent it still provides a way by means of which a wife who claims to have been falsely accused of infidelity by her husband can go to court and claim dissolution of the marriage.

(J. Schacht*)

LIBĀS (A., pls. *lubus*, *albisa*) like its cognate counterpart in most Semitic languages (cf. Akk. *lubūshu*; Heb. and Aram. לבוש; Syr. ܠܒܘܫܐ), is the general Arabic term for clothing or apparel. The dictionaries define it as "that which conceals or covers the pudenda", for which the Ḳurʾānic verse is cited, "O Children of Adam! We have revealed unto you clothing to conceal your shame, and finery, but the garment of piety, that is best" (VII, 26). In addition, "it is for self-beautification and adornment and for protection against heat and cold" (*Ḳāmūs TA*, s.v.). In addition to the form *libās*, one finds *libs*, *malbas*, *milbas*, *malbūs*, *labūs* and *labūsa* also signifying clothing.

A detailed history of Islamic costume has yet to be written. There have been of late ever-increasing studies of modern and late pre-modern attire for various Islamic countries (cf. *Bibliography*), but with the exception of R. Dozy, *Dictionnaire détaillé des noms des vêtements chez les Arabes* (Amsterdam 1845) no comprehensive work covering all Arab —much less Islamic—lands in all periods has been produced. Dozy's pioneer work was based solely on literary references which were mostly in manuscript at that time. His literary references were somewhat supplemented by R. Levy, *Notes on costumes from Arabic sources*, in *JRAS* (1935), 318-38. R. B. Serjeant's monograph *Islamic textiles, material for a history up to the Mongol conquest* (Beirut 1972), although not dealing specifically with costume, has brought forth a great deal of important ancillary material. Recent attempts to coordinate literary, sources with representations of costume in Islamic art and with actual relics of garments preserved for specific periods are those of L. A. Mayer, *Mamluk costume*, Geneva 1952, and Y. K. Stillman, *Female attire of medieval Egypt, according to the trousseau lists and cognate material from the Cairo Geniza*, unpubl. diss., University of Pennsylvania, Philadelphia 1972.

We shall limit ourselves here to a general survey of costume history in the Arab world during the classical period, with some brief notes on pre-Islamic and modern times.

i. — In the Central and Eastern Arab Lands

1. Clothing of the pre-Islamic Arabs Despite numerous references to the Arabs in classical geographical and historical literature, there is only scattered and scanty information concerning their attire. Herodotus mentions that the Arabs wore the *zeira*, a sort of long flowing garment caught in with a belt (*Hist.* vii, 66). This most certainly is the *izār* (also found in the forms *azr*, *miʾzar*, and in Middle Arabic texts and vernaculars *izār*), a large sheet-like wrap worn both as a mantle and a long loin cloth or waist cloth (comp. late bibl. Heb. אזור). This is corroborated by Strabo, who says of the Arab Nabataeans that "they go without tunics, with girdles about their loins, and with slippers on their feet" (*Geog.* xvi, 4, 26). The mode of wearing the *izār* by the Muslim pilgrim in a state of *iḥrām* [*q.v.*] reflects this ancient fashion.

The earliest evidence for the clothing worn in ancient Arabia is the rupestrean art of prehistoric Arabia (second and first millennia B.C.). These show men wearing relatively little clothing aside from a *cache-sexe* and a variety of headdresses (see E. Anati, *Rock-art in Central Arabia*, i, Louvain 1968, 159, 163, and *passim*). Already at this very early time some women are depicted in enveloping wraps (*ibid.*, 195). Some sort of slippers or sandals were also worn by both sexes (*ibid.*).

Those Arabs who lived within the cultural sphere of one or another of the great empires could not help but be influenced by the fashions of the higher civilisations, clothing being a manifestation of culture, no less than art, architecture, literature, etc. Thus we find statues of the Arab rulers of Hatra in Mesopotamia which depict them wearing Parthian-style dress. Some wear a sleeved mantle and chiton, and others Persian trousers and military festoons (see F. Altheim-R. Stiehl, *Die Araber in der alten Welt* ii, Berlin 1965, 227). Those Arabs who inhabited the oasis towns of the Syrian desert apparently dressed in the fashion of the eastern Hellenistic world (see

R. Dussaud, *La pénétration des Arabes en Syrie avant l'Islam*, Paris 1955, figs. 20-3, *et passim*).

Because of their conservative existence beyond the pale of sedentary civilisation, the Bedouin have maintained a fairly constant style of dress from pre-Islamic times down to the present. Throughout the Muslim world loose wraps have always been an extremely common feature of dress for both men and women. Ibn Khaldūn noted that wraps, as opposed to tailored or fitted clothing, were the mark of non-urban dwellers (*Muḳaddima*, repr. Beirut 1900, 411). Ibn Khaldūn's observation, of course, needs some modification. City-dwellers wore wraps also. To be sure, these were of finer quality, often ornate, and were worn over fitted clothing. The Bedouin have always shown a preference for dark garments. The Babylonian Talmud cites the dark garments of an Arab as an example of a blue-black colour it is trying to define with precision (*Niddah*, 20a). Clothing is frequently mentioned in Djāhilī poetry, especially the many kinds of outer mantles such as *burd*, *izār*, *ridā'*, and *shamla* (apparently similar to the bibl. Heb. שמלה). Tertullian mentions that Arabian women appeared in public totally enveloped in their mantle in such a way so that only one eye is left free (*De virg. vel.*, 17). This fashion continues in places as far apart as Iran and southern Algeria and Morocco.

The use of footwear in Arabia goes back to prehistoric times and was certainly necessitated by the harsh landscape. Many of the figures in the ancient rupestrean engravings wear some sort of distinctive shoe or sandal (Anati, *Rock-art*, *passim*). The Talmud specifically mentions that the sandals worn by the Arabs are "close-fitting" (*Yevamot*, 102a) and that they "are knotted tightly by the shoemakers" (*Shabbat*, 112a).

2. The time of the Prophet and early Islam. The fashion of dress of the earliest Muslim community was on the whole an extension of the preceding period, with certain modifications for the new moral sensibilities. It is interesting to observe that many of the garments worn by the Prophet and his contemporaries continued through the centuries as the basic clothing of villagers and Bedouin, being simple, functional, and suitable to the ecology. The urban dweller, though perhaps far more conscious of *sunna* [*q.v.*] than his rural or nomadic cousins, has since Umayyad times been constantly modifying his wardrobe. Nevertheless, the basic outlines of the Islamic vestimentary system have remained remarkably constant even in the city.

The basic articles of clothing at the time of the Prophet for both sexes consisted of an undergarment, a body shirt, a long dress, gown, or tunic, and an overgarment such as a mantle coat, or wrap, footgear consisting of shoes or sandals, and a head covering. A person might wear many garments or only one depending upon a variety of factors including weather, occasion, economic means, etc. Many of the items of clothing worn by men and women were identical. Indeed, many of the articles were simply large pieces of fabric in which the wearer wrapped himself. What must have set off male from female fashion in many instances was the manner of draping, the accessories (jewelry, head- and footgear, and veils), as well as colours, fabrics and decoration.

The basic undergarment was the *izār* (sometimes referred to as *ḥaḳw*), the loincloth which goes back to prehistoric times. It may well be—although there is dispute over this point in the Muslim traditions as well as in Western scholarship—that *sirwāl* (from old P. *zārawāro*; modern P. *shalwār*) or underdrawers were already in use by this time before the conquest of Iran. Persian cultural influenced had filtered down into Arabia through the Lakhmid kingdom of Ḥīra and perhaps up through the Yemen. There are *ḥadīths* both claiming and denying that the Prophet wore them. From many *ḥadīths*, however, it would seem that there were women who were certainly *mutasarwilāt*, i.e. wearing the *sirwāl*, at this early period. In one well-known story the Prophet averted his glance out of modesty from a woman who had fallen from her mount until he was assured that she was wearing a *sirwāl*. How these early *sirwāl* looked cannot be ascertained. In later Islamic times they differed greatly from country to country and included all sorts of pantaloons, kneebreeches, long trousers, and close-fitting drawers. It is reported that the men who bore ʿA'isha's litter on the pilgrimage wore *tubbān*, small *sirwāl* or briefs (Bukhārī, *Ṣaḥīḥ*, *kitāb* xxv, *bāb* 18). Not everyone could afford a separate undergarment, and there are numerous *ḥadīths* in which men without underwear are forbidden to sit or squat publicly, truss up their garments while working, or to drape themselves in the fashion known as *al-ṣammā'* whereby one end of the mantle is pulled up on the shoulder leaving the other side of the body exposed—apparently in the style of the Greek chiton (cf. e.g. Bukhārī, *Ṣaḥīḥ*, viii, 8; viii, 10, 1; lxxvii, 20, 2; and most of the other canonical collections).

The basic body shirt was the *ḳamīṣ* (from late Latin *camisia*; cf. Jerome, *Ep. vest. mul.*, 64, no. 11). Like so many items of Islamic attire, it was worn by both sexes. Just as in the Arab world today, the *ḳamīṣ* was frequently worn by children. The Prophet supposedly covered his uncle al-ʿAbbās with a *ḳamīṣ* when the latter was taken prisoner naked at Badr. Any variety of robes or tunics might be worn over the *ḳamīṣ*. These include the *thawb* which in addition to being a gown was also a general word for garment (the pls. *thiyāb* and *athwāb* designate clothes) and fabric, since many garments were no more than a piece of cloth (*shiḳḳa*). Also worn over the *ḳamīṣ* were the *djubba*, a woollen tunic with rather narrow sleeves which was imported in the Prophet's time from Syria (Bukhārī, *Ṣaḥīḥ*, lvi, 90 and lxxvii, 10), and perhaps elsewhere in the Byzantine empire (Ibn Mādja, *Sunan*, xxxii, 4); the *ḥulla*, a long, flowing coat which the Prophet wore tucked up when he went out (Bukhārī, *Ṣaḥīḥ*, lxxvii, 3) and of which he is reported to have worn on occasion a red one of great beauty (*ibid.*, lxi, 23, 11); the *ḳabā'*, a luxurious, sleeved robe, slit in front, with buttons (*muzarrar*), made of fabrics such as brocade (*dībādj*), and apparently of Persian provenance; the *farrūdj*, a robe similar to the *ḳabā'*, but slit in the back. The Prophet is reported to have received a silk *farrūdj* (*farrūdj ḥarīr*) as a gift, to have worn it, prayed in it, and finally to have thrown it off as if it were suddenly loathsome, saying that it was not fitting for the God-fearing (Bukhārī, Muslim, Nasā'ī, and elsewhere). The custom of wearing several layers of tunics and robes continued through the Middle Ages and still persists in traditional areas today. In Morocco, for example, one frequently sees a man wearing two and even three *djallābas* (hooded outer robe) over two or more tunics.

The principal form of armour was the coat of mail known as *dirʿ* or *dirʿa* which Nöldeke thought to be of Ethiopic origin (*Neue Beiträge zur sem. Sprachwissenschaft*, Strasbourg 1910, 53), but as Bosworth has shown, was borrowed from Persia (ch. *Iran and the Arabs*, in *Cambr. hist. of Iran*, iii, ed. E. Yarshater,

Cambridge 1983). Also mentioned in the early sources is a *djubba min ḥadīd* or tunic of mail.

Arabian fashion required both men and women to wear a mantle of some sort over everything else when appearing in public. In the case of the less well-to-do, the mantle or outer wrap might be the only garment over the underwear, and there are numerous *ḥadīth*s dealing with questions of public modesty which arose because of the common presence of men dressed in a single wrap at prayer. Once again, it is the ubiquitous *izār* which was the fundamental garment in this category for both sexes. Another basic one was the *shamla*, which like *izār* simply means "wrap". These were usually white or some other light colour. The *khamīṣa*, on the other hand, was black with ornamental borders (*aʿlām*). In a frequently repeated *ḥadīth*, the Prophet found himself distracted by the decoration on a *khamīṣa* he was wearing at prayer and called for a simple woollen cloak known as an *anbidjāniyya* (Bukhārī, *Ṣaḥīḥ*, viii, 14, 1, *et passim*; Ibn Mādja, *Sunan* xxxii, 1). Like many wraps, the *khamīṣa* also served as a sleeping garment. Some wraps and mantles at this time seem to have been associated with one sex or other, although these were in the minority. The *ridāʾ* was a man's mantle par excellence, and for the man of honour, in the words of the Djāhilī poet al-Samawʾal, "every *ridāʾ* he wears is becoming". The *djilbāb*, *khimār*, and *mirṭ* were primarily for women. Tirmidhī, Muslim and Abū Dāwūd all repeat a *ḥadīth* about Muḥammad wearing a black *mirṭ*, but all other references to this garment are solely in a feminine context (e.g. Imruʾ al-Ḳays, *Muʿallaḳa*, 28; Bukhārī, *Ṣaḥīḥ*, lii, 15). Then, as now, there were many names for wraps and mantles, and these were often synonymous, perhaps reflecting earlier usages of regional dialects. That the terms were frequently interchangeable is clear from a *ḥadīth* where a woman brings the Prophet as a gift a woven *burda* with a border (*burda mansūdja fīhā ḥāshiyyatuhā*) which she herself had made and asks the people assembled if they know what a *burda* is. They answer "a *shamla*". The story continues that Muḥammad wore it as his *izār* [*sic*] and gave it upon request to a man who wanted it for a shroud (Bukhārī, *Ṣaḥīḥ*, xxiii, 29; Ibn Mādja, *Sunan*, xxxii, 1; and with variations elsewhere). Many wraps and mantles were known by their fabrics. Thus the *namira* was a man's wrap with stripes of varying colours which gave it the appearance of a tiger's skin, whence its name. The *mulabbada* was simply a felted *kisāʾ* (the generic word for wrap; cf. Assyr. *kusītu*, bibl. Heb. כסות, both general terms for garment or covering). The *burda* or *burd* [*q.v.*] was a wrap of striped woollen cloth produced in the Yemen. The Prophet wore a Nadjrānī *burd* with a wide border. He gave one such mantle of his to the poet Kaʿb b. Zuhayr [*q.v.*] which became legendary. The distinction between fabric and garment is often not clear. The *ḥibara* was a striped garment similar to the *burd*, and according to Anas, it was the favourite garment of the Prophet. Yet we also read of *ḥibara* garments, and thus, in a tradition to ʿĀʾisha, the Prophet was wrapped in a *burd* of *ḥibara* fabric when he died (*sudjdjiya bi-burd ḥibara*). The *siyarāʾ* was both a mantle of Seres (Gk. Σηρες; Aram. שירא and ܫܝܪܐ) or Chinese silk and the fabric. Thus we find *ḥulla siyarāʾ*, *burd siyarāʾ*, and *ḳamīṣ ḥarīr siyarāʾ*.

Precisely how these mantles and the many others mentioned in the traditions were draped we cannot know, but it is quite clear from the sources that there was a wide variety of styles. This is further corroborated by the fact that in those parts of the Islamic world where traditional wraps and mantles are still worn today there is considerable variation from one locale to the other in draping style. The canonical *ḥadīth* collections are almost unanimous in citing condemnations of the practice of ostentatiously trailing one's garment along the ground (*djarr min al-khayulāʾ*). Ankle-length garments were considered proper in the early *umma*. Shorter garments became the mark of an ascetic, longer ones the mark of a libertine.

Already in the Prophet's time the ancient Near Eastern practice of covering the head out of modesty and respect was the norm for both men and women. It is for this reason the Muslims and Jews customarily cover their heads when praying, rather than baring them as in the West. The Ḳurʾān warns that the wicked man will be dragged down to hell by his exposed "lying, sinful forelock" (XCVI, 15-16). Of course, a man or woman could draw his or her long mantle or ample wrap over the head, and in the case of women this was and still is the most common fashion even when some sort of hat or veil is worn under it. The Prophet is reported to have visited Abū Bakr while wearing the border of his *burd* over his head with a black headband (*ʿiṣāba dasmāʾ*) (Bukhārī, *Ṣaḥīḥ*, lxxvii, 16). In his last public appearance before his death, Muḥammad supposedly wore his *milḥafa* (a wrap similar to the *izār*) over his head, again held in place with a black headband (*ibid.*, lxi, 25, 51).

The *ʿimāma* or turban has been worn by the Arabs since pre-Islamic times. The word turban which is used in one form or another in all western languages derives from Persian *dūlband* via vulgar Turkish *tulbant* or *tolibant*. The *ʿimāma* of Djāhilī and early Islamic times was probably not the composite headgear of the mediaeval and modern periods consisting of one or two caps (*ṭaḳiyya* or *ʿaraḳiyya* and/or *ḳalansuwa*, *kulāh*, or *ṭarbūsh*) and a winding cloth, but merely any strip of fabric wound around the head. G. Jacob has suggested that the later turban is a synthesis of Arab and Persian styles (*Altarabisches Beduinenleben*, Berlin 1897, 237). In the early *umma*, the *ʿimāma* certainly did not have any of the significance it was later to have as a "badge of Islam" (*sīmā al-Islām*) and a "divider between unbelief and belief" (*ḥādjiza bayn al-kufr wa 'l-īmān*). Nor was it yet—in the words of a proverb still heard in Morocco, at least—the "crowns of the Arabs" (*tidjān al-ʿarab*). The many *ḥadīth*s which provide detailed descriptions of the Prophet's *ʿimāma* are clearly anachronistic. For later generations, Muḥammad was "the wearer of the turban" (*ṣāḥib al-ʿimāma*), and like many of the accoutrements associated with a hero of epic proportions, his turban had a name—*al-siḥāb* or "the cloud". According to a Shīʿī tradition, he willed it to ʿAlī. This *ḥadīth* may have been circulated in order to counteract any prestige accruing to the Umayyad and ʿAbbāsid caliphs by their possession of the Prophet's *burda*. One of the few reliable facts we know about the *ʿimāma* in early Islamic times is that it is one of the garments specifically forbidden to a person in a state of *iḥrām* [*q.v.*]. The *ʿimāma* must have consisted of a very long strip of fabric as in later periods, since there are reports of its being used for bandaging (e.g. Bukhārī, *Ṣaḥīḥ*, lxiv, 16, 2).

The hats worn in the Prophet's time included the *ṭaylasān*, which though worn by Muslims was considered a typically Khaybarī Jewish hat (cf. Bukhārī, *Ṣaḥīḥ*, lxiv, 38, 13), the *ḳalansuwa* which originally designated a close-fitting cap, and the *burnus*, a

sort of high cap or bonnet. Already at this early time the *burnus* must have also designated by extension a cloak with hood, despite Björkman's view to the contrary (art. "Turban", *EI*[1], iv, 889) since ʿUmar's assassin was prevented from escaping by a Muslim who threw a *burnus* over him (Bukhārī, *Ṣaḥīḥ*, lxii, 8). The word *ḳalansuwa* apparently also could designate a hood or cowl, since it is mentioned along with the *ʿimāma* as one of the garments which a man might spread under him for prayer when the ground was too hot (*ibid.*, viii, 23). The high cap known as *ṭarṭūra* or *ṭurṭūr*, though not mentioned in the early traditional literature, appears already in a 7th-century papyrus (J. von Karabaček, *Abendländische Künstler zu Konstantinopel*, in *Denkschr. d. Kais. Akad. d. Wissen.*, Bd. lxii, Abh. 1, Vienna 1918, 67). The 16th-century traveller Belon suggested a connection between this cap and the ancient Egyptian headcovering called by the Latin writers *turritum capitis ornamentum* or *turritam coronam* (cited in Dozy, *Vêtements*, 263). S. Fraenkel's suggestion that the word is derived from Aramaic טרטן (*Die Aramäischen Fremdwörter im Arabischen*, repr. Hildesheim 1962, 53) seems more probable, since such hats were worn in the Aramaic-speaking regions in the period just prior to the advent of Islam. They are depicted in several murals from Dura-Europos and elsewhere (see e.g. R. Ettinghausen, *From Byzantium to Sasanian Iran and the Islamic world*, Mayer Memorial Studies iii, Leiden 1972, Pl. xix, no. 65). On military expeditions, men wore a *mighfar* or *ghifāra*, a cap or headcloth of mail over which was worn a *ḳalansuwa* or a helmet known as *bayḍa* (so-called because of its resemblance to an ostrich egg). The Prophet was wearing a *mighfar* on the day Mecca surrendered.

Women in early Islamic times normally covered their head and face with any of a variety of veils when appearing in public. In addition, they were usually entirely enveloped in the large *djilbāb* from head to foot leaving only one eye free. A common head veil was the *mandīl* or *mindīl* (ultimately derived from Lat. *mantellum*; cf. Sp. *mantilla*). The word may also have already been used at this time for "handkerchief" or "hand cloth" (see the detailed discussion on the *mandīl* in F. Rosenthal, *Four essays on art and literature in Islam*, Mayer Memorial Studies ii, Leiden 1971, 63-108, and MANDĪL). The two most common face veils were the *lithām* [*q.v.*], a rectangular cloth covering the nose and the lower half of the face, and the *burḳuʿ*, a harness-like affair consisting of fabric suspended from the centre front of the headband (*ʿiṣāba*) to cover the face. The lower corners of the *burḳuʿ* were attached to the sides of the headband by a string creating a mask-like effect. The *burḳuʿ* is still worn by married women amongst the Sinai Bedouin. ʿĀʾisha wore neither of these veils when she was a *muḥrima* (*lā talaththamu wa-lā tabarḳaʿu*). Another veil worn by women at this time was the *niḳāb*. Oddly enough, there is no mention of any sort of hats or head-dresses for women at this early period, despite a veritable plethora of such items from the High Middle Ages to modern times.

Men did veil on occasion, normally by wearing the outer mantle (*izār*, *ridāʾ*, *burd*, *milḥafa*, etc.) in such a way as to cover both head and face). The Prophet is described on more than one occasion as being *mutaḳanniʿ*. This does not necessarily imply that he was wearing the face veil known as *ḳināʿ* or *miḳnaʿa* (cf. for example, Bukhārī, *Ṣaḥīḥ*, lxxvii, 16). Very handsome young men sometimes veiled their faces, particularly at feasts and fairs, in order to protect themselves from the evil eye (*Aghānī*, vi, 33; xi, 28; xiii, 137; xv, 157; also J. Wellhausen, *Reste arabischen Heidentums*[2], repr. Berlin 1961, 196). The free end of the turban cloth frequently served as a face veil to protect the wearer against dust while riding. It was veiled in this fashion that al-Ḥadjdjādj [*q.v.*] entered into the mosque at Kūfa, mounted the pulpit, and dramatically bared his face as he began his famous sermon with the lines "I am the son of splendour, the scaler of the high places/When I take off my turban you know who I am".

Footwear for both sexes fell into one of two catagories—the *naʿl* or sandal which could be of palm fibre, smooth leather, or leather with animal hair, and the *khuff*, a sort of shoe or boot made of leather. The various kinds of slippers which are popular throughout the modern Islamic world under a variety of names (*bābūdj*, *tāsūma*, *surmūdja*, *bulgha*, etc.) came into vogue after the conquests.

3. Early Islamic laws and customs regarding clothing. The austere nature of the early Medinese *umma* did not encourage luxury of any kind. The Ḳurʾān promises the righteous garments of silk [see ḤARĪR] in Paradise, but the Prophet felt that such clothes were inappropriate in this life for men, although apparently not for women. According to a frequently-repeated *ḥadīth*, Muḥammad forbade seven things: silver vessels, gold rings, garments of *ḥarīr*, *dībādj* (brocade), *ḳassī* (a striped fabric from Egypt containing silk), *istabraḳ* (satin), and *mayāthir ḥumr* (tanned hides). Actually, there are many more fabrics mentioned in the traditional literature which he supposedly proscribed. It would seem that he did make exceptions in the case of individuals suffering from some pruritic skin condition or lice. With the development of the empire and the rise of a leisured class, there came into being a wealth of counter-traditions expressing the permissibility of wearing clothes of silk and other luxury fabrics.

Many of the earliest and most reliable traditions regarding clothing deal with *iḥrām* and questions of ritual impurity caused by menstrual flow or the ejaculation of semen. Each of the Prophet's wives had a special menstrual garment. Garments defiled by menstrual flow need only to be washed to be worn for prayer (e.g., Abū Dāwūd, *Sunan*, i, 130), and if not stained, a menstrual garment may be worn for prayer without washing. For these and related laws, see DJANABA, GHUSL, ḤAYḌ and WUḌŪʾ. It is not certain whether or not women in the early *umma* had special clothes for mourning. During the Djāhiliyya, a woman wore her worst clothes when in mourning (*wa-labisat sharra thiyābihā*—Bukhārī, *Ṣaḥīḥ*, lxviii, 46, 47). The Prophet forbade women in mourning to wear dyed clothing except for garments of *ʿaṣb*, a Yemenite fabric with threads dyed prior to weaving (*ibid.*, 48, 49). The technical term for "mourning garment" (*thawb al-ḥidād*) only appears in Ibn Ḥanbal (*Musnad* vi, 438) and seems to be a later development. The name implies a garment dyed to a dark iron black.

As already noted, many of the garments worn in early Islamic times were the same for both men and women, especially tunics and wraps. There were, nonetheless, distinct stylistic differences. Islam, like Judaism and Christianity, strictly condemns transvestitism (Bukhārī, *Ṣaḥīḥ*, lxxvii, 61). However, in Islam this prohibition clearly refers to overall conduct as much as dress.

Clothes have always been considered objects of significant material value in the Middle East. They

are mentioned as valuable gifts, a medium of payment, and items of booty. A man who had worked in the Prophet's baggage train supposedly went to Hell for taking a single *ʿabāʾa* (a sleeveless robe) from the *khums* of the Prophet (Bukhārī, *Ṣaḥīḥ*, lvi, 190). Garments could also be used for the payment of the *zakāt* (*ibid.*, xxiv, 33). As had been the custom of oriental rulers since ancient times, Muḥammad bestowed valuable garments upon members of his entourage as a mark of favour (cf. e.g. Genesis, xxxvii, 3 and xli, 42).

Many customs were associated with clothes. Then as now, pious wishes and felicitations were appropriate for someone with a new garment. Muḥammad wished Umm Khālid *ablī wa-akhlifī*! ("wear it out and exchange it!"), when he presented her with a small black *khamīṣa* (Bukhārī, *Ṣaḥīḥ*, lxxvii, 22, 1). In more recent times, the wishes have become less eloquent, and one simply says *mabrūk* ("congratulations") or *naʿimman* ("how nice!"). In accordance with an ancient custom going back to pagan times, the Prophet reversed his *ridāʾ* when he went out to make the prayer for rain. He did not reverse his cloak, however, when making the *istiskāʾ* [*q.v.*] on Friday (*ibid.*, xv, 11). The act of reversing the garment was apparently symbolic of the change in weather sought. It was still practiced in Tunis at the end of the 19th century (Wellhausen, *Reste*, 197). The custom of baring the head in extreme humility during the *istiskāʾ* ritual also probably goes back to this period, though it is not mentioned in the literary sources until the later Middle Ages (see I. Goldziher, *Entblössung des Hauptes*, in *Isl.* vi [1916], 301-16, esp. 304).

Many customs regarding clothes which most certainly have their roots in ancient Near Eastern superstition and are found also in the Talmud are ascribed to Muḥammad in the Muslim traditions. Thus the believer should always put the right shoe on first. He should not go out with only one shoe on—either both or barefoot (cf. the ill omen for Pelias of anyone shod in only a single sandal, in the Greek myth of Jason). Furthermore, shoes should never be left with the soles facing heavenward.

4. **The Umayyads and ʿAbbāsids and the *ṭirāz* system.** Judging by the rather scattered and scanty literary evidence, most of the Arabian garments of early Islamic times continue into the Umayyad period, although some items become more and more restricted to Bedouin use (e.g. the *mirṭ*). The most significant change that came with the rise of an Islamic empire is the use of clothing made of luxury fabrics by the Umayyad caliphs and their courtiers. ʿAbd al-Malik is reported by al-Maḳrīzī to have worn embroidered garments (tr. E. Blochet in *Revue de l'Orient Latin*, viii [1900-1], 175). Sulaymān and his retinue wore only garments of *washy* or variegated silk, including the *djubba*, *ridāʾ*, *sirwāl*, *ʿimāma*, and *ḳalansuwa* (Masʿūdī, *Murūdj*, v, 400). There is one report specifically mentioning the so-called "caliphal garments" (*thiyāb al-khilāfa*) being worn by al-Walīd II (*Aghānī* vii, 83). Later under the ʿAbbāsids, the caliph wore special robes of office with embroidered borders and which were called by this name. It is only stated of al-Walīd's "caliphal garments" that they were white. The ʿAbbāsid robes of state were normally black. Their custom of wearing black garments on official occasions was established by al-Manṣūr and was only abandoned for a brief period in favour of ʿAlid green under al-Maʾmūn (Ṭabarī, iii, 1012 f.).

Two of the most significant phenomena of Islamic costume history originate in the Umayyad period—the sumptuary laws requiring distinguishing clothing for the non-Muslim subject population, and the production of regal embroidered fabrics for clothing.

The laws of differentiation or *ghiyār* [*q.v.*] most probably do not go back to the time of ʿUmar b. al-Khaṭṭāb, since at that early period the *ahl al-dhimma* [*q.v.*] and the Arabs did not dress alike anyway. Although these laws were to be minutely detailed only in later centuries, they go back in general outline as well as in spirit, at least, to the caliphate of ʿUmar b. ʿAbd al-ʿAzīz. *Dhimmīs* were forbidden to wear Arab-style headgear, including the *ʿimāma*, *ʿaṣb*, and *ṭaylasān*, Arab military dress, and certain robes, as for example, the *ḳabāʾ*. They also had to wear a distinguishing belt called *minṭaḳ* and more frequently *zunnār* (cf. Gk. ζωνάριον). This ordinance may have applied at first only to Christians. By the reign of Hārūn al-Rashīd, these rules governing *dhimmīs*' dress were well-refined and were ascribed back to ʿUmar I [Abū Yūsuf, *K. al-Kharādj*, Cairo 1382, 127 f.). For a detailed discussion of the restrictions on *dhimmī* dress and the sources for Umayyad and ʿAbbāsid times, see A. S. Tritton, *The caliphs and their non-Muslim subjects*, repr. London 1970, 115-26.

The production of special embroidered fabrics in palace textile factories also began in Umayyad times and became a standard feature of mediaeval Islamic material culture. The fabrics were known as *ṭirāz* [*q.v.*], which in its narrowest sense meant "embroidery", especially embroidered bands with writing in them, and in a wider sense, indicated an elaborately embroidered robe, such as might be worn by a ruler of his entourage. *Ṭirāz* garments were bestowed as tokens of royal favour and were among the standard gifts brought by diplomatic embassies to other rulers as part of foreign policy. In the view of many scholars, the Umayyads most likely took over Byzantine state factory establishments and adapted them to their special needs and tastes (e.g. E. Kühnel and L. Bellinger, *Catalogue of dated tiraz fabrics*, Washington: The Textile Museum, 1952, 1). However, most mediaeval Arab historians believed the production of *ṭirāz* garments to be derived from a Persian institution, and there is some evidence that garments with royal insignia were worn in Sasanian times (see S. D. Goitein, *Petitions to Fatimid caliphs from the Cairo Geniza*, in *JQR*, NS, xlv [1954-5], 34 f., where Talmudic evidence is cited). The truth as to the origins of the *ṭirāz* system would seem to combine both views.

The first Umayyad caliph who is specifically mentioned in the Arabic sources as having had *ṭirāz* factories was Hishām b. ʿAbd al-Malik (al-Djahshiyārī, *K. al-Wuzarāʾ*, Cairo 1938, 60). In any event, it is clear that by late Umayyad times the *ṭirāz* system extended across the caliphate, and continued to flourish under the ʿAbbāsids, Būyids and Saldjūḳs. The production of such luxurious fabrics was a highly profitable business, and there was considerable government control. The state was also responsible for the prices in Ashtor's view (E. Ashtor, *Histoire des prix et des salaires dans l'Orient médiéval*, Paris 1969, 75). This is perhaps an oversimplification.

To the mediaeval Middle Eastern bourgeoisie, *ṭirāz* garments were status symbols as well as valuable pieces of real property. Clothing formed part—sometimes a considerable part—of a family's investment, being transmitted from parents to children, to be converted into cash in case of emergency. Clothes also

formed an important element of the state's assets. Thousands of garments are listed among the annual treasury receipts under Hārūn al-Rashīd (al-Djahshiyārī, *K. al-Wuzarā'*, 179-182). In addition to their socio-economic importance, garments of *ṭirāz* fabrics were of great socio-political significance. The ʿAbbāsid caliphs and, at a later date, other Muslim rulers, were wont to bestow robes of honour (*khilaʿ*, sing. *khilʿa* [*q.v.*]) upon those of their subjects—Muslim and non-Muslim, male and female—whom they wished to reward or for some reason mark for distinction. The *khilʿa* was often not a single robe, but an entire outfit. This suit consisting of two or more garments was known as a *ḥulla*. (The word today means a "western suit of clothes".) The vizier Ḥamīd b. al-ʿAbbās (d. 311/923), for example, received two such outfits each consisting of a lined coat (*mubaṭṭana*), a sleeved robe (*durrāʿa*), a body shirt (*ḳamīṣ*), drawers (*sarāwīl*), and turban (*ʿimāma*) (Hilāl al-Sābi', *Ta'rīkh al-wuzarā'*, ed. Amedroz, Beirut 1904, 176).

With the rise of the bourgeoisie during the ʿAbbāsid period and the dissemination of the polite educational ideal of *adab* [*q.v.*] by the Persian secretarial class, many new garments and fabrics came into use, and people became ever more fashion-minded. The early aversion from silks and satins was forgotten or ignored by all but a pious few, and only the most ascetic and the poor wore the rough woollen robe known as the *khirḳa* [*q.v.*] (the latter use of this word to designate "rag" or "dishcloth" is instructive). Another wool garment worn only by the very poor was the sleeved tunic known as *midraʿa*. Cultured gentlemen and ladies, on the other hand, were very much concerned with their appearance. The *adīb* al-Washshā' [*q.v.*] (d. 325/936) devoted several chapters of his book *On elegance and elegant people* (*K. al-Muwashshā aw al-ẓarf wa 'l-ẓurafā'*, ed. Brünnow, Leiden 1886; ed. cited here is that of Cairo 1362/1953) to describing the types of clothing worn by his contemporaries, as well as the acceptable canons of taste. The fashionable man, according to al-Washshā', outfitted himself in several layers of clothing, beginning with a fine undershirt (*ghilāla*), over which was worn the heavier, lined (*mubaṭṭan*) *ḳamīṣ*. Both of these ought to be of fine linen, such as Dabīḳī or Djannābī (produced in Egypt and Fārs, respectively). Over these tunics was worn a lined robe (*durrāʿa*) or *djubba* of linen, silk, or *mulḥam* (a fabric with a silk warp and a woof of some other stuff). Finally, when going out, the fashion plate would drape over these his *ridā'* or another cloak known as *miṭraf* (also *muṭraf*) which had decorative borders at each end (*ṭaraf*) and cover his head, or turban rather, with a *ṭaylasān*, which at this time was probably a cowl (*K. al-Muwashshā*, 160 f.). Making a good appearance also meant not wearing unpleasant or clashing colours, dirty clothes, or clothes perfumed like those of slave girls. Shoes and sandals could be of any of a number of leathers, colours, and designs; and it was permissible to wear shoes in such colour combinations as black and red and yellow and black (*ibid.*, 161). The wearing of stockings (*djawrab*, from Pers. *gūrab*), a fashion adopted from the Persians, was by now well-established.

Al-Washshā' does not provide as much detail in his chapter on female attire which is devoted specifically to "those clothes which differ from those of fashionable men". The elegant woman's lingerie consisted of a smoky-grey coloured *ghilāla* and *sirwāl*. White garments of any kind—except for the *sirwāl*—were considered masculine and were to be avoided. Exactly what kind of dress was worn over the undergarments at this time is not specified. Al-Washshā' does mention, however, that it should be wide-sleeved (*akmām maftūḥa*) and that the collar should have a drawstring (*wa 'l-djurrubānāt al-mukhāniḳiyya*). For her wraps, the woman was to wear a Rashīdī or a Ṭabarī *ridā'* (from Rosetta and Ṭabaristān, respectively). She might then totally envelop herself in a Khurasānī *izār* or *mulḥam*. On her head she wore a black *miʿdjar*, which seems to have been the female equivalent of the *ʿimāma* both in form and use. Black was particularly stylish at this time. The *miʿdjar* was worn together with a face veil (*miḳnaʿa* or *miḳnaʿ*). The Nīshāpūr *miḳnaʿa* was held in particular esteem (*ibid.*, 163 f.).

Persian cultural influences became more pronounced under the ʿAbbāsids. In addition to those garments of Persian provenance already mentioned (*sirwāl* and *djawrab*), there was introduced at this time the distinctive, tall, conical Persian hat called the *ḳalansuwa ṭawīla* or simply *ṭawīla* (e.g. Yāḳūt, *Udabā'* vi, 59). This hat was also called *danniyya* because of its resemblance to a long amphora-like wine jar known as a *dann* (*ibid.*, i, 373, and *Aghānī*[1] x, 123). The top of the *ṭawīla* was pointed (cf. al-Masʿūdī, *Murūdj*, viii, 377 = § 3537, where it is described as *maḥdūda*). This hat consisted of a wicker or wooden frame covered with fabric such as silk. R. Levy has suggested that it may also have been shaped like "a truncated cone worn base upwards after the fashion of the cumbrous headgear of the modern Lurs" (*Notes on costume from Arabic sources*, in *JRAS* [1935], 324); however, this suggestion is not borne out by the evidence of illuminated manuscripts. Abū Zayd of al-Ḥarīrī's *Maḳāmāt* is frequently depicted wearing a pointed *ṭawīla* (e.g. Bibl. Nat., Paris, ms. arabe 3929, f. 69). Hārūn al-Rashīd is supposed to have worn such a hat inscribed on one side with the word *ḥādjdj* and on the other with *ghāzin* for the duties which he undertook on alternating years of leading the pilgrimage and the war against Byzantium (Ṭabarī, iii, 709). Another Persian garment which was introduced at this and which became extremely popular throughout the Arab world is the *khaftān*, a fine robe with sleeves that buttons down the front (the original Persian word designates a cuirass). The caliph al-Muḳtadir wore a *khaftān* of Tustarī silk brocaded with silver when he set out on his fatal march against the rebel Mu'nis in 320/932 (Dozy, *Vêtements*, 162 f.; Levy, *JRAS* [1935], 331-2, and the sources cited by both). Since the later Middle Ages, the form *ḳafṭān* (variant *ḳufṭān*) has been used exclusively throughout the Arabic-speaking world, due to the influence of Turkish.

Fine garments were brought to Baghdād from all over the Muslim world, as well as being imported from abroad. From India came the *fūṭa*, a long piece of sari-like cloth which served a variety of functions: as a loincloth, apron, and a variety of headgear (Stillman, *Female attire*, 214 ff.). From China during this period there came oilcloth raincloaks (*mimṭara*) (Thaʿālabī, *Laṭā'if al-maʿārif*, Cairo 1960, 221; Eng. tr. Bosworth, Edinburgh 1968, 141; Mez, *Renaissance*, Eng. tr. 390). Fine garments for men in 3rd/9th century ʿIrāḳ ranged in price from 5-30 *dīnārs*, and even more (Ashtor, *Prix et salaires*, 53). However, some of the prices cited by Arab writers for fabulous garments and fabrics are clearly anecdotal, as for example, the 50,000 *dīnārs* that al-Khayzurān [*q.v.*] is reported to have paid for a piece of *washī* (al-Masʿūdī, *Murūdj* viii, 298). Still, it is quite apparent both from the literary and documentary sources that throughout

the Middle Ages clothing was very costly in comparison with the other necessities of life.

5. The Fāṭimids. Perhaps no period in the history of the Arab East was more clothes-conscious than that of the Fāṭimids. Fāṭimid pomp and ceremony exceeded anything known in Bag͟hdād, and clothing played a major part in creating the splendid effect.

The first Fāṭimid caliph in Egypt, al-Muʿizz (d. 365/975), founded a special government costume supply house known as the *dār al-kiswa* or *k͟hizānat al-kiswa* with an outlay of 600,000 *dīnārs*. An official bureau (*dīwān*) oversaw the production, storage, and distribution of costumes. Every official and functionary from the caliph down to government clerks was supplied with a ceremonial costume (*badla mawkibiyya*) for public occasions. According to al-Maḳrīzī, who is the almost exclusive source of information for Fāṭimid ceremonial costume, each person was provided with an entire wardrobe "from the turban to the underdrawers" (*K͟hiṭaṭ* ii, 409). The *k͟hizāna* provided different weight clothes for summer and winter. A complete costume (*badla mukmala*) could consist of as many as a dozen articles, most of which have been mentioned in the preceding sections.

Naturally, these ceremonial costumes were made of the most costly fabrics. The most popular were *ḥarīr* (fine silk), *sūsī, dabīḳī, s͟harāb, dimyāṭī* (all linens), *k͟husrawānī* (kingly brocade), and *siḳlāṭūn* (siglaton). Most of the ceremonial costumes were white and embroidered with gold and silver threads in accordance with the official Fāṭimid imagery of luminous splendour and divine light. The selection of the caliphal costume was itself a ritualised event before every holiday.

Each rank and office was distinguished by its costume. The most outstanding item of the caliph's attire was his enormous turban which consisted of a cap (*s͟hās͟hiyya*) around which was wound a *mandīl* in a fashion unique for the ruler in the shape of a myrobalan. This special manner of winding the caliphal turban was called "the winding of majesty" (*s͟haddat al-waḳār*). The entire turban was ornamented with jewels. An enormous solitaire (*yatīma*) mounted on a silk band was centred on the caliph's forehead (*K͟hiṭaṭ* i, 449). The entire headgear was called "the noble crown" (*al-tād͟j al-s͟harīf*).

The rest of the imperial retinue wore a variety of less splendid headdresses. The chief eunuchs of the court who were the *amīrs* of the palace, all wore turbans which were distinctively wound under the chin —the so-called *taḥnīk al-ʿimāma* or simply *al-ḥanak*. Thus, they were known as *al-ustād͟hūn al-muḥannakūn*. The caliph al-ʿAzīz became the first ruler to appear with the *ḥanak* (*K͟hiṭaṭ*, ii, 285) and eventually so did the vizier and the *amīrs* (*ibid*., i, 440, 449). This fashion was introduced into the east by the Fāṭimids from the Mag͟hrib, where it still may be seen, especially in southern Algeria and Morocco.

Another head covering which is first mentioned during this period is the *kalawta* or *kalūta* (cf. Lat. *calautica*, Fr. *calotte*, Pers. *galūta*) which was a kind of cap (*K͟hiṭaṭ*, i, 413). It was to become a standard item in Ayyūbid and Mamlūk times (see e.g. al-Ḳalḳas͟handī, *Ṣubḥ al-aʿs͟hā*, iv, 39, 52-3; al-Maḳrīzī, *K͟hiṭaṭ*, ii, 98).

The various modern studies dealing with Fāṭimid ceremonies draw mainly upon al-Maḳrīzī and to a lesser extent, on al-Ḳalḳas͟handī and on Ibn Tag͟hrī-Birdī, all three of whom depended upon the lost work of Ibn al-Ṭuwayr. See K. A. Inostrantsev, *Toryestvenii viezd Fatimidiskikh k͟halifov* ("The solemn entry of the Fāṭimid caliphs"), in *Zapiski Vost. Otdyel. Imp. Russ. Ark͟heol. Obs͟hčestva*, xvii (St. Petersburg 1904); M. Ḥ. Zakī, *Kunūz al-Fāṭimiyyīn*, Cairo 1937; M. Canard, *Le cérémonial fatimite et le cérémonial byzantin: essai de comparison*, in *Byzantion*, xxi/2 (1951), 355-420; idem, *La procession du nouvel an chez les Fatimides*, in *AIEO*, x (1952), 364-98; ʿA. M. Mād͟jid, *Nuẓum al-Fāṭimiyyīn wa-rusūmuhum fī Miṣr*, ii, Cairo 1955.

6. The Geniza as a source for mediaeval Islamic attire. The Cairo Geniza [*q.v.*] manuscripts are an important and till recently, untapped source for the costume history of the Fāṭimid, Ayyūbid, and—to a lesser extent—the Mamlūk periods. In particular, the some 750 trousseau lists from the Geniza, in combination with ancillary Geniza records, offer a wealth of information on the attire of Jewish women in mediaeval Egypt, and by extension, the attire of Muslim women as well. Information for male costume comes from commercial documents, but is by no means as extensive or as detailed.

One fact stands out clearly—that Jewish and Muslim women dressed alike during the Fāṭimid and Ayyūbid periods. The Geniza trousseau lists give every indication that the restrictive laws of *g͟hiyār* were not enforced. The same garments are mentioned as in the Islamic sources. There is no limitation in the Geniza as to colour and textile, rather there is the greatest variety of hues and diversity of fabrics. Jewish women, like their Muslim counterparts (and most likely Copts as well) went veiled.

The Geniza documents show that the bourgeoisie consciously or unconsciously tried to imitate the modes and mores of the ruling class. Merchants, for example, bestowed *k͟hilaʿ* and *ṭirāz* garments upon relatives and friends. People of means wore all the precious fabrics known to us from the descriptions of the Fāṭimid ceremonies. Over sixty fabrics are mentioned in the Geniza. Of these, forty-six are known from the literary sources collected by Serjeant. Under the Fāṭimids and Ayyūbids, the mercantile class indulged itself in many types of garments. The Geniza trousseaux mention almost seventy items for women alone.

The Geniza has revealed the names and considerable data for more than two dozen garments which were hitherto unknown or only mentioned in isolated literary sources without any explanation or description. Among these are the *d͟jūkāniyya* and *mak͟htūma*, both fine dresses; the *ḳad͟jīd͟ja*, a dress which first appears in late Ayyūbid trousseaux and became popular in Mamlūk times, after which it seems to have disappeared; the *ʿaḳabiyya, ʿarḍī, mukallaf*, and *radda*, all head scarves or shawls; and the *wasaṭ* and *k͟haṣī*, both belts or cummerbunds.

In addition to new names of garments and textiles, the Geniza has provided an entirely new vocabulary of patterns and adornments. Many of these designs can be correlated with those in manuscript illustrations (see Stillman, *The importance of the Cairo Geniza manuscripts for the history of mediaeval female attire*, in *IJMES* vii/4 [1976], 579-89).

There is also considerable new information on garments already known. For example, the *safsārī* and the *barrakān*, both mantles, which have been in attested use in the Mag͟hrib from mediaeval to modern times (al-Idrīsī, *Nuzhat al-mus͟htāḳ*, ed. Dozy and de Goeje, Leiden 1866, 59; al-ʿUmarī, *Masālik al-abṣār*, tr. Gaudefroy-Demombynes, Paris 1927, 125) are shown to have been worn in Fāṭimid and Ayyūbid Egypt as well. No doubt they were brought

into the east after the Fāṭimid conquest in 358/969. The *badan*, a short, sleeveless tunic, worn by both sexes and usually associated with the Arabian Peninsula (Dozy, *Vêtements* 56-8), is shown to have been a fairly common article of feminine attire in mediaeval Egypt.

For the information provided by the Geniza on costume, see Y. K. Stillman, *Female attire of Mediaeval Egypt*; idem, *The wardrobe of a Jewish bride in mediaeval Egypt*, in *Studies in Marriage Customs*, ed. Ben-Ami and Noy, Folklore Research Center Studies, iv (Jerusalem 1974), 297-304; eadem, *The importance of the Cairo Geniza manuscripts for the history of mediaeval female attire*; eadem, *Ketūbbot ha-Genīzā ke-Māḳōr liLvūsh hā-Ishshā bīmē ha-Bēnayim*, in *Ḥikrē Genīzat Ḳāhir*, ed. M. Friedman, Tel Aviv 1980, 149-60.

7. The early Turkish dynasties: Saldjūḳs, Ayyūbids, Mamlūks. The Turkish military dynasties that controlled one part or another of the Middle East from the late 5th/11th to the early 10th/16th centuries brought with them many Central Asian styles, particularly in military and ceremonial attire. These, however, were the distinguishing costumes of the military élite. The fashion of dress of the native Arab population was little affected at first. M. V. Gorelik (*Blizhnevostočnaya miniatyura XII-XIII vv. kak etnografičesky istočnik*, in *Sovetskaya Etnografya*, clxxii/2 [1972], 37-50) has attempted to distinguish between two broad complexes of dress throughout the Arab east at this time—the western, based on the fusion of Arabian styles with those derived from Hellenistic Mediterranean prototypes, and the eastern, derived from Iranian, Turkish, and Inner Asian styles. Syria and ʿIrāḳ during this period fell generally into the latter category, while Egypt, with the exception of the military, fell into the former.

Throughout much of this period, the typical outer garment for a member of the ruling class was any one of a variety of coats (*aḳbiya*). These were worn over the usual layers of undershirts, the most common of which was the *ḳamdjūn*. The undershirt was normally hidden by the outer garments, except in southern ʿIrāḳ where it was cut long to extend below the coat above it.

The Saldjūḳs and Ayyūbids preferred the so-called Turkish coats (*al-aḳbiya al-turkiyya*), the hem of which crossed the chest in a diagonal from right to left. The Mamlūk *amīrs* wore the Tartar coats (*al-aḳbiya al-tatariyya*) with the hem crossing the opposite way. Over the coat was worn a belt of metal plaquettes (*ḥiyāṣa*) or a sash (*band*). Al-Maḳrīzī (*Khiṭaṭ* ii, 99) identifies the *ḥiyāṣa* with the ancient *minṭaḳa*, and states that there was a special market in Cairo (*sūḳ al-ḥawāʾiṣiyyīn*) devoted to the sale and manufacture of these belts. (For a finely preserved specimen of the *ḥiyāṣa*, see Mayer, *Mamluk costume*, Pl. IX.)

For members of the upper classes, the sleeves of their coat were frequently indicative of rank and social status. The longer and more ample the sleeves, the higher the standing of the wearer.

The illustrations from *Maḳāmāt*, *K. al-Aghānī*, and *K. al-Diryāḳ* manuscripts from this period attest a wide variety of caps and turban styles. The normal headgear of the military class was a stiff cap with a triangular front. It was sometimes trimmed with fur (*sharbūsh*), and sometimes had a small kerchief bound around it to form a sort of turban (*takhfīfa*). The other most common cap was the *kalawta* which was usually yellow under the Ayyubids, yellow and red under the early Mamlūks, and later red only (Mayer, *Mamluk costume*, 29).

The *ḳabāʾ* and the *sharbūsh* were so much the distinctive mark of a Muslim knight that even a Crusader was prepared to wear them as a gesture of friendship to Ṣalāḥ al-Dīn (Ibn al-Athīr, xii, 51-2).

Under the Mamlūks, two popular short sleeved coats were the *bughluṭāḳ* (also *bughlūṭāḳ*) and the *sallāriyya*. These were made of a variety of fabrics and frequently were lined with fur. Such a coat was sometimes worn under an ample outer robe (*faradjiyya*).

Eventually, some of the garments which were at first the mark of the military aristocracy were imitated by the middle classes. The *bughluṭāḳ*, for example, appears in several Geniza documents.

The only comprehensive study of the attire of any of the dynasties of this period is L. A. Mayer, *Mamluk costume*, where there is an extensive bibliography. Shorter, general studies include: Mayer, *al-Azyāʾ fi ʾl-ayyām al-wusṭā*, in *al-Kulliyya* (1932), 438-49; idem, *Saracenic arms and armor*, in *AI*, x (1943), 1-12; M. V. Gorelik, *op. cit.* (men's dress only). ʿA. M. Mādjid, *Nuẓum dawlat salāṭīn al-Mamālīk wa-rusūmuhum fī Miṣr*, ii, Cairo 1967, 64-87, has a chapter on Mamlūk attire which, however, adds little to Mayer's work.

8. The Ottoman period (to early modern times). As far as the costume history of the region is concerned, the Ottoman conquest of the Arab East in the early 10th/16th century marked a continuation of the preceding period, rather than an abrupt change. Ceremonial and military dress remained Turkish (see below, section iv). Some Ottoman fashions were adopted by members of the urban élite, as for example, the Turkish-style *ḳafṭān* for men and the long, tightly-fitted coat known as the *yelek* for women. Turkish synonyms came into common use for certain items of clothing alongside, but not necessarily replacing, the native Arabic equivalents (e.g. *čaḳshīr* for *sirwāl* and *yashmaḳ* for *burḳuʿ*). But on the whole, Arab styles and Arabic terminology prevailed. The vestimentary system remained essentially the same.

Outside of the principal, metropolitan seats of administration, distinct regional styles predominated. These regional distinctions were of minor differences in cut (e.g. sleeves, opening for the neck, ampleness, and length) and not-so-minor differences in decorative details such as embroidery, colour, fabric pattern, fastenings, trimming, etc., rather than in the basic garments themselves. The extent of the fine details in variation in basic costumes throughout the Ottoman East in the last century is apparent from the important photograph album of Hamdy Bey and M. de Launay, *Les costumes populaires de la Turquie en 1873*, Constantinople 1873.

Regional distinctions were—and this remains true today in those places where traditional costumes are still worn—most striking in female attire. Men's clothing was more or less uniform throughout much of the Middle East during the Ottoman period. This was due in part to the fact that men were physically and socially more mobile than women and came to have a more pan-Middle Eastern style of dress. Thus when a plate from E. W. Lane's *Manners and customs of the modern Egyptians* (London 1836) appeared in a book on Syria with the added caption "A Syrian gentleman with pipe and inkwell, *ca.* 1860", the inaccuracy was only minor.

9. The last one hundred years: the impact of the West on traditional Middle Eastern

dress. The ever-increasing Western economic, political, and cultural penetration into the Middle East in the second half of the 19th and the first half of the 20th century had a marked impact on the costume history of the region. Over the past hundred years a gradual abandoning of traditional, loose-flowing garments has been taking place in favour of Western tailored clothes. The transition was slow at first and did not take place in every place and among all groups at the same time.

The first group in the Arab East who began in large numbers to abandon traditional attire were the westernised Christian and Jewish protégés of the foreign powers. The civil emancipation of non-Muslims during the *Tanẓīmāt* [*q.v.*] period and the expansion of missionary schools and European businesses accelerated the process.

Most Christian and Jewish women abandoned the veil a full generation or more before their Muslim counterparts. One factor which facilitated their abandoning the veil so much earlier was that the segregation of women in the non-Muslim communities was never as strict as it was among Muslims, nor was the non-Muslims' style of veiling quite as total even in the preceding centuries (see e.g. Y. K. Stillman, *The costume of the Jewish woman in Morocco*, in *Aspects of Jewish folklore*, ed. D. Noy, Cambridge, Mass. 1979).

By the end of the 19th century, the "to veil or not to veil" question had become one of the burning issues for modernist reformers such as Ḳāsim Amīn (see his *Taḥrīr al-marʾa*, Cairo 1901). It also became a burning issue for the small but growing Egyptian feminist movement. Hudā Shaʿrāwī, the famous Egyptian feminist, is supposed to have solemnly cast her veil into the Mediterranean as she returned home in 1923 from a women's congress in Rome (A. H. Hourani, *The vanishing veil: a challenge to the old order*, in *UNESCO Courier* [January 1956], 37). Her symbolic action was soon followed by many upper and upper-middle class women, but not by women of the lower-middle class, which remained the last stronghold of tradition (see Y. K. Stillman, *Attitudes toward women in traditional Near Eastern societies*, in *S. D. Goitein Festschrift*, i, ed. S. Morag, I. Ben-Ami and N. A. Stillman, English-language volume, Jerusalem 1981, 345-60).

Muslim men abandoned traditional attire more rapidly than Muslim women. This is due to the male's greater physical and social mobility, as noted above. The first Muslim men to adopt the European mode of dress were members of the bureaucracy and the upper class who were in direct contact with westerners and who, in many cases, had visited Europe. Such individuals were referred to as "westernisers" (Ar. *mutafarnadjūn*) and "westernised gentry" (Turk. *alafranga čelebiler*). Throughout the 19th century they remained a small minority. However, after the First World War the change became rapid (see e.g. R. Tresse, *L'évolution du costume des citadins syrolibanais depuis un siècle*, in *La Géographie*, lxx [1938], 1-16, 76-82; idem, *L'évolution du costume des citadines en Syrie depuis le XIXe siècle*, in *La Géographie*, lxxi-lxxii [1939], 257-71, 29-40).

One aspect of the male wardrobe that has resisted change even where the transition to Western attire has been more or less complete is the headgear. It is still common to see men dressed in a Western suit, wearing a *ṭāḳiyya*, a *tarbūsh*, or a *kāfiyya*. This is due to the traditional importance of covering the head and to the fact that the headcovering (originally the turban) was considered a badge of Islam. The *kāfiyya*, which was in the last century most commonly worn by Bedouin and peasants in many parts of the Middle East, has in recent years taken on a nationalist connotation comparable to that of the fez in Ottoman Turkey under the Young Turks. The chequered *kāfiyya* is today the badge of the Palestinian commandoes (see Y. K. Stillman, *Palestinian costume and jewelry*, Albuquerque 1979, 16). The traditional *ʿimāma* is now worn almost exclusively by members of the *ʿulamāʾ* in the Middle East (although in the Maghrib, and in particular in Morocco, it is still commonly worn even by men who have adopted Western dress. See below, section ii.

Outside the major cities, traditional costumes are still commonly worn, but they are loosing ground rapidly in many places. Even among some Bedouin, European garments are gradually displacing traditional clothing (see L. Stein, *Beduinen*, in *Mitteilungen aus dem Museum für Völkerkunde zu Leipzig* [1962], 41-2). The one area which has successfully maintained its traditional style of dress in all levels of society is the Arabian Peninsula.

Any sort of country-by-country survey of the traditional garments still worn—or worn until recently—in the Arab East would be outside the scope of this article. Western travellers to the Middle East over the past two-and-a-half centuries have provided lengthy and detailed descriptions of native costumes. In addition to these, there have appeared in recent years a number of scholarly monographs on various aspects of Middle Eastern costume (see *Bibl.*).

What follows is the alphabetical glossary of some of the more common articles of clothing still worn in the Arab East in the 20th century:

GLOSSARY

ʿabāʾ, *ʿabāʾa*: coat, shoulder mantle, worn by both sexes (Arabian Peninsula, Egypt, ʿIrāḳ, Syria-Palestine)

ʿaḳāl: ringed cord or rope to go over the head scarf, worn by men (Ar. Pen., Ir., Syr.-Pal.)

ʿantarī: a lined vest ranging from short to knee length, worn by women (Eg., Syr.-Pal.)

ʿaraḳiyya: skull cap, often embroidered, worn by both sexes by itself or under the head-dress (Ar. Pen., Eg., Syr.-Pal.); called *ʿaraḳčīn* in ʿIrāḳ

ʿaṣba: folded scarf worn by women (Eg., Syr.-Pal.)

bābūdj, *bābūsh*: oriental slippers of soft leather (Ar. Pen., Eg., Ir., Syr.-Pal.)

badan: cotton or silk man's gown (Ar. Pen.)

banish, *banīsh*: a wide-sleeved man's coat (Ar. Pen., Ir., Syr.-Pal.)

bisht: mantle, jacket, worn by both sexes (Syr.-Pal.)

brīm: ringed cord or rope to go over the head scarf, syn. with *ʿaḳāl* (Syr.-Pal.); binding for loin cloth, syn. with *ḥakw* (Ar. Pen.)

burd, *burda*: heavy woollen wrap usually worn by men (Ar. Pen., Eg.)

burnus: woollen hooded cloak worn by men, imported from the Maghrib (Eg.)

burḳuʿ: woman's face veil (Ar. Pen., Eg., Syr.-Pal.)

būsh: variety of *ʿabāʾ* made in N. Syria (Syr.-Pal.)

būshī, *pūshī*: black face veil worn by women (Ir.)

čaḳshir, *shaḳshir*: Turkish-style pantaloons, underdrawers, worn by both sexes (Eg., Syr.-Pal.)

dāmir: a woman's jacket with short sleeves, syn. with *taḳṣīra* (Syr.-Pal.)

diffiyya: a heavy winter cloak for men (Eg.)

dilḳ: the patched garment of Ṣūfīs, also worn by clowns (Eg., Ir., Syr.-Pal.)

djallābiyya: the loose body shirt still commonly worn by men in Egypt.
djillāya: embroidered *djubba*, a wedding costume may be a dress or a coat depending upon the region, worn by women (Syr.-Pal.); a man's marriage *ḳaftān* (Yemen)
djubba: a coat-like outer garment worn by both sexes (Ar. Pen., Eg., Syr.-Pal.)
djūkh, djūkha: a wide-sleeved coat worn by men (Syr.-Pal.)
durrāʿa: a woman's outer coat, open in front, sometimes syn. with *djubba* (Syr.-Pal.)
faradjiyya: a long-sleeved man's robe (Eg.)
farmaliyya: a woman's dress (Syr.-Pal.)
farūdiyya: a square kerchief bound around the cap by women (Eg.)
fās: the Turkish fez, synonym for the red *ṭarbūsh* (Ar. Pen., Eg., Syr.-Pal.)
fustān: a woman's dress (Eg., Syr.-Pal.)
fūṭa: embroidered kerchief hung from the waist sash by men (Ir.)
ghabānī, ghabāniyya: head scarf with an embroidered pattern of lozenges, worn by both sexes (Syr.-Pal.)
ghudfa: large head shawl for women, worn in the Hebron area (Syr.-Pal.)
ḥabara: dark, silky enveloping outer wrap for women (Ar. Pen., Eg., Syr.-Pal.)
ḥakw: binding for waist wrapper worn by both sexes (Ar. Pen.)
ḥiyāṣa: cloth belt with silver plaque in the centre, worn by men (Syr.-Pal.)
ḥizām: a belt or sash worn about the waist by both sexes (Ar. Pen., Eg., Ir., Syr.-Pal.)
ḥulalliyya: a large dark wrap wound around the body with the upper parts pulled down over the shoulders and secured with pins (Eg.)
iḥdāda: a white *kāfiyya* worn in summer (Syr.-Pal.)
ʿiṣāba: headband worn by women (Ar. Pen., Eg., Syr.-Pal.)
ishdād: woven, woollen belt, worn by both sexes (Syr.-Pal.)
itb: a loose gown worn by women (Ar. Pen.)
izār: a large, enveloping body wrap for women (Eg., Syr.-Pal.)
kāfiyya, kūfiyya: head scarf worn by both sexes (Ar. Pen., Ir., Syr.-Pal.)
ḳaftān, ḳuftān: ample, full-length robe, buttoned down the front, with long sleeves, worn by both sexes (Ar. Pen., Eg., Ir., Syr.-Pal.)
kamar: a broad belt often red in colour, worn by men (Eg., Syr.-Pal.)
ḳamīṣ, ḳamīṣa: shirt-like dress worn by both sexes (Ar. Pen., Eg., Ir., Syr.-Pal.)
khalaḳa: a woman's dress (Ar. Pen., Syr.-Pal.)
khalwātiyya: a variety of *ʿabāʾ* made in Ḥasbaya (Syr.-Pal.)
khirḳa: veil, head scarf, worn by women (Syr.-Pal.); also syn. with *dilḳ* of Ṣūfīs
khuff: short boots or leather outer socks (Ar. Pen., Eg., Ir., Syr.-Pal.)
khumr: a man's belt (Ir.)
kibr: a variety of *thawb* (Syr.-Pal.)
kubrān: a jacket with long, wide sleeves, worn by both sexes (Syr.-Pal.)
ḳumbāz: overgarment, gown, made of striped silk, worn by both sexes (Syr.-Pal.)
ḳurṣ, ḳirṣ: a metallic cap or crown, often studded with jewels, worn on top of a woman's headdress (Eg., Syr.-Pal.)
laffa: man's turban cloth (Ir., Syr.-Pal.)
lafāʾif: long bands of cloth attached to a hat and in which woman's hair is wrapped (Syr.-Pal.)
lāsa: a woman's head scarf of white silk or cotton net into which flat metal strips have been decoratively hammered (Syr.-Pal.)
libās: pants, underpants, worn by both sexes (Ar. Pen., Eg., Ir., Syr.-Pal.)
libda, labbāda: a felt cap worn by men (Eg., Syr.-Pal.)
madraḳa: a variety of *thawb* worn by Jordanian women (Syr.-Pal.)
makrūna: head scarf worn by Bedouin women (Ar. Pen.)
mandīl: a woman's head scarf, veil (Syr.-Pal.); an embroidered kerchief hung from the waist sash by men (Ir.)
maʿraḳa: syn. with *ʿaraḳiyya* (Ar. Pen.)
markūb: pointed men's shoes of thick red morocco (Eg.)
mashla: a variety of *ʿabāʾ* made in Baghdad (Ir.)
mast: long stocking of soft, yellow leather, inner shoe worn by both sexes (Eg., Syr.-Pal.)
masūmī: a fine *ʿabāʾ* of white wool for men, produced in Baghdad (Ir.)
mazz, mazd, mizz: syn. with *mast* (Eg., Syr.-Pal.)
milḥafa: a large, enveloping outer wrap worn by women (Eg., Syr.-Pal.)
minshafa: a large, white head veil for women (Syr.-Pal.)
mintiyān: a jacket worn by both sexes (Syr.-Pal.)
muḍarrabiyya: a peasant woman's jacket (Syr.-Pal.)
muḳla: a very wide turban worn by *ʿulamāʾ* (Eg.)
mulāʾa: a large, enveloping outer wrap worn by women (Ar. Pen., Eg., Ir., Syr.-Pal.)
musayyaḥa: a silk *kāfiyya* (Syr.-Pal.)
naʿl: a general word for shoe used throughout the Middle East
sabla: a loose gown worn by women, synonymous with *thawb* (Eg.)
ṣaffa: a small embroidered bonnet trimmed with coins, worn by women (Syr.-Pal.)
sākw: a woollen or velvet coat for women (Syr.-Pal.)
salṭa: a jacket worn by both sexes (Syr.-Pal.)
shabābliḳiyya: a variety of *ʿabāʾ* made in Ḥasbaya (Syr.-Pal.)
shadda: a man's leather belt (Syr.-Pal.)
shāl: a woman's shawl, usually of wool (Ar. Pen., Eg., Ir., Syr.-Pal.)
shalwār: synonymous with *sirwāl* (Ir.)
shambar: a large veil common to the Hebron area and southern Palestine
shaʿriyya: a black face veil of goat's wool or horse hair, worn by women (Ir., Syr.-Pal.)
shāsh: the winding cloth of a turban (Syr.-Pal.)
shāshiyya: a variety of *ṭarbūsh* (Eg.); a skull cap worn beneath the *ṭarbūsh* (Syr.-Pal.)
shaṭwa: Bethlehem married woman's hat
shawdar, shawdhar: a black, enveloping outer wrap for women (Ar. Pen., Ir.)
shintiyān: woman's pants or pantaloons (Eg., Syr.-Pal.)
shutfa: a head scarf of Bedouin women (Ar. Pen., Syr.-Pal.)
shuwayḥī, shuwayḥiyya: woman's belt, usually woven of goat's hair, quite ornate, worn mainly in Southern Palestine
ṣidriyya: sleeveless vest worn by both sexes (Ir., Syr.-Pal.)
ṣimāda: bonnet-like hat trimmed with coins most common to women of Ramallah (Syr.-Pal.); a man's headcloth (Ir.)
ṣudayra: a short, sleeveless vest, worn by men (Eg.)
ṭāḳyya: the common skull cap worn by both sexes alone or under the head dress (Ar. Pen., Eg., Ir., Syr.-Pal.)

taḳṣīra: short-sleeved jacket worn by both sexes (Syr.-Pal.)

ṭanṭūr, ṭarṭūr: a high conical cap resembling a mitre, worn by Ṣūfīs (Eg., Syr.-Pal.); a high pointed woman's headdress of wood, horn, or metal, once very common among the Druze (Syr.-Pal.)

tarbiʿa: a woman's head scarf or veil (Syr.-Pal.)

ṭarḥa: a large, dark head veil that hangs all the way down the back, worn by women (Eg.)

thawb: basic tunic worn by both sexes throughout the Middle East; a woman's dress (Eg., Syr.-Pal.)

tikka: draw-string for *sirwāl*, used throughout the Middle East

wuḳā, wuḳāya, awḳā: terms designating a variety of women's bonnets, usually decorated with coins (Syr.-Pal.)

yashmaḳ: Turkish-style veil, frequently syn. with *burḳuʿ* (Eg., Syr.-Pal.)

yelek: a woman's long coat, tightly fitting (Eg., Syr.-Pal.); a long vest worn by both sexes (Ir.)

zunnār: a belt, usually made of a folded scarf, worn by both men and women (Syr.-Pal.)

Bibliography: For a detailed bibliography on Middle Eastern costume that includes both travel and scholarly literature, see Y. K. Stillman, *Palestinian costume and jewelry*, Albuquerque 1979, 130-8; in addition: R. Arié, *Notes sur le costume en Égypte dans la première moitié du XIXe siècle*, in *REI*, xi (1968), 201-13; J. S. ii. — THE MUSLIM WEST

The Muslim West, which in the Middle Ages included Spain and Sicily as well as North Africa, belongs generally to the Arabo-Mediterranean vestimentary system, whose common unifying factors are rectangular tunics and loose outer wraps. Within this system, however, there has always been a great deal of regional, ethnic, and socio-economic variation. The Maghrib has been noted since the time of the Arab conquest in the second half of the 1st/7th century for its own particular styles in dress, as in other aspects of material culture. The reasons for this can be conveniently summarised as follows: (1) the physical distance of the Maghrib from the Muslim-Arab heartlands; (2) the indigenous Berber element, which always remained strong; (3) in the case of Spain, the large native Iberian population and the propinquity of Christian territory; (4) the absence of the Persian *kātib* class; and (5) the very late arrival of the Turks in Tunisia and Algeria (and their total absence from Morocco).

Since much of the information concerning mediaeval Arab costume—nomenclature, style, customs and institutions—applies to the Maghribī centres of urban culture in the Middle Ages, this article will deal only briefly with this period, concentrating on the uniquely Maghribī aspects of its costume history. Most of the article will deal with the period extending from the later Middle Ages to modern times, or approximately the last 700 years, which, it should be pointed out, has been the subject of more study than that devoted to Middle Eastern costume history for all periods combined. A glossary and an extensive bibliography by country follow at the end.

1. Pre-Islamic foundations of Maghribī costume. When the Arabs conquered North Africa, Punic and Byzantine influences were still alive in the cities and towns. The countryside may also have had some Punic elements, but was overwhelmingly—if not exclusively—Berber. Even in Classical times, North Africa was noted for its distinctive style of dress. Greek and Roman authors considered the natives to be barbarians because they wore only an animal skin draped over the left shoulder covering the front and back. Garments of soft leather reminiscent of *filālī*, the soft leather from goatskin (which in European languages is called morocco, maroquin, etc.) were also mentioned as being worn, and indeed, some archaeological remnants have been found (see S. Gsell, *Histoire ancienne de l'Afrique du Nord*, Paris 1927, 22-38, where numerous sources are cited). Both this simple style of draping and the use of leather garments continued among the Berbers well into modern times.

The most striking feature of North African clothing in Roman eyes was the flowing, unbelted tunic. Roman and Byzantine sources mention the uncinched tunic frequently and in the same attributive way that they note the trousers of the European and Asiatic barbarians. Thus, for example, Virgil speaks of *hic nomadum genus et discinctos Mulciber Afros* (*Aeneid*, viii, 724), and Corippus, the 6th-century poet of the Byzantine reconquest, says even more explicitly: *Nec tunicae manicis ornant sua brachia Mauri/Insita non ullis stringuntur cingula bullis/ Distinctique ...* (*Johannidos*, ii, 130-2). The basic Maghribī tunics such as the Tunisian *ḳmadjdja*, the Algerian *ʿabāya*, and the Moroccan *gandūra* all fit this type. Though ample and uncinched, the tunics of the pre-Islamic period seemed to have been short, not falling below the thigh. Similar short, simple garments were common in Berber areas such as the Moroccan Rīf and the Algerian Mzāb into the early 20th century.

Another distinctive feature of North African attire which continued to be a hallmark of Maghribī style in the Islamic period is the hooded cloak, called *burnus* (*bərnūs*) in Libya, Tunisia, Algeria, and *səlham* and *akhnīf* and less commonly *bərnūs* in Morocco. Gsell (*op. cit.*, p. vi, 24-6) sees the origin of the *burnus* in the *sagum*, the simple wool cloak worn by the

Roman legionnaire. E. F. Gauthier (*Le passé de l'Afrique du Nord: les siècles obscurs*, repr. Paris 1952, 148 f.) point to an even more similar garment, the *paenula*, a travelling cloak to which a hood (*cucullus*) was generally attached. Philologically, the word *burnus* is probably derived from Greek and Latin *birrus* (S. Fraenkel, *Die aramäischen Fremdwörter im Arabischen*, repr. Hildesheim 1962, 50 f., where an interesting connection is made with *sagum* on p. 51, n. 2). The term *burnus* existed in early Islamic Arabia, where it usually designated a bonnet [see LIBĀS. 1]. The North African *burnus*-cloak was palpably different. When the Arabs invaded the Maghrib, they distinguished between two great Berber groups, whom they called the Barānis and the Butr (Ibn Khaldūn, *ʿIbar*, vi, 89 f.). W. Marçais (*Articles et conférences*, Paris 1961, 74) has suggested very plausibly—albeit with caution—that these names might reflect not genealogical or ethnic groups, but rather physical appearance; i.e., those Berbers who wore hooded garments (*barānis*), and those who wore short garments (*butr*), most likely without hoods. The ubiquity of *burnus* in the Maghrib may originally have been due to the fact that the Berbers in Antiquity and for the first few centuries under Islam wore no caps or headcloths (e.g. Ibn Khaldūn, *ʿIbar*, vi, 89; *wa-ruʾūsuhum fi 'l-ghālib ḥāsira*). Furthermore, some Berbers shaved all or part of the head (Gsell, *op. cit.*, 16-18, for classical sources; cf. also Ibn Khaldūn, *ʿIbar*, vi, 89; *wa-rubbamā yataʿāhadūnahā bi 'l-ḥalḳ*).

One last distinctive feature that may be traced back to pre-Islamic times is the large wrapping cloth used as an outer garment by both men and women (albeit in quite different ways) from Libya to Morocco. This wrap which is known by various names, the most common in Arabic being *ḥāʾik, ksāʾ*, and *barrakān*, and in Berber *aʿaban, akhuṣi, afaggu, taḥaykt*, and many others. Gsell suggests that this primitive garment has its origins in two wraps commonly worn in Roman North Africa, the *lodix* and the *stragula* (*op. cit.*, 29, n. 6). The poet Corippus speaks of the rough wrap which the natives of North Africa wore thrown over the shoulder and enveloping the arms (*Johannidos*, ii, 134 f.: *Horrida substrictus dependens stragula membris/Ex umeris demissa iacet* . . .). Ibn Khaldūn also says that most Berbers wrap themselves with a *kisāʾ* that is thrown over the shoulder (*ʿIbar*, vi, 89: *yashtamilūna 'l-ṣammāʾ bi 'l-aksiya*). Later European travellers also took note of this rather incommodious fashion (see G. Marçais, *Costume d'Alger*, 25-30, where numerous sources are cited). In Islamic times, the ancient Berber wrap came to be associated with its Arabian counterparts, the *izār, milḥafa*, etc. Insofar as it was used as a veil for women, it overlapped with eastern fashions. However, it seems clear from the sources and from the modern witness that the Maghribī man's was, and remained, quite different in the way it was draped.

2. Maghribī costume during the early and high Middle Ages. The Arabs looked upon the Maghrib as a colonial territory even more than they did the conquered lands of the Middle East. There was almost nothing in the cultures of North Africa or Spain to command even their grudging respect or to stimulate a desire for emulation. They therefore adopted little or nothing from the native costume during the first century or so of their rule. The fashion of the urban élite was Arab. A child's tunic dating back to the earliest Islamic period which is now in the possession of the Bardo Museum in Tunis is very similar to garments from the same time in the Coptic Museum in Cairo (see M. Fendri, *Un vêtement islamique ancien au Musée du Bardo*, in *Africa*, ii [1967-8], 241-71). The 4th/10th-century geographer al-Muḳaddasī (239) observed that Maghribīs dressed in the Egyptian fashion (*wa-bi 'l-Maghrib rusūmuhum miṣriyya*—that *rusūm* here refers to custom in dress is clear from the continuation of the text). The many references to clothing in Ifrīḳiya collected by H. R. Idris for the 4th-6th/10th-12th centuries correlate fairly well with what is known of Middle Eastern attire during that period (Idris, *La Berbérie Orientale sous les Zīrides*, Paris 1962, ii, 594-600). The only items that were distinctly Maghribī were the *kisāʾ*, the *kurziyya* (from Berb. *takerzit*; see Dozy, *Vêtements*, 380-2) which was a simple winding cloth for the head, and *aḳrāḳ* (sing. *ḳurḳ*), native cork-soled sandals (Dozy, *Vêtements*, 362 f.; idem, *Suppl.*, ii, 334; Idris, *op. cit.*, 597; cf. Sp. *alcorque*). According to al-Muḳaddasī (*op. cit.*, 239), even the traditional Arab *ridāʾ* was worn draped like a *kisāʾ* or *burnus*.

The early Umayyad *amīrs* in Spain tried as best they could to maintain the material culture of Syria, and it may be safely assumed that the dress of the small Arab élite and their epigones (*mustaʿribūn*) remained generally faithful to the styles of the Damascus caliphate. The newer Islamic styles with their oriental influences became the fashion of the upper classes when the ʿIrāḳī singer Ziryāb [*q.v.*] arrived at the court of Cordova in 207/822, where he established himself as the Andalusian Petronius. He was not only the *arbiter elegantiarum* in regard to the cut, colour, and fabric of clothes, but established the proper season for each outfit (al-Makkarī, *Analectes*, ii, 88, citing Ibn Ḥayyān). It was he who established the *djubba* as the standard robe for both sexes. One eastern fashion which only took limited root in Spain was the wearing of the turban (*ʿimāma*), which was reserved mainly for the *fuḳahāʾ*. Bare heads or heads crowned with a red or green wool cap (*ghifāra*) were commonplace for much of the Spanish population of all classes. Most of the figures that appear in the genre scenes on carved ivory pyxes from Umayyad Spain appear to be bareheaded (see e.g. E. Kühnel, *Islamic art and architecture*, Ithaca, N.Y. 1966, Pl. 12a; W. M. Watt and P. Cachia, *A history of Islamic Spain*, Edinburgh 1965, Pls. 5 and 7). The *ḳalansuwa* and the *ṭaylasān* were also in vogue after the arrival of Ziryāb (for details on both, see LIBĀS, section 1). The last ʿĀmirid *ḥādjib* ʿAbd al-Raḥmān Sanchuelo increased his already great unpopularity in 399/1009 by ordering courtiers to wear turbans in the style worn by the Berber military (Ibn ʿIdhārī, iii, 48). The style was soon abandoned when two months later his rule came to its violent end.

There was with the passage of time considerable intermingling of styles between the Christian North and the Muslim South. The Spanish peasant's frock, *sayo*, in Ar. *shāya* (from Lat. *sagum*) was commonly worn in the countryside (Lévi-Provençal, *Hist. Esp. mus.*, iii, 425; Dozy, *Vêtements*, 212 f.). Soldiers wore a scarlet cape (*ḳabāʾ*) similar to that worn in Christian territory (Lévi-Provençal, *op. cit.*, iii, 429; Dozy, *op. cit.*, 360; obviously derived from Sp. *capo* or *capa* and not from Pers. *ḳabā*, concerning which see LIBĀS, sections 1 and 3). Oriental fashion progesssively gave way—perhaps as a partial corollary to the Reconquista—to a uniquely Andalusian style or cut (*tafṣīl*). By the 7th/13th century, an Easterner in the turban and robes of the Levant was regarded as a curiosity (Lévi-Provençal, *op. cit.*, iii, 492).

It is interesting to note that although Muslim

women in Spain wore the various veils used in the Middle East, such as the *khimār*, *burḳuʿ*, *miḳnaʿa*, and *izār* (see e.g. H. Pérès, *La poésie andalouse, en Arabe classique au XIe siècle*², Paris 1953, 179, 180, 329), they were not always too strict about it. The poet al-Ramādī saw the beautiful Khalwa at the Bāb al-ʿAṭṭārīn, a popular gathering place for women in Cordova, and fell in love with her at first sight. Although she was unveiled, he did not know whether she was slave or free (Ibn Ḥazm, *Ṭawḳ al-ḥamāma*, ed. Ḥ.K. al-Ṣayrafī, Cairo n.d., 22 f.). The roguish Ibn Ḳuzmān [*q.v.*] tells of a married Berber woman he met and with whom he had an affair. She is described as wearing only a garland on her head (J. T. Monroe, *Hispano-Arabic poetry*, Berkeley and Los Angeles 1974, 265). Jurists complain of the heretical innovation among the common people whereby a man allows his wife or fiancée to unveil in front of someone other than an immediate male relative (Ibn ʿAbd al-Raʾūf, *Risāla fī ādāb al-ḥisba wa 'l-muḥtasib*, tr. R. Arié, in *Hespéris-Tamuda*, i [1960], 32). This laxity may have been due to the influence of the large non-Muslim population or of the considerable Berber element, or both. Even women who were normally veiled would bare their faces when in mourning (see e.g. Pérès, *op. cit.*, 103; also Ibn ʿAbdūn, *Risāla fi 'l-ḳaḍāʾ wa 'l-ḥisba*, tr. Lévi-Provençal, *Séville musulmane au début du XIIe siècle*, Paris 1947, 59, para. 53).

3. The Berber Empires and their successor states. Middle Eastern influences in Maghribī dress — as in other aspects of material culture—declined greatly from the late 5th/11th century onward. Indigenous Berber and Spanish influences became stronger than ever. The major factors in the increasing "Berberisation" and "Andalusianisation" were the rise of extensive Berber empires that united the Maghrib with what remained of Muslim Spain. This occurred at a time of growing isolation, when the Arab East was coming under the rule of Turkish military régimes with their own language, customs, and style of dress [see LIBĀS, section 1] and when the arteries of communication between Maghrib and Mashriḳ, though by no means cut, were not as smooth as in preceding centuries, because of the war, instability, and the overall decline of Muslim sea power. Lastly, the urban centres of high culture in Ifrīḳiya which had set the fashion for much of North Africa were in ruins after the invasion of the Banū Hilāl Bedouin. Further west, Morocco was a centre of power and Spain a centre of culture. Once united, they would become the focal point of style for the rest of the Maghrib.

The rise of the Almoravids paralleled in a sense a contemporary phenomenon in the East. They were a non-Arab ruling élite who wore their own distinguishing uniform. They dressed in Saharan Berber fashion, and are described as being untouched by Mediterranean civilisation (al-Bakrī, *K. al-Mughrib fī dhikr bilād Ifrīḳiya wa 'l-Maghrib*, ed. de Slane, Algiers 1857, 164 f.; also Ibn Khaldūn, *ʿIbar*, vi, 181). The main feature setting the Almoravids apart from their subjects was their face veil (*lithām* [*q.v.*], which masked the lower half of their face), hence their nickname of *al-mulaththamūn*. Ibn Khaldūn (*ʿIbar*, vi, 197 f.) notes that many Saharan people were *mulaththamūn* even in his own day. The style was essentially the same as that of the modern Tuaregs. Almoravid dress was not for the subject population. In fact, Ibn ʿAbdūn (*op. cit.*, 61 ff., para. 56) warns against permitting even the other Berbers in the service of the Almoravids to wear the *lithām* in the streets of Seville because of the fear it struck in the population. The Almoravids also wore the *ʿimāma* and *bərnūs*. There were some Andalusians who donned these items in order to ingratiate themselves with their new masters, even though their own compatriots laughed at them (Ibn Abbār, *al-Ḥulla al-siyarāʾ*, in Dozy, *Recherches*³, i, p. li).

The Andalusians found little to copy from the Almoravids. However, the latter found a great deal worthy of emulation in Spanish civilisation. Under Almoravid rule, Andalusian culture spread into Morocco together with, certainly, Andalusian fashions. This movement of styles across the Straits of Gibraltar mainly from north to south would continue under the Almohads and in varying degrees under their successors.

The rise of the Almohads had a more direct and lasting influence on Maghribī costume history. The Mahdī Ibn Tūmart's [*q.v.*] puritanism extended to matters of dress. His biographer al-Baydhaḳ relates that on his return home from the East, the Mahdī upbraided the people of Bidjāya for wearing sandals with gilded laces (*al-aḳrāḳ al-zarrāriyya*) and turbans not in the Muslim fashion (*ʿamāʾim al-djāhiliyya*), and for men wearing *futūḥiyyāt*, which was apparently a tunic normally for women (*Taʾrīkh al-Muwaḥḥidīn*, ed. in Lévi-Provençal, *Documents inédits d'histoire almohade*, Paris 1928, 52, Ar. text). The prudish Mahdī had to cover his face when passing adorned and unveiled female *laban* vendors in the streets of Tlemcen (*ibid.*, 61). His full wrath was heaped upon the Almohad rulers themselves. In the Friday mosque of Marrakesh, he called the veiled *amīr* and his retinue "veiled slavegirls" (*ibid.*, 68; *djawārī munaḳḳabāt*). When he encountered the princess al-Ṣūra unveiled as was customary among Almoravid women, he reprimanded her so severely that she went crying to her brother the *amīr* (Ibn Khaldūn, *ʿIbar*, vi, 227).

Like all Berbers, the Almohads wore the *burnus* (also *burnūs*) and the *kisāʾ* (al-Baydhaḳ, *op. cit.*, 72 f.). They normally wore the form of turban known as *kurziyya* (*ibid.*, 81). Under the Ḥafṣids, the descendants of the great Almohad families wore the *ṭaylasān* with the ends criss-crossed in front like the Arabic letters *lām-alif* (R. Brunschvig, *La Berbérie Orientale sous les Ḥafṣides*, Paris 1947, ii, 278. It was not long before the early Almohad simplicity in dress gave way to the luxuries of al-Andalus. They bestowed magnificent robes of honour (*khilaʿ saniyya*) upon their favourites (al-Marrākushī, *K. al-Muʿdjib fī talkhīṣ akhbār al-Maghrib*, ed. Dozy, Leiden 1881, 175, 184, 230).

From the Almohad period onwards, veiling for women was more strictly observed throughout North Africa and Muslim Spain. The Almohads also instituted one of the most unusual applications of the laws of *ghiyār* [*q.v.*]. Suspecting the sincerity of the large number of Jews who had converted to Islam under duress, the caliph Abū Yūsuf ordered that all these neophytes should wear distinguishing clothing consisting of blue-black garments (*thiyāb kuḥliyya*) with exaggeratedly wide sleeves (*akmām mufriṭat al-saʿa*) which reached to the ground, and ludicrous caps (*kalawtāt ʿalā ashnaʿ ṣūra*) that resembled pack saddles (*ka-annahā 'l-barādiʿ*) which extended below the ears (al-Marrākushī, *op. cit.*, 223). His son and successor Abū ʿAbd Allāh changed the uniform to yellow garments and yellow turbans (*ibid.*). It may be considered part of the Almohad heritage that in Morocco throughout the later Middle Ages and until modern times, the dress code for Jews was one of the most strictly applied in the Muslim world (see N. A.

Stillman, *The Jews of Arab lands*, Philadelphia 1979, 83, 304, 312, 367).

There were no great changes in Maghribī fashion with the passing of the Almohads. The Ḥafṣids in Tunisia, the Zayyānids in Algeria, and the Marīnids in Morocco were all in a sense successors rather than supplanters of the Almohads. The information on Tunisian dress culled by Brunschvig (*Ḥafṣides*, ii, 276-82) correlates well with what is known from the preceding period. Local names for special varieties of garments appear more frequently now, as for example, *barrakān*, the heavy wrap for men and the *safsāri*, the light wrap for women. Both are mentioned as being commonly worn in Tunisia (*ibid.*, 276, 280), and both are known from earlier centuries as well (see Y. K. Stillman, *Female attire of medieval Egypt*, 42 f., 62 f.). Leo Africanus's [*q.v.*] description of clothing worn in Marīnid Fez also shows considerable continuity in the general outlines (*Description de l'Afrique*, tr. A. Epaulard, Paris 1956, i, 207 f.). He does note that the learned doctors and gentlemen wore jackets with large sleeves like upper-class Venetians. He also mentions that women's trousers for outdoor covered the entire leg. He further notes that the latter are always veiled with a large wrap covering the head and the entire body (*ḥāʾik*) as well as with a face veil (*lithām*) covering all but the eyes (*ibid.*, 208).

Clothes are mentioned by the Marīnid historian Ibn Aḥmar (*Rawḍat al-nisrīn fī dawlat Banī Marīn*, Rabat 1382/1962, 15) in connection with the popular Moroccan belief in *baraka*, the blessedness of a charismatic individual. The Amīr ʿAbd al-Ḥaḳḳ b. Maḥyū was considered by the Zanāta to be a possessor of *baraka* and a *mudjāb al-duʿāʾ* (one whose prayers are answered). His *ḳalansuwa* and *sarāwīl* would be sent to women in difficult labour to ease the birth.

With the passing of the Almohads, the Muslims of Spain abandoned the turbans they had briefly worn (al-ʿUmarī, *Masālik al-abṣār fī mamālik al-amṣār*, tr. Gaudefroy-Demombynes, Paris 1927, 234). Multi-coloured garments were popular. The wealthy wore garments of the fine gilded silk (*al-washy al-mudhahhab*) produced in Almeria, Murcia, and Malaga or special silken clothes (*al-libās al-muḥarrar*) called *mulabbad mukhaṭṭam* ("felted, checked") made in Granada and Basta (al-Maḳḳarī, *Analectes*, i, 123). R. Arié has noted that fashions of the neighbouring Christian kingdoms already influenced the mode of Andalusian dress in the early days of the Naṣrids (*L'Espagne musulmane au temps des Naṣrides*, 382). The *sayo* (Ar. *shāya*) mentioned above was worn not only by peasants, but even by the Naṣrid monarch when out riding (*ibid.*). The *marlota* (Ar. *mallūṭa*), a sleeved outer garment whose precise details are vague, and the *capellar* (Ar. *ḳābillār*), a hooded cloak shorter than the *burnus*, were among the new fashions (*ibid.*, 386).

4. From the end of the Middle Ages to modern times. The basic outlines of Maghribī costume remained quite constant from the end of the Middle Ages up to and well into the period of colonial domination. Certain new fashion elements were brought into the region by the Turks in Ṭunisia and Algeria and by the Moriscos and Jewish refugees from Spain in these countries and Morocco as well. Most of the clothing innovations which they introduced remained particular to their own ethnic group. Thus, for example, the *djalṭīṭa* (Sp. *giraldetta*), a whirling skirt, was worn in Morocco only by Jewish and Andalusian women (see Y. K. Stillman, *The costume of the Jewish woman in Morocco*, in *Studies in Jewish Folklore*, ed. Talmage, Cambridge, Mass. 1980, 350, 355, l. 30). The high, brimless hats known as *ṭarṭūr* and *ṭarṭūra* in Algeria were part of the uniform of the Turkish military élite (Marçais, *Costume d'Alger*, 53-8), and as late as the 18th century, the Turkish-style *dulband* was not permitted to native North Africans (*ibid.*, 53). Nevertheless, Ottoman modes of dress did make themselves felt in the urban centres of Algeria and Tunisia. The *jaleco* (Turk. *yelek*) was very popular in Algeria, and the high, split cone, metal head piece, known as the *ṣārma*, became a general fashion for women in Algeria and Tunisia (*ibid.*, 116-119, and Pls. xxix, xxxii, xxxiii, xxxiv). Likewise, the *djabadūli*, or *djabadōr*, a short coat brought by Jews and Andalusians became widespread in the cities of Morocco and Algeria, and in Morocco was manufactured exclusively by Jewish tailors (see Brunot, *Noms de vêtements masculins à Rabat*, in *Mélanges René Basset*, i, 97 f.).

Most remarkable is the conservative nature of draping patterns in men's clothing, which as we have seen goes back to the world of Antiquity. Also interesting to note is the widespread use of fibulae to fasten garments. The Maghribī fibula, called *bzīma*, *khellāla*, *kitfiyya*, and in Berber *tabzimt*, *tizerzay*, and *tazerzit*, has been shown to go back to Antique prototypes (H. Camps-Fabrier, *L'origine des fibules berbères d'Afrique du Nord*, in *Mélanges Le Tourneau* = *ROMM*, nos. 13-14 [1973], 217-30). However, traditional attire is—as in the case of the Middle East—losing ground rapidly to Western dress, particularly in the major cities and towns where more than half the population now resides.

GLOSSARY

aʿaban: large outer wrap for Berber men (Mor.)
ʿabāya: a sleeveless, long overblouse for men; a sleeveless, flowing dress for women (Alg.)
ʿabrūḳ: bandana for women (S. Mor.)
akhnīf, *khnīf*: Berber cape, hooded for men, unhooded for women (S. Mor.)
ʿarrāḳiyya: skull-cap for men (Mor., Alg., Tun.)
bābūshāt: flat slippers for both sexes (entire Maghr.)
bakhnūḳ: embroidered head shawl for women (Tun.)
barrakān: large enveloping outer wrap for both sexes (Lib.)
bədʿiyya: sleeveless vest for men (entire Maghr); a sleeveless *ḳafṭān* for women (Mor.)
bəlgha: flat slippers, usually pointed at the toe, but sometimes rounded, worn by both sexes (entire Maghr.)
bərnūs: large hooded cape for men (entire Maghr.)
bhīḳa: woman's hat (entire Maghr., but different in each country)
čāmir: body shirt for both sexes (Mor.)
dāmī: jacket for men (Alg.)
dərbāla: a vest (Lib., Tun.); an old threadbare garment (Mor.)
djābādūli, *djābādōr*: a full-length, caftan-like garment with either no buttons, or a single button in front (Mor., Alg.)
djarāʾid: a pair of men's leather leggings (Tun.)
djellāba, *djəllābiyya*, *djəllāb*: Hooded outer robe with long sleeves, originally worn by men only, now by both sexes (mainly Mor., also W. Alg.)
djubba: full-length, sack-like chemise without sleeves (Tun.)
djūkha: a long, woollen outer robe without sleeves or collar which is closed by a single button at the neck; worn by men (Mor., Alg., Tun.)
dūka: a pointed bonnet for women (Tun.)

durrāʿa, dərʿa, dirra: long robe with sleeves for both sexes (entire Maghr.)
falṭīṭa, djalṭīta, djanṭīṭa: a skirt of Spanish origin worn mainly by Jewish and Andalusian women (Mor.)
faražiyya (Berb. *tafaražit*): a very light gown with a deep slit at the breast which may or may not have sleeves and is worn under the *ḳafṭān* or garment by both sexes (Mor.). It also comes in a half-length version called *nuṣṣ faražiyya*
fərdja, fradja: garment similar to the *faradjiyya* for men only (Alg., Tun.)
fərmla: vest for elderly men (Alg.)
fishtūl: shawl and headscarf for women (Mor.)
frīmla, furmayla: corselet for women (Alg.); embroidered bolero (Lib.)
fūṭa: outer wrap; loin cloth for women (entire Maghr.)
fūḳiyya: a body shirt for men worn under the *djallāba* (Mor.)
gandūra: full-length tunic with short sleeves for men (S. Mor.) and for both sexes (Alg.)
ghlāla: sleeveless outer robe for women (Mor.)
ghlīla: vest for both sexes (Alg.)
gnīdra: a light, lacy chemisette for women (Alg.)
haddūn, ahaddūn: a variety of heavy *burnus* (Mor.)
ḥāʾik, ḥāyk, taḥaykt: large outer wrap, usually white, worn by both sexes (entire Maghr.)
ḥzām: general designation for belt, especially a sash (entire Maghr.)
iburegsen, idūshsha, iherkas: all names for a simple Berber sandal (Mor.)
ikerzī: a Berber turban consisting of a white cloth wound about the head leaving the crown uncovered (Mor.)
ʿimāma: standard turban (entire Maghr.)
ʿīsāwiyya: a simple, wide tunic consisting of a hole in the centre for the head and one at each side for the arms, made of striped wool and worn by men; also a very ample blouse of strong cotton worn over other clothing (Mor.)
izār: large outer wrap for both sexes (entire Maghr.); fringed shawl worn by Jewish women (Mor.)
kabbūṭ: a coat for both sexes (entire Maghr.)
ḳabḳāb: wooden clogs for women (Alg. Tun.)
ḳafṭān: caftan, originally worn by men and women, now only by women (Mor., Alg.)
ḳalansuwa: pointed bonnet for men (Alg., Tun.)
ḳamīṣ, ḳamīdjdja, ḳamīdja: long body shirt for both sexes (entire Maghr.)
ḳashshāba: long sleeveless outer gown for men; long-sleeved flowing tunic with a deep slit down the breast for women (Mor.)
kbāya: sleeveless vest for men (Alg.)
khlālī: a red wrap for women (Mor.)
kəswa kbīra: elegant wedding and festivity dress of Jewish women consisting of several parts, derived from 15th century Spanish dress style (Mor.)
ḳmādjdja: fine embroidered tunic for both sexes (Tun., Lib.)
ksā: large outer wrap for both sexes (entire Maghr.)
ḳṭīb: headscarf for women (Mor.)
kurziyya: belt for both sexes (Mor.)
lithām: veil for lower half of the face, worn by married women (Mor., Alg.)
malūsa: large Turkish style turban worn by religious dignitaries (Tun.)
maryūl: short, embroidered shift for women (Lib.)
mḍamma: leather belt worn by men, women and children (Mor.)
milḥafa, mlaḥfa, taməlḥaft: large outer wrap worn by both sexes (entire Maghr.)
məntān, məntāl: man's waistcoat with long, straight sleeves (Mor., Alg., Tun.)
naʿl, nʿāla, nʿāyl: sandals (entire Maghr.)
nḳāb: face veil for married women, often synonymous with *lithām* (Mor., Alg.)
riḥiyyāt: flat leather slippers worn by both sexes (Mor., Alg., Tun.)
rezza, rrəzt: small, rather flat turban (Mor.)
safsāri: large outer wrap for women (Tun., Lib.)
sāya: a skirt (N. Mor.); a dress (S. Mor.)
səbbāṭ: closed shoes for either sex (Mor., Alg., Tun.)
sərbīl, sherbīl: flat slippers for both sexes (Mor.)
shədd, shədda: turban (Mor., Alg., Tun.)
shāl, shān: head scarf for both sexes (Mor., Alg., Tun.)
shāshiyya, shāsh: brimless soft hat worn by both sexes (entire Maghr.)
shḳūfiyya, ḳūfiyya: woman's bonnet (Tun.)
səbniyya: woman's headscarf (Mor., Alg.)
sədriyya (= *ṣadriyya*): a man's waistcoat (entire Maghr.)
səlhām (Berb. *āsəlhām*): man's hooded cape (Mor.)
sərwāl: trousers for both sexes (entire Maghr.)
taʿdjīra: large embroidered shawl for women (Tun.)
takayda: pointed woman's bonnet (Tun.)
ṭāḳiyya: skull cap for men (entire Maghr.)
ṭarbūsh: hats of various types for men (entire Maghr.)
taraza, tarazala, tarazal: wide-brimmed straw hat for both sexes (Mor., Alg.)
təstmal: fringed head scarf for women (Lib.)
tḳāshər: stockings for both sexes (entire Maghr.)
tmāḳ: riding boots (entire Maghr.)
ṭrābaḳ: leather leggings worn by women (Mor.)
wiḳāya: woman's head scarf (Mor., Alg.)
žəllāba: see *djellāba*
zərgūta: a simple, sleeveless, square-cut man's tunic (S. Alg.)
zibbūn: a man's jacket with long sleeves (Lib.)
zzīr: a Berber scarf for both sexes (Mor.)

Bibliography: For the Maghrib in general, Dozy, *Vêtements*, is still extremely useful, since it is based heavily upon North African and Spanish sources. (1) For Algeria: G. Marçais, *Le costume musulman d'Alger*, Paris 1930, remains unparalleled. See also: A. Bourgeot, *Le costume masculin des Kel Ahaggar*, in *Libyca*, xvii (1969), 355-76; M. (Y. K. Stillman)

iii. — Iran

Iranian costume belongs to a completely different vestimentary system than does Arab costume. The most salient features have shown remarkable consistency from pre-Achaemenid to modern times. Whereas Arab costume (see i. above) is marked by rectangular tunics and loose wraps, Iranian clothing has traditionally featured tailored garments that include a sleeved coat of varying length and ampleness (*ḳabā*), long, straight trousers (*shalwār*) or leggings (*pāy-tāba* or *rān*), close-fitting boots (*mūza*, *kafsh*, *khifāf*, or *čaḳma*), and a high or medium high soft cap (*kulāh* or *ḳalansuwa*, the latter perhaps a descendant of the ancient *kyrbasia*). This type of attire is typical of other equestrian peoples from the steppes of Inner Asia, such as the Scythians, and also of the Phrygians, and is consistent both with the harsh and highly variable climate and their pastoral way of life. It also shows strong affinities with the clothing of other Indo-Aryan peoples who moved further west, such as the Germans. This sort of clothing was also convenient to the calvary warfare practised by these peoples. Flowing robes were also worn, but mainly as royal or priestly dress for ceremonial occasions. Women, like men, wore coats or jackets (*ḳabāča* or *nīm tana*) and trousers or a skirt (*dāman*), with however, a chemise (*pīrāhan*) or tunic (*djāma*, a word which like Ar. *thawb* also designates an unspecified garment and cloth in general).

For convenient surveys of pre-Islamic Iranian costume, see H. Goetz, *History of Persian costume*, in *Survey of Persian art*, ed. A. Pope, London-New York 1938, 2227-36; Georgina Thompson, *Iranian dress in the Achaemenian period*, in *Iran*, *JBIPS*, iii (1965), 121-6; Dj. Ḍiyāʾ Pūr, *Pūshāk-i zanān-i Īrān*, Tehran 1347/1968, 4-125.

1. The Umayyad and ʿAbbāsid periods. During the Umayyad period ʿIrāḳ, which had for centuries been part of the Persian cultural sphere, became arabised. Traditional Iranian modes of dress remained in the Iranian heartlands and in Transoxania. Despite the fact that Umayyad rulers adopted elements of Iranian costume for themselves and their court (see e.g. R. Ettinghausen, *From Byzantium to Sasanian Iran and the Islamic world*, Leiden 1972, 21, 30-3), they did not permit the Arab fighting men on duty in the Persian territories to don Iranian clothing. Soldiers who put on the Persian-style cuirass (*khaftān*) and leggings (*rān*) were punished (B. Spuler, *Iran in früh-islamischer Zeit*, Wiesbaden 1952, 515). However, by late Umayyad times the Arabs settled in Khurāsān were becoming increasingly assimilated into the local culture, and, it may be assumed, had adopted many elements of native attire.

The rise of the ʿAbbāsids, the founding of Baghdād, and the increasing importance of Persian *mawālī* in the civil service, made ʿIrāḳ a zone of osmosis where Iranian and Arabo-Hellenistic styles fused, with Iranian elements passing westward and Arab styles and terminology eastward. There is a frequent overlap in the New Persian vestimentary vocabulary of Arabic and Iranian terms (e.g. Ar. *libās* becomes a common synonym for Pers. *pūshāk*). Nevertheless, native Iranian styles remained distinctive well into the ʿAbbāsid period, as noted by the Arab geographers (e.g. al-Muḳaddasī, 326-7. For other sources, see P. Schwartz, *Iran in Mittelalter*, repr. Hildesheim 1969, 140-2, 404-5, 424-6, and 834-5). Among the more particular Iranian fashions in Arab eyes were the wearing of boots (*khifāf*) in summer as well as in winter (al-Muḳaddasī, 327), the unique cold weather clothing (*ibid.*, 328), and the extensive use of the *ṭaylasān*, or headshawl worn over the turban, by religious scholars and notables in the northern and eastern parts of Iran and even by the common folk in Fārs (*ibid.*, 327, 440).

Throughout the ʿAbbāsid period—as in earlier and later times as well—Iran was noted for its fine textiles. For a thorough survey of Persian textile production in this period, see R. B. Serjeant, *Islamic textiles*, Beirut 1972, *passim*. Iran was also noted for the special garments produced there. Āmul and Ḳūmis were famous for their wool *ṭayālisa* (ps.-Djāḥiẓ, *K. al-Tabaṣṣur bi 'l-tidjāra*, ed. Ḥ. Ḥ. ʿAbd al-Wahhāb, Cairo 1935, 30-1), Gurgān and Rayy for their excellent variety of soft wool cloaks known as *narmaḳ* (from Pers. *narm* "soft", *ibid.*, 29-30), and Bam for its fine kerchiefs and turban cloths (*dastār-i bamī*, anon., *Ḥudūd al-ʿālam*, rev. ed. V. Minorsky and C. E. Bosworth, London 1970, 125). Ādharbāydjān, Armenia, and Arrān produced the best quality trouser cords (*shalwār band*, *Ḥudūd al-ʿālam*, 142-3). Kāth, the capital of Khwārazm, was noted for its quilted jackets (*ḳazhāgand*, *Ḥudūd al-ʿālam*, 121).

Artistic representations from the 5th-7th/11th-13th centuries invariably show both men and women in a full-length sleeved coat (*ḳabā*) with arm bands (*bāzū band*) either with or without *ṭirāz* inscriptions. In a 6th/12th century stucco relief from Rayy, each of the women in the courtly scene is depicted in a brocade coat (*ḳabā-yi dībā*) with a bordered edge (*ḥāshiya-dār*). Each woman wears a fillet (*pishānī band*) in the centre of which is an aigrette (*djiḳa*). Most of the women wear a necklace (*gardan band*) and earrings (*gūshwārahā*) (the relief is included in Pope, *Survey*, v, Pl. 517 and Ḍiyāʾ Pūr, *Pūshāk-i zanān-i Īrān*, Pls. 106 and 107. For a survey of Persian jewelry during this period, see Dj. Ḍiyāʾ Pūr, *Ziwarhā-yi zanān-i Īrān*, Tehran 1347/1968, 331-62).

The Saldjūḳ period did not mark for Iran the introduction of totally new styles of dress as it did in the Arab East (see section i, above, 8) since the Saldjūḳs were themselves under the influence of Persian culture. There were, however, some new fashions that were introduced at this time, particularly in head coverings. At least three distinctive caps were introduced at this time, all of Inner Asian, Turkish origin (for examples of Saldjūḳ caps, see ill. no. 7; also Pope, *Survey*, v, Pls. 643B, 652, 655, 686, 687, 688A, 692, 694, 706, 708, 714A, 813). Men of high rank wore a crown-like hat with a pointed rim on either side (*dūshākh*, Spuler, *Iran*, 365). The so-called Saldjūḳ crown (*tādj*, *tādj kulāh*, or *afsar*), which shows affinities both to one of the Mongol caps and to the ancient Sāsānid crown, remained for centuries the headdress of rulers and princes depicted in Persian paintings. It is perhaps to this sort of "crown" that the poet Saʿdī refers in the expression *kulāh khudāwandī*, or "cap of lordship" (*Būstān*, Introd., 1. 212, in *Kulliyyāt-i Saʿdī*, ed. M. ʿA. Farūghī, Tehran 1964, 12). These various hats were apparently known by regional and ethnic names, such as *kulāh-i khwārizmī* (al-Rāwandī, *Rāḥat al-ṣudūr*, Tehran 1333, 385) or *kulāh-i tatarī* (Saʿdī, *Gulistān*, in *Kulliyyāt-i Saʿdī*, 62). The Saldjūḳs also introduced new military garments.

2. The Īlkhānid and Tīmūrid Periods. The Mongol conquests brought with them many totally new fashions from the Far East. Court styles were those of China: mandarin robes with elbow-length sleeves are most commonly depicted. These were decorated with heraldic designs on the breasts and back—usually Chinese clouds, scrolls, and vegetal motifs. Beneath the robe was worn a long-sleeved tunic. Men wore a variety of hats with brims turned up or down, and even with double brims (for examples of these different hats, see Goetz, *Persian costume*, in Pope, *Survey*, iii, 2239, Fig. 746a-h; and D. T. Rice, *The illustrations of the "World history" of Rashid al-Din*, Edinburgh 1976, 21, Fig. 10a-f).

Military attire was also of the Far Eastern variety, consisting of long coats of link mail arranged in horizontal bands (*djawshan-i ḳabā*) or cuirasses (*zira*) of mail (Djuwaynī, *Taʾrīkh-i Djahāngushā*, ed. Ḳazwīnī, ii, 186, 176. For examples of the Mongol long mail coat, see Rice, *Illustrations ... of Rashid al-Din*, Pls. 38, 44, 48, 49, 53. For the mail cuirass, see Pope, *Survey*, v, Pls. 834B, 839, and 842A). The latter could be worn under a robe (*zira dar zir-i djāma*, Rashīd al-Dīn, *Histoire des Mongols de la Perse*, ed. and tr. E. Quatremère, repr. Amsterdam, 1968, 122).

Also typical of Mongol armour were their close-fitting helmets with ear-flaps and a small spike at the top (for examples, see Rice, *Illustrations ... of Rashid al-Din*, Pls. 22, 38, 39, 40, 43).

During the Īlkhānid period, women's clothing seems not to have undergone any major change, except with respect to the head gear. The head scarf (*sar band*) was worn for the most part as a wimple (see e.g. Pope, *Survey*, v, Pl. 836B) by non-Mongol women. The Mongol princesses, however, wore a special bonnet consisting of a light wood frame covered with silk and from the top of which protrudes a long feather (see Goetz, *Persian costume*, in Pope, *Survey*, iii, 2241, Fig. 747a-b). This bonnet is frequently mentioned by Rashīd al-Dīn (*Histoire des Mongols*, ed. Quatremère, 102, 106, 107), and is called *bughtāḳ*. The *bughtāḳ* could be ornamented with gold and precious stones and sometimes had a long train (*dhayl-i bughtāḳ*) which hung down behind. According to Ibn Baṭṭūṭa, the girls who attended the Mongol ladies wore "a *kulāh* that looked like an *aḳrūf* (fez) with a gold band encrusted with jewels around the upper part, topped with peacock feathers" (Ibn *Baṭṭūṭa*, ii, tr. H. A. R. Gibb, Cambridge 1958, 485).

Despite Tīmūr Lang's partiality to Mongol ways, there is a noticeable decrease in Mongol influence as far as Persian costume is concerned under the Tīmūrids. The bulky mandarin robes give way to close-fitting garments which follow the body's own lines. The outer *ḳabā* was often left entirely open or was left partially-open at the neck and below the waist revealing another coat below, beneath which a long body shirt (*ḳamīṣ* or *pīrāhan*) was worn. The *kamar band* which, except for a military belt over the armour, had all but gone out of style in the Īlkhānid period, became once again a regular part of male attire, worn on either the inner or the outer coat. The distinctive caps and hats of the Saldjūḳ and Mongol periods were gradually replaced during the Tīmūrid period by turbans, which at first were small, but became progressively larger throughout the 9th/15th century (for examples of the caps and turbans of the period, see Pope, *Survey*, v, Pls. 851, 860, 865, 878, 880, 882). The reason for the gradual disappearance of the Mongol caps is that they came to be considered as symbols of paganism, in contradiction to the *dastār* which was symbolic of Islam (see e.g. Muḥammad Ḥaydar, *A history of the Moghuls of Central Asia*, tr. E. D. Ross, repr. New York 1970, 58). One new head-covering that appears at this period is the *ḳalpāḳ*, a fur-trimmed cap of Turkoman origin. As in earlier periods, both men and women wore fur cloaks (*pūstīn*, Ḥāfiẓ-i Abrū, *Dhayl-i Kitāb-i Ẓafar-nāma*, Tehran n.d., 25) and fur-trimmed robes (*ḳabā pūstīnī*, Saʿdī, *Gulistān*, in *Kulliyyāt-i Saʿdī*, 119; and idem, *Būstān*, in *Kulliyyāt-i Saʿdī*,

213). For illustrations of fur-trimmed coats, see Pope, *Survey*, v, Pls. 842B, 878; also Ḍiyā' Pūr, *Pūshāk-i zanān-i Īrān*, Pls. 129, 132.

Female attire during the Tīmūrid period also consisted of several layers of long, close-fitting robes. The *pīrāhan* covered the entire body down to the feet and was long-sleeved. A wide variety of outer coats were worn by women at this time. Although some had long, narrow sleeves, most were short-sleeved (*āstīn-i kūtāh*), and some were sleeveless. The woman's *ḳabā* depicted in Tīmūrid paintings came in both long and three-quarter length versions (For the feminine *ḳabā* in all its variety, see Ḍiyā' Pūr, *op. cit.*, 143-65, Pls. 113-32.) The short coat is perhaps the *ḳabāča*, mentioned in earlier literary sources (e.g. al-Kātib al-Arradjānī, *Samak-i ʿAyyār*, Tehran n.d., i, 50), but does not appear in artistic representation until this time.

Most of the women's head-dresses depicted in Tīmūrid paintings are simple, consisting in the main of a white *sar band* worn in the simple fashion of the preceding periods or allowed to flow down behind. Some women are depicted wearing a close-fitting bonnet-like cap which is usually dark in colour. The bonnet has wide flaps that come down in front of the ears, and is held in place with a chin strap. On the top of the bonnet is a small flat plaque to which the face veil is attached (see Ḍiyā' Pūr, *op. cit.*, Pls. 119-20; also J. M. Scarce, *The development of women's veils in Persia and Afghanistan*, in *Costume*, v [1975], 6, Pl. 4, where, however, this headdress is interpreted somewhat differently).

European travellers report that women appeared in public at this time in an all-enveloping white wrap (*čadār-i safīd*), their faces hidden behind a black net of woven horsehair (*pīča*) (e.g. Ruy Gonzales de Clavijo, *Narrative of the Embassy . . . to the court of Timour*, London 1859, 89). Another sort of face veil worn at this period was a small, white mask covering only the mouth and chin (*dahān band*, Ḍiyā' Pūr, *op. cit.*, 155, Pl. 212).

3. The Ṣafawid period. The establishment of the Ṣafawid dynasty marks not only a watershed in Iranian political and religious history, but a turning point in its costume history as well. During this period, Far Eastern influences in Persian costume cease to be important, and there is a reassertion of native Iranian styles.

The most immediate change came in the man's turban (*dūl band*), which was wrapped around a cap with a high, spiked protrusion that extended straight up through the middle of the headdress (see e.g. Pope, *Survey*, v, Pls. 893A, 895, 896, 898, 900, 901B). The cap which forms the centre of the turban was known as the *tādj Ṣafawī*. It was normally red, although occasionally blue. Because of the red caps which distinguished the Shīʿī Ṣafawids and their followers, they were referred to by the Sunnīs as *kulāh-i surkh*, or "red caps" (see Abu 'l-Ghāzī Bahādur Khān, *Histoire des Mongols et des Tatares*, ed. and tr. P.I. Desmaisons, repr. Amsterdam 1970, 209, n. 1), which was the Persian equivalent of Tk. *ḳïzïl bash* [*q.v.*]. The symbolic importance of the Ṣafawi *tādj* was such that in an allegorical painting showing the religions of the world, the Shīʿīs, as well as Muḥammad, ʿAlī, al-Ḥasan, and al-Ḥusayn are all depicted wearing it (the illustration is in the Houghton *Shāh-nāma*, Metropolitan Museum of Art, New York and is reproduced in B. Lewis (ed.), *The World of Islam*, London 1976, 257).

Ṣafawid costume became extremely sumptuous with the reign of Shāh Ṭahmāsp (930-84/1524-76). Clothes were more closely-fitted than ever before. The *ḳabā* for both sexes became somewhat shorter. It was now fastened in front by a row of shiny buttons or golden frogs. The waist was cinched with a narrow belt decorated with large bejewelled gold discs spaced at equal intervals (for surviving examples of such belts, see Ḍiyā' Pūr, *Zīwarhā-yi zanān-i Īrān*, 365, Pl. 274, and Pope, *Survey*, vi, Pls. 1394B-C; for detailed depictions in miniatures, see *ibid.*, v, Pl. 901). The most outstanding feature of the Persian wardrobe for the next century-and-a-half is the great richness of the fabrics in both colour and pattern (see Pope, *Survey*, v, Pls. 896, 898-900, for illustrations; and *ibid.*, vi, Pls. 1006, 1011, 1012, 1015, 1028, 1034, 1041, 1042, 1046, for actual textiles and garments).

Ṣafawid costume reached its most distinctive development in the 11th/17th century. The *ḳabā* remained close-fitted about the trunk, but was now often flared below the waist. Over the *ḳabā* was worn an overcoat (*bālāpūsh*) which could be short and sleeveless (*kurdī*) or long and with sleeves (*kadabī*). The turban (*mandīl* or *dūl band*) became even larger than before, but no longer had the long stick protruding from the top. A large scarf or sash replaced the belt with roundels. It was usually tied with a large knot in front (for surviving examples of such silk sashes, see Pope, *Survey*, vi, Pls. 1074A-E). Ṣafawid clothing has been described in detail by the European travellers Herbert for the first half of the 17th century (T. Herbert, *Travels in Persia, 1627-1629*, London 1928, 79-80, 230-3) and Chardin for the second half (Sir J. Chardin, *Travels in Persia*, London 1927, 211-15, and the engravings between 212 and 213).

Female attire during this period was very sensuous. The dress (*ḳamīṣ*) was buttoned or tied below the neck, but slit open down to the navel to expose the bare flesh (Pope, *Survey of Persian Art*, v, Pl. 918A). The items of underwear (*tunbān*) were straighter than male drawers and were often decorated with flower motifs. Over these were worn embroidered leggings (*zangār*) that went from several inches above the ankle to slightly above the knee (see Pope, *Survey*, v, Pl. 918, where a reclining female is shown with her dress rolled up to expose her underwear). A loose shawl (*čārḳad*) which was held on the head by a tiara, an embroidered band, or a pointed *kulāh*, fell down on to the back and shoulders (see e.g. J. M. Upton, *Notes on Persian costumes of the sixteenth and seventeenth centuries*, in *Metropolitan Museum Studies*, ii [1929-30], 206, Fig. 2; 214, Fig. 13; and 219, Fig. 21). As in the previous period, the favoured *čādur* for outdoor was white. One new innovation that came into use at this time was the *rū band*, a rectangular white veil that was fastened over the *čādur* and fell down over the face. The *rū band* had a small slit covered with netting over the eyes to permit vision (Scarce, *Women's veils*, in *Costume*, v, 7, Pl. 7).

Two major trends can be detected in Persian costume during the 17th century. One is a bohemianism that appears in the increasingly casual and suggestive style of dressing, at least in the court circles depicted in paintings (see Pope, *Survey*, v, Pls. 917B, 918A-B, 921B, 924B; and Upton, *Notes on Persian costumes*, 217, Fig. 18). The other is a noticeable, albeit still minor, Western influence in clothing styles. At first this influence was more Georgian than truly European (Chardin, *Travels*, 212), but later the influence of the clothing of European traders and diplomats become stronger (Upton, *Notes on Persian costume*, 217).

4. The Ḳād̲j̲ār period. There was little discernible change or development in Iranian costume during the half-century of instability between the end of Ṣafawid rule and the establishment of the Ḳād̲j̲ār dynasty, except for a decrease in the elegance of upper-class attire and an increase in words of Turkic origin in the vestimentary vocabulary.

The second ruler of the Ḳād̲j̲ār House, Fatḥ ʿAlī S̲h̲āh (1212-50/1797/1834), attempted to recreate the glories of the Iranian past with a revival of ancient artistic traditions and styles, including in court dress. He adopted for himself a modified version of one of the Sāsānid winged crowns (see Lewis, *World of Islam*, 270, Pl. 27, and 272, Pl. 32). Wide shoulder capes and diadems in imitation of Tīmūrid prototypes were also revived for a short while (Goetz, *Persian costume*, in Pope, *Survey*, iii, 2254). However, under his successors this artificial renaissance came to an end.

There was growing European influence in Persia already during the reign of Fatḥ ʿAlī S̲h̲āh. During the 19th century these influences became increasingly dominant in court and military dress. Popular costume came under foreign influence more slowly. The many European travellers, missionaries, and diplomats who visited Persia in the 19th and early 20th centuries have left detailed descriptions of clothing of the period. Male costume was composed of loose drawers (*zīr d̲j̲āma* or *s̲h̲alwār*) of white, blue, or red cotton, a collarless shirt (*alkalūk* or *ḳamīṣ*), a tunic (*kamarčīn*), a vest (*kulīd̲j̲a* or *kurdī*), one of a variety of outer coats (*bālāpūs̲h̲, bīrūna, ḳabā, d̲j̲ubba*—the latter favoured by government secretaries), or jackets (*nīm tana*). The principal hat for all classes was the high *kulāh* of felt (*namad*) or lambskin (*pūstī*) which was dented in on one side. Footwear consisted of boots (*sarmūza*) of Russian leather (*bulg̲h̲ār*) for the upper classes, and leather sandals (*čārūḳ*) or cotton shoes (*gīva*) for the common people. The belt for all classes was most commonly a large shawl tied round the waist (*s̲h̲āl kamar*). The mullas commonly wore the *ʿabā* (see section i, above), and *sayyids* the green *ʿimāma* (among the numerous descriptions of male attire, see J. B. Fraser, *A winter's journey: Constantinople to Teheran*, ii, London 1838, 77-103, 151-7, and C. J. Wills, *In the land of the Lion and the Sun, or modern Persia (1866 to 1881)*, London 1893, 317-22).

Female attire for the upper and middle classes consisted of a transparent *pīrāhan* of gauze and pantaloons (*čāḳčūr*). Over these were worn a short frocked coat or jacket and a pleated skirt (*s̲h̲alīta*). The head was normally covered with an embroidered scarf of cotton, silk, or cashmere (*čargāt*). Upper-class women are depicted in contemporary paintings wearing a jewelled tiara (*nīm tād̲j̲*). Out of doors, women wore a white or black *čādur* and one of a variety of face veils (*rū band, pīča, burḳuʿ, niḳāb*) (see Fraser, 322-5; E. C. Sykes, *Persia and its people*, London 1910, 196-203.)

5. Recent years. Urban dress is overwhelmingly that of the modern West. Recently however, there has been a return to the *čādur* even among educated women for political as well as religious reasons. Outside the major cities, and especially in tribel regions, traditional costumes are still worn (for a comprehensive survey, see D̲j̲. Ḍiyāʾ Pūr, *Pūs̲h̲āk-i ilhā, čādurnis̲h̲inān wa-rustāʾiyān ba-rūzigār-i S̲h̲āhans̲h̲āh-yi Muḥammad Riḍā S̲h̲āh-i Pahlawī*, Tehran 1346/1967).

iv. — Turkey

1. Old Turkish costume of the 6th/12th to the 13th/19th centuries. After having settled in Anatolia, the Turks remained faithful to their customs and cultural traditions and preserved their traditional costume. The latter, tracing its origin to Central Asia, was enriched from the 5th/11th century, in Iranian territory, by a certain number of new elements. To judge by the iconographic documents of the 12th to 15th centuries, Turkish costume was inspired to a great extent by Persian costume. But Persian costume evolves, new designs and types of clothing appear in it, whereas Turkish costume, whose style remains almost unchanged for several centuries, retains its specificity and its national character.

Synthesised studies of an historical and comparative character are not always to be found on this subject. The only materials which we have at our disposal, apart from illustrations, are the articles which have come to light and which relate to certain types of clothing in the different periods that Turkish costume has evolved in its history. The question which invariably arouses the largest number of problems and controversies is that of terminology, especially concerning the clothing and the small clothing items of which nothing more has remained. In order to reconstitute the cut of an old costume, its original parts, those which have been preserved, have in the first place to be positioned. Turkish costumes are to be found at present in vary large numbers in the collections of Turkish museums, especially in the Topkapı Sarayı Müzesi of Istanbul. They are also to be found, although in a smaller quantity, in European and American museums, notably in the Victoria and Albert Museum, London, the Islamisches Museum, Berlin, and some others. The oldest pieces of these collections date back to the 15th century, but it is impossible and risky in many cases to establish the exact date of their fabrication. The costume of the 16th century possesses, on the other hand, a documentation which seems credible. This comprises especially the Turkish miniatures and, notably, the special albums with the miniatures of costumes (*ḳīyāfet-nāme*) which constitute in this respect a very rich source of information. Failing originals, we can also derive help in our comparative studies from various iconographic materials originating from Europe, such as prints, engravings, paintings or further representations of Turkish costume on objects in ceramic, metal and other materials.

Another source of information on old Turkish costume is constituted by the writings of travellers,

explorers; the descriptions left by European ambassadors; as well as the documents of Turkish archives speaking of the organisation of corporations of tailors, of sewing workshops and of registers of costumes.

The classification of costumes can be established according to the use for which they were destined. We may distinguish: (1) the civilian costumes, (2) the military ones, and (3) the religious ones (of *ʿulamāʾ* and dervishes). The civilian costumes are divided into (i) costumes of the court (costumes of ceremony, state, household) and (ii) costumes of the bourgeoisie, each having its masculine and fremminine variants.

A complete costume is composed of some basic elements (whose number varies in accordance with needs and whose importance is not always the same): (a) head-gear, (b) outer garments, (c) inner garments, (d) belt, (e) shoes and (f) accessories.

In Ottoman Turkey, there were registers of laws which also contained the precepts of etiquette. These laws regulated notably dress, i.e. head-gear, clothing, the kind and colour of the material, the shoes, all in accordance with the rank occupied in the social and administrative hierarchy, of the religion or race of the person in question. The most important regulations of this kind date back to the period of Süleymān I (1520-66), Aḥmed III (1703-30) and ʿUthmān III (1754-7).

Head-gear. It was the head-gear, masculine as well as feminine, which, in Turkish costume, was characterised by the greatest diversity and mobility of forms.

a) Masculine turbans. The Turkish *ḳavuḳ* was a head-dress of felt or woollen cloth of different thickness around which was wrapped a turban (a long band of material) called in Turkish *sarïḳ* or *dülbend* (current pronunciation *tülbent*). It is from the form of the *ḳavuḳ* and the way in which the turban was tied that there derive different types and names of head-gear known in Europe as turbans. The *ḳavuḳ*s, whose height varied, normally had the form of a contracted or enlarged cylinder, flat or bulging; but there were also those which resembled a truncated cone or a cupola. The highest *ḳavuḳ*s (40 to 60 cm.) were kept rigid by means of a construction of metal bars or a kind of basket. They had a smooth or quilted (*terk*) surface and were trimmed with cotton to give the effect of relief or a dome shape with the quilting (*dilim*). To make the turban, lengths of material (*sarïḳ*) were used which were folded or made into rolls (*burma*). Fine materials such as cotton, gauze, muslin, fine wool, silk or brocade were chosen for this. Under the *ḳavuḳ* was placed a skull-cap (*takke*) which could also be worn alone. Sometimes small braids (*zülüf*) or pendants (*püskül*) were attached to the *ḳavuḳ*s, allowing the end of the *sarïḳ* to fall on the back or the shoulders (*ṭaylasān*). To give protection from the rain, a kind of small umbrella or covering (*yaghmurluḳ*) was carried.

*Ḳavuḳ*s included: *khorāsānī*—of cylindrical shape, growing broader at the top, worn with a white turban rolled slantwise on two sides; *selīmī*—of cylindrical shape, introduced by Selīm I (918-26/1512-20), some 65 cm. high, flat on top, worn with a white turban rolled around and bulging at the sides; *kātibī*—also called *pashalï ḳavuḳ*, is the most widespread type of turban, worn from the 18th century by functionaries and civilians. It is a *ḳavuḳ* of cylindrical shape, quilted, worn with a white turban not too long, rolled at the base and tied in front; *müdjewweze*—a head-dress reserved for the Sultan and the highest dignitaries, a *ḳavuḳ* of cylindrical shape, growing slightly broader towards the top, about 45 cm. high, flat on top, worn with a white turban rolled around; the end of the turban was fastened with a small roll of red felt; *ḳallāvī*, a head-dress reserved for dignitaries with the rank of *pasha* which, from the 18th century, became official headgear, a *ḳavuḳ* with the body of a cone, worn with a white turban rolled around, draped and bulging in flour places, decorated with a gold band; *ʿörf* (*ʿörfī*), worn from the 18th century by the religious classes, a large, dome-shaped *ḳavuḳ*, worn with a white turban rolled around and which, draped, forms harmonious folds; *ḳafesī* (*ḳubbeli ḳalāfat*), worn from the 17th century by the functionaries of the Defter, a dome-shaped *ḳavuḳ*, worn with a long turban forming folds fastened towards the base with a fine thread or pin; and *kharlāwī*—worn from the 17th century, a high, pointed *ḳavuḳ*, worn with a turban rolled around whose end was often left free.

Another quite widespread head-dress was the turban worn on a small skull-cap (*takke*), often folded in large rolls (*burmalï*) or particularly the *ḳavuḳ* worn with a small turban (*muʿaḳḳad*) rolled around; the *ḳavuḳ* without a turban was called *dal ḳavuḳ* or *dal ḳalāfat*.

b) Külāh (cap, hat). *Külāh*s were a very widespread masculine and feminine head-gear, worn by soldiers, dervishes, functionaries and civilians. This head-gear, of which several dozen variants existed, could be made from felt or woollen cloth combined with other materials such as cotton cloth, fur, small turbans, scarves and trimmings. As to their shape, the most common were caps, head-dresses in the shape of a dome, cone, cylinder broadening towards the top, tube, helmet, brimmed hats with flaps and straps. Among the *külāh*s most frequently worn by servants of the court and soldiers there were: the *zerrin tas*, worn by the pages; a high, cylindrical *külāh* trimmed with brocade and decorated with *zülüf*; the *börk*, which was the most widespread head-gear, in a cone or helmet shape, raised in front, decorated at the base with gold braid; officers wore it decorated in addition with a plume; the *üsküf* (*kečeli külāh*) of the Janissaries, a high *külāh* whose rear part fell in the form of a covering (*yatïrma*) on the back, a ribbon ornamenting it at the base where a metal case for the officer's spoon or plume was also fixed; and the *barata* of the palace domestics, a *külāh* of woollen cloth in the shape of a sleeve whose rear part fell on the back.

The *külāh*s worn by the dervishes most frequently had the form of a cone, a helmet or a cylinder widening towards the top and they were normally quilted (each order or *ṭarīḳa* had the right to a defined number of *terk*). There were also *külāh*s bordered with fur (*müzhgānlï*). Only *shaykh*s had the right to put a turban on the *külāh*. The *külāh*s worn by dervishes also had other names: *sikke*, *tādj* and *elifli tādj*.

In the 19th century, the *fez* became a current head-dress, as did the *shubara* in the army.

c) *Ḳalpaḳ* (busby), a kind of bonnet of lamb's fleece or woollen cloth decorated with lamb's fleece, worn by men and women.

d) Feminine headgear: *külāh*s of various shapes, scarves with a flap or a peak (*siper*); a veil (*čarshaf*); a scarf called a *yashmaḳ*, and the *khotoz*, the most popular head-gear, in the form of a conical *külāh* or hood decorated with a fine scarf or shawl

and trimmed with feathers, precious stones and ribbons.

Outer garments. The most characteristic and widespread outer garment in Turkey (known since antiquity in Central Asia and the Near East) was the *ḳaftān* (caftan), a long, full robe with sleeves. Its cut varied according to the period and area. The Turkish caftan had several variants which were distinguished from one another by the length and width of the skirts and sleeves, the buttoning, the use of slit or supplementary sleeves of a decorative character. It was these elements and the cut which decided the type of caftan. The *khilʿat*, for example, was a ceremonial caftan, made with sumptuous materials, quite full, with skirts side by side or crossed over. Caftans had skirts descending as far as the ankle, covering the knee, descending as far as the ground or even trailing on the ground. They were slightly-fitting, flared or close-fitting, most often with a collar or bottom of a collar buttoned up to the neck and with a rounded or pointed scooped neckline, with crossed over, buckled or buttonless skirts; fitted or more or less flared sleeves, descending as far as the wrist or short, elongated slit or falling on the back, double sleeves. Caftans were made in brocade, velvet, *kemkhā*, satin, cotton, silk, cotton satin and wool. They were often embroidered, laced with frogs and loops, edged with fur and with the lining.

Outer garments. These included the *dolama*, a caftan worn by the least important palace servants, which has a long robe, fastened in front, with narrow sleeves; *entārī*, a kind of caftan, the most widespread of all the garments, worn under the real caftan and fur, descending as far as the ankle or covering the knee; *ferādje* (a man's garment), a long, full robe, with rather wide, short sleeves, sometimes edged with sable, sometimes with a collar; *djübbe*, a full caftan; *kerāke*, a kind of *djübbe* in fine wool; *khirḳa*, a full, short caftan with sleeves; *ʿabā* (really the name of a thick material), a garment of thick woollen cloth, stopping at the knee; *setre*, a military garment covering the knee and fastened at the front; *čepken* (or *čebken*), a short caftan with sleeves, buckled and bordered; *salta*, a kind of *čepken* worn by the working classes; *yelek*, a waistcoat without sleeves formerly worn as an outer garment; *djāmedān*, a short, trimmed waistcoat without sleeves; *mintān*, a short caftan without sleeves, stopping at the waist; *binish*, a kind of very full caftan with wide sleeves, worn most frequently as a travelling or riding garment. Dervishes' garments: *tennūre*, a long robe without sleeves; *ḥayderī*, a kind of short garment, without sleeves, stopping at the waist; *khirḳa*, a short caftan with flared sleeves; *etek*, a skirt; and *mintān*.

To go out, particularly in the rain, a kind of cape was put on, called a *ḥarmāniyye*, *barānī*, *ḳāpūt* or *yaghmurluḳ*. Furs were an important element in the costume worn at court. Fox, squirrel, ermine, sable, lynx and marten furs were covered with the most varied materials (brocade, wool, velvet, silk, cotton satin and satin). They were characterised by a great diversity of styles, but the caftan was also dominant there. The most sumptuous fur was the *ḳapanidja* of the sultan, with a large fur collar, narrow or short sleeves, decorated with fur below the shoulders, with straight supplementary sleeves, laced with frogs and loops in front; *ferve-i beyḍā*, a fur of white sable covered with green cotton satin; and *kontosh*, a fur (or caftan) with straight sleeves, with a collar. Full furs edged with fur in front and in general with a collar were worn during ceremonies, gala receptions, etc. These were the *üst kürk*, the *dīvānī kürk*, or the *dört ḳollu kürk* (when they had supplementary sleeves), or further the *bol yeñli kürk* (when it was a fur with wide sleeves).

The outer garments most often worn by women were: the *ferādje*, the *entārī*, the *yelek* and capes (*ḥarmāniyye*); *ferādje*, a kind of full cloak with sleeves and a collar, sometimes with cuffs; *entārī*, a long robe whose cut varied, normally with a low neckline, fitting at the waist and flaring from the hips, buttoned in front as far as the waist, trimmed, laced with frogs and loops, with narrow sleeves, sometimes long or turned up. Women also wore short caftans or short *entārī*s stopping at the hips with wide skirts. Their furs had long sleeves or short ones or were without sleeves. They put a long robe under the *entārī* or over baggy trousers.

Inner garments. Among these are counted shirts (*gömlek*, *pīrāhen*); a long robe worn under the *entārī* or caftan, *dolama* or *ičlik*; baggy trousers (*shalwār*) of varying fullness, fuller and in finer materials for women; men's trousers (*čaḳshīr*), reaching down to the ankle or below the knee; the *potur*, full trousers as far as the knee and straight from the knee to the ankle; the *tozluḳ*, breeches worn by men as an outer garment; pants (*don*). All the parts of the trousers were held with a special belt called *učḳur*.

Belts were an indispensable element of old Turkish costume. They were of two kinds: material belts (*ḳushaḳ*), supple, knotted, with the ends hidden under the trousers; and leather belts (*kemer*), fastened with a buckle, often decorated, gilded, in hammered leather, embellished and encrusted with precious stones.

Shoes were divided into indoor shoes with a supple sole and town shoes with a thicker sole: *čizme*, the most widespread shoes for several centuries, with a high leg reaching up as far as the knee and a supple sole; women's boots bore the name *pashmaḳ*; *čedik* (an older form *içedik*), with a low leg, most often made in yellow Moroccan leather, with a supple sole; *mest*, a kind of *čedik*; *shipship*, a mule without heels with the end slightly raised and a supple sole; *terlik*, the most popular shoes, worn by men and women, without heels or quarters slightly raised at the end, in leather or material, often decorated; shoes for women had a low heel. To go out in the town the *pabuč* was slipped on over the supple shoes (*čedik*, *mest*). Sandals with a compensatory sole called *nalin* were also worn. The shoes of the sultan, dignitaries and women were often richly decorated, in accordance with various techniques, with plant motifs (appliqués, embroidered, hammered leather).

Accessories decorating the head-gear: plume (*sorguč*, *süpürge*), crest (*čelenk*), feathers, ornaments, scarves, shawls, ribbons, tassels, small braids and plumes. Accessories decorating outer garments: shawls, trimmings, buckles, small buckles and metal badges. Jewels and side arms completed the costume.

2. The modern period. In the 19th century, in the period of the army reforms, a new military uniform was introduced, combining modified forms of old Turkish costume with some elements of European uniform. This new uniform became common during the second half of the 19th century. Later on, modern European uniform was introduced.

Regional costume is not made the object of this study: there only exist a few studies in depth on this subject (see Hamdy Bey and Marie de Launay,

Les costumes populaires de la Turquie en 1873, Constantinople 1873).

(T. Majda)

LIBERIA, an African republic in which, according to the sources, Muslims account for no more than 15 to 20% of the population. They are concentrated mainly between Monrovia and Robertsport on the frontier of Sierra Leone as well as on the frontier of Guinea. Their number is estimated at 300,000, but because the censuses take no account of religious allegiance, there exists no precise figure for a Muslim population whose Islamic culture was until recently extremely primitive.

Islam was a late manifestation in Liberia. Certain groups related to the Mandingo peoples and arriving, in the 16th century, from the region of Kankan were probably the first Muslims to penetrate what was to become Liberia. After the Vaï, other Mandingo groups like the predominantly merchant tribe of the Gbande were totally Islamised, while the Loma (or Bouzi) the Kpelle, the Mano and the Sumba were only partially converted. These peoples, impelled by military and commercial forces, included in their ranks Islamised elements. But the expansion of Islam could only begin to take shape from the 19th century onwards when the Afro-American emplorers had crossed the forest zone.

Since Liberia was governed until the coup d'état of 12 April 1980 by Liberians of Negro American origin, mostly of the Protestant faith, Muslims enjoyed no political representation. Moreover, the Liberian constitution of 1847 had a significant preamble: "Our People recognises with pious gratitude the goodness of God who has accorded us the blessings of the Christian religion and granted us political and religious liberties ..."; but the first clause declared that all religions would be tolerated and that no religious conditions would be attached to the holding of public office.

In 1953, President Tubman enacted a law pledging to the Muslims of Liberia full recognition of their rights. In 1965, the same president attended the mosque for the beginning of Ramaḍān and delivered the address. It was his government which, after consultation, gave to the leading *Imām* the title of *Muslim Bishop*.

Since 1974, the National Muslim Council of Liberia has united the principal groups. It comprises the following organisations: *The Council of the Muslim Community*, founded in 1949 by Alhaji Varmunych Shariff who, in 1953, built the capital's first mosque (inaugurated by President Tubman); *The Muslim Congress of Liberia*, founded in 1965 for cultural and scholastic objectives; *The Muslim League of Salefiya*; and *The Liberia Muslim Union*, established in the north, in the province of Nimba, and providing bursaries for academic students to be educated abroad.

The majority of the Muslims are orthodox Sunnīs of the Mālikī rite. Since 1957, the "Caliph" Mīrzā Nāṣir Aḥmad, who came in 1970 from Pakistan, has established himself and gathered around him a group of about a thousand disciples belonging to the Aḥmadiyya sect. In addition, an autonomous and syncretist Bahāʾī sect, which arrived in the country in 1957, has founded at Bomi Hilla a school capable of accommodating between 25 and 30 pupils.

In a land where the level of literacy is low (15 to 20%), the contribution made by the Muslim schools is feeble. The National Muslim Council sponsors one primary school in Monrovia and three high schools of which one, at Kakota, comprises 300 pupils. There is one elementary school at Robertsport (province of Cape Mount) and a secondary school in the province of Bong (40 pupils). Instruction is given partly in Arabic, partly in English.

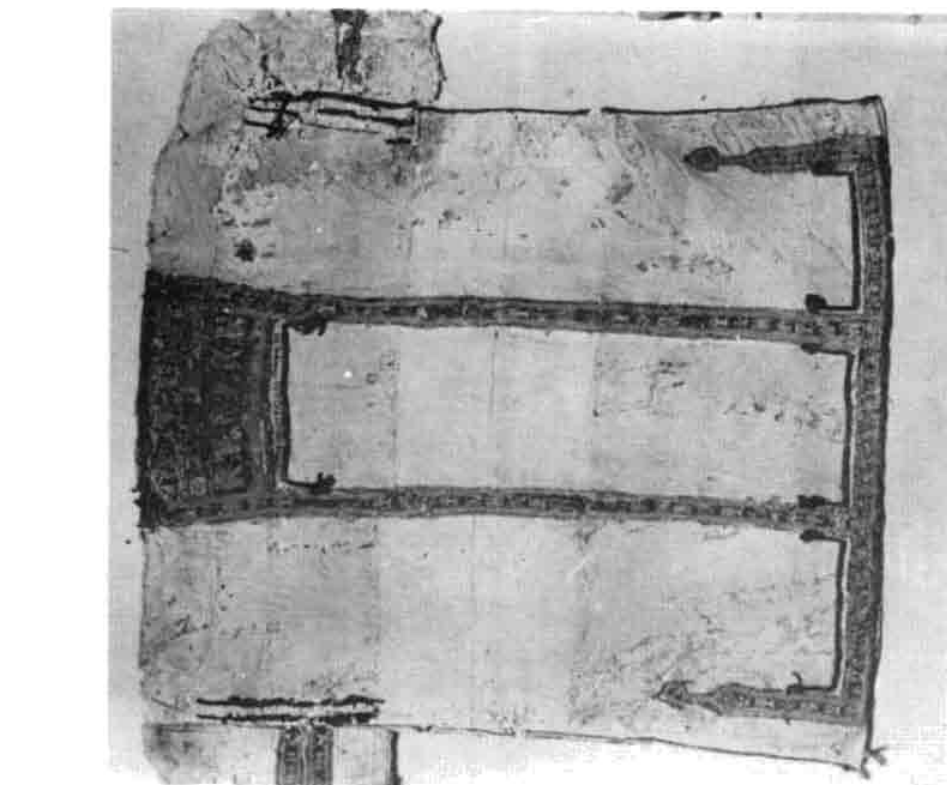
Some rare Arabic books feature in the libraries of the capital, including some that have no religious content. There are certain Lebanese newspapers, of no interest other than to nationals of that country. The Aḥmadiyya broadcast a five-minute television programme every Friday.

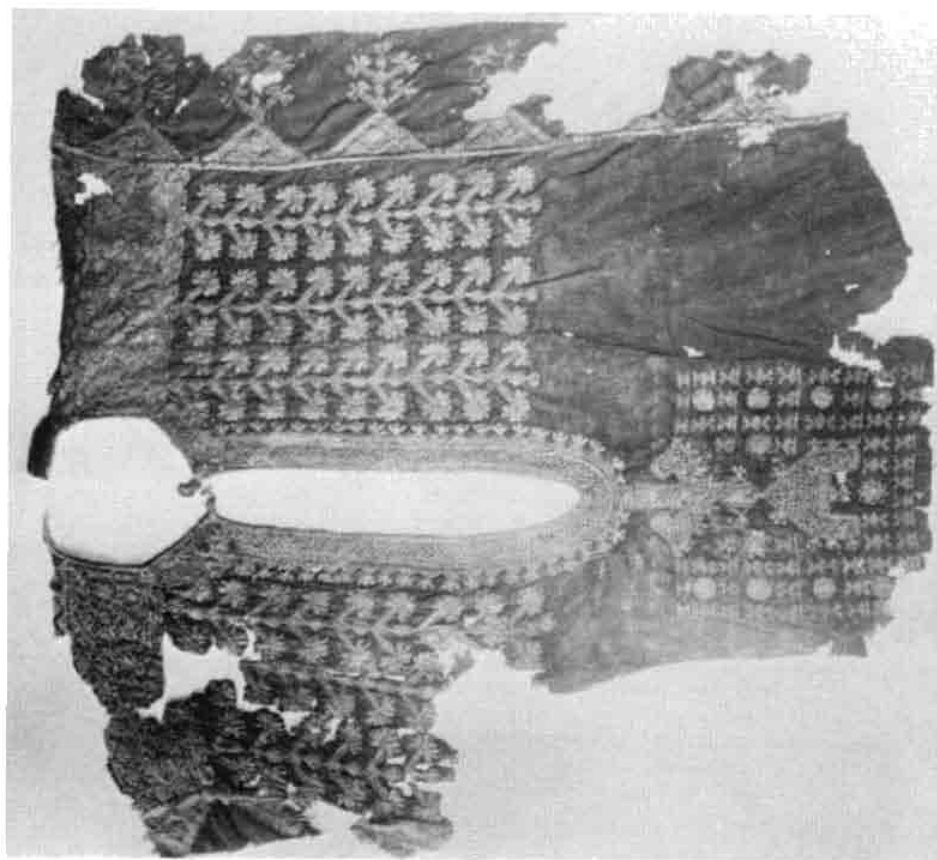
Each year, between 100 and 200 Liberian pilgrims make the journey to Mecca. Only *al-ʿīd al-kabīr* at the end of Ramaḍān is celebrated with any kind of vigour. Despite these modest activities, the role of the Muslims seems to be steadily growing.

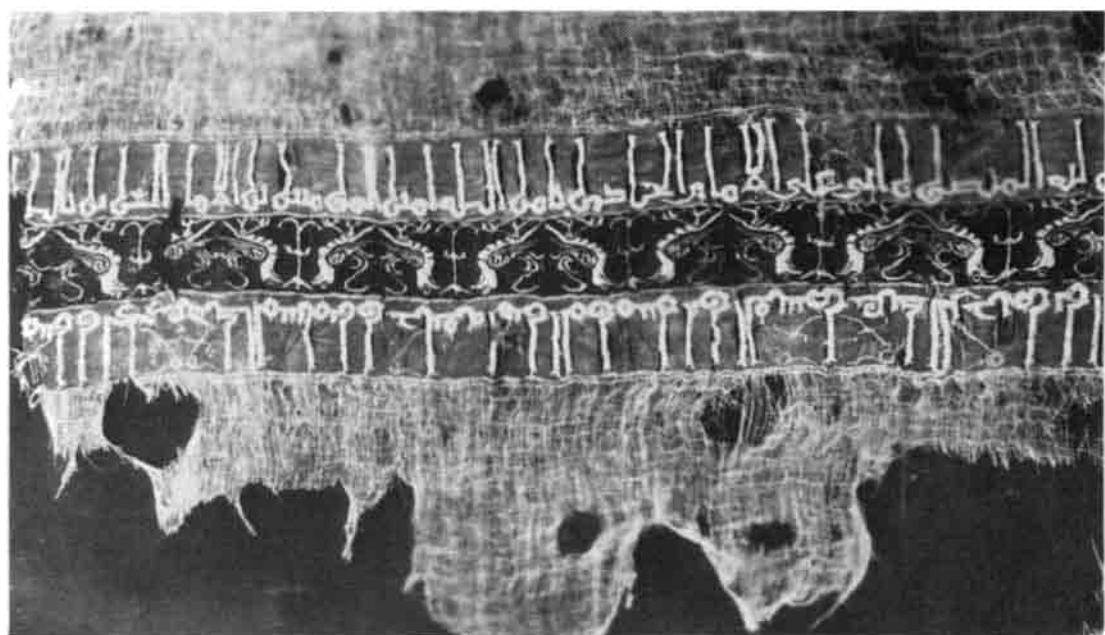
Bibliography: *Libéria*, in J. M. Cuoq, *Les Musulmans en Afrique*, Paris 1975, 172-4 and bibl. cited there; J.-P. Monchau, *Les Musulmans du Libéria*, in *Atlas raisonné du monde musulman contemporain*, to appear in the publications of the CHEAM.

(R. Cornevin)

LĪBIYĀ, an Arabic form based on the Italian Libia, which in turn derives from the ancient Greek Λιβύη/Λυβύα.

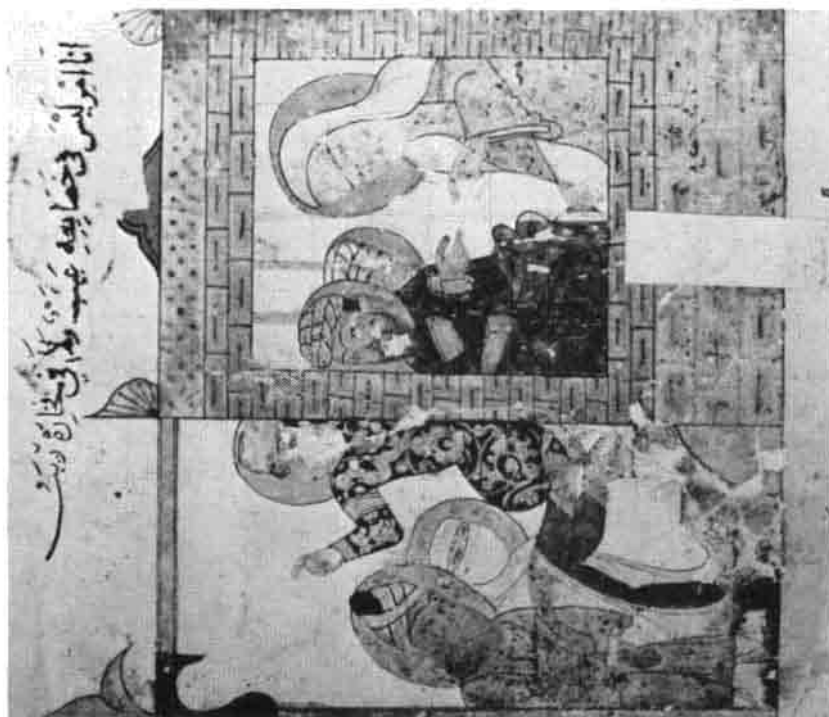
1. The name. The name first appears in ancient Egyptian writings in the form RBW or LBW, perhaps representing Lebu or Libu. It was also known to the ancient Israelites and occurs several times in the later books of the Old Testament in the form Lubim.


1. Egypt, Fāṭimid period. *T͟hawb* with decorative bands and border. (Courtesy of the Coptic Museum, Cairo).


2. Egypt. Fāṭimid period. Fragment of an embroidered garment. (Courtesy of the Coptic Museum, Cairo).


3. Egypt, 1007-21. *Ṭirāz* silk fragment inscribed with the name of the Fāṭimid caliph al-Ḥākim and decorated with birds (*muṭayyar*). (Courtesy of the Museum of Islamic Art, Cairo).

4. Egypt. Fāṭimid period. Dancing girl in what appears to be a *sirwāl*. She holds a *mandīl kumm* in each hand. (Courtesy of the Museum of Islamic Art, Cairo).

5. N. ʿIrāḳ (?), second quarter of the 13th century. Woman wearing a *ṭirāz faradjiyya*. On her head is an *ʿiṣāba māʾila*. From the *Maḳāmāt* of al-Ḥarīrī. (Bibl. Nat. Paris, ms. Arabe 3939, fol. 151r).


6. Syria (?), *ca.* 1300. Group scene: The seated figure on the right is wearing a *ṭaylasān* or *ṭarḥa* over his turban. The fourth figure is wearing a printed robe (*makhtūma*), the woman standing below him is veiled by an *izār*, and the man on the left wears a turban wrapped around a *ḳalansuwa*. From the *Maḳāmāt* of al-Ḥarīrī. (Brit. Mus. Add. 22.114, fol. 15).

7. N. ʿIrāḳ, *ca.* 1218-19. Ruler wearing a *ḳabā' turkī* with *ṭirāz* bands. On his head is a *sharbūsh*. His attendants also wear Turkish costs. Most wear the cap known as *kalawta*. From the frontispiece of the *K. al-Aghānī* (Feyzullah Efendi 1566, fol. 1b, Millet Kütüphanesi, Istanbul).

8. Syria. Two women of Lattakia: The standing figure is veiled with a *burḳuʿ* and *ḥabara*, the reclining figure with a *yas͟hmaḳ* and *mulāʾa*. From Lortet, *La Syrie d'aujourd'hui*, Paris 1884, plate facing p. 48.

9. Tripolitanian merchant. From Hamdy Bey and Launay, *Les costumes populaires de la Turquie en 1873*, Constantinople 1873, Fig. XLII.

10. Egypt. Men of the bourgeoisie in *d͟jubba* and *banīs͟h*. From Lane, *Modern Egyptians*, London 1898, 47

11. Transjordanian villager wearing a *thawb*, *kibr*, and *ʿabāʾa*. On his head a *kāfiyya* and a *ʿaḳāl*. From Musil, *Arabia Petraea*, Vienna 1908, fig. 29.

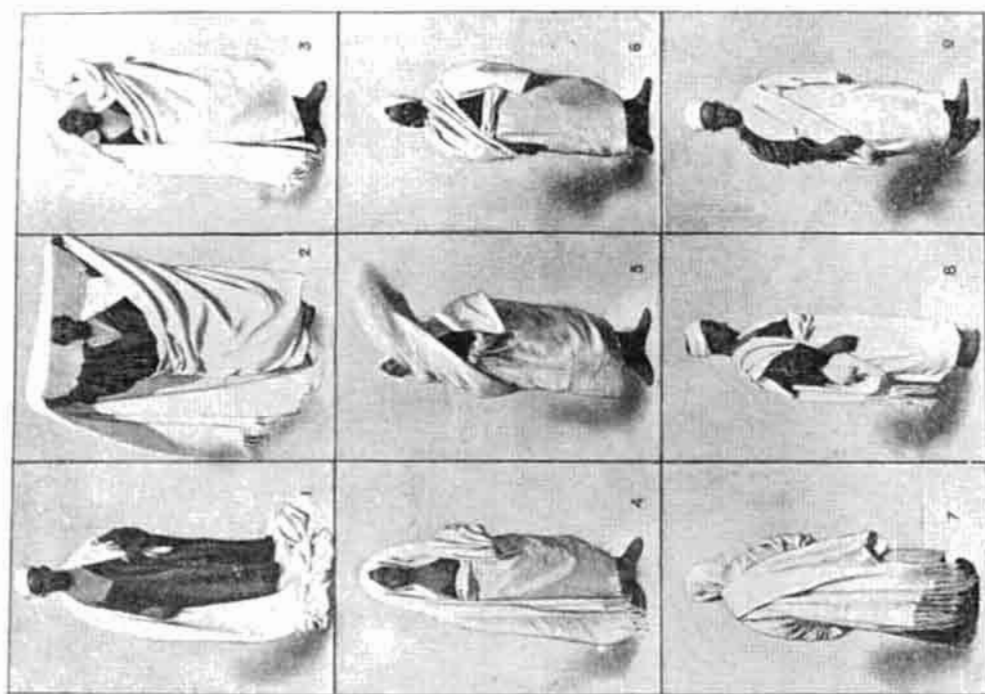
13. Palestine. *Shaṭwa* worn by married women. Bethlehem, late 19th century. (Courtesy of the Museum of International Folk Art, Santa Fe, New Mexico).

12. Palestine. *Taḳṣīra* for a woman. Bethlehem, late 19th-early 20th century (Courtesy of the Museum of International Folk Art, Santa Fe, New Mexico).

14. Syria, early 20th century. *Libās* or *sirwāl* for a woman. (Courtesy of the Museum of International Folk Art, Santa Fe, New Mexico).

15. Syria. *Yelek* for a woman. Aleppo, *ca.* 1850. (Courtesy of the Museum of International Folk Art, Santa Fe, New Mexico).

17. Morocco. A boy's striped woollen *djallāba*. (Courtesy: Moroccan Ministry of Tourism).

16. Morocco. Draping of the man's *kisā'* or *ḥā'ik* in the national fashion. (From E. Doutté, *Merrâkech*, Paris 1905, 254).


18. Morocco. High Atlas Berbers wearing the heavy black woollen *akhnīf*. (From G. Rousseau, *Le costume au Maroc*, Paris 1938, fig. 1).

19. Algerian *mufti* wearing long Andalusian *sərwāl* and a *ḳafṭān* over which is a *ḳabā'a* and a white *səlhām*. On his head is a Turkish-style turban called *ʿimāma mboṛṛdja* over which is the scarf known as a *muḥannaka*, similar to the ancient *ṭaylasān*. (From G. Marçais, *Le costume musulman d'Alger*, Paris 1930, Pl. XIII-Bibl. Nat. Estampes O f 2 a)

20. Tunisia. Woman's wedding dress known as *ḳmādjdja kabīra* from Nabeul. (From S. Sethom, *La tunique de mariage en Tunisie*, in *Cahiers des Arts et Traditions populaires*, no. 3 [Tunis 1969], fig. 9).

21. Southern Morocco. Guedra dancer wearing an indigo *izār* pinned at either side of the bosom with silver fibulae called *khallāla, kitfiyya* or *bazīma*. (Courtesy: Moroccan Ministry of Tourism).

22. Iran. Men and women in Tīmūrid attire (from the *Shāh-nāma* of Bāysunḳur, Gulistān Palace, Tehran, dated 833/1429-30).

23. Iran. Scene from the *Khamsa* of Niẓāmī depicting Alexander meeting the *Khāḳān* of China. All are dressed in Ṣafawid attire and wear the distinctive turban with the protruding spike known as the *tādj Ṣafawī* (from a ms. in the Metropolitan Museum of Art, painted in Tabrīz, 931/1524-5).

24. Iran. Ḳādjār court scene showing Fatḥ ʿAlī Shāh receiving tribute. Figures in the foreground wear frocked coats and *kulāh*s, while the enthroned Shah wears a modified version of the ancient Sāsānid crown (from Bodleian Library, Oxford, ms. Elliott 327, f. 265b, *ca.* 1810).

25. Iran. Women in black *čādur* and white *rū band* (from E. C. Sykes, *Persia and its people*, London 1910).

The Lehabim of Genesis, x, 13 may possibly represent the same name. The term passed into later and modern usage through the Greeks and subsequenly the Romans. In Greek geographical writings, it was most commonly used—along with Africa, which later replaced it in this sense—as the name of one of the three continents or, occasionally, as the name of the region in North Africa west of Egypt. Transmitted by the Greeks to the Romans in both senses, it was first made the name of a specific political entity by the Emperor Diocletian, who established the adjoining provinces of upper and lower Libya west of Egypt. The authenticity of a *ḥadīth* quoted by al-Bakrī (*Description de l'Afrique septentrionale*[2], ed.—French tr. M. G. de Slane, Paris 1965; Ar. 8, tr. 23) according to which the Prophet is supposed to have said "He whose sins are numerous must place Libya (Lūbiyā) behind him", i.e. go to fight the infidels in Ifrīḳiya, is doubtful; moreover, the same author (Ar. 21, tr. 49) states that Ifrīḳiya is really called Lībiya, from the name of the founder of Memphis, who reigned over the land.

The term passed, along with much other Greek geographical knowledge and terminology to the Arabs, who normally wrote it in the form Lūbiya (لوبيا or لوبية). The earliest Arabic geographical writers name Lūbiya as one of the four quadrants into which the world is divided, the others being Europe, Ethiopia and Scythia (al-Battānī, *Opus astronomicum*, ed. C. A. Nallino, text iii, Rome 1899, 27, tr. 19; Ibn Khurradādhbih, 155, cf. Ibn al-Faḳīh, 6-7, 197; Agapius of Manbidj, *K. al-ʿUnwān*, ed. A. Vasiliev in *Patrologia Orientalis*, v, Paris 1910-12, 612; al-Hamdānī, *Ṣifat Djazīrat al-ʿArab*, ed. D. H. Müller, i, Leiden 1884, 32; Yāḳūt, s.v., citing al-Bīrūnī who ascribes this classification explicitly to the Greeks). Lūbiya consisted of "Egypt, Kulzum, Ḥabash, the lands of the Berbers and adjoining countries, and the southern seas." In addition to this vague use as the name of a quarter, Lūbiya also occurs, more specifically, as a place-name in northern Africa. Ibn ʿAbd al-Ḥakam (*Futūḥ Miṣr*, ed. and partial French tr. A. Gateau, *Conquête de l'Afrique du Nord et de l'Espagne*, Algiers[2] 1947, 35, 77), probably copied by Ibn Khurradādhbih (ed. and partial French tr. M. Hadj-Sadok, *Description du Maghrib et de l'Europe au iii*e*/ix*e *siècle*, Algiers 1949, 13 and n. 172) makes Lūbiya a province of western Egypt. Al-Masʿūdī (*Murūdj*, iii, 242 = § 1106), copying in his turn Ibn Khurradādhbih, speaks of a place (*mawḍiʿ*) named Lūbiya wa-Marāḳsiya (Marmarica) and cites in the *Tanbīh* (20) the region (*nāḥiya*) of al-Iskandariyya, Lūbiya and al-Marāḳiya. Ibn al-Faḳīh (*Buldān*, 74, French tr. Massé, 90) makes Libya a locality of Egypt. Al-Yaʿḳūbī (*Buldān*, 339, 342, tr. Wiet, 197, 201) speaks of Lūbiya as one of the districts (*kūra* or *ʿamal*) dependent on Alexandria, while Yāḳūt (iv, 368) places Lūbiya between Alexandria and Barḳa. Most of the mediaeval Arab geographers see North African Libya as administratively part of Egypt (al-Maḳrīzī, *Khiṭaṭ*, ed. Wiet, i, 56, 309, 311; Ibn Duḳmāḳ, v, 43; al-Ḳalkashandī, *Ṣubḥ*, iii, 386-7, 390-1, citing the *Rawḍ al-miʿṭār* and al-Ḳuḍāʿī; see further J. Maspero and G. Wiet, *Matériaux pour servir à la géographie de l'Égpyte*, Mém. IFAO, xxxvi, Cairo 1919, 163; A. Grohmann, *Studien zur historischen Geographie und Verwaltung der frühmittelalterlichen Agypten*, Vienna 1959, 8-9). The name also occurs as that of a mountain vaguely situated west of the Nile Valley. The passage in al-Bīrūnī, (*K. al-Djamāhir fī maʿrifat al-djawāhir*, Hyderabad 1355, 100) naming Lūbiya as a source of precious stones south of Egypt, is certainly a misreading for Nubia. The form Lībiya is used, exceptionally, by al-Maḳrīzī (*Khiṭaṭ*, ed. Wiet, i, 52), citing the Arabic version of Orosius, and therefore following the Latin form of the name. By late mediaeval times, the name Lūbiya seems to have passed out of use in Arabic. It reappears in the 19th century when it is clearly derived from European sources. A late Ottoman work of reference, the historical and geographical dictionary of Aḥmed Rifʿat (*Lughāt-i taʾrīkhiyye ve djughrāfiyye*, vi, Istanbul 1300, 151) lists Libya in the form Lībī, obviously transcribed from the French, and defines it as "the Greek name of Africa". The entry goes on to explain the different senses in which the word was subsequently used ends by noting that, in the writer's own day, the term was confined to the regions "beyond Tripoli, Tunisia and Egypt and northeast of the Great Sahara Desert." ʿAlī Mubārak (*Khiṭaṭ*, xv, 41), no doubt following European practice, also uses the form Lībiya for the region west of Egypt.

The name Libya continued in occasional use in Europe, mainly in the context of ancient history. It was given greater precision and popularity by the Italian geographer F. Minutilli, whose *Bibliografia della Libia* was published in Turin in 1903, and who applies the term specifically to the two Turkish *sandjaḳs* of Cyrenaica (Barḳa [*q.v.*]) and Tripolitania (Ṭarābulus al-Gharb [*q.v.*]), the only parts of the North Africa littoral that had not yet fallen under European control. Libya remained a geographical expression until the Italian invasion and the Italian decree of 5 November 1911, proclaiming Italian sovereignty over the two Turkish *sandjaḳs*. It was made the official name of a country—for the first time since Diocletian—by the Italian royal decree of 1 January 1934, which created a new colony, formed by the union of Cyrenaica and Tripolitania, and called Libya (Arabic Lībiya). This form was retained by the independent state established after the ending of Italian rule.

2. Libyco-Berber inscriptions. The Maghrib and the Sahara possess a large number of inscriptions using a script peculiar to the North-West of Africa, which was given the name Numidian and later Libyan. The first name, which has fallen out of use, was, however, to be preserved to designate one of the forms of this script, known as Eastern, which is widespread in Tunisia and Eastern Algeria.

The Libyan inscriptions published up to now and regarded as ancient, let us say pre-Islamic, can be estimated at some 1,200, but the Sahara possesses thousands of more recent graffiti and inscriptions carved on weathered rocks in the same script, still used by the Touareg, who call it *Tifinagh* [See BERBERS. VI].

These inscriptions, whether the monumental texts of Dougga from the 2nd century B.C. or the simple Touareg graffiti, use only signs of a strictly geometrical form, based for preference on the straight line. Also, the alphabet of Dougga which contains 23 or 24 signs only uses the circle for two letters: ⨀:

B and ◯: R and the curve exceptionally) for M, more often written ⊐, and (for S, more often rendered by ⴳ.

The other Libyan alphabets make more use of the curve, which appears for example in five or six *Tifinagh* signs. The dots, only present in the composition of two Eastern Libyan signs, are more frequent in *Tifinagh* (seven signs) where they sometimes replace the straight portions of the Eastern signs, also = in Eastern is rendered by: W in *Tifinagh*. The Libyan scripts seem to have failed to appreciate any cursive form; the signs are clearly separated in the ancient scripts, which know nothing of connections and ligatures, which are not so rare in *Tifinagh*, where the initial *n* and final *t* are joined in about twenty cases according to K. Prasse.

Another characteristic is that the Libyan script, like the *Tifinagh*, remains essentially consonantal. The vowels are not transcribed graphically except at times with a dot in *Tifinagh*, at the end of certain words. The sign ☰ seems to have had a separate function in the Eastern script, and the dot to have been the equivalent of *alif*.

The Libyan script, moreover, has no doubling of consonants and does not indicate stress; also, the alphabet is limited. In fact, 24 signs are known in the so-called Eastern form, of which one is doubtful, which agrees with the information given by an African writer of the 5th century, Fulgentius, according to whom the Libyan alphabet contained 23 signs.

The Libyan inscriptions, the ancient Libyco-Berber or *Tifinagh* and the modern *Tifinagh* inscriptions, occupy a vast area which seems to correspond to the ancient domain of the Berber language. Roughly, the signs of this script are to be found in use from the Mediterranean as far south as the Niger and from the Canary Islands to Libya. It is towards the east that the limit of this script's use is least known.

In Libya it was in common use in the Fezzān and Tripolitania. Recently, at the time of his excavation of Bu Ngem, R. Rebuffat noted that the Libyan inscriptions and graffiti there were influenced by Latin writing. Beyond there the evidence is less certain; nevertheless, a rock inscription found at Khor Kilobersa in Nubia was published recently. The signs of this inscription are sufficiently close to ancient *Tifinagh* for Alvarez Delgado to suggest a transcription and translation. Another author, Zawodowsky, even considered recognising in it a contamination of Meroitic script by Libyan, but this hypothesis was rejected by the majority of specialists. In this vast area, the density of inscriptions is highly variable and they are, furthermore, of different periods.

The zone with the highest concentration of Libyan inscriptions, their *locus classicus*, is undoubtedly North-West Tunisia and the part of Algeria adjacent to it; of the 1,124 published by J.-B. Chabot in his *Recueil des inscriptions libyques*, 1,073 come from this region. It is in fact the land of the Numides Massyles, cradle of the Numidian kingdom, where the Libyan language and script remained alive for a long time. In this district a large number of inscriptions are, moreover, from the Roman period. The rest of Algeria, as well as Northern Morocco, contains a low density of inscriptions. Despite the discoveries made since the *Recueil* of J.-B. Chabot appeared in 1940-1, the number of these inscriptions has only risen to 27 in Northern Morocco (L. Galand), and those in Algeria to the west of Sétif can be estimated at around fifty, of which about ten are in Kabylia alone.

Things are less clear on approaching the Saharan regions. Exploration is incomplete and above all very unevenly conducted. Furthermore, geological and topographical conditions are very influential factors in distribution. It is quite understandable that the flat regions, such as the Hamada or the basins occupied by dunes like the Western Great Erg, the Edeyen of Marzouk, contain very few inscriptions, while the rocky regions are infinitely richer. In the present state of our knowledge, which does not necessarily reflect the reality, the richest Saharan regions are the Hoggar and Tassili n'Ajjer, as well as its Libyan extension formed by the Acacus, the Air, the Adrar of the Iforas and the southern edge of the Atlas chain, particularly the south of the High Atlas, the Anti-Atlas and the Rio de Oro.

Inscriptions whose signs are close to the Saharan alphabet are not exceptional in the Canary Islands.

Periodically, "Libyan" inscriptions are mentioned outside the Berber domain, such as those of the Grotto Regina at Palermo, which, if their relationship to Libyan is confirmed, can be explained by the presence of Numidian mercenaries in the Punic contingents of Sicily. Others have been shown to be bad readings of Latin inscriptions (an inscription of La Garde Freinet, Var, attributed to the "Saracens") or the most fantastic interpretations, such as inscriptions found in Mexico or even Chile.

Traditionally, there are several distinguishable "alphabets" in the Libyan script. Some are contemporaneous with each other, such as the so-called Eastern and Western alphabets. The Libyco-Berber scripts of the Northern Sahara and the ancient *Tifinagh* preceded the *Tifinagh* used at the present day by the Touaregs, who are unable to read the ancient *Tifinagh*. Modern *Tifinagh* can undergo regional variations which are still little known.
The Eastern alphabet covers the north of Tripolitania, Tunisia and Eastern Algeria; the western limit of its use is to the east of Sétif, although two western-type inscriptions may be seen at Guelma and some eastern-type inscriptions may exceptionally be found in Kabylia: such is the case of the decorated stele featuring a person standing found at Lakhdaria (ex-Palestro), which bears on its main face, on either side of the person, an inscription with eastern signs. This inscription mentions offices and titles similar to those in use in Dougga in the 2nd century B.C. This detail allows us to put forward the hypothesis that it may well be an official inscription of the Numidian Massylian kingdom and somewhat "foreign" in a land that was in ancient times Masaesylian and the later Mauritania. This hypothesis may be strengthened by the existence on the reverse of the stele of graffiti using the Western script, which is that of the other inscriptions of the region. In the present state of our knowledge, the stele of Lakhdaria is the westernmost evidence of the Numidian or Eastern alphabet which seems to us to be more precisely Massylian.

The Western Libyan alphabet covers the lands peopled by the Masaesylians and Moors. It contains a greater number of signs than the Eastern, but also presents more variations; some signs known in Algeria are unknown in Morocco, and vice-versa. This script thus occupies a vast region, for all the Libyco-Berber inscriptions of the Northern Sahara and the Atlas belong to it to a greater or lesser extent. A great many of the Canary Islands inscriptions have the same signs, whose value is unfortunately not known with any certainty; besides, it is hardly likely that the Western script and that of

the Libyco-Berber inscriptions can be transcribed in the same way everywhere. This does not prevent three signs + ⊐ V (read from right to left) being found throughout the western area, from Guelma to the Atlantic, and is evidence of a certain unity.

Modern *Tifinagh* signs, current or sub-current, whose use goes back at least to the 5th century A.D. (tomb of Tni Hinan in Hoggar), are known throughout the Touareg world and go beyond it on the north-west, to Touat and Gourara, where they were even in use among the Judaised Berbers.

In some regions such as the Anti-Atlas, particularly in the Tinzouline, the signs of the Western script are sometimes mixed with small animal figures (horse, dog, oryx) which appear to act as pictograms; they are so closely linked that it makes it hard to believe that they do not have the same semantic content. The presence of dromedary figures in the same scenes prevents these inscriptions from being regarded as very ancient. These pictograms, if they really play this role, cannot serve to support the hypothesis of the Libyan alphabet coming into being through transformations of ancient marks of ownership and other traditional drawings, such as those which still figures in tattoos.

However, it should be noted that *Tifinagh* has two signs: ⵊ, a sign which has the value DJ, and ⵣ, which has the value Z, the two of which seem to be derived from signs of a figurative, more or less anthropomorphic, character. More frequently, Libyan *Tifinagh* is written in horizontal lines, but the meaning of the reading is highly variable; sometimes it is from right to left, sometimes from left to right, from top to bottom and in boustrophedon. K. Prasse noted that the use of a movable support, such as a sheet of paper, actually favoured this tendency. There are even some inscriptions known which describe almost closed curves.

Only the current form of *Tifinagh* and the Eastern Libyan alphabet can be transcribed, the former because the script and language are still in use among the Touareg, the latter because we have at our disposal several Libyco-Punic inscriptions, in particular that of Dougga, where we know that the Libyan text corresponds quite closely to the Punic text. This last has also transcribed, without translation, some Libyan titles or municipal offices, such as LOGMIL or GZB, which, it seems, had no equivalent in the Punic towns. Unfortunately, while the value of the signs is basically known and only requires some verification or points of detail, the language of the Libyan inscriptions is still unknown to us.The little that is known of Libyan,some elements of vocabulary and some presumed grammatical functions, show clearly that this language belongs to Berber; an ancient Berber, certainly, and imperfectly transcribed by a strictly consonantal alphabet, but which cannot be fundamentally different from the numerous current Berber dialects.

However, since the composition of the famous *Recueil* of Chabot, the very few specialists in this field have in general refused to suggest any translation of the texts, which are indeed very short, of the majority of the Libyan inscriptions; some even go so far as to pose the question of whether Libyan belongs to Berber. This carefulness contrasts with the adventurous attempts of G. Marcy, who, relying on Berber, particularly Moroccan *Tamazight* and Touareg *Tamahaḳ*, suggested a translation for most of the Libyan inscriptions known in his time. This attempt was followed by M. Alvarez Delgado, who extends it to some Canary Islands inscriptions.

Between the possibly exaggerated carefulness of the former, and the certainly dangerous enthusiasm of the latter, there has to be a middle position which accepts at the same time both the most serious checking and control and the minimum of hypothesis indispensable for the progress of all-knowledge.

The Western alphabet contains some supplementary signs which are absent in the Eastern and whose originality has been demonstrated by L. Galand in his ***Inscriptions antiques du Maroc***. The use of these two ancient alphabets was certainly contemporaneous, and it would be a mistake to believe, following a historicising logic, that the Eastern alphabet is the older because the script came from the East. Personally, adopting a hypothesis of J. Février, the author of the present article would carry it so far as to think that the Eastern form of the Libyan script (Numidian or Massylian alphabet) is a recast and simplified form of the original script due to contact with Punic, whereas outside the Massylian territory the old forms continued to be employed and to evolve until they became modern *Tifinagh*, which itself affords variations. His only disagreement with the hypothesis presented by J. Février is over the age of this adaptation, which Février placed in the 3rd century or the beginning of the 2nd century B.C., whereas it seems to be much earlier.

Among others, the hypothesis has for long been prevalent that the Libyan alphabet derived directly from the Punic alphabet, as the name *Tifinagh* given to the present form of this script implies. But it is widely recognised that an origin derived from etymology can be fallacious. Nevertheless, the Libyan alphabet has several signs in common with the Punic script where they have the same value (G, T, SH). S. Gsell, however, raised considerable objections to this opinion. The writing of the Punic characters, as they are transmitted by numerous steles from Carthage, Utica, Hadrumeta and Cirta, is radically different from those of all the Libyan alphabets. Not only do nearly all the Punic signs have a cursive form, while the Libyan signs are angular and geometrical, but even the meaning of the script differs. All the Punic inscriptions, like every Semitic text, are written in horizontal lines from right to left, while the Libyan inscriptions are generally written from bottom to top in vertical columns, particularly those which we have every reason to believe the most ancient. It is only at Dougga for several decades, during the reigns of Massinissa and Micipsa, that some inscriptions of an official character were written in horizontal lines. These inscriptions number eleven, which represent a hundredth of the texts gathered by J.-B. Chabot. This proportion would be even smaller if we were to take account of the inscriptions discovered since. The case of the texts inscribed at Dougga is thus highly original and denotes a very powerful Punic influence, but this appears to be only a factor of modernisation and not as an especially determining original element.

If we are to look, as is most likely, among the Near Eastern scripts for the forms from which the Libyan alphabet derives, it is not to the Phoenician of Africa as it is known at Carthage, but to a more archaic script that we should turn, which would explain the similarities remarked with the South Arabian scripts (Ḥimyarite, Sabaean), but also with the Turdetan alphabet of Southern Spain.

The script did not necessarily penetrate Africa by sea, and it is actually more likely that it crossed the continent and that the Numidian Massylian form (the most recent of the ancient Libyan alphabets) may have arisen out of a transformation of the archaic forms in contact with the Punic world.

As far as this alphabet itself is concerned, two old hypotheses may definitely be rejected. The first is that of Meltzer, according to whom the Eastern alphabet was wholly invented by Massinissa, for we know today that some Libyan inscriptions are earlier than this king and, further, that the Numidian royal administration employed Punic exclusively in its official inscriptions, as it did in the legends on its coins. The other hypothesis, that of Lidzbarski, who wanted to link Libyan with Neo-Punic, is even more improbable, for it is based on a totally outdated chronology of the Neo-Punic script.

If the origin of the Libyan alphabet poses some insoluble problems, it is even more difficult to date its invention or introduction.

Contrary to the views of several authors (D. Blanchet, S. Gsell), the Libyan inscriptions or signs which are found on some rock carvings as at Kef Mektouba, Chaba Naïma and Khanguet el Hadjar, cannot be contemporaneous with these latter. It is now known that these carvings are for the most part Neolithic and thus very much earlier than every script. Careful examination reveals in every case that the inscriptions are superimposed on the carvings.

However, this is not the case with the inscription from the Azib n'Ikkis (High Atlas, Morocco). This inscription occupies a vertical cartouche delimited in an anthropomorphic figure of which it forms an indisputable part. It is certain that this inscription, which contains fifteen or sixteen signs not belonging to the Saharan alphabet, is contemporaneous with the carving. The technique of the lines, the patina, style and details such as the representation of the sex and the lateral fringes, which accompany the figure, are identical with other carvings which are usually attributed to the Old Bronze Age (El Argar civilisation in Spain). Even assigning it as late as possible within the archaeological context, this inscription seems to us clearly earlier than the 6th-5th century B.C.

In Morocco, we also have the inscription of Sidi Slimane of the G͟harb which refers to the tumulus that it adjoins and with which it is consequently contemporaneous; the funerary furniture of this monument belongs to the 4th-3th century B.C.

In Eastern Algeria the bazina (Palaeo-Berber dry-stone burial chamber) at Tiddis contained pottery, a piece of which has three Libyan letters painted on its belly. The bones contained in the pottery of this tomb have been dated from 2200 ± 100 years to 250 ± 100 B.C. So this inscription is quite likely to be older than the bilingual dedication of the Temple of Massinissa at Dougga, dating from the tenth year of the reign of Micipsa, i.e. 138 B.C. This inscription was for a long time the only Libyan text reliably dated, and there was also an unconscious tendency to regard it as the oldest. A study by J. G. Février of the inscriptions of Dougga, mentioning municipal offices, allows us to reconstruct the genealogy of an important person, Sefot, who was twice (during one year?) prince of the city. Taking account of this genealogy, it is possible to date back two other inscriptions (*RIL*, 10, 11) to a generation preceding the dedications of 139; these inscriptions would date from the decade 170-180 B.C.

In the Sahara, the datable documents are rarer, but a preliminary investigation has shown that *Tifinag͟h* is very much older than the historians, who believed that the Berbers only conquered the Sahara in the 3rd century of our era following the pressure exerted by Rome on the land routes of the north, formerly thought. In Fazzān, some *Tifinag͟h* scripts are carved on amphora found at Germa which date from the 1st century of our era. Among these graffiti figures sign ⵣ, which exists only in the Saharan alphabet. The Fazzān necropolis thus proves that in the 1st century of our era, *Tifinag͟h* was in use in the heart of the Sahara.

In the massif of the Hoggar, the stele of Assekrem, whose inscriptions and carvings appear very ancient (H. Camps-Fabrer), is worth citing, and especially the carved blocks of the funerary monument of Ti n Hinan at Abalessa. These blocks which bear *Tifinag͟h* script have been cut so as to form part of the construction of the monument, of which they constitute the lower courses. The cutting has mutilated or interrupted some carved texts. This *Tifinag͟h*, which belongs, however, to the modern alphabet, is thus at least contemporaneous with the monument and probably older; the funerary furniture and the isotopic date calculated from the wood of the bed or stretcher on which Ti n Hinan reposed, date the construction of the monument back to the 5th century of our era.

Such are the chronological pointers which allow us to assert the great antiquity of the Libyan script in the Mag͟hrib, where it is clearly earlier than the reign of Massinissa, i.e. at the emergence of the Numidians and Moors into history. As for the Sahara, the use of *Tifinag͟h* goes back to at least the beginning of our era and probably much earlier.

Bibliography: It is not possible to present a complete bibliography of the Libyan inscriptions. The various histories of the alphabet and of writing should be consulted, particularly that of J. G. Février, Paris 1948, and M. Cohen, *La grande invention de l'écriture et son évolution. Documentation et index*, Paris 1958, 90-1. A very complete bibliography, for the period, is given by J.-B. Chabot in the *Recueil des inscriptions libyques*, Paris 1940-1. See also C. Meinhof, *Die Libyschen Inschriften. Eine Untersuchung*, Leipzig 1932-5; L. Galand, *Inscriptions libyques*, in *Inscriptions antiques du Maroc*, Paris 1966; J. Alvarez Delgado, *Inscripciones libicas de Canarias, ensayo de interpretacion libica*, La Laguna, Tenerife 1964. The greatest caution should be exercised in using G. Marcy, *Les inscriptions bilingues de l'Afrique du Nord*, Paris 1936, and the numerous articles of this author which appeared in *Hespéris* (1934-7), *AIEO Alger* (1936) and *R. Afr.* (1937).

L. Galand provides annually a report entitled "Les Études de linguistique berbère" in the *Annuaire de l'Afrique du Nord.* In these chronicles the discoveries and analyses of Libyan inscriptions are mentioned regularly. These reports have been collected in a volume entitled *Langue et littérature berbères. Vingt-cinq ans d'études*, Paris 1979. For the chronology of the inscriptions, see G. Camps, *Recherches sur les plus anciennes inscriptions libyques de l'Afrique du Nord et du Sahara*, in *Bulletin archéologique du Comité des Travaux historiques*, N.S., x-xi (1974-5), 146-66.

(G. Camps)

3. Modern history. — On 29 September 1911, Italy declared war on Turkey and started its long-planned invasion of the Libyan littoral. Italian troops did not succeed in penetrating beyond the coastal strip due to stiff resistance by combined Turkish-Libyan Forces. Negotiations between Italy and Turkey resulted in the Peace Treaty of Ouchy (17 October 1912). On the battlefield, however, Libyan resistance did not subside. During World War I the Italians were virtually besieged in their coastal strongholds. In Cyrenaica, Fazzān and the Sirtica, resistance was led by Aḥmad al-Sharīf (1873-1933), head of the Sanūsī order, with support from Turkey and Germany. It was under their influence that he decided to attack British Forces in Western Egypt in November 1915. Defeated, he transferred all political and military control of Cyrenaica to his cousin Muḥammad Idrīs al-Sanūsī (born 1882). In April 1917 agreements were reached between Idrīs and the British and Italians (the Accords of ʿAkrama). The Sanūsī-Italian accord was superseded in October 1920 by the Accord of al-Radjma, in which Idrīs was recognised as the independent ruler (*Amīr*) of the interior oases.

In Tripolitania, leadership was divided. Though a number of tribal leaders (*inter alios* Ramaḍān al-Shtaywī (or Suwayḥilī) and the Ibāḍī Berber Sulaymān al-Bārūnī) agreed on establishing a Tripolitanian Republic (*Djumhūriyya Ṭarābulsiyya*) in 1919, fighting soon broke out between tribal factions. To overcome dissensions and to strengthen their position vis-à-vis the Italians, they decided to offer Idrīs al-Sanūsī the amīrate of all Libya. This put him in a predicament, for he was bound to the accords with the Italians. On the other hand, refusal of the offer would undermine his position with his adherents. Finally, he decided to accept the offer, but subsequently fled the country to Cairo (1922).

Full-scale war in Libya was resumed after Mussolini's take-over in Rome in 1922. Due to its internal divisions, resistance in Tripolitania was soon crushed, but in Cyrenaica the charismatic leadership of the Sanūsī representative ʿUmar al-Mukhtār inspired Bedouin resistance for almost ten years until at last he was injured in battle, imprisoned and publicly hanged on 16 September 1931. Pacification of Libya being completed, the Italians started extensive agricultural colonisation schemes in the fertile coastal plains. In 1935 they completed the strategic coastal road connecting Tripolitania and Cyrenaica. The onset of World War II impeded further Italian development plans. After severe fighting between Germany and the Allied Forces, in January 1943 all of Libya was occupied by British and Free French Forces. Idrīs al-Sanūsī had assisted the British war effort from Cairo, and an army of Libyan exiles under the Sanūsī flag had participated in the liberation of Cyrenaica.

After World War II the future fate of Libya was put before the General Assembly of the United Nations. On 21 November 1949 it was decided that Libya should become an independent state before 1 January 1952. A UN Commissioner, the Dutchman Adriaan Pelt, was appointed to supervise the power-transfer from British and French military governments. The UN decision stimulated political debate on the future form of an independent Libya. Two opposing groups emerged. The older tribal and religious leaders, mainly concentrated in Cyrenaica and Fazzān, supported a federation under the Sanūsī crown. The younger generation, influenced by Arab nationalism, advocated a unitary republic. This no doubt would lead to the preponderance of Tripolitania, with its larger population and its better-developed economy and thus reduce the influence of Idrīs's supporters. They were wary of Idrīs's close bonds with Britain. The outcome of the debate, however, was anticipated by the proclamation of Idrīs al-Sanūsī as head of an independent amīrate of Cyrenaica, while control of foreign affairs and defence remained with Britain (1949). After this, Idrīs would not support the independence of a united Libya unless under his own crown.

Libyan independence was declared on 24 December 1951. (Due to peculiar international circumstances it was only in 1955 admitted to the UN.) The constitution provided for a hereditary monarchy under a Sanūsī King and a representative federal government consisting of two houses (a Senate and a House of Representatives). The King was endowed with extensive powers, including the right to select and dismiss the Prime Minister, to appoint half the Senate and to dissolve the elected parliament. The political system never matured. The first elections to be held on 19 February 1952 resulted in a victory for government candidates, but voting results were contested by the opposition parties. Demonstrations ended in violent clashes with police forces. As a result, all political parties and programmes were suppressed. From that moment, Libyan politics gradually degraded into the assertion of family, tribal and parochial interests.

The next two decades witnessed increasing pressure on Libyan society. An unprecedented oil boom was the main cause. Libya's first oil was struck in 1955; in 1962 it joined OPEC; and in 1969 Libya had already become the world's fourth largest oil producer. Oil revenues ended Libya's dependency on foreign financial aid and allowed a more assertive policy. In order better to cope with the exigencies of oil exploration, in 1963 the cumbersome federal system was abolished. Social changes set in with developing oil industry. Urbanisation and industrialisation gave birth to a new stratum of traders, service-men and technicians; petroleum and dock workers started to organise in trade unions. The new social groupings were denied political expression. Subsequent tensions were heightened by foreign politics. During the Suez crisis (1956) and again in 1967 there were violent outbursts of Arab nationalist feelings. But Libya, a member of the Arab League since 1953, was tied to the West in its foreign policy by the presence of British and US military bases. The government, though briefly joining the Arab oil embargo of 1967, had no means adequately to meet widespread popular support for a Nasserist policy. This undermined the King's authority.

On 1 September 1969, Idrīs was deposed. In spite of an initial wave of popular enthusiasm, the revolution remained entirely an army affair. It had been planned and implemented by a movement of "Free Officers" modelling itself on the Nasserist revolution. A Revolutionary Command Council (RCC) took control of affairs. It consisted of twelve officers under the general leadership of Colonel Muʿammar al-Ḳadhdhāfī (Gaddafi). Political parties remained suppressed. An attempt at broadening the RCC's political base was made by creating the Arab Socialist Union (1972). Lack of cadre, apathy and hostility from traditional leadership caused its failure. Another attempt was made in 1973 by the proclamation of the popular revolution. Its ideology was set forth by Muʿammar al-Ḳadhdhāfī in his *Green books* (see *Bibl.*). In these, he propagated his Third World

theory which refuted parliamentary democracy as well as class domination. Libya was to be governed by Popular Congresses (*mu'tamarāt sha'biyya*) and Popular Committees (*lidjān sha'biyya*) in every section of society. On 2 March 1977, power was officially transferred to the people and the country renamed the *Djamāhīriyya* (Masses' Republic).

In oil policies, republican Libya took a nationalistic stand, leading to a sharp price increase and a major share in production. On the international scene, the theme of Arab unity was paramount, though al-Kadhdhāfī's Third World theory has universalist aspirations.

Bibliographical: Indispensable bibliographical materials are to be found in H. Schlüter, *Index Libycus. Bibliography of Libya 1957-1969 with supplementary material 1915-1956*, Boston Mass. 1972, and *Index Libycus. Bibliography of Libya 1970-1975 with supplementary material. Vol. I. Titles.* (*al-Fihris al-Lībī 1390 ilā 1395-1970 ilā 1975*), Tripoli n.d. On the colonial period, a lot of material is available, especially in Italian. A good short account is to be found in E. E. Evans-Pritchard, *The Sanusi of Cyrenaica*, Oxford 1949. For the period 1943-1960: Ismail Raghib Khalidi, *Constitutional Development in Libya*, Beirut 1956; Majid Khadduri, *Modern Libya. 4. Ethnography and demography. Since the early 1860s, when Libya began to export oil on an international scale, the social and economic structure of its population has been undergoing a continuous process of accelerated and extensive change. Nonetheless, studies of Libyan culture and society and its institutionalised forms—the family, kinship systems, political organisation, legal procedures, religious beliefs and practices, etc.—must still take into account geographical and historical diversities within the country and among its inhabitants. The three regions of Tripolitania, Cyrenaica (Barka), and the Fazzān have had different economies, varying external connections, and experienced specific historical and cultural influences; and internally, each of these regions has been diversified in particular ways.

Along the Mediterranean coastline of 1,200 miles lies a fertile coastal strip nowhere broader than 50 miles. The barren Gulf of Sirte, an arc of some 300 miles where the desert comes right down to the sea, separates the settled coastal areas of Tripolitania from those of Cyrenaica. These areas are well-watered, enjoy a Mediterranean climate and contain the principal cities, towns and villages inhabited by the overwhelming majority of the country's population. The western coastal zone includes the capital city of Tripoli; the inland hills of Djabal Nafūsa, with sufficient rainfall for habitation, and ancient olive groves surrounding small Berber-speaking towns and troglodytic settlements formerly inhabited by Libyan Jews; and, between the fertile coast and the hills, the arid plain of Djafāra. The eastern zone contains the country's second largest city, Benghazi, and the Djabal Akhḍar mountain range which runs in an arc parallel to the coast from Derna to south of Benghazi and whose uplands, rising to 2,000 feet, receive plentiful rainfall.

To the south of this strip lies a second zone which in the past has been too arid for permanent settlement, but which is sufficiently watered to provide grazing and crops of barley for nomadic herders. Although rains were uncertain and the hot wind from the south (*giblī*) could "shrivel plants like a flame", this was the country's main barley-producing area.

Beyond this zone was an absolute desert with the exception of four oasis groups in Cyrenaica—Djaghbūb [*q.v.*], Djala, Marada and Kufra [*q.v.*], and the spare half-dozen oases of the Fazzān [*q.v.*]. Only about one-twentieth of the country's total population lived in this area of extreme desert climate.

The divisive geographical features of Libya were mitigated by trade, religion and, finally, by the political unity created by Italian colonisation, beginning in 1911 and furthered by the Second World War. Before the opening of West African ports in the 19th century, a good proportion of the wealth of tropical Africa had reached Europe by way of Libya. From the Fazzān and Cyrenaica, gold, ivory, ebony, ostrich feathers and slaves transported to the emporia of Tripoli and Benghazi had sustained oasis-dwellers, camel-herders and merchant townsmen. The Fazzān had been a wealthy community of slave-owning merchants, Berber-speaking Tuaregs with trading networks as far as Timbuctu, in parts of the Sahara and into the Western Sudan; while Cyrenaica had controlled the caravan route through Kufra to Wadai. When this commerce ceased, the Tuareg moved further west while the former Tebu-speaking slaves remained in the oases, subsisting as crop-sharing peasants until the oil boom of the 1960s. Most of these areas, as well as the Djabal Akhḍar and the tribes in the plain of Djafāra, were more or less autonomous and maintained their own locally-based social structures.

Until the 1950s, at least four-fifths of the population of Tripolitania lived from agriculture and animal-rearing. In the Djafāra, a number of tribes, integrated in a complex social and economic pattern that included sedentary peasants, transhumants, and oasis cultivators, were linked by *ṣuff* [*q.v.*] relations of alliance which transcended other loyalties.

In Cyrenaica, as well, the combination of nomadism, pastoralism, and some cultivation, along with the significant seasonal variations in climate, assumed a characteristic form of social organisation, viz., the segmentary tribal system. Throughout Libya (and elsewhere in North Africa and the Middle East), the disposition of non-urban groups reflected the distribution and exploitation of natural resources, and the usage of common concepts, especially that of the segmentary tribal system, was widespread and of central importance. Nonetheless, these shared concepts often glossed over diverse adaptations to different types of ecologies. Thus, for example, in Cyrenaica the virtually sedentary cow and goat herders of the Djabal Akhḍar and the camel and sheep pastoralists of the semi-desert area differed significantly in the pattern of their social relationships. The idiom of "tribe" also nominally existed in the cities of the coastal area, but the urban élites with their cosmopolitan values and social structure had more resemblances and affinities with their urban counterparts in the Arab and Muslim world than they did with the tribesmen of their hinterlands.

Libya, like the rest of predominantly Berber North Africa, had been invaded in the 5th/11th century by the Banū Hilāl [q.v.] and Banū Sulaym [q.v.], some of the former settling in Tripolitania, and the latter in Cyrenaica. These tribal movements from the east accelerated the process of Arabisation and the spread of Islam and produced a fusion of cultures and races. Only small pockets of Berber-speakers have resisted. In Tripolitania there are communities of sedentary agriculturalists along the northern fringes of Djabal Nafūsa between Yefren and Nalut, and on the coast at Zuara; these Berber-speakers, who are further distinguished by their adherence to the Ibāḍiyya [q.v.] sect, constitute an estimated 4% of the population of Tripolitania; in addition, there are in the oases of Ghadamès and Ghat Berber-speaking Tuareg. To complete the linguistic description, mention should again be made of the Tebu of Fazzān and southern Cyrenaica who speak their own language, a Sudanic dialect. Finally, amongst the Arabic-speaking population, the Libyan Jewish communities deserve inclusion: before emigrating *en masse* during the decade following the Second World War, the Jews numbered some 30,000, most of them in Tripolitania. Their communities had their own internal social structures and values, and they played an important role in economic life, particularly trade.

In regard to religion, the overwhelming majority of Libyans have long adhered to the Sunnī creed and followed the Mālikī school of law. Yet neither their beliefs, nor the history of the country, may be understood without taking into account the revivalist movement of the Sanūsiyya [q.v.], a neo-Ṣūfī order established by Muḥammad ʿAlī al-Sanūsī (1787-1859). The order, founded on a network of lodges, spread along the desert oases from Tripolitania to the Sudan. With his headquarters in the interior at Djaghbūb, a strategic centre for consolidating power and spreading the creed among tribes along the caravan routes, the head of the order created a political-religious organisation that was to lead the opposition to Italian penetration and eventually become transformed into the Libyan Kingdom under the rule of a descendant of the founder, King Idrīs. The Sanūsī order, as an Islamic revivalist movement, gave the population of the country a religious zeal and, aroused by Italy's attack, a sense of unity that developed into Libyan nationalism.

During the period of Italy's colonisation of Libya, a large number of agricultural estates belonging to Italian individuals and development companies were established: a programme of state and land-grant colonisation in the 1920s was followed by large-scale agricultural settlement by Italian peasant families in the 1930s. The invasion and the colonial occupation disrupted and influenced the economic and social life of the indigenous population in a myriad of ways: e.g. there was an increase in sedentarisation among nomads, the breakdown of corporate groups, the spread of education, and a massive exodus of poor rural pastoralists and agriculturalists to take up wage labour in the cities and towns of the coastal region, especially after the Second World War.

Since independence in 1951, the government has created a new group of Libyan farmers by transferring to them former Italian lands (and eventually nationalising those lands in 1971) and establishing a National Agricultural Settlement Agency. Moreover, it has instituted policies for land use, irrigation, rural settlement (and, since the revolution of 1969, a state policy for rural development with projects planned for the Djafāra plain, Djabal Akhḍar, Kufra, Serir and Fazzān), and has generally sought to raise the contribution of agriculture to the national economy. But because of the phenomenal development of oil and the growth of industry and services, agriculture has declined significantly since the pre-1961 period when it involved 70% of the labour force.

In 1964 oil in Libya began to flow on an international level. Since then it has transformed the country from a poor agricultural and desert backland to a land of affluence and one of the biggest oil exporters in the world. With an estimated annual average income of $ 8 billion per year (1978) and a per capita Gross National Product of $ 6,310, Libya has become the richest country in Africa and the fifteenth richest country in the world (1977 World Bank Report). The national economy now depends on the oil sector, which accounted for about 62% of Gross Domestic Product in 1980. The government (renamed since 1973 the Socialist People's Libyan Arab Jamahiriya, to replace the Libyan Arab Republic established following the *coup d'état* led by Colonel Muʿammar al-Ḳadhdhāfī (Gaddafi) in 1969) has concentrated in its latest Development Plan (1976-80) on the needs of electricity, water supplies, sewage and housing, and the creation of three major industrial complexes. It is the urban sector, where one-third of the labour force are foreigners and less than 3% women, which now receives governmental priorities.

Libya is on the way to becoming a highly-urbanised society. About half of its population in 1978 of 3,014,100 (of whom 2,597,600 are Libyans) live in towns of 20,000 or larger. Its accelerated urban growth results from migration, natural increase and immigration of foreign labour. Between 1966 and 1973, towns of 25,000 or more population grew by 20% annually, one of the highest rates in the world. (Natural increase for the same period was 4.2%.) The urban regions of Tripoli and Benghazi (10% of the country's total area) contain 92% of the total population, include fourteen of the fifteen towns with a population of at least 10,000, and are responsible for 86% of Libya's agricultural production. The city of Tripoli has grown from a population of some 30,000 at the beginning of the century, to 110,000 (1931), to 240,000 (1954) and to an estimated 820,000 in 1980; while Benghazi, according to the 1980 estimate, has some 400,000 inhabitants. By the end of this century, it is expected that of Libya's

population of 5.5 to 7 million, 67% to 74% will live in cities of 20,000 or more, i.e., that the number of city-dwellers will triple or quadruple. The study of social and cultural changes consequent to these processes greatly increases the challenges to Libyan ethnography.

LIḤYA-YI SHERĪF, the hairs of the Prophet. In imitation of the Prophet's practice shaving of the hair and beard later became a *sunna*. According to al-Bukhārī, during his penultimate and last pilgrimages, Muḥammad permitted people who wanted to get his hair when he was being shaved (Ahmet Zebidi Zeynüddin, *Sahih-i Buhari muhtasarı tecridi sarih tercemesi*, tr. Ahmed Naim-Kâmil Miras, Istanbul 1926-46, vi, 193-8, x, 442). The hairs of his head and beard, thus obtained, were preserved and later circulated in all Islamic countries. People kept this hair in a bottle, wrapped in layers of green cloth, in mosques, palaces, etc., opening this on public festivals such as during the days of Ḳandīl, Bayram, and in the second half of Ramaḍān. In the houses of the rich, the Liḥya-yi Sherīf was regarded with respect and placed in an honoured, elevated position. In the mosques it stood on a high stool on the landing above the last stair of the pulpit (Osman Ergin, *Türkiye maarif tarihi*, Istanbul 1939-43, i, 172; Mehmet Zeki Pakalın, *Osmanlı tarih deyimleri ve terimleri sözlüğü*, Istanbul 1971, ii, 366).

Although it means properly a hair from the head of beard of the Prophet, it is called Saḳal-ı Sherīf incorrectly by the public in the Turkish-speaking countries, meaning the Prophet's beard only.

The Liḥya-yi Sherīf is today kept in a silver box at the Topkapı Palace, together with the other relics of Islam, in the Imperial Chamber (*Khāṣṣ Oda*), in the Pavilion of the Holy Mantle (*Khirḳa-yi Saʿādat Dā'iresi*) (Kemal Çığ, *Relics of Islam*, Istanbul 1966, 7). Two other examples which belong to the Yıldız Palace, now transferred with other objects to Istanbul University Library, are however in boxes encrusted with mother-of-pearl on which verses from the Ḳur'ān are written. As well as green cloths, these are wrapped in a kind of gauze with inscriptions printed on it, called *destimal* ("napkin"), specially made (İsmail H. Baykal, *Enderun mektebi tarihi*, Istanbul 1953, 148) for the visits to the Holy Mantle organised by the Sultan-Caliph on 15 Ramaḍān and then distributed to the courtiers and other people invited to the ceremony [see KHIRḲA-YI SHERĪF].

The ceremony of visiting the Holy Mantle is explained at length in many Ottoman writers. Although the Liḥya-yi Sherīf is kept with the other relics there, it is never mentioned, and the Mantle of the Prophet occupied the most important place in these ceremonies (H. Z. Uşaklıgil, *Saray ve ötesi*, Istanbul 1966, 223; Leylâ Saz, *Haremin içyüzü*, Istanbul 1974, 125). It is interesting to note that in histories such as those of Silāḥdār or Selānīkī, we find much information about the Holy Standard and the Holy Mantle's being removed from their places and sent away in times of crisis, and about help being expected from them when the sultans or the Ottoman army were in trouble; butn one of these authors writes anything about the Liḥya-yi Sherīf (İ. H. Uzunçarsılı, *Osmanlı devleti'nin saray teşkilatı*, Ankara 1945, 250-60).

LIḤYĀN, people and State of early Arabia.

1. Liḥyān and Liḥyānite in epigraphy. Inscriptions discovered in the north of the Ḥidjāz and speedily identified as "Liḥyānite" have preserved the names of at least six kings of Liḥyān, a kingdom which must have existed for several centuries in pre-Islamic times. The great majority of the Liḥyānite inscriptions are found in the valley of al-ʿUlā and its immediate surroundings, especially in the neighbourhood of al-Khurayba, the site of ancient Dedān, not far to the south of the great Nabataean centre of al-Hidjr [*q.v.*], i.e. modern Madā'in Ṣāliḥ. Not only Liḥyānite, but also other inscriptions are found in more or less considerable numbers in the same area: Dedānite, Minaean, Thamudic,

Nabataean, Hebrew and Arabic. C. M. Doughty, Ch. Huber and J. Euting were the first travellers to copy Liḥyānite inscriptions and to report on the archaeological remains in their vicinity.On the basis of Euting's documents in particular, D. H. Müller presented a first interpretation of the texts. Close to 400 Liḥyānite inscriptions and graffiti were subsequently published by A. Jaussen and R. Savignac in their monumental *Mission archéologique en Arabie*. In recent years, many more have come to light, for instance those included in some of A. Jamme's publications, particularly in various volumes of his *Miscellanées*. Most important was the discovery, in a mountain gorge near Biʾr al-ʿU<u>dh</u>ayb, to the west of al-<u>Kh</u>urayba, of a group of texts connected with a place of worship of <u>Dh</u>ū-<u>Gh</u>ābat, the principal deity of Liḥyān at the time.

The Liḥyānite inscriptions are written in a South Semitic alphabet, related to but distinct from the South Arabian, Dedānite, Thamudic and Safaïtic scripts. Although the evolution of the South Semitic letter forms is not yet sufficiently clear in all its details, it has become generally accepted, since H. Grimme (1930, 1932), that the Dedānite inscriptions are older than the Liḥyānite ones. On both historical and palaeographic grounds, these Dedānite inscriptions are usually dated, with F. V. Winnett (1937, p. 50), to the sixth century B.C., or slightly later; cf. Winnett, in Winnett and W. L. Reed (1970, pp. 114 ff.). It is not known when the Dedānite supremacy in the region was replaced by the Liḥyānite one and after how long an interval, if any. It seems certain, however, that the kingdom of Liḥyān flourished at least throughout the 3rd century B.C.; the Minaean inscription found in Dedān and now dated to approximately this period points to the presence of a colony of Minaean traders without implying, contrary to what was previously believed, Minaean political domination, cf. A. van den Branden (1957, p. 16) and J. Ryckmans (1957-8, p. 243; 1961, pp. 54 ff.). The name of certain kings of Liḥyān, *TLMY*, may be another indication that the Liḥyānite rulers were to some extent contemporaries of the Ptolemies of Egypt, if the identification of that name with Ptolemy, suggested by E. Littmann, in J. Euting, *Tagbuch*, ii, 225, and W. W. Tarn is correct. But the name could be Semitic, and it has been compared, most recently again by al-Ansary (1970), with that of Talmay, king of Geshur (II Sam. iii, 3 and xiii, 37; I Chron. iii, 2). The southward advance of the Nabataeans probably caused the downfall of the Liḥyānite kingdom. In this connection, three short Nabataean inscriptions, found south of Taymā and written by a certain Masʿūdū, who calls himself king of Liḥyān, are often quoted. Various dates have been ascribed to these inscription: the 2nd century B.C. by A. Jaussen and R. Savignac (*Mission*, ii, 221), the middle of the 1st century B.C., "but before the final Nabataean conquest of Dedan", by W. F. Albright (1953, p. 7) and, less likely, the 1st century A.D. by W. Caskel (1954, p. 42). Among the deities worshipped by the Liḥyānites, the inscriptions mention, in addition to <u>Dh</u>ū-<u>Gh</u>ābat, Hallāh, Lāt, Han-ʿUzzay, Han-ʾAktab, Ha-Kūtbay, Baʿalsamēn, Ḥumām, Ha-Mahr, <u>Kh</u>ar<u>dj</u>, Salmān and Wadd (the vocalisation is purely conventional). These and other deities are also encountered in composite proper names such as Zēd-<u>dh</u>ū-<u>Gh</u>ābat, Wahb-Allāh, ʾAmat-ʿUzzā, <u>Dj</u>aram-han-ʾAktab, <u>Dj</u>aram-Kutbā ʿAbd-Manāt, etc. The site of a temple was discovered in al-<u>Kh</u>urayba by A. Jaussen and R. Savignac (*Mission*, ii, 56 ff.). Its walls were probably ornamented on the inside with large statues; parts of several of these statues were found lying in the débris. In the central court of the temple, there was a stone basin, circular in form and more than four metres in diameter.

The language of the Liḥyānite inscriptions is an early form of Arabic. Some differences with Classical Arabic are easily observed. The defective spelling of words like *bt* (cf. Classical Arabic *bayt*) and *ʾs* (cf. Classical Arabic ʾAws) shows that the Liḥyānite phonemic system comprised the vowels *ē* and *ō*. After nasals, *t* may have been realised as *<u>th</u>* and is occasionally spelled conformingly, e.g. *bn<u>th</u>* instead of *bnt*—daughter. The article has the form *h-*; *hn-* before ʾ, ʿ and, optionally, *ḳ*; *hl-* occurs in one inscription. The dual pronominal suffix *-hmy* (cf. Classical Arabic *-humā*) did not end in *-ā* because, in Liḥyānite orthography, final long *-ā* is written with the letter *-h*. The nominative dual *status constructus* is also spelled with final *-y* and, for that reason, cannot have ended in *-ā*. The perfect, third person m. sg. of the causative stem of verbs with identical second and third radicals is frequently not contracted, *ʾfll* or *hfll*; but contracted forms are also found on occasion. A systematic analysis of the inscriptions will undoubtedly reveal other peculiarities of Liḥyānite Arabic.

(A. J. DREWES)

2. In Islamic sources. The Islamic historical and genealogical sources consider the Arab tribe of Liḥyān to be a branch of the Hudhayl [*q.v.*], and ascribe to it the genealogy Liḥyān b. Hudhayl b. Mudrika b. al-Yās b. Muḍar, i.e. Liḥyān was attached to the North Arab stock. When and how the Liḥyān came to the position in which we find them in the 6th century A.D., forming part of the Hudhayl and established in a territory considerably to the south of their original home, sc. now in the country to the north-east of Mecca, we cannot tell, on account of the complete absence of documents. Muslim tradition has lost all memory of them and confounds them apparently under the general designation of Thamūd [*q.v.*] with the Thamūd proper and the Nabataeans of al-Ḥidjr: a memory, but a very vague one, of the old kingdom of Liḥyān may perhaps have survived in the isolated mention in a tradition that the Liḥyān were "remnants of the Djurhum", who later became part of the Hudhayl (Ṭabarī, i, 749, 11-12 [see DJURHUM], following Ibn al-Kalbī; *Tādj al-ʿarūs*, x, 324, 1-2, following al-Hamdānī, probably in *al-Iklīl*, since the passage is not found in the text of the *Djazirat al-ʿArab*).

In the period just before and after Islam, the Liḥyān do not seem to have had a history independent of their brethren of Hudhayl; it is only rarely that they are mentioned apart from them, e.g. in *Ḥamāsa*, 34, à propos of their battles with the warrior-poet Taʾabbaṭa Sharran; Yāḳūt, Buldān, ii, 272, iv, 104 (cf. the *Ḥamasā* of al-Buḥturī, 80-1; Ibn al-Djarrāḥ, ed. H. H. Bräu, no. 86 = *SBWAW*, cciii, no. 4, 1927, 31), ii, 614, of a battle with the Khuzāʿa. The poets of this tribe are as a rule reckoned among those of the Hudhayl—e.g. Mālik b. Khālid al-Khunāʿī, al-Mutanakhkhil al-Khunāʿī, etc. At the time of the preaching of Islam we find them, like the rest of the Hudhayl, under the political influence of the Ḳuraysh. This explains their hostile attitude to Muḥammad, which resulted in the murder of their chief Sufyān b. Khālid b. Nubayh by ʿAbd Allāh b. ʿUmays at the instigation of Muḥammad. This murder was cruelly avenged by the Liḥyān, who slew several Muslims in their turn (the *yawm al-Radjīʿ*, 4 A.H.). As there is no further mention of hostile relations between the Muslims and the Liḥyān, it is probable that the latter were included in the submission which the Hudhayl made to Islam [see HUDHAYL].

After the triumph of Muḥammad, and in the periods following, there is an almost complete lack of information about the Liḥyān, and there are very few persons of note belonging to this tribe: the grammarian al-Liḥyānī, whose full name was ʿAlī b. Ḥāzim (Khāzim) or b. al-Mubārak, d. in 222/837 or 223/838 (cf. al-Zubaydī, *Ṭabaḳāt al-nuḥāt*, ed. Krenkow, in *RSO*, viii, 145, no. 125, with bibliography; Flügel, *Die grammatischen Schulen*, 51) perhaps belonged to it, but other sources (Yāḳūt, *Irshād*, v, 229; *Tādj al-ʿarūs*, x, 324, 19) trace his *nisba* "al-Liḥyānī" to the unusual length of his beard (*liḥya*).

Bibliography: Wüstenfeld, *Genealogische Tabellen*, M. 8 (*Register*, 275); Ibn Ḳutayba, *K. al-Maʿārif*, ed. Wüstenfeld, 31; Ibn Durayd, *K. al-Ishtiḳāḳ*, ed. Wüstenfeld, 109; Ibn al-Kalbī-Caskel, *Ǧamharat an-nasab*, i, Tab. 58, ii, 7, 378; Ibn Hishām, *Sira*, ed. Wüstenfeld, 638-42, 981-3; Wāḳidī, tr. Wellhausen, 158-60, 224; Ṭabarī, i, 1431-7; Caetani, *Annali dell' Islām*, i, 577-8, 581-2 (year 4, §§ 3-4, 7).

(G. LEVI DELLA VIDA *)

LĪM, LĪMŪN [see MUḤAMMAḌĀT]

LIMASSOL [see ḲUBRUṢ]

LIMNI (Turkish form of the Greek Λῆμνος, in older Ottoman historical works Limoz and Ilimli, in older Greek sources also Λῆμος, Stalimene in mediaeval western sources, Lemnos in modern usage) an island in the northern part of the Aegean Sea, 80 km. west of the entrance of the Dardanelles (*Čanaḳḳalʿe Boghazi* [*q.v.*]) halfway between Mount Athos and Tenedos (*Bozdja-Ada* [*q.v.*]). The island, of *ca.* 470 km², has been virtually treeless since long before Ottoman times. Agriculture is of local importance only. Its famous export product since antiquity is a sort of volcanic earth which had reputedly medicinal power, *terra limnia, ṭīn-i makhtūm*, which used to be dug once yearly with some ceremony. Lemnos today has a Greek population of about 25,000 which is constantly decreasing. Myrina (formerly Kastro, Turkish Limni) on the western coast is the capital of the island that forms a part of the province of Lesbos of the Republic of Greece. There is a military air base at Mudros. The large harbours of Purnia in the north and Port Mudros in the south, almost cutting Lemnos in two halves, are not much used any more.

Lemnos in the Middle Ages was part of the Byzantine Empire. It suffered the depredations of corsairs, Arabs from Crete (*Iḳritish* [*q.v.*]) in the 10th century, and those of Saldjūḳs from Anatolia in the 11th century. With the partition of the Empire after the Latin conquest (1204), Stalimene became an imperial fief granted to Filocalo Navigajoso and to his descendants in 1207. Byzantine rule was restored by the Emperor Michael Paleologus between 1276-8. Prisoners of state were held in the island, e.g. the Ottoman pretender Düzme Muṣṭafā in 823-5/1419-20. Shortly before 1453, Dorino I Gattilusi (1426-55), Lord of Lesbos (Turkish Midilli [*q.v.*]), acquired the whole of Lemnos as a fief. After the fall of Constannople (29 May 1453), the Byzantine authorities fled. Thanks to the diplomatic activities of Critobulus, the Byzantine-Ottoman historian, who was a judge in nearby Imbros (Imroz [*q.v.*]), the Gattilusi dynasty of Lesbos was granted Lemnos and Thasos (Ṭashöz [*q.v.*]) as fiefs by Sulṭān Meḥemmed II, subject to a tribute of 2,325 gold pieces a year. Domenico Gattilusi, son and successor of Dorino I, was in 1455 granted Lemnos only. In 1456, however, the inhabitants appealed to the sultan to be directly governed by him. From this time, the first *ḳānūn-nāme* of Imbros, Lemnos and Thasos must be dated, and this was revised by Selīm I in 1519 (cf. Barkan, *Kanunlar*, 237-40).

A papal war fleet commanded by Ludovico, Cardinal Scarampi, captured the island in 1457, but in 1459 the Ottoman admiral Khādim Ismāʿīl Bey retook it. Critobulus intervened once more to maintain its special status, which led to the grant of Lemnos (plus Imbros and Enos on the mainland

(Turkish Enez)) in 1460 to the ex-despot of the Morea Demetrius Paleologus in return for a tribute of 3,000 gold pieces a year. A Venetian force conquered the island in 1464, and held it till the peace was concluded in 1479. Gedik Aḥmed Pas̲h̲a [*q.v.*], *ḳapudān pas̲h̲a*, had the fortresses repaired and Anatolian subjects were settled there. A regular administration was now set up with a *voyvoda*, a *ḳāḍī* and *ḳod̲j̲abas̲h̲ïs* in charge of the native Greek population. Limni became later a part of the province of the *sand̲j̲aḳ begi* of Gelibolu (i.e. of the Ottoman admiral). Towards the end of the 16th century, Lemnos, together with Chios (Saḳïẓ [*q.v.*]), was the only prosperous island of the Archipelago, with 74 villages, including 3 Turkish Muslim ones.

Its strategic position led to repeated Venetian attacks and its conquest in 1656, undone a year later by Topal Meḥmed Pas̲h̲a after a 63 days' siege of Kastro. Following the destruction of the Ottoman fleet near Čes̲h̲me on 5 July 1770 by the Russian fleet of Count Alexis Orlov, Lemnos suffered a Russian attack. An Ottoman squadron defeated the Russians in Mudros Bay, and this success brought D̲j̲azāʾirli Ḥasan Bey [*q.v.*] the titles of *g̲h̲āzī* and *pas̲h̲a*. After 1774, Ottoman authority in the Archipelago had to be reinstated, which led to a harsh régime and subsequent popular unrest.

During the Russo-Ottoman war of 1806-12, a division of Admiral D. Senyavin's fleet occupied Lemnos in 1807. In the same year the *ḳapudān-pas̲h̲a* Seydī ʿAlī Pas̲h̲a confronted the enemy in the battle of Athos, west of Limni (30 June 1807). Lemnos did not play an active role in the Greek War of Independence. When the Ottoman administration underwent the reforms of the *tanẓīmāt*, Lemnos in 1283/1866 became one of the 4 *sand̲j̲aḳ*s of the *vilāyet* of the *D̲j̲azāʾir-i baḥr-i sefīd* [*q.v.*], with the *ḳaḍāʾ*s of *Bozd̲j̲a-Ada*, Imroz and "*merkez*", the latter subdivided into the *nāḥiye*s of Bozbaba (Strati or Aghios Eustratios Island) and Mudros. An Orthodox bishop resided at Kastro. There was a small garrison, and a government steamship had its station there. In 1312/1894 the population consisted of 23,499 Ottoman subjects and 192 foreigners (in the 1310/1892 statistics, there were 34,451).

During the Macedonian crisis, the Powers sent a naval force to occupy Lemnos's castle, customs house and telegraph office (5 December 1905) in order to press the Porte to introduce reforms. At the outbreak of the Balkan War, the main division of the Greek fleet under the flag of Admiral Paul Koundouriotis steamed straight to the island (19 May 1912). The next day, 1,500 troops were landed and these occupied Lemnos after a short fight with the 30-man-strong Ottoman garrison. The *muteṣarrif* and leading Muslim civilians were deported. A Greek naval base was established at Port Mudros.

The Treaty of London (that of St. James) of 30 May 1913 confirmed the Greek annexation. During World War I, the Venizelos government lent Lemnos to the Allied Powers. An Anglo-French naval base and army camp were established at Port Mudros, from where the Gallipoli campaign was directed. It was here, aboard the British battleship HMS *Agamemnon*, that an Ottoman delegation led by the Minister of Marine Hüseyn Raʾūf [Orbay] negotiated with the British plenipotentiary Admiral Arthur Calthorpe and concluded the armistice of 30 October 1918 ending hostilities between the Allied Powers and Turkey.

At the Treaty of Lausanne (24 July 1923) the new Republic of Turkey recognised formally the loss of Lemnos and other islands. With Samothrace (Turkish Semadirek), Imroz (Gökče-Ada) and Tenedos (Bozd̲j̲a-Ada), the last two having been restored to Turkey, Lemnos formed part of a demilitarised zone. The 2,500 Muslim-Turkish inhabitants of Limni had already left their island in 1920, and Greek refugees from Anatolia took their places in 1923.

(A. H. de Groot)

LINEN [see ḳaṭṭān]

LINGA, a minor seaport, modern Bandar-i Linga, on the northern shore of the Persian or Arab Gulf, in lat. 26° 34′ N. and long. 54° 53′ E., to the south of Lāristān [see LĀR, LĀRISTĀN] and facing the islands of Ḳishm [*q.v.*] and the Ṭunbs. Linga has a harbour of some depth, allowing traffic by dhows and coastal craft; behind the town lies a salt marsh, and then the Band-i Linga mountains, which rise to 3,900 ft./1,190 m. The population, formerly largely Arab, is now predominantly Persian, but with strong admixtures of Arabs, Baluchis, Indians and the descendants of black African slaves, these comprising both Sunnīs and Shīʿīs.

The old port was at Kung, 8 miles/13 km. to the east, where the Portuguese retained a footing till 1711, long after they had lost Hurmuz [*q.v.*]. In 1760, the Ḳawāsim Arabs [*q.v.*] under Shaykh Ṣāliḥ came from Raʾs al-Khayma and established footholds at Linga, which they seized from the *kalāntar* [*q.v.*] of the Djahāngīrī district, at Shinās and on Ḳishm island, till they were in 1765 expelled by Karīm Khān Zand [*q.v.*]. In 1809-10 the British naval expedition from Bombay which attacked the Ḳāsimī pirates at Raʾs al-Khayma went on to take Linga and other Ḳāsimī-held ports on both the Arab and the Persian shores of the Gulf. In 1887 the Persian imperial government extended its control over Linga and deposed the last hereditary *shaykh* of Ḳadīb, carrying him off in chains to Tehran.

Linga was at this time still a flourishing port, a centre for pearl-fishing, with Indian merchants residing there; an import centre for textiles coming into Persia; and an export centre for Persian tobacco. There was still some slave-running of Persians and Baluchis into the Arabian peninsula and of Somalis and black Ḥabashīs into Persia which the Persian authorities in Shīrāz were unable or unwilling to stop. Curzon in 1890 estimated the population of Linga at 10,000. After the assertion of Persian central government control, and the inclusion of Linga within the reformed government customs administration, many of the old-established merchant families moved to the Arab shores, e.g. to Dubayy, Baḥrayn and ʿUman, and in recent times, Linga has been only a shadow of its former self, completely overshadowed by such ports as Bushire and Bandar ʿAbbās. The population in the 1970s was 9,404. Linga is also administratively one of the five *bakhsh*s in the *shahristān* of Lār in the *ustān* of Fārs, the population of the *bakhsh* being *ca.* 41,000.

LION [see AL-ASAD; MINṬAḲAT AL-BURŪDJ]

LIPḲA or Lubḳa, Lupḳa, the name given to the Tatars who since the 14th century inhabited Lithuania, and later the eastern and south-eastern lands (Belorussia, Volhynia) of old Poland up to Podolia, and after 1672 also partly Moldavia and Dobrudja. Derived from the old Crimean Tatar name of Lithuania, the record of the name in Oriental sources (ليبقا in 926/1520, later لبقه: V. Véliaminof-Zernof, *Matériaux pour servir à l'histoire du khanat de Crimée*, St. Petersburg 1864, 3, 4, 720; also ليبقه and لبقه *Silāḥdār taʾrīkhi*, i, Istanbul 1928, 615, 638, and C. Orhonlu, *Lipkalar*, in *TM*, xvi [1971], tables I, VI) permits to infer an original *Libḳa* > *Lipḳa*, from which Pol. *Lipka* was formed (contamination with Pol. *lipka* "small lime-tree"; this etymology was suggested by the Tatar author S. Tuhan-Baranowski, *Skąd powstała nazwa Lipków*, in *Wschód*, iii [1932], 96-8). A less frequent Polish form, *Łubka*, is corroborated in (*Lubḳa* >) *Lupḳa*, the Crimean Tatar name of the Lipkas up to the end of the 19th century (Ewliyā Čelebi, *Kniga puteshestviya*, ed. by A. S. Tveritinova, i, Moscow 1961, 254, n. 3).

The Tatar settlements in Lithuania date back to the first quarter of the 14th century. Lithuania was also to provide a refuge for various exiles from the Golden Horde in later years. However, Tatar colonisation on a mass scale in Lithuania is commonly associated with the person of the Lithuanian Grand Duke Witold (*ca.* 1352-1430), a supporter of the Khān Tokhtamīsh and his sons in their struggle for power within the Horde. Witold's expedition to the banks of the Don in 1397 gave a rise to a voluntary and long-lasting immigration of large masses of Tatar population from the steppes to Lithuania. The newcomers, who were brought to settle at the very centres of power (Vilna, Troki and others), while maintaining their tribal organisation and freedom of the Islamic cult, were enlisted to do military service in separate units, and were endowed for this with land and exemption from the taxes. The nobility came in time to be put on a par with the Lithuanian and Polish nobility, whereas the former *tamgha*s performed the function of coats-of-arms (S. Dziadulewicz, *Herbarz rodzin tatarskich w Polsce*, Vilna 1929). The poorer part of the Tatar population engaged in various activities such as waggon-driving, trade with the East and tanning, a craft traditional with Turkic peoples. Certain of the Lipkas also provided some dispatch-riders sent to the Crimea, and official interpreters for mutual contacts with Turkish and Crimean embassies. The privileges granted to the Lipkas by Witold were to be later re-affirmed by the successive Grand Dukes of Lithuania and Kings of Poland. Nevertheless, they were exposed to the envy of the magnates and nobility and of the Roman Catholic clergy as well, which in turn provoked the first manifestations of ill-will among these Muslims towards their adopted land. Their complex situation was adequately depicted in the anonymous *Risāle-yi Tatar-i Leh* by one of the Lipkas who, during a stay in Istanbul in 965/1557-8 on his way to Mecca, wrote his account for Süleymān the Magnificent (from a 18th century copy thereof, no longer extant, the Turkish text with Polish translation and commentary was published by A. Muchliński, *Zdanie sprawy o Tatarach litewskich* . . ., Vilna 1858). The rule of the fervent Catholic Sigismund III (1587-1632) and the Counter-Reformation movement brought a number of restrictions to the liberties granted to non-Catholics in Poland, the Lipkas

among others. To this can be attributed the intervention by Sultan Murād III with the King in the matter of liberty of religious cult for the Lipkas, undertaken in 1000/1591 upon the request of two Muslims who had accompanied the King's envoy to Istanbul (Z. Abrahamowicz, *Katalog dokumentów tureckich*, Warsaw 1959, no. 236). In 1609 the mosque at Troki was destroyed and some Tatar women were accused of witchcraft and burnt. P. Czyżewski, in retaliation for his father's death at the hands of a Lipka, published a pamphlet, *Alfurkan tatarski prawdziwy* ... (1616), abusive towards the Muslim creed and its believers. It gained wide popularity (republished 1640, 1643) despite the *Apologia Tatarów* by Azulewicz (1630). The Lipkas who had defended their new land in the wars against the Teutonic Order and Muscovy, and even the borderland territory of Poland against the attacks of Crimean Tatars, on the other hand, as early as in 965/1557-6, having the author of the *Risāle* for their mouthpiece, had expressed their wish to be reintegrated with the world of Islam and even of having their land subjugated by the Pādishāh. Now, ostracised as they were and in view of the material difficulties in the Polish army, they partly joined the Turks when the latter invaded Poland in 1672. Köprülüzāde Fāḍīl Aḥmed Pasha made Poland, by the Buczacz treaty of 1083/1672, refrain from putting any obstacles to their emigrating to Islamic lands; however, their pro-Turkish enthusiasm was soon to abate. A. Kryczyński, who had once served in the Polish army, and later was made commander (*muḥāfiẓ*) at Bar, the centre of one of the four *sandjaḳ*s within the new *wilāyet* of Podolia, and a fervent promoter of the idea of serving the Ottomans, perished at the hands of other exiles in October 1673 (*Silāḥdār ta'rīkhi*, i, 638; S. Kryczyński, *Bej barski*, in *RT*, ii, 229-301). Some of the Lipkas availed themselves of the Amnesty Act and returned to Poland (K. Grygajtis and J. Janczak, *Powrót Lipów pod sztandary Rzeczypospolitej*, in *Sobótka*, 1980/2, 181-9). They also took part in the battle of Chocim on the Polish side under the command of John Sobieski (1673). The reign of John III, a protector and patron of the Lipkas, was also noted in their history by a wave of conversions to Roman Catholicism, a fact which roused the displeasure of Khān Selīm Girey I in 1095/1683 (Vel'yaminov-Zernov, *op. cit.*, 720). The Lipkas fought in 1683 under King John III at Vienna, and their merits were recognised and rewarded at the 1684 Diet. Nevertheless, there were as many of them as 472 at Kamieniec Podolski, and lesser numbers were stationed at other Podolian castles occupied by the Turks (Orhonlu, *op. cit.*, 71; Lipḳas are also to be found in the *Defter-i rūznāmče-yi zu'amā we erbāb-i timār-i eyālet-i Ḳamaniče ber mūdjib-i taṣḥīḥ fī sene 1098* [= 1682] at the Wojewódzkie Archiwum Państwowe, Poznań).

The next considerable emigration of the Lipkas to Turkey took place early in the 18th century, in connection with the victory won by King Augustus II over the Polish-born King Stanislas Leszczyński, whom the Lipkas had supported in his war against the Saxon King. Those of the Lipkas who stayed on in Turkey after 1673, as well as the new emigrants, were settled in Moldavia (the "Puste Pola Tatarow Lipkow Libka Tatarlerinugn (*sic!*) Topraghi ابقه تاتارلرینک طپراغی in J. A. B. Rizzi Zannoni, *Carte de la Pologne divisée par provinces et palatinats* ..., Paris 1772, no. 23), Dobrudja, and even Anatolia (in the *sandjaḳ* of Khudāwendigār [*q.v.*] and on the Ḳīzīl Irmaḳ [*q.v.*]). Formerly a constant threat to Polish borderland areas, after 1699 they served the borderland *pasha*s as interpreters in the peaceful relations with Poland. In Poland they enjoyed the favour of the last King Stanislas Augustus (1765-95), and later had their shares in the national Polish uprisings against the Tsarist government; they also served with the Poles in the Napoleonic army. On the other hand, the Russian Empire opened to them a way to a lawful career and education; what was more, the Lipkas owed to it a stimulating contact with the other Turkic Islamic peoples (those of the Crimea and of Ādharbāydjān). This atmosphere of religious and national revival, of animated contacts with Turkey and the other Muslim lands, as well as with the centres of Muslim learning (Sarajevo, Cairo), distinguished also the activities of the Lipkas in restored Poland (after 1918). An important part was performed by the Cultural and Educational Association of the Tatars in the Republic of Poland (established 1926) and personally by Dr. J. Szynkiewicz, *muftī* since 1926, an orientalist who was in close contact with the Polish Islamist T. Kowalski (Cracow) and two Karaim Turcologists, S. Szapszał (Vilna) and A. Zajączkowski (Warsaw). In Vilna, where the *muftī* had his seat, a Tatar National Museum was founded in 1929, and the Tatar National Archives in 1931. Several journals were published: *Przegląd islamski* (1930-34), *Zycie tatarskie* (from 1934), and the *Rocznik Tatarski* (= *RT*) dealing with scientific research (i-iii: Vilna 1932, Zamość 1935, Warsaw 1938; vol. iv, destroyed by the Nazis, was never published). In 1936 a Tatar cavalry unit was founded within the Polish Army; they wore the traditional horse-tails (*tugh*). The forms of Muslim religious activities in Poland were finally established by the relevant Act passed on 24 April 1936. The outbreak of the Second World War did not permit completion of the building of the mosque in Warsaw. Tatars participated in the Polish resistance movement and fell victims to the Nazis during the occupation. The westward shift of Poland's frontiers after the war, and the emigration of the *Muftī* Szynkiewicz, who had not left any followers of his stature, were detrimental to the general situation of the Lipkas. Some of the Tatar intellectuals, however, supported by the Polish state, have focused their attention on religion, contacts with the Muslim world, history, mosques, burial grounds and other monuments of the Tatar past in Poland (M. Konopacki, *Les musulmans en Pologne*, in *REI*, 1968/1; A. Miśkiewicz, *Tatarzy polscy w latach 1918-1980*, in *Novum*, 1980/8, 83-109).

The author of the *Risāle* reckoned that there were a hundred settlements of the Lipkas, with a corresponding number of mosques, in Poland, and numbered their population at 200,000, which seems greatly exagerated. Ibrāhīm Pečewī, quoting the statement made by a messenger of the Lipkas to the *muftī* at Aḳkerman, mentions sixty villages with mosques (*Ta'rīkh*, i, Istanbul 1283, 472, quoted by A. Muchliński, *Izsledovanie o proiskhozhdenii i sostoyanii litovskikh tatar*, St. Petersburg 1857, 60-1, and Orhonlu, *op. cit.*, 63). In 1932 there were about 6,000 Muslims in Poland, with 16 mosques and one under construction, and two prayer-houses (*RT*, i, 323). At present, their approximate number in Poland exceeds 2,000. There are only two mosques, in the villages of Bohoniki and Kruszyniany (*Boghonuḳ*, *Ḳurshun* among the Tatars), of which the former, devastated by the Nazi troops, has been rebuilt on a government grant. Since the 19th century there has also been a Muslim community in Warsaw

with an old burial ground; two new ones were established after the last war in Gdańsk and Szczecin, where the Tatar repatriates from the East had come to settle.

The author of the *Risāle* reports that the *imāms* were brought by the Lipkas partly from the Crimea and the Horde. Pečewī relates that litigious matters of religious and legal nature were submitted by them to, e.g., the *muftī* at Aḳkerman (*loc. cit.*). Their contacts with the Muslim clergy in Turkey (also attested by the references in contemporary Turkish authors; Orhonlu, *op. cit.*, 66) are recorded still in the 18th century (Czartoryski Library, Cracow, no. XVII/1080). The author of the *Risāle*, a fervent Muslim himself, had deplored the fact that some of the Lipkas assumed the Christian creed, that the knowledge of Arabic was dying out among them and that, still worse, they tended to forget their own language, so that *yerlüler lisānī ile söylemeye bas̲h̲ladïlar* and nobody but the newcomers knew the "Ottoman" language. Pečewī's informant had equally stressed that the Lipkas on copying the Ḳurʾān *ʿarabī k̲h̲aṭṭ ile* commented upon it *Leh keferesi lisānī ile* (*loc. cit.*). Ewliyā Čelebi had at first called them soberly *Leh ḳrallïna tābiʿ ümmet-i Muḥammed'den Libḳa ḳawmī*, and numbering them into the "Tatar" nations, justly regarded their language as belonging to the Slavonic family (*Seyāḥat-nāme*, ii, 99; v, 138, 146). Later, however, when the name of the Lipkas was cited to him at Ūjvár-Neuhäusel (Nové Zámky, in Slovakia) by the Crimean Tatar adversaries of the Swedes in Poland in 1656 [cf. LEH], he wrote how in that "Sweden" which he had allegedly visited along with the Tatars in 1663, he found 800,000 (vi, 368) or 1,000,000 (x, 77) *göčer ewli* Tatar, adding to this that they did not know Tatar at all and spoke among themselves only *iṭālyān lisānī üzere* (vi, 368). In fact, the Lipkas, as a result of their intermarriage with the Poles and Belorussians, abandoned completely their native language; however, though Polish and Belorussian became their predominant languages, even in religious writings, they were spelt in Arabic alphabet (such texts in both languages are quoted by Muchliński, *Izsledovanie* ..., 62-70; in general, A. K. Antonovich, *Belorusskie teksti, pisannye arabskim pis̀mom, i ikh grafiko-ortografičeskaya sistema*, Vilna 1968, with detailed bibliography). Furthermore, the Polish and Belorussian as spoken and written by these Muslims were enriched with many loan-words taken from the Muslim creed, community life, and everyday activities, of Arabic, Persian and Turkic origin (A. Woronicz, *Szczątki językowe Tatarów litewskich*, in *RT*, ii, 351-67, with a vocabulary listing similar words and phrases). This cultural ambiguity can be also observed on the tombstones of the Lipkas, where the half-moon and the *s̲h̲ehādeteyn* formula in Arabic are usually followed by the text proper written in Polish or, formerly, sometimes in Russian. In recent times, however, even the knowledge of the Arabic alphabet has been dying out among the young generation. Hence when J. Sobolewski wrote his *Wykład wiary mahometańskiej czyli islamskiej* ("Exposition of the Muhammedan or Islamic creed", Vilna 1830), with an explanation of the religious rites and prayers, he did it in Polish only; the book was destined for his many co-religionists who were unable to read the traditional *kitāb*s in the Arabic alphabet. The Polish translation of the Ḳurʾān by Jan Mirza Tarak Buczacki (Warsaw 1858) was founded not upon the original only, and was provided with commentaries derived from the French translation of the Ḳurʾān by Kazimirski, which, to cite J. Szynkiewicz, "were often offensive to the religious feelings of a Muslim" (*Literatura religijna Tatarów litewskich i jej pochodzenie*, in *RT*, ii, 140).

The Tatar national and cultural revival in inter-war Poland was, however, largely due also to some of the Roman Catholic Lipkas (S. Dziadulewicz, S. Kryczyński and others). Lipkas converted to Christianity were also among the ancestors of the celebrated Polish writer H. Sienkiewicz (1846-1916; Nobel Prize for Literature 1905). The Tatars, who since the 14th century had been settled on Polish territories as war prisoners, were soon converted, with just a vague memory left of their origin (the names "Tatar" or "czabany", pl. derived from Turkic *čoban* "shepherd", as in the surroundings of Chrzanów near Cracow) and their traditional occupations (tanning and horse-breeding).

LISĀN al-ʿARAB [see IBN MANẒŪR]

LISĀN al-DĪN [see IBN AL-K̲H̲AṬĪB]

LISBON [see BURTUḲĀL; AL-US̲H̲BŪNA]

LIṢṢ (A., also *laṣṣ*, *luṣṣ*, pl. *luṣūṣ*, with *maṣdars luṣūṣiyya*, *talaṣṣuṣ* (see *LA*[1], viii, 355-6, and Lane, s.v.), one of the two main words in Arabic for thief robber (the other being *sāriḳ*); in Persian we have *duzd* "thief", *duzdī* "theft", and in old Turkish *og̲h̲rï*, Ottoman *k̲h̲ayrsïz*, modern *hırsız*. Arabic *liṣṣ* and the unassimilated variants *li/a/uṣt* must have appeared in the language during the Byzantine period, presumably via Syriac *leṣṭā*, whilst there exists the form *listis*, closer to the Greek original ληστής, in Mishnaic Hebrew and Palestine Jewish Aramaic (see S. Krauss, *Griechische und lateinische Lehnwörter im Talmud, Midrasch und Targum*, Berlin 1898-9, ii, 315; Fraenkel, *Die aramäischen Fremdwörter im Arabischen*, 284; J. Schacht, *An introduction to Islamic law*, Oxford 1964, 9). *Liṣṣ*, etc. do not appear in the Ḳurʾān, where we have *sāriḳ* and *sāriḳa* (V, 42/38, XII, 70, 73), but nevertheless they are found occasionally in pre-Islamic poetry (Imruʾ al-Ḳays, Labīd), and then quite frequently in the Umayyad period (for full documentation, see the forthcoming entry *s.v.* in *WKA*).

In general, the pre-Islamic Arabs did not recognise theft as a highly reprehensible crime, and it was not condemned unless the victim was a member of the kin-group or a *d̲j̲ār* within it (hence D̲j̲amīl al-ʿUd̲h̲rī could satirise a man's father as "the one who stole a guest's cloak", *Ḥamāsa* of Abū Tammām, 155); the injured party was normally left to secure redress himself and recover his property (see G. Jacob, *Altarabisches Beduinenleben nach den Quellen ge-*

schildert[a], Berlin 1897, 217-18). Only with the coming of Islam did theft and brigandage become crimes punishable under the *Sharīʿa*, and *ḥudūd* were laid down both for simple theft (now called in legal parlance *al-sirḳa al-ṣughrā*) and for brigandage and highway robbery (*al-sirḳa al-kubrā* or *ḳaṭʿ al-ṭarīḳ*); for the legal aspects of these crimes, see SĀRIḲ. And of course, the carrying-off of camels and other beasts in the course of *ghazw* [*q.v.*], the raiding of a hostile tribe, was always regarded as perfectly legitimate.

Bedouin society up to the present day has preserved much of the ancient ethos in regard to thieving, with the Ḳurʾānic penalty of amputation only sporadically applied, even in the towns. In eastern Arabia, H. R. P. Dickson noted that amongst the local Bedouin, stealing from friend or foe was regarded as something shameful and dishonourable, *ʿayb*, but not treated as a crime (*The Arab of the desert, a glimpse into Badawin life in Kuwait and Sau'di Arabia*, London 1949, 531-2). Where penalties for stealing are applied, they often involve the infliction of indignities rather than mutilation and suchlike severities. Doughty, whilst journeying with a pilgrim caravan, observed the beating of a servant who had stolen from his master, although the leader of the caravan did in fact have the power of life and death in regard to crimes considered as really serious. In the town of ʿAnayza in al-Ḳasīm, he noted that common thieves were beaten with green palm rods (because dry ones would have broken their bones) by the *muṭṭawwiʿa* or elders responsible for order and decency, but amputation was not practised, and petty theft, if not openly paraded, was disregarded (*Travels in Arabia Deserta*, London 1926, i, 14, 69, ii, 368-9). In Jordan, Jaussen registered humilliating punishments amongst the Bedouins there for stealing, such as tearing out the offender's beard hair by hair (*Coutumes des Arabes au pays de Moab*, Paris 1948, 229-30), forcibly shaving or plucking out the beard being an ancient Near Eastern way of showing contempt for someone, cf. Hamun King of the Ammonites' shaving off half the beards of David's servants (II Sam. x, 4-5). Only when a man showed himself as an habitual thief, thereby bringing dishonour on his kin, was he likely to be outlawed by them, becoming an outcast in respect of that particular offence (A. Kennett, *Bedouin justice, laws and customs among the Egyptian Bedouin*, Cambridge 1925, 21).

Within the Bedouin life of pre-Islamic and early Islamic times, the *liṣṣ* was in many ways hardly distinguishable from the outcasts and desperadoes of the desert known as *ṣaʿālīk* and *futtāk* [see ṢUʿLŪK], who lived outside the tribal system with every man's hand against them; the poetry of these *ṣaʿālīk* and *futtāk* attracted the attention of philologists of the ʿAbbāsid period, and more recently, has attracted that of modern western and oriental scholars (see e.g. Yūsuf Khalīf, *al-Shuʿarāʾ al-ṣaʿālīk fi 'l-ʿaṣr al-djāhilī*, Cairo 1959; Sezgin, *GAS*, ii, 133-45; and arts. AL-SHANFARĀ, TAʾABBAṬA SHARRAN, ʿURWA B. AL-WARD). But the activities of those described as *luṣūṣ* proper seem also to have been isolated for study by the philologists and compilers of *adab* works. Thus we have mention in the literary sources of an *Akhbār al-luṣūṣ*, containing poetry of well-known thieves and brigands amongst the Arabs, by the pupil of al-Aṣmaʿī, Abū Saʿīd al-Ḥasan b. al-Ḥusayn al-Sukkarī (212-75/827-88 [*q.v.*]); see Brockelmann, I[2], 108-9; Sezgin, ii, 63, 133), and of a *Kitāb al-Sall wa 'l-sirḳa* of Abū Muḥammad al-Ḥasan b. Aḥmad al-Aʿrābī, called al-Aswad al-Ghandadjānī (d. *ca.* 428/1036-7, see Sezgin, ii, 68, 88). The contemporary Syrian scholar ʿAbd al-Muʿīn al-Mallūḥī has collected the names together of some 30 *liṣṣ* poets of the Islamic period, together with their surviving verses, see his *Ashʿār al-luṣūṣ wa-akhbāruhum*, in *RAAD*, xlix (1974), 362-76.

With the awakening, from the 3rd/9th century onwards, of a distinct interest among Arabic authors in low life and in the criminal and semi-criminal underworlds of the burgeoning Islamic towns, we find a certain amount of information on the activities of those thieves and brigands in the urban environment, although there are enough continuing references to criminal activities in the countryside and deserts (e.g. the rustlers of thoroughbred horses and camels, the thieves of the latter being known as *khurrāb*, sing. *khārib*, see C. E. Bosworth, *The mediaeval Islamic underworld. i. The Banū Sāsān in Arabic life and lore*, Leiden 1976, 118) to show that rural crime and brigandage never disappeared.

A writer of such varied interests as al-Djāḥiẓ shows a special interest in the tricks and stratagems of the sophisticated criminals of his time, and he seems to have written a special work on the *ḥiyal al-luṣūṣ*, partially extant and cited in subsequent *adab* works (e.g. possibly in al-Bayhaḳī's *K. al-Maḥāsin wa 'l-masāwī*, ed. Schwally, 521-3, without explicit mention of the title here; cf. Ch. Pellat, *Ǧāḥiẓiana. III. Essai d'inventaire de l'œuvre ǧāḥiẓienne*, in *Arabica*, iii [1956], 164, no. 95). The compilers of collections of anecdotes were eager to include tales about clever thieves, and in the opening of his *Nishwār al-muḥāḍara* al-Tanūkhī lists among the interesting tales which he had heard in the course of his career those of fanatically-inspired assassins using knives (*aṣḥāb al-ʿaṣabiyya wa 'l-sakākīn*), of brigands and thieves, and of profligates and rowdies (*ahl al-khasāra wa 'l-ʿayyārūn*) (ed. ʿA. Shāldjī, Beirut 1391-3/1971-3, i, 4). Several of the succeeding anecdotes do in fact deal with the ruses of crafty evildoers, see e.g. i, 156-8, nos. 79-80, vii, 96-102, 250-1, nos. 57-9, 144, viii, 218-28, nos. 96-8. One of these tales actually deals with a body of thieves and bandits in India called the Bānuwāniyya, whom al-Tanūkhī equates with the Arab *mustaḳfī*, the cut-purse who follows and steals up behind a person to rob him, and from whose activities Muslim traders in India suffered (cf. also the Bānuwānī of al-Djāḥiẓ, cited in Bosworth, *op. cit.*, i, 37); Muslim authors seem to have been aware of the existence of organised groups or castes of dacoits and thugs in India, grouping these criminal bodies with the Bedouins of Arabia and predatory Iranian peoples like the Kurds, the Balūč and the Kūfičīs [see ḲUFṢ] as examples par excellence of violent and uncontrollable brigands. One should note also the connection in certain sources of gambling [see ḲIMĀR] and thieving, seen in the not-infrequent phrase *liṣṣ muḳāmir* "thief and gambler" (see F. Rosenthal, *Gambling in Islam*, Leiden 1975, 114, 153).

The authors of *maḳāmāt* [*q.v.*] and other works of the picaresque genre likewise found here material around which they could weave incidents involving their respective heroes. Thus Badīʿ al-Zamān al-Hamadhānī wove several of the adventures of Abu 'l-Fatḥ al-Iskandarī around the activities of impudent thieves, such as those who stole surreptitiously from the ranks of prostrate worshippers during the *ṣalāt*, those who ascended house walls and used grapnels for purloining articles inside the rooms, and those who burrowed into cellars and vaults from the outside or from adjacent houses (the *naḳḳābūn* or *aṣḥāb al-*

naḳb) see further, Bosworth, *op. cit.*, i, 100-3). Especially valuable evidence on this type of activities is to be found in the chapter on *talaṣṣuṣ* and associated malfeasances in al-Rāg͟hib al-Iṣfahānī's *Muḥāḍarāt al-udabā'* (ed. Cairo 1287/1870, ii, 108-12, ed. Beirut 1961, iii, 189-99). Al-Iṣfahānī cites as an outstanding figure amongst successful criminals one ʿUt͟hmān al-K͟hayyāṭ, who as a skilful practitioner himself (called al-K͟hayyāṭ, not because his original profession was that of tailor, but because he "sewed up", *k͟hāṭa*, the holes bored into houses for felonious purposes so neatly that they were almost undetectable) had apparently become something of a semi-legendary figure by al-Rāg͟hib's time (the Dāwūd al-Čalabī Library in Mosul—whose contents are now dispersed and their location largely unknown—contained a *Ḥikāyat ʿUt͟hmān al-K͟hayyāṭ fi 'l-luṣūṣ wa-waṣāyāhu*, see Pellat, *loc. cit.*; and one wonders whether there is some connection with the hero of two anecdotes given by al-Tanūk͟hī, named as ʿAbbās b. K͟hayyāṭa and described as a supremely clever thief of Baṣra, see *Nis͟hwār*, vii, 97-102, nos. 58-9).

According to this ʿUt͟hmān, there were five main categories of thieves and brigands: (1) the *muḥtāl* or "trickster", who worked by stratagems and who did not kill in the course of his crimes and was therefore looked down on his more desperate and violent confrères; (2) the *ṣāḥib al-layl* or "worker by night", the nocturnal housebreaker, who got in either by boring or by scaling walls (the *mutasalliḳ*), and the robber with violence (*mukābir*); (3) the *ṣāḥib al-ṭariḳ* or "gentleman of the road", the highwayman or brigand; (4) the *nabbās͟h* or "burrower, excavator", said to be well-known and presumably a man who dug up a people's buried treasure hoards; and (5) the *k͟hannāḳ* or "strangler, assassin", who may work by suffocating his victim, but may also be a disemboweller (*bāʿiḏj*) or one who pounds his victim's head with a stone (*rāḍik͟h*). He then goes on to detail the types of confederates and auxiliaries (*ʿawna*) whom criminals employed, e.g. to "case" likely premises for a future break-in or to create diversions whilst a raid could be made (for further details, see Bosworth, *op. cit.*, i, 101-6).

Bibliography: Given essentially in the article. On the legal status of highway robbers and thieves, see Majid Khadduri, *The Islamic law of nations, Shaybānī's Siyar*, Baltimore 1966, 247-50.

LITERATURE [see ADAB; ʿARABIYYA; G͟HAZAL; MADĪḤ; MAḲĀMA; MART͟HIYA; S͟HIʿR; TA'RĪK͟H, etc.]

LIT͟HĀM (A.) (sometimes also pronounced *lifām*), the mouth-veil, is a piece of material with which the Bedouins concealed the lower part of the face, the mouth and sometimes also part of the nose (see the commentary on al-Ḥarīrī, ed. de Sacy, Paris 1821, 374, 2). According to the *LA*, *lifām* is a mouth-veil which also covers the nose top (*arnabat al-anf*) and is worn by women. It served the practical purpose of protecting the organs of respiration from heat and cold as well as against the penetration of dust (cf. D͟hu 'l-Rumma, no. 5, 43, also no. 39, 24 and 73, 16; and the commentaries on al-Mutanabbī, 464, 27, and al-Ḥarīrī, 374, 2). It also made the face more or less unrecognisable, and thus formed a protection against the avenger of blood (Goldziher, in *ZDMG*, xli [1887], 101). The *lit͟hām* was therefore also sometimes worn as a deliberate disguise by people who did not usually wear it; thus in the *1001 Nights* (ed. Macnaghten, i, 878) it is worn by a princess, who disguises herself as a man, and (*ibid.*, ii, 59) by a woman for similar reasons. A denominative verb has been formed from *lit͟hām*, the fifth form of which in particular means "to put on the *lit͟hām*" (e.g. *Ag͟hānī*, viii, 102, 20; xxi, 55, 19; *Ag͟hānī*, ed. Kosegarten, 121, 13; Wright, *Opuscula arabica*, iii, 2; al-Ḥarīrī, *Maḳāmāt*[2], ii, 433, 2), while the eighth form in the meaning "to put on something as a *lit͟hām*" is generally used only metaphorically (see below). *Talt͟hīma* usually means a woman's veil (Cherbonneau, in *JA* [1849], i, 64), but *talt͟hīmat al-bayāḍ* is also found as the distinctive dress of a particular office under the Fāṭimids: their chief *ḳādī*s wore it along with the *turban* and *ṭaylasān* (de Sacy, *Chrest.*, ii, 92). In general, however, the *lit͟hām* does not seem to have been worn by town-dwellers.

The *lit͟hām* has no considerable importance for Islam from the purely religious point of view; it is forbidden along with certain other garments for the *muḥrim* (al-Buk͟hārī, i, 390, below).

The custom of wearing a *lit͟hām* was generally disseminated among the Ṣanhād͟ja tribes [*q.v.*] in north-west Africa, who are therefore described as *lit͟hām* wearers, *mulat͟ht͟himūn* or *awlād al-mutalat͟ht͟hima*; as the Almoravids originated in one of their clans, the Lamtūna [*q.v.*], the *lit͟hām* thus came to have a certain political significance. The custom of wearing a *lit͟hām* (below the *niḳāb*, see al-Bakrī, 170; the *lit͟hām* is also mentioned by al-Yaʿḳūbī, Ibn Ḥawḳal, Ibn Baṭṭūṭa, Ibn K͟haldūn, etc., cf. Corso, 151) was found in other parts of Africa also, e.g. in Kānem (al-Maḳrīzī, i, 193, 33 f.) and still prevails among the Tuareg. The Tuareg veil has been the object of several special studies (see *Bibl.*). Amongst the Tuaregs, it is not called *lit͟hām*, but *tegulmust* or *s͟hās͟h* ("muslin"). Its origin seems to be pre-Islamic and perhaps even prehistoric. Among the ancient paintings and rock engravings found by Leo Frobenius there are human figures without mouth and nose, but with only two eyes. The primary motive for a veil seems to be magical, to protect the ways of life from evil forces. These Africans retained their veils even on journeys into the eastern lands of Islam, where it was not the fashion, while their women went unveiled. A tradition of late invention explains these remarkable customs by a story that on one occasion during an attack on a village, where there were many women but only a few men, the men put on veils and the women took up arms to deceive the enemy as to their real numbers (Goldziher, in *ZDMG*, xli, 101); another story has it that after the fall of the Umayyads, 200 members of the Umayyad family and their clients escaped to Africa disguised as women and that the wearers of the *lit͟hām* are descended from them (Wüstenfeld, *Der Tod des Husejn*, p. viii). According to al-Bakrī (text, 170, tr. 321), they never took off the *lit͟hām*, and if one of them fell in a battle and lost the *lit͟hām*, not even his friends could recognise him till the *lit͟hām* was put on him again; they also called other men who did not wear the *lit͟hām* "fly-mouthed". The Almohads, particularly Ibn Tūmart, opposed the veiling practised by the Almoravids. They continuously insisted that it was forbidden for men to imitate the dress of women, but they did not succeed in abolishing the custom of wearing the *lit͟hām* (Goldziher, in *op. cit.*, 102). Among further passages where the term *mulat͟ht͟him* occurs in this sense may be mentioned ʿAbd al-Laṭīf, ed. de Sacy, 483, 48 (with other references); Fleischer, *Kleinere Schriften*, ii, 243 (discusses several passages); Marquart, *Die Benin-sammlung*, Index, s.v. *Liṭāmträger*.

The word *lit͟hām* and its derivatives was very much used in figurative language, especially by poets.

From expressions like "to kiss the lips of the beloved one, which are under her *lithām*" (Dozy, *Vêtements*, 400; cf. *mā taht al-lithāmayn* = "the face" in al-Mutanabbī, 464, 27) develops the meaning of *l-th-m* "to kiss" (ʿUmar b. Abī Rabīʿa, ed. Schwarz, 6, 207; Ibn al-Fāriḍ, *Dīwān*, Marseilles 1853, 125, l. 5 from below) and especially *talāthama* = "to kiss one another"; *maltham*, the place which is kissed (al-Farazdaḳ in Dozy, *Supplément*). A girl is given a *lithām* woven out of her own hair (*1001 Nights*, Breslau edition, ii, 52, 2); the camel has a *lithām* of foam around its mouth (Dhu 'l-Rumma, 76, 17); the wolf is *ahamm al-lithām* = "black in the region of the muzzle" (al-Ṭirimmāḥ, 4, 35; of the wolf, we find it said in *Ḥamāsa*, i, 762, 17, *lam yatalaththam*); the wine-jar has a *lithām*, i.e. a piece of cloth over its mouth (*malthūm*; *Mufaḍḍaliyyāt*, ed. Lyall, no. 125, 7; also al-Akhṭal, ed. Ṣālḥānī, 85, 2 and ʿAlḳama, ed. Socin, ii, 43, on jars); the sun is darkened by clouds of dust and is thus given, as it were, a mouth-veil (*iltathama*, al-Mutanabbī, 601, 15); "as the day (*nahār*) doffed its *lithām*" = a description of dawn in Ibn ʿArabshāh, ed. Golius, 64, 3, from below; cf. the commentary on al-Ḥarīrī, *Maḳāmāt*, 240, 10: *kashafa* [*al-ṣubḥ*] *al-lithāma*; many titles of books also begin with *Kashf al-lithām*, cf. Brockelmann, S III, 915, 937 (eight titles with *kashf al-lithām* and one with *imāṭat al-lithām*); the *lithām* is to be taken from the walls of buildings, i.e. they are to be exposed (ʿImād al-Dīn, ed. Landberg, 65, 12); to doff the *lithām* of one's origin = to confess it freely (al-Ḥarīrī, *Maḳāmāt*[2], ii, 426, 3); the archangel Isrāfīl has one of his four wings veiled like a vast mouth-veil (*iltathama*) from heaven down to the seventh earth (al-Ḳazwīnī, ed. Wüstenfeld, i, 56, below); a voice may be hidden, *malthūm* (Ṭarafa, ed. Ahlwardt, no. 5, 26 = ed. Beirut 1886, 10); a further metaphor is found in Ibn al-Fāriḍ, in de Sacy, *Chrest.*, iii, 55, verse 25.

Bibliography: in general, cf. Dozy, *Vêtements*, 399-400 and *Supplément*, ii, 516; and for the veils of Muslim women, in general, cf. Snouck Hurgronje, *Twee populaire dwalingen verbeterd*, in *Verspr. Geschr.*, i, 295 ff. and LIBĀS. On the Tuareg veil specifically, see H. R. Palmer, *The Touareg veil*, in *Geogr. J.*, lxviii (1920), 412-18; D. Campbell, *The Touaregs or veiled men of the Sahara*, in *MW*, xviii (1928), 256-62; Raffaele Corso, *Il velo dei Tuaregh*, in *AIUON*, nuova serie (1949), 151-66; J. H. Keenan, *The Tuareg veil*, in *Revue de l'occident musulman*, no. 17 (1974), 107-18; L. Frobenius and H. Obermaier, *Hadschra mektuba*, 1925, pls. 32, 80, 158.

(W. BJÖRKMAN)

LITHOGRAPHY [see MAṬBAʿA]

LITHOMANCY [see ṬARḲ]

LIU CHIH (*Matthew' Chinese-English dictionary*, Revised American edition 1969, characters nos. 4093, 933), also known as LIU CHIAI-LIEN (*Matthews'*, nos. 4093, 629, 4003), 12th/18th century Chinese Muslim scholar (translator, theologian, philosopher and biographer of the Prophet Muḥammad), the most prolific Chinese Muslim author and probably the best-known literary figure yet produced by the Chinese Muslim community.

A *Hui* (Chinese-speaking) Muslim, Liu Chih was born in Nanking *ca.* 1081/1670. Little is known of his class background or early childhood, but it is safe to assume that he was from a well-to-do family. His father Liu Han-ying (*Matthews'*, nos. 4093, 2039, 7489) is said to have "ceaselessly regretted" (Pelliot, *op. cit.* in *Bibl.*, 415, n. 1) the paucity of Islamic works available in Chinese, and indeed, some sources have credited Liu Han-ying (under the pseudonym Liu San-chieh, *Matthews'*, nos. 4093, 5415, 774) with the authorship of two short Islamic tracts (Pelliot, *ibid.*); certainly, Liu Chih seems to have manifested an early interest in the study and translation of Islamic works. Liu tells us that he prepared himself for his life's work—the propagation of Islam through the medium of the Chinese language—by undertaking prolonged linguistic and philosophical studies. At the age of 15 he began a study of the traditional Chinese classics and histories which lasted for eight years. This was followed by a six-year study of Arabic and Islamic religious literature, a further three years study of Buddhism, and finally, one year studying the Taoist classics. Liu completed his universal education by reading 137 *Hsi-yang* (Western) books of which Ford, 150 (see *Bibl.*), writes: "this may seem a large number for that period, but it was over a century since Matteo Ricci had arrived in Peking (1601) and he and his successors, together with the Chinese scholars associated with them, had produced a whole series of works on geography, astronomy, mathematics, mechanics and religion, including some touching on Confucianism. It is therefore quite possible that there was a collection of that number at Nanking and that Liu had seen it".

From the age of 33, Liu was to concentrate on making Arabic and Islamic works available to his Chinese co-religionists. It is clear that he also wished to make Islam philosophically acceptable to the Confucian Chinese establishment. As Ford (*ibid.*) points out: "his leaning towards Confucianism was more marked than that of any other Muslim and it has sometimes been questioned whether he did not compromise his Muslim principles. After ten years of study, he writes, it came on him like a flash that the guiding purpose of the *Qurʾān* was similar to that of Confucius and Mencius. 'The Sacred Book', he wrote, 'is the Sacred Book of Islam, but *li* (the Confucian concept of moral propriety) is the same *li* which exists everywhere under heaven' ". In Liu's attempt to reconcile Confucianism and Islam, the traditional dilemma of Chinese Muslims—geographically and culturally isolated from the rest of *dār al-Islām*—can clearly be seen. The same may be said of Liu Chih's personal dilemma—the almost instinctive desire of a Muslim member of the Chinese *literati* in ethnocentric 12th/18th century China to make his "barbarian" religion culturally and politically acceptable in his native land (Liu lived at a time of rapidly-deteriorating Han Chinese—Hui Muslim relations), whilst at the same time strengthening the Islamic affiliations of the Chinese Muslim community.

Liu Chih tells us that after completing his preparatory studies, he wrote several hundred manuscripts, of which only about one-tenth were published. His first major work, *T'ien-fang hsing-li* ("The philosophy of Arabia"—preface dated 1116/1704) deals in some depth with questions of cosmology, creation, the nature of man and the unity of God. In the preface to this book, a contemporary non-Muslim mandarin, the Vice-Minister of the Board of Ritual, wrote: "the ancient Confucian doctrine has been undermined at different times by Buddhists and Taoists ... now, however, in this book of Liu Chih we see once more the way of the ancient sages, Yao and Shun, King Wen and King Wu, and Confucius. Thus although his book explains Islam, in truth it illuminates our Confucianism". Similarly in the preface of Liu's *T'ien-fang tien-li che-yao-chiai* ("A selection of important Arabian [i.e. Islamic] rules and cere-

monies"—preface dated 1122/1710), the Vice-Minister of the Board of War was to write that after discussing the Muslim religion with Liu he had found that it upheld the traditional Confucian values of loyalty to the sovereign, filial piety and brotherly love—in short, that Islam was not to be equated with "heretical and vicious sects" which were opposed to the established (Confucian) order (Ford, *ibid.*). This early Ch'ing attitude to Chinese Islam was to change radically by the latter half of the 12th/18th century when North-West China was shaken by the rebellion of Ma Ming-hsin [*q.v.*], and still more so after the mid-13th/19th century risings of Ma Hua-lung and Yaʿḳūb Beg [*q.vv.*]. Liu's *Arabian rules and ceremonies* was less kindly reviewed in the 1197/1782 Catalogue of the Imperial Library, which states: "The style of this book is extremely elegant, but if the base is wrong to start with, fine words avail nothing". In 1710, the same year as the publication of *Arabian rules and ceremonies*, Liu also produced a short handbook entitled *T'ien-fang tzu-mu chiai-i* ("An explanation of the Arabic alphabet"), essentially a guide to the Arabic script intended for the use of Chinese Muslims.

Undoubtedly Liu Chih's greatest work—he himself saw it as both the zenith and climax of his life's work—was his biography of Muḥammad, *T'ien-fang chih-sheng shih-lu nien-p'u* ("An accurate biography of the Arabian Prophet", Nanking 1137/1724, first published 1193/1779). This book has been wholly or partially translated into Russian, French, English and Japanese, and is certainly the most widely-known of all Chinese Muslim books. Liu's biography of Muḥammad was based on a number of Arabic and Persian language works, the chief of which has been transliterated by Pelliot as *Tard̲j̲uma Muṣṭafā*, a work which remains unidentified. A list of 67 reference works in Arabic and Persian used by Liu in his researches has been studied by the Japanese scholar Kuwata Rokuro (see *Bibl.*, also Ford, *op. cit.*, 151).

Liu Chih tells us little of his personal life. We know that he was a bookworm, and that because of his studiousness he was considered rather dull by his relatives and friends. Liu travelled widely, primarily in search of Arabic and Persian texts. Whilst *en route* "he pursued his reading among the dust of the carts by which he travelled, and even when riding on his beast" (Mason, *The Arabian Prophet*, p. xii).

Before the Communist conquest of China in 1949, Liu Chih's tomb, which could still be seen outside the southern gate of the city of Nanking, was regularly visited by Chinese Muslim pilgrims. It is not known whether the tomb still exists today, but it should be noted that in 1973 the tomb of Sayyid Waḳḳās, by tradition the father of Chinese Islam, was restored by the Chinese government.

Bibliography: The first European language analysis of Liu Chih's work was made by the Archimandrite Palladius (Piotr Ivanovič Kafarov) under the title *Kitaiskaya literatura Magometan: izlozhenie soderzhaniya na kitaiskom yazïke, pod zaglaviem Iui lan'chzhi shen shi lu, sostavlennoe Liu-tsze-liang* ("The Chinese literature of the Muslims: survey of Islamic works in Chinese entitled *Yü-lin-shih san-shi-liu*, compiled by Liu Tzu-liang"), ed. V. V. Grigor'ev, St. Petersburg 1874 (cf. *Trudï VOIRAO*, xvii [1887)], 149-88). Pelliot says of this work: "cette publication n'est elle-même qu'un extrait d'un travail plus considérable de même titre, rédigé par Palladius entre 1848 et 1859, et qui . . . a enfin paru en 1909"; in fact, the work referred to by Pelliot (*op. cit.*, 414, n. 1) first appeared in *Trudï VOIRAO*, xviii (1887), 163-496 (repr. 1909); see *Kitaiskaya literatura Magometan, pokoinago o. arkhimandrita Palladiya . . . izdal yeromonakh Nikolai Adoratskii* ("The Chinese literature of the Muslims, by the late father Archimandrite Palladius, ed. posthumously by the monk Nikolai Adoratskii"), St. Petersburg 1887, 1909. For an early translation of Liu Chih's *T'ienfang tien-li che-yao-chiai* by C. F. Hogg, see the *Chinese Recorder*, xxxvi (Shanghai 1891), 545-53,under the title *Mohammedanism—laws and ceremonies*. A short notice appears in M. Broomhall, *Islam in China*, London 1910, 73-5. An analysis of Liu Chih's work may be found in A. Vissière, *Analyse d'ouvrages chinois-Mahometans*, in D'Ollone, *Recherches sur les Musulmans chinois*, Paris 1911, 389-417, 421-5; also in *RMM*, xiii (1911), 30-63. A number of Liu Chih's works are listed in C. L. Ogilvie and S. M. Zwemer, *A classified bibliography of books on Islam in Chinese and Chinese-Arabic*, in the *Chinese Recorder*, xlviii (1917), 652-9, see nos. 6, 7, 13, 20 (?), 21 (?), 43, 71, 77. For a translation of Liu Chih's *Mu-min san-tzu ching* ("Muslim three-character classic") by F. L. M. Cotter and K. L. Reichelt, see *MW*, viii (1918), 10-15; also in the *Chinese Recorder*, l (1919), 645-52. [This is the same work as Liu Chih's *T'ien-fang san-tzu ching* ("Arabian three-character classic") mentioned by Mason in *JNCBRAS* (1925), cited below.] For a preliminary examination of Liu Chih's *T'ien-fang chih-sheng shih-lu nien-p'u*, see I. Mason in *Journal of the North China Branch of the Royal Asiatic Society*, li (1920), 159-80, under the title *A Chinese life of Mohammed*. Certainly the most interesting English-language work on Liu Chih is Mason's *The Arabian Prophet: a life of Mohammed from Chinese and Arabic sources*, Shanghai 1921; this work is an extensive (though not full) translation of Liu's *T'ien-fang chih-sheng shih-lu*. A list of some of Liu Chih's works also appears in Mason's *Notes on Chinese Mohammedan literature*, in *JNCBRAS*, lxi (1925), 173-215, see nos. 260, 262, 274, 277, 278, 284, 287, 312. The fullest translation of Liu's biography of Muḥammad is in Japanese; see Tanaka Ippei, *Tempo Shisei jitsuroku*, Tokyo 1930. Also in Japanese, see Kuwata Rokurō, *Liu Chih no ts'ai-ching shu-mu ni tsuite*, in *Ichimura hakushi koki kinen Toyo-shi ronso* (Ichimura *Festschrift*), 1933, 335-53. A short notice may be found in Fu T'ung-hsien, *Chung-kuo hui-chiao shih* ("A history of Chinese Islam"), Shanghai 1940, 160-1 (Taipei reprint 1970; Japanese tr. Itō Akira 1942). Also in Japanese, Kadono Tatsudo, *Kaijō Ryuchi* [sc. Liu Chih] *no "Tenho Tenrei yaku yōkai"* ("The Muslim scholar Liu Chih's 'Selection of important Arabian rules and ceremonies' "), in *Shina Bukkyo Shigaku*, iv/1 (1940), pp. 13. See also the monumental work on Chinese Islam of Tazaka Kōdō, *Chūgoku ni okeru Kaikyō no denrai to sono gutsū* ("Islam in China: its introduction and development"), Tokyo 1964, 1270-91. The most recent English language notice is J. F. Ford's *Some Chinese Muslims of the seventeenth and eighteenth centuries*, in *Asian Affairs*, lxi/2 (1974), 144-56, see esp. 149-52. D. D. Leslie, in his *Islam in China to 1800: a bibliographical guide*, in *Abr-Nahrain*, xvi (1976), 16-48, states that Liu Chih's tombstone obituary is to be found on pp. 11077-11080 of the 1970 edition of his *T'ien-fang tien-li*, see Leslie, *op. cit.*, 36.

(A. D. W. Forbes)

LIVADYA (Λεβάδεια), a town in central Greece on the slopes of Mount Helicon, bordering the vast fertile plain of Boeotia. Nearby is Lake Kopais, reclaimed between 1883-92. The local centre of agriculture and the seat of a bishopric, Livadya was in the Frankish Middle Ages one of the important castles of the Duchy of Athens. In Ottoman times (1460-1829) it developed into a prosperous urban centre and grew into the largest city of central Greece, after Athens, with the highest number of Muslim citizens to the south of Thessaly.

The origins of Livadya go back to the remote antiquity. Since the 8th century B.C., it was one of the minor Boeotian towns, living in the shade of the mighty Thebes. As is the case with many Greek cities, little is known about the town in the early Middle Ages. As an urban centre it appears to be the successor of the ancient city of Orchomenos/Skripou, the seat of the Byzantine administration since the 8th century, which declined during the 11th and 12th centuries. The castle of Livadya, situated on a steep conical hill overlooking the city on the south-west, must have been founded by the Franks after 1204, when it was included in the Duchy of Athens. The Catalans of the Grand Company occupied Livadya after the battle of Skripou in 1311 and held it till 1379-80, reconstructing the castle to the form it largely has today. At an unknown date, the Navarrese, who had captured the town in 1378-80, ceded Livadya to the Florentine Nerio I Acciaiuoli, but almost immediately afterwards it was taken by the Ottomans under G͟hāzī Ewrenos, who kept it for almost a year (1392-3). Yildirim Bāyezīd's armies, marching to the Morea in 1397, seem to have passed by Livadya, reconquered by the Franks under Bertranet Mota. The unceasing warfare of the second half of the 14th century, and at least four epidemics of plague (1348, 1372, 1374, 1388) depopulated the land to a large extent. The Acciaiuolis tried to remedy this by settling ten thousand Albanian families who had been ousted from Epirus by Carlo Tocco. The reign of Antonio Acciaiuoli (1403-35), an Ottoman vassal, was more or less peaceful. There must have been some recovery, interrupted only by the plague of 1423. During the "Varna crisis" of 1443-4, the Livadya area was plundered and occupied twice, first by the Ottomans under Ṭurk͟hān-og͟hlu ʿÖmer Beg in 1460, as retaliation for the treason of Nerio II, who had forsaken the Ottomans, and then by the troops of Despot Constantin of the Morea. The last Florentine Duke of Boeotia, Antonio II, also an Ottoman vassal, was removed in 1460 when the duchy became an Ottoman *sand̲j̲ak* without much upheaval. This is perhaps the reason why the Ottoman chroniclers pass over the acquisition of Boeotia in silence. After Chalkis had been wrested from the Venetians (1470), this large walled city and important harbour became the capital of the *sand̲j̲ak*, called Eg͟hriboz (from Euripos), and Livadya the seat of a *ḳāḍilik*.

The Ottomans seem to have settled mainly in the Catalan castle and in a cluster of houses below it, on the banks of a torrent. There Turk͟hān-og͟hlu ʿÖmer, the Ottoman governor of Thessaly, constructed an *ḥammām* and a domed mosque with some guestrooms that was to become the centre of Islamic life for the next three-and-a-half centuries. The castle was guarded by a garrison of a few dozen soldiers. The mosque is mentioned in the *Waḳf-nāme* of ʿÖmer Beg, its staff being paid from the vast urban property of the Turk͟hān-og͟hlu clan in Thessaly.

The *Icmal defter* M.M. 66 from 871/1466-7, is apparently the oldest preserved Ottoman register containing information on Livadya. In the mentioned year, the town was a *nāḥiye* of the *sand̲j̲aḳ* of Tirk͟hāla (Trikkala) containing 164 Christian households and 24 bachelors as well as a Muslim community of 57 households and 25 bachelors. The Christian group should be regarded as the autochtonous population of Livadya, the relatively large Muslim group as the product of a deliberate policy of colonisation after the town had been annexed.

In this same year the administrative district of Livadya contained 47 Greek ("Rûm") villages and 30 *ḳaṭuns* inhabited by Albanians ("Arnavud") A year after the conquest of Eg͟hriboz (Chalkis), in 875/1471, the town and the district were detached from Tirk͟hāla and added to the newly-formed *sand̲j̲aḳ* of Eg͟hriboz, as is mentioned *der kenār* in the 871 register. Another *der kenār* note in the same register mentions that in D̲h̲u 'l-Ḥid̲j̲d̲j̲a of 876/May-June 1472, Livadya was entrusted to 22 soldiers of the garrison of Eg͟hriboz, soldiers bearing Muslim Turkish names and coming from a number of places in the Balkans (Pirlepe, Fanarī (Thessaly), Nig͟hbolu, Izdin (Lamia), Yanbol Serfid̲j̲e, Serres, Berat in Albania, etc.) thus giving an indication of where the first Muslim settlers of Livadya came from.

During the 16th century, Livadya shared in the general expansion of the cities of the Ottoman empire. The census registers of the *sand̲j̲aḳ* of Eg͟hriboz, preserved in the Başbakanlık Arşivi in Istanbul, give exact information on the fast-growing number of inhabitants as well as on the number and scope of the Islamic institutions founded in the city in that period. The *Mufaṣṣal defter* of 1506 (T.D. 35), which records some of the *waḳf*s of the *sand̲j̲aḳ* of Eg͟hriboz (but no data on the population of Livadya), mentions a *muʿallim-k͟hāne* of Ḥasan Beg b. Mūsā in the city and a *zāwiye* of Ayas Dede, which provided lodging for travellers. Both foundations were maintained from the rents of some shops, watermills and gardens in or near the town. According to the *Icmal defter* (no. 367) of 1526-28, Livadya numbered 427 households, 295 of which were Christian, divided in four *maḥalle*s under their priests (49 of the Christian families were registered as cultivators of rice, *čeltükd̲j̲iyān*). The Muslim community, consisting of 96 households, was apparently not yet crystallised in *maḥalles*. The *Defter* also mentions a community (*d̲j̲emāʿat*) of 36 Jewish families. Thus the population of Livadya was then 70% Orthodox Christian, 22% Muslim and 8% Jewish. According to the *Ḳanūn-nāme* of the city and the district of Livadya, contained in the same register, the Muslim citizens paid only the tithes and nothing else. This source also states that the Jews had come from the West and that among the Christian inhabitants there were Albanians and Vlach nomads. The Albanians enjoyed some minor tax facilities. The city was by then a *k͟hāṣṣ-i hümāyūn*. T.D. no. 196 from 1539-40 mentions a garrison of 36 men in the castle of Livadya. This number could be so low because the city was safely situated in the interior of the country and had little to fear from an enemy attack (Chalkis and Athens, both on the coast, had then 357 and 114 men respectively, including *dizdār*s, gunners, etc.).

A further witness of the vast expansion of Livadya in the 16th century is the *Mufaṣṣal defter* of 1569-70 (T.D. 484). It mentions 552 Christian, 317 Muslim, and 32 Jewish households. The Christians still lived in four *maḥalle*s, but the Muslims had by now formed five *maḥalles*, grouped around their mosques: the D̲j̲āmiʿ-i ʿAtīḳ-i ʿÖmer Beg, the D̲j̲āmiʿ-

i Bālī Beg, the Mesdjid-i Muṣṭafā Voyvode, the Mesdjid-i Muṣliḥ al-Dīn and the Mesdjid-i Maḥmūd Čelebi. The rapid augmentation of Muslim inhabitants did not primarily result from conversion of local Christians, for the 1570 register, written when the peak of conversions to Islam was over, gives but 15% converts among the Muslims. In the 16th century, the cultivation of rice in the fertile and well-irrigated plain east of the city expanded likewise. The 1526 register mentions 51 Christian *čeltükdjis* living in Livadya; that of 1570, recapitulating the registrations of the intervening years (not known to us) gives 53 "old" Christian *čeltükdjis* and 16 "new" ones besides 16 "old" Muslim *čeltükdjis* and no less than 43 "new" ones. Only 3% of these 59 Muslim cultivators of rice were converts, which means that they must have come from elsewhere, most probably from Thessaly with its massive population of Muslim Turkish colonists. The *čeltükdjis* of Livadya had a privileged fiscal position, since they were exonerated from the *ʿawāriḍ-i dīwāniyye* and the *tekālīf-i ʿörfiyye*, a status given to them by "previous Sulṭāns" and renewed ever since. The cultivation of rice in the marshy Kopais area thus goes back at least to Bāyezīd II or even Meḥemmed II. The Muslim population of Livadya as a whole had a specific status. It was exonerated from the *ʿawāriḍ* and the *tekālīf* taxes and the duty of oarsmen of the fleet, but was expected to form a military reserve in case of attack. This status, based on "orders of the previous Sulṭāns", probably goes back to the time of Meḥemmed II.

The 1570 register shows a major shift in the ethnic-religious composition of the Livadya population: 62% was Christian, 35% Muslim and only 3% Jewish. It had the highest number of Muslim citizens of the entire *sandjaḳ* of Eghriboz (in that year, Eghriboz numbered 199 Muslim households. Thebes (Istifa) 121 households and Athens 56 households). This expansion of Islam as well as the further growth of the town continued throughout the last quarter of the 16th and first half of the 17th century, although exact numbers are lacking.

The most detailed description of Islamic Livadya in the 17th century is given by Ewliyā Čelebi (*Seyāḥat-nāme*, viii), who visited the city in 1078/1667-8. By then it appears to have reached its widest expansion. There were 2,020 houses, six Christian *maḥalles*, inhabited by Greeks, Latins and Armenians, and seven Muslim *maḥalles*. The latter were principally the same as those mentioned in the 1570 register, but the *mesdjids* had now became mosques. Ewliyā Čelebi does not mention the *mesdjid* of Maḥmūd Čelebi, but adds as a new building the Mosque of the Tanneries, commonly known as Süleymāniyye, and notes three *maḥalle mesdjids*. According to Ewliyā, the mosque of ʿÖmer Beg was a small building in ancient style, with a plentiful congregation. The mosque of Bālī Beg, also in old style, had an inscription in Arabic, dated 931/1524-5, which Ewliyā quotes *in extenso*. There were, furthermore, three dervish *tekkes*, three *mektebs* and two *medreses*. The existence of the latter is not attested elsewhere. Ewliyā gives a very accurate description of the castle, then guarded by fifty men who had their houses inside the walls. Like the European travellers after him, Ewliyā extols the beauty of the town, situated on seven hills and dales, and its spacious and prosperous houses, fountains and coffeeshops. Among its population were many rich and notable persons. According to Ewliyā, part of the *waḳf* property of the Holy City of Medina and was governed by a Voyvode of the Ḳizlar Aghasî [*q.v.*], who had jurisdiction over this *waḳf*. Commanding 200 men, he administered justice and had the right of capital punishment. Ewliyā's information suggests that he paraphrased stipulations from state documents. Greek sources attest that Livadya was part of the domain of the Wālide Sulṭān, thus reflecting the situation in the last part of the Ottoman period. On an Ottoman list of *ḳāḍīliḳs* of 1667-8, Livadya ranked sixth in the hierarchy of twelve states.

Spon and Wheler, who travelled in 1675-6, relate that the town was inhabited by "Turks and Greeks" and a few Jews, living from the production of woollen cloth and trade in corn and rice, which was exported to all of Greece. The Turks possessed "five or six" mosques, the Greeks as many churches. They also mention a caravanserai and say that the mosque of ʿÖmer Beg was originally a church, dedicated to St. George. According to Richard Pococke, who visited Livadya in 1745, the town was inhabited by an almost equal number of Greeks and Turks. His information about the number of houses seems unreliable. Pouqueville, who visited the town shortly before 1800, gives a "cadastre du Vaivodilik de Lebadée" with the names and numbers of the inhabitants of all the villages of the district, Livadya itself counting 2,000 households. In the same period, Col. Leake found Livadya singularly beautiful, possessing an air of opulence not found elsewhere in Ottoman Greece. According to him there were 1,500 houses, only 130 of which were Turkish. Henry Holland, travelling in 1815, noted that Livadya was "still retaining the reputation as one of the principal towns in modern Greece" with nearly 2,000 houses, "many of them very large and inhabited by wealthy and respectable Greeks." There were still five mosques with minarets, but the Turkish population was very small. Economy was still based on agriculture, exports consisting of wheat, barley, maize, cotton, wool, cheese, honey, etc., and estimated in 1805 at 250,000 *kiles* (bushels). The reason why the Muslim-Turkish part of the inhabitants of Livadya declined so markedly in the 18th century is not known in detail.

In the first decade of the 19th century, the powerful Tepedilenli ʿAlī Pasha tried to extend his direct control over Livadya. He was unsuccessful in attempting to lease the taxes of the area, but succeeded in enlarging his influence, acting as inspector of the Passes.

In the second half of the Ottoman period, especially in the 18th century, the type of land tenure and the administrative system favoured the development of a powerful Christian bourgeoisie that took control of production and commerce. The main representative of this class was Giannákis Stamou Logothetis, a progressive and cultured man who was in touch with the liberal movements of Western Europe. The general prosperity of the Livadya area was attributed to men like him.

During the Greek War of Independence, the town was several times plundered and burnt and at the end nothing but ruins remained. After 1829, Livadya was rebuilt gradually. In 1889 there were 4,990 inhabitants; in 1907, 7,089; and in 1928, 12,585, more than during the last century of Ottoman rule (approx. 10,000). In 1928 the expansion virtually stopped (in 1961 there were 12,609 inhabitants), but in recent years there is again some growth. No traces of Islamic buildings are preserved except for a fine vaulted stone bridge and an 18th century clock tower. The Catalan castle, wrecked through an earthquake in 1894, still exists in ruined condition.

Bibliography: A history of Livadya based on Ottoman sources remains to be written. Modern Greek literature deals mainly with the events of the War of Independence and recollections of the Greek part of the population. Very informative is: I. Γιαννόπουλος, Ἡ διοικητικὴ ὀργάνωσις τῆς Στερεᾶς Ἑλλάδος κατὰ τὴν Τουρκοκτίαν, Ph. D. diss. Athens 1971 [J. Giannopoulos, *The administrative organisation of Stereá Hellas during the Turkokratia*]. For the pre-Ottoman period, see K. M. Setton, *The Catalan domination of Athens*, rev. ed., London 1975; J. Koder, F. Hild, *Tabula imperii Byzantini, Hellas und Thessalia*, Vienna 1976 (both with extensive bibl.) and W. Miller, *Essays on the Latin Orient*, London 1921; for the Catalan fortress see A. Bon, *Forteresses médiévales de la Grèce centrale*, in *Bulletin de correspondance hellénique*, lxi (1937), 187-206. The Ottoman documents used here have not been published, except the *waḳf-nāme* of ʿÖmer Beg, a Greek translation of which can be found in Epaminondas Pharmakidis, *I Larisa*, Volo 1926, 288-310. The official Ottoman list of *ḳāḍīlïḳ*s of Rumeli was published by Özergin in *Ord. Prof. İsmail Hakkı Uzunçarşılı'ya armağan*, Ankara 1976, 252-305. For travellers' accounts, see Jacob Spon and Georg Wheler, *Naukeurige Reyse door Italien, Dalmatien, Grieckenland ende de Levant gedaan in de jaren 1675 en 1676*, Amsterdam 1689 (also in English and German versions); R. Pococke, *Beschryving van het Oosten en van eenige andere landen*, Utrecht-Amsterdam 1780 (also in English and German versions), iii/2; W. M. Leake, *Travels in Northern Greece*, London 1835, 119-20; F. C. H. L. Pouqueville, *Voyage de la Grèce*, 2nd ed., iv, Paris 1826, 159-75; H. Holland, *Travels in the Ionian Islands, Albania, Thessalia, Macedonia, etc. 1812-13*, London 1815, 395; J. A. Buchon, *La Grèce Continentale et la Morée, voyage, séjour et études historiques en 1840 en 1841*, Paris 1843, 220-6; A. Philippson, *Die Griechische Landschaften*, Frankfurt 1951, i/1, 449-66; *Baedeker's Griechenland*, Leipzig 1888, 164; *Population de la Grèce au recensement du 19 Mars 1961*, Athens 1962, 533; *Megale Ellenike enkyklopeideia*, xv, 870-1. The anonymous Greek manuscript no. 93.3 from 1796, preserved in the Gennadius Library at Athens, contains a mass of information on the political, social and economic situation of Levadya, Salona, Vostitsa (Aeghion) and Corinth for the late 18th century. An edition and a critical study of this singularly important manuscript was given by Σπῦρος Ἀσδραχάς [Spyros Asdrachas] in the periodical Ἐποχές [*Epochés*] of May 1968.

(M. Kiel)

LIVNO (in pre-modern Slavonic texts, often written as Hlivno; in older Ottoman texts variously written as Hlevne, Ihlivne, etc.), a town in Bosnia situated at the spur of a mountain at the eastern edge of the homonymous *polje* or plain in a very dry and stony karst landscape on the approaches to Dalmatia. Today, it is a small local centre far off the main thoroughfares and little-visited, but in the 16th and 17th centuries it was a centre of Ottoman power, seat of the *sandjaḳ beg*s of Klis, and bulwark of Islam on the western frontiers of the empire. Until World War II, Livno boasted five domed and lead-covered mosques from the classical period of Ottoman architecture, thus ranking second in Bosnia, immediately after Sarajevo, in this aspect, demonstrating the importance which the place once had as a centre of Islam.

The town of Livno is an Ottoman foundation from the early 16th century, whose expansion was greatly promoted by various members of the *sandjaḳ* administration residing there. The castle of Livno, now a ruin overlooking the town, is much older. It is mentioned by Constantine Porphyrogenitus (10th century A.D.) as Hlediana, one of the eleven *župas* of the kingdom of Croatia, situated on the border between the Serbian and the Croatian lands. In the later Middle Ages, Livno belonged to the kings of Bosnia. It is mentioned as "Grad Hlivanjski" in 1400 (Miklošić, *Monumenta*, 248-9). In the first half of the 15th century, it was ruled by the family of Vukčić. King Tomas resided in Livno in 1444 (H. Šabanović, tr., *Evlija Čelebija putopis*, i, Sarajevo 1957, 154). The castle is again mentioned in 1466 as being guarded against the Turks by Vladislav Hercegović, a son of Duke (Herceg → Hercegovina) Stjepan (one of Vladislav's brothers became the later famous Grand Vizier of Bāyezīd II and Selīm I, Hersekoghlu Aḥmed Pasha). The Ottomans captured the castle of Livno between 1466 and 1485. The exact date is not known, and is an object of controversy. The *Taḥrīr defter* no. 18 of 890/1485 mentions Livno as centre of a *nāḥiye*; it possessed then a civil population of 27 families and 26 temporary residents.

In the first decades of the Ottoman period, there was only one mosque in Livno, the Khünkār Djāmiʿ, or Starogradsko Džamija, in the castle, serving the needs of the garrison. In the first decades of the 16th century, a Muslim suburb grew up around the Balagina Mosque (Balaguša), built according to its Arabic inscription in 920/1514. This building, still preserved, is the first of the domed mosques of Livno. Soon afterwards, the Džumanuša Mosque of Sinān Čāwūsh from 935/1528-9 was erected, also a domed structure (destroyed in World War II). The open town of Livno sprang up below the castle on sloping ground, with the older quarters at the foot of the castle and the newer ones further down the hill.

Livno remained a *nāḥiye* of the *ḳāḍīlïḳ* of Neretva until some time in the first quarter of the 16th century. After the conquest of Skradin in 928/1522 (*Pečewī taʾrīkhi*, i, 72), Livno was included in a newly-founded *ḳāḍīlïḳ*, which had the Dalmatian town as its centre. In 1537, Murād Beg Tardić (a Dalmatian convert from Šibenik) captured the fortress of Klis facing the Venetian base of Split (Spalato) and became *sandjaḳ begi* of the newly-formed *sandjaḳ* of Klis (Pečewī, i). As Split was too vulnerably-situated to suit the requirements of an administrative centre, the residence of the beg was set up in Livno. They resided there especially in the latter part of the 16th century, which induced Italian and German sources to speak of "the *sandjaḳ* of Livno". In 1648, during the Cretan War, Klis was lost for the Ottomans, but the *sandjaḳ* kept the name of its former titulary capital.

The second half of the 16th century and first half of the 17th century was the time of the greatest expansion of the town. According to the *Tapu defter* no. 285, 1-7 and no. 284, 67-73, both from 960/1553, the "*ḳaṣaba* of Hlivne", part of the *khāṣṣ* of the *Mīr-i Liwā* of Klis, Aḥmed Beg, numbered five *maḥalle*s with 262 households (*khānes*) and 170 bachelors (*müdjerred*), thus totalling *ca.* 1,340 inhabitants. Only nine households were Christian, and all others were Muslims. Four of the town quarters were called after the mosque around which they had sprung up: Maḥalle-yi Djāmiʿ-i Sinān Čāwūsh, with 50 *khānes*, 43 *müdjerreds*; Maḥalle-yi Djāmiʿ-i Ḥamza, with 35 *khānes* and 28 *müdjerreds*; Maḥalle-yi Mesdjid-i

Pehliwān Ḥüseyn, with 73 *khānes* and 46 *müdjerreds*; Maḥalle-yi Mesdjid-i Ḥüseyn Etmekci-zāde, with 48 *khānes* and 53 *müdjerreds*; and Varosh of Hlivne, with 19 Muslim *khānes* and nine Christian *khānes*. Other Ottoman registers, from 22 years later, testify to the rapid development of the town in those years. The *Tapu defter* no. 533, 320-30, and the *T.d.* 546, 298-307, both from 982/1573-4, mention seven *maḥalles* in Livno. Added to those mentioned in 1553 are the following new wards: Maḥalle-yi Djāmiʿ-i sherīf-i Meḥmed Agha, Maḥalle-yi Djāmiʿ-i sherīf-i Meḥmed and Maḥalle-yi Ferhād Beg. The number of inhabitants is given as *nefers* (single individuals, persons), 653 men and a separate group of 40 tanners, an indication of the function of the town as a centre of handicrafts besides being an administrative centre. If three-quarters of the number given were family heads, this would make a total population of little less than 3,000 souls, which is indeed a spectacular growth. The second mosque mentioned in the *T.d.* of 982 is the so-called Perkuša Džamija, built according to its Arabic inscription in 971/1563-4 by Sipāhī Meḥmed. It was the third domed mosque of Livno, and existed till World War II. The above-mentioned Ferhād Beg was a Ṣoḳollu-zāde (Sokollović), a nephew of the Grand Vizier Meḥmed Ṣoḳollu. Ferhād was *sandjaḳ begi* of Klis between 1566 and 1574, and is known to have erected a large caravanserai in the lower town of Livno. The last quarter of the 16th century saw the erection of two more domed mosques: the Begluk Džamija of Ṣoḳollu-zāde Lala Muṣṭafā Pasha in 985/1577-8, built during his term as *sandjaḳ begi* of Klis (1574-7), and the Glavica Džamija, built by a Dūḳatar-oghlu Ḥādjdjī Aḥmed in 996/1587-8). Both buildings are preserved at the present time and still have their *Bauinschrift* in Turkish. Four more mosques and a Clock Tower (1659) were built in the course of the 17th century: the Tepet Džamija, Borusa Džamija, Piragic Džamija (demolished in 1918), and the Pasina or Atlagić Džamija. The latter was most probably built by Meḥmed Pasha Atlagic, the most important member of the Livanjsker family of Atlibegović, or Atli-agi. Meḥmed Pasha Atlagić was *sandjaḳ begi* of Klis in 1685-7 and vizier of Bosnia in 1687-8 (H. Kreševljakovic, in *Hrvatskoj Enciklopediji*, art. *Atlagići*). With the erection of these buildings, the architectural outlook of Livno acquired its definitive form. The only known important group of buildings of the 19th century is the mosque, *mekteb*, *tekke* and water-supply system of the brothers Maḥmūd Beg and Derwīsh Beg Bushatlī. The mosque, the Milosnik Džamija, built in 1291/1874-5, was restored in 1978.

When Ewliyā Čelebi visited Livno in 1070/1659-60, he found a fully-developed Muslim town, the seat of a *ḳāḍī* (the Ottoman list of *ḳāḍīliḳs* of Rumeli of 1078/1667-8 also mentions "Ihlivne" as seat of a *ḳāḍī*), a number of officials of the provincial administration as well as a *dizdār* who commanded a garrison of 600 men. The open town below the castle was composed of nine *maḥalles* and had 1,100 stone-built houses, covered with shingles, 13 mosques, of which seven were Friday mosques (for three of them, he gives extracts from the inscriptions), three *medreses* (attached to the mosques of Dūḳat[ar]oghlu Ḥādjdjī Aḥmed, Sipāhī Meḥmed and Lala [Muṣṭafā] Pasha), five *mektebs*, six *tekkes*, one *ḥammām* and 300 shops. With 5,000-6,000 inhabitants, the town clearly reached the limits of self-sufficiency for a poor karst land like the Livno district. The "golden age" of Islamic Livno ended in 1686 when, during the great war against the Christian coalition, Stojan Janković captured the town and burnt it down. The Starogradsko Džamija in the castle and the Borusa Džamija were destroyed and not rebuilt. Since that time and throughout the 18th century, Livno was the seat of the *Livanjsker kapetanat*, a function which was in the hands of the Atlagić family till 1711. The most famous captain of Livno was Firdūs in the first half of the 19th century. Parts of his fortified house (*kula*) still exist.

At the beginning of the 18th century, with the border areas lost to Venice, the *sandjāḳ* of Klis comprised four *ḳāḍīliḳs*: Akḥiṣār (Prusac), Gölḥiṣār (Jezero), Novosel and Livno, the latter with the *nāḥiyes* of Livno, Glamoč, Grahovo and Satomiševo. Livno recovered slowly from the destruction of 1686. The castle was maintained throughout the 18th and the greater part of the 19th centuries. In 1833 it still had 34 guns. The Ottoman period ended in 1878, when the Austrian-Hungarian army captured Livno after an obstinate defence. The town continued to flourish until the beginning of the present century as a small centre of grain and live-stock trade and silver filigree-work, until a great conflagration in 1904 swept away more than 500 houses. Before that date it had, according to the *Encyclopaedia Britannica*, 1911 edn. (xvi, 816), about 5,000 inhabitants, thus maintaining the level of the 17th century. According to the *Baedeker, Österreich-Ungarn* of 1913, 422, Livno had still 4,700 inhabitants, but this recovery was temporary. After 1918, when it was incorporated in the kingdom of Jugoslavia, a large part of its Muslim population departed. When René Pelletier visited it in the early thirties, Livno had but 2,200 inhabitants (Pelletier, *Sarajevo et sa région*, Paris 1934). During World War II, Livno was three times occupied by German and Croatian Fascist forces and as many times liberated, lastly in October 1944. During these events, all the hitherto-preserved mosques but one (Balaguša Dž.) were deliberately destroyed or heavily damaged, together with the entire town. The ruins of the Glavica Džamija and the adjacent Clock Tower, together constituting the landmark of Livno, were restored in 1963-4. The Begluk Džamija of Ṣoḳollu-zāde Muṣṭafā was restored in 1971-2, and the Zavra Džamija and Čurčinca Džamija, both wood-covered halls, in the seventies.

In 1953 Livno numbered 3,672 inhabitants, among whom is a small Muslim minority. The centre of gravity of the post-war town has shifted to the flat grounds of the plain below the totally-ruined Ottoman town. In the old parts, now under the protection of the Service of Ancient Monuments of Bosnia, only construction in local style is allowed, thus creating a harmony with the preserved Islamic monuments.

The *tapu defters* from 960 and 982 are preserved in the Başbakanlık Arşivi, Istanbul, and are not yet published. (M. Kiel)

LIWĀʾ (A.), in Ottoman *liwā*.

1. For the meaning banner, flag, standard see ʿALAM.

2. In the Ottoman empire the word indicated a province, several of which were at a certain moment joined into an *eyālet*, later *wilāyet* [see WILĀYA]. The term *liwāʾ*, synonymous with Turkish *sand͟jaḳ* [see SAND͟JAḲ], was mainly used in official documents. Accordingly, *mīr liwā* (from Arabic *amīr al-liwāʾ*) stood for *sand͟jaḳ begi* [see BEG], the governor and military commander of a *liwāʾ* or *sand͟jaḳ*. From the middle of the 19th century onwards there was also used the term *müteṣarrīflīḳ*, derived from the title *müteṣarrīf*. Of all the states issued from the Ottoman Empire, only ʿIrāḳ kept the term *liwāʾ* (up till 1974) to indicate a province. In the army of ʿIrāḳ, *liwāʾ* indicates a brigade, *amīr al-liwāʾ* brigadier (as in Egypt until 1939).

Bibliography: Gibb and Bowen, *Islamic society and the west*, London 1950, i/1, 137-73; A. Birken, *Die Provinzen des Osmanischen Reiches*, Wiesbaden 1976. For further literature, see SAND͟JAḲ. (A. Birken)

LĪWĀN [see IWĀN].

LIWĀṬ (A.), sodomy. There does exist in Arabic a verb *lāṭa* meaning "to attach oneself, to join oneself to", but *liwāṭ* appears to be rather a *maṣdar* of *lāṭa* or *lāwaṭa*, denominative of Lūṭ [*q.v.*], i.e. Lot; in modern Arabic there are also the terms *liwāṭa*, *mulāwaṭa*, *talawwuṭ*, etc., as well as a large number of euphemisms and of dialectical and slang terms. The homosexual is called *lūṭī* or *lāʾiṭ* (pl. *lāṭa*), or *mulāwiṭ*, when he is the active partner, although the distinction is often difficult to establish; the passive is *maʾbūn*, and his perversion, *ubna*; among the synonyms, the most common is *mukhannath*, generally translated as "effeminate", although in normal usage it refers to the genuine hermaphrodite (see A. Bouhdiba, *La sexualité en Islam*, Paris 1975, 55-7). In the Muslim West in the Middle Ages, a special term, *ḥāwī* (pl. *ḥiwā*) was used in reference to professional male prostitutes (see below).

In a number of verses of the Ḳurʾān relating to Lot and his people, the word *fāḥis͟ha*, which may be rendered as "depravity", is clearly an allusion to the vice in question, but this is even more strongly indicated by the pejorative nature of the remarks and questions attributed to this prophet: *inna-kum la-taʾtūna l-rid͟jāla s͟hahwatan min dūni'l-nisāʾ, bal antum ḳawmun musrifūn* "You commit the carnal act, in lust, with men and not with women, you are indeed an impious people" (VII, 79/81), *a-inna-kum la-taʾtūna'l-rid͟jāla*? (XXVII, 55/54) and *a-taʾtūna 'l-d͟hukrāna*? (XXVI, 165). The punishment inflicted upon the people of Lot, in the Ḳurʾān as in the Bible (Gen., xix, 1-23) leaves no doubt as to the way in which sodomy should be regarded by Islam, even though it is not explicitly condemned by the Holy Book, which indeed allows a certain ambiguity in passages where the believers are promised that in paradise they will be attended by menservants (*g͟hilmān*, LII, 24; *wildān*, LVI, 17, LXXVI, 19).

The statements of *ḥadīt͟h* are, on the other hand, perfectly clear and particularly harsh, as is noted by al-Nuwayrī who, in his *Nihāya* (ii, 204-10), has conveniently collected them together, with the addition of the opinions of the Companions and the *fuḳahāʾ* on the subject. The Prophet is alleged to have said that what he feared most for his community were the practices of the people of Lot (although he seems to have expressed the same idea in regard to wine and to female seduction: *Nihāya*, ii, 198). According to him, both the active and the passive agent must be killed (*yuḳtal/uḳtulū 'l-fāʿil wa 'l-mafʿūl bihi*, terms which were subsequently to be applied, in grammar, to the subject and the direct object) or, more precisely, subjected to the punishment prescribed for the man guilty of *zinā* [*q.v.*], the fornicator, that is, death by stoning (*fa-rd͟jumū 'l-aʿlā wa 'l-asfal*). The man who sodomises another or inflicts the same treatment on a woman, will on the Day of Resurrection be regarded as more reprehensible than carrion; needless to say, he will suffer eternal damnation, unless he obtains pardon through repentance. The lustful kissing of an adolescent is enough to earn a thousand years in Hell.

By the very fact of their existence, these *ḥadīt͟hs* show that, while probably not very common in Bedouin society, homosexuality was not totally unknown in Arabia of the pre-Islamic period. For proof of this, one need look no further than the story of D͟hū Nuwās [*q.v.*], who was compelled to kill D͟hū S͟hanātir in order to escape his advances. Proverbs of the form *alwaṭ min* . . . (al-Maydānī, ii, 205) testify to the antiquity of the term and of the idea which it expresses; al-Maydānī cites the ex-

pression *alwaṭ min Dubb*, making the last word ("bear") into a proper name; similarly al-Djāḥiẓ (*Mufākharat al-djawārī wa 'l-ghilmān*, in *Rasā'il al-Djāḥiẓ*, ed. Hārūn, ii, 136-7) quotes a Ḥidjāzī proverb, *alwaṭ min Dīk*, in which *Dīk* ("cock") would also be the name of a person; these coincidences are curious, to say the least. Whatever the case may be, animals are not exempt from this vice: al-Djāḥiẓ himself (*Ḥayawān*, iii, 204) cites the example of a *ma'būn* horse, perhaps castrated at an early age, which pursued male horses, mules and donkeys. The same author seems to have been the first to speak (*ibid.*, vii, 178) of a fabulous animal, the *ʿudār*, which was in the habit of assaulting the men whom it encountered; its victims suffered a worm-infected anus and died as a result (cf. al-Masʿūdī, *Murūdj*, iii, 319-20 = § 1203). In his *Mufākhara*, he also mentions a *mawlā* of Khuzāʿa, Maymūn b. Zayd b. Tharwān, who was a *lā'iṭ* in Kūfa and who became proverbial under the nickname of Siyāh, but was apparently viewed with an indulgence that spared him any punishment.

However, in the course of the 1st/7th century, a number of precise cases of *lāṭa* subjected to exemplary penalties are reported, especially by al-Djāḥiẓ and al-Nuwayrī. Abū Bakr condemned a homosexual to be buried beneath the débris of a wall, and prescribed burning alive as the penalty for all those guilty of such practices; in this respect he was followed by ʿAbd Allāh b. al-Zubayr and Hishām b. ʿAbd al-Malik. For his part, ʿAlī b. Abī Ṭālib ordered the stoning of a *lūṭī* and had another thrown head-first from the top of a minaret; according to Ibn ʿAbbās, this last punishment must be followed by stoning. ʿAbd Allāh b. ʿUmar went a step beyond the condemnation predicted by the Prophet, reckoning that these people would be resurrected in the form of monkeys and pigs. The famous letter from an Umayyad caliph [see KHAṢĪ, IV, 1087b] ordering the governor of Mecca or of Medina to "hold a census" of the *mukhannathūn* of the town corresponds to a real situation, even if the tradition itself is contrived.

In fact, the increase in prosperity brought about by the rich flow of spoils from the conquered lands was accompanied, paradoxically, by the corruption of morals in the two holy cities. As regards the subject which concerns us here, information relating to the development of music and song reveals the presence of *mukhannathūn*, who were apparently for the most part of foreign origin. It may thus be assumed that from this time homosexuality became less of a rarity as the result of a rapid process of acculturation. A defender of paedophiles, of lovers of *ghilmān*, depicted in the *Mufākhara* (ii, 116) of al-Djāḥiẓ, observes in effect that natural love is a feature of Bedouin culture and of simple morality and that if the ancient Arabs glorified woman, this was because they knew nothing of the refined pleasures of this world, which are only to be encountered in a highly civilised society.

All the same, it is not impossible that the decisive impulse came with the arrival of the ʿAbbāsid army from Khurāsān (cf. A. Mez, *Renaissance*, Eng. tr., 358) and that homosexuality subsequently spread more widely under the new dynasty. In fact, tradition attributes to al-Amīn tastes so depraved that his mother, Umm Djaʿfar, was obliged to procure for him slave women with the physical characteristics sought after by *lāṭa* among boys and to dress them in masculine clothing, in the hope of inducing him to adopt more conventional morals (al-Masʿūdī, *Murūdj*, viii, 299-300 = §§ 3451-2). It was no doubt such episodes that gave rise to the fashion for "masculine girls", *ghulāmiyyāt*, a trend widely reflected in literature (see Ḥ. Zayyāt, *al-Mar'a al-ghulāmiyya fi 'l-Islām*, in *Machriq* [1956]). In Ifrīḳiya, the Aghlabid Ibrāhīm II was surrounded by some sixty catamites, whom he treated in a most horrific manner (see M. Talbi, *Émirat aghlabide*, 306, 317). At Cordova, ʿAbd al-Raḥmān III had executed a young lad from Léon who was held as a hostage, the future St. Pelagius (Pelayo), because he had refused his advances (Simonet, *Historia de los Mozárabes*, 542; see also Ch.-E. Dufourcq, *La vie quotidienne dans l'Europe médiévale sous la domination arabe*, Paris 1978, 117-18). Homosexual tendencies are attributed to al-Muʿtaṣim and to some of his successors, and it is probable that this is not a case of slander designed to justify a vice vigorously opposed by the *fuḳahā'*.

In general, the *ḥadīth* relating to the punishment of the *lūṭī* (see above) provides the base for the opinions of jurists, but a distinction tends to be made, in the application of the legal sanction (*ḥadd*), according to whether the culprit is *muḥṣan* or not, that is, in practice, whether he is married or celibate. Ibn Ḥanbal and his followers appear to be the most severe, since they insist that in all cases the culprit must be put to death by stoning, while the other schools are in general content with flagellation, with or without banishment, if the man is not *muḥṣan*; it should be noted in addition that it is sometimes recommended that the prescribed penalty (one hundred strokes) should not be applied in full, and Ibn Ḥazm goes so far as to reduce the number of strokes to ten. These variations correspond to the uncertainties surrounding the definition of the penalty to be imposed for fornication [see ZINĀ for details], but also betray a tendency towards indulgence; moreover, since proof is always difficult to establish, there is little likelihood of the punishment actually being applied. These circumstances do not prevent moral pundits from considering illegal a lustful glance in the direction of a beardless youth (*amrad*), and the Ḥanbalīs forbid men to walk in the street with women or with adolescents (Mez, *Renaissance*, Eng. tr., 362).

The legal provisions set out above are thus to a large extent theoretical, since homosexual relations have always been tolerated. They were common in religious brotherhoods and in educational institutions (see A. Bouhdiba, *op. laud.*, 146), and schoolmasters had an unenviable reputation in this respect, as is shown by many anecdotes. The nudity of the public baths did nothing to discourage such practices, and the paragraph devoted by H. Pérès (*Poésie andalouse*, 341-3) to homosexuality in al-Andalus refers specifically to the *ḥammām*.

As regards women, the *Aghānī* (ed. Beirut, ii, 110) mentions a love affair between a certain Hind (named, incorrectly, as the daughter of al-Nuʿmān b. al-Mundhir by Ṣ. al-Munadjdjid, *al-Ḥayāt al-djinsiyya ʿind al-ʿArab*, Beirut 1958, 14; see Masʿūdī-Pellat, index, under Ḥurāqa) and Zarḳā' al-Yamāma, which would be the oldest example of Sapphism among the Arabs, but in this particular case we have a work of imagination, called moreover *Kitāb Hind wa-bint al-Nuʿmān* by Ibn al-Nadīm (ed. Cairo, 427), who cites a dozen love romances with female names in their titles (e.g. *K. Ruḳayya wa-Khadīdja*, *K. Salmā wa-Suʿad*, etc.). Although information is scarce, it is likely that *saḥḳ/siḥāḳ/musāḥaḳa*, while not widespread, existed no less than male homosexuality, since according to the relevant *ḥadīth* it is also identified with *zinā* (*siḥāḳ al-nisā' zinā bayna-hunna*). These practices, which al-

Djāḥiẓ (*Ḥayawān*, vii, 29) knew well, spread in parallel with sodomy, at least in the leisured classes of Arab-Islamic society, if we are to believe the rather late works of eroticism which will be mentioned in due course; in any case, at the end of the 3rd/9th century, Abu 'l-ʿAnbas al-Ṣaymarī [*q.v.* in Suppl.] wrote a *Kitāb al-Saḥḥāḳāt*, of which apparently no traces remain. In addition, the sodomisation of women, although formally forbidden by the Prophet (see above and the *ḥadīth*: *lā taʾtū l-nisāʾ min maḥāshshi-hinna / adbārihinna*) would seem to have been a fairly common practice (see A. Bouhdiba, *op. laud.*, 246-7).

Besides female prostitution (*bighāʾ* [*q.v.* in *Suppl.*]), there is abundant evidence of male prostitution. It is not known how much credence should be attached to an allegation by Ibn Ḥawḳal (93, 95, tr. Kramers-Wiet, 91, 93), reiterated in part by al-Idrīsī (*Nuzha*, ed. Pérès, Algiers 1957, 70; ed. Naples-Rome, iii, 269-70), according to which the Kutāma Berbers "offer themselves to their guests as a token of hospitality, without any sense of shame", while at Sétif, they are content to offer their male children. Inconsistencies in these passages are such as to cast doubt on the author's claims.

In any case, the presence of professional deviants (*muʾādjirūn*) in the larger towns has been frequently attested by travellers (see G. H. Bousquet, *L'éthique sexuelle de l'Islam*, Paris 1953, 59). Mention has been made of transvestites, for example in Bougie (Idris, *Zirides*, 329, 591), in Tunis (R. Brunschvig, *Ḥafṣides*, ii, 173) where Leo Africanus (tr. Épaulard, 385) saw young boys prostituting themselves, in Fez, where the same author encounters what he calls *cheua* (= *ḥiwā*, a term of particularly common usage in Spain; see Dozy, *Suppl.*, s.v.) living with men in hostelries. Such statements cover such a broad expanse of time that they cannot but be a reflection of a permanent situation which has, moreover, persisted into the present day (see, e.g. Bouhdiba, *op. laud.*, 233). It need hardly be said that the authors of works of *ḥisba* utterly deplore these deviants and the moral corruption for which they are responsible, but not one of them is so severe as to demand for them the capital penalty ordained by the afore-mentioned *ḥadīth*. According to Ibn ʿAbdūn (Lévi-Provençal, *Séville musulmane*, Paris 1947, § 170), the *ḥiwā* are to be expelled from the town and severely punished if they return, since they are accursed of Allah and of the whole people; al-Saḳaṭī (*Manuel hispanique de ḥisba*, ed. Colin and Lévi-Provençal, Paris 1931, 68, and gloss., 26; Spanish translation by Chalmeta, in *al-Andalus*, 1968 ff., § 161) speaks only of *mukhannathūn* (singers disguised as women), whom he forbids to wear their hair long over the temples or to attend banquets and funerals (see also Lévi-Provençal, *Trois traités hispanique de ḥisba*, Cairo 1955, 123). Although the repression of *liwāṭ*, in the strict sense of the word, forms a part of the general censorship of morals, these works contain few specific references to it.

It should be said that this phenomenon, while provoking the disapproval of a number of moralists loyal to the tradition of the Prophet, has for the most part been viewed with indulgence—if not actively condoned—even in circles which would appear to be furthest from it.

Firstly, homosexuality was a theme favoured by libertine poets who, especially from the 1st/7th century onwards, glorified homosexual love quite shamelessly, often in terms of intolerable obscenity; in the interminable list of these poets, the first place belongs without doubt to Abū Nuwās who, even without the dedication of the *1001 Nights* (see N. Elisséeff, *Thèmes et motifs*, 150) plays a role of unassailable eminence in this regard. His master Wāliba b. al-Ḥubāb, who is thought to have debauched him, Ḥusayn b. al-Daḥḥāk, Muṭīʿ b. Iyās and a great number of others, were imitated and sometimes overtaken by exponents of *mudjūn* [*q.v.*] and of *sukhf*, which Ibn al-Ḥadjdjādj made his speciality, as well as by Ibn Ḳuzmān in his celebrated *zadjals*.

On the other hand, there are a great many poets who have not hesitated, at some point or other in their career, to sing the praises of a youth, in many cases no doubt, less from personal taste than from the desire to conform artificially with a general trend. In fact care should be taken not to accuse all such writers of libertinism, for it was conventional practice to glorify wine, women and favourites, without becoming personally involved in debauchery or violating the rules of Islamic ethics. We may cite, as a simple example, the theme of *dabīb*, of "crawling", appropriate perhaps for an Imruʾ al-Ḳays who lived in a society where it was possible to crawl under the tent in order to approach a woman, but purely conventional in the case of a city-dweller like Ibn Shuhayd who, unlike the pre-Islamic poet, uses (*apud* Ibn Bassam, *Dhakhīra*, i/1, 244), in poetry of a high standard of sophistication, the masculine form to designate the person in question, whose sex thus remains undefined. Leaving aside the mystics, who frequently adopt an equivocal posture, the use, by poets whose morality is not suspect, of the masculine form in their love poems, derives less from a desire to shock than from a sense of modesty and from respect for a tradition that was reckoned to be harmless, a tradition maintaining an ambiguity universally accepted and appreciated.

In the sphere of prose, the most significant, if not the oldest writing, is certainly the *Mufākharat al-djawārī wa 'l-ghilmān* of al-Djāḥiẓ who, always prone to cultivate the genre of *munāẓara*, debate, of which he is one of the pioneers in Arabic literature, presents in the form of a stylised dialogue arguments exchanged between homosexuals and men of normal sexuality. So as to leave no doubt as to his own tastes, this author saw fit to publish a *Risāla fī tafḍīl al-baṭn ʿalā 'l-ẓahr* (ed. Pellat, in the *Ḥawliyyāt* of the University of Tunis, xiii [1976], 183-92) in which he plays on the different meanings of *baṭn*—"stomach" and *ẓahr*—"back" in order to demonstrate, with a great deal of humour, the superiority of the former; he goes so far as to attribute to sodomy the destruction of the people of Thamūd [*q.v.*], which is thus accorded the same status as the people of Lot.

In the *Mufākhara*, there are a number of anecdotes which testify to the popularity of stories of *lāṭa* from the 3rd/9th century; these were to find a place in collections compiled in later times for the entertainment of what were, in appearance at least, the most puritanical sections of society. A characteristic manifestation of this somewhat perverse taste is encountered in the work of al-Tawḥīdī, who devotes a chapter of his *Imtāʿ*, the 18th night (ii, 50-60) to *mudjūn* and naturally tells the story of a *lāṭī* (tr. Bouhdiba, *op. laud.*, 158).

The example set by al-Djāḥiẓ in his *Mufākhara* has been followed by quite serious authors who have left analogous writings, among which we may mention *al-Wasāṭa bayn al-zunāt wa 'l-lāṭa* by Ibn Hindū (see Brockelmann, S I, 426) and the *Kitāb al-Ḥikāyāt* by Badr al-Dīn al-ʿAynī (see Ṣ. al-Munadjdjid, in *RIMA*,

iii [1957], 335). In addition, the vice in question inspired a specialised literature all its own, notably consisting of advice on techniques of seducing young men (see Ṣ. al-Munadjdjid, *al-Ḥayāt al-djinsiyya*, 52-4). The writers of works of eroticism (see DJINS and add to *Bibliography*, A. Boudhiba, *op. laud.*, 171 ff.) mostly devote some space to sodomy; on this point, the most characteristic works are without doubt the *Nuzhat al-albāb fi-mā lā yūdjad fi kitāb* (Brockelmann, I, 495, S I, 904) of al-Tīfās̲h̲ī and the *Nas̲h̲wat al-sakrān* of Muḥammad Ṣādiḳ Ḥasan K̲h̲ān (Istanbul 1296/1878; see Bouhdiba, 178).

In the *Mufāk̲h̲ara* of al-Djāḥiẓ, which has nothing in common with the preceding works, the advocate for the *djawārī* claims (ii, 104) that there has never been a case recorded in which love for a youth has proved fatal, while tradition is full of examples of heterosexuals who have pined away, lost their reason or died for love. However, there are apparently authentic accounts which contradict this assertion. Al-Ḍabbī (*Bug̲h̲ya*, no. 462; tr. Lévi-Provençal, *En relisant "le Collier de la colombe"*, in *al-Andalus*, xv/2 [1950], 363-8) relates, after Ibn Ḥazm (although the text of the *Ṭawḳ al-ḥamāma*, ed. and tr. L. Bercher, 301, is quite perceptibly different): "the incredible adventure ... of a certain Aḥmad b. Kulayb, poet and grammarian of Cordova who, in 426/1035, died of grief because one of his fellow-citizens, a member of the Andalusian patrician class, persisted in rejecting his advances" (Lévi-Provençal, *Hist. Esp. mus.*, iii, 445); the same story is told by Yāḳūt (*Irs̲h̲ād*, ii, 19 ff. = *Udabāʾ*, iv, 109 ff.; cf. Mez, *Renaissance*, Eng. tr., 359-60) who also relates (ii, 23 ff. = iv, 115 ff.; cf. Mez, 360-1), after al-Ṣanawbarī, the story of a bookseller of Edessa (al-Ruhā) named Saʿd, whose shop was a literary salon frequented by poets and in particular by a young Christian called ʿĪsā; Saʿd developed a violent passion for the latter, and did not cease pursuing him and dedicating poems to him; ʿĪsā became a monk, and, finally denied access to the monastery, Saʿd set fire to all his possessions and became a vagrant. He died eventually of consumption, but the governor of the town accused the monks of having killed him and condemned the young man to death; the punishment was averted following the payment of a large sum of money, but when ʿĪsā went to visit his parents, the local children pelted him with stones and called him an assassin. A third story (Yāḳūt, *Irs̲h̲ād*, ii, 25 ff. = *Udabāʾ*, iv, 122 ff.) tells of a poet in love with a young monk who pines away with grief and dies the very moment that he meets the object of his infatuation.

From anecdotes such as these one gains the impression, on the one hand, that the authorities and the people did not regard the inclinations of these homosexuals as immoral, and on the other, that monasteries and monks played an inauspicious role. It is quite clear that poetry and works such as the *Diyārāt* of al-S̲h̲ābus̲h̲tī regard monasteries [see DAYR] as places of debauchery frequented by lovers of forbidden delights. One must, however, proceed with caution, because once again we are faced with a poetic theme whose treatment is analogous to that of the glorification of unnatural love by poets who are influenced more by respect for a tradition than by any desire to become personally involved in the acts to which they refer. In this context, the adventure of the Andalusian poet al-Ramādī, the account of which is borrowed by H. Pérès (*Poésie andalouse*, 278-9) from a work of dubious authenticity, the *Maṭmaḥ al-anfus* of Ibn K̲h̲āḳān, seem to us no more authentic than the braggings of Ibn S̲h̲uhayd, in a poem composed in imitation of Abū Nuwās (H. Pérès, *op. laud.*, 277-8).

The fact remains that in the Middle Ages, many attacks on Islam by Christians were based on the frequency of homosexual relations which, in their view, were permitted by the Ḳurʾān and which characterised the behaviour of Muslims; they based this opinion on verse 20/16 of Sūra IV which they misinterpreted as referring to sodomy, without taking account of the condemnation of "depravity" which it contains (see N. Daniel, *Islam and the West, the making of an image*, Edinburgh 1960, 141-5).

It is indeed difficult to measure precisely the extent of the phenomenon, but it should be recognised that the separation of the sexes, which is a particular feature of Islam, has played a significant role in promoting it (cf. Brunschvig, *Ḥafṣides*, ii, 173), among women as much as among men, and the precautions taken against such behaviour (al-Nuwayrī, for example, entitles the chapter cited above *al-taḥd̲h̲īr min al-liwāṭ*) did not succeed in preventing it. It is now known that homosexuality, once regarded as a punishable offence, is caused as much by genetic as by social and psychological factors, but it seems that in the event the latter have played the leading role in the proliferation of what remains, to a large extent, a vice.

Bibliography: Given in the article. (ED.)

LIYĀḲAT ʿALĪ K̲H̲ĀN, honorary secretary of the All-India Muslim League from 1936 to 1947 and prime minister of Pakistan from 1947 to 1951, was born in the Karnāl district of east Pandjāb on 1 October 1895. He was the second son of a well-to-do landlord, Nawwāb Rustam ʿAlī K̲h̲ān of the Mandal family, which claimed to have migrated 500 years previously from Iran and to descend from the Sāsānid king Anūs̲h̲irwān (K̲h̲usraw I, 531-79 A.D.); British officials on the other hand considered the Mandals to be of Paṭhān origin, or perhaps Djāṭs hailing from Samānā in Paṭiālā. Liyāḳat ʿAlī K̲h̲ān's grandfather, Nawwāb Aḥmad ʿAlī K̲h̲ān, gave powerful support to the British in the Mutiny uprising of 1857-8, for which he was handsomely rewarded in the bestowal of honours and the remission of rent.

From 1909 to 1919 Liyāḳat ʿAlī K̲h̲ān attended the Muḥammadan Anglo-Oriental College at ʿAlīgaṛh, where he was notably successful both on the games field and in the classroom. After graduating, he read law at Exeter College, Oxford, getting his degree in 1921, and was called to the Bar in 1922. At Oxford he began to display political promise as a prominent member of the Indian Madjlis. On returning to India he settled down on the family estate in the Muẓaffarnagar district of the western United Provinces and, despite family pressure to enter government service and his own training as a lawyer, aimed at politics. In 1923 he joined the All-India Muslim League, the organisation of Muslim separatist politics, and when in 1927 the League split over its response to the Simon Commission to inquire into India's constitutional progress, he supported the Djinnah group which boycotted the Commission. In 1928 he joined those representing the League at the Indian National Convention which discussed the Nehru Report. From 1926 to 1940 he was a member of the United Provinces Legislative Council, in which he quickly came to play a prominent part, organising and leading the small but influential Democratic Party and acting as deputy president of the Council from 1931 to 1936.

In the 1930s and 1940s Liyāḳat ʿAlī Khān played the leading role, after Muḥammad ʿAlī Djinnah, in generating the revival of the All-India Muslim League. In the early 1930s the League was crumbling, meeting only once in full session between 1931 and 1936. In 1933, while visiting London on his second honeymoon, Liyāḳat ʿAlī Khān helped to persuade, and according to some was decisive in persuading, Djinnah to return to India to revitalise the organisation. In April 1936 he became honorary secretary, a position he held till 1947, even though from July 1936 to early 1938 he was associated with the landlord party in the United Provinces, the National Agriculturalist Party led by the Nawwāb of Čattārī; the Muslim League leadership in the province, he declared by way of explanation, was too close to the Indian National Congress. In the early 1940s Liyāḳat ʿAlī Khān prepared the League's organisation, and Muslims more generally, for the overwhelming victory of the 1945-6 elections. He sat on the League's major committees, he was chairman of the Central Parliamentary Board, he toured India to spread the League's message, he directed the *Dawn* newspaper which was founded in 1942 as the League's mouthpiece, and from 1940 he led the League's party in the Central Legislative Assembly in Djinnah's absences, which were quite frequent. So highly did Djinnah value Liyāḳat ʿAlī Khān that in supporting his re-election as honorary secretary in 1943 he described him as his "right hand".

In the two crucial years before the partition of India, Liyāḳat ʿAlī Khan was at the heart of events. In late 1944 and early 1945 he attempted to come to an agreement with Bhulabhai Desai, the leader of the Congress in the Central Legislative Assembly, which would identify common ground and enable the Congress and the League to participate in forming an interim government, although he may have gone too far on his own initiative, as Djinnah disavowed the project. He was also closely involved in two further attempts to solve the constitutional deadlock, the Simla conference of 1945 and the Cabinet Mission discussions of 1946. When towards the end of 1946 the interim government was eventually formed, Liyāḳat ʿAlī Khān led the Muslim league bloc, defending Muslim interests with vigour. When that government's quasi-Cabinet offices were distributed, the Congress apparently trusting in the north Indian belief that Muslims were unskilled in financial matters, encouraged him to take the Finance portfolio, which gave him a say in all the activities of the interim government and enabled him through a masterly budget to impose his will on the political situation. Indeed, it is said that he used his powers to such effect that leading Congressmen, among them Sardar Patel, came to see partition as the only solution to their difficulties. After partition was finally agreed on 2 June 1947, Liyāḳat ʿAlī Khān was marked out to be the first prime minister of the new state of Pakistan.

When Djinnah, governor-general and presiding genius of Pakistan, died on 11 September 1948, Liyāḳat ʿAlī Khān came forward as the unchallenged ruler. He faced enormous problems: the state was divided into two parts separated by 1,200 miles of hostile territory; there were six million refugees; there were divisions of language, race and religion (15% of the population was Hindu); there was no administrative centre, efficient bureaucracy, political tradition or economic focus. That Pakistan survived these problems, in addition to the premature death of Djinnah, owed much to the wise leadership of Liyāḳat ʿAlī Khān.

He responded firmly to the threats levelled by an India still not entirely reconciled to the dismemberment of the subcontinent, and through his statesmanlike approach to international affairs did much to establish Pakistan in the eyes of the world. When in September 1949 India imposed a total trade boycott because Pakistan refused to devalue her rupee alongside the Indian rupee, Liyāḳat ʿAlī Khān was unmoved, and eighteen months later India relented. When in both 1950 and 1951 India massed her forces on Pakistan's borders, he combined a staunch reply with a readiness to seek an immediate resolution of differences by negotiation. It is sometimes thought that he need not have accepted India's offer of a ceasefire in Kashmīr in 1949, but it is difficult to see, in view of the condition of Pakistan and her resources at the time, what choice he had. In the world at large he maintained a determined policy of non-alignment: he attended the conferences of British Commonwealth prime ministers but quickly made it clear that Pakistan should not be "taken for granted", he made a personally successful official visit to North America in May and June 1950 but made no foreign policy commitment. He did, however, make commitments in the Muslim world and embarked on that search for a leading role amongst Muslim states which in the succeeding decades characterised his country's foreign policy. International Islamic conferences were held, and by mid-1951 Pakistan had signed formal treaties of friendship with Syria, Turkey, Iran and Indonesia.

Within Pakistān, Liyāḳat ʿAlī Khān's first concern was nation-building. He strove to make the fragments of the armed forces inherited from the British a truly national force, encouraging them to recruit as many of the under-represented East Pakistanis as possible and removing the remaining foreign officers. Brushing aside suggestions that, now Pakistan was won, the Muslim League had performed its task, he tried to mould it into a party of national construction. "Pakistan is the child of the Muslim League", he declared, "it is the duty of the mother to look after the child till it grows up", and to emphasise his point he became president of the League on 8 October 1950 and urged others to follow suit in drawing together party and government. Most important, he endeavoured to create a framework for politics in which all Pakistanis would be happy to work. There were great problems: autonomous provinces had to agree to surrender powers to the centre, a fair place had to be found for non-Muslim minorities, while the *ʿulamāʾ*, who knew that all sovereignty flowed from God and that they alone were equipped to interpret His law, had to be reconciled with those who believed that the people were sovereign and that power in politics should rest with their representatives. Liyāḳat ʿAlī Khān's first step towards creating a constitutional framework was the Objectives Resolution brought before the Constituent Assembly on 7 March 1949. Although no more than a statement of intent, it marked out enough apparently common ground, particularly on the questions of sovereignty and minorities, for Pakistanis to be able to proceed with constitution making. There followed the publication of the interim report of the Basic Principles Committee in September 1950 which created great, and it seems unexpected, opposition; the East Pakistanis were the most vociferous, fearing that their majority in the Constituent Assembly would be reduced to a minority, although they were more numerous than the West Pakistanis. Liyāḳat ʿAlī Khān responded by

postponing consideration of the report and deciding to hold general elections before grappling again with the constitutional issue. He has been criticised for this move, indeed for mishandling the issue altogether. On the other hand, his aim in holding elections was to create elected bodies which would be more firmly under central control. To this end, he used his powers as Muslim League president to vet all applications for candidacies. He had just completed the task in the Pandjāb, and was about to proceed to the North-West Frontier Province, when on 16 October 1951 he was assassinated by an Afghān while addressing a meeting in Rawalpindī.

As a person, Liyāḳat ʿAlī Khān was noted for charm, manners, simple tastes and an egalitarian outlook which led him of his own accord to drop his hereditary title of Nawwāb-zāda. As a public figure he was noted as a practical administrator, as a witty speaker, and as a calm, shrewd and selfless politician, qualities which no doubt helped him to outstrip more experienced politicians in Djinnah's esteem. The full measure of his achievement will not properly be assessed until the Muslim League papers are fully open for consultation and the context of his last ten years is better understood. Nevertheless, he did much to bring Pakistan into existence and more than anyone else to nurture it through the first four very difficult years. Had he been spared, he may well have given his country a workable constitution, the lack of which came to be much felt. Rightly his countrymen bestowed upon him the title Ḳāʾid-i-Millat, leader of the nation.

Bibliography: There is a description of Liyāḳat ʿAlī Khān's family in Sir Lepel H. Griffin and Col. Charles Francis Massy, *Chiefs and families of note in the Punjab*, revised ed., Lahore 1909; memoirs of him will be found in Ziauddin Ahmad, ed., *Quaid-i-Millat Liaquat Ali Khan: leader and statesman*, Karachi 1970; M. Rafique Afzal, ed., *Speeches and statements of Quaid-i-Millat Liaquat Ali Khan (1941-51)*, Lahore 1967, and S. M. Ikram, *Modern Muslim India and the birth of Pakistan (1858-1951)*, second ed., Lahore 1965; insights from those who worked with him closely can be found in Choudhry Khaliquzzaman, *Pathway to Pakistan*, Lahore 1961, and Chaudhri Muhammad Ali, *The emergence of Pakistan*, New York 1967, while his relations with Djinnah are considered in H. Bolitho, *Jinnah: creator of Pakistan*, London 1954; the background to his achievement will be found in Khalid B. Sayyeed, *Pakistan: the formative phase 1857-1948*, second ed., Oxford 1968; H. V. Hodson, *The Great Divide: Britain-India-Pakistan*, London 1969, and L. Binder, *Religion and politics in Pakistan*, Berkeley and Los Angeles 1961. (F. C. R. Robinson)

LIYŪN, capital of the ancient kingdom of Léon and, at the present time, of the province of that name, to the south of the Asturias. The name comes from the *Legio Septima Gemina Asturica*, which established its *castrum* there in the reign of the Emperor Trajan. J. M. Blazquez (*Estructura económica y social de España*) includes it among the towns which were provided with walls during the Later Empire, and its role was very slight for the whole of the Visigothic period.

The Arab geographers mention Liyūn only rarely. Abu 'l-Fidāʾ says that "Ibn Saʿīd places it in 10°5′ longitude and 46°55′ latitude. It is a town in the seventh climate, in the land of the Djalāliḳa. According to Ibn Saʿīd, it is situated to the north-east of Zamora. It is the town of which al-Manṣūr b. Abī ʿĀmir [*q.v.*] destroyed the main rampart. It lies on a river which flows into the Zamora river. It is the finest and most important of the towns of the Djalāliḳa". Al-Ḥimyarī (*K. al-Rawḍ al-miʿṭār*, ed. Lévi-Provençal, no. 164) makes it "one of the capitals of Castile/Ḳashtāla. It is a populous town, where business, commerce and stock-raising are carried on. The people there are bellicose and touchy". Al-Maḳḳarī (*Nafḥ al-ṭīb*, ed. I. ʿAbbās, i, 143, 346) mentions the existence of tin mines in the region of Frandja and Liyūn.

The geographers and historians knew perfectly well that there existed a kingdom, with a capital (*ḳāʿida*) of this name, but generally preferred to utilise for this state the ancient term Djilliḳiyya or Djalliḳiyya [*q.v.*]. The information which one can glean from the chronicles is very sparse, a laconic attitude probably due in part to the fact that political and military activity there passed at an early date, and thenceforth almost exclusively, into the hands of the people of Ḳashtāla [*q.v.*].

At the time of the Muslim conquest, the occupation of Liyūn is mentioned neither by the *Fatḥ al-Andalus*, the *Akhbār madjmūʿa* nor the *Iftitāḥ al-Andalus* of Ibn al-Ḳūṭiyya. It is a reasonable assumption that the town was included in the capitulation of Petrus, *Dux Cantabriae*, which opened up all the Galicia-Asturias-Léon region. It was at that time probably a small, unimportant place with no Muslim governor. The Arab texts are indeed silent about it, and agree with the *Chronica de Alfonso III* in making Astorga and Oviedo the seat of "Munnuza", the Muslim governor of the region at the time of Pelayo's revolt.

The town must have been more or less officially abandoned at the time of the great rising of Berbers who emigrated from northern Spain in the years after 123/741. According to the *Chronica Albeldense* (602), "Fruela, brother of Alfonso I, entered Léon", and the *Chronica de Alfonso III* (615-16) specifically says that "Abela, Astorica, Legionem, Septemancas . . . Omnes quoque Arabes gladio interficiens xristianos autem secum ad patriam ducens", events whose veracity seems to be confirmed by the parallel version of the *Akhbār madjmūʿa*. It is essentially these texts which Cl. Sanchez Albornoz depends on for his theory of the *Despoblación y repoblación del valle del Duero*, Buenos Aires 1966. A partial return, spontaneous and unorganised, by small cultivators and herdsmen must have taken place under the shelter of the ramparts of the town, since, according to Ibn ʿIdhārī (*al-Bayān al-mughrib fī akhbār al-Andalus wa 'l-Maghrib*, ii, 346), ʿAbd al-Raḥmān II in 231/945-6 sent "his son Muḥammad, who besieged, bombarded, pillaged and burnt Léon, without however being able to destroy the 17-cubits' high walls". The *Chronica Albeldense* mentions under the reign of Alfonso "a campaign by al-Mundhir which is said to have reached as far as the town and which had to retreat with heavy losses", but one cannot tell from this whether it is the attack mentioned by the *Bayān* or not. The town remained uninhabited until 860, when Ordoño II "repeopled the deserted towns from which Alfonso I had expelled the Chaldaeans: Tuy, Astorga, Léon and Amaya" (*Chronica Alfonso* III, 619).

Ibn Ḥayyān (*Muḳtabas*, v, 120, 325, 344) makes Léon the capital (*ḳāʿida, ḥaḍra, dār mamlaka*) of Djalliḳiyya. The town was the objective of two raids by al-Manṣūr b. Abī ʿĀmir, one in 372/982 and the other in 376/986, leading to the sacking and burning of the town (ʿUdhrī, *Masālik*, ed. al-Ahwānī, 80).

Ibn ʿIdhārī (*Bayān*, iv, 80), as well as ʿAbd al-Wāḥid al-Marrākushī (*al-Muʿdjib fī talkhīṣ akhbār al-Maghrib*, 235, 268) consider Liyūn solely as an urban centre since they make Alfonso VII "the Slobberer" lord of Ciudad Rodrigo, Avila, Léon and Zamore, information also reproduced by Ibn Khaldūn in his *K. al-ʿIbar*.

As opposed to this view, Ibn al-Khaṭīb (*K. Aʿmāl al-aʿlām*, ed. Beirut 1956, 74, 241) speaks of it as a kingdom and not as a town ("the Christians of Ḳashtāla and Liyūn"). He has preserved for us an additional piece of information by including in the curious *Dhikr al-taʿrīf bimā amkana min mulūk al-naṣārā bi 'l-Andalus*, which comes at the end of his *Aʿmāl*, material which the Christian chronicles mention about the physician-ambassador Yūsuf b. Waḳḳār al-Isrāʾīlī al-Ṭulayṭulī. This chapter uses phonetic transcriptions of Christian names and titles, giving also the Christian equivalent for *hidjrī* dates; it is interesting to compare with this Ibn Khaldūn, who, in his *K. al-ʿIbar*, also changes at approximately this time *ḳūmis* [*q.v.*] into *ḳumṭ*. Ibn al-Khaṭīb reports thus that "in 148/766 [error for 768], Aurelio, brother of Froila, governed the territory of the Asturias, Galicia, Portugal and part of Léon"; "in 248/863 [error for, at the earliest, 866] Alfonso the Great transferred the *dār al-mulk* of his father to Léon and styled himself King of Léon"; and "Castilian separatism began under the reign of Garcia in 297/909 [correctly 911-14]", a period corresponding in fact to one of the phases of Castilian expansionism [see ḲASHTĀLA]. Ibn al-Khaṭīb then mentions the birth of the kingdom of Castile under Fernan Sanchez, and his struggle against the Léonese state before its merging into the kingdom of Castile and Léon, as well as the origin and the succession of Portugal. The information given by Ibn Khaldūn in the chapter of the *K. al-ʿIbar* called "Notice on the *Djalāliḳa* Banū Idhfūnsh, kings of al-Andalus after the Goths . . .", although very similar to that of Ibn al-Khaṭīb, is not a mere piece of plagiarism but seems rather to come from a parallel source of information.

LIZARD [see ḌABB].

LŌDĪS, a North Indian Afghān tribe and dynasty, 855-932/1451-1526.

1. History. Afghān tribes from the mountainous Sulaymān regions regularly migrated to the plain of the Indus; they joined the invading armies as auxiliaries in war, and came as traders or herdsmen during peace. They moved to the hills in summer and to the plains at the onset of winter. Among these emigrants were the ancestors of the Lōdī sultans of India. For the Afghāns in India generally, see PATHĀN and ROHILA.

The Lōdīs are related to a clan of the Ghilzay tribe of Afghānistān [see GHALZAY] and ruled over parts of north India for 77 years. Afghāns came to the Indus plains from Rōh [*q.v.*] as early as 934/711-12 with the army of Muḥammad b. Ḳāsim, the conqueror of Sind, and allied themselves politically with the Hindū-Shāhī [*q.v.*] rulers of Lahore, and receiving part of Lāmghān [see LĀMGHĀNĀT] for settlement, built a fort in the mountains of Peshāwar to protect the Pandjāb from raids. During Alptigin's government at Ghazna, when his commander-in-chief Sebüktigin raided Lāmghān and Multān, the Afghāns sought help from Rādjā Djaypāl who appointed their chief, Shaykh Ḥamīd Lōdī, viceroy of the *wilāyats* of Lamghān and Multān. Shaykh Ḥamīd appointed his own men as governors of those districts, and thereby the Afghāns gained political importance; their settlements stretched southwards from Lāmghān to Multān, incorporating the tracts of Bannū and Dērā Ismāʿīl Khān.

Later, a family of the Lōdī tribe settled at Multān, which was ruled in 396/1005 by Abu 'l-Fatḥ Dāwūd, a grandson of Shaykh Ḥamīd. There was also a strong Afghān element in the forces of Sultan Maḥmūd of Ghazna and Shihāb al-Dīn of Ghūr. The latter on his third campaign to India [see GHŪRIDS] had 12,000 experienced Afghān horsemen in his army, and he defeated the Rādjpūts under Rādjā Pithawrā of Dihlī. On his return journey, he settled in the hills of Rōh, the Sulaymān mountains, Ashnaghar and Badjawr—a tract extending from Kābul to the Indus—and appointed Malik Muʿizz al-Dīn Ghūrī at the head of 20,000 men to transplant the Afghāns from Ghūr to the new settlements, thereby paving his way for the conquest of Hindūstān. Each clan was granted an *iḳṭāʿ* in the environs of Nīlāb and the Indus.

Serving thus in the army of Shihāb al-Dīn Ghūrī, the Afghāns rose to power and settled over a large tract of land. Their leader ʿAlī Kirmākh was appointed governor of Multān in 582/1186-7. Sultan Balban of the "slave kings" posted them as garrisons in Bhodjpur, Kampila and Paṭiālī against the Hindū rebels in the Dōʾāb. During the reign of Muḥammad b. Tughluḳ, they rebelled under their leader, Malik Shāhū Lōdī, in Multān at some time in 741/1341, and killed its governor. Since the time of seizure of the Pandjāb by the Ghaznawids, the movements of Afghān merchants increased considerably. They started participating actively in the politics of northern India from the time of Muḥammad b. Tughluḳ and particularly after Fīrūz Shāh Tughluḳ's death (790/1388), during the decline of the Tughluḳ dynasty and the weak rule of the Sayyids.

During the invasions of India by Tīmūr [*q.v.*] in 801/1398, Afghāns fought on both sides. Malik Khiḍr Lōdī, Malik Bahāʾ al-Dīn Djilwānī, Malik Yūsuf Sarwānī and Malik Ḥabīb Niyāzī joined the army of Tīmūr at the head of 12,000 Afghān mercenaries. About this time, Sulṭān Shāh's father Malik Bahrām had come as a warrior-trader to Multān from Balōt, a *pargana* in the Bīrūn-i Pandjnād *sarkār* on the border of Balūčistān, according to the *Āʾīn-i Akbarī*. He quarreled with his two brothers Malik Maḥmūd and Malik Mawdjī, and took service under Fīrūz Shāh Tughluḳ's governor at Multān, namely Malik Mardān Dawlat, entitled Malik al-Sharḳ Nāṣir al-Mulk (*Ṭabaḳāt-i Akbarī* and *Taʾrīkh-i Mubārak Shāhī*). Malik Bahrām organised a tribal militia. After his death his sons Sulṭān Shāh Lōdī, Malik Fīrūz, Malik Muḥammad, Malik Khʷādja and Malik Kālā stayed on in Multān while the city passed, during political confusion and unrest, into several hands. After the death of Malik Mardān Dawlat, his son Malik Shaykh and his adopted son Malik Sulaymān were appointed after his death governors of Multān in succession by Fīrūz Shāh Tughluḳ. Malik Sulaymān was succeeded in the governorship by his son Khiḍr Khān, the founder of the Sayyid dynasty at Dihlī [see DIHLĪ SULTANATE], who had been appointed governor of Multān and the Pandjāb

by the Tughluḳids in recognition of his military service, but later betrayed the Tughluḳids and joined the invading Mongol force under Tīmūr.

Sulṭān Shāh Lōdī, who succeeded his father Malik Bahrām as chief of the Afghān mercenaries, distinguished himself in the service of Khiḍr Khān and helped him in overpowering the Tughluḳids. He succeeded in killing Mallū Iḳbāl Khān, the *de facto* ruler of Dihlī and the staunch supporter of Maḥmūd Tughluḳ, in the battle of Adjodhan fought on the banks of the Satladj (18 Djumādā I 808/11 November 1405). Thus Multān, together with the Pandjāb, seceded from Dihlī, and Sulṭān Shāh Lōdī was put in charge of Sirhind with the title of Islām Khān. During the time of the Sayyid Sulṭān Mubārak Shāh, son of Khiḍr Khān, the Afghān chief Sulṭān Shāh Lōdī obtained power and held Sirhind with the neighbouring districts in *djāgīr* [*q.v.*]. He settled there with his four brothers and gathered a strong contingent of 12,000 horse, mostly of his own tribe. Malik Kālā married his uncle's daughter, received Dawrāla (Sirhind *sarkār*) in *djāgīr* and served under Nāṣir Khān, who held Multān as governor on behalf of the Sayyid Sulṭān Khiḍr Khān. His child was named Bahlūl, the subsequent founder of the Lōdī dynasty at Dihlī. He died in a struggle against the Niyāzī emigrants in the Indus valley, and the child was brought up by his uncle Malik Sulṭān Shāh Lōdī at Sirhind. Finding him a soldier of promising character, Sulṭān Shāh Lōdī gave him his daughter, Shams Khātūn, in marriage. Once in Sāmāna he visited a local holy man, Sayyid Abban, with two companions, (*Ta'rīkh-i Shāhī*, 3; *Ta'rīkh-i Dāwūdī*, Sarkar ms., 4); the Shaykh demanded 2,000 *tankas* in exchange for the throne of Dihlī if any one of them was willing so to hazard for it. Bahlūl Lōdī had with him only 1,300 *tankas* which he instantly offered, and was congratulated as the future ruler of India. Although he was taunted by his companions for this transaction, he drew inspiration from the Shaykh's proposal and had no cause to regret either the throne of Dihlī or his gift.

Sulṭān Shāh Lōdī nominated Bahlūl as his heir-apparent in preference to his adult son Ḳuṭb Khān. On his father-in-law's death in Radjab 824/March 1431, the Afghān militia became divided into three camps under Ḳuṭb Khān, Malik Fīrūz, (son and brother of Sulṭān Shāh Lōdī [= Islām Khān] respectively) and Bahlūl Lōdī; the latter won over his uncle Malik Fīrūz to his side against the confederation of his rivals Ḳuṭb Khān and Muḥammad Shāh, the Sayyid ruler of Dihlī. The latter sent a force under his *wazīr* Malik Sikandar Tuḥfa and Djasrath Khokar to drive the Afghāns out of Sirhind and to deprive Bahlūl Lodī of his *djāgīr*. The Afghāns, defeated, fled to the hills. Malik Fīrūz was made captive and his son Malik Shāhīn Khān was killed. Bahlūl escaped, and, on Djasrath's return to the Pandjāb, he managed to re-gather his scattered army. Malik Fīrūz escaped from Dihlī and joined Bahlūl. The contrite Ḳuṭb Khān Lōdī also joined Bahlūl's camp. Thus remustering his forces, Bahlūl Lōdī recaptured Sirhind in 840/1436. The Sayyid Sulṭān Muḥammad Shāh sent a large force under one of his chiefs, Ḥādjdjī Shudanī, better known as Ḥusām Khān, which was defeated at Karā (Kharār in Anbāla district?) near Khiḍrābād Sadhūra, and Ḥusām Khān escaped to Dihlī while Bahlūl established himself firmly in the Pandjāb.

In 844/1440, when Dihlī was threatened by Maḥmūd Khaldjī I [*q.v.*] of Mālwā, the feeble Sayyid Sulṭān of Dihlī appealed to Bahlūl, who agreed to help him on condition that Ḥusām Khān the prime minister was to be replaced by his nominee Ḥamīd Khān. The Sulṭān acted accordingly, without taking into account the implications, and Ḥusām Khān was killed. Bahlūl Lōdī took the field with his contingent of 8,000 Afghān and Mughal militia and 20,000 of the royal army against Maḥmūd, who after a day's desultory fighting sued for peace, and retreated to deal with a serious riot in his own capital, Māndū [*q.v.*], and an invasion by Sulṭān Aḥmad of Gudjarāt. This retreating Mālwā army was waylaid by Bahlūl. Dihlī was saved from annexation to Mālwā, and Bahlūl was awarded the title of Khān-i Khānān, and confirmed in his *djāgīr* at Sirhind, with Lahore and Dībālpūr added to his fief. He then rebelled against Muḥammad Shāh and annexed Sunām, Ḥiṣār Fīrūza and other districts of the Pandjāb. Twice he made unsuccessful attempts to capture Dihlī, once during the time of Muḥammad Shāh (d. 849/1445) and again during that of his son and successor Sulṭān ʿAlāʾ al-Dīn ʿĀlam Shāh (849-83/1445-78). Circumstances were in his favour. ʿAlāʾ al-Dīn ʿĀlam Shāh was a weak ruler. His authority hardly extended beyond twenty miles from Dihlī: hence the epigrams *az Dihlī tā Pālam/bādshāhī Shāh ʿĀlam* ("ʿĀlam Shāh's rule extends from Dihlī to Pālam"). The ill-advised Sulṭān planned to kill his prime minister Ḥamīd Khān, who escaped from Badāʾūn, occupied the palace of Dihlī and invited Bahlūl to take over. The latter came, but cleverly declined the offer as the time was not ripe. Subsequently seizing an opportunity, he had Ḥamīd Khān arrested by Ḳuṭb Khān Lōdī and occupied Dihlī. He offered the throne to Sulṭān ʿAlāʾ al-Dīn ʿĀlam, who however abdicated in favour of Bahlūl, preferring himself to live a life of ease and seclusion at Badāʾūn. Bahlūl, thereupon, ascended the throne of Dihlī with the title of Abu 'l-Muẓaffar Bahlūl Shāh on 17 Rabīʿ I 855/19 April 1451.

After the capture of Dihlī, Bahlūl extended his territory over north India up to Djawnpur [*q.v.*]. The last decades of the 9th/15th century witnessed a fluctuating struggle between the Sharḳī dynasty of Djawnpur and the Ḥusayn-Shāhī dynasty of Bengal, and then between the Lōdīs and both of them. Bihār remained throughout a bone of contention. At first, Bahlūl succeeded in driving out Ḥusayn Shāh from his capital (Djawnpur) to his eastern possessions of Čunār, Čawnd and Bihār. The Lodī Sulṭān proposed to maintain the *status quo*, provided that Ḥusayn Shāh did not harbour his enemies, but the latter was bent on recovering his lost territory. (An inscription confirms the control of Ḥusayn Shāh over Bihār in 892/1486-7, but it was annexed by Sikandar Lōdī and put in the charge of Daryā Khān in 901/1495-6, as is evident from another inscription.) Ḥusayn Shāh Sharḳī was driven to Kahalgāon, 23 miles east of Bhāgalpūr. The Dihlī army crossed the Ganges from Paṭnā, while another contingent marched from Darwīshpur via Ḳutlughpur near Manēr Sharf, against the Bengal Sulṭān ʿAlāʾ al-Dīn. To oust the Lōdī troops, Prince Dāniyāl was sent by his father at the head of Bengal army towards Mungēr (Monghyr). The two armies stood facing each other for some time and ultimately a non-aggression pact was signed at Bāṛh to the west of Monghyr. Even after this, the boundary remained fluctuating. Bhāgalpur was perhaps, the western extent of the Bengal sultanate during the height of Lōdī power; Sikandar Lōdī's bounds definitely extended up to Bāṛh in the east (cf. *JBRS* [1955], 358-63).

Bahlūl considered himself a chief of chiefs rather

than an absolute autocrat. The Afghān chroniclers speak highly of his simplicity, sense of social equality, bravery and generosity. He followed strictly the _Sharīʿa_, and spent much time in the company of learned and pious men. He died in Shaʿbān 891/July 1488 at Malāwalī near Saket, a short distance from ʿAlīgaṛh [_q.v._]. His body was brought to Dihlī and buried in the Bāgh-i Djūd.

Before his death, he ensured Lōdī dominance in north India by placing his second son Bārbak on the Djawnpur throne and assigning Mānikpur to ʿĀlam Khān Lōdī, Bahrayč to his nephew Kālā Pahār, Lakhnaʾū and Kālpī to Aʿẓam Humāyūn Lōdī, and Badāʾūn to Khān Djahān Lōdī, while Niẓām Khān held the Pandjāb, Dihlī and most of the Dōʾāb.

He was succeeded by Niẓām Khān as Sulṭān Sikandar Lōdī, who reigned until 923/1517-18. Bahlūl was a chief of chiefs; Sikandar Lōdī considered himself a fully-fledged Sulṭān. He was a good administrator, a just ruler and a good poet. He was able to control the unruly Afghāns by introducing the system of inspection, auditing accounts and registering a _ḥilya_ (descriptive roll) [see DĀGH U TAṢḤĪḤA in Suppl.].

Sikandar Lōdī was succeeded by his son Ibrāhīm Lōdī at Āgrā on 8 Dhu 'l-Ḳaʿda 923/22 November 1517. To establish himself, he had to fight against his rival brother Sulṭān Djalāl al-Dīn of Kālpī and other rebels. After nine years, he had to fight a defensive battle at Pānīpat [_q.v._] against the Mughal invader Muḥammad Bābur of Farghāna. The Afghān Sulṭān, who had been betrayed by Dawlat Khān Lōdī, lost the battle, was killed on Friday, 8 Radjab 932/20 April 1526, and was buried by the roadside. Although the Afghān sultanate passed into the hands of the Mughals after about 77 years' rule, the Afghāns continued to fight against the suzerainty of the Mughals under the Karrānīs and Nūhānīs in Bengal until they were finally subjugated by the Mughal emperor Djahāngīr at Nekudjyāla about 30 miles from Dacca in 1021/1612.

Ibrāhīm Lōdī possessed military skill, but lacked tact and moderation. His idea of monarchy in which kin relationship was not counted was in accordance with the traditional idea of monarchy in India, but his repression of the powerful nobles of the Nūḥānī, Farmūlī and Lodī tribes caused his fall and death. He took drastic steps for establishing his suzerainty, but failed miserably in crushing the nobility which had reduced the Sulṭān to a mere figure-head from the time of Muḥammad b. Tughluḳ onwards, which had been granted too much license by his grandfather, but which had been largely controlled by his father, with his benevolent and tactful methods, methods which Ibrāhīm Lōdī himself lacked. He did not know how to win over and conciliate an aggrieved noble and was opposed to the equality which was a tradition of his own Afghān race. He hardly tried to patch up his differences with his nobles and to set up a joint defence against the invading Mughal force under Bābur. A correct use of the wealth which he had amassed in great quantities, and conciliation of his nobles, would have earned the loyalty of the nobility to him and helped him in bringing a still larger and stronger army to the battle field of Pānīpat than he could in fact assemble there, thus presenting a united resistance to the Mughals.

2. Administration. After years of insecurity, a stable government was established by the Lōdīs, essentially a military oligarchy; for, with the exception of a few Rādjpūts, all officials and _djāgīrdārs_ were Afghāns, mostly of the Lōdī, Nūḥānī, Farmūlī and Sarwānī tribes. Bahlūl had considered himself as _primus inter pares_; Sikandar Lōdī insisted on the dignity of a sultan, thereby going against Afghān tradition. For the civil administration under the Lōdīs, see ḌARĪBA. 6. India (a) The Sultanate of Dihlī, and WIZĀRA.

3. Social and cultural life. Tīmūr's invasion caused considerable damage to Indian culture in the Sultanate period, which shifted from Dihlī to provincial capitals until the establishment of the Lōdī dynasty. Sikandar Lōdī's reign witnessed a renaissance of learning and culture in Dihlī. Hindūs began to take interest in Muslim learning and Dungar, a Hindū poet, taught in a Muslim college. Sikandar patronised music, and gathered poets and musicians in his court. The Sulṭān's cultivation of music led to the compilation of a rare work, the _Lahdjat Sikandar Shāhī wa-laṭāʾif-i lā-mutanāhī_, a ms. of which is preserved in the Tagor library of Lakhnaʾū University.

There was some rapprochement between Muslim Ṣūfīs and Hindū _yōgīs_; the Bhakti poets Čaitanya, Kabīr, Nānak and others compelled some popular attention in the 9th/15th and 10th/16th centuries, under Sikandar Lōdī and his successors. There are some contemporary instances of social intercourse between Muslim saints and Hindū _yogīs_, and of Muslim followers of Hindū saints, and vice-versa. See further HINDŪ, and also KABĪR; MALIK MUḤAMMAD DJĀYASĪ; DJAMĀLĪ, in Suppl.

4. Architecture. Lōdī architecture is described in the articles dihlī sultanate, art, and hind, vii. Architecture. There are many sites not mentioned in those articles where monumental tombs of the Lōdī period are found, especially in the neighbourhood of Sirhind [*q.v.*], Sohnā and other towns in the Māwāt, and in the environs of Āgrā. There is still no adequate study published on Lōdī architecture as a coherent whole, and a competent survey is badly needed. Recent research suggests that later Dihlī Sultanate architecture in the regions of eastern Uttar Pradēsh and Bihār has many features of a regional style not described in the classification of styles in hind, vii.

5. Coinage. Gold and silver coins, already very scarce under the Sayyids, were not continued by Bahlūl. His standard coin (= *ṭanka*), a billon issue of 9.2 to 9.4 gms., was of a traditional north Indian (80-*ratī*) standard, but issued in sufficient quantity for the sobriquet of *bahlūlī* to be applied to it. Sikandar's standard *ṭanka* was a 32-*ratī* piece, hence of less than half the value of the *bahlūlī*. The issues of Ibrāhīm are confined to copper small change. There are a few issues of autonomous Lōdī governors from e.g. Kalpī [*q.v.*]. See further dār al-ḍarb and sikka.

LOGIC [see manṭiḳ].

LOJA [see lawsha].

LOMBOK, an island belonging to the Indonesian province of the Western Smaller Sunda Islands (*Nusa Tenggara Barat*). In the west it is separated from Bali by the Bali Strait, in the east by the Alas Strait from Sumbawa. It is some 4,670 sq. km. in area, and has approximately 1,850,000 inhabitants. There are extreme differences of climate between the humid western and the more arid southern and eastern parts of the island. Mount Rinjani (3,730 m.) is one of the highest mountains in South-East Asia. Mataram, situated close to Lombok's west-coast, is the provincial capital. The Island is divided into three *kabupaten* (regencies): West, Central and East Lombok.

The main population group, comprising *ca.* 95%, are the Sasaks who are nominally adherents of Islam. Approximately 3% are of Balinese origin, in addition to some "*orang Buda*" who keep to old animistic beliefs, some Chinese, and few Arabs (about 140 in West Lombok).

Influence of Mahayana Buddhism in the 8th and 9th centuries A.D. is suggested by some recently-discovered Buddhist statues in the eastern part of the island. After the conquest of Bali by the *patih* Gajah Mada from the Hindu-Javanese empire of Majapahit in 1343, Lombok met with the same fate. On the initiative of Trenggana (1521-46), the third ruler of the first Islamic kingdom on Java, Demak, Islam was introduced in Lombok among the Sasaks. Tensions between the Sasak rulers and the kings of Sumbawa during the 17th century finally led to the intervention of the Balinese kingdom of Karangasem, which established its supremacy on Lombok at the beginning of the 18th century. Mataram, close to the western shore and thus in neighbourhood to eastern Bali, developed as the most influential centre on Lombok. Its king was counselled by Balinese nobles, and the districts, too, were governed by Balinese, whereas their decisions were executed by Sasak officials who were often descendants from the old indigenous nobility.

In 1849, Karangasem lost its supremacy over Mataram, which maintained closer relations with the Dutch at Batavia. But the Balinese nobility still tried to develop western Lombok into a second Bali, and by court decisions Sasaks were eventually made slaves and had to serve in that rôle. Finally, the Sasaks asked the help of the Dutch Indies government, which organised in 1894 an expedition against Lombok "to protect the Muslims", to abolish the dynasty, and to turn Lombok into a Dutch colony. Besides its political consequences, this expedition resulted in the discovery of the manuscript of the *Nāgarakṛtāgama*, a chronicle of the kingdom of Majapahit from the 14th century.

Although the Sasaks are usually considered to be Muslims, old customs, beliefs, and rules (*adat*) are still dominant. Especially during the 19th century, two parallel movements brought some change into the traditional social structures: the attempts of certain circles of the nobility to exert a greater degree of power, which they justified with *adat* convictions, and which was based on the eventual support of the Dutch; and, on the other side, the attempts of mainly commoners to gain some influence too. For them, Islam with its more democratic concept of society, provided sufficient motivation, and at the same time was consonant with the anti-Balinese feelings among the people.

It was the latter group, however, who in the course of time proved to be more influential than the former one. The features of this development are similar to those in other rural areas in Indonesia. The traditional nobility, which as descendants of the original semi-divine hero has a strong attachment to *adat*, disqualified itself by its affiliation to the foreign powers who ruled the area, whereas for the Muslim preachers, lacking those affiliations and usually themselves originating from the lower strata of society, it was much easier to convince the commoners that they were defending their interests. Externally, they were opposed to the habits and convictions of traditional Sasak culture. But as they were usually oriented towards Islamic traditionalism, a number of Sasak cultural and ceremonial notions were in effect absorbed into their understanding and practising of Islam. Besides the questions of leadership and social control, it was especially in regard to the matrimonial customs and kinship relations where a discrepancy between *adat* and Islam was felt, and this caused internal tensions in Sasak society, which on the whole is moving towards a gradual acceptance of the custom and habits of traditionalist Muslims. This happens mainly through intermarriage between *adat*-obeying and Muslim partners, where the former one adapts himself to the Muslim partner. But the transition from *adat* to Islam is much less a matter of changing doctrines than of changing practical behaviours, and it is mainly obedience to certain demands of the *Sharī'a* which serve as the criterion for considering someone as a Muslim or not.

LORCA [see LURKA].

LOS PEDROCHES [see FAHṢ AL-BALLŪṬ].

LOT [see LŪṬ].

LUBĀN (*lūbān, lawbān*) is frankincense, the dried-up sap produced by notching some kinds of Boswellia, obtained in Somalia and South Arabia in the form of yellow resin-grains. As is well-known, the term is Old Semitic: Assyr. *lubānu*, old South Arabian *l-b-n*, Hebr. *lbonā*, Aram. *lebontā* (*lebottā*), Eth. *lābān*, from which have been derived the loanword λίβανος, λιβανωτός, Latin *olibanum*, with derivations in the Romance languages. The name can be traced back to the original meaning "white" (Hebr. *lābān*), after the colour of the fresh, milk-white gum-resin, exuded abundantly from the notched trunks and after some time solidified into yellow grains, which are then detached from the trunks or gathered from the soil. At least as often as *lubān*, there appears in Arabic the synonym *kundur*, according to most authors of Persian origin, but perhaps to be derived from χόνδρος "grain"; this term may have become an independent form, derived from the combination χόνδρος λιβάνου "frankincense-grain".

The frankincense trade is extremely old and has been treated repeatedly—but at times inadequately—in comprehensive descriptions. In the first place, frankincense—together with myrrh—formed the richness of the old South-Arabian states of the Minaeans and Sabaeans; the loss of the frankincense monopoly was one of the main causes of the collapse of this commerce fundamental for their existence, and consequently of cause of their downfall around the middle of the 6th century A.D. (see the good survey by W. W. Müller, *Alt-Südarabien als Weihrauchland*, in *Theol. Quartalschrift*, cxlix [1969], 350-68). The Arabic sources point in the same direction. According to al-Aṣmaʿī, three items were found only in the Yemen, and indeed abundantly there: *al-wars* (*curcuma*, a dye-plant), *al-lubān* and *al-ʿaṣb* (Poterium) (cited in al-Dīnawarī, *The book of plants*, ed. B. Lewin, Wiesbaden 1974, no. 627). According to a Bedouin from ʿUmān (in al-Dīnawarī, *Le dictionnaire botanique*, ed. Hamidullah, Cairo 1973, nos. 971, 979), frankincense is only found in al-Shiḥr, in Shiḥr ʿUmān in fact, as a small briar which reaches up to two cubits high and which grows only in the mountains; its leaves resemble those of the myrtle [see ĀS in Suppl.], as do its fruits, which have a bitter (read *marāra* instead of *ḥarāra*) taste; its resin, also used for chewing and called *kundur*, wells up in some places struck with the hatchet and stays there until harvest. According to al-Dimashḳī, *Nukhba*, ed. Mehren, St. Petersburg 1866, 87, frankincense is obtained on Suḳuṭrā (Socotra) and in some regions of the Yemen. After Matt. ii, 11, al-Ṭabarī, i, 729, 1, reports verbatim that the Magi brought gold, frankincense and myrrh. Lice infestation is caused by two different things: by taking excessive delight in dried figs and by burning frankincense (Ibn Ḳutayba, *ʿUyūn*, iii, Cairo 1930, 294).

The best frankincense comes from the male plant (*lubān dhakar* = the λιβανωτὸς ἄρρην of Dioscorides); it is white and firm and has round grains which are gummy when broken open. The white frankincense (*lubān abyaḍ* = λιβανωτὸς λεύκός) is also named as a noble variety; finally are to be mentioned the Javanese (in fact, Sumatran) frankincense (*lubān djāwī*), i.e. benzoin, obtained from various kinds of styrax-trees whose fumes are said to remove a cold in the head, and the reddish, Indian frankincense. When, however, the geographers speak continuously of the frankincense of Arabia, this statement is based more on a literary topos than on knowledge of things on the spot. The critical Marco Polo remarks explicitly that he does not want simply to repeat these literary accounts, but to report the personal information of the frankincense-traders. According to these last, frankincense was particularly cultivated in two regions of South Arabia in "Escier"—apparently al-Shiḥr—and "Dufar", the ancient Ẓafār. In al-Shiḥr, he further reports, the lord confiscates the entire harvest, pays the cultivator a low price, and sells it to the traders at a sixfold price (for this report, see W. Heyd, *Histoire du commerce du Levant*, ii, Leipzig 1886, 614-16). Some other places named by the geographers which produced frankincense lie close to each other and belong to the region of Mahra [*q.v.*]. The fact that at times scanty production of frankincense could not always satisfy the sustained and high demand in East and West, led to numerous adulterations (S. Labib, *Handelsgeschichte Ägyptens im Spätmittelalter*, Wiesbaden 1965, 334). Nahray ben Nissīm, a Jewish scholar, merchant and banker, called *al-tādjir al-maghribī* and well-known from the Geniza documents, carried on a widespread trade in frankincense in the Mediterranean area in the 5th/11th century (S. D. Goitein, *A Mediterranean society*, i, Berkeley and Los Angeles 1967, 154).

The medicinal use of frankincense, described extensively by Ibn al-Bayṭār, goes back for the greater part to Dioscorides, from whom was also borrowed without examination the enumeration of several kinds, together with their Greek names. According to him, frankincense has a heating, drying and astringent power, expels darkening of the pupils, causes wounds to scar over and checks haemorrhage. It softens virulent abscesses and, applied in combination with vinegar and pitch, removes warts and eruptions. It is good for earaches and, combined with other medicines, for illnesses of the trachea and of the intestines. For healthy people, it can be dangerous, for it may cause madness and, if drunk with wine, even death. Frankincense is burned by putting it in a mussel-shell and setting fire to it. Shortly before it is fully consumed it must be covered up so that the fire is smothered completely in order that the frankincense is charred and not reduced to ashes; it can then more easily be pulverised. Various supplementary observations were made by the Arab physicians, such as the following: frankincense "burns" pathological phlegms, dries up excessive humours in the breast, strengthens the stomach and warms up a cold liver. Dissolved in water and taken daily, it increases the reasoning power and eliminates loss of memory. It checks diarrhoea and vomiting, calms palpitation of the heart but can also lead to mental disturbances. When chewed, it strengthens the gums. Its bark is good for haemorrhages and intestinal ulcers. The bark of the frankin-

cense-tree was often adulterated with that of the stone-pine, but the fraud could easily be detected; when burned, pine-resin smokes while frankincense burns with a flame. Apart from genuine medical science, frankincense is until now still of great importance in popular medicine and magic, cf. e.g. for Egypt, M. Meyerhof, *Der Bazar der Drogen und Wohlgerüche in Kairo*, in *Archiv für Wirtschaftsforschung im Orient*, iii, 3/4, Berlin 1918, 202, and for North-West Africa, Helga Venzlaff, *Der marokkanische Drogenhändler und seine Ware*, Wiesbaden 1977, 67 ff.

(A. Dietrich)

LUBNĀN, Arabic name of the Lebanon. The Lebanon belongs to the sphere of Arab culture and of Islamic civilisation. It is also one of the components of the Christian world and of the French-speaking community. Created a state in 1920, it seeks its justification, as do all the countries of the contemporary Near East, through the quest for a very ancient identity. With the prosperity of their merchants, with the Biblical symbol of the cedar on their flag, or with the violence of the civil war which broke out in 1975, the Lebanese are a part of the myths and realities of the peoples who, from the Mediterranean to Mesopotamia, have based their civilisations on the patriarchal family, agriculture, the city, commerce and God.

The modern State of the Lebanon was proclaimed of September 1920 by General Gouraud, High Commissioner of the French Republic to the Levant. Within the frontiers allotted to it, and which then earned it the title of "Greater Lebanon", it occupied an area estimated today as close to 10,450 km², meassuring no more than 210 km from north to south, and with a breadth of 40 to 75 km from east to west. It is bordered to the north and east by the Syrian Arab Republic, to the south by the State of Israel, and to the west it has an open coastline on the Mediterranean. Like the *mutaṣarrifiyya* of Mount Lebanon, the Ottoman *sandjaḳ* which preceded it, dating from 1861, it took the name which had come to be attributed, progressively, to the whole of the mountain range which stretches from the Nahr al-Kabīr, in the north, to the Nahr Līṭānī, in the south; it contains, furthermore, part of Upper Galilee to the south, the central plain of the Biḳāʿ (the Coelesyria of Antiquity), and the western foothills of the Anti-Lebanon and of Mount Hermon.

In implementation of Article 22 of the Treaty of Versailles which created the system of mandates, and of the Treaties of San Remo (25 April 1920) and of Lausanne (24 June 1923) which officially brought about the end and the dismemberment of the Ottoman Empire, the Council of the League of Nations, with its decisions of 24 July and 29 September 1923, placed the Lebanon under a mandate entrusted to France. On 26 November 1941, General Catroux, on behalf of the leadership of Free France, recognised the Lebanon as "a sovereign and independent State". In October 1943, following the election to the Presidency of the Republic of the Maronite Christian Bishāra al-Khūrī and the appointment of the Sunnī Muslim Riyāḍ al-Ṣulḥ as President of the Council of Ministers, the ministerial declaration of the new government affirmed, with all the ambiguity necessary to a compromise, that "the Lebanon is a homeland whose countenance is Arab, which will benefit richly from the civilisation of the Arabs." It became a member of the Arab League on the foundation of the latter in March 1945.

Greater Lebanon had taken the name of the Lebanese Republic when it was endowed, in 1926, with a constitution establishing a parliamentary and liberal régime. In 1943, when the Lebanese Government, with the support of public opinion, took its own destiny properly in hand, it set the seal on these institutions by means of the National Pact (*al-Mīthāḳ al-waṭanī*), a verbal accord which, in particular, defined the division of the responsibilities of power between the different religious communities; it thus entrusted the Presidency of the Republic to a Maronite Christian, the Presidency of the Council of Ministers to a Sunni Muslim, and the Presidency of the Chamber of Deputies to a Shīʿī Muslim. Herein lies the heart of the problem. Under the cover of a constitutional régime inspired by the French Third Republic, Lebanese political and social life was to be regulated by a sectarian division of responsibilities, conforming to the development which it has experienced since the beginnings of Islam [see DHIMMĪ] and the changes that it had undergone in the Ottoman Empire in the period of the *Tanẓīmāt* [*q.v.*]. If the declaration of 1943 stated that the Lebanon is a "homeland" (*waṭan*) of Arab countenance, the Constitution made it a "nation" (*umma*). To which structure was the action of the state therefore to respond?

Social culture imposes its norms here, digging its root into a very distant past; there is more of history in this than in all the "Phoenician" justifications put forward today by the Christians, or in the unicity of civilisation to which the Muslims lay claim.

Populated from the very dawn of history, the coast accommodated active ports, the memory of which has been perpetuated by the Biblical texts, and of which contemporary archaeology has revealed

the stages and the levels of habitation, such as those superimposed on more than three millenia of glories and disasters in the remarkable site of Byblos (D̲j̲ubayl). Under the Roman domination and the rise of Mediterranean traffic which accompanied it, 30,000 spectators could be accommodated in the immense hippodrome constructed in Tyre (Ṣūr) and recently brought to light, excavations having begun in the 1960s.

Shrouded by its forests and its rocks above the narrow coastal strip, the mountain was also penetrated by man at a very early stage, as is shown by its Canaanite and Aramaic toponyms; its inhabitants, probably fairly dispersed until the end of the ancient period, made a living through the exploitation of timber, transporting it on the first stage of the long route which led from Tyre and Sidon (Ṣaydā) to Asia, and through brigandage. The haunt of the gods worshipped by the cities of the coast, it also attracted pilgrims to shrines adjoining the ruins of temples built in the Roman period.

After the mission of Muḥammad, the Arab conquest, by modifying the horizons and the nature of power, gave rise to a different exploitation of resources. While the narrow coastal plains, open to the sea and giving access to all ventures coming from

the West, formed a passage hardly favourable to the prosperity of a sedentary life in the absence of security, the Lebanon range became one of the marches of western Syria where Muslim and Byzantine adversaries confronted one another, perhaps through the intermediary action of unruly local inhabitants with an aptitude for warfare. Furthermore, the virtual autonomy enjoyed by those who had established themselves there was favourable to the maintenance and development of heterodox and minority religious tendencies.

On the western slope of a mountain already largely deforested, between its first escarpment dissected by deep gorges and its high calcareous plateaus of the north or its ridges to the south, conditions for agriculture and human settlement were particularly favourable at altitudes between 900 and 1,500 metres, since here erosion had uncovered soft and fertile strata of chalk. Sandstone, marl, clay and basalt rock provide a more open relief in this area, where the climate is temperate, the air salubrious and water plentiful. Annual rainfall at this altitude in fact reaches levels of between 1,000 and 1,500 mm; most of the rainfall occurs from November to March, but, during the summer season, the high calcareous surfaces retain the water which they have absorbed over the winter in the form of snow. The Lebanese mountain range is well-irrigated at a latitude where water is rare, because it stops the humid air currents coming in from the west; it forms a barriage between the sea and the steppe. Behind the sheer eastern face, the inland depression of the Biḳāʿ [*q.v.*] becomes much more dry; climatic contrasts are accentuated; the Mediterranean littoral is replaced by the Syrian plains which stretch beyond Anti-Lebanon. The Biḳāʿ was the wheat-growing region to which the mountain people came in search of part of their cereal requirements; as a result, it became a disputed territory because, as an enclave also penetrated by nomads, it became a prey to the rival and destructive aspirations of distinguished families who sought to impose their control on the mountain region, and of those who governed in Damascus.

Over the centuries, the mountain people constructed and maintained walls of dry stone to retain the arable soil on the slopes, thereby establishing narrow fields which were arranged in successive and horizontal layers; these were put to full use when the farmers became capable of developing the cultivation of the vine, the olive and the mulberry. This remarkable and intricate system of terracing was an eloquent testimony to the need for regulating work communally in order to guarantee that of each participant, not only because they were subject—not without legal disputes—to the easements of rights of way, of distribution of water and of crop rotation, but also because the security of each element depended on the maintenance of the whole.

The men who constructed and cultivated these terraces were organised according to the two modes of grouping fundamental throughout this historical milieu: the patriarchal family and the religious community. Social life was at first determined by a system which sanctioned marriages within the framework of paternal parentage to form a patriarchal family which was turned in upon itself and of which the identity was established through a patrilineal genealogy and through references to a more or less legendary ancestor. Within this context, the family group found expression for its defensive reflexes ("my brother and I against the son of my paternal uncle, my paternal uncle's son and I against the stranger"), its obligations towards neighbouring family groups and its dependent relationships with more powerful families. In fact, the nature of its internal constitution did nothing to prevent, in the field of exterior contacts, the forging of links of solidarity and the establishment of hierarchies; the role of the latter was still significant in the 19th century among the families of the mountain region. This system, largely pre-Islamic in its origins, was adapted to different types of economic and political organisation, arriving progressively at its fullest expression during the Islamic period, in this mountainous milieu—it should be stressed—just as among the Arab tribes, nomadic, sedentary or sedentarised, of which the conquest did nothing more than establish norms within the general cultural ambience. Thus it was not confined to one religious community, but common to all, even though it underwent evolutions and variations in the course of the centuries; furthermore, the identifying marks of social culture which it entailed, and the experience of which was vigorously maintained through the everyday vocabulary of the Arabic language, were shared by the mountain people with their entire human environment, with the inhabitants of the interior as with those of the coast, and with those of the towns as with those of the plain.

However, the higher collective consciousness relied for its support on something beyond this organisation, which could only engender unstable coalitions between separate and rival agnate groups; it became crystallised at the level of a religious community which ascribed itself to a universalism of divine essence and thereby corresponded to a unitary aspiration where the social body ideally expressed its instinct for survival in its cultural identity and through its willingness to transcend personal interest. Islam was the perfect response to this need, while allowing the survival under its protection of other revealed religions which had proved satisfactory. While each religious community transcended the divisions of the family groups which composed it by uniting the latter in a common faith, the different communities became juxtaposed in their turn in a hierarchy imposed by Islamic law, analogous, in fact, to that which proceeded from the structure of society. The effects of this situation were to a great extent accentuated by the schisms and heresies provoked by the fragmentation of each of the great monotheistic religions into tendencies, different interpretations, communions, liturgies, doctrinal and judicial schools, themselves forming *ṭawāʾif* (sing. *ṭāʾifa*), possessing their own distinctive characteristics in the service of the one God, and even exacerbating them in the course of continual confrontations between the communities. The historical ambiguity of the Lebanon, as compared with other groupings of the region, consists in the fact that it was constructed on the banding together of minorities to form a majority.

How did the distribution of those who fostered their idiosyncracies in this mountain refuge develop? The reply to this question is one of the keys to the progressive definition of "the Lebanon" by its own inhabitants. It is not to be easily answered, however, first because our information on the population during the mediaeval period is still fragmentary and uncertain, furthermore because hypotheses on this subject have been exploited to develop fallacious or emotional claims which have served to justify community and political choices in contemporary Lebanon, with consequences that have not been

solely doctrinal. Passions are aroused and polemic erupts as soon as it becomes necessary to determine the appellation, past or present, of this mountain chain overhanging the Mediterranean, with the vindication or negation of claims of affiliation with the populations settled there, whose origins, in fact, are so often lost in the obscurity of time and in successive human migrations. The controversy continues when the effort is made to define the society and personality of this region in the Ottoman period, with incantatory references to the Occident or to the Orient, the whole being a splendid mental and verbal confusion of all the ideological and academic models. Genuine scientific endeavour has suffered from these practices; on the other hand, their analysis makes for a better understanding of the mentalities involved and of their significance in the Lebanese context.

In the context of each religious group, the collective imagination and, consequently, the emotional outlook of the community are nourished by accounts of the origins of the group. In the case of the Maronite Christians, they have appeared to be all the more important in the Ottoman and contemporary periods because they have explained, or justified, their geographical and human association with the ancient and Biblical designation of "Lebanon", and the extension of the latter over the whole of the country. The stages in the mental realisation of this territorial appropriation are instructive. In the 16th and 17th centuries, following the epic and liturgical work of the bishop Djibrāʾīl b. Ḳilāʿī, one of the preoccupations of the Maronite chroniclers, in particular of the patriarch Isṭifān al-Duwayḥī, had been to arrange and give shape to stories of monks who had lived as recluses in the canyons of the Ḳādishā under the patronage of the saint Mārūn—or as successors to the patriarch Yūḥannā Mārūn—and had exercised a ministry among the peasantry of the neighbourhood. These authors also insisted on the cohesion of the community around their patriarch and on their obedience to the orthodoxy of the Roman Church, which consolidated relations with Catholic Europe at a time when the Maronites were extending their territorial base in central Lebanon, coming into conflict with authority and encountering various spiritual and economic trends. To hagiography and to annals perpetuating the consciousness of the Maronite community, there may be added, especially since the end of the 19th and the beginning of the 20th centuries, the exploitation of scholarly works with a view to laying claim to a very distant past. Thus the Jesuit priest Henri Lammens had taken up again the study of the "Mardaïtes" (cf. *EI*[1], *s.v.*), a rather mysterious people which he believed could have established roots in northern Lebanon after Byzantium had diverted its religious turbulence into opposition to the Muslims, and Maronite authors recognised once more some of their ancestors there, even though these last were tarnished by heterodoxy. However, a question then had to be answered: in relation to Islam and to the "Arabs", was this population to be regarded as allogenous or indigenous? The construction of a national past, conceived as an uninterrupted chain of events, also led Christian authors to claim kinship with the Phoenicians, as they saw in this approach the best interpretation of implantation in time and space.

The monuments which the Crusaders left behind at Tripoli, Beirut and Sidon and on the foothills of the mountain, constitute for their part evidence for those passions which appropriate this past or reject it. Leaving aside sentimental and political reactions, it is nevertheless legitimate to wonder with what populations the "Franks" really came into contact. In the central and northern parts of the mountain, it seems very probable that the dominant tonality was then provided by a population that was either Shīʿī or influenced by Shīʿism. Thus when the Mamlūks, operating from Damascus in the name of orthodox Sunnism, sought, in 704/1305, to recall where the power of the state was situated and to which community it belonged, it was against these *rawāfiḍ* (sing. *rāfiḍa*), "people of dissent" or "recusants", as Ibn Taymiyya condemned them, that they launched in the direction of Kisrawān their victorious and devastating campaigns. This dispersion of the Shīʿīs was favourable to an influx of Maronite population, moving in from the north, and to an extension of the authority of distinguished Druze families [see DURŪZ] around the Gharb and the Shūf. The chronicle of Ṣāliḥ b. Yaḥyā, written in the 15th century, clearly shows how the hierarchy of the family groups became established on the mountain by means of the fiscal and military organisation of the Muslim states (the system of *iḳṭāʿ* under the Mamlūks, to be replaced by the *muḳāṭaʿa* under the Ottomans). It was in this encounter between a population of settlers and an authority which derived its administrative legality from the centre of Sunnī power and its structure from social culture that there was established the "Government of the Druzes" which European travellers discovered in the Ottoman period, and where one of the axes of the modern Lebanon progressively took shape.

With the dangers posed by the Franks and Mongols removed, the Ottoman conquest of Syria in 1516 was, in fact, a decisive moment for this mountain region. It had ceased to be a disputed frontier; it became a centre for access which, for all its undoubted difficulty, was situated at the meeting-point of the great land and maritime communications routes of the vast imperial Ottoman federation. Its inhabitants found in this the opportunity to develop their own activities, and thereby, also the means of affirming their own originality. The Ottoman régime favoured the expansion of regional networks for the relaying of long distance trade; the mountain people were thus able to obtain improved profit from their cultivated terraces, producing grapes and oil, and especially silk in the central regions, cotton and tobacco in the south. Their outlets were initially the local centres of manufacture and consumption, Damascus and Aleppo being the leading customers. Major commerce radiated from these inland terminals, both on interior routes and towards the coastal ports, Tripoli, Beirut, Sidon, which put them in contact with cabotage traffic plying between Palestine and Anatolia and with Egypt, the Maghrib and the ports of Christian Europe, Marseilles in particular, whose merchants, consuls and agents joined together in conducting their business under the system of capitulations [see IMTIYĀZĀT].

As a mainstay of the power of the sultanate which was maintained through control of the towns and the plains, Sunnī society first put down its roots in the centres for the radiation of religion, justice and authority. In the zone studied here, the Sunnīs were located principally in the ports, the coastal plains and the Biḳāʿ; the dignitaries of Sidon undertook with those of Damascus rich exchanges in the form of merchandise, marriages and spiritual brotherhood, while Moroccans were to be recorded in the genealogies of Beiruti families. The old communities

of the Melkite Church of Antioch also shared in the revival of the cities and the development of the plains; in 1724, their fragmentation into two hierarchies, one of them "orthodox" and remaining under the jurisdiction of Constantinople, the other "catholic" and bowing, amid controversy, to that of Rome, bore witness to the effects of the milieu in which they reasserted their vitality. Between the "Greek Orthodox" monastery of Balamand (formerly the Cistercian Belmont) and the olive plantations of the Kūra, to the south of Tripoli, and, on the other hand, the agricultural development which grew up around the "Greek Catholic" monastery of Saint Saviour, Dayr al-Mukhallaṣ, on land dominated by the Djunbulāṭ Druze family, these two rites also maintained monasteries such as that of Shuwayr, where a printing press was installed during the first half of the 18th century, in this centre of Christianity which the Kisrawān and the Matn were to become.

Between the Djabal Lubnān to the north and the Djabal al-Shūf to the south, the movement of Maronite population towards the south of the mountain effectively turned this region into a religious focal point, an agricultural zone accessible to commerce, and formed *muḳāṭaʿāt* administered by families of Maronite *shaykhs* within the context of the "Government of the Druzes", the *ḥukm Djabal al-Shūf wa-Kisrawān* of the local chroniclers. Forces which came into contact here also clashed. The Jesuits had sent their first missionaries to the Levant two decades after the Council of Trent, and they had assumed direction of the seminary founded in Rome, in 1584, for the training of young Maronites. It was therefore no paradox that the communities of oriental rite attached to Rome were among the first to feel the impact caused by the renewal of religious activity in Europe and contributed to its repercussions. Under the influence of the Holy See, the Maronite Church underwent a movement of reconstruction which affected monasticism and the hierarchy, and a number of synods, including that of Luwayza in 1736, had to be convened for the new rules to be discussed, accepted and imposed. Better organised, it acquired material strength through the donations and *waḳfs* of which it was the beneficiary; monasteries became institutions of education where, alongside liturgical Syriac, the Arabic language was cultivated as a means of instructing the faithful and of better understanding the sacred texts. The milieu regained its rights through the use of Arabic and the social structure; thereby, the Maronite Church "naturalised" its western elements. By virtue of the authority of its patriarch and the work of its monks on the popular level, its influence in the community grew in comparison to that wielded by the *muḳāṭaʿadjīs*, the title born by members of families responsible for the levying of a contractual tax on a district, *muḳāṭaʿa*.

Among the dignitaries (*aʿyān*) of old Maronite stock, some advanced in the echelons of the ecclesiastical hierarchy, whilst others acquired the title of honorary consul in dealings with the representatives of the king of France; but the maintenance of their power derived from their role in the Ottoman fiscal system. After their conquest of Syria in 1516, the Ottomans had retained the administrative divisions of the mountain region, following the example of their predecessors and on the basis of the ethnic distribution; the north belonged to the *wilāyet* of Tripoli, the centre and the south, where the "Government of the Druzes" held sway, to that of Damascus. In 1660, in the wake of campaigns which the Porte had been obliged to conduct in order to suppress the rebellious ambitions of the Druze *amīrs* of the leading family of the Maʿn, a new *pashalıḳ*, whose governor resided at Sidon, was created to ensure better control of the Druzes and the Maronites. Detached from that of Damascus, its territory included the central and southern part of the Lebanese range and northern Palestine; however, the pasha of Damascus retained seniority over those of Tripoli and Sidon. The latter made no attempt to exercise direct authority over a mountain range that was difficult of access and inhabited by well-organised groups; in common with the usual practice of the Ottoman administration, they relied on local leaders for the levying and submission of the tribute, the most tangible sign of the sultan's power. In doing so, they were obliged, on the regional level, to adapt themselves to the structure and hierarchy of this society so as to utilise it in a manner favourable to the maintenance of their control, expression and assurance of the sovereignty of the Porte, even though the latter was far away and incapable of applying consistent coercion.

The principal tax, the *mīrī*, was linked to the primacy of agricultural production; it was therefore levied on produce. It was farmed out and the leaseholder was subject to annual confirmation; the *amīr*—or sometimes two or three *amīrs* simultaneously—entrusted with this role belonged to the family of the Maʿn from the time of the Ottoman conquest to the last quarter of the 17th century, then to that of the Shihāb. The delegation of this authority consequently led to the pre-eminence of one family over the others, and of one *amīr* over his kinsmen; the latter was obliged to lead a life of constant duplicity in order to reconcile the rules imposed on him by his social milieu with the obligation to hand over revenue to the imperial financial chest and thus retain his post. According to the total sums determined by the Porte and demanded by the pasha, each year it was his duty to divide the amounts to be levied between the *muḳāṭaʿadjīs* responsible for collecting the tax from the *muḳāṭaʿāt* under his jurisdiction. The "Great Prince", the translation adopted by European travellers for the title of *al-amīr al-kabīr*, also took the title of *al-ḥākim* to assert his authority in the *ḥukm Djabal al-Shūf wa-Kisrawān*. Following the example of the controlling family, those senior families which exercised authority over others, and whose members were the most important landowners, took responsibility for the collection of rents in the *muḳāṭaʿāt*, where their social and proprietorial power was thus guaranteed; but in the effort to exert and retain their authority, the *muḳāṭaʿadjīs* wore themselves out in internal rivalries, which were the visible results of the division of society into juxtaposed and opposing groups, and which were revived by the ambitions and intrigues of the sultan's representatives. Thus in 1711, near the village of ʿAyn Dārā, the Ḳaysī faction of the *amīr* Ḥaydār Shihāb crushed the Yemenī faction; in order to establish more firmly the supremacy of the Shihāb, *amīr* Ḥaydār then proceeded to make a new division of the *muḳāṭaʿāt* among powerful families, strengthening some of them and weakening others. But the Porte was also capable of dismissing *amīrs* [see ḲAYS ʿAYLĀN]. Ḳays and Yaman in the Ottoman period].

School text-books appeal to the consciousness of present-day Lebanese through the history of two "heroes", the *amīr* Fakhr al-Dīn II Maʿn [*q.v.*] and the *āmīr* Bashīr II Shihāb [*q.v.*], who contributed to the vision of independence for their country in

a unitary fashion that transcended divisions and sectional interests. Both of them, one at the beginning of the 17th century, the other at the beginning of the 19th, exercised authority of a power and extent that had hitherto been unknown in the region; while exploiting the weakness and rivalries of the Turkish governors, they also looked for support to those states which, in the Mediterranean basin, testified to the regenerated power of Europe. But on each occasion, the Porte succeeded in frustrating their ambitions. When the Druze Fakhr al-Dīn, with this son ʿAlī, took steps to expand his amirate and to render it autonomous, the Ottomans resisted him with the same determination that they had shown in suppressing Shīʿism in the interior of their empire and in combatting Ṣafawid Persia on their eastern frontiers. Fakhr al-Dīn, forced to take refuge at the court of the Grand Duke of Tuscany in 1612, returned in 1618, but was finally captured near Djazzīn and sent to Istanbul where he was executed in 1635. In a totally different historical context, the *amīr* Bashīr II Shihāb also died in Istanbul, in 1850, but of old age, after he had been forced to abdicate his power in 1840, when the Ottoman government, undertaking a programme of political reform and driving the Egyptian troops of Muḥammad ʿAlī out of Syria, refused to renew his appointment. However, for more than a half-century, from 1788 to 1840, he had thrown all the force of his strong personality into giving the people of the Lebanese range a unity of purpose. To this end, he followed the policy of his predecessors which consisted in adding to the territory of the "Government of the Druzes", belonging to the *pashalīk* of Sidon, that of the land of Djubayl, north of the river Muʿamaltayn, which was a dependency of the *pashalīk* of Tripoli; he demoted the leading *muḳāṭaʿadjīs*, like the Druze shaykh Bashīr Djunbalāṭ [see DJĀNBULĀṬ], and made use of the support of the Maronites, who had become the largest community in the mountain region. But as the intermediary of a fiscal system which became more and more oppressive, and subjected to the coercions of Muḥammad ʿAlī during the presence in Syria from 1832 to 1840 of Ibrāhīm Pasha's Egyptian army, he left his country in a state of full-scale revolt on the part of the mountain people. This led to the elimination of the greatest of the "old style" dignitaries, since the central Ottoman power, in seeking to reassert its control, struck at the leadership first; his departure spelt the dissolution of a system.

What situation was discovered by the Porte, when it re-established its authority with the support of a British military expedition and reformed it through its policy of *Tanẓīmāt*? Since the beginning of Ottoman domination, the active centre of Syria had shifted from the east towards the west; Lebanese overtures towards Mediterranean Europe and the demographic growth which had enabled the Maronites to spread from the north to the south of the mountain had worked in favour of this orientation and had benefited from it. However, in this material, human and religious context, arboriculture, producing timber in commercial quantities, had been considerably developed to the detriment of edible crops; at the beginning of the 19th century, the cereals which the mountain people harvested from their soil were sufficient to feed them for only three or four months of the year, the remainder having to be bought. The need to guarantee their subsistence thus put them into still further dependence on the Turkish governors who controlled the fertile plains; although the *amīrs* attempted to remedy this necessity by a permanent extension of their influence over the Biḳāʿ, their efforts were in vain. On the other hand, commercial exchanges turned the mountain range into a zone of monetary circulation, and its economic development affected favourably its population growth; but, at the end of the 18th century and during the first four decades of the 19th, increasing pressure of taxation, linked to the effects of Ottoman monetary manipulations, had caused a massive depletion of financial resources and led to an impoverishment which was all the more powerfully-felt because the cultivable areas of the mountain had reached a point of demographic saturation in terms of the development possibilities of the period. This in turn led to social tensions between, on the one hand, the *muḳāṭaʿadjīs*, themselves impoverished and weakened by the policies of *amīr* Bashīr II and by their own numbers and rivalries, and on the other, the tenant farmers who found it increasingly difficult to cope with increasing taxes and rents on contracting land space. On the Maronite side, the enfeeblement of the nobility (*aʿyān*) led to a regrouping in the framework of the community under the leadership of the clergy, with resulting profit to the latter's role. On the side of the Druzes, who had not experienced the same demographic increase, and who therefore were subjected to the continuing influx of Christian population simultaneously with the renewal of economic and political activity in Europe, there was a contrary regrouping behind the major traditional families, the social backbone of the community; a migratory movement also took place towards the Syrian interior, towards the Ḥawrān [*q.v.*]. Social tension thus also led to community confrontations in the "mixed areas" which were inhabited by Druzes and Christians; the clashes which ensued were a part of the general unrest which affected Syria in this period.

With the regulations of 1842 and 1845, the Porte imposed a new administrative system which gave preferential terms to the Christian population but retained the division of the mountain, the northern part being entrusted to a Christian *ḳāʾimaḳām* and the southern to a Druze *ḳāʾimaḳām*; both were functionaries placed under the authority of the Turkish governor who was now resident in Beirut, and were assisted by a council "like those which already exist at all points of the empire". It was the renewal imposed by changes in Europe that was manifested behind these modifications, behind new forms of intervention by representatives of European powers in Lebanon, especially behind the activities of the consuls of France and Great Britain posted to Beirut. This port was regularly visited by steamships after 1835; although the major cities of the interior underwent a crisis in their activities, it was the major regional beneficiary of the expansion in trade, especially after 1850, when its commercial affairs followed the rhythm of western economic trends, and the changes in the laws of property ownership introduced into the Ottoman empire (confirmed by the *Khaṭṭ-i Hümāyūn* of 18 February 1856) stimulated the development of new commercial and financial enterprises. Its population grew and diversified, especially in its Christian components (6,000 inhabitants at the beginning of the 19th century, 60,000 in 1860, 130,000 in 1914). In the mountain region, industrial initiative was introduced by the French, who installed new systems for the spinning of silk: they diverted deliveries of cocoons for the benefit of their establishments, thus breaking the links between the small-holders and the influential families and

thereby contributing further to the decline of the latter. These economic changes, while favouring the prosperity of those who were the intermediaries, chief among whom were the Christians, had an adverse effect on the disadvantaged communities and led to aggravation of social and religious tensions. In 1859, an agrarian revolt saw peasants in conflict with *shaykhs* in Maronite Kisrawān. However, the Christians benefited overall from these transformations, while Muslims and Druzes were, overall, prevented from playing any part; claiming the "equality" promised by the reforms, reinforcing the status of the community with the support of France and of the Roman Church, profiting from a European expansion which both rivalled and dominated the traditional economy of the Near East —all these activities on the part of the Christians were in the eyes of the Muslims crimes committed by a people whom they had never ceased to despise, in opposition to their past supremacy and to their present existence. An incident in May 1860 touched off conflict between Druzes and Christians, and was followed by massacres of Christians in the "mixed areas" and in Damascus. To limit intervention by the European powers, the Turks restored order in the most brutal fashion; however, this did not prevent the arrival in Beirut of a French expeditionary force, which Napoleon III had also sent for the purpose of furthering the Mediterranean and Arab aspects of his policy.

The result of these events, of the presence of French troops until June 1861, and of the negotiations held between the Porte, France, Great Britian, Austria, Prussia and Russia, was the creation of a province of Mount Lebanon. Administrative unity was thus confirmed by law. Although it was nothing more than a *sandjak* or *mutaṣarrifiyya*, the agreement signed at Pera on 9 June 1861 made it clear that: "The Lebanon will be administered by a Christian governor appointed by the Sublime Porte and responsible directly to it." The Porte laid down the condition that this Christian governor be chosen from among the non-Lebanese subjects of the Sultan. The majority of the population of the new province was Christian; order was maintained by its own police force and it was the beneficiary of a special fiscal system; it included neither Beirut, nor Tripoli, nor Sidon, but its links with Beirut developed continuously to their mutual enrichment in economic and human terms. Although its relatively autonomous status was guaranteed by the signature of five European powers, Mount Lebanon was none the less included in the general administrative modernisation of the Ottoman empire; the abolition of the ancient privileges of the *muḳāṭaʿadjīs*, the judicial equality of the Muslim and Christian communities, the representation of these communities on the *madjlis* which advised the governor, all these corresponded to the general conditions applied to the administration of provinces as laid down by the law of 1864.

Beirut and Mount Lebanon were the centres of important movements in terms of products, people and ideas. The economic expansion introduced from the West was most clearly marked by the development of sericulture under the control of the city of Lyons, the capital of the industry; French participation in companies formed for the construction from Beirut to Damascus of a carriageable highway (1863), later of a railway line (1895); the extension of the port of Beirut; the architectural improvement of this town; and the founding of banks and trading houses. The increase in population and social pressures led to waves of emigration towards Egypt and the Americas. The Arab literary renaissance, the *nahḍa* [*q.v.*], expressed awareness of these encounters; besides the education provided by the Syrian Protestant College, founded in 1866 under the auspices of the American Presbyterian Mission, and by the Jesuit University of St. Joseph (1881), the pedagogic and literary activities of the *muʿallim* Buṭrus al-Bustānī [see AL-BUSTĀNĪ in Suppl.] and of numerous other writers, journalists and scholars led to a crystallisation of consciousness in the confrontation with all the human, spiritual and geographical dimensions which had been brought into play, and in posing the problem of the affirmation of the personality amid all these transformations. But although for many of the initiators of this intellectual revival the fact of belonging to a common civilisation was something that must transcend religious differences, ambiguities none the less survived at all levels of cultural awareness, since the idea of nationhood proposed by Europe was balanced, on the one hand, by a "Lebanonist" conception, especially among the Maronites, an Arab ideal for a uniting of energies going beyond community distinctions, and on the other, by an Ottomanist faction for whom the Ottoman State was the quarantee of Islamic civilisation in the face of western domination. In 1911, Shakīb Arslān fought the Italians in Libya alongside the Turks; in June 1913, the Arab Congress, convened in Paris, proposed a decentralisation for the benefit of the different Arab provinces.

The war and the defeat of the Ottomans in 1918 gave an impetus to Lebanese development. Three Lebanese delegations, including one led by the Maronite patriarch, attended the Peace Conference to claim from it the maintenance and even the expansion of their territories. In 1920, the French military intervention against the Arab Kingdom of *amīr* Fayṣal permitted the creation of the State of Greater Lebanon which was placed under a mandate entrusted to France. This state was established around a Christian, mainly Maronite, nucleus, which constituted a majority, although all the other lands of Arab culture were populated predominantly by Muslims. But the former province of Mount Lebanon was expanded with the addition of Beirut, Sidon, Tripoli, ʿAkkār, the Biḳāʿ, the Wādī al-Taym and the Djabal ʿĀmil where Sunnī and Shīʿī Muslims were present in large numbers. This situation aroused two principal attitudes: on the one hand, the Christians had no intention of accepting a position of inferiority in a Republic of which they considered themselves the architects; on the other, the Muslims speculated as to what their status was to be within a political entity which had not been founded according to their aspirations. Numerous factors came into play in this context, in particular: the nature of groupings and relationships in the community frameworks or the political parties; demography, increasingly favourable to the Muslims; the question of ability to cope with all the necessities of the modern world; and the economic role and the place of manual labour, not only in terms of the different social levels but also in terms of the communities. While some Shīʿī leaders were quite prepared to throw in their lot with the system, the ruling circles and the populace of the Sunnī community expressed strong reservations and they took the opportunity of showing where their feelings lay at the time of the 1925 revolt. However, a compromise was devised, one of its principal Sunnī initiators being Riyāḍ al-Ṣulḥ; in 1936 it was agreed, following Franco-Syrian

and Franco-Lebanese negotiations, that the Lebanon would continue to exist within its present frontiers and would retain the representation of the communities which had been confirmed by its parliamentary constitution. In 1943, the National Pact, already mentioned, was a decisive factor in the Muslim adhesion to the Lebanese identity. In March 1945, the Lebanon was among the founders of the League of Arab States.

Under all the presidents of the Republic who have succeeded one another since independence (Bishāra al-Khūrī 1943-52, Kamīl Sham'ūn 1952-8, Fu'ād Shihāb 1958-64, Charles Hilū 1964-70, Sulaymān Farandjiyya 1970-6, Ilyās Sarkīs 1976-82), each serious crisis has renewed the fragmentation of the communities, but has also revealed the growth of a Lebanese consciousness among the majority of a population which has become accustomed to living in the framework of the Lebanese State. In February 1958, many Muslims greeted with enthusiasm news of the foundation of the United Arab Republic; but while bloody civil unrest engulfed the country between May and September of the same year and provoked, in the international and Arab context, the landing of American troops on 17 July in application of the Eisenhower Doctrine, the programme of reforms instituted under the presidency of General Fu'ād Shihāb was accompanied by the emergence of a genuine Muslim Lebanonism. At the same time, Kamāl Djunbalāṭ, as much in his capacity as an aristocratic Druze of the Shūf as in his role as leader of a socialist movement, appealed to a fundamentally Lebanese patriotism in his effort to bring the country into the bosom of Arab solidarity. The Sunnī leaders and the Muslims as a whole were placed in the reality of the Lebanese state as a cadre for the future, but they demanded institutional reforms which would give greater recognition to their numbers and to their talents in the control of the Lebanon. In a state where all civil life is defined by the fact of belonging to a religious community, this claim was supported on the basis of modifications arising from the demographic separation. It is, in fact, the Muslim populations that have increased most rapidly; this development is most clearly marked within the Shī'ī Muslim community, the most disadvantaged in the country, which has become the most numerous. The Shī'ī labour force has therefore tended to leave the impoverished rural zones of eastern and southern Lebanon, the precise areas where Israeli raids have contributed to the acceleration of the migration, to seek work in the expanding industrial zones of the Beirut region. A social problem has thus prolonged the process of political demand and demographic change; this has been reflected in the actions of the political parties of the Left, who have also sought, in a similar manner, to channel the discontent of the peasants of the north whose agitation, since 1970, has been directed against the major landowners and has called into question the authority of the state. They have also acquired, through their new militancy, a stronger "Muslim aspect".

This evolution has come about in a period of economic growth whose profits have been most unevenly distributed. Since 1967, the ascending curve of the Lebanese economy has followed that of the increased wealth of the Near East as a whole; petrodollars, "Arab" assets which are essentially the property of Muslims, have been invested in Lebanese banks, of which the majority are controlled by Christians. At the same time, the Lebanon has not only counted on the resources deriving from its "services", but also on those produced by its industry, which has undergone a vigorous expansion in the suburbs of Beirut and Tripoli, exporting 80% of its production to Arab markets. While Lebanese technicians and businessmen, including Christians at the higher echelons, have taken the opportunity of practising their skills in the developing Arab countries, the contracted labour force in the construction industry of Beirut is of Syrian origin; thus, through its recent economic development, the Lebanon has become still more integrated into the life and destiny of the Arab world.

Paradoxically, this situation has been cruelly underlined since 1973 by the internal consequences of the recession of the western economy, for the Lebanon has also remained closely linked to the latter; the extension of social malaise has rendered political demands more bitter and has accentuated the impact of the Palestinian presence. This dates from 1948 (the foundation of the State of Israel), but it has only begun to pose a real problem to the authority of the Lebanese State since 1967, when the Palestinians consolidated their political orientation and took on the role of an armed organisation. Now, while the Palestinians exist alongside other Lebanese groups in a structure consistent with the norms of Arab society, and while they have exploited the liberal Lebanese régime to act, as independently as is possible, towards invoking the solidarity of the Arab nation, they have none the less remained very distinct from the remainder of the population, since they lay claim to a land which is not the Lebanon. The sovereignty of the Lebanese state has suffered as a result of their military activities in the frontier regions of the south and, consequently, as a result of repeated Israeli incursions; but, besides the members of the front of progressive parties, all Muslims have felt sympathetic to their cause and have often offered them support in internal political action.

The resentment at this situation felt by the Christians, and especially by their Maronite majority, has been channelled by the Lebanese Phalanges. Although of Arabic language and culture, the Christian population has developed and rediscovered an isolationist complex in an Arab world where the movement towards secularisation tends to work to the advantage of the institutions of the majority, i.e. the Muslims and where, equally, politically active movements have been mobilised in the name of Islamic ideals. This sense of insecurity has also been shared by those business circles which, while reaping the benefits of trading with the Arab countries, participated in the workings of the western economy. On the other hand, the movements of the Left have integrated their denunciation of the injustices of the system with revolutionary Arab perspectives. As a result of the origins of modern Lebanon as well as of present-day circumstances, the internal crisis has taken on Arab, Islamic and international dimensions, and is nourished by them.

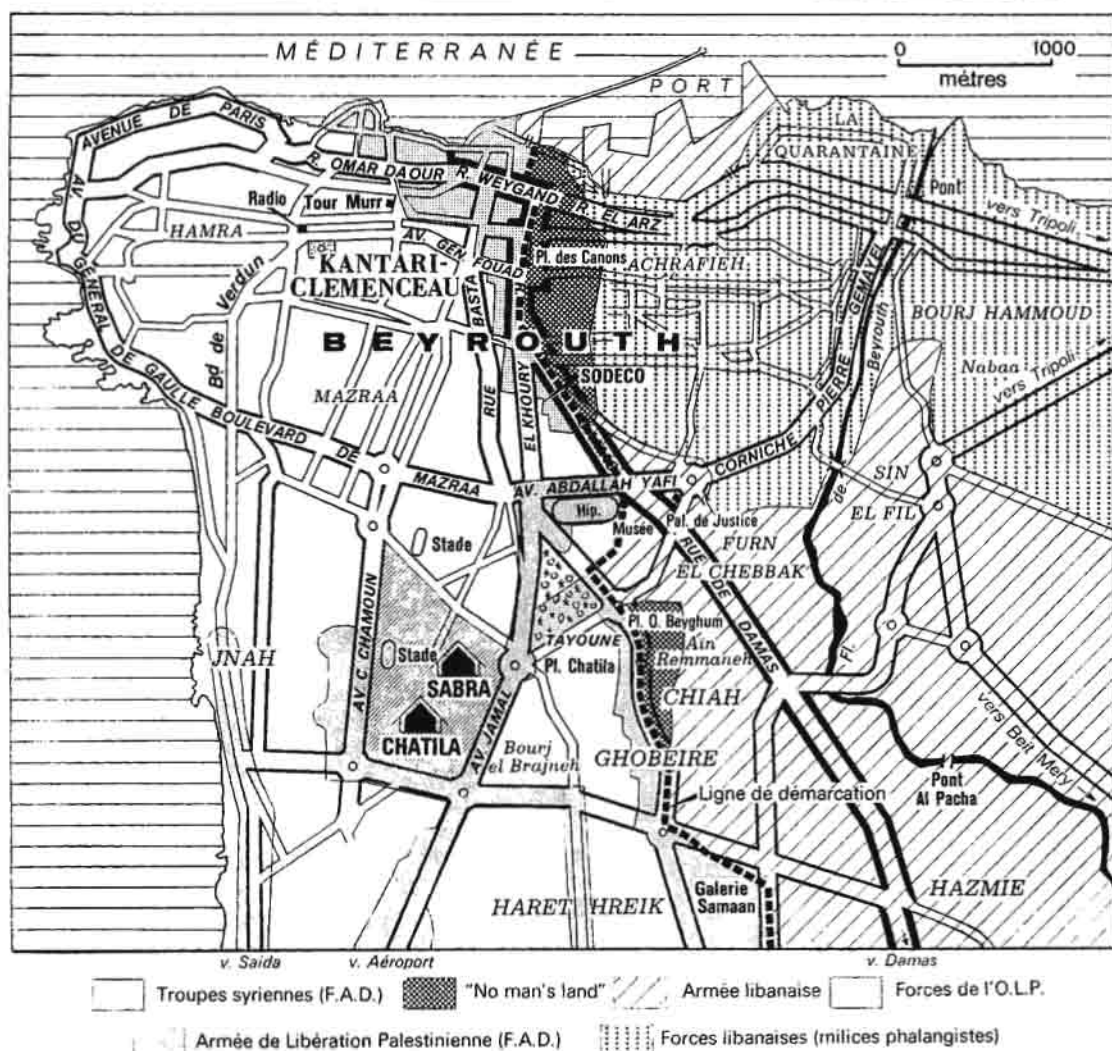
After February 1975, the repression of political and social unrest at Sidon illustrated the limited capabilities of the Lebanese army, itself a multi-religious organisation. On 13 April 1975, a coach carrying Palestinians was machine-gunned by Phalangists near Beirut; twenty-seven passengers were killed. Since then, the authority of the government has progressively disintegrated. At the beginning of the 1970s, a whole generation of students had dreamed of a fraternal future for the Lebanon, to be achieved by the erosion of community divisions; this dream has been shattered. While the sovereignty of the state has been called into question, and the ancient


Fig. 3. Beirut in 1981 (after *Le Monde*, 19 May 1981).

structures of the familial group have been damaged by modern urbanisation and industrialisation, religious segregations have shown themselves to be all the more active at the level of collective consciousness, since they have remained the principal touchstone of identity and therefore the principal framework for community solidarity. In the agony of the civil war, political and social conflicts have been kept alive by the most ancient segregational structures of Near Eastern society; the polarisation of passions according to religious allegiances has been the most symptomatic expression of this at the conscious level. How is one to contemplate the idea of the partitioning of the Lebanon as envisaged by the minorities, the constitution of semi-autonomous fraternities of combatants, principally within the popular Muslim milieu, the conflicting claims of fragmentation and unitary ideologies, or the unequalled violence of the fighting since September 1975, without reference to this conglomeration of sociological and historical data?

The Lebanese crisis which began in 1975 owed its seriousness to internal causes which in their turn reflected the changes in the Arab world and the social, cultural and political tensions which had become acute throughout the Near East. At the beginning of the war, two powers with an interest in the existence of the modern Lebanon made official approaches to the different Lebanese parties: Syria, with repeated missions on the part of its Minister of Foreign Affairs, France with the fact-finding missions of Maurice Couve de Murville and Georges Gorse. In June 1976, Syria sent a massive force into the Lebanon under the cover of the Arab Peace-Keeping Force in order to restore calm. In spite of truces, the sound of gunfire is still to be heard, across alliances and the reversal of alliances (especially after the Camp David Accords), across struggles for hegemony within each politico-religious faction. The continuing prosperity of the banking sector has no doubt compensated for the massive destruction of property and the aggravation of social disparities. From 1840 to 1958, civil disorders in Lebanon had been resolved only by the intervention of western armies. Since 1976, the presence of the Arab Peace-Keeping Force has shown that a

solution should be found through Arab negotiation, but having regard to international repercussions and to the conflict with Israel which led, in 1978, to the despatch of a United Nations Interim Force in the Lebanon (U.N.I.F.L.).

It is estimated that the Lebanon has close to three million inhabitants. It is they, residents or temporary emigrants, who ensure the existence of their country. Though each continues to feel part of a minority in relation to his compatriots, the adhesion of the majority of the Lebanese to the Lebanon is symbolically represented by the celebration of the Day of the Flag; but, while they are aware of belonging to the same entity and are determined to maintain it, they do not share the same national vision.

Bibliography: Since the relevant bibliography is extremely rich and often very polemical in tone, there have been listed below only some works of reference which contain detailed bibliographies themselves and some recent studies which bring important information. (D. Chevallier))

LUBŪD (pl. of *libd*, *labad*), felt. The production and craftsmanship of wool [see ṢŪF] was very prosperous in the mediaeval Muslim world, and supplied a variety of articles not only for refined and wealthy customers but also for the popular market in the form of relatively inexpensive clothing. In more recent times, local woollens have not managed to compete with European products (E. Ashtor, *Les lainages dans l'Orient médiéval*, in *Atti Inst. F. Dattini*, Florence 1976, 657-86). Felt was one of the less expensive products among the woollen articles manufactured locally (and probably not threatened by imports from Europe), but there were also felts of high quality which were dyed (see for their colours, below) or embellished (Ibn al-Zubayr, *al-Dhakhā'ir*, 87: a royal cloak of Byzantine origin).

As elsewhere, felt was manufactured in the Muslim world at that time by pressing wool between pieces of wood, etc., a process often combined with moistening and binding by means of *ṣamgh* (i.e. gum; for the Middle Ages, a description is supplied by Ibn al-Ukhuwwa, *Maʿālim*, 231, and for the beginning of the modern period, by al-Ḳāsimī, *Dict. des métiers*, ii, 399-400).

The maker of felt was called the *labbād*, *lubūdī*, and *labābīdī* (Ibn al-Ukhuwwa, *loc. cit.*; al-Maḳrīzī, *Khiṭaṭ*, Beirut ed., i, 194; al-Ḳāsimī, *loc. cit.*). The names of a number of articles are derived from that of "felt": cap (*libda*), cloak, or piece of felt worn over the outer garment (*lubbāda*), moquette (*libd*, *labad*), saddle, or a piece of felt put under the saddle, especially among the nomadic Arabs, etc. (al-Nabigha and Imru' al-Ḳays, ed. Ahlwardt, 7, 149; *Dīwān al-Hudhaliyyīn*, ed. Wellhausen, 86; Djarīr, ed. Sāwī, 139; Ibn Ḳutayba, *al-Maʿānī*, 944 [but it is not known if this *libd* of the Arabs of the pre-Islamic and early Islamic periods, was manufactured like the felt known in sedentary civilisation]; al-Shābushtī, *Diyārāt*, Baghdād 1966, 199; Ibn Ḥayyān, *Akhlāḳ al-nabī*, Cairo 1959, 161; al-Raghib al-Iṣfahānī, *Muḥāḍarāt*, Beirut 1962, iv, 377-8; Ibn al-Zubayr, *op. cit.*, 60, 145-6; al-Zamakhsharī, *Asās*, Cairo 1960, 432; idem, *Muḳaddimāt*, Leipzig 1850, 63; al-Maḳrīzī, *op. cit.*, ii, 99, 156, 338; *LA*, Beirut 1955, iii, 386, 387; Lane, i, 2646; S. Fraenkel, *Fremdwörter*, 103; Dozy, *Vêtements*, 395; idem, *Suppl.*, *s.v.*).

In fact, felt was also used for the manufacture of items whose names are not derived from it, such as clothing and hats (see some of the above sources and al-Djāḥiẓ, according to Ch. Pellat, in *Arabica*, i, 103 (*musūḥ* of felt); Ibn Ḥawḳal, tr. Kramers-Wiet, 113; Dozy, *Vêtements*, 114, 251, 267, 366; *ḳalansuwa*, *ṭarbūsh*, for example), linings of jackets (A. Miquel, *La géographie humaine*, ii, 499—the case here in point is the equipping of a Muslim expedition, outside the Islamic world, with clothing manufactured in ʿIrāḳ), blankets and mattresses (al-Tanūkhī, *Faradj*, Cairo 1955, 139: mattresses of less affluent people), ropes (possibly; see below). Felts were available in several colours, apart from the natural colour (red.: al-Djāḥiẓ, *op. cit.*, 158-9; al-Shābushtī, *loc. cit.*;—black: Ibn al-Zubayr, *op. cit.*, 145-6).

The felts came from various regions and countries: from China (refined and rare felts, in the Muslim world, al-Djāḥiẓ, *loc. cit.*; al-Thaʿālibī, *Laṭā'if*, tr. C. E. Bosworth, 142), from North Africa (al-Djāḥiẓ, *loc. cit.*; al-Iṣṭakhrī, 15; Ibn Ḥawḳal, *op. cit.*, 113; al-Thaʿālibī, *loc. cit.*; Ibn al-Zubayr, *op. cit.*, 47), from Armenia and Khurāsān (al-Djāḥiẓ, *loc. cit.*; Ibn al-Zubayr, *op. cit.*, 60; al-Hamadānī, *Takmila*, 22). The Turks, in common with other peoples of Central Asia (A. Miquel, *op. cit.*, ii, 156, 159, 234), used large quantities of felt, for clothing as well as for the making of tents, but there is no evidence to show that felt was exported from these regions to the centre of the Muslim world. Felt from Ṭālaḳān (in Khurāsān), strong and resilient, was used possibly for the weaving of a kind of rope rescue-ladder (al-Masʿūdī, *Murūdj*, vii, 117 = § 2799). In Samarḳand (Transoxania) and Damascus (Syria) there were specialised quarters in the suburbs or in the town, for the manufacture and sale of felt (Yāḳūt, iv, 345).

Bibliography: Given in the article.

(J. Sadan)

LUCKNOW [see LAKHNAW].

LUDD, the Arabic name of Lydda, the ancient Hebrew Lodd, a town in Palestine to the south-east of Jaffa (Yāfā, Yāfo) and 17 km. in direct line from the Mediterranean shore.

Ancient history. Ludd is extremely ancient, and its name is believed to appear in the list of towns conquered by the Egyptian King Thutmos III (*ca.* 1468-1436 B.C.) (cf. Alt, *Essays*, 138; Aharoni, 149). The name of Lodd appears four times in the later books of the Bible (I Chron. viii, 12, the building of the city by several families belonging to the tribe of Benjamin; Ezra, ii, 33; Neh. vii, 37, xi, 32-5). The Hebrew name was preserved in the New Testament (Λύδδα, Acts, ix, 32), and through it has entered, in the Latin form of Lydda, into the European languages. After the British occupation in 1917, the name of the city was given to the whole district, which was called "the District of Lydda". Early in the 3rd century A.D., the Greek name Diospolis must have been given to the town by Emperor Septimus Severus, who visited the place in 200-1, when the town was given Roman city rights and coins were struck there (cf. Smith, 121 n. 3). Although the name Diospolis survived until the Islamic conquest, the local Jewish and Samaritan population continued to use the original name of Lodd, which appears frequently in Talmudic literature (e.g. *Pal. Talmud*, Sheviʿit, 9; *Babylonian Talmud*, Megilla, 3b-4a; *Sanhedrin*, 32b, 74a; *Sukka*, 2b; *Hullin*, 56b; *The minor tractates of the Talmud*, London 1965, 127, 331, 341).

During the whole of the Second Temple period, the city was one of the major Jewish centres, although in the Hellenistic and Roman periods it occasionally remained outside Jewish domination. The Seleucids ceded it to Jonathan Maccabaeus in 145 B.C. and 83 years later, Pompey detached it from the Jewish state. In 48 B.C. Julius Caesar restored it to Jewish rule. In 44 B.C. after the murder of Caesar, Cassius, who appeared in the country with a large Roman army, sold its population as slaves when the town failed to pay the high tribute imposed on it (Josephus, *Wars*, I, ch. xi, 2). The city revived and even flourished as a centre of Jewish learning and a home for Jewish spiritual leadership after the destruction of Jerusalem in 70 A.D. (Smith, 121 and n. 2).

Once Christianity was proclaimed the state religion by Constantine, Ludd instantly assumed an important place in Christian thought, mainly because of the healing miracle which St. Peter performed on the paralytic Aeneas (Acts, ix, 32-5. Cf. Hieronimus, in Reland, *Palaestina*, 877), which is said to have been the cause of numerous converts to Christianity in the city and its environs. However, the real sanctity of Ludd and its major fame in the Christian world are due to the belief that it is the birthplace of St. George, who is probably the most venerated hero in Eastern Christianity and who rose from obscure origins to become "not only the virtual patron of Syrian Christendom and an object of Muslim reverence, but patron, as well, of the most Western of Christian peoples. St. George of Lydda is St. George of England ..." (Smith, 122). His fame must have been due to his martyrdom, on the eve of the triumph of Christianity, under Diocletian in Nicomedia in A.D. 303, after which his relics (or his head only) were brought to Ludd and buried there.

Early Christian travelers refer, therefore, to Ludd as the place where the saint is buried. At some time during the Byzantine period, probably under Justinian, a church was built over the burial place, the altar of which must have stood over the tomb itself, and a monastery which was also established in the city was dedicated to him. The church, however, appears not to have been dedicated to him, since travellers mention only the tomb and the monastery (Smith, *loc. cit.*). The archaeological survey in which the traces of the Byzantine church were discovered was carried out by Clermont-Ganneau (*Archaeological researches*, ii, 98-103, 341-6; cf. *SWP, Memoires*, ii, 267-8). The town became, already in the 4th century an episcopal see (despite partial destruction after an anti-Roman revolt in 351) and retained this position until modern times, even after its cathedral was destroyed and its Christian population reduced to a negligible number; there was even a Synod of Diospolis early in the 5th century. The signatures of several Bishops from Ludd appear on conciliar documents; Aetius Lydensis at the Council of Nicaea (325), Dionysius Diospolitanum at the Council of Constantinople (381); Photinus Diospolitanus (as well as Photinus episcopus Lydae) at the Council of Chalcedon (451) (Reland, *op. cit.*, 878-9. For more references concerning Ludd in classical literature, cf., Avi-Yonah, *Gazeteer*, 75).

Topography. The town is located on the border between the coastal plain and the Shephela, in an extensive area of flat land, some 40-50 m. above sea level, which came to be known after it as "the Valley of Lod" (cf. *Pal. Talmud, loc. cit.*). The area enjoys a very good amount of winter rain (annual average of above 500 mm.), and its alluvial soil stores large quantities of excellent water which have rendered the environs of the city extremely fertile in all times; this, in addition to the rich soil and generally warm climate, made the town famous for its agriculture. It was always described by travellers as being encircled by olive groves and vineyards (and in modern times, citrus plantations). Cotton grows very well in the area, and in the later Ottoman period it was cultivated extensively as a major cash crop. The cultivation of cotton ceased during the British Mandate, but was renewed in a most extensive form in Israel. Plants used in the dyeing industry, for which the town had also been very famous (until the building of Ramla), must have also been grown around the city. The virtually unlimited possibilities offered by the natural conditions explains the place's attraction for settlers, who repeatedly restored it after the frequent calamities, whether of human or natural making, which befell it throughout its extremely long history.

Its position made Ludd from ancient times an important station on the eastern and more frequented branch of the *Via Maris* which runs from Gaza via Yavneh (Ar. Yubnā) and Ludd to Antipatris (Raʾs al-ʿAyn) and thence via Wādī ʿĀra (ancient ʿIron) to the Valley of Jezreel. This route running along the eastern slopes of the hills of Samaria, though longer than the one running parallel to the coast, was deemed easier and safer. It attained especial importance in the post-Crusader period (mainly under the Mamlūks), and has since served as one of the major traffic routes in the country. The road connecting Jerusalem to Jaffa also passed via Ludd, thus making it into an important crossroads, a position which the city regained in modern times after the construction of the Jaffa-Jerusalem railroad at the end of the last century (see below).

Early Islamic history. According to al-Balādhurī's tradition, Ludd was conquered by ʿAmr b. al-ʿĀṣ after the conquest of Nābulus and Samaria (*Futūḥ*, 138/13). Al-Ṭabarī relates that the city capitulated in 15 A.H. and quotes the agreement made with its inhabitants. It is the standard formula of capitulation treaty known from other places in Syria which were reportedly taken without war (*ṣulḥ^an*), and stipulates *amān* (protection) for the conquered inhabitants' life and property, guaranteeing the safety of the religious institutions in return for a payment of an unfixed sum of *djizya* (al-Ṭabarī, i, 2406-7). Very soon after the Islamic conquest the town underwent a process of rapid deterioration, mainly due to the growth of Ramla as a major administrative, economic and cultural centre in the *Djund Filasṭīn* (the Byzantine *Palaestina Prima*).

Ramla was built by Sulaymān b. ʿAbd al-Malik with the intention of serving as the capital of the province, after a long period in which the *Djund Filasṭīn* had been devoid of a proper administrative centre. Having discarded, for obvious reasons Caesarea, the Roman-Byzantine capital of Palaestina Prima, the Muslims made Ludd into the permanent seat of the administration. The city was, however, too Christian in ethos for the taste of the Umayyad rulers, especially after the inauguration of ʿAbd al-Malik's Arab-Islamic reforms. When Sulaymān was nominated by his brother al-Walīd I as governor of Palestine, he took up residence in Ludd, but immediately embarked upon the grand scheme of the building of Ramla (*Futūḥ*, 143; Yāḳūt, s.v. "Ramla"). Once the new capital was established, Ludd almost instantly fell into oblivion. The Islamic traditions

unanimously confirm this by saying that the building of Ramla was the reason for the destruction of Ludd (*wa-kāna dhālika sabab kharāb Ludd*, Yāḳūt, *loc. cit.*). Some traditions even say that Sulaymān destroyed the homes of the inhabitants of Ludd in order to force them to move to his new capital. Al-Yaʿḳūbī, who specifically mentions Sulaymān's destruction of Ludd, emphasises that in his own time it was already in ruins (*Buldān*, 328). The traditions relating to its deterioration are all intensified by the Islamic accounts of its past glory. Thus Ibn al-Faḳih speaks about the splendid buildings of Ludd, which impressed the Muslim beholders so much that they believed that they were built for Solomon by the djinn (*Mukhtaṣar*, 117). This tradition must refer to the Byzantine basilica of Ludd, which had been built over the tomb of St. George. It is believed to have been destroyed by al-Ḥākim in 398/1008 and rebuilt by King Stephen I (St. Stephen) of Hungary (997-1038). However, by then the church of Ludd had already been celebrated in the Islamic eschatological traditions. Al-Muḳaddasī, in the second half of the 4th/10th century, mentions the church as the most prominent feature of the city and adds that ʿĪsā will kill the Antichrist or Dadjdjāl [*q.v.*] at its gate. In his time, the place had already undergone a process of Islamisation, for he refers to a large Friday mosque which served as a prayer place not only for the Muslims of Ludd but also for the inhabitants of its environs, including even those of the provincial capital Ramla (al-Muḳaddasī, 176; Le Strange, *Palestine*, 493).

The place which Ludd occupies in the Islamic eschatological tradition must have been born out of the popular mixture of legends connected with the image of St. George and the Jewish traditions about the false Messiah (or in Aramaic, *Meshīḥa daggala*, hence Arabic Dadjdjāl). Some of the Islamic traditions about the death of Dadjdjāl at the gate of the church of Ludd, or at the gate of the city, identify their Jewish origin. According to these accounts, ʿUmar used to show great interest in the subject, and persistently searched for information about it. After the battle of Adjnādayn [*q.v.*], when Ludd was captured, a Jew told ʿUmar that the Muslims would kill Dadjdjāl "a little more than ten cubits from the gate of Ludd" (al-Ṭabarī, i, 2403, Ibn al-Athīr, ii, 388, 390; Abu 'l-Fidāʾ, *Taḳwīm*, 227). In a tradition attributed to al-Zuhrī, Jesus, at the head of the Muslims, would follow Dadjdjāl and kill him at the gate of Ludd (Ibn Kathīr, ii, 99; al-Bakrī, 490). Similar eschatological traditions are numerous, and the whole theme has been elaborated upon in great detail by Ibn ʿAsākir (ed. Munadjdjid, i, 149-52, 184, 215-17, 228-9, 232, 256-7, 260, 294-5, 606-19; *Tahdhīb*, i, 48, 195).

It is very possible that the tradition grew somehow out of the idea connecting St. George and the dragon, which can be traced to the 6th century, when the legend of Perseus and Andromeda was transferred to St. George. There is no doubt that the magnificence of the Byzantine church and later the Crusaders' cathedral of Ludd, as well as those local legends woven around the image of St. George, furnished the proper background for the development of the Islamic traditions concerning the church in particular and the city of Ludd in general. The core of the traditions in which the false Messiah dies in Ludd is Jewish. From this point of view, those Islamic accounts emphasising the Jewish connection with the tradition are correct. Clermont-Ganneau suggests, however, that the Dadjdjāl in this case represents the dragon, while St. George, who was transformed by the Islamic popular tradition, into al-Khiḍr [see AL-KHAḌIR], kills it (Smith, 123).

The feast of St. George on 23 April continued to be celebrated under Islam, and its ceremonies at the church were also attended by Muslims. Three verses by al-Muʿallā b. Ṭarīf, the caliph al-Mahdī's poet-singer freedman, in which he talks about his "coming intentionally to Ludd on the feast of *mārī sirdjis*" (*sic*), where he saw "ladies like gazelles in their covert", attest to the popularity of the feast, at least in the pre-Crusader period (Yāḳūt, s.v. "Ludd"; *Aghānī*, vi, 46-7).

The Byzantine church is described by all the early Christian travellers. On the eve of the invasion of the Crusaders in 1099, the Muslims destroyed it again. The Crusaders found Ludd and Ramla deserted, and thus were easily able to establish a corridor from Jaffa to Jerusalem, whence they could mount their attack on the Holy City as well as widen their hold on central and southern Palestine. In Ludd they built in 1150 a new cathedral with much splendour and magnificence, over the remains of the previous Byzantine church and the Saint's tomb. They dedicated it to the Saint, because of its location as well as because of the then prevalent belief in his intervention in their favour during the siege of Antioch. The new cathedral "was a great pile, capable of use as a fortress" (Smith, 122). Toward the end of the 12th century, the cathedral attained even greater attention and significance when St. George was adopted by Richard Cœur-de-Lion as the patron saint of England, in addition to the veneration he already enjoyed as the patron saint of Eastern Christianity (it was, however, only under King Edward III that St. George actually became the patron saint of England, *ibid.*, 122 n. 3). Moreover, under the Crusaders, the name of St. George replaced the name of the town, so that during the whole of their period it came to be known as St. George, and pilgrims call it by this name until the 16th century (*ZDPV*, x, 215; xi, 195). Even the Jewish traveller Benjamin of Tudela speaks about his visit to St. George, erroneously identifying it with the Biblical Luz (*Early travels*, 81, 88).

In 583/1187, following the battle of Ḥiṭṭīn [*q.v.*], Saladin conquered Ludd (Abū Shāma, ii, 89), but the effect on the town of this conquest was felt only three years later. In the framework of Saladin's policy of dismantling the main coastal fortresses, he demolished Ascalon (ʿAsḳalān) and proceeded to dismantle on 3 Ramaḍān 587/24 September 1911 the fortress of Ramla. On this occasion he also demolished the Cathedral of Ludd (Abū Shāma, ii, 192; Ibn al-Athīr, xii, 47, Zettersteen, 235). Al-Yāfiʿī, iii, 461, erroneously speaks about the demolition of the whole town. Mudjīr al-Dīn, ii, 419, remarks that with the destruction of the church the town became "a village like the other villages" (cf. Robinson, *Bibl. res.*, iii, 54-5; De Vogüé, *Églises*, 363). When peace negotiations began between Saladin and the Franks in 588/1192, the former suggested that the King of Jerusalem should receive Ludd to compensate him for his losses in the dismantled Ascalon (Abū Shāma, ii, 200). The strategic importance of Ludd as an inland station on the main route from Egypt to Syria (cf. Mudjīr al-Dīn, *loc. cit.*), which had, in the previous period, been lost to Ramla, must have been at least partly resumed during the Crusader-Ayyūbid period. In 601/1204-5, during the negotiations between the Franks and al-Malik al-ʿĀdil, they demanded and received Jaffa as well as what amounted to the lease of Ludd, Ramla and their environs (al-Maḳrīzī,

Sulūk, ii, 164). The name of Ludd appears in the sources again in connection with the peace treaty of 626/1229 between al-Malik al-Kāmil of Egypt and the Emperor Frederick II. In this treaty, which provided for the cession of Jerusalem to the Franks, Ludd was also handed over to the Crusaders' sovereignty, together with some other villages which were part of the territorial corridor between Jaffa and Jerusalem, which came under Frankish domination (*Sulūk*, i/1, 230; al-Ḳalḳas̲h̲andī, iii, 429). In 666/1267-8, Ludd was conquered by Baybars, who must have dismantled whatever remained of the church (*Sulūk*, i/2, 565), the stones of which were later used to build the bridge to the north of the city in 671/1273.

The development of the inland branch of the Cairo-Damascus route (or the eastern branch of the *Via Maris*), in the course of which the great engineering enterprise of building the monumental bridge of Ludd was undertaken, was part of Baybar's policy to demolish completely the coast of Syria and Palestine. This policy began in fact, with Saladin and was later used by the subsequent Muslim rulers. In view of the Mamlūk weakness on the sea and their inability to prevent the free naval activity in the Mediterranean, Baybars and his successors followed the strategy of abandoning the demolished shore and creating a strong line of inland fortresses. The unprecedented attention paid to the inland route to Damascus passing via Ludd was part of this overall Mamlūk strategy (cf. Ayalon, BAḤRIYYA, ii, and idem, *The Mamlūks and naval power*, 7-10).

Clermont-Ganneau, who studied the bridge as well as the church of Ludd, remarked that whole parts of the Crusaders' cathedral were used for building of the bridge (*RAO*, i, 270-1; cf. Prawer, ii, 424); modern Islamic art historians, however, doubt this theory. The bridge is known as D̲j̲isr D̲j̲indās, after the name of a neighbouring village, and has been in constant usage since the time of its building until this very day. Two almost identical inscriptions on both its façades commemorate its building; it was ordered by Baybars and executed by ʿAlāʾ al-Dīn ʿAlī al-Sawwāḳ b. ʿUmar in Ramaḍān 671/April 1237 (Clermont-Ganneau, *loc. cit.*). On both sides of the inscriptions Baybars' famous heraldic symbol, the leopard, is carved in relief with its paw raised to strike a miserable animal resembling a mouse, believed to represent the king of Jerusalem or the Crusaders in general (cf. Prawer, ii, 461-2).

Ludd revived as a consequence of the development of this major traffic route, especially since the early Mamlūk sultans paid great attention to the orderly and secure movement of the royal postal services or *barīd* [*q.v.*] between the imperial capital of Cairo and the major provincial capital of Damascus. In the Mamlūk administrative division, Ludd was made into a centre of a subdistrict, *ʿamal Ludd* (al-Ḳalḳas̲h̲andī, iv, 100). Ibn al-Furāt (vii, 225) speaks in 680/1281 about *wilāyat al-Ludd wa 'l-Ramla*. After then, Ludd is mentioned as an important station on the road between Cairo and Damascus (e.g. in *Sulūk*, i/3, 824-5; Ibn Ḥad̲j̲ar, *Durar*, i, 512). Nevertheless, it did not regain its former splendour, for during the Mamlūk period also, it was overshadowed by Ramla. Mud̲j̲īr al-Dīn describes the place in this time, namely the very end of the Mamlūk period, as a pleasant village with an active Friday mosque. The singling-out of the mosque of Ludd is understandable in view of the fact that its monumental structure was far beyond the needs of the little village and served the population of the neighbouring villages as well. Mud̲j̲īr al-Dīn adds that to the east of the city there was a *mas̲h̲had* venerated as the tomb of the famous companion ʿAbd al-Raḥmān b. ʿAwf. There is no question that the *mas̲h̲had* and the local traditions around it were a post-Crusader invention; (in actual fact, Ibn ʿAwf died in Medina and was buried in the cemetery there of al-Baḳīʿ [*q.v.*], Ibn ʿAbd al-Barr, *Istīʿāb*, ii, 850; Mud̲j̲īr al-Dīn, 419).

The Grand Mosque was also built at the order of Baybars, in part over the sites of the Byzantine basilica and the Crusaders' cathedral, with the building material taken from the ruins of both. On one of the columns of the mosque a 6th century Greek inscription which had belonged to the Byzantine church can still be seen. The mosque built by Baybars is called al-D̲j̲āmiʿ al-ʿUmarī. The long inscription in early Mamlūk *nas̲k̲h̲ī* script over its entrance is the only detailed source concerning its building. It runs as follows:

"... ordered the building of this blessed Friday Mosque our lord the Sulṭān al-Malik al-Ẓāhir Rukn al-Dunyā wa 'l-Dīn, Abu 'l-Fatḥ Baybars al-Ṣāliḥī, the associate of the Commander of the Faithful, may God make his victories glorious and forgive him. This was done under the direction of the servant, yearning for the mercy of his [divine] Master, ʿAlāʾ al-Dīn ʿAlī al-Sawwāḳ al-Ṣāliḥī, may God forgive him, in the month of Ramaḍān 666 (began 15 May 1268)." (L. A. Mayer, *Muslim religious buildings*, 31).

This means that the mosque was built shortly after the conquest of the city. The work was executed by the same ʿAlāʾ al-Dīn al-Sawwāḳ who was later charged also with the building of the bridge but of whom nothing else is known (Mayer, *loc. cit.*). Another inscription on the grand mosque, hitherto unpublished, bearing the name of Ḳāʾitbāy and dated 13 Ramaḍān 892/2 September 1487, commemorates the abolition of certain unjust taxes upon the inhabitants of Ludd. Of special interest is the fact that the name of the powerful local leader of D̲j̲abal Nābulus, K̲h̲alīl b. Ismāʿīl, hitherto known from literary sources only, appears in this inscription as officially participating in the affairs of Ludd. This may be explained by the fact that a few months earlier in 891/1486, the *amīr* Aḳbirdī, the great *dawādār*, arrived in the environs of Ludd and Ramla, whence he set off to recruit warriors for the war against the Ottoman Bāyezīd II. K̲h̲alīl b. Ismāʿīl was officially nominated to the *mas̲h̲yak̲h̲a* of D̲j̲abal Nābulus and took an active part in this recruiting activity, through which he must have widened his scope of influence (but clashing with the *nāʾib* of Jerusalem, Mud̲j̲īr al-Dīn, 666, 669).

The Bedouin element, which during the Fāṭimid period was predominant in the coastal plains of Palestine, and particularly around Ramla and Ludd, reappeared as a major factor in the history of the country in the post-Crusader period, again easily establishing itself around Gaza (G̲h̲azza) on the one hand and around Ludd and Ramla on the other These areas have always been within easy reach of the nomads, who took advantage of the weakness of the Mamlūk and later also Ottoman military and administrative hold on the country. The environs of Ludd in both periods were completely at the mercy of Bedouin tribes, mainly of the Sawālma, the Kus̲h̲ūk and the Sawtariyya, who replaced the Banū D̲j̲arrāḥ of Ṭayyiʾ—the predominant tribe of the Fāṭimid period in Palestine.

According to Oppenheim, the Sawālma and the Kus̲h̲ūk arrived in the Ramla-Ludd region from Lower Egypt at the beginning of the 11th/17th century; but the Sawālma, the leading tribe of the area,

definitely arrived earlier, for in 1622 they took part in a coalition (with Bedouins from the Nābulus area and others) which aided Aḥmad b. Ṭurābāy, the Bedouin *amīr* of Ladjdjūn [*q.v.*], in his war against Fakhr al-Dīn II (Sharon, *The political role of the Bedouins in Palestine* . . ., 28-9).

The Ottoman period and modern times. Throughout most of the Ottoman period, Ludd was completely overshadowed by Ramla. It was a small village, which in judicial matters fell under the jurisdiction of the deputy *ḳāḍī* of Ramla (Heyd, 55-6). In spite of its small size, it retained some of its importance as being situated on the central postal route of the empire. When in 1552, Roxelana (Khurrem Sulṭān [*q.v.*]), the favourite and later wife of Sultan Sulaymān the Magnificient, established her famous endowment (*ʿimāret*) in Jerusalem, Ludd was one of the many villages which were made *waḳf* for it (*ibid.*, 143, n. 1, doc. 90, and n. 7; *QDAP* [1944], 170-94).

The European travellers who visited the town in the Mamlūk and Ottoman periods are of little value for the history of Ludd until the 19th century, when the systematic research of the Holy Land began. They all repeat the same description of a small village in the midst of a fertile environment, emphasising the impressive ruins of the Crusader cathedral. At some time during these periods, an altar was built by the small Greek Orthodox community, who used to assemble at the place for regular prayers. In spite of Ludd's fertility and favourable location on a major commercial route, it was not until the second half of the 19th century that it began to revive. In the middle of the century the number of its population, according to the 1851 census, was only 1,345 (the number for the neighbouring villages being 4,400, *SWP*, ii, 279). The increased attention paid by the Ottomans to Syria and Palestine in the second half of the century, which entailed improvement in the internal security, mainly in the central parts of the country, and the keeping of the Bedouin in closer check, had an immediate influence on the fortunes of the town. The systematic European scholarly investigation of Ludd, which began with Edward Robinson in 1838 and continued particularly in 1852, and was followed by the Palestine Exploration Fund (Conder, Kitchener and others), drew European attention to Ludd and its past. In 1871 and again in 1873-4 Clermont-Ganneau prepared a most detailed study of the town and its environs, which included a detailed study of the Byzantine basilica and the Crusaders' cathedral. At this time work began on the rebuilding of the present church of St. George, partly on the ancient foundations not included in the mosque. Once completed (on a far smaller scale than the former edifices), the church became the focus of popular celebrations twice a year, on 24 April, the birthday of the Saint, and 16 November, the day in which his relics were brought to Ludd (*SWP*, *Memoires*, ii, 268).

In spite of this steady growth of the town, its real development came with the building of the Jaffa-Jerusalem railway, which began in 1890 in accordance with a *firmān* granted by the Ottoman sultan to Joseph Navon Efendi. On 26 September 1892, the railway was inaugurated and Ludd was transformed almost overnight and began to overshadow Ramla.

When the First World War broke out it regained its significant strategic value, serving the logistic efforts of the Turks and Germans. On 15 November 1917 General Allenby's army entered Ramla, and dispersing a retreating Turkish column, took Ludd two days later.

Under the British administration, Ludd (now officially called Lydda) flourished very rapidly, mainly because of the wide-gauge railway (143.5 cm.) with which the British replaced the old narrow (105 cm.) Ottoman one, connecting Jaffa via Ludd not only to Jerusalem but also via Rafah and Ḳanṭara to Cairo. Hence towards the end of the thirties of the present century, Ludd became one of the most important rail junctions in the Middle East. In 1934, the first airstrip was built near the city which was developed into an international airport, inaugurated in 1937, and today the major international airport of Israel, Ben Gurion Airport. All this contributed to the population growth of Ludd. By 1922 it numbered 8,103 inhabitants, exceeding for the first time the population of Ramla (Barron, *Report . . . census of 1922*), and by 1947 it was about 19,000 (2,000 Greek Orthodox and the rest Muslims).

An earthquake on 11 July 1927 damaged the town very badly, destroying 500 homes and killing 40 people. Severe earthquakes had occurred formerly in 1033 and 1546 (*PEF, QS* [1927], 171).

On 11 July 1948, in the course of the Arab-Israeli War, Ludd was conquered by Israel. Out of its former Arab population, only 1,056 remained in the town. Very soon modern outskirts grew up around it, and by 1958 its population reached again the figure of 19,000, most of them Jews from the Arab countries. The rapid growth of the airport and the Israeli air industry have in the subsequent 20 years doubled its size and population (the latter standing at 40,000 in 1980).

(M. Sharon)

LŪDHIĀNA, a district and town in the Djālandhar division of the Pandjāb state of the Indian Union. The tract is an alluvial plain, covering 3,614 km.² and bounded on the north by the river Sutlej. Generally, it has been a frontier area. On the high road from Central Asia, it has been crossed by successive waves of conquest or immigration, while over the last 250 years it has seen struggles for supremacy between the Durrānī Afghāns and the Mughals, between the Sikhs and the British, and recently between India and Pakistan. In 1809 Lūdhiāna town became a British frontier cantonment, and the district gained most of its present form after the Anglo-Sikh war of 1846. Since the partition of India in 1947 it has been close to the Pakistan frontier. Before partition, nearly 38% of the district's population were Muslims; now they form less than 1%, 300,000 Muslims having migrated to Pakistan.

The town of Lūdhiāna stands on the Grand Trunk Road and is an important junction on the Northern Railway. It appears to have been founded in the 9th/15th century by the Lōdī rulers of Dihlī, from whom it took its name. In the 19th century it was an important Wahhābī centre, and in the great uprising of 1857, Shāh ʿAbd al-Ḳādir, a prominent Wahhābī and friend of Sayyid Aḥmad Barēlwī, took the lead against the British. In the 20th century ʿAbd al-Ḳādir's family remained prominent in the resistance to the British, a great-grandson, Mawlānā Ḥabīb al-Raḥmān, leading the Khilāfat agitation of 1919-23 and, as President of the District Congress Committee, the civil disobedience movement of 1930. In the 1930s, the town was the centre of the Aḥrārs, religious idealists, Indian nationalists, and for a time the leading Muslim party in north-west India Consequently, Lūdhiāna returned the only Muslim Congressman from the whole Pandjāb in the 1937 elections, although by the next elections of 1946 the Muslim League was able to capture the seat with ease. Since 1947 the area has seen striking industrial and agricultural growth; it is one of the most prosperous regions in India.

(F. Robinson)

LUGHA (A.), "speech", "language" in current usage.

The term does not appear with this sense in the more ancient texts. In the Ḳurʾān it is exclusively *lisān* which is used to express the concept of "language" and not *lugha*, which is completely absent from the Ḳurʾānic text: *bi-lisānin ʿarabiyyin mubīn* ("in clear Arabic language"), XXVI, 195; and *wa-mā arsalnā min rasūlin illā bi-lisāni ḳawmihi* ("all the messengers whom We have sent [to Mankind], We have made them speak in the language of their own people"), XIV, 4. According to J. Fück and Nöldeke, it seems that this term is non-existent in the "ancient poetry of the Bedouin" (see Fück, *ʿArabīya*, French tr., 195) but this cannot be asserted because there is not yet available an exhaustive inventory of the vocabulary of those ancient poetic works which have survived. *Lugha* cannot have acquired the sense of "language" or "speech" until the end of the 2nd/8th century. Before this date, the term always appears with the very specialised sense of "manner of realising an element of language" particular to an ethnic group, a tribe or a locality; whence the meaning of regional or tribal "variant of realisation" which it possesses in the works of the grammarian Sībawayh (d. 180/795). It is appropriate to stress the fact that, in the writings of this author, and of his contemporaries, *lugha* does not denote the full range of linguistic particularities associated with an ethnic group, in other words a local patois or a dialect, but only a local variant. Thus in the common expression *lughat ahl al-Ḥidjāz* (*Kitāb*, i, 28, 36, 187, etc.), *lughat Hudhayl* (*ibid.*, ii, 191), it concerns the special "manner" of the Ḥidjāzians of treating the particle *mā* like the verb *laysa* ("not to be") and the "manner" of the Hudhaylites of forming the plural of words of the type *djawza* in *djawazāt*. This sense of "variant" or of "regional variety of realisation" is clearly illustrated in the use, by Arab grammarians and lexicographers, of the dual or plural form of the word *lugha* in expressions such as *ammā Maʿdikarib fa-fīhi lughāt* ("as for the name of Maʿdikarib, there exist several variants", *Kitāb*, ii, 50) and the lexicographical phrases *fīhi lughatāni* and *fīhi thalāthu lughāt*. In view of the fact that a "regional or tribal variant" is always regarded, by those whose own speech does not include this variant, as a deviation and often also as an incorrect expression in terms of their speech, it comes as no surprise to find that the word *lugha* is derived from a root *l-gh-w* of which the essential meaning is precisely the idea of digression from a certain norm of expression, whence the very strong sense of a co-derivative of *lugha*, *laghw*, "inconsistent", "incomplete construction, *lapsus*"; whence also, by transposition to the content alone—even if the form is "correct" "subject without point or interest" (see *LA*, art. *l-gh-w*). This is confirmed, furthermore, by the eminent scholar and lexicographer Ibn al-Aʿrābī: "the sense of *lugha* is derived from this idea (of deviation): in fact, [it is stated that] certain speakers produce locutions by which they *depart from* the manner of speaking (*lugha*) of certain others" (*ibid.*). Another word, *laḥn*, which already has in the works of the most ancient grammarians the very strong sense of "incorrectness" and of "solecism" (cf. *Kitāb*, i, 304), alternates with *lugha* in the texts collated by researchers into Bedouin culture [see Laḥn al-ʿĀmma]. For example, this remark reported by the disciples of the eminent Abū ʿAmr Ibn al-ʿAlāʾ, as made by one of his informants, Abū Mahdiyya: *laysa hādhā min laḥnī wa-lā min laḥni ḳawmī* "this is not my manner of speaking nor that of my tribe", al-Ḳālī, iii, 39, repeated by al-Zadjdjādjī in his *Madjālis al-ʿulamāʾ*, 3). In his *Amālī*, al-Ḳālī is quite explicit: "*Laḥn* also signifies *lugha* according to al-Aṣmaʿī and Abū Zayd, and it is in this sense that it is to be understood in the saying of the caliph ʿUmar "Study ... the *laḥn* in the same fashion that you study the Ḳurʾān

(*ibid.*, i, 5). Ibn Abī Dāwūd, author of the *Kitāb al-Maṣāḥif* (d. 316/429), uses *laḥn* in this sense in his article *Ikhtilāf alḥān al-ʿArab fi 'l-maṣāḥif* "the divergences of *laḥn* specific to Arabs in texts of the Ḳurʾān," and at the very beginning of this article he asserts that "*al-alḥān* (pl. of *laḥn*) are the *lughāt*" (*ibid.*; see in this context the excellent studies devoted to the word *laḥn* by J. Fück in *ʿArabīya*, appendix). There is, however, the general sense of "manner of speaking" without reference to a particular element in the following passage: *kullimū bi-kalāmihim wa-djāʾa 'l-Ḳurʾānu bi-lughatihim* "they are addressed in their own language and the Ḳurʾān has used their *lugha*" (*Kitāb*, i, 166-7). This general sense is also to be inferred from these expressions in the *Kitāb*: *fī djamīʿ lughāt al-ʿArab* "in all the manners of speaking (or linguistic usages) of the Arabs" (i, 110); *man kān al-nasb min lughatihī* "those whose habitual linguistic usage is to employ the accusative in this case" (*ibid.*, ii, 263); and *illā man lā yuʾkhadh bi-lughatihī*—"except those whose manner of speaking is not acceptable" (*ibid.*, ii, 264).

These variants and the different manners of realising the elements of *ʿArabiyya* constituted, in the period of the major "field-studies" made by Arab researchers (*al-lughawiyyūn*), especially in the 2nd and 3rd/8th and 9th centuries, the essential material towards which the analyses of the grammarians (*al-naḥwiyyūn*) were directed. The term *naḥw* which came ultimately to denote "grammar" and which is to be opposed to *lugha* taken in this sense of "linguistic material" (compiled from the mouths of Arabic speakers) itself signified, initially, "a type of expression" (cf. *hādhā 'l-naḥw min al-kalām*; *Kitāb*, i, 491). Thus the *naḥwiyyūn* ("grammarians") were the individuals who studied the *anḥāʾ* (or *nuḥuww*, pl. of *naḥw*; see *Kitāb*, ii, 381: "types of expression heard from the mouths of Arabic speakers") with the purpose of making an exhaustive examination and of formulating rules. It is nevertheless clear that the sense of *naḥw* in these usages does not contain the idea of deviation, which is the specific nature of the word *lugha* and of *laḥn*, the latter having a much stronger sense and ultimately taking on, in the 3rd/9th century, the meaning of "incorrectness".

When applied to pronunciation, the *lughāt al-ʿArab*, insofar as they constitute optional variants, are contrasted with variants conditioned and dictated by the physiological laws of articulation: there is talk in this case of *badal* (= variant) due to the *ḍarūra* (constraint imposed by these factors; cf. Ibn Djinnī, *Sirr al-ṣināʿa*, i, 78) or to the system of the language; it is then a matter of *ṣanʿa*, that is, of a formal process effected on an element of the language (cf. Ibn Djinnī, *Khaṣāʾiṣ*, i, 371). In the context of the oral reproduction of an existing and memorised text (in effect, the Ḳurʾān and poetry) these variants—both *lughāt* and conditioned variants—are called *wudjūh al-ḳirāʾāt*/*al-ʿadāʾ* by grammarians and by specialists in Ḳurʾānic diction alike (Ibn Ḳutayba, *Taʾwīl*, 33). *Lugha* was also contrasted with *luthgha*; in the period of the early grammarians, this latter term denoted a deviation in the pronunciation of a number of phonemes (not exclusively *ghayn*, as is often believed; cf. al-Djāḥiẓ, *Bayān*, i, 34), but this was a case of individual and not collective deviation. It was sometimes difficult at the first attempt to distinguish between a regional variety and a purely individual variety, as is shown by this statement from the *Kitāb al-ʿAyn*: *samiʿnāhū fa-lā nadrī a-lugha am luthgha*—"we have heard it well, but we do not know if it is a regional variant or a [simple] individual pronunciation" (*ibid.*, i, 128).

The attitude of Arab lexicographers and grammarians towards linguistic data—the *lughāt*—has not always been properly understood by contemporary authors. The norm (the "norm" of the linguist E. Coseriu and the "idiom" of the linguist J. Gagnepain) is for them the result of a choice, but this involves the choice of the native locutors themselves (*fuṣaḥāʾ al-ʿArab*, the "native speakers of *ʿArabiyya*"). When this choice emanates from the greater part of these speakers, Sībawayh refers to *ḳawl al-ʿāmma* "the way of speech of the majority (*Kitāb*, i, 228, ii, 263; variants: *ḳawl ʿāmmat al-nās*, *ibid.*, i, 263, 293; *ḳawl ʿāmmat al-ʿArab*, *ḳawl al-ʿArab kullihim* "the manner of all Arabic speakers", *ibid.*, i, 477, ii, 303). Ibn Djinnī, for his part, was to use the expression *lughāt al-kāffa*—"the manners of speaking of the majority" (*Khaṣāʾiṣ* ii, 13). It could also be the case that this convergence of usages was lacking; each *lugha* was then considered a norm in itself. "All the *lughāt*", declares Ibn Djinnī, "may be regarded as probative references (*ḥudjdja*—with regard to the norm), and when two different *lughāt* have the same range of usage and are equally accepted by the *ḳiyās* (Ibn Djinnī speaks in this context of two *ḳiyās*, i.e. two different systems), it is not permitted to prefer one of them at the expense of the other" (*ibid.*, ii, 10). Attention should also be drawn to the remarkable insistence with which Sībawayh (in common with his masters and disciples) urges the reader to rely upon *samāʿ*, upon attested facts only and above all "to accept among these [types of expression which Sībawayh cites] only those which Arabic speakers have themselves accepted and to treat them in the same fashion (*istaḥsin min hādhā mā istaḥsana al-ʿArab wa-adjrihi kamā adjrawhū*, *Kitāb*, i, 252). Ibn Djinnī also asserts (*Munṣif*, ii, 240), "*Samāʿ* can annul the action of *ḳiyās*". This assumes, as this author explicitly states, that "everything which *ḳiyās* permits is not necessarily actualised in reality" (*Khaṣāʾiṣ*, i, 117).

In fact, the only criterion of normalisation which has been retained by the Arab scholars is that of the maximum extension of usage with the domain of *ʿArabiyya* (the *ḳawl ʿāmmat al-ʿArab* cited above) and of the most widespread inter-comprehension. Whence the degrees of "clarity" applied to *lughāt*: *faṣīḥ*/*afṣaḥ*. The *Kitāb* of Sībawayh is also full of these appraisals: *hādhā ʿarabī kathīr* "this is Arabic of widespread usage"; *hādhā akthar* "this is more widespread"; and *akthar wa-aʿraf*—"more widespread and better known" (see *Kitab*, i, 27, 43, 74, 78, 258, etc.). When two *lughas*, or more, were in competition, some were described as being "Arabic" and *ḥasana* or *djayyida* ("good"), others as *aḥsan* or *adjwad* ("better") or *ḳabīḥa* or *radīʾa* ("bad"); here it is no longer a question of value judgments, but of acceptability applied solely to the subjects of speech and on the basis of the most widespread usage (cf. the expression *ʿarabī djayyid kathīr*, *al-aṣl al-akthar*, *ibid.*, i, 27, 60). The geographical recurrence of a *lugha* was assessed with the aid of the following scale: *muttarid* = perfectly uniform, recurrent or general (100%); *ghālib* = predominant (86%); *kathīr* = widespread or frequent (65%); *ḳalīl* = less widespread or less frequent (13%), and *nādir* = rare or isolated (4%) (see *Muzhir*, i, 234). It may be noted that this scale is applied equally to the frequency of an element or linguistic form within one grouping; see in this context the contrast between *muttarid fi 'l-istiʿmāl* "general in usage" and

muttarid fi 'l-ḳiyās "general in terms of *ḳiyās*", in *Khaṣā'iṣ*, i, 96 ff. and Hadj-Salah, *Linguistique arabe et linguistique générale*.

As opposed to *naḥw*, *lugha* is the very essence of language, in other words that part which is not constructed (by induction), inconsistent with the rules of grammar or non-predictable or non-deducible by means of these rules. It is primarily a matter of *samā'*, that is of crude identifications. Thus the entire range of data recorded from the mouths of speakers of *'Arabiyya* constituted the *lugha* (taken as a collective: the ensemble of all the *lughāt* duly identified). Analysed in groups of items, it is vocabulary opposed to grammar; included in it, necessarily so, were not only the lexical unities effectively in use—along with their regional variants—but also colloquial expressions, in the form of idioms or *amthāl* (pl. of *mathal* in the very broad sense of "stereotyped figure of speech" or "cliché of widespread diffusion". Cf. the first compilations of *amthāl* which have survived to the present, comprising collections of idiomatic figures, and not only of maxims and proverbs; see e.g. *al-Fākhir* by al-Mufaḍḍal b. Salama, Cairo 1960).

The non-predictable character of *lugha* (as crude fact and/or as vocabulary of a formal system, that of *naḥw*) has been well described by Ibn Djinnī: "the language of the Arabs comprises two sorts of elements: those elements that one is obliged to accept as such, with their configuration, for example, and not on the basis of a rule; such elements are: *ḥadjar* (stone), *dār* (house) . . . and another type that may be apprehended through *ḳiyās*". (*Khaṣā'iṣ*, ii, 42). "*Ḥadjar* may be analysed in a root (ḥ-dj-r) and a system (C¹a C²a C³), but the fact that these unities combined in *ḥadjar* arrive at the meaning of "stone" is a fact of *samā'*; all that can be done is to memorise it (*yuḥfaẓ*). It is also in this sense that this remark of the lexicographer Ibn Fāris (d. 395/1004) is to be interpreted: *al-lugha lā ta'khadhu ḳiyāsan naḳīsuhū naḥnu al-'ān*—"the data of the language cannot be obtained, in our era, as far as we are concerned, through *ḳiyās*" (*Ṣāḥibī*, 33).

Lugha, initially "regional variant of realisation" or "datum of the language", comes to designate the entire speech of an ethnic group and even to be identified with the word *lisān* which signifies "tongue" and "language". This identification is however absolutely unknown to the first generations of grammarians (up to and including Sībawayh). It appears sporadically at the end of the 2nd/8th century (see the use of it made by the jurist and leader of the law-school al-Shāfi'ī in his *Risāla*, where he employs the word *lugha* with the sense of *lisān* only once (p. 564) and *lisān* in all other cases). It was probably in the period of the great controversies of the *'ilm al-kalām* that such a usage came into being; al-Djāḥiẓ in fact uses *lugha*, still as a manner of speaking, but enlarged to cover the entire language of an ethnic group (regional speech types, *'Arabiyya*, languages other than Arabic; see *Bayān*, i, 161-2 and *Ḥayawān*, v, 299). The sense of regional variant applied to a single linguistic element or item is, however, retained until a very late period.

The science of *lughāt*, which became the science of *lugha* or the data of the language, underwent a prodigious development following the major researches initiated by the very founder of this branch of science, Abū 'Amr Ibn al-'Alā' (154/770), that is, in the period when his immediate disciples such as al-Aṣma'ī (d. 213/838), Abū 'Ubayda (d. 209/826), Abū Zayd al-Anṣārī (d. 215/831) and the Kūfans al-Mufaḍḍal al-Ḍabbī, Ibn al-A'rābī, Abū 'Amr al-Shaybānī, etc., made immense journeys of investigation across the Arabian peninsula. This gigantic effort of collection and codification of data (which continued until the total disappearance of the spontaneous mastery of *'Arabiyya* = *al-faṣāḥa*, at the end of the 4th/10th century) resulted initially in the composition of innumerable monographs on the *lughāt al-ḳabā'il* "the variants of realisation specific to the Arab tribes", on *amthāl* or "clichés", *nawādir* or "hapax legomena", toponymy, the vocabulary of flora and fauna, onomastic, types of verbs, *maṣdars*, the extension of use of schemes, etc. (on this subject, see H. Naṣṣār, *al-Mu'djam al-'arabī*, Cairo 1956). To this, there is added the collection and codification of variants in reproduction of the Ḳur'ānic text which were drawn from those who had belonged to the school of the *Tābi'ūn* or from their disciples. All Arabic lexicography of later centuries is based on these monographs.

Lugha as a datum constitutes, for early grammarians as well as for philosophers, the product of a *waḍ'*, that is of an *institution*. The same furthermore applies to the rules of grammar themselves because they are different from one language to another (cf. *Muzhir*, i, 48) and, above all, because they do not result from the application of more primitive rules, but by induction from the acts of discourse of Arabic speakers (*maḳāyīs mustanbaṭa min istiḳrā' kalām al-'Arab*; Abū 'Alī al-Fārisī, *al-Takmila*, fol. 1). The difference, as has just been observed, resides in the fact that *lugha* is the *non-inductive* ensemble of linguistic items. "By the *waḍ'* of an articulated sound" declares al-Rāḍī, "is meant the primitive assignation of an articulated sound (*lafẓ*) to a certain significance (*ma'nā*) with the intention of seeing this significance become the object of conventional usage within a community" (*Sharḥ al-Kāfiya*, i, 3). Thus everything which is not imposed by institution (*mawḍū'*) as the symbol of something is outside the scope of *lugha*, outside *waḍ'*. Among other examples of this are the following: *saṣ*, *kaḳ*, *ḥadj*, etc., which have not been retained by the founder of the language for reasons of phonetic incompatibility (*tanāfur al-ḥurūf*; see *Khaṣā'iṣ*, i, 54). *Lugha* is, from this point of view, an *iṣṭilāḥ* or social institution tacitly accepted by its users; but a distinction is also drawn between these two terms, because it is considered that *lugha* is always a primitive institution, while *iṣṭilāḥ* can be an innovation, a technical neologism (cf. *Bayān*, i, 139-40), whence the pairs *aṣl al-waḍ'* or *aṣl al-lugha*/*iṣṭilāḥ* language/metalanguage and *waḍ' al-lugha*/*waḍ' thānī* primary institution/secondary institution (cf. al-Rāḍī, *ibid.*, ii, 126; al-Djurdjānī, *Dalā'il*, 24, 193, 308; and al-Fārābī, *Kitāb al-Ḥurūf*, 148). It is also in this context that a distinction is drawn between *waḍ' al-lugha* as an organisation and code established by social institution and *waḍ' al-kalām*, which is the arrangements of discourse and the choice of its elements by the individual speaker (al-Djurdjānī, *op. cit.*, 64, 69, 79, 81).

Waḍ' constituted for the majority of the Mu'tazilīs a purely human convention (*muwāḍa'a* = code), and for other thinkers, an institution which is divine, or at least inspired in men by God (*tawḳīf*, *ilhām*; see in this context *Muzhir*, i, 8-28 and Loucel, *L'origine du language d'après les grammairiens arabes*, in *Arabica*, x-xi). It does not seem, however, that these two positions were so clearly stated in the works of the major Arab linguists and philosophers. In fact, al-Ash'arī (d. 324/935-6), to whom is attri-

buted the idea of the divine institution of the language, has a rather inconclusive attitude to the subject, judging by the lukewarm opinions of his disciples. The same applies to the Imām al-Ḥaramayn and to al-Ghazālī (see *Muzhir*, i, 20). A similar position is adopted by the Muʿtazilī grammarians Abū ʿAlī al-Fārisī and Ibn Djinnī (who attributes to Sībawayh's pupil, Abu 'l-Ḥasan al-Akhfash, the same cautious attitude; see *Khaṣāʾiṣ*, i, 41).

Considerably more interesting is the problem which the Muʿtazilīs raised towards the middle of the 3rd/9th century, that is, the absolute arbitrariness of the linguistic symbol compared with the no less absolute immutability of the *lugha*. These two extreme positions were represented, the first by Abu 'l-Ḥusayn al-Ṣāliḥī and the second by ʿAbbād b. Sulaymān al-Ṣaymarī (*ca.* 250/854; see the *Maḳālāt* of al-Ashʿarī, ii, 186, and i, 250). The argument of ʿAbbād was as follows: "if there existed no particular relationship between articulated sounds and the objects they signify, the assignation of each of these signifiers to a signified object would be tantamount to choosing a possibility of assignation without any motive (*tardjīḥ bi-dūn muradjdjiḥ*), which is absurd" (quoted by al-Rāzī, *Tafsīr*, i, 22). The other Muʿtazilīs did not follow ʿAbbād: "There is no necessary relationship", the *ḳāḍī* ʿAbd al-Djabbār (415/1025) was to say, "between the expression (*al-ʿibāra*) and the content, such that one cannot exist without the other" (*Mughnī*, v, 20). For al-Ṣāliḥī, such arbitrariness has no limits since it is possible, he claimed, "to change today the names [of things] and the *lugha* as it presents itself to us at the present time" (*ḳalb al-lugha*; *Maḳālāt*, ii, 186). Later, these two opinions came to be reconciled: "As for those things which have become the object of a convention", the *ḳāḍī* ʿAbd al-Djabbār was to assert, "it is certain that they could have been established according to an entirely different system with the same validity. But the moment that these objects are fixed by a conventional system, they are assimilated, for the user, to that which could not be otherwise than it is" (*Mughnī*, xvi, 191). In the same period, Ibn Sīdā reproduces this dichotomic formula which summarises well the reconciliation of the two extremes: "Language is constraint (*iḍṭirāriyya*), although the conventional expressions of which it is composed have been (at the moment of *waḍʿ*) freely chosen (*ikhtiyāriyya*) (*Mukhaṣṣaṣ*, i, 3).

The expression *ʿilm al-lugha* (or *ʿulūm al-lugha*), has always denoted, as opposed to *ʿilm al-naḥw* (or *ʿilm al-ʿArabiyya*), lexicology or more exactly the science of the datum of the language (cf. al-Zadjdjādjī, *Īḍāḥ*, 79; Ibn Fāris, *al-Ṣāḥibī*, 31; Ibn Yaʿīsh, *Sharḥ*, i, 4; al-Rāḍī, *Sharḥ*, i, 4; *Muzhir*, *passim*, etc.). Ibn Khaldūn defines *ʿilm al-lugha* as "the science of the *instituted* elements of the language" (*hādhā 'l-ʿilm huwa bayān al-mawḍūʿāt al-lughawiyya*; *Muḳaddima*, 1059), a science which he includes along with *ʿilm al-naḥw* and *ʿilm al-bayān* (style) among the *al-ʿulūm al-lisāniyya* (*ibid.*). Besides this expression, there was also another: *fiḳh al-lugha* which functioned as a synonym of *ʿilm al-lugha*, but it seems likely that this was a more specialised branch of the same discipline, that is, the study of the semiological distinctions and affinities which exist between the elements of vocabulary (cf. the work of Ibn Fāris cited above, the *Fiḳh al-lugha* of al-Thaʿālibī and the *Mukhaṣṣaṣ* of Ibn Sīdā, as well as the definitions of Ibn Khaldūn, *Muḳaddima*, 1060-1). The very frequent modern usage of *lugha* with the sense of "language" has led certain of our contemporaries to attempt to employ the expression *ʿilm al-lugha* to represent the modern concept of "linguistics", which is not entirely appropriate because this signification has had, and still has, the sense of lexicology. A different term exists to denote this concept: *ʿilm al-lisān* (often abridged into *lisāniyyāt*), which al-Fārābī employs in his works and in particular in his *Iḥṣāʾ al-ʿulūm*, where he envisages in a very distinct fashion the possibility of constructing a general linguistics extending to all languages and no longer to one particular language (8-13, 21).

(A. Hadj-Salah)

LUGHA, ʿIlm al- [see lugha].

LUGHAT-NĀMA [see dehkhudā, in Supplement].

LUGHZ (a., pl. *alghāz*) "enigma", muʿammā (pl. *muʿammayāt*) "word puzzle, verbal charade", uḥdjiyya (pl. *aḥādjī*[n]) "riddle, conundrum", three Arabic terms often used in a figurative sense, but basically referring to three kinds of literary plays upon words which are fairly close in type to each other.

The enigma is generally in verse, and characteristically is in an interrogative form. Thus for *falak* "heavenly firmament": *mā ʿadam*[un] *fī 'l-ḥaḳḳi, lākin tarā || min-hū wudjūd*[an] *ḥaythumā staḳbalak || [...] fa-in ḳaṭaʿnā raʾsahū fahwa lak* "What is the thing which in reality has no existence, but nevertheless you see it in existence wherever you confront it [...] and if we cut off its head (= *fa*), it will be yours (= *lak*)?".

The *muʿammā* is to be distinguished from the *lughz* by the absence of the interrogatory element and by the fact that the sense of the passage, also in verse, had been made "blind" by various procedures. Thus it may be formed by designating one or more words by various clues to the letters forming it or them or by allusions relating to the pronunciation: the alphabetic value, the numeral value of the letters, misreading or inversion (*ḳalb*). Mostly, no account is taken of the vowels or of letters without phonetic value. Good taste is the rule.

The invention of the *muʿammā* is attributed to Khalīl b. Aḥmad, the inventor of prosody, while the Persians of course attribute it to ʿAlī b. Abī Ṭālib.

The following is an example of *muʿammā* on the name Aḥmad: *awwaluhu thālithu tuffāhatin || wa-rābiʿu 'l-tuffāḥi thānīhi || Wa-awwalu 'l-miski lahū thālithun || wa-ākhiru 'l-wardi li-bāḳīhi* "Its first is the third of [the word] *tuffāha* (apple) = A; and the fourth of [the word] *tuffāḥ* (apples) is its second = Ḥ; and the first of [the word] *misk* (musk) is its third = M; and the last of [the word] *ward* (roses) is the remainder of it = D".

The *muʿammā* was used by many poets (in particular by Abū Nuwās; see E. Wagner, *Abū Nuwās*, Wiesbaden 1965, 380-3).

As for the *uḥdjiyya*, this term denotes a simple guessing game (e.g. "Guess what I have in my hand"), but can also mean a type of enigma fairly close to the *lughz*. Thus for *salsabīl* "wine": *mā ridfu ḳawli 'l-muḥādjī || in ḳāla: uṭlub ṭarīkā* "What is the alternative sense meant by the person setting forth a riddle when he says: ask (= *sal*) the way (= *sabīl*)?".

Muḥammad al-Ṭabarī, *ʿUyūn al-masāʾil min aʿyān al-masāʾil*, Cairo 1316, 108; Muḥammad b. Ḳays al-Rāzī, *al-Muʿdjam fī maʿāyīr ashʿār al-ʿadjam*, ed. Mīrzā Muḥammad and Browne, Leiden 1901, 397; al-Djurdjānī, *Taʿrīfāt*, s.vv.; Garcin de Tassy, *Rhétorique et prosodie des lang. des musul. de l'Or.*, Paris 1873, 165; Nāṣīf al-Yāzidjī, *Madjmaʿ al-baḥrayn*, Beirut 1381/1961, wrote two *maḳāmas* about enigmas, no. 26, *al-maḳāma al-lughziyya*, 159-64, and no. 44, *al-maḳāma al-ḥilliyya*, 249-52. In colloquial Arabic, riddles and conundrums have been collected by A. Giacobetti, *Recueil d'enigmes arabes populaires*, Algiers 1916; J. Quemeneur, *Enigmes tunisiennes*, Tunis 1937; they have been made the subject of a paper by A. Hamidou, *Devinettes populaires de Tlemcen*, in *RAfr.* 372-3 (1937), 357-72 and of a study in *IBLA* (1943), 191-213; numerous examples can be found in *ibid.*, 1937, 1938, 1939, 1941 *passim*, 1943, 214-62, and 1945, 420-9. For the riddle in Turkish see BILMEDJE.

(M. BENCHENEB *)

AL-LUḤAYYA (Ar. "small beard", Yaḥyā b. al-Ḥusayn, *Ghāyat*, ii, 569 n. 3), a small port on the Red Sea coast in the Yemen Arab Republic (lat. 15° 42′ N., long. 42° 41′ E.), *ca.* 110 km. north of al-Ḥudayda [*q.v.*; see the map accompanying ʿASĪR], and situated at the northern end of a narrow and shallow bay formed between the mainland and a coral reef. The bay is continued northwards past the town by a narrow boat-channel, at the entrance of which small craft may moor. Larger vessels lie about 6 km. south-west of the town in an open roadstead between the mainland and the offshore island of al-Urmak. At very low tide, not even small boats can reach the town when loaded.

A. Sprenger's identification of al-Luḥayya with Ptolemy's Μαμάλαη κώμη is not proved, nor is it certain that the port is identical with Ναπηγοῦς κώμη, Sambrachate or Leupas (Pliny), as proposed by E. Glaser.

When Affonso d'Albuquerque entered the Red Sea in 1513, he called at al-Luḥayya (Luya in the Portuguese sources). The port then belonged to the territory of the *Imām* of Ṣanʿāʾ, to whom tribute was paid. Previous to the 10th/16th century, al-Luḥayya, like other ports on the Arabian coast such as al-Ḥudayda, Kamarān Island, al-Mukhā (Mocha) and Zabīd, had been in the power of the Rasūlids [*q.v.*], and their heirs the Banū Ṭāhir, whose last monarch, ʿĀmir b. ʿAbd al-Wahhāb, was defeated in 1515 by the firearms of the Mamlūk forces under Salmān al-Rūmī and Ḥusayn Turkī (Serjeant, *The Portuguese*, 29), sent by the sultan Ḳānṣawḥ al-Ghawrī [*q.v.*]. The ruler of al-Luḥayya, Faḳīh Abū Bakr b. al-Maḳbūl al-Zaylaʿī (of Zaylaʿ [*q.v.*]), supported the Egyptians, made the *khuṭba* for al-Ghawrī and, after the Mamlūk forces had damaged the port of al-Ḥudayda, opened up the road leading inland. With one hundred men armed with muskets (*banādiḳ*), he then advanced against Mawr. Abū Makhrama (Schumann, *Political history*, 19) and Yaḥyā b. al-Ḥusayn (*Ghāyat*, ii, 644) remark that this was the first time fire-arms were used in the Yemen; see however Schumann, *op. cit.*, nn. 18, 92. After Sulṭān Selīm I had conquered Egypt, Ottoman suzerainty was quickly recognised by the Egyptian forces in the coastal towns. According to the *Taʾrīkh al-Shiḥrī* (Serjeant, *op. cit.*, 51, 170), the Portuguese, after an unsuccessful attack on Djudda (see, however, *EI*[2], ii, 572a) in 923/1517, turned back to Yemen, pursued by Salmān "or one of his men" who took a Portuguese *grab* (Ar. *ghurāb* "brigantine") near al-Luḥayya. This story, confirmed by João de Barros (*Decadas*, iii, I, 6), refers to Lopo Soares de Albergaria's expedition in the Red Sea.

In 1635 the *Imām* al-Manṣūr bi'llāh al-Ḳāsim b. Muḥammad [*q.v.*] succeeded in expelling the Turks, and al-Luḥayya again came into the possession of the *Imāms* of Ṣanʿāʾ. Around 1650, ships sailing between Massawa and al-Mukhā on behalf of Banyans settled in the latter port apparently used to anchor at the port of al-Luḥayya (Van Donzel, *Foreign relations*, 134-6, 139). On his return from Ethiopia to Yemen, Aḥmad b. al-Ḥaymī, the envoy of Imām al-Mutawakkil ʿalā ʾllāh (1054-87/1644-76) to the Ethiopian king Fāsiladas (1632-67), disembarked at al-Luḥayya.

During his stay at al-Luḥayya between 29 December 1762 and 20 February 1763, C. Niebuhr was amicably received by *amīr* Farhān, a black African, appointed as governor (*dola*) by the *Imām* of Ṣanʿāʾ. He was told that the town was not older than three hundred years and that its foundation, as is the case with Bayt al-Faḳīh and al-Mukhā [*q.vv*], was connected with a local Muslim saint, *shaykh* Salei (Ṣāliḥ), around whose cell and later tomb the original settlement grew. The descendants of the *shaykh* were still revered in al-Luḥayya in Niebuhr's days. The town had no circular wall then, but on the landward side there were some twelve towers, armed with a few cannon and lying at a distance of 120 double steps from each other. The highly-placed entrances were accessible only by a ladder. The towers, however, were not worth much as defence works: the Ḥāshid and Bakīl tribes [see ḤĀSHID WA-BAKĪL] (see also Niebuhr, *Beschreibung*, 258-61, and Robin, *Les hautes terres*) marched across them and burned the town, and on a rumour of another attack, the inhabitants fled to al-Urmak. Since the water was brackish, it had to be fetched at some distance. The people, among whom were some forty Banyans, lived off commerce and fish. Although the coffee was of inferior quality compared with that of Bayt

al-Faḳīh, it was cheaper, since transport to the more important port of al-Djudda was inexpensive. In al-Luḥayya merchants bought it for customers in al-Djudda, Egypt and Turkey, and some Cairenes used to come over in order to acquire it in person. Lime was made by burning coral in the open air, and rock-salt was cut in the neighbourhood. Although Niebuhr describes the town as rather poor, al-Luḥayya had to pay monthly 2,000 thalers to the *Imām* of Ṣanʿāʾ, and during the *mawsim* (April-June) when Indian vessels were calling, 3,000 thalers, more than al-Ḥudayda had to bring in. The arrival of Indian vessels at al-Luḥayya around 1770 is confirmed by Bruce (*Travels*, i, 323). Niebuhr also relates that one of the rich merchants of al-Luḥayya had obtained several kinds of aphrodisiacs from "engländischen Wundärtzen" (*Reisebeschreibung*, i, 304, not "Wunderärzten" as in Th. Hansen, *Reise*, 246, or "miracle doctors", idem, *Arabia Felix*, 221), so English ships must have called at al-Luḥayya around 1760, at least occasionally.

In the 12th/18th century, the power of the *Imāms* of Ṣanʿāʾ declined sharply, and many towns declared themselves independent, while the Sharīfs of Abū ʿArīsh [*q.v.*] grew more powerful. In 1730 only the coastal land between al-Luḥayya and al-Mukhā remained in the *Imām*'s possession, and by 1790 the coastline between al-Kunfudha [*q.v.*] and Bayt al-Faḳīh, including al-Luḥayya, was under the authority of the Sharīfs of Abū ʿArīsh (Baldry, *Al-Yaman*, 158). At that time, the monthly revenue of al-Luḥayya was roughly computed at £600 (Bury, *Arabia Infelix*, 119).

The rise of Wahhābī power at the beginning of the 19th century forced Sharīf Ḥamūd Abū Mismār of Abū ʿArīsh to give allegiance to ʿAbd al-Wahhāb Abū Nuḳta, whom Saʿūd II had appointed governor of the Tihāma (Philby, *Saʿudi Arabia*, 13). When in 1809 he revoked his allegiance and restored the revenues of the coastal towns to Aḥmad b. Manṣūr ʿAlī, the *Imām* of Ṣanʿāʾ (Salt, *A voyage*, 125; Playfair, *A history*, 129), the Wahhābīs despatched an army by sea to Djayzān [*q.v.*], from where it advanced southwards, looting and burning al-Luḥayya and al-Ḥudayda. Under Wahhābī rule, an attempt was made to develop the port of al-Luḥayya, and negotiations were opened with the English East India Company to start a factory (Lord Valentia, *Voyages*, ii, 385, quoted by Ritter, *Erdkunde*, 884). When Ehrenberg visited the port in 1825 (Ritter, *Erdkunde*, 192 n. 485) a Persian ship was blockading the harbour in order to force the *dola* Fatḥ Allāh to pay a debt. By then the walled town had been deserted. Abū Mismār was forced to give allegiance again to the Wahhābīs, but shortly afterwards he associated himself with Muḥammad ʿAlī, the viceroy of Egypt, and in an agreement, authority in the Tihāma was surrendered to Muḥammad ʿAlī, who restored that territory to the *Imām* of Ṣanʿāʾ in return for a payment of 20,000 bahars of coffee (El Batrik, *Egyptian-Yemeni relations*, 282). When in 1832 the Ottomans rewarded the Albanian Meḥmed Agha Türkče Bilmez with the governorship of Ḥidjāz for having mutinied in al-Djudda against Muḥammad ʿAlī, he occupied several coastal towns, but by 1837 the whole of the eastern shore of the Red Sea was in Egyptian hands (El Batrik, *op. cit.*, 286), although Ḥusayn Efendi from Belgrade was governor of al-Luḥayya when the French botanist Botta visited the port in 1836 (Ritter, *Erdkunde*, 756). When the Egyptian troops moved southwards, Great Britain, having occupied Aden in 1837, exerted pressure on Muḥammad ʿAlī to evacuate the Arabian peninsula. The Egyptian forces accordingly left the coastal towns in 1840 and the territory was surrendered to Ḥusayn, the Sharīf of Abū ʿArīsh. In 1842 the latter admitted his dependence on the Ottoman Sultan and was created a Pasha and governor of the sea coast (el-Khazrají, *History of the Resúliyy dynasty of Yemen*, ed. Redhouse, i, Introd., 35). In 1844 the *Imām* Manṣūr ʿAlī tried to recover the territory, and after his deposition in 1848 his successor occupied several coastal towns and imprisoned Sharīf Ḥusayn. But the latter escaped and re-established his authority over the Tihāma (Redhouse, *op. cit.*, i, 36). In 1849 Ottoman troops under Tewfīḳ Pasha occupied the Yemen, and after the latter's untimely death, ʿAbd Allāh b. Muḥammad ʿAwn of Mecca was appointed governor of the whole of the Tihāma. Opposition to Turkish rule continued, however, among successive Zaydī *Imāms*, Sharīfs of Abū ʿArīsh, tribal *shaykhs* and occasionally the Sharīfs of Mecca. After subduing the Sharīfs of Abū ʿArīsh, the Idrīsī family in Ṣabyā [see ʿASĪR, i, 709b] became fierce opponents to Turkish rule, so that the Ottoman forces were compelled to withdraw to the principal garrison towns. The opening of the Suez Canal in 1869 enabled the Ottomans to despatch troops rapidly to Yemen, and in 1871 they subdued ʿAsīr. In 1872 Ṣanʿāʾ became the centre of the Ottoman government in the *wilāyet* of Yaman, which was divided into four *sandjaḳs*, each headed by a *mutaṣarrif*: Markaz, ʿAsīr, Taʿizz and al-Ḥudayda, al-Luḥayya being a *ḳaḍāʾ* of the latter (Wenner, *Modern Yemen*, 62, n. 5). Its population was estimated in 1881 at 2,000. In 1882 Muḥammad b. ʿĀʾiḍ of the ʿĀʾiḍ family of the Banū Mughayd, who had been granted the hereditary chieftainship of the highland tribes of ʿAsīr by Fayṣal b. Saʿūd [*q.v.*], cut off the Turks in Abhā [*q.v.*] from the coast, and the Banū Marwān, who inhabit the region between Maydī (Mīdī) and Ḥaraḍ, attacked al-Luḥayya. The coastal towns were the only Turkish strongholds amidst the "state of almost chronic rebellion" (Baldry, *op. cit.*, 169) in ʿAsīr and Ḥidjāz, and served as bases for expeditions against the rebellious inland tribes. In 1899 even the garrison of al-Luḥayya came under attack. When a telegraph line was constructed between al-Luḥayya and al-Maydī, Turkish soldiers guarding the workmen were attacked. Al-Maydī, north of al-Luḥayya, was captured by tribesmen loyal to the *Imām* and became a centre for the illegal import of arms. In 1906 the Turkish troops were withdrawn from al-Luḥayya and al-Maydī, but not for long, because in the same year they marched from al-Luḥayya to Ḥādjdja, accompanied by Bonī Pasha, a *shaykh* of the pro-Turkish Banū Ḳays who inhabit the region east of al-Luḥayya. Shortly afterwards, Turkish soldiers of the al-Luḥayya garrison joined others from Djayzān, Zabīd and al-Mukhā in their march on al-Ḥudayda in order to demand their discharge papers: many had served seven years in Yemen but had received less than one year's pay (Baldry, *op. cit.*, 178-9). In 1909 Sayyid Muḥammad b. ʿAlī al-Idrīsī of Sabyā came to the assistance of tribes living to the east of al-Luḥayya who had been forced to pay illegal taxes levied by Bonī Pasha. He occupied the port, but it was soon recaptured by the Turks, for in the same year two gunboats, two transports and nine battalions were sent from Istanbul to al-Ḥudayda and al-Luḥayya. The latter port became Rifʿat Pasha's base for launching attacks against the Idrīsī tribesmen. In 1911 the *Ḳāʾim-maḳām* of al-Luḥayya set out with 200 troops against the inhabitants of al-

Zuhra who had captured a caravan of eighty camels. He was, however, defeated and besieged in al-Zuhra. Later that year, the Banū ʿAbs seized the wells outside al-Luḥayya, but due to dissension among the Arabs, Ḥamdī Bey, arriving from Kamarān, was able to regain them. Shortly afterwards, however, Ḥamdī Bey suffered a severe reverse in al-Luḥayya itself. A new Turkish expedition was prepared against Sayyid Muḥammad, Ḥamdī Bey having 2,500 troops ready in the port. But the advance was postponed because of the outbreak of the Turkish-Italian war in 1911 (see Green, *Italian relations*). In 1912 the Italian navy bombarded al-Luḥayya and extended the blockade of the coast to a point 15 km. north of the port, while 6,000 followers of Sayyid Muḥammad moved against al-Luḥayya. The whole coast between al-Ḳunfudha and al-Luḥayya was now under the effective control of Sayyid Muḥammad.

On the eve of the First World War, the Ottoman government desired to settle the difficulties in Yemen. *Imām* Yaḥyā of Ṣanʿāʾ and Sayyid Muḥammad (see al-Kibsī, *Imām Yaḥyā*) agreed to observe a truce. Most of the Turkish troops were withdrawn from Yemen, only small garrisons remained in the main towns of the Tihāma. During the War, Sayyid Muḥammad signed a treaty with the British Resident at Aden (May 1915) and overran much of the northern Tihāma. He did not, however, succeed in taking al-Luḥayya because of the Turkish artillery (*Handbook*, i, 141-2; Philby, *Arabia*, 239; Rihani, *Around the coasts*, 166-7). After the War, the Turks evacuated Arabia. In 1339/1920 Sayyid Muḥammad concluded a treaty with Ibn Saʿūd [*q.v.*], but after his death *Imām* Yaḥyā in 1925 annexed the entire Tihāma and its ports as far north as al-Maydī. During the war with *Imām* Yaḥyā, Saʿūdī forces occupied the coast as far south as Bayt al-Faḳīh, including al-Luḥayya. The treaty of al-Ṭāʾif in 1353/1934, defining the frontier between Saʿūdī Arabia and the Yemen, led to the attachment of al-Luḥayya to Yemen.

In 1970 the population of al-Luḥayya was estimated at 5,000. At present, the port has no commercial significance and is only a small base for fishing boats (*sunbuk*), traffic being limited to coastal shipping. The seaborne trade is now centred at the modern facilities of Aḥmadī, the new harbour of al-Ḥudayda.

VAN DONZEL)

LUḲAṬA (A.), an article found (more precisely: "picked up"). The leading principle in the Muslim law regarding articles lost and found may be said to be the protection of the owner from the finder, sometimes mingled with social considerations. The picking up of articles found is generally permitted, although it is sometimes also said to be more meritorious to leave them. The finder is bound to advertise the article which he has found (or taken) for a whole year unless it is of quite insignificant value or perishable. The particulars of this advertising are minutely regulated by special rules. After the termination of the period, the finder, according to Mālik and al-Shāfiʿī, has the right to take possession of the article and do what he pleases with it, but according to Abū Ḥanīfa, only if he is "poor"; but the use of the articles as religious alms (*ṣadaḳa*) even before the expiry of a year is permitted in a preferential clause by Abū Ḥanifa and Mālik. If the owner appears before the expiry of the period, he receives the object back, as he does after the expiry of the period if it is still with the finder; but if the finder has disposed of it in keeping with the law, he is liable to the owner for its value; Dāwūd al-Ẓāhirī alone recognised no further claim by the loser in this case. The establishment of ownership is facilitated, compared with the ordinary process in Mālik and Aḥmad b. Ḥanbal (in al-Bukhārī also; cf. his superscription to *Luḳaṭa*, *bāb* 1). As regards the finding of domestic animals in the desert, there are special regulations which are less onerous for the finder in the case of in-

jured animals and more onerous when they are not injured. Al-Shāfiʿī and Aḥmad b. Ḥanbal have similarly some special regulations for articles found in the *Ḥaram*, the sacred territory in Mecca, which at bottom go back to the old idea of a special right of ownership by Allāh in the *Ḥaram* and articles found in it.

These prescriptions of the *fiḳh* are based on certain *ḥadīth*s which have been handed down with several variants (cf. al-Bukhārī, *Luḳaṭa*; Muslim, Constantinople 1329 ff., v, 133) which need not be quoted in detail here as they agree with the principles in all essentials. But it may be mentioned that in a very old stratum, later worked over, there is mention of a two- or three-year period. In the conception of the primitive jurists, the article found is sometimes described as deposited (*wadīʿa*); further, out of special religious scruples, one is careful not to pick up found dates and eat them, as they might belong to the *zakāt*; finally, there is a *ḥadīth* which forbids the Mecca pilgrim (*ḥādjdj*) to pick up articles found at all. From the superscription by Bukhārī to *Luḳaṭa*, *bāb* 11, it is evident that found articles might be handed over, or used to be handed over, to a government office; but their retention in the finder's care is justified by quoting a special tradition.

None of these traditions can be considered historical; at most, the prohibition by the Prophet in his oration after the occupation of Mecca from keeping articles found in the *Ḥaram* without advertising them (cf. above) may be genuine on account of its antiquated terminology. *Luḳaṭa* is not mentioned in the Ḳurʾān.

(J. SCHACHT)

AL-LUKKĀM, DJABAL, the name which the mediaeval Arabic geographers give to the mountain chain which is situated in the northern part of Syria and for long formed the frontier between the Islamic and the Byzantine lands. In classical times it was known as the Amanos/Amanus (Khamanu in the cuneiform inscriptions), but by the Turks as Alma Daghī (Elma Dağı in modern Turkish); since it has not been treated under ELMA DAGHĪ, it has seemed useful to consider it here, even though the Djabal al-Lukkām does not correspond exactly to these ramifications of the Taurus Mountains, which detaches itself from the dolomite massif of the Ḳaradede Dagh in the region of Marʿash, to the south of the Pyramus (Djayḥān), running parallel to the chains of the Taurus and Anti-Taurus, surrounding with its eastern ridge the Gulf of Alexandretta, and falling steeply into the sea to the south of Raʾs al-Khinzīr (5,100 ft.), together with the Djabal Mūsā or Djabal Aḥmar (5,750 ft.).

The deep transverse valley of the Orontes and the morasses of al-ʿAmḳ [*q.v.*] separate the Alma Dagh from the Lebanon chains, which differ also in their geological formation (mostly limestone) from that of the Taurus system. With its off shoots, the Alma Dagh cuts off Cilicia entirely from Syria and the Mesopotamian hinterland; apart from a few passes that are mere mule-tracks, the pass of Baylān [*q.v.*] is the only connection between Asia Minor and Syria and has always been much frequented. The heights of the several mountains are not yet accurately known; the average height is said to be 3,650 ft., and some peaks reach 7,300 ft. or more; as the highest point, Dormeyer gives the Menhör, 7,450 ft. In the northern part, jagged and steep peaks prevail; in the south, more rounded outlines. The Alma Dagh with its fresh verdure is an attractive sight, for its sides are thickly overgrown with trees, out of which the bare dolomite peaks project. The ridge of the Alma Dagh north of Iskandarūn formed in Ottoman times, together with the sides sloping to east and west, an administrative unit, the Sandjaḳ Djabal Barakat; cf. Sachau in *SBPr. Ak. W.* (1892), 314.

Locally, no one common name is used for the whole of the Amanus; in the reports of European travellers and in the maps based on these, this fact has caused considerable confusion as to the nomenclature, because the same name is sometimes used for a part, sometimes for the whole. For the northern part of the Amanus we find the name Gyawr Dagh or Djawur Dagh, i.e. the mountains of the infidels; H. Kiepert in his *Carte générale de l'empire Ottoman* (Berlin 1892) makes the Alma Dagh reach about as far as Iṣlāḥiyye (Nicopolis, lat. 37° N.); the continuation of this mountain-chain as far as the neighbourhood of Marʿash he takes as Gyawr Dagh; cf. also H. Kiepert's map for Sachau's *Reise in Syrien und Mesopotamien* (Leipzig 1883). In R. Kiepert's map for von Oppenheim's *Vom Mittelmeer zum persischen Golf* (Berlin 1900), Alma Dagh only appears as the name of one single mountain massif to the north of Baylān; the name Gyawr Dagh does not appear at all on it, in its stead we find Sur Dagh, Adje Dagh and Göydje Dagh as names of single peaks between Marʿash and Iṣlāḥiyye. The northern Gyawr Dagh is connected, according to E. Reclus, with the southern mountains by a mountain plateau in the depth of which is situated the Gyawr Göl (i.e. lake of the infidels). The name of Gyawr Dagh is occasionally extended to the whole of the Amanus (e.g. on the map of Favre and Mandrot). Reclus does not call the southern Amanus Alma Dagh, but, in accordance with a number of travellers, Aḳma Dagh. Benzinger is evidently mistaken in calling the southern part of the Amanus Gyawr Dagh and the northern part Aḳma Dagh. Czernik seems to stand quite alone in calling the Amanus Ḳara Dagh; this name is evidently the Turkish translation of Djabal al-Lukkām (also al-Ukkām), the "black mountains" (*ukkām*, Arabicised from the Syriac *ukkāmā* = "black") of the Arab geographers of the Middle Ages, the μαῦρου ὄρος of the Byzantines; for the name al-Lukkām designating nearly the same as Amanus, cf. Sachau, *op. cit.*, 325. By a misnomer, the Alma or Aḳma Dagh in its more limited sense (north of Baylān) is also often called Nawlu Dagh by travellers, which name according to Kotschy (cf. also the map by R. Kiepert, mentioned above) belongs only to the northeastern part of the Djabal Arzūs (south of Baylān).

(M. Streck *)

LUḲMĀN, a legendary hero and sage of pre-Islamic Arabia. He appears in the Ḳurʾān as a monotheist and a wise father giving pious admonitions to his son. In later Islamic lore, he became the creator of fables par excellence and a striking parallel of Aesop.

1. Luḳmān in Old Arab tradition. The Arabs of the D͟jāhiliyya knew of a certain Luḳmān b. ʿĀd. The connection with the long-lost tribe of ʿĀd [*q.v.*] places him in the dimmest recesses of the Arab past. The two attributes upon which his fame apparently rested were his wisdom and his longevity. Many early poets, including Imruʾ al-Ḳays, al-Nābig͟ha, al-Aʿs͟hā and Ṭarafa, celebrate his wisdom (Horovitz, *Koranische Untersuchungen*, 133-5). To be "as wise as" or even "wiser than Luḳmān" are standard compliments in panegyrics. Because of his proverbial wisdom, Luḳmān was credited with being the architect, or one of the architects, of the famous Maʾrib [*q.v.*] dam (e.g. al-Masʿūdī, *Murūd͟j*, iii, 366).

In ancient Arabian legend, Luḳmān was *al-Muʿammar* ("the Long-lived"). He is granted a long life. (According to later Muslim tradition, this was a reward for his piety, in contradistinction to the wickedness of his people.) From among several choices offered him, he chooses the duration of the lives of seven vultures, the vulture (*nasr*) being the most popular symbol of longevity among the Arabs (Goldziher, *Abh. zur arabisch. Phil.*, Leiden 1899, ii, pp. li-lii; cf. Ps. ciii, 5, where the Hebr. cognate *nes͟her*, meaning "eagle", has the same significance). Luḳmān nurtures and protects each of his seven vultures in turn. The last one is named Lubad which means "enduring" or "remaining" (*LA* and *TA*, s.v.). He finally dies, however, and with him Luḳmān. This story is cited in explanation of the old Arab proverb "eternity (*al-abad*) outlasts Lubad" (al-Maydānī, *Amt͟hāl al-ʿArab*, Cairo 1310/1892-3, i, 290-1). According to the different versions of the tale, Luḳmān lived 560, 1,000, 3,000, or 3,500 years. In Islamic times, he is considered second in longevity only to al-K͟hiḍr (al-Sid͟jistānī, *K. al-Muʿammarīn*, ed. Goldziher, in *Abh. zur arabisch. Phil.*, ii, 2).

It is difficult to know what details beyond this essential nucleus are of pre-Islamic origin and what are the creations of later Muslim narrators. It is possible, for example, that the tradition that includes Luḳmān among the ambassadors sent by the drought-stricken ʿĀdites to pray for rain at the Kaʿba may have its roots in pagan Meccan lore (al-Ṭabarī, i, 235). Already in its pre-Islamic form, the Luḳmān legend exhibits motifs found elsewhere. R. Basset (*Loqmân Berbère*, pp. xxvii-xxix) finds a remarkable parallel in the interpretation given by Sidonius Apollinarius of Romulus's watching for twelve birds. The birds turn out to be twelve vultures, signifying hat Rome will endure for twelve centuries.

2. Luḳmān in the Ḳurʾān and the Islamic tradition. Ṣūra XXXI, which belongs to the Third Meccan period, bears the name of Luḳmān. No allusion is made to either his ʿĀdite origin or his longevity. Likewise, there is no mention of Luḳmān in connection with the various references to ʿĀd and its prophet Hūd throughout the Ḳurʾān.

The Ḳurʾānic Luḳmān is a sage who is found only in the sūra that bears his name. He first appears in v. 12, where it is stated that God gave him wisdom or, perhaps as has been recently suggested, a book of maxims (see D. Gutas, *Arabic wisdom literature: nature and scope*, in *JAOS*, ci [1981], 50-4, 57-8). In vv. 13 and 16-19, Luḳmān offers pious counsel to his son. The admonitions bear the unmistakable stamp of ancient Near Eastern wisdom literature. Three times, he begins with the formula "O my dear son" (*yā bunayya*) that prefaces so many of the aphorisms of Aḥiḳar (Ar. Ḥayḳār). R. Harris has pointed out the parallel between v. 18: "Be modest in thy gait and lower thy voice, for the most hateful of voices is that of the ass", and Aḥiḳar's maxim: "Incline thy head downward, soften thy voice, and be courteous ... For if a house could be built by a loud voice, the ass would build many houses each day" (Harris *et alii*, *The story of Aḥiḳar*, p. lxxvi; cf. Ar. text in *ibid.*, 4, 11). Even though vv. 20-34 no longer cite Luḳmān, they partially reflect the same genre. Thus v. 27: "if all the trees on the earth were pens and the sea were replenished after it with seven seas [of ink], the words of God would not be exhausted" can be traced back to Jewish wisdom literature, where it is found in numerous variations (R. Köhler, *Und wenn der Himmel wär' Papier*, in *Orient. u. Occident*, ii, 546-59; idem, in *Ethnolog. Mitteil. aus Ungarn*, i, 311-23, 441-53; H. L. Strack and P. Billerbeck, *Kommentar zum Neuen Testament aus Talmud und Midrasch*, Munich 1956, ii, 587). However, this verse is later than the rest of the sūra and was revealed in Medina during a dispute with the Jews. Its inclusion indicates that it was considered appropriate to the general tone of the sura.

Once the Ḳurʾān had consecrated Luḳmān as the wise utterer of proverbs, everything that was thought pious or sensible could be attributed to him. Wahb b. Munabbih is credited with saying that he had read 10,000 chapters (*bāb*) of Luḳmān's wisdom (Ibn Ḳutayba, *K. al-Maʿārif*, ed. Wüstenfeld, Göttingen 1850, 27). The Arabic collections of proverbs (notably that of al-Maydānī) attribute much to Luḳmān (see Basset, *op. cit.*, pp. xliv-liv). Al-T͟haʿlabī devotes a chapter of his *Ḳiṣaṣ al-anbiyāʾ* (Būlāḳ 1286/1869, 275-7) to the wisdom of Luḳmān. Many sayings seems to link up with the Sūra of Luḳmān. v. 14 advises reverence for parents, but warns against being led astray by them to worship false gods. Al-T͟haʿlabī's authority makes Luḳmān say: "Be amenable to your friends, but never so far as to act against God's laws". There is much that is reminiscent of Aḥiḳar. For example, Luḳmān teaches: "A father's beating his son is like water for a crop." The parallel maxim in Aḥiḳar states: "Spare not thy son, for strokes of the rod are to a boy like dung to the garden." Luḳmān says: "When thou seest people who remember God, join them; if thou hast knowledge, it will be useful to you with them, and they will increase it; if thou hast none, they will teach thee; and when thou seest people who do not remember God, do not join them; for if thou hast knowledge, it will not avail thee with them, and if thou art ignorant they will increase your ignorance".

Aḥiḳar says: "Join the wise man, then thou wilt become as wise as he, but join not the brawler and babbler, lest thou become associated with him". Luḳmān gives excellent advice for one going on a journey, and also adds that he should be armed. So too does Aḥiḳar. Al-Maydānī (*Amthāl*, i, 97) attributes to Luḳmān the dictum: "Consult the physician before thou fallest ill!" This corresponds to the advice of Ben Sīra: "Honour the physician before thou hast need of him" (*Ecclesiasticus*, xxxiii, 1).

It may be that many of these proverbs that belong to the general treasury of Near Eastern wisdom literature had already begun to penetrate into the Arabian Peninsula in the Djāhilī period. The Christian Arab poet ʿAdī b. Zayd [*q.v.*] of al-Ḥīra knew of Aḥiḳar, whom he calls al-Ḥayḳār (see Nöldeke, *Untersuchungen zum Achiqar-Roman*, 25; also Goitein, *The present-day Arabic proverb*, in idem, *Studies*, 371, 376 ff.). Already at this early time, the dicta of foreign sages may have begun to accrue to the indigenous Luḳmān al-Ḥakīm.

Muslim legend is fond of making the sages and wise men of the past into prophets. But since the Ḳurʾān merely says that Luḳmān received wisdom from God, all of the traditional scholars with the sole exception of ʿIkrima agree that he was not a prophet (al-Thaʿlabī, *Ḳiṣaṣ al-anbiyāʾ*, 275). Nevertheless, he receives mention in most of books of the *ḳiṣaṣ al-anbiyāʾ* genre [*q.v.*]. Most accounts tell that God offered Luḳmān the choice between becoming a prophet or a sage, and that he chose the latter. He even becomes vizier to King David, who tells him: "Blessed art thou, O Luḳmān. You have been given wisdom and spared tribulation, while David has been given authority and has suffered trials and rebellion" (*ibid.*). Most of the traditions give him a biblical genealogy connected variously with Abraham, Job and even Balaam (see 4. below). He is said to have lived down to the time of the prophet Jonah. He is also called judge of the Jews (*ibid.*, 275, citing al-Wāḳidī). Some accounts make Luḳmān the author of a book. Supposedly, Muḥammad was shown the scroll (*madjalla*) of Luḳmān and asked if the book in his possession was comparable to it, to which the Prophet replies: "These are indeed fine words, but what I have is better, namely the Ḳurʾān revealed by God" (Ibn Hishām, *Sīra*, Cairo 1375/1955, i, 427; also al-Ṭabarī, i, 1208).

3. Luḳmān the writer of fables. At some time during the Middle Ages, Luḳmān came to be regarded as the author of fables as well. This is perhaps due in part to the fact that *amthāl* means both proverbs and fables in Arabic. Luḳmān thus became the Aesop of the Arabs. Much was transferred to Luḳmān that was told in Europe of Aesop. The tendencies to this can be traced quite early. The Ḳurʾānic commentators already relate traditions that he was a "thick-lipped, flat-footed black slave" of Ethiopian or Nubian origin (al-Ṭabarī, *Tafsīr*, Būlāḳ 1328/1910, xxi, 43). He is also said to have been an Egyptian, a carpenter, a shepherd, and to have had deformed legs. These features are obviously modelled on the story of Aesop. So too are several of the anecdotes about Luḳmān. For example, Luḳmān's master orders him to butcher a sheep and set the choicest parts before him. Luḳmān gives him the tongue and the heart. His master then orders him to slaughter another sheep and bring him the worst parts. Once again Luḳmān sets a heart and a tongue before him, for there is nothing better than a good tongue and a good heart and nothing worse than evil ones (in Maximus Planudes, *Vita Aesopi*, only the tongue is mentioned and not the heart; see Eberhardt, *Fabulae Romanenses Graece conscriptae*, Leipzig 1872, 259). On another occasion, Luḳmān's fellow-slaves eat their master's figs and accuse Luḳmān. At Luḳmān's suggestion the master makes them all drink warm water. Luḳmān vomits only water, the other slaves figs and water. Once, Luḳmān's master in his cups had wagered he would drink up the sea. Sobered, he asks Luḳmān's advice. The latter demands of those who had taken up the wager that they should first dam up all the rivers flowing into the sea, as his master had promised to drink up the sea only but not its tributaries. This last motif is widely disseminated in folk tales of the type of the Emperor and the Abbot (Aarne-Thomson Type no. 922; the folktale and its parallels are discussed at length in W. Anderson, *Kaiser und Abt*, FCC no. 42, Helsinki 1923, especially p. 139, where reference is made to Luḳmān; also Chauvin, *Bibliographie*, viii, 60-2). These anecdotes are also found in the biography of Aesop by the 14th century monk Planudes, who drew upon older material. The story of the wager to drink the sea is known as early as Plutarch's *Dinner of the seven wise men* (Plutarch, *Moralia*, 151B-E) and the Midrash (*Leviticus Rabba*, 33).

The older Arabic literature does not know fables of Luḳmān. They first appear in the later Middle Ages. The Paris manuscript published by J. Derenbourg is dated 1299 and is from Christian circles. It contains 41 fables. These fables have been published frequently and discussed in detail, especially by Derenbourg, Basset and Chauvin. Out of the 41 fables, only no. 22 has no clear parallels: the thorn bush begs the gardener to tend it so that kings may delight in its flowers and fruits; the gardener waters it twice a day, and the thorn bush overruns the whole garden. Basset (*Loqmân Berbère*, 98, n. 1) posits a possible connection with Jotham's parable in Judges, ix, 8-15, while H. Schwartzbaum has suggested a link with the talmudic proverb-fable about the thorn and the cabbage (*The Mishle Shuʿalim of Rabbi Berechiah ha-Nakdan*, Kiron 1979, p. xlvii, n. 80, citing BT *Baba Qama*, 92a-b). All the other Luḳmān fables with the exception of the thirteenth (the gnat and the bull) are found in the Syriac fables of Sophos (= Aesopus) published by J. Landsberger (*Die Fabeln des Sophos*, Posen 1859). The only fables of Luḳmān not found in the Greek Aesop are no. 9 (the gazelle in the well), no. 22 (the thornbush), no. 24 (the wasp and the bee) and No. 40 (the man and the snakes). It has further been observed that in these fables, a number of important animals that were indigenous among the Arabs, such as the ostrich, the hyena, the jackal and the camel, play no part. As these fables first appear in the later Middle Ages, and on the basis of other evidence, there can be no doubt that we have here a translation and adaptation of the Syriac version of Aesop originating in Christian circles in Mamlûk Syria.

4. Luḳmān and related legendary figures. Luḳmān is a composite, and hence a many-sided figure: he is a *muʿammar*, hero, sage, maker of proverbs and author of fables. It is no wonder then that he has often been compared and identified with other legendary heroes, such as Prometheus, Alkmaion, Lucian and Solomon. Muḥammad b. ʿAlī al-Zawzanī makes Luḳmān the teacher of Empedocles (*Taʾrīkh al-Ḥukamāʾ*, in M. Amari, *Biblioteca Arabo-Sicula*, Leipzig 1857, 614). Three of these equations deserve closer examination: (1) with Balaam, (2) with Aḥiḳar

and (3) with Aesop. The identification with Balaam is old. Al-Thaʿalabī and al-Bayḍāwī (although not al-Ṭabarī apparently) give the following genealogy: Luḳmān b. Baʿūr b. Nāḥūr b. Tārikh. It would seem that some Muslim exegetes sought for something corresponding to Luḳmān in the Bible. They found this in Balaam, as the roots *b-l-ʿ* and *l-ḳ-m* both mean "to swallow". This identification may have been reinforced by the talmudic tradition that Balaam (and also Job) was one of the seven gentile prophets who preached to the nations of the world (BT *Baba Batra*, 15b). This became a Muslim tradition which entered the Hebrew *Mishlē Sendebar*, where Luḳmān is one of the seven wise teachers of the king's son (ed. and tr. M. Epstein, Philadelphia 1967, 54-5), and also the *Disciplina clericalis* of the Spanish Jewish apostate Petrus Alfonsi (ed. A. Hilka and W. Söderhjelm, Heidelberg 1911, 3), where it specifically states: "Balaam qui lingua arabica vocatur Lucaman". It is clear that for Muḥammad and his contemporaries, there was no confusion between Luḳmān and Balaam. Neither is there any confusion in al-Ṭabarī, who does not make Luḳmān the son of Beor and who relates the story of Balʿam b. Bāʿūr in its proper place and with the correct details (al-Ṭabarī, i, 508-10). On the other hand, al-Thaʿlabī makes Luḳmān Beor's son, while at the same time devoting a full narrative to Bilʿām b. Bāʿūrā (*Ḳiṣaṣ al-anbiyāʾ*, 186-9). Al-Thaʿlabī and others like him were probably aware of the inconsistency, but wished to connect Luḳmān with the Bible at any cost. Horovitz has suggested that perhaps early Muslim traditionalists' Jewish informants connected Luḳmān with the Edomite king Bela son of Beor in Gen. xxxvi, 32 (*Jewish proper names and derivatives in the Koran*, in *HUCA*, ii [1925], 173 f.), and that this was the source of the confusion.

Luḳmān's similarity to Aḥiḳar was also noticed long ago, but it was only in the early 20th century that the identification found a vigorous champion in Rendel Harris, who devotes ch. vii of his *Story of Aḥiḳar* to it. He bases his identification on the agreement of Sūra XXXI, 18, with Aḥiḳar's warning about the voice of the ass, the formulaic "O my son" in both, and the Arab hypotheses which compare Luḳmān with other figures in legend and history, notably to the relationship of Luḳmān, Aḥiḳar and Aesop. The arguments, however, are not convincing. The Aḥiḳar legend was known in the Arab world, and a considerable number of Arabic and Karshūnī manuscripts have survived. Many of the aphorisms attributed to Aḥiḳar, like those attributed to Luḳmān, were part of the common stock of Near Eastern lore and may be found in the Bible, the Apocrypha and elsewhere. The use of the introductory formula "O my son" was standard in admonitory literature of this sort, and is found in *Proverbs* and *Ben Sira*, to mention only the most outstanding examples.

Any real relation between the personalities of Luḳmān and Aḥiḳar comes through Aesop. The story of Aesop shows originally a close relationship to that of Aḥiḳar. The later legend of Luḳmān has borrowed much of the story of Aesop and thus become obliquely like the Aḥiḳar story, but in reality Luḳmān is not directly connected with Aḥiḳar but with Aesop.

5. **Luḳmān in Persian and Turkish literature and lore.** Luḳmān was a fairly popular figure in Persian literature. A lengthy chapter is devoted to him in the 5th/11th-century Persian *Ḳiṣaṣ al-anbiyāʾ* of al-Nīsābūrī (ed. Ḥ. Yaghmāʾī, Tehran 1340/1961, 333-8), which contains anecdotes found in the Arabic *ḳiṣaṣ* as well as some new material. Rūmī devotes several stories to Luḳmān in the *Mathnawī*. In addition to the well-known anecdote of Luḳmān's innocence proven by drinking warm water (*Mathnawī*, ed. Nicholson, GMS iv/1, London 1925, 220-1), Luḳmān appears as an idealised ascetic who is a pure slave (*banda-yi pāk*) to his earthly and heavenly masters and thus is master of himself and free from sensual passion (*khʷādja būd wa az hawā āzād būd*). In this story, Luḳmān is the true master and his master the slave. He exchanges clothes and roles with Luḳmān when they travel. He would gladly set him free, but knows that Luḳmān has found true freedom in servitude (*ibid.*, 326-9). In another anecdote, Luḳmān's master will only eat food from which Luḳmān has partaken and is enraptured even with the scraps. One day upon receiving a gift of a melon, he gives Luḳmān slice after slice. The latter eats it as if it were honey. When the master himself tastes the final slice his mouth is blistered by the sourness. He asks Luḳmān how he could eat such poison. Luḳmān replies that he had received such bounty from him that he could not do otherwise. The love of the giver makes the bitter sweet (*ibid.*, 329-32). Saʿdī relates a story in which Luḳmān is once again an idealised ascetic in the Persian mould. By mistake, he is placed into cruel slavery for a year, bearing all in silence. When the mistake is realised, he harbours no grudge and says that he has learned compassion from the experience (*Būstān*, in *Kulliyyāt-i Saʿdī*, ed. M. ʿA. Farūghī, Teheran 1964, 328).

Luḳmān was known to the Turks from both Arabic and Persian literature. In addition to his standard roles, he also appears in Turkish folklore as an Arab physician by extension of his title *ḥakīm* (see W. Eberhard and P. N. Boratav, *Typen türkischer Volksmärchen*, Wiesbaden 1953, 346). In one tale, Luḳmān teaches the adventurer Meḥmed the Mad how to cure the wife and daughter of the king and the wife of the grand vizier, all three of whom had grown horns (W. S. Walker and A. E. Uysal, *Tales alive in Turkey*, Cambridge, Mass. 1966, 33).

Leroy, *Vie, préceptes et testament de Lokman*, in *ROC*, xiv (1909), 225-55, where some very important texts are given; H. Schwartzbaum, *Jewish and World folklore*, Berlin 1968, contains many references and parallels to Lukman; H. Halm, *Kosmologie und Heilslehre der frühen Ismāʿīliya*, Wiesbaden 1978, 34 ff., for Luḳmān's place in the esoteric doctrines of the Seveners. Still very useful for the fables of Luḳmān and their many relationships is V. Chauvin, *Bibliographie des ouvrages arabes*, Liège 1892-1922, iii, 1-82. For Aḥiḳar, see T. Nöldeke, *Untersuchungen zum Achiqar-Roman*, in *AGW Gött.*, Phil.-hist. Kl., N.F. xiv/4, Berlin 1913; F. C. Conybeare, J. R. Harris and A. S. Lewis, *The Story of Aḥiḳar*[2], Cambridge 1913; R. H. Charles (ed.), *The Apocrypha and Pseudepigrapha of the Old Testament*, Oxford 1913, 715-84.

(B. Heller - [N. A. Stillman])

LUḲMĀN b. SAYYID ḤUSAYN al-ʿĀshūrī al-Ḥusaynī al-Urmawī originated from Urmiya in western Persia. It is not known when he, or perhaps already his family before him, migrated to the Ottoman empire. Nor do we know much about his studies and career. He was apparently a protégé of the Grand Vizier Meḥmed Sokullu (d. 987/1579) and of the influential Khōdja Saʿd al-Dīn [*q.v.*] whom he

praised as his benefactor in one of his works (Rieu, *Catalogue of the Turkish manuscripts in the British Museum*, 53b, and H. Sohrweide in *Der Islam*, xlvi [1970], 292). In 1569 Selīm II appointed him as *Shāhnāmedji* (official historian-panegyrist; for this office, see Babinger, 163-4); as such he was the successor of Eflāṭūn Shīrwānī and Fetḥullāh ʿĀrif. In his works, Luḳmān gives two different dates for this appointment: Shawwāl 976/March 1569 (N. ʿĀṣim, in *TOEM*, 430) and the end of Muḥarram 977/middle of July 1569 (A. Tewḥīd, in *TOEM*, 107, and Rieu, *Catalogue*, 53b; see also Babinger, 164-5). To this office was attached a *ziʿāmet* which yielded yearly between 30,000 and 34,000 *aḳčes* (*TOEM*, 430-1). As *Shāhnāmedji*, Luḳmān was mainly active during the reign of Murād III (982-1003/1574-95); he is said to have been deposed soon after the latter's death and appointed as *Defterdār* [*q.v.*]. He died in 1010/1601-2 (*ʿOthmanlī müʾellifleri*, iii, 136) or later (*TOEM*, 432; Babinger, 165).

As was the case with his predecessors, Luḳmān's literary gifts were under discussion. It is noteworthy that contemporary biographers of poets and learned men do not consecrate a section to him in their works. The well-known historian ʿĀlī (d. 1007/1599), on the other hand, criticises him caustically (*TOEM*, 431 and Sohrweide, *op. cit.*, 290-2; but see Rieu, *Catalogue*, 53b). Until now, Luḳmān's extensive literary production taken has been into account mainly by art historians because of the costly presentation of several manuscripts and because of the miniatures by well-known painters which they contain. The pictures are a culminating point of historical Ottoman miniature-painting (I. Stchoukine, *La peinture turque*, I, Paris 1966, and N. Atasoy and F. Çağman, *Turkish miniature painting*, Istanbul 1974). From a literary and historical point of view, Luḳmān's works have hardly been evaluated; because of his office as court poet, whose task was to extol the ruling dynasty, the choice of his themes was limited. Inevitably, many themes had to be repeated and were partly treated in the various works almost at the same time.

Luḳmān's works, written in Persian and Turkish, in both poetry and prose, are the following: 1. *Ẓafar-nāma*, known as the *History of Sulṭān Sulaymān*, deals with the final years of the sultan (1561-6). Brought to an end in 986/1578-9, it is an epic Persian poem, written in the same metre (*mutaḳārib*) as Firdawsī's famous work. It was described by V. Minorsky, *The Chester Beatty Library. A Catalogue of the Turkish Manuscripts and Miniatures*, Dublin 1958, no. 413. 2. *Ḳiyāfat al-insāniyya fī shamāʾil al-ʿothmāniyya*, also known as *Shamāʾil-i ʿothmāniyya* or *Shamāʾil-nāma-yi Āl-i ʿOthmān*, describes the first twelve Ottoman sultans and gives, besides their portraits, short pieces of information on their reigns. It was probably finished in 987/1579-80 (Atasoy and Çağman, *op. cit.*, 39). Rieu, *Catalogue*, 54a, gives the year 997, but this is likely to be an error since the Munich manuscript, which he quotes as evidence, contains another of Luḳmān's works. 3. *Shāh-nāma-yi Salīm Khān*, an epic Persian poem on the reign of Selīm II (974-82/1566-74). According to the colophon of the illuminated manuscript in Topkapı Sarayı Müzesi, which was prepared for the benefit of the sultan, the poem was finished in Dhu 'l-Ḥidjdja 988/January 1581 (Atasoy and Çağman, *op. cit.*, 34). The signature of the manuscript must read: A. 3595, Table 16 and p. 80, 27, see also Karatay, *Farsça yazmalar kataloğu*, no. 788, where no date of the work or of the manuscript is indicated. 4. *Hunar-nāma*, a Turkish work in prose in two volumes. The first volume, composed between 987/1579 and 992/1584, describes the appearance, the qualities and the virtues of the Ottoman sultans as far as Selīm I (918-26/1512-20), together with the most important events of their reign. The second volume was finished in 996/1587-8 and deals with the reign of Sultan Süleymān (926-74/1520-66). The work is written in simple Turkish. Originally, two other volumes were planned on Selīm II and Murād III, see TOEM, 103-11, and further, Karatay, *Türkçe yazmalar kataloğu*, no. 688-9; Atasoy and Çağman, *op. cit.*, 44-6. 5. *Shāhanshāh-nāma*, an epic poem in Persian on the reign of Murād III in two volumes. The first volume comprises the period until 985/1577 or 989/1581. In the *Hunar-nāma*, Luḳmān says that he presented the work, consequently this first volume, to the sultan in the middle of Ramaḍān 985/ end of November 1577 (*TOEM*, 107-8), probably for it to be checked beforehand, as was usual in such cases. Atasoy and Çağman, *op. cit.*, 36, 50, take the year 989/1581 from the colophon of the manuscript. Karatay, *Farsça yazm.*, no. 792, attributes the first volume not to Luḳmān, but to an unknown predecessor in the office named ʿAlāʾ al-Dīn Manṣūr Shīrāzī. However, only the above-mentioned Eflāṭūn and ʿĀrif are known as Luḳmān's predecessors. Volume ii deals with the period 990/1582 to 996/1588. The text was finished in 1001/1592-3, but since the making and the finishing off of the manuscript stretched out until 1006/1597-8, the finished work could only be presented to Meḥemmed III (1003-12/1595-1603). 6. *Zubdat al-tawārikh*, a universal history in Turkish prose, arranged genealogically, in four sections: 1. The creation of the world. 2. the Prophets. 3. the life of Muḥammad, the caliphs and the Islamic dynasties. 4. the principalities in Anatolia and the Ottomans until the year 991/1583. The work was possibly finished after the death of Murād III (1003/1595), whom the Dublin manuscript mentions as having died. Minorsky, *op. cit.*, no. 414, suggested *Nasab-nāma* as another possible title. Karatay, *Türkçe yazm.*, no. 678, calls it *Silsila-nāma*; the *Zubdat* which he ascribes to Luḳmān in no. 733 seems to be another work. 7. *Mudjmal al-ṭūmār*, a history of the Ottoman dynasty until 992/1584, in Turkish prose. Only the sultans Süleymān, Selīm II and Murād III are dealt with in detail, and the two last mentioned in a purely annalistic way; see Rieu, *op. cit.*, 54-5. 8. *Shāh-nāma-yi Āl-i ʿOthmān*, a rhymed chronicle in Turkish of the Ottoman sultans, covering the beginning of the dynasty until 999/1590-1, and written in the same year; see Rieu, *op. cit.*, 186-7.

Besides these principal works, Luḳmān is said to have left some other writings or translations (*TOEM*, 107; Babinger, 165). The *Sūr-nāma*, famous for its illustrations and composed by an unknown *Dīwān* secretary, was erroneously ascribed to Luḳmān by R. Ettinghausen (*Türkische Miniaturen vom 13. bis 18. Jahrhundert*, UNESCO Taschenbücher der Kunst, Tafel-Verzeichnis 18-21), see Karatay, *Türkçe yazm.*, no. 703; Atasoy and Çağman 39-42.

Bibliography: given in the text.

(H. Sohrweide)

LUḲMĀNDJI b. Ḥabīb Allāh b. Mullā Ḳāḍīkhān Rāmpūrī, was a great Mustaʿlī-Ṭayyibī Ismāʿīlī savant of India and was given the title *bāb al ʿilm* ("the gate of knowledge") by the thirty-ninth *dāʿī*, Ibrāhīm Wadjīh al-Dīn. He was the teacher of Ismāʿīl b. ʿAbd al-Rasūl al-Madjdūʿ, the author of the *Fihrist*. He died on 8

Djumādā II 1173/27 January 1760. His works, very few of which seem to have been preserved, deal with the history of the *daʿwa* in India, biographies of *daʿwa* dignitaries, Ismāʿīlī doctrine, and the refutation of dissident groups.

His son Walībhāʾī (or Walī Muḥammad) was also a distinguished scholar, while his grandson Hibat Allāh, the mentor of the forty-third *dāʿī*, ʿAbd-i ʿAlī Sayf al-Dīn, was considered one of two learned men of his time, the other being ʿAlī b. Saʿīd al-Hamdānī. For a while, Hibat Allāh supported the son of al-Madjdūʿ, who had claimed to be *al-ḥudjdja al-laylī* of the hidden *imām* with whom he was in contact. In 1201/1786-7 he was honoured in the *daʿwa* by the forty-second *dāʿī*, Yūsuf Nadjm al-Dīn. He died probably after 1214/1799-1800.

Poonawala, *Biobibliography of Ismāʿīlī literature*, Malibu, Calif. 1977, 201-4, 206-7, 210-11. (I. Poonawala)

LÜLEBURGAZ (in old texts variously written as Birghos, Bürghūs, Borghūs, Čatal Burghaz, etc.; the form "Lüleburgaz" is of recent date and related to the industry of pipe-making), a town of more than 25,000 inhabitants in Turkish Thrace and a minor administrative and agricultural centre on the highway from Edirne to Istanbul, 75 km. south-east of Edirne. It is situated on level ground in a wide valley on the southern bank of a tributary of the Ergene River. In the past it was one of the largest caravan halting-places on the Belgrade-Edirne-Istanbul highway, the chief artery of Ottoman Europe. In addition, it was an administrative centre; in the 15th century, a *nāḥiye*, and from the 16th century, the seat of a *ḳāḍī* in the *liwā* of the Pasha. Ḥādjdjī Khalīfa (*Rumeli und Bosna*, Vienna 1812, 20) mentions it as a *ḳaḍāʾ* of the *sandjaḳ* of Vize, Ewliyā Čelebi as belonging to Kïrḳ kilise. In the 18th century, it belonged (once again?) to Vize. In the second half of the last century, it belonged at first to the *sandjaḳ* of Tekfūrdaghï (Tekirdağ), in which Vize was incorporated (*Sāl-nāmes* of the Edirne *wilāyet* of 1281-3/1864-76). Later, it was incorporated in the *sandjaḳ* of Kïrḳ kilise (cf. *Sāl-nāme* for Edirne 1310/1892-3). Today it is a part of the *il* (*vilâyet*) of Kırklareli.

Lüleburgaz goes back to a Byzantine stronghold, Arkadiopolis (Tomaschek, *Hämus-Halbinsel*, 324; Jireček, *Heerstrasse*, 133). The name Burgaz is a corruption of the Greek Pyrgos "tower", thus giving a hint of the size of this castle.

The Ottoman chroniclers (Oruč, ʿĀshïḳ-pasha-zāde, Anonymus-Giese, Neshrī, Saʿd al-Dīn) unanimously place its conquest between 759/1358 and 761/1360, and all of them noted that the castle was deserted when the Ottoman *ghāzī*s took it. They burnt it down, according to the first three sources, demolished it from one side to the other according to Saʿd al-Dīn, and levelled it according to Neshrī. When Bertrandon de la Broquière passed through it in 1433, he noted "a town which they call Pirgasi which has also torn-down walls and where no others reside but Turks". The accounts of 16th century Western and Ottoman travellers, as well as the extant monuments, allow us to reconstruct the resurrection of Lüleburgaz. Arnold van Harff, passing through it in 1499, is still silent about it. De Schepper called it in 1533 already "la ville de Bosgais", but had to pass the night in a local school. By then it must have been a small borough with a Friday mosque and a *ḥammām*. The latter is mentioned by Meḥmed-i ʿĀshïḳ. The mosque, the Eski Djāmiʿ, or Ḳāḍī Djāmiʿi, is still extant and situated near the bridge. It is a work of the early classical phase of Ottoman architecture, from the time of Bāyezīd II or from a few years later. When Hans Dernschwam (ed. Babinger, 242) passed through "Borgas" in 1555, he still saw the gate and walls of the old castle and noted a stone bridge over the river; but he still had to spend the night in Ḳarïshtïran, a settlement 10 km. to the south-east of Lüleburgaz, which possessed three caravanserais. A few years after Dernschwam's visit, the Beglerbegi of Rumeli and later Grand Vizier, Ṣoḳollu Meḥmed Pasha, laid the foundations for the total reconstruction of the town and its transformation into a caravan halting-place of the first order. A new stop between Ḳarïshtïran and Baba eski was a necessity because the distance between the two was far too great (43 km.) to cover in one day. In 967/1599-60 he completed his exquisite domed mosque and vast *medrese* with 24 student cells. A long inscription, still preserved, gives the date in the form of a chronogram. Seven years later he completed the erection of two spacious caravanserais, with separate stables for camels and horses, separate rooms for female travellers and state officials, an *ʿimāret*, a double *ḥammām*, a school and street lined with 65 stone-vaulted shops between the *medrese* and the caravanserais. The whole complex covers an area of 170 × 150 metres and is one of the most harmonious civic centres ever erected by the Ottomans. The works were designed by the famous architect Sinān and appear in various places on the lists of his works drawn up by his friends and contemporaries. The date of completion of the two caravanserais is given in the extant inscription in the form of a chronogram, whose numerical value gives 973/1565-6, the first year of Ṣoḳollu's Grand Vizierate. The chronogram also found its way to the work of Ewliyā Čelebī (iii, 301, of the printed edition). This date is further corroborated by the notes of the Italian traveller Marc Antonio Pigafetta, who saw the workmen still active in 1567. Since that time a host of travellers have mentioned the buildings, either with a few words or with a detailed description.

Melchior Besolt called "Pregasch" or "Burgasch" in 1584 a "stättlin" and described the buildings in detail. He mentions the "fine new stone bridge", also built by "Mechemed Basscha", who likewise laid out a stone paved road half-a-mile long. Meḥmed-i ʿĀshïḳ remained some time in "Birghos" in 986/1578-9 and 998/90, and called it "a small town without walls". He mentions a ruined and uninhabited castle and noted that the Grand Vizier Meḥmed Pasha "constructed in Birghus a pleasant mosque, having within the circuit of its enclosure a lofty *medrese* and for the overnight stay of the sons of the road a large *ribāṭ* and a public kitchen. It was ordained that for all guests a plate of food from the kitchen was placed before every fireplace of this *ribāṭ*. A *ḥammām* and a small market street were built next to the mosque. In Birghos is further an unpretentious old *ḥammām*. The environs of Birghos comprise well-cultivated land which yields excellent grain". The account of Meḥmed-i ʿĀshïk passed in a shortened form into the work of Ḥadjdjī Khalīfa, see *Rumeli und Bosna*. Reinhold Lubenau, travelling in 1587-8, called Lüleburgaz a "feiner Marckt", and adds the detail that the buildings were partly situated in "schoner, groser Gartten". All buildings were covered with lead. Lubenau found the mosque especially beautiful,

and adds that all travellers, Turk, Jew or Christian, received three times a day a dish of rice and mutton, this for three days in succession. The most detailed description of this Turkish "Grand Hotel" is from Ewliyā Čelebi, who visited the town in 1061/1651. It was then a *ḳāḍīlīḳ* in the *sandjaḳ* of Ḳirḳ kilise; a township of 700 houses, divided into six *maḥalles*. It had five places of prayer, of which three were Friday mosques, 300 shops and seven *mektebs*. All travellers, regardless of their religion, received twice daily a dish of soup, a loaf of bread, a candle and fodder for their horses. On Fridays they got stewed rice with meat and onions and sweetened saffron rice (*zerde*). A number of other travellers mention the buildings and the free distribution of food, but add hardly any new details.

Lüleburgaz continued to function as a caravan halt throughout the 17th and 18th centuries, but it seems to have remained a relatively small place. This period of prosperity ended abruptly in 1214/1799-1800 when a gang of *Krdžalis* under the robber baron Ḳara Feyḍ captured it and burnt it down, together with the two caravanserais. When, under Maḥmūd II, order was restored in Thrace, the caravanserais had to be rebuilt from their foundations. An inscription with a long eulogy on the good works of Maḥmūd, placed above the old inscription of 967/1559-60, still reminds us of this work. The vaulted shopping street and the two caravanserais, as they appeared just before the fire, are depicted in two very accurate drawings by Luigi Mayer. Lüleburgaz remained a small place throughout the 19th century. The *Sāl-nāme* of the Edirne *wilāyet* of 1287/1870-1 calls it the centre of a *ḳaḍā'* with 33 villages, and with 2,056 male Muslim inhabitants and 3,429 male non-Muslim inhabitants. The town itself numbered according to the *Sāl-nāme* of 1291/1874-5, 984 houses with 834 male Muslim inhabitants and 1,528 male non-Muslim inhabitants. There were three Friday mosques, two *mesdjids*, one church, one synagogue, 282 shops and one *ḥammām*. The size and shape of the town had thus remained basically the same as in the time of Ewliyā Čelebi.

With the Russo-Turkish war of 1877-8, all territories beyond Edirne were lost and the caravan road suffered an eclipse. The two caravanserais of Lüleburgaz and the *ʿimāret* were taken by the army and transformed into a barracks for the cavalry and the fourth battery of gunners. The old Ḳāḍī Djāmiʿi was turned into an ammunition store. The *Sāl-nāme* of 1310/1892-3 gives the same number of buildings in the town, but adds the name of two *tekkes*, one of the Gülshaniyya [see GULSHANĪ, IBRĀHĪM] and one of the Naḳshbandiyya [*q.v.*] order. This source also gives detailed information about the composition of the population of the district of Lüleburgaz. The total number of inhabitants had augmented considerably, from about 10,000 in 1870 to 15,313 in 1893. The Muslim population had grown faster than the non-Muslim element. The Muslims now numbered 7,079 males and females altogether, and there were 6,450 Greeks (Rūm), 720 Bulgars, 220 Jews, 662 Gypsies (largely Muslim), and 38 Armenians, besides some non-permanent residents, also largely Muslim.

During the First Balkan War, Lüleburgaz was occupied by the Bulgarian army, but the Turks took it back in 1913. From 1918 till 1923 the town and all of Thrace were occupied by the Greeks. After Thrace had returned to Turkey and the Greek population had been exchanged for Turks from the now Greek Macedonia by the provisions of the Treaty of Lausanne, Lüleburgaz recovered slowly from the blows which it had received. The town was to profit greatly from the decay of Edirne in the forties and fifties, and did not cease to develop when Edirne recovered. In 1958 Lüleburgaz numbered 13,000 inhabitants; today this has passed the 25,000 mark. It is at present a prosperous and relatively well-built town, almost entirely Muslim Turkish. The two caravanserais and the *ʿimāret* of Ṣoḳollu Meḥmed Pasha disappeared in the troubled times around World War I; but the mosque, *medrese*, *ḥammām*, shopping street and *mekteb* are still standing, and rank among the best of all extant monuments of Muslim architecture in European Turkey outside Edirne.

LŪLĪ, one of the names for gipsies in Persia; parallel forms are: in Persian, *lūrī*, *lōrī* (*Farhang-i Djahāngīrī*); in Balūčī, *lōṛī* (Denys Bray, *Census of Baluchistan*, 1911, iv, 143, gives the popular etymology from *lōṛ* = "lot, share").

The name *lūlī* is first found in a legend relating to the reign of Bahrām Gūr (420-38 A.D.). At the request of this Sāsānid King, who wished to amuse his subjects, the Indian king Shangal (?) sent to Persia 4,000 (12,000) Indian musicians. Ḥamza (350/961), ed. Berlin-Kaviani, 38, calls them al-Zuṭṭ [*q.v.*], Firdawsī (Mohl, vi, 76-7), Lūriyān; Thaʿālibī, *Ghurar al-siyar* (*ca.* 429/1037), ed. Zotenberg, 567, says that from them are descended the black Lūrī (*al-Lūriyūn al-sūdān*), skilful players of the flute: the *Mudjmal al-tawārīkh* (*ca.* 520/1126), tr. Mohl, in *JA*, xii (1841),

515, 534, confirms this origin of the Lūrī. The Lūlī (plur. *Lūliyān*) are often mentioned by Persian poets. Manūčihrī (Dāmghān-Djurdjān-Ghaznī, 5th/11th century), Djamāl al-Dīn ʿAbd al-Razzāḳ (d. 588/1192, Iṣfāhān), Kamāl Ismāʿīl (d. 635/1237, Iṣfāhān), Ḥāfiẓ (d. 791/1389, Shīrāz) say that the *lūlīs* are "black" (like night), petulant (*shūkh*) and elegant (*shangūl*), that they play the flute, that their way of living (*bunagāh* "baggage") is irregular. The Persian dictionaries explain *lūrī/lūlī* as "shameless, gay, sweet, musician, woman of light morals", etc.; cf. Vullers (the quotation from Amīr Khusraw (d. in 725/1325 in India), s.v. Lur, refers rather to the inhabitants of Luristān).

The origin of the name *lūlī* has not yet been investigated. The term seems to be applied to the inhabitants of the town of Sind which the Arab authors call Arūr or al-Rūr (cf. Aras > al-Rās; Alān > al-Lān). This town has been conquered by Muḥammad b. al-Ḳāsim before 95/714 (al-Balādhurī, 439, 440, 445). According to al-Bīrūnī, *India*, ed. Sachau, 100, 130, the town of Arūr (Aror) lay 30 *farsakhs* south-west of Multān and 20 *farsakhs* above al-Manṣūra. In Elliot and Dowson, *History of India*, London 1867, i, 61, 363, the town is called Alor. This town, the old capital of the Hindu *rādjās* of Sind, is now in ruins (on the Indus, in the *tāluka* of Rohri in the district of Sukkur; cf. *Imperial gazetteer of India*, Oxford 1908, vi, 4 and xxi, 308: Aror and Rohri). The change of *Arōrī/Rūrī into Lōrī/Lūlī is readily explained by the phonetic law of dissimilation of the two *r* s especially after the change from Aror (Indian) to al-Rūr (Arabic). The descendants of the Indian musicians of Bahrām Gūr (i.e. the gipsies) seem to have been called after the most important town that the Arab invaders had known, and perhaps before them, the Sāsānids. This explanation would locate quite precisely the original home of the *lūlī/lūrī*, without in any way prejudicing the ethnic relationship of this tribe.

The term *lūlī-lūrī* (unknown in Khurāsān, Ivanow 1914) is particularly found in the south-east of Persia, in Kirmān and in Balūčistān. *Lūlī* or *lūlī* is also found in Turkestan: Bābur, ed. Ilminsky, 358, 457, uses "Lūlī" in the sense of "player"; Abu 'l-Ghāzī, ed. Desmaisons, 241, 258, 276, 282, mentions in the 9th/15th century a Shaybānid prince of Marw and Ābīward, son of a Lūlī woman. Mayev, *Izvêstiya Ross. Geogr. Obshč.*, xii/4, 349, and *Geogr. Magazine* (1876), 326-30: Lūlī in Eastern Bukhārā; Grenard in Dutreuil de Rhins, *Miss. scient. dans la Haute Asie*, Paris 1898, ii, 308: Lūlī and Āghā in Chinese Turkestan; Valikhanov, *Sočineniya*, in *Zapiski Ross. Geogr. Obshč. po Etnografii*, xxix (St. Petersburg 1904), 43: Lulu (sic) and Multānī in Kāshghar. Lastly, it has been suggested that the name of the gipsy tribe in Syria, Nūrī, pl. Nawara, is derived from Lūlī (cf. Père Anastase, in *Machriq*, v [1902], tr. in *Jnal. of the Gipsy Lore Soc.* [1913-14], 298-319).

The Lorī/Lūlī gipsies (cf. the reference above to their dark skin) must be clearly distinguished from the Lur [*q.v.*] highlanders who live in the southwest of Persia, have a fair skin and speak an Iranian dialect with no trace of Indian elements. The situation is, however, slightly complicated by certain minor points. In the first place, the use of the terms Lūlī, Lurī, Lur, etc., is not always quite clear. In the confederation of Arab tribes of Fārs there is a Lur clan; Sykes, *Ten thousand miles in Persia*, 330; Rittich, *Poyêzdka v Belučistān*, in *Izv. Ross. Geogr. Obshč.* xxxiii/1 (1902), 69, speaks of a Lorī section (Persian pronunciation of Lūrī?) among the Lūlī of Kirmān. Edmonds notes the existence of a Lurī (?) clan in Luristān in the Dashēnān division of the Bayrānwand group. In Kurdistān there is a clan Lurr-i Kulāhgar [see SENNA].

Still more confusing is the fact that some Lurs follow the profession of acrobats, bear-leaders, rope-dancers (cf. Čirikov, 277). As early as the 8th/14th century, Shihāb al-Dīn Ibn Faḍl Allāh al-ʿUmarī mentions the talent of the Lurs in these directions, and in our own day we find wandering troops of Lurs as far north as Tabrīz, where there is a permanent colony of Ḳarači gipsies, professional actors and singers. It is possible that the special qualifications of the Lur and gipsy players differ somewhat; the Sūzmānī of Kurdistān (cf. SARPUL-I ZOHĀB and SENNA), who excel in singing and dancing, are not acrobats. But we must first of all wait till a special investigation settles to what precise section the wandering Lur artistes belong.

There is nothing impossible in a gipsy infiltration into Luristān. Whatever was the ethnic entity covered by the name Zuṭṭ (on the confusion of the Zuṭṭ with the Lūrī, see above: Ḥamza, Thaʿālibī) the existence of Zuṭṭ colonies in Khūzistān is known as early as the time of al-Ḥadjdjādj [*q.v.*] (cf. Hawmat al-Zuṭṭ between Arradjān and Rām-Hurmūz; the modern town of Hindiyān ["the Indians"] may have a similar origin). According to al-Balādhurī, 382, when in the second quarter of the 1st century A.H. the Zuṭṭ had apostasised from Islam, they were joined by the local Kurds, which provoked the punitive expedition of ʿAbd Allāh b. ʿĀmir b. Kurayz [*q.v.*] to Īdhadj [*q.v.*] (= Mālamīr, the future capital of Lur-i Buzurg). The alliance of the Zuṭṭ and Kurds (= Lurs [*q.v.*]) at so early a date is curious. Under al-Rūr, Yāḳūt, ii, 833, mentions two places in Sind and a small district (*nāḥiya*) under Ahwāz in Khūzistān. Schwarz, *Iran im Mittelalter*, v, 665, identifies this Rūr with the district of al-Lūr [cf. LURISTĀN]. In the light of what has been said above one might suppose the existence in al-Lūr of a very ancient Indian colony. But as our sources contain no positive confirmation of this hypothesis (according to Ibn Ḥawḳal[1], 176, the "Kurds" were predominant in al-Lūr), the questions of the origin of the name al-Rūr in Khūzistān, of the identity of this al-Rūr with al-Lūr and of the remoter origin of the name Lur must for the present be left open. In any case, even if the name Lur came from the town of al-Lūr, the origin of the name would not necessarily settle the question of the ethnic origin of this people.

As to the general question of the gipsies in Persia, their names in the provinces other than Kirmān and Balūčistān were in the early years of this century:

in Khurāsān: Ḳirshmāl (in which a fantastic popular etymology sees *ghayr-i shumār*, interpreted as "innumerable"; in Transcaucasian Turkish dialects *ḳirishmal* means "rascal"; cf. the comedies of Fatḥ ʿAlī Akhundov [see AKHUND-ZĀDA];

in Astarābād and Māzandarān: Djūgī and Gāodārī;

in Ādharbāydjān: Ḳarači (which in Čaghatay Turkish means "faithful servant, person near the *khān*", Abu 'l-Ghāzī, 145, and Bugadov, ii, 45);

in Fārs (and elsewhere): Kāoli (= Kābulī).

The names mentioned may have corresponded to slight local distinctions not yet fully known. Gobineau collected the following names of particular tribes leading a nomadic life in the north of Persia: Sanād (?), Kāsa-tarāsh, "cup-makers", Budāghī, Adenesīr [Adharnarsē?], Zargar-i Kirmānī, "goldsmiths of Kirmān", Shahriyārī (winter at Hamadān, summer

near Damāwand), Karẓī, Toʾār-ṭabīb (*dawar* + *ṭabīb* "sheep-doctor"?), Gāobāz, Bāsh-kāpān (in Turkish *bash* "head" + *ḳapan* "he who seizes"?), Gāodārī (bold hunters in Māzandarān; cf. de Morgan), Kāshī and Badjumbūn. According to Newbold, the Persian gipsies fall into two classes: Kāoli (or Ghurbatī) and Gāobāz.

As names applied to Persian gipsies in general, de Gobineau gives Beshāwān/Peshāwān (cf. the name of the Armenian and Transcaucasian gipsies, the Bosho) and Odjūlī (?). The following names have a general and neutral character: Ghurbatī, "living in a foreign land" (according to Ivanow, the Persians, who confuse *gh* and *ḳ*, see in *ḳurbati* an offensive allusion to the promiscuity (*ḳurbat*, "relationship, consanguinity") of which isolated communities in all ages have been accused; the name is sometimes transcribed *kurbati* and *kurbātī*), Fiyūdi (from the Arabic, *fuyūdj*, "courriers"), Ustākār, Āghā, Gharbāl-band "sieve-makers".

The number of gipsies in Persia was in the early years of this century estimated at 20,000 families, or 100,000 souls, of whom 5,000 families were in Ādharbādjān and 300-500 families in Kirmān (Sykes). The gipsies had an organisation of their own, at the head of which was the chief of the Shāh's runners (*shāṭir-bāshī*) under whom were the provincial deputies (*kalāntar*). In eastern Persia, the gipsies were very little different from the Persian peasantry (Sykes, Ivanow). In Khurāsān they played a considerable part in the life of the rural community as artisans, making and repairing sieves, chains, combs etc. In Astarābād, the Gāodārī were coppersmiths, carders of wool and cotton (de Morgan). Throughout Persia one sees the black tents of the nameless *īlāt* who must be gipsies. It remains to be seen also whether the Kurd tribes bearing names like Kharrāṭ ("turners"), Lurr-i Kulāhgar ("hatters") are not of gipsy origin [see SENNA]. In the towns, such as Sabzawār, Nīshāpūr and Tabrīz, the gipsies had quarters of their own. There were troops of gipsy dancers and musicians in Persia, but they did not seem to be very popular. Ouseley gives a description of the comic performances and of the marionette theatres of the Ḳaračī (Tabrīz). The dancing and singing girls of the Sūzmānī tribe in Kurdistān were often described by travellers; cf. notably: T. M. Chevalier Lycklama a Nijeholt, *Voyage en Russie, au Caucase et en Perse ... pendant les années 1866, 1867 et 1868*, Paris 1872-4, iv, 30-70; Čirikov, *Putevoi zhurnal*, 282, 299, 330; Khurshīd Efendi, *Siyāḥet-nāme-yi ḥudūd*, Russian tr., 119; cf. T. Thomson, *The Soozmanee: are they Gypsies?* in *Jnal. Gipsy Lore Soc.*, ii (1909), 275-6.

The language of the gipsies of Persia (Sykes, de Morgan, Ivanow) has taken its morphology from modern Persian; its vocabulary also is full of Persian words (cf. the lists in de Morgan); Indian elements seem to be rarer than in the Romanī of Europe; the language of Kirmān and Khurāsān (Sykes, Ivanow) contains a large number of unrecognisable elements. Longworth Dames out of 96 words in Sykes's vocabulary found 12 Indian, 4 Arabic, 28 Persian and 52 of unknown origin. He preferred to regard this dialect rather as an artificial secret jargon. Denys Bray (quoted by Ivanow) in any case confirmed the fact that the Lōrī of Balūčistān is learned by the children as a separate language ("is at any rate acquired naturally by Lōrī children, as a language for the home circle").

The Sūzmānī used Kurdish mainly. According to Čirikov, they were called Dummī, which must correspond to Dūmān (= Dōm, the name of a low caste in India, from which comes the well-known name for gipsies *Rom*). The vocabulary of the Dūmān (Baghdād, Aleppo?) as collected by Newbold, *JRAS* (1856), 303, from an informant from Altun-köprü, is full of Kurdish words: *kāwar*, "stone", *khoi*, "salt", *lāwak*, "boy". A Kurd tribe in the east of Bohtān bears the suggestive name of Sindī/Sindiyān (the "Sindīs"). According to the *Sharaf-nāma*, the chief of the Kurdikān clan (of the Zrāḳī) had married a gipsy woman. In discussing the relationship of gipsies and Kurds, it should be remembered that in 220/835 a section of the Zuṭṭ settled in Khāniḳīn, i.e. at the gates of Kurdish territory; cf. de Goeje, *Mémoire*, 30; Ṭabarī, iii, 1168.

According to Sampson, two categories of gipsy speech may be distinguished, according to the fate of the primitive Indian aspirated *mediae*: the one changes them into aspirated *tenues*, i.e. Prākrit, *bhāini* > *phen* (Armenia, Europe), the other deprives them of aspiration, *bhāinī* < *ben* (Persia, Syria, Egypt). The interest of the Persian dialects lies in the fact that Persia was the first country in which the gipsies sojourned after leaving India (probably in the Sāsānid period). In the gipsy dialects of Persia, as yet very insufficiently studied, we may expect to find traces of a rather archaic phonetic system. Ouseley, for example, found among the Ḳaračī of Tabrīz the word *behn* "sister" which must be older than *phen* or *ben* (cf. also *ghorā* in Gobineau).

Literary references to the Lūlīyān or Lūrīyān are to be found in many classical Persian authors, including Badīʿī, Muṣʿabī, Firdawsī, Manūčihrī, Ḥāfiẓ and ʿUbayd Zākānī, who variously describe them as musicians and dancers, vagabonds, thieves and prostitutes.

In modern times, the general term for the gipsies in Iran is *kawlī*, but a wide variety of names are used locally. Apart from those listed earlier, the following may be mentioned: *alwāṭ*, *ghurbatū*, *gīlānī*, *ḥarāmī*, *kulīlānī* (Zandjān), *lawand*, *tūshmāl*, *yūt* and *zangana*. No up-to-date population statistics are available, but such information as there is suggests that the figures quoted by Sykes must by now be considerably reduced. The main centres are still Fārs, Arāk and Ādharbāydjān. Dhukāʾ quotes some notes by Fīrūz Bāḳirzāda on a group of *kawlī*s settled in Kūt ʿAbd Allāh (10 km. south of Ahwāz) since the turn of the century. According to Mughdam, the *ghurbats* of the Wafs area (between Hamadān and Arāk) spend five months on the land and seven travelling (*dawra-gardī*). They do not give their daughters in marriage outside the tribe, but apparently may take non-*kawlī* wives. The main present-day occupations of the gipsies of Iran, as elsewhere, include basket-making, tinkering, singing and dancing, magic, fortune-telling and making of spells and charms.

(V. Minorsky — [L. P. Elwell-Sutton])

LUʾLUʾ (pls. *laʾāliʾ*, *laʾālī*, the pearl. The word is often used as a synonym of al-durr [*q.v.*], and the difference in meaning between the two cannot be defined with precision. With coral and amber, the pearl belongs to the organic products associated, however—as is still the case in our days—with the precious stones (*djawāhir*), and thus with the minerals (*maʿādin*). Yet the difference between the pearl and the real minerals was well-known: the former changes quickly because it is of animal origin (al-Akfānī, in Wiedemann, *Aufsätze*, i, 845). In the same way, the Jews in antiquity had considered the pearl as belonging to the minerals, but since the Tannaitic period to animal products (I. Löw, *Fauna und Mineralien der Juden*, ed. A. Scheiber, Hildesheim 1969, 227). Ibn Māsawayh, *Djawāhir*, 24 f., enumerates 27 varieties of precious stones, among which come the *luʾluʾ* as the first, the *yāḳūt* (ruby), the *zumurrud* (emerald), the *mās* (diamond), etc. Al-Bīrūnī, *Djamāhir*, 81, declares that there were "originally" (*fi 'l-aṣl*) only three precious stones, namely the *yāḳūt*, *zumurrud* and *luʾluʾ*. Elsewhere (105) he says that the *luʾluʾ* consists of two kinds of pearls, a bigger one (*durr*) and a smaller one (*murdjān*). Likewise al-Tīfāshī, *Azhār*, 242, who adds that *djawhar*, *djumān* and *shadhr* are synonyms of the pearl in general, while *durr*, *ḥabb* and *kharīda* indicate the unpierced pearl and *luʾluʾ* the pierced one. Terminology is, however, fluctuating; for further details, see the *Bibl.*

The authors mentioned above also describe in fair detail the various kinds of *luʾluʾ* according to colour (white, yellow, lead- or ivory-coloured), form (globular, oblong, olive- or turnip-shaped, conical, flattened, almond-shaped, notched), size, structure (various shells), compactness, consistency, weight and value, its changes by means of external influences (oils, all acid reagents, in particular still lemonade, and further, the heat of fire and friction against coarse objects), and finally, the places of its discovery, pearl-fishing and trade. Al-Bīrūnī, *op. cit.*, 134-7, moreover, has an interesting chapter on causes and elimination of worthlessness or faultiness of pearls. On the innermost layer of the pearl-oyster's shell, the so-called mother-of-pearl, see ṣadaf. All those qualities of the pearl have their own very specific nomenclature, based on close observation. The calculation of the specific gravity of the pearl was amazingly accurate (according to al-Khāzinī in Ullmann, *Die Natur- und Geheimwissenschaften im Islam*, Leiden 1972, 123). Even the formation of the pearl is explained correctly, namely by the infiltration of parasitic foreign bodies, bringing about growths which then solidify into pearls. At the same time, however, the curious fable held currency according to which pearls originate in the pearl-oyster from rain: every year the Southern Sea—the Indian Ocean—is agitated by heavy storms which force the pearl-oyster to emerge at the surface, where its two valves open and take in the rain. After that, the oyster snaps the two halves closed and dives to the bottom of the sea; from the rain-water, a precious stone grows like an embryo in the womb (al-Tamīmī, *Murshid*, 35-8; *Das Steinbuch aus der Kosmographie des ... al-Ḳazwīnī*, tr. J. Ruska, *Beilage zum Jahresbericht 1895/96 der prov. Oberrealschule Heidelberg*, 21 f., s.v. *durr*), or, according to the majority of the scientists, like the egg in oviparous animals (al-Akfānī, *Nukhab al-dhakhāʾir fī aḥwāl al-djawāhir*, in Wiedemann, *Aufsätze*, i, 843).

For the finding-places of pearls and their recovery, see al-durr. Plentiful material is also to be found in the extensive lemma *luʾluʾ* in *WKAS*, ii, 45-50, containing a well-arranged synopsis of pieces of evidence for the metaphorical use of the word: the pearl is compared with teeth, tears, dew- and raindrops, small bubbles, with the goblet, with words and poems, letters, wisdom, boys, girls or women, with a face, with gazelles, flowers or blossoms, stars, currants, etc. The word appears also extraordinarily often in book-titles with an ornamental, metaphorical or metonymic meaning, mostly as "head title" before the real title, which is introduced with *fī*, see *GAL* S III, 919 (*ʿiḳd al-laʾālī*), 944 (*laʾālī*), 949 (*luʾluʾ*), 1083 f. (*simṭ*); the indexes to the separate volumes of Sezgin, *GAS*; Ḥādjdjī Khalīfa, *Kashf al-ẓunūn*, ed. Yaltkaya, ii, 1534 f., 1570 f.; Ismāʿīl Bāshā, *Īḍāḥ al-maknūn*, 396 f., 416 f.

Apparently a word for pearl-trader cannot be derived from *durr*, but only from *lu'lu'*: *la''āl* or *la''ā'* (*WKAS*, ii, 50).

For medicinal use of the pearl, see *WKAS*, ii, 46. (A. DIETRICH)

LU'LU' ("pearl"), a noun often given as proper name to a person of servile origin, a guard or an officer or a leader of a special body of *ghulāms* [*q.v.*] in the service of a prince. Thus a Lu'lu' was the *ghulām* of Aḥmad b. Ṭūlūn (al-Masʿūdī, *Murūdj*, viii, 69 = § 319b); a Lu'lu' was chief of police in Baghdād in 324/935-6 (Miskawayh, i, 351); another was governor of Ḥimṣ for the Ikhshīd, and it was he who was to capture al-Mutanabbī when the latter proclaimed himself a prophet and attracted a numerous following of partisans in the Syrian desert (Ibn Khallikān, ed. Būlāḳ, 1299, i, 44).

LU'LU' AL-KABĪR ("the elder" or "the senior") AL-DJARRĀḤĪ AL-SAYFĪ played an important role at the court of the Ḥamdānids of Aleppo. The *nisba* al-Sayfī indicates that he was in the service of Sayf al-Dawla, and in fact he is seen, during the reign of the latter, in 355/965, participating with the *ghāzīs* [*q.v.*] of Khurāsān in an expedition mounted from Antioch against the town of Miṣṣīṣa (Mopsuestia); the *nisba* al-Djarrāḥī suggests that he also served, before the Ḥamdānid prince, one of the members of the family of Djarrāḥids [*q.v.*], but the historians give us no information on this point.

As chamberlain (*ḥādjib*) of the Ḥamdānid Abu 'l-Maʿālī Saʿd al-Dawla, who on his death-bed (381/991) committed his son Abu 'l-Faḍā'il to his care (cf. Bar Hebraeus, ed. Ṣālḥānī, Beirut 1890, 309, and *Chronography*, 179), Lu'lu' played his part, with other *ghulāms*, in having Abu 'l-Faḍā'il recognised as successor to the emirate of Abu 'l-Maʿālī. He subsequently acquired a position of even greater importance through his daughter's marriage to Abu 'l-Faḍā'il.

In the difficult situation facing the *amīr* of Aleppo, threatened by the commander of the Fāṭimid troops, Bandjūtekīn (Mandjūtekīn) and by Fāṭimid ambitions, Lu'lu' followed a policy of caution, recalling the troops which Abu 'l-Faḍā'il had sent to the south and avoiding further conflict with the Fāṭimids. When Bandjūtekīn came, in Rabīʿ II 383/May-June 993 and laid siege to Aleppo, Saʿīd al-Dawla and Lu'lu' appealed for help to Byzantium, which, since the treaty of 359/996, had exercised a kind of protectorate over the emirate of Aleppo. As Yaḥyā b. Saʿīd al-Anṭākī expressed it (*PO*, xxiii/3, 442) they "threw themselves at the feet" of the Byzantines. The emperor sent the governor of Antioch, Bourtzes (Burdjī) with troops, but Bandjūtekīn drove them away and continued the siege which lasted until the beginning of 995. Lu'lu' sent another appeal for help to the emperor Basil II, who arrived in person with 13,000 men and forced Bandjūtekīn to raise the siege. Generously, the emperor excused Abu 'l-Faḍā'il from the payment of the tribute which the emirate had been giving to the Byzantines since the treaty of 359/969. In confrontation with Bandjūtekīn, to whom Abu 'l-Faḍā'il was prepared to surrender Aleppo, Lu'lu' showed himself more resolute than his master. He played an increasingly influential role in the conduct of affairs.

In 386/996, he persuaded Abu 'l-Faḍā'il to deal severely with the rebel governor of Maʿarrat al-Nuʿmān, who subsequently went over to the Fāṭimid camp. In 388/998-9, Lu'lu' and Abu 'l-Faḍā'il made an attempt at capturing Apameia, which was relieved by the Duke of Antioch Damien Dalassenos (Yaḥyā, *PO*, xxiii, 455-6). In Ṣafar 392/December-January 1002, Saʿīd al-Dawla Abu 'l-Faḍā'il died, and Lu'lu' assumed full power, not hesitating to rid himself of the two sons of Saʿīd al-Dawla, whom he banished to Egypt, and destroying some fortresses in the territory of Aleppo to prevent his enemies from installing themselves there. Furthermore, in order to maintain good relations with Byzantium, he ordered the imprisonment in the citadel of Aleppo of an adventurer named al-Aṣfar who dreamed of renewing the holy war against Byzantium, which was a prospect deeply worrying the emperor. Al-Aṣfar had been a fugitive in Djazīra, but the governor of this province, al-Waththāb, handed him over to Lu'lu', thus putting an end to his activities (see Yaḥyā, *PO*, xxiii/3, 466-7). Lu'lu' continued to pay tribute to Byzantium and died in 399/1009-9. His son al-Manṣūr exercised power in Aleppo, but he was little more than a governor under the Fāṭimids.

The character of Lu'lu' presents some favourable aspects, some which are less so. Loyal and courageous, he saved the life of Saʿīd al-Dawla in the battle which the latter was obliged to fight against Bakdjūr, his rebellious *ḥādjib* who had ambitions to take over control of Aleppo. Taking the place of Saʿīd al-Dawla next to the standard, and accepting the blows intended for the prince, he assured his victory. But according to a tradition related by Kamāl al-Dīn, Saʿīd al-Dawla was poisoned by one of his concubines at the instigation of Lu'lu'. Lu'lu' presents the image of a slave (*ghulām*) who, by his energy and ability, and favoured by external events, succeeds in hoisting himself up to a position of supremacy over an emirate, admittedly an emirate of secondary importance. It could be said that he prefigures in the 5th/11th century what various of the Mamlūks of Egypt were later to become on a larger scale.

LU'LU', BADR AL-DĪN ABU 'L-FAḌĀ'IL AL-MALIK AL-RAḤĪM, a freedman, possibly black, of the last Zangids of Mosul, whose régime he prolonged. Designated by Arslān Shāh I on his death in 607/1210-1 as regent of the principality for his young son al-Ḳāhir, then by the latter (d. 615/1218) for his infant son, Arslān Shāh II, he was officially designated, with a caliphal diploma, as lord in 629/1232. The chronicles mention him especially for his interminable minor clashes with the lesser surviving Zangids and their Muẓaffarid allies from Irbil; he had, on the other hand, the support of the Ayyūbid al-Ashraf, all this interfering with the intrigues of the Khwārazm-Shāhs and first Mongol detachments. Later, he fought with al-Ṣāliḥ Ayyūb in Djazīra and then with al-Nāṣir of Aleppo. In all these clashes, he appears far less as a successful military leader than as an astute diplomat. This ability and his longevity resulted in his being regarded as a power; it is for having wanted to marry his daughter that the first Mamlūk Sultan, al-Muʿizz, was assassinated by his wife, Shadjar al-Durr. The last days of Lu'lu' were clouded, however, by the Mongol invasion; after the fall of Baghdād and the caliphate, he succeeded in keeping Mosul as a vassal of Hūlāgū. He died in 657/1259, aged about 80. His sons soon had to renounce the succession and flee to Baybars in Egypt.

The chronicles tell us nothing of Lu'lu''s internal administration. We know, however, that Mosul attained in this period a notable role as a craft (copperwork), commercial and cultural centre. The people from Mosul who are several times mentioned in Acre under Latin domination are possibly Christians, a large number of whom survived in Upper Mesopotamia. ʿIzz al-Dīn Ibn al-Athīr (*q.v.*] may have written his history of the Atabeks with the encouragement of Lu'lu'.

LUR (in Persian *Lor* with *o* short), an Iranian people living in the mountains in south-western Persia. As in the case of the Kurds, the principal link among the four branches of the Lurs (Mamāsanī, Kūhgīlū'ī, Bakhtiyārī and Lurs proper) is that of language. The special character of the Lur dialects suggests that the country was Iranicised from Persia and not from Media. On the ancient peoples, who have disappeared, become Iranicised or absorbed in different parts of Luristān, see LURISTĀN.

The name. Local tradition (*Ta'rīkh-i guzīda*) connects the name of the Lurs with the place Lur in the defile of Mān-rūd. This tradition is perhaps based on a memory of the town al-Lūr mentioned by the early Arab geographers (al-Iṣṭakhrī, 195, etc.), the name of which survives in Ṣaḥrā-yi Lur (to the north of Dizfūl). There are several other place-names resembling Lur, namely Līr, a district of Djunday-Sābūr (Schwarz, *Iran im Mittelalter*, 666; cf. the Kūhgīlū'ī tribe: Līrāwī), which may be to Lur what *pīl* in Lurī is to *pūl* "money" in Persian; Lurdjān (Yāḳūt: Lurdadjān, now Lurdagān) according to Iṣṭakhrī, capital of the canton of Sardan (between Kūh-Gīlū and the Bakhtiyārīs) and lastly there is a place called Lurt (Lort) near Ṣaymara.

Al-Masʿūdī alone, in his list of "Kurd" tribes speaks of the Lurriyya tribe (which may mean the Lurs connected with the district of al-Lur). In the 7th/13th century Yāḳūt uses the names Lūr, Lurr, to mean the "Kurd tribe living in the mountains between Khūzistān and Iṣfahān"; he calls the country inhabited by it *bilād al-Lur*, or Luristān.

These facts show the stages of evolution of the geographical term (perhaps pre-Iranian) into an ethnic name. If however we seek an Iranian etymology for the name Lūr, its connection with the first element in Luhr-asp (already proposed by von Bode) at once suggests itself. According to Justi, *Iranisches Namenbuch*, 183, Luhr is explained by **rudhra* "red". The place-name Rūr in Yāḳūt may supply an intermediary form. The *Ta'rīkh-i guzīda* gives a popular etymology *Lur* = *lir* "wooded hill" in Lurī.

Ethnology. If the linguistic data connect the Lurs with Fārs, local tradition only regards as true Lurs the tribes who came from the defile of Mān-rūd. According to the *Ta'rīkh-i guzīda*, 539, 547, there is in the *wilāyet* of Mān-rūd a village called Kurd, near which there is a defile. The place called Lur is situated in this *kūl* (the word means in Lurī a "little ravine", cf. O. Mann). The name Mān-rūd much resembles that of Mādiyān-rūd (the word *mādiyān* is found as *mān/mūn* in Lurī; Zhukovski, iii, 158) but certain historical considerations make us look for it near Māngarra-Mūngarra (cf. *Ta'rīkh-i guzīda*, 548, on the place lying between Mān-rūd, Samhā and Māngarra). The clans (*gurūh*) of the natives of Kūl-i Mān-rūd were later called after the places where they had settled, like the Djangrū'ī (Čangrū'ī, Djangardī) and the Ūtarī (Aztarī). The governing family of the Atābegs of Little Lur belonged to the Djangrawī (the name of their clan is Salbūrī, Salghūrī; the names Salwīzī in *ʿĀlam-ārā*, 369, Sallwarzī in ʿAlī Ḥazīn, *Tadhkira*, 135, and Salawarzī in Houtum-Schindler are to be corrected). The *Ta'rīkh-i guzīda* concludes by enumerating the 8 clans (*shuʿab*) of the two principal *gurūh* and the 18 other tribes (*aḳwām*) of the Lurs.

A few names (Māngarra, Anārakī, Djūdakī) correspond to modern names. Finally, four clans are mentioned: Sāhī (Sāmī), Arsān (Asbān, Asān), Arkī and Bībī, who, although speaking Lurī, are not Lurs; the people of the other villages of Mānrūd were peasants (*rūstā'ī*).

In *ca.* 500/1106, a hundred (or 400) Faḍlawī Kurd families arrived from Syria. They came by the north (Shuturān-Kūh) and settled at first on the lands of the Khūrshīdī *wazīrs* (see LUR-I KŪČIK; and cf. *Nuzhat al-ḳulūb*, 70, under the word *girdlākh*). At the beginning of the 7th/13th century, new tribes flocked to the standards of Hazārasp of the Great Lur. Among them were two Arab tribes: ʿUkaylī (ʿAkīlī; cf. the place of this name below Shūshtar), a Hāshimī one, and 28 different tribes (*mutafarriḳa*), among whom we find the Bakhtiyārī (Mukhtārī), the Djawānikī (Marāsilī), the Gōtwand (cf. the village near Shūshtar), the Djākī, the Līrāwī, the Mamāsatī (Mamāsanī?), etc. According to the *Sharaf-nāma* (i, 26), all these tribes also came from Syria. These waves of immigration must have had a considerable effect on the ethnic composition of the Great Lur.

It is probable that the immigrants were Kurds and that traces of them still survived among the Kurds whom Ibn Baṭṭūṭa (ii, 21-30) found at the beginning of the 8th/14th century near Bahbahān and Rām Hurmūz when on his way to the capital of the Grand Lur. There has long been a village of Kurdistān on the Djarrāhī and it had even given its name to this river. Shihāb al-Dīn al-ʿUmarī (in *Notices et extraits*, xiii, 330-2) mentions the existence of Lurs in Syria and Egypt and tells how Saladin (564-89/1169-93), alarmed by their dangerous ability to climb the steepest ramparts, had them massacred en masse. This anecdote throws a light on the causes which produced the arrival in (? return to) Luristān about 600 A.H. of numerous Iranian tribes.

The southern part of Little Lur was exposed to infiltration by Kurds, especially through the valley of Karkha (cf. LAK; just to the north of Susa is a tree *dār-i Bābū*, bearing the name of a clan of the Kurd tribe of Djuzḳān, celebrated in the history of the Ḥasanwayhids [*q.v.*]; cf. Ibn al-Athīr, ix, 146, 219) and exposed to Turkish and Mongol invasions (cf. the desperate fighting of the Atābegs of the Lur-i Kūčik against the Bayāt and Aywa [= Bahārlu?] Turks).

In the Ṣafawid period, Turkish tribes were introduced into Luristān from the direction of the Kūh-Gīlū (where traces of them still exist), and Georgian and Armenian colonies to the north of the Bakhtiyārī country. On the movements of the population under Nādir, the Zands and Ḳādjārs, see below. The ethnic situation gradually stabilised at the beginning of the 19th century.

The names of the Lur tribes and groups are now quite well-known, and as we have lists going from 1836 to 1922, a comparison enables us to note the changes that have taken place meanwhile. Regroupings seem to be taking place more rapidly among the Lurs than among the Kurds, but the general framework of the tribal grouping remains essentially the same.

In 1881 (Curzon, ii, 274), there were 421,000 Lurs, of whom 170,000 were Bakhtiyārī, 41,000 Kūh-Gīlū, and 210,000 Faylī. According to Rabino, this last section numbered in 1904 31,650 tents (or 130,000 individuals) in Pīsh-Kuh, and 10,000 tents (or 50,000 individuals) in Pusht-i Kuh (this last figure seems too low).

The Mamāsanī (Mamassanī) group includes 4 main tribes: the Bakash, Djāwīdī (Djāwī), Dushmanziyārī and Rustamī [see SHŪLISTĀN in *EI*[1]]. The Kūh-Gīlū group (Kūh-Gālū) includes three large tribes (Aḳādjarī, Bawī and Djāki). The first of these tribes (cf. the name of the old Turkish tribe of Aghadjārī) is of a composite character, for of its nine clans four (Afshar, Begdālī, Čaghatay and Ḳara-Bāghlī) are Turkish (evidently the remains of the Shāh-Sewen, to whom the government of Kūh-Gīlū had been given under the Ṣafawīs) and a fifth clan (Tilakūhī) bears the name of a district in Kurdistān of Senna [*q.v.*]. Concerning the second tribe, Bawī, O. Mann notes that it bears the name of an Arab tribe of the neighbourhood of Ahwāz; but there is also a mountain called Bawī to the south of Khurramābād. The third tribe, Djākī, is purely Lur and is composed of two main sections: Čārbunīča and Līrāwī with very many subdivisions. This threefold composition of the Kūh-Gīlū group is typical of many of the Lur tribes.

As to the Bakhtiyārī, Sawyer as long ago as 1894 said that their territory was "thoroughly surveyed on a scale of 8 miles to the inch, nearly every tribe visited in their own encampment, everything appertaining to the Bakhtiaris may now be said to be known". But Curzon's tables (1890) are still the last word available to the student. Of the two Bakhtiyārī groups, Čahār-lang and Haft-lang, the latter is the more important at the present day. The Čahār-lang, who used to be in the south, are now mainly on the outskirts in the district north of the northern barrier (between Burūdjird and Gulpāyagān).

The main groups of Lur are: Tarhān, Dilfān, Silsila (cf. LAK) and Bālā-girīwa. The tribes of the last group are the Lurs par excellence and have important subdivisions: Dirīgwand, Sagwand etc. It is possible that the Dirīgwand are the real nucleus of the Lur race. Their chiefs are called *mīr*.

In contrast to what we find among the Kurds, where the individual members of the tribe are usually much attached to their hereditary chiefs, the Lurs proper (Bālā-girīwa) are distinguished by a more democratic feeling. The power of the hereditary families of *khāns* is based on their "guard" (*ḳaytul*), but this power is considerably reduced by the authority of the chiefs of the clans (*tushmāl*). The *khāns* are forced to court the favours of these wild, petty chiefs (Edmonds: "uncouth headmen"); the latter are amenable to the solicitations of their neighbours, and in this way the tribes are broken up and new groupings take place.

Little is known of the ethnology of the Lurs. The notes of Duhousset (who commanded a Lur regiment in 1859), *Études sur la population de la Perse*, 23, of Khanikoff, *Mém. sur l'ethnographie de la Perse*, Paris 1866, 15, 110, 138, and of Danilov, only touch the surface of the subject. Duhousset particularly notes the peculiar (compressed) form of the skull of the Lurs. Edmonds emphasises the difference between the Lurs and the Laks; the latter are taller, have purer features and aquiline noses. Their women are more beautiful than those of the Lurs. The hair of the Lurs is often chestnut-coloured; very heavily bearded men are found among the Lurs (the Persians call Luristān *maʿdān-i rīsh*, "mine of beards"). The women do not seem to have such liberty among the Lurs as among the Kurds. According to Edmonds, there are no cases among the Kurds of women acting as chiefs of tribes. But von Hammer (ii, 239) mentions under the year 1725 the warlike exploits of the two daughters of the Wālī ʿAlī Mardān Khān.

The domestic life and manners of the Bakhtiyāris have found enthusiastic panegyrists in Layard, Mrs. Bishop and Cooper in his *Grass*, New York 1925. On the other hand, the Lurs have been very severely judged by most travellers, cf. Edmonds, in *Geogr. Jnal.* (1922) (*ibid.*, the speech of General Douglas, who was wounded by the Lurs in 1904).

Bibliography: for the Mamāsanī (cf. SHŪLISTĀN in *EI*[1]) and the Kūh-Gīlū, cf. especially Ḥasan Fasāʾī, *Fārs-nāma-yi Nāṣirī*, on which are based Demorgny, *Les tribus du Fars*, in *RMM*, xxii (1913), and B. Miller, *Kočevlye plemena Farsa*, in *Vost. Sbornik*, St. Petersburg, ii (1916), 213-18. Cf. also the lists in Bode, Layard, Sheil, Baring etc. (summed up in Curzon, *Persia*, ii, 317) and those of O. Mann, *Die Mundarten d. Lur-Stämme*, pp. xv-xxi. For the Bakhtiyārī: H. Rawlinson, *A march from Zohab*, 102-6 (cf. Ritter, *Erdkunde*, ix, 210-15); A. H. Layard, *Description of Khuzistan*, and especially *Early adventures*; Curzon, *Persia*, ii, 286-8. For the Lurs: the lists of Rawlinson (Ritter, *Erdkunde*, iv, 215-19), Bode, Layard, Čirikov, Houtum-Schindler, O. Mann, *op. cit.*, p. xxiii, and especially the articles by Rabino, in

RMM (1916), and C. J. Edmonds, in *Geogr. Jnal.* (1922).

Religion. The Christian and Jewish colonies (cf. the evidence of Benjamin of Tudela) settled in the village of Karkhā since the Sāsānid period may have left some traces in the country. A very curious tradition is the story of the conversion of the Bakhtiyārīs to Christianity in the time of Constantine the Great (?) (Hanway, ii, 168). A mention in the *Ta'rīkh-i Djahān-gushā*, GMS, xvi/2, 216, shows that in 650/1252 the *mulḥids* (Ismā'īlīs) had gained a footing around Gird-Kūh. The Ḥurūfī heresy had probably also a following in Luristān, for the *murīd* of its founder Faḍl Allāh, who attempted the life of Sulṭān Shāhrukh in 830/1427, was called Aḥmad Lur (Browne, *Lit. hist. of Persia*, iii, 366). In the Ṣafawid period, the *wālīs* of the Little Lur claimed descent from 'Abbās, son of the caliph 'Alī, whose tomb is shown near Sīrwān (Māsabadhān); cf. Rawlinson, in Ritter, ix, 402. The esoteric doctrines of the extremist Shī'a are widespread in Luristān. The great majority of the Lak are Ahl-i Ḥaḳḳ [*q.v.*] ('Alī-Ilāhī). The Sagwand, Pāpī and Badrā'ī tribes are also followers of this secret religion. In the belief of the Ahl-i Ḥaḳḳ, Luristān is the scene of the activities of the third avatar of the divine manifestation who is called Bābā Khōshīn and numbers among his "angels" Bābā Ṭāhir [*q.v.*]. An important sanctuary of the sect, the tomb of Shāh-zāda Aḥmad (the alleged son of the *imām* Mūsā Kāẓim), is in the district of Kūs near Bī-āw (territory of Ḳalawand) and is kept by Sayyids of the Pāpī tribe; these Sayyids wear red turbans which recalls the predilection for red of the old Muḥammira = Khurramiyya [*q.v.*], whose flags were of this colour.

The religion of the Lurs was so little orthodox, even from the Shī'a point of view, that at the beginning of the 19th century prince Muḥammad 'Alī Mīrzā had to send for a *mudjtahid* to convert the tribes to Islam (Rabino, 24). All the Lur and Lak tribes are officially Shī'īs (contrast the attachment of the true Kurds to Sunnī orthodoxy).

Language. Down to the beginning of the 20th century, our knowledge of the Lur dialects was confined to 88 words collected by Rich, to four Bakhtiyārī verses in Layard and to some thirty words collected by Houtum-Schindler. As late as the *Grundriss d. iran. Phil.*, i/2, 1898-1901, 249, we find the thesis stated that Lurī is closely related to Kurdish and may even be described as one of its dialects. The materials of Zhukovski (collected in 1883-6) were finally published the day after the death of the author (d. 4 December 1918). The merit therefore of having first established the important fact that Kurdish and Lurī are quite separate ("eine tiefgehende Scheidung des Kurdischen vom Lurī") is due to O. Mann. This scholar has shown that although there are Kurd tribes in Luristān [see LAK], the true Lurs speak dialects which belong undoubtedly to the south-western Iranian group (like Persian and the dialects of Fārs) and not to the north-western group (like Kurdish and the "central" dialects).

The Lurī dialects which have none of the asperities of Kurdish [see KURDS] fall into two categories. To the first belong the dialects of the Great Lur: Mamāsanī, Kūhgīlu and Bakhtiyārī (the latter has a few insignificant peculiarities of its own); to the second belong the dialects of the Little Lur, i.e. of the Faylī Lurs.

Even the first group possesses very few special features compared with modern Persian. From the point of view of phonetics: *-am* at the end of a word becomes *-om*, *-um* (*mikunām/īkunom*; *ādām/ādhom*); *ū* changes into *ī*: *pūl/pīl*; intervocalic *d* gives *dh* (*y*): *midihām/īdhim*; the combination *-kht -ft* give *-hdh* and *-ht* (*t*): *dukhtār/duhdhār*, *rāft/rāht*; initial *kh* becomes *h*: *khānā/honā*, etc. Peculiar to Bakhtiyārī are the change of intervocalic *m* to *v*: *djūwā* > *djāmā* and the occasional change of *sh* to *s*: *isā* > *ishān*. It is remarkable that some of these phonetical peculiarities were long ago noted by Ḥamd Allāh Mustawfī (*Ta'rīkh-i guzīda*, 537-8). He says that Lurī (although full of Arabic words) does not have the peculiarly Arabic sounds, like *kh*, *sh*, *gh*, *f* and *ḳ*. Inflection: Plural in *-gāl*, *-yāl*, *-āl*, e.g. *ānhā*, *āngāl*; accusative in *-ā*, *-nā* instead of *rā*: *yūnā got* = *inrā-guft*; formation of the present: *i-* instead of Persian *mi-*; first Persian plural ending in *-imū(n)*: *ikhārimū(n)* = *mikhārim*. Lurī usually forms the preterite of active verbs as in Persian with the help of personal endings (active construction) and not like Kurdish and the majority of Persian dialects (including those of Fārs) which give the preterite a passive construction. Vocabulary. In the present and preterite stems, Lurī usually follows Persian, but we find stems and words unknown in Persian: *iwānum*, *wāndum*, "to throw"; *tār-*, *itārom*, "to be able"; *tia*, "eye", etc. From the Mongol period, Lurī has kept several expressions like: *tushmāl*, "chief of a clan", in Mongol, *tüshümel*, "official"; *ḳaytul*, "guard of the khān", in Eastern Turkī "camp, laager", cf. Budagov, ii, 102; *kūrān*, "encampment", in Mongol, *küren*, "camp, tent".

As to the Faylī group, their dialect differs very little from ordinary Persian (Mann: "weiter nichts als ein stark abgeschliffenes Persisch").

There are in Luristān a few islands of Kurds of some importance. Such are in the north the Lak tribes [*q.v.*]. Among the Faylī, the Mahkī group (on the frontier of Kirmānshāh, at Hulaylān, and farther south) speaks a southern Kurdish dialect like that of the Kalhur. The Kurdishūhān group (to the south of Pusht-i Kūh) speaks a "Kurmandjī" Kurdish. Linguistic conditions in the Pusht-i Kūh still require further study.

Hadank, in the preface to O. Mann, *Kurdisch-Persische Forschungen*, Berlin 1926, ii/1. On the Mamāsanī and Kūh-gālū'ī materials of Romaskevič, cf. *Bull. Acad. de Russie* (1919), 452.

Literature. The Lur tribes and especially the Bakhtiyārīs have a rich popular literature, fairy tales, epic fragments, celebrating the exploits of their heroes (like Muḥammad Taḳī Khān Čar-Lang and Ḥādjdjī Ilkhānī Haft-Lang), lyrics, songs sung at marriages (*wāsīnak*) and cradle-songs (*lālā'ī*). These pieces are often pretty and full of sentiment; cf. the collections by O. Mann and Zhukovski (the latter published an article on Persian and Bakhtiyārī lullabies in the *Zhurn. Min. Narodn. Prosveshč* [Jan. 1889]); D. L. R. Lorimer and E. O. Lorimer, *Persian*

tales, London 1919, 197-351; eidem, *Bakhtiari tales* (translations only).

There are also Lurī poets writing in the established literary forms: Ḥusayn Ḳulī Khān Haft-Lang (killed in 1882), Nadjmā Mamāsanī, Daftarī, Fāyiḍ (still alive in 1902), Īzadī (d. 1905), ʿAlī Aṣghar Khān Nihāwandī (cf. O. Mann). A *Miʿradj-nāma-yi Bakhtiyārī* by Shaykh ʿAlī Akbar Muʿammam was lithographed at Tehran in 1314. A *ghazal* by Mullā Zulf ʿAlī Kurrānī was published by N. Y. Marr in the *Comptes Rendus de l'Acad. de l'U.R.S.S.* (1922), 55-8; according to Marr, a *tadhkira* of Bakhtiyārī poets compiled by ʿUmmān-i Sāmānī is in the library of Sālār-i Fātiḥ. Another similar *tadhkira* comes from the pen of Aḥmadī-yi Bakhtiyārī.

History. On the participation of the tribes of Khūzistān and Fārs in the fighting between Arabs and Persians in the early centuries of the Hidjra, see KURDS. The caliphs interfered directly in the affairs of the country, especially in Lur-i Kūčik [*q.v.*]. The fortunes of the Lurs were more closely associated with the Iranian dynasties ruling in Khūzistān, at Shīrāz, Iṣfahān, Hamadān and in the Zagros, sc. the Ṣaffarids, Būyids, Kākwayhids, Ḥasanwayhids and their successors of the family of Abu 'l-Shawk [see ʿANNĀZIDS].

We have coins of the Būyids struck at Īdhadj (Codrington). In 323/935 the Būyid army marched through Luristān (Sūs-Shāpūr-Khʷāst-Karadj). The Ḥasanwayhid Kurds, whose capital was at Sarmādj (south of Bīsūtūn), extended their dominions into the valley of the Karkhā. Shāpūr-Khʷāst (= Khurramābād) formed part of their possessions about 400/1009 (Ibn al-Athīr, ix, 89; *Tadjārib al-umam*, ed. Amedroz, ii, 291, iii, 451). The Kākwayhid Garshāsp sustained a siege by the Saldjūḳs in Shāpūr-Khʷāst (434/1042). The *amīrs* of this last dynasty later settled in northern Luristān: the family of Zangī b. Bursuḳ in Shāpūr-Khʷāst before 499/1105. Ḥusām al-Dīn Alp-Ḳush at Dizh-i Māhkī on the Karkhā before 549/1154 (*Rāḥat al-ṣudūr*, ed. Iqbál, 285). A Turk Ḥusām al-Dīn Shūhla or Aḳsarī is mentioned as lord of Luristān and of a part of Khūzistān between 547/1152 and 570/1174-5. A long inscription (Kūfic?) on a stele near Khurramābād is still undeciphered (cf. a copy in von Bode, ii, 298; Rawlinson thought he recognised in it the name of the Atābeg Shudjāʿ al-Dīn, but according to Curzon it has an earlier date (517/1123).

In any case, all attempts from outside to subdue Luristān or to take parts of its territory affected the tribal system very little, the development of which came to a head at the coming of the Atābegs.

The principal source for the domestic history of the country is the *Taʾrīkh-i guzīda* (730/1330) based in turn on the *Zubdat al-tawārīkh* of Djamāl al-Dīn al-Kāshānī (of which the Preussische Staatsbibliothek only has the first volume, no. 368 of Pertsch's *Catalogue*). The *Madjmaʿ al-ansāb* (*ca.* 743/1342-3) is based on independent oral tradition, but is less accurate. The *Djahān-ārā*, although late (its author, Ḳāḍī Aḥmad, died in 975/1567-8), uses unpublished data. The *Sharaf-nāma* (1105/1596) is based on the *Zubdat al-tawārīkh* or perhaps a good copy of the *Taʾrīkh-i guzīda*. According to these sources, which supplement the statements of the Arab geographers, the situation in Luristān about 300/912 was as follows:

The Shūl [see SHŪLISTĀN]—who are not mentioned by the Arabs before the Mongol epoch—occupied a part ("half") of Luristān. The *wilāyet* of Shūlistān proper (*Taʾrīkh-i guzīda*, 537, 539, 13) had a governor named Nadjm al-Dīn Akbar (according to the *Madjmaʿ al-ansāb*, the title Nadjm al-Dīn was hereditary among the Shūl), while the Lur territory under the Shūl (probably Kūh-Gīlu) had a *pīshwā* Sayf al-Dīn Mākām whose family had been prominent in the country since the Sāsānid period; he was of the Rūzbihānī tribe, which the *Taʾrīkh-i guzīda* mentions among the Lur tribes. The rest of Luristān was ruled by a family of Lur princes (independent of the Shūl), of whom Badr ruled in the Great Lur and his brother Manṣūr in the Little Lur. Their dates are uncertain. Badr's successor was his grandson Naṣīr al-Dīn Muḥammad b. Khalīl b. Badr (according to the *Madjmaʿ al-ansāb*, Naṣīr al-Dīn was a nephew of Awrang [Rang] b. Muḥammad b. Hilāl). Naṣīr al-Dīn was deposed by the Faḍlawī Kurds, who founded the dynasty of the Atābegs of the Great Lur and relied for support on tribes who came from outside Luristān (cf. above, under Ethnology). The same Faḍlawī drove the Shūl out of their settlements.

We know nothing of Manṣūr, brother of the above-mentioned Badr. The tribes of Little Lur were directly under the caliphs, and in the north were subjected to the invaders. The founder (in *ca.* 580/1184) of the native dynasty of the Atābegs of Lur-i Kūčik [*q.v.*] had to dispose of a rival Surkhāb b. ʿAyyār (probably a scion of the dynasty of Abu 'l-Shawk which was called ʿAyyār/ʿAnnāz; see ʿANNĀZIDS).

The history of the two dynasties of the Atābegs is filled with feuds, murders and executions, but in domestic affairs the state of the country was fairly prosperous. The Atābegs built bridges and *madrasas* (Ibn Baṭṭūṭa) and secured a peaceful existence for the inhabitants (cf. *Taʾrīkh-i guzīda*, 550). The revenues of each of the two Atābegs were estimated at a million *dīnārs*, while each of them paid to the Mongol treasury a tribute of 91,000 *dīnārs* only (*Nuzhat al-ḳulūb*, 70).

In the interval between the Mongols and the rise of Tīmūr, the two Atābegs were vassals of the Muẓaffarids. In 788/1386 and 795/1393 Tīmūr ravaged Little Lur, but treated the Lord of Great Lur more kindly. In 795/1393 Tīmūr passed through Kūh-Gīlū and Shūlistān. The Tīmūrids consolidated their power in Luristān, and in 837/1433-4 the last Atābeg of the Great Lur disappeared.

Ṣafawid period. The lords of the Little Lur maintained their position, and by intrigue even succeeded in extending their power over the plain to the west of the mountains of Pusht-i Kūh. After the execution of Shāh-wardī Khān, Shāh ʿAbbās installed in his place a *wālī* descended from a lateral line of the old family. The possessions of this *wālī*, Ḥusayn Khān, were, however, somewhat reduced.

After the disappearance of the dynasty of the Great Lur, the power had passed to the chiefs of the tribes composing this federation. Under Shāh Ṭahmāsp we find the title of *Sardār* of the local *ulūs* conferred on Tādj-Mīr, chief of the principal clan, the Astarakī. Tādj-Mīr, having neglected his duties, was executed and replaced by Mīr Djahāngīr Bakhtiyārī (the Astarakī and Bakhtiyārī had come to Luristān after 600/1203-4; cf. *Taʾrīkh-i guzīda*). Djahāngīr, under the guarantee of Shāh Rustam of the Little Lur, pledged himself to supply annually to the Ṣafawid treasury 10,000 mules. In 974/1566-7 the governor of Hamadān was sent to remind him of his obligation (*Sharaf-nāma*, i, 48). Henceforth, the Bakhtiyārī tribe becomes of the first rank and, as usual, gives its name to the whole confederation.

As to the Kūh-Gīlū territory, it was governed by

Khāns of the Turkoman tribe (Shāh-Sewen) of Afshār settled among the Lurs. In 988/1580 a dervish impostor claiming to be Shāh Ismā'īl II had a considerable success among the Djākī, Djawānikī and Bandānī tribes, who killed several Afshār governors. In 1005/1596-7, as a result of the excesses committed by the Afshār as well as by the Lurs, the governor of Fārs, Allāh-wardī Khān, established the direct centre of his government in Kūh-Gīlū (*Ta'rīkh-i 'Ālam-ārā*, 198, 358).

We do not know under what circumstances at the end of the Ṣafawid dynasty (*Fārs-nāma-yi Nāṣirī*) the group of Mamāsanī tribes, who had migrated into the Great Lur (after 600/1203-4) occupied the ancient Shūlistān [*q.v.*].

After the Ṣafawids: During the troubles provoked by the appearance of the Afghāns before Iṣfahān, the *wālī* of Luristān, 'Alī Mardān Khān Faylī (a descendant of the Ḥusayn Khān appointed by Shāh 'Abbās), played a considerable part. With 5,000 of his men he took part in 1135/1722-3 in the defence of the capital. He was even appointed commander-in-chief of the Persian troops, but the other Khāns refused to take orders from him. When the Turks invaded Persia in 1137/1725, 'Alī Mardān Khān abandoned Khurramābād (which was occupied by Aḥmad Pasha) and retired to Khūzistān, from which he undertook a diversion against Baghdād. The Turks who had gone through the Bakhtiyārī country and reached Fīrūzān had to retire. Cf. 'Alī Ḥazīn, *Ta'rīkh-i aḥwāl*, ed. Balfour, London 1831, 115, 134, 137, 148, who was an eye-witness of the events; Hanway, *The revolutions of Persia*, ii 135, 159, 168, 238; Malcolm, *History of Persia*, London 1829, ii, 60-1; von Bode, *Travels*, ii, 281-3; Von Hammer, *GOR*, iv, 227.

About the same time, several Bakhtiyārī *khāns* (Ḳāsim Khān, Ṣafī Khān) are mentioned as resisting the Afghān and Ottoman invaders, but they did not agree well with 'Alī Mardān Faylī. In 1137/1724 'Alī Muḥammad Ḥusayn Khān Bakhtiyārī recognised as his suzerain a certain pretender who claimed to be prince Ṣafī Mīrzā. The latter's headquarters were in Kūh-Gīlū; he was not taken till 1140/1727-8 (Hanway, ii, 168, 238; Mahdī-Khān, *Ta'rīkh-i djahān-gushā-yi Nādirī*, Tabrīz 1284, French tr. Jones, London 1770, p. xxvii). The Afghāns do not seem to have penetrated into the Bakhtiyārī country, and their expedition in 1136/1724 against Kūh-Gīlū was a fiasco (Von Hammer, ii, 210; Malcolm, *op. cit.*, ii, 449). By the treaty of 1140/1727-8, the Afghān Ashraf ceded Luristān to Turkey with other western provinces. The Turks kept it (nominally) till 1149/1736, when Nādir re-established the status quo (Hanway, ii, 254, 347; Von Hammer, *GOR*, iv, 235, 317).

Under Nādir, a certain Turkoman chief named Bābā Khān Čapushlu (Čawushlu) was appointed *beglerbeg* of Luristān-i Faylī. On the other hand, 'Alī Mardān II Faylī was entrusted by Nādir with diplomatic negotiations in Istanbul. Nādir in 1145/1732 passed through Kūh-Gīlū with his troops, where Muḥammad Khān Balūč (the claimant to Shīrāz) was defeated. The local Afshārs had to support Nādir, who was one of their tribe. Several expeditions were sent against the Bakhtiyārī, among whom a new chief 'Alī Murād Mamīwand (Čahār-Lang) had collected together the malcontents. In 1145/1732 Bābā-Khān Čapushlu was sent against him for the first time. In 1149/1736-7 Nādir Shāh took the field against him in person, going via Djāpalaḳ and Burburūd. The Bakhtiyārī country was several times invaded, but the main blow was directed against the little-explored country south of Shuturān-kūh. 'Alī Murād was captured and executed. The Bakhtiyārī were decimated and deported to Djām and Langar (in Khurāsān). A little later, a Bakhtiyārī detachment distinguished itself in the assault on Ḳandahār (Mahdī Khān, *op. cit.*, 116, 134, contains interesting geographical details; tr. Jones, i, 185, ii, 18; 'Alī Ḥazīn, 231, 253; Malcolm, ii, 21).

The deported Bakhtiyārī returned from Khurāsān immediately after the death of Nādir (*Ta'rīkh-i ba'd Nādiriyya*, ed. Mann, 26), and when the dynasty of the latter was extinguished, the Bakhtiyārī chief 'Alī Mardān Khān (who is not to be confused with the two *wālī*s of Luristān-i Faylī) attempted to play a big part. In 1163/1750, along with Karīm Khān Zand, he set up at Iṣfahān a scion of the lateral line of the Ṣafawids (Āl-i Dāwūd, under the name of Ismā'īl III). The career of "guardian of the sovereign" acted by Nādir seemed to be certain for him also, but Karīm Khān gained the upper hand; the troops of 'Alī Mardān, who included Lak of the tribes of Kalhur and Zangana, were defeated in 1165/1752; he escaped to Baghdād, but died there by the hand of an assassin; cf. Mīrzā Ṣādiḳ, *Ta'rīkh-i gīti-gushā*, quoted by Malcolm, ii, 61 and note *r*; Von Hammer, *GOR*, iv, 475, 477; R. S. Poole, *The coins of the Shahs of Persia*, London 1887, p. xxxv; Curzon, ii, 289.

Karīm Khān [*q.v.*], who had disposed of his Bakhtiyārī rival, was himself a Lak of the tribe of Zand, settled in the immediate neighbourhood of Luristān-i Faylī. On the movements of population in his time, see KURDS and LAK. In 1200/1785, when Dja'far Khān Zand had to fall back on Shīrāz, a number of Lurs and of Turks assembled at Iṣfahān under former partisans of 'Alī Murād Khān, but the town was soon occupied by Āḳā Muḥammad Ḳādjār, who had nothing better to do than attack the Bakhtiyārīs ('Abd al-Karīm Shīrāzī, *Ta'rīkh-i Zandiyya*, ed. Beer, 29; Malcolm, *op. cit.*, ii, 179 ff.), which injured his popularity among the tribes.

The Lur Bakhtiyārī country was never completely assimilated during the century-and-a-half which the Ḳādjārs reigned. A résumé of the history of the Bakhtiyārīs in the 19th century has been given by Curzon in ch. xxiv of his *Persia and the Persian question*. At first the Kunurzī family, descended from the brother of 'Alī Mardān Khān (see above), came to the front, but the expedition of the governor of Iṣfahān Manučihr Khān Mu'tamid al-Dawla (whose real name was Yenikolopov; he was an Armenian from Tiflis) in 1841 put an end to the career of the Īlkhānī Muḥammad Taḳī Khān of the Čahār Lang group, and the family did not recover. In *ca.* 1846 the Bakhtiyārwand (or Baydarwand, a family which claimed to be descended from a shepherd named Pāpī) rose to prominence in the Haft-lang group, and in spite of the assassination in 1882 of its chief Ḥusayn Ḳulī Khān (Ḥādjdjī Īlkhānī) by order of the governor of Iṣfahān, Nāṣir al-Dīn Shāh's eldest son Mas'ūd Mīrzā Ẓill al-Sulṭān, under whose jurisdiction the Bakhtiyārī country fell, the family held on to its wealth and importance. The tribal khāns did, however, now fall into a period of prolonged dispute over the leadership, with two factions of the Ilkhānīs and Ḥādjdjī Ilkhānīs on one side versus the Ilbegī family on the other. Eventually, a basic principle of power-sharing between the two families was established which was to endure until 1936, when Riḍā Shāh Pahlavī placed the Bakhtiyārī country under standard Persian civil jurisdiction; until this time, the country enjoyed virtual autonomy under the

rule of the Ilkhānī and the Ilbegī. The Ilkhānī-Ḥādjdjī Ilkhānī group in fact enjoyed a superior financial and political position, in part because from 1899 onwards they drew an investment income from Messrs. Lynch Bros, when the Bakhtiyārī Road, connecting Ahwāz, Shushtar and Iṣfahān, was opened, and then after 1905 from oil concessions, whilst both families received subsidies from the British government during the First World War in return for Bakhtiyārī support. The Bakhtiyārīs also played a considerable role in the Persian Constitutional period, in alliance with the Shīʿī ʿulamāʾ and the urban-based constitutionalist reformers, achieving prominence in national as well as local affairs; by 1912 Bakhtiyārī khāns held the governorship of seven cities in Persia, including Kirmān, Iṣfahān and Kāshān, and one was Prime Minister (Ṣamṣām al-Salṭana) and another Minister of War (Sardār Asad).

The centralising efforts of the Ḳādjārs had more effect in Luristān-i Faylī (formerly Lur-i Kūčik) in as much as, as a result of the governorship in Kirmānshāh of the energetic prince Muḥammad ʿAlī at the beginning of the 19th century, the old family of the *wālīs* of Luristān found its rights reduced simply to the possession of Pusht-i Kūh (see Čirikov, 227). The Pīsh-Kūh formed the Persian province of Luristān. Muḥammad ʿAlī Mīrzā with troops and artillery marched through this province. In 1836 Rawlinson followed him at the head of his Gūrānī regiment. After the famous expedition of Manučihr Khān (1841), his nephew Sulaymān Khān Sahām al-Dawla, governor of Khūzistān, maintained order in Luristān, but for the second part of the 19th century Luristān was plunged more or less into a state of anarchy. It was not till 1900 that prince ʿAyn al-Dawla was able to restore order in Luristān, and at this time several explorers travelled freely in the disturbed province. But in November 1904 two British officers (Col. Douglas and Capt. Lorimer) on their way to Khurramābād were attacked and wounded by Lurs. A considerable agitation was stirred up among the Lurs (and in western Persia generally) by the appearance among them of the rebel prince Sālār al-Dawla (several times after 1905). In spite of the efforts of the Persian government, Luristān remained closed till 1917, when with the help of foreign representatives several caravans went from Dizful to Burūdjird. About the same time, the Persian government conferred the rank of *wālī* of Pīsh-Kūh on Naẓar ʿAlī Khān Amrāʾī [see LAK]; cf. Edmonds in *Geogr. Jnal.* (1922).

The advent of Riḍā Khān, later (1925) Riḍā Shāh Pahlavī, meant a declared policy by the central government of bringing the Bakhtiyārī country into the normal framework of administration in Persia, part of which involved the forcible sedentarisation of semi-nomadic tribesmen; but with Riḍā Shāh's deposition in 1941 and the period of weaker rule during the earlier years of Muḥammad Riḍā Shāh's reign, many Bakhtiyārīs and Lurs reverted to the semi-nomadic way of life they had been accustomed to, and this last still prevails amongst an appreciable section of the estimated 500,000 Lurs and Bakhtiyārīs.

(V. MINORSKY*)

LUR-I BUZURG, a dynasty of Atābegs [see ATABAK] which flourished in eastern and southern Luristān between 550/1155 and 827/1423, the capital of which was Īdhadj [*q.v.*] or Mālamīr.

The eponymous founder of the dynasty, also known as Faḍlawī, was a Kurd chief of Syria named Faḍlūya. His descendants (the *Djihān-ārā* mentions 9 predecessors of Abū Ṭāhir) migrated from Syria, and passing through Mayyafāriḳīn and Ādharbāydjān (where they made an alliance with the Amīra Dībādj [?] of Gīlān), they arrived about 500/1006 in the plains north of Ushturān-Kūh (Luristān).

Their (1) chief Abū Ṭāhir (b. ʿAlī) b. Muḥammad distinguished himself in the service of the Salghurid Sunḳur (543-56/1148-61) in an expedition against the Shabānkāra [*q.v.*]. As a reward, Sunḳur gave him Kūh-Gīlūya and agreed to send him to conquer Luristān. He succeeded in this. Abū Ṭāhir assumed the title of Atābeg, and later quarrelled with Sunḳur and made himself independent (*ca.* 550/1155). (The *Madjmaʿ al-ansāb* seems to confuse several individuals under the name Ḳāʾid ʿAlī, to whom it attributes the following successes: the defeat of the Shūl [*q.v.*], the deposition of Nāṣir al-Dīn, last descendant of Badr, ruler of Luristān, and the defeat of the Khūzistān troops commanded by the Turk Eshek.)

Under the son of Abū Ṭāhir, (2) Malik (*sic*) Hazārasp (600-26 or 650/1204-29 or 1252?), Luristān prospered, and new Arab and Iranian tribes flocked into it. Hazārasp drove out of Luristān the last remnants of the Shūl and invaded Luristān proper. The Shūl migrated to Fārs. Hazārasp disputed with the Salghurids the possession of the fortress of Māndjasht (Mungasht, south-west of Mālamīr). The possessions of Hazārasp were extended up to a distance of 4 *farsakhs* from Iṣfahān. The caliph al-Nāṣir (575-622/1180-1225) confirmed to Hazārasp the title of Atābeg. On the other side, Hazārasp maintained friendly relations with the Khwārazm-Shāh Muḥammad and gave his daughter in marriage to his son Ghiyāth al-Dīn (Djuwaynī-Boyle, ii, 382-3, 471). (The *Djihān-ārā* mentions two sons of Hazārasp: ʿImād al-Dīn (d. 646/1248-9) and Nuṣrat al-Dīn Kalḥa (d. in 649/1251?); the former bought Zarda-Kūh, where several members of the family were afterwards interred.)

(3) Tikla (*ca.* 655-6/1257-8), son of Hazārasp and his Salghurid wife, successfully withstood four attacks on him by the Salghurid Atābeg of Fārs, who was indignant among other things at the expulsion of the Shūl from Luristān. Tikla took from Ḥusām al-Dīn Khalīl (d. 640/1242-3?) certain districts of Lur-i Kūčik. He defeated the generals sent against him from Khūzistān by the caliph. During the Baghdād campaign of Hūlāgū Khān (655-6/1257-8), Tikla accompanied him in Kitbuḳa Noyan's division (*tūmān*). He did not, however, conceal his feelings about the treatment inflicted on the caliph and Muslims. Hūlāgū took umbrage at this, and Tikla fled to Luristān and shut himself up in Māndjasht. Hūlāgū pardoned him, but later changed his mind and had him executed in Tabrīz. Tikla was buried at Zarda-Kūh.

(4) Shams al-Dīn Alp Arghūn succeeded to his executed brother and ruled for 15 years. He led a nomadic life. His winter residence was at Īdhadj and at Sūs (probably Sūsan on the Kārūn above Shūshtar) and his summer one at Djūy-i sard (on the upper waters of the Zanda-rūd) and at Bāzuft (source of the Kārūn).

His son (5) Yūsuf Shāh had spent his youth with

Abaḳa Khān (663-80/1265-82) and even after being appointed in his father's stead, remained at the Mongol court with 200 horsemen. He took part in the war against Burāḳ Khān [*q.v.*], and distinguished himself in a skirmish with the Daylamis. To the possessions of Yūsuf Shāh, Abaḳa added Khūzistān, the region of Kūh-Gīlūya and the towns of Fīrūzān (7 *farsakhs* above Iṣfahān) and Djurbādhaḳān (Gulpāyagān). Yūsuf Shāh went to Kūh-Gīlūya and attacked the Shūl settled in the modern Mamāsanī country east of Kūh-Gīlūya. After the death of Abaḳa, Yūsuf Shāh was forced against his will to go with 2,000 cavalry and 1,000 foot to the help of Aḥmad Takūdar. The latter was defeated (683/1284), and the Lurs retreated from Ṭabas to Natanz across the desert, where the majority died of thirst. After the accession of Arghūn, Yūsuf Shāh went to pay him homage and interceded on behalf of the former vizier Khwādja Shams al-Dīn, who had taken refuge in Luristān (cf. d'Ohsson, iv, 5).

His son (6) Afrāsiyāb sent his brother Aḥmad to the court of Arghūn while he himself remained in Luristān, where he put to death the members of the former vizier's family. Their relatives having taken refuge in Iṣfahān, Afrāsiyāb sent his kinsmen in pursuit of them. At this moment arrived the news of the death of Arghūn (690/1291). The Lurs killed the Mongol governor of Iṣfahān. Afrāsiyāb appointed members of his family to govern in Hamadān, Fārs and in the territories reaching to the Persian Gulf, and even began to march on the capital. The Mongol general Amīr Turak was defeated at Kūhrūd or Ḳuhrūd [*q.v.*] near Kāshān. Gaykhatu Khān sent Mongol troops against Afrāsiyāb and troops from Lur-i Kūčik. Afrāsiyāb shut himself in Māndjasht, but after some time went to Gaykhatu who pardoned him. Returning to Luristān, Afrāsiyāb massacred his own relatives and a number of the notables. Ghāzān Khān (694-703/1295-1304) at first showed himself favourable to Afrāsiyāb, but in 696/1297, on the complaint of the Amīr Hurḳudaḳ of Fārs, Afrāsiyāb was tried and executed at Mahāwand (?) of Farāhān.

The rank of Atābeg was next conferred on his brother (7) Nuṣrat al-Dīn Aḥmad (695-730/1296-1330 or 733/1333), who had spent most of his life at the court of the Īlkhāns. According to the *Madjma' al-ansāb* he introduced Mongol institutions (*āyīn-i mughūl*) into Luristān. Ḥamd Allāh Mustawfī praises his able and prudent administration, which repaired the damage done by Afrāsiyāb. He was a friend of men of religion and several books were dedicated to him, like the *Ta'rīkh Mu'djam fī aḥwāl-i mulūk al-'Adjam* of Faḍl Allāh Ḳazwīnī. The *Madjma' al-ansāb* gives him the title of *pīr*. According to Ibn Baṭṭūṭa (*Riḥla*, ii, 29-30, tr. Gibb, ii, 287-8), he built 160 *madrasas* (here = "hermitages"), of which 44 were at Īdhadj, and he had roads cut through the mountains.

His son and successor (8) Rukn al-Dīn Yūsuf Shāh II (733-40/1333-40) was also a just ruler. His lands, according to the *Madjma' al-ansāb*, extended from Baṣra and Khūzistān to Lālamūstān (?) and Fīrūzān. He was buried in the *madrasa* of Ruknābād.

His successor was his son (according to Ibn Baṭṭūṭa, his brother) (9) Muẓaffar al-Dīn Afrāsiyāb II (Aḥmad). Ibn Baṭṭūṭa, travelling via Mādjūl-Rāmuz-Tustar, visited the capital Īdhadj [*q.v.*] or Mālamīr. He found the prince addicted to wine. The Arab traveller describes the peculiar customs of the Lurs, which he witnessed at the burial of the son of the "sulṭān". The latter's possessions included Tustar (Shūshtar) and extended to Garīwā' al-Rukh (the modern Kahyarukh in Čarmaḥāll west of Fīrūzān). During the ten days the Arab traveller took to cover this distance, he found shelter every night in a *madrasa*. At the same time (740) Ḥamd Allāh Mustawfī mentions among the possessions of the Great Lur Djābalaḳ (apparently the district to the north-east of Luristān and west of Gulpāyagān).

Next follows an obscure period. According to the anonymous historian of Mīrzā Iskandar, the successor of Afrāsiyāb was his son (10) Nawr al-Ward ("rose-bud"), who ruled from 736/1335-6 (?) to 756/1355 and dissipated the treasures of his ancestors. According to the *Djihān-ārā*, Muḥammad Muẓaffar of Fārs (713-60/1313-59), learning of his dealings with Abū Isḥāḳ Indjū, had him blinded at Sūs in 756/1355. His cousin (the *Djihān-ārā* has "nephew") (11) Shams al-Dīn Pashang b. Yūsuf Shāh II (?) succeeded him and ruled from 756/1355 to 780/1378. At this time, Luristān became involved in the civil wars of the Muẓaffarids [*q.v.*]. When Shāh Manṣūr, making Shūshtar his headquarters, began a series of raids on the lands of Pashang, Shāh Shudjā' (elder brother and rival of Manṣūr, d. 786/1384) came to the help of Pashang. We have coins of 762/1361 and 764/1362-3 struck at Īdhadj in the name of Shudjā' (S. Lane-Poole, *Cat. of oriental coins in the Brit Mus.*, vi [London 1881], 235, 237). After the death of Pashang, a struggle began between his two sons, (12) Malik Pīr Aḥmad and his younger brother (12bis) Malik Hūshang, in which the latter was killed. (According to the anonymous historian of Iskandar, if he has been rightly understood by Howorth, Aḥmad and Hūshang were sons of Nawr al-Ward and the former was the immediate successor of his father.) Shāh Manṣūr drove out Pīr Aḥmad and appointed in his stead a notable named Malik Uways. When Tīmūr passed through Luristān in 795, Pīr Aḥmad came to meet him at Rām-Hurmuz. Tīmūr later received him graciously at Shīrāz, confirmed him by a decree (*āl tamgha*) in his hereditary possessions, and allowed him to repatriate 2,000 families of Lurs deported by Shāh Manṣūr. In spite of this, in 798/1395-6 Tīmūr took as hostages to Samarḳand the brothers of Pīr Aḥmad and Afrāsiyāb. After the death of Tīmūr, Mīrzā Pīr Muḥammad imprisoned Pīr Aḥmad in Ḳuhandiz. He was restored in 811/1408-9, but met his end in a popular rising. The son of Pīr Aḥmad (13) Abū Sa'īd, kept for two years a hostage at the court of Mīrzā Iskandar at Shīrāz, succeeded his father and died in 820/1417. His son (14) Shāh Ḥusayn died in 827/1424 by the hand of his relative (15) Ghiyāth al-Dīn b. Kāwūs b. Hūshang (12bis). The latter seized power, but the Tīmūrid Sulṭān Ibrāhīm b. Shāhrukh sent troops to expel him and thus ended the rule of the Faḍlawī family. Later, the power passed into the hands of local notables of the Bakhtiyārī tribes (*Sharaf-nāma*, i, 48).

LUR-I KÜČIK, a dynasty of Atābegs [see ATABAK] which ruled in northern and western Luristān between 580/1184 and 1006/1597 with Khurramābād as their capital. The Atābegs were descended from the Lur tribe of Djangrū'ī (Djangardī?). The dynasty is also known by the name of Khurshīdī from the name of the first Atābeg. (It remains to be seen if this name is connected with that of Muḥammad Khurshīd, vizier of the former rulers of Luristān before the rise of the Atābegs of Lur-i Buzurg.) After 730/1330, the power passed to another line which later claimed to be of ʿAlid descent; at this time also, the title *malik* succeeded that of *atābeg*.

The ancestors of the Khurshīdīs had entered the service of Ḥusām al-Dīn (of the Turk tribe of Shūhli or Shūhla), who ruled Luristān and Khūzistān about the end of the Saldjūḳ period (*ca.* 550-80/1155-84?).

(1) Shudjāʿ al-Dīn Khurshīd b. Abī Bakr b. Muḥammad b. Khurshīd was at first *Shiḥna* of a part of Luristān on behalf of Ḥusām al-Dīn, but after the death of the latter (in 570/1174-5 or 580/1184-5) became independent lord of the whole of Lur-i Küčik. He waged war on the Djangrawī (the tribe in which he had originated, but which was then being ruled by his rival Surkhāb b. ʿAyyār) and besieged their stronghold Diz-i Siyāh (in the district of Mānrūd and in the *wilāyat* of Samhā?). The inhabitants handed all Mānrūd over to him, but the caliph ordered Shudjāʿ al-Dīn to deliver up to himself the stronghold of Māngarra (Mūngerre north of Ḳilāb). In compensation, Shudjāʿ received the district of Ṭarāzak in Khūzistān. Shudjāʿ al-Dīn drove back the Bayāt Turks who were ravaging Luristān. He led a nomadic life and spent the summer at Kirīt (in Bālā-Girīwa) and the winter at Dulur (Fih-i Lurān in Pusht-i Kūh?) and at Malāḥ (?). He died a centenarian in 621/1224 and his tomb was venerated by the Lurs. His son Badr was killed by his nephew (2) Sayf al-Dīn Rustam b. Nūr al-Dīn, who became Atābeg and was a good ruler. Rustam was succeeded by his brothers first (3) Sharaf al-Dīn Abū Bakr and next (4) ʿIzz al-Dīn Garshasp. The latter married the widow of Abū Bakr, Malika Khātūn, who was the sister of Sulaymān Shāh Aywa, later commander-in-chief of the caliph al-Mustaʿṣim (*Abūh* should be altered to *Aywa*, name of a tribe or a district in the time of the last Saldjūḳs; cf. *Rāḥat al-ṣudūr*, ed. Iḳbāl, 346; Djuwaynī-Boyle, ii, 421-2; *Nuzhat al-ḳulūb*, ed. Le Strange, 107; Defrémery, *Recherches sur quatre princes d'Hamadan*, in *JA* [1847], 177). When (5) Ḥusām al-Dīn Khalīl b. Badr b. Shudjāʿ killed Garshāsp, a struggle ensued between him and Sulaymān Shāh (Shihāb al-Dīn?). The Lurs took Bahār (near Hamadān), but finally Khalīl was defeated and killed near Shāpūr-Khwāst in 640/1242.

His brother (6) Badr al-Dīn Masʿūd went to the court of Mangū and returned in the train of Hūlāgū. This devout man, an authority on Shāfiʿī law, ruled till 658/1260. He showed great kindness to the family of Sulaymān Shāh when the latter was executed at the taking of Baghdād. The sons of Masʿūd were executed by Abaḳa, who appointed as Atabeg (7) Tādj al-Dīn b. Ḥusām al-Dīn Khalīl, also executed by Abaḳa in 677/1278-9.

He had two immediate successors, the two sons of Masʿūd of whom (8) Falak al-Dīn Ḥasan ruled a part of Luristān (*dilār, wilāy*) and (8 *bis*) ʿIzz al-Dīn Ḥusayn ruled the crown domains (*indjū*). The number of their troops was 17,000. They chastised the Bayāt and reunited under their control all the lands between Hamadān and Shūshtar and between Iṣfahān and the Arab lands. Both died in 692/1293.

Gaykhātū appointed as their successor (9) Djamāl al-Dīn Khiḍr b. Tādj al-Dīn, who was killed in 693 near Khurramābād by (10) Ḥusām al-Dīn ʿUmar b. Shams al-Dīn "Darnakī" b. Sharaf al-Dīn b. Tahamtan b. Badr b. Shudjāʿ, who relied for support on the Mongol tribes settled in the lands adjoining Luristān. The other rulers did not recognise this usurper and he had to make way for (11) Ṣamṣām al-Dīn Maḥmūd b. Nūr al-Dīn b. ʿIzz al-Dīn Garshāsp, who slew a certain Shihāb al-Dīn Ilyās and in turn was executed by Ghāzān in 695/1296.

(12) ʿIzz al-Dīn Muḥammad b. ʿIzz al-Dīn (8 *bis*) was a minor, and his cousin Badr al-Dīn Masʿūd (son of 8) obtained from Öldjeytü the title Atābeg and ruled over a part of Luristān (*dilār*), but later ʿIzz al-Dīn fully established his authority. After his death (716/1316 or 720/1320 his widow (13) Dawlat Khātūn retained a semblance of authority while the real power was in the hands of the Mongols. Such was the state of affairs when Ḥamd-Allāh Mustawfī was writing his *Ta'rikh-i guzida* (*ca.* 730/1329-30). Later, the *malika* (who according to the anonymous historian of Mīrzā Iskandar became the wife of Yūsuf Shāh of the Great Lur) found herself forced to surrender the throne to her brother (14) ʿIzz al-Dīn Ḥusayn who received investiture from Abū Saʿīd and ruled for 14 years. His son and successor (15) Shudjāʿ al-Dīn Maḥmud was killed by his subjects in 750/1349-50.

(16) The Malik ʿIzz al-Dīn b. Shudjāʿ al-Dīn was only 12 when his father died. The vicissitudes of his life are known from the record of them in the *Ẓafar-nāma*. In 785/1383 the Muẓaffarid Shāh Shudjāʿ with his army visited Khurramābad and married the daughter of ʿIzz al-Dīn. Another of his daughters was married to Aḥmad b. Uways Djalā'ir. When Tīmūr arrived in Persia in 788/1386, he was told of the depredations of the Lurs of ʿIzz al-Dīn. Setting out from Firūz-kūh, Tīmūr by forced marches reached Luristān. Burūdjird was laid waste, and the fortress of Khurramābād razed to the ground. The ringleaders were thrown down from the tops of the cliffs. The fate of ʿIzz al-Dīn is unknown and we do not know if he was one of the Atābegs of Luristān to whom in 789/1387 Tīmūr granted an audience at Shīrāz, but according to the anonymous historian of Mīrzā Iskandar, ʿIzz al-Dīn was captured in 790/1388 in the fortress of Rūmiyān (Armiyān, Wāmiyān, situated near Burūdjird) and deported with his son to Turkestān. At the end of three years both father and son were released. In 793/1391 ʿIzz al-Dīn played a part in the aggrandisement of the Muẓaffarid Zayn al-ʿĀbidīn, son of his old suzerain Shāh-Shudjāʿ. When in 795/1393 Tīmūr returned to Persia, he went

from Burūdjird to Shūshtar. Luristān was overrun piece by piece and laid waste by the troops of Mīrzā ʿUmar, but ʿIzz al-Dīn escaped his pursuers. In 798/1395-6 prince Muḥammad Sulṭān, governor of Fārs, extended his authority over all Luristān and Khūzistān. In 805/1402-3, we find a mention of the restoration of the fortress of Armiyān (?) near Burūdjird ordered by Tīmūr, and under 806/1403-4 the *Ẓafar-nāma* mentions the arrival in Baylaḳān from Nihāwand of a courier bearing the head of ʿIzz al-Dīn, whose skin had been stuffed with straw and publicly exposed. His son (17) Sīdī Aḥmad, whose irregularity in the payment of tribute seems to have provoked the punishment of his father, regained his possessions, after the death of Tīmūr in 807/1405 and ruled till 815/1412-13 (or 825/1422). (18) Shāh Ḥusayn ("Abbāsī", i.e. descendant of ʿAbbās b. ʿAlī b. Abī Ṭālib), another son of ʿIzz al-Dīn, took advantage of the decline of the Tīmūrids to extend his territory. He plundered Hamadān, Gulpāyagān, Iṣfahān and even undertook an expedition to Shahrazūr, where the Bahārlu Turks slew him in 871/1466-7 (or 873/1468-9). His son (19) Shāh Rustam supported Ismāʿīl I; at this period, the lords of the Little Lur had already adopted the theory that they were of ʿAlid descent. The son of Rustam (20) Oghur (or Oghuz) accompanied Shāh Ṭahmāsp on his campaign of 940/1533-4 against ʿUbayd Allāh Khān, and during his absence his brother (21) Djahāngīr seized power. He was executed in 949/1542-3. The governor (*lala*) of his son (22) Rustam Shāh handed over the latter to Ṭahmāsp Shāh, who imprisoned him in Alamūt while Muḥammadī, another son of Djahāngīr, was hidden by the Lurs at Čangula. An impostor in Luristān gave himself out to be Shāh Rustam Ṭahmāsp, then released the true Rustam, who recovered his fief but had to hand over a third of it (*do dāng*) to his brother (22 *bis*) Muḥammadī. At the instigation of the wife of Shāh Rustam, the governor of Hamadān seized Muḥammadī, who was shut up in Alamūt. The sons of Muḥammadī plunged Luristān and the adjoining provinces into great disorder. Ten years later Muḥammadī escaped, and conquered Luristān while Shāh Rustam took refuge at the court of the Shāh. Muḥammadī established good relations with Ṭahmāsp and Ismāʿīl II, but after their death submitted to the Ottoman Sulṭān Murād III (982-1003/1574-95), which earned him an extension of his territory by the cantons west of Pusht-i Kūh: Mandalī, Djesān, Badrāʾī and Tursaḳ. But relations with the Ottomans soon became strained, and Muḥammadī became reconciled with the Ṣafawīds.

(24) Shāhwardī b. Muḥammadī, who had escaped from Baghdād where he was living as a hostage, received investiture from Shāh Muḥammad Khudābanda after his father's death. At the time of the occupation of Nihāwand by the Turks, Shāhwardī showed some signs of independence. In 1000/1591-2 good relations with Shāh ʿAbbās were re-established, with whom Shāhwardī made the most of his alleged descent from ʿAbbās b. ʿAlī and his Shīʿism (*tashayyuʿ wa ʿAbbāsgirī*). Shāh ʿAbbās married his sister and gave him a Ṣafawīd princess in marriage. In 1002/1593-4 Shāhwardī in a pitched battle killed the governor of Hamadān, Oghurlu Sulṭān Bayāt, who was trying to levy taxes in Burūdjird. Shāh ʿAbbās, filled with wrath, left the Khurāsān front and hastened to Khurramābād. Shāhwardī crossed the Ṣaymara (Karkhā) and escaped to Baghdād. Luristān was given to Sulṭān Ḥusayn b. Shāh Rustam. In 1003/1594-5 Shāhwardī was pardoned and restored, but he was not long in relapsing. In 1006/1597-8 Shāh ʿAbbās took the field against him a second time. Shāhwardī was besieged and slain in the fortress of Čangula (in Pusht-i Kūh). Ḥusayn Khān b. Manṣūr Beg Salwīzī (?) was given Luristān, except Ṣaymara, Hindmas (?) and Pushti-Kūh, which were given to Ṭahmāsp Ḳulī Inānlū. This may be regarded as the end of the dynasty of the Atābegs of the Little Lur, although the dynasty of *wālī*s of Luristān (later of Pusht-i Kūh) claims descent from Ḥusayn Khān, who was a cousin of Shahwardī.

(V. Minorsky)

LURISTĀN, "land of the Lurs", a region in the south-west of Persia. In the Mongol period the terms "Great Lur" and "Little Lur" roughly covered all the lands inhabited by Lur tribes. Since the Ṣafawid period, the lands of the Great Lur have been distinguished by the names of Kūh-Gīlū and Bakhtiyārī. At the beginning of the 18th century, the Mamāsanī confederation occupied the old Shūlistān [*q.v.*] and thus created a third Lur territory between Kūh-Gīlū and Shīrāz.

It is however only since the 16th century that Lur-i Kūčik [*q.v.*] has been known as Luristān (for greater precision it was called Luristān-i Faylī). In the 19th century, Luristān was divided into two parts: 1. Pīsh-Kūh, "country on this side of the mountains" (i.e. east of Kabīr-Kūh) and 2. Pusht-i Kūh (country beyond the mountains), *i.e.* west of Kabīr-kūh. At the present day, the term Luristān usually means Pīsh-kūh, while Pusht-i kūh means the Faylī country.

The Mamāsanī territory and the Kūh-Gīlū form part of the province of Fārs. The capital of the Mamāsanī is at Fahliyān. Kūh-Gīlū (Kūh-Djilūya, Kūh-Gālū) stretches from Bāsht (west of Fahliyān) to Bihbahān; this last town is the main centre for the tribes of Kūh-Gīlū. To the south, the Kūh-Gīlūʾī tribes descend as far as the Persian Gulf. The mountains of Kūh-Gīlū and the frontier between its tribes and the Bakhtiyārī are not yet well-known. The chief rivers of Kūh-Gīlū are the Āb-i Shīrīn which is formed by the junction of the Khayrābād and the Zohra, and in its lower course runs via Zaydān and Hindiyān, and the Āb-i Kurdistān or Djarrāhī, one branch of which later runs into the Kārūn [*q.v.*] and the other towards Dawraḳ. On Kūh-Gīlū, see the valuable *Fārs-nāma-yi Nāṣirī* of Ḥasan Fasāʾī [*q.v.* in Suppl.], the itineraries of Stocqueler, Haussknecht (*Routen im Orient*, Map iv), Wells and Herzfeld, and the general account in Bode, i, 251-89; ii, 327-98; Ritter, *Erdkunde*, ix, 132-44, is now very much out of date.

The Bakhtiyārī lands stretch from Čahārmaḥāll (west of Iṣfahān) to Shūshtar; to the south, the Bakhtiyārī march with the Kūh-Gīlū, and to the north they go beyond the northern barrier of Luristān (Shuturān-kūh, etc.). They are found at Faraydan, Burburūd, Djālapagh, and in the cantons around Burūdjird (even before 1840 many villages had been purchased here by Muḥammad Taḳī Khān

Čahār-Lang). Roughly speaking, the Bakhtiyārī occupy the upper basin of the Zanda-rūd and of the Kārūn above Shūshtar. The works of Layard, Sawyer, Mrs. Bishop, Curzon etc. give a very accurate picture of this mountainous country, in the centre of which rises the Kūh-i Rang (12,800 feet high) which forms the watershed between the Persian Gulf and the central Persian plateau. (It may be asked if the name Kūh-i Rang is not the Mongol *küren*, "encampment, laager", found in Luristān?)

The frontier between the Bakhtiyārī and the Lurs proper follows the western branch of the Āb-i Diz, an important tributary of the Kārūn. Luristān (Pīsh-kūh) is bounded on the east and west by the convergent streams of the Āb-i Diz and the Kakhrā, while in the north the range of the Čihil-nā-bālighān, Garrū, etc. separates Luristān from Nihāwand and Silākhor (district of Burūdjird). To the west of Karkhā, Pūsht-i Kūh begins. In the northwest, the frontier of Luristān runs to the southwest of the districts of Hulaylān and Harsīn, which belongs to the province of Kirmānshāh.

The chief left bank tributary of the Karkhā is the Kashgān (Rawlinson: Kashaghan) which is formed by two arms. The northern arm with its tributaries drains the beautiful plains of Hūr-rūd, Alīshtar and Khāwa. The southern arm, separated from the northern one by the Yāfta-kūh range, takes the name of the town of Khurramābād [*q.v.*] near which it passes. After the confluence of the two arms, the Kashgān, running south-westwards, receives on the left bank the combined waters of the Kāwgūn and Tāyin, which flow from Kūh-i Haftād Pahlū (south of Khurramābād) and the northern slopes of the Kūh-i Gird. These two ranges are at right angles to the mountains which follow the right bank of the Āb-i Diz, which they separate from the valley of the Karkhā. On the right bank the Kashgān receives the Mādiyān-rūd, "river of the mare". Above Kashgān, the Karkhā receives on its left bank several tributaries of less importance still little known (Rūbār, etc.). Below Kāshgān and also on the left bank, the Karkhā receives the Fānī, Laylum (Lehlum) and Āb-i Zāl. This last river with its tributaries, Anārak, etc., rises in the southern slopes of the Kūh-i Gird. The topography of the right bank of the Ab-i Diz is not well-known. The sources of the Baladrūd and its right-bank tributary the Ḳir-āb lie a considerable distance to the north. The Balad-rūd flows into the Āb-i Diz between Dizfūl and Susa. The Ḳir-āb receives on its right bank the waters of the Kūl-i-āb which come down from the high valley of Mūngarra, which with the peaks that surround it form a kind of natural bastion and separate the basin of the Balad-rūd from that of the Āb-i Zāl. The Ṣaḥrā-yi Lur plain, formerly well-irrigated, lies north of Dizfūl and south of Ḳir-āb ("pitch-water"), whose naphta spring has been known since ancient times. It was probably here that Darius settled a colony of Greeks (Ritter, ix, 201).

The interior of Luristān presents a series of mountain ranges, which stretch north-westwards to south-eastwards, the direction usual in Persia, and rise one behind the other between the plain of Susiana and the northern barrier (height about 9,000 feet).

Ancient history. The lands now occupied by the Lur tribes have been inhabited since the period before the arrival of Iranians in them. This region, being at a considerable distance from Assyria, was mainly under the influence of Elam; Susa, where there have been found traces of occupation going back to the third millenium B.C., lies just at the entrance to the mountains of the Little Lur. The purest traces of the local culture and of this alone are found more to the south-east. Just as the Atābegs of the Great Lur had for their capital Īdhadj [*q.v.*] or Mālamīr, so in very early times, the lords of this district, the kings of Aiapir (Hapirti?), whatever were their relations with the rulers of Susa, had control at least of the Kārūn valley. The site of Mālamīr (cf. de Bode, Layard, Jéquier in de Morgan, *Délégation en Perse*, 1902, iii, 133-43, and Hüsing, *Der Zagros und seine Volker*, Leipzig 1908, 49-50), with its purely indigenous (Elamite, non-Semitic) inscriptions and bas-reliefs, is an important point. The discovery by E. Herzfeld (*Reisebericht*, in *ZDMG* [1926], 259) in the Mamāsanī region of a bas-relief and bricks bearing Elamite characters (1,500-1,000 B.C.) is valuable as indicating the extent of Elamite penetration into the Lur mountains. Kūh-Gīlū lying between Susiana and Persis may correspond to the still-unknown region of Anshan (Anzan), out of which came the ancestors of Cyrus the Great. On the survival of this name near Shushtar, cf. *Grundr. der iran. Phil.*, ii, 418 (according to Rawlinson: Assān).

The antiquities of the valley of the Upper Kārūn (the two Sūsan, Lurdagān, the mounds of Salm, Tūr and Īradj) are insufficiently known (Layard, Sawyer). According to Sawyer, the higher Bakhtiyārī lands are "singularly devoid of any ancient landmarks".

Mention should be made of the great importance of Luristān, from at least the later fourth millenium B.C., as a centre for metal-working, with an industry distinguished from other local ones by its greatly-varied and richly decorated range of bronzework, made by the cire-perdue process. This bronzework has some sub-human decoration, but is especially notable for animal motifs. This zoomorphic decoration probably stemmed originally from Elam, which much influenced Luristān till the destruction of Elamite political power by Nebuchadnezzar I (*ca.* 1124-1103 B.C.) of Babylon, after Babylonian influence is visible in Luristān art. The bronze industry continued until the 7th century B.C., in association with equally fine ironwork; see P. R. S. Moorey, *Prehistoric copper and bronze metallurgy in Western Iran (with special reference to Luristān)*, in *Iran, Jnal. of the BIPS*, vii (1969), 131-53.

The western part of Luristān in the strict sense of the word is known as Māsabadhān and Pusht-i Kūh. No monuments of very great antiquity have yet been discovered in Pīsh-kūh except the caves (Median?) of Se-darān between Mūngarra and Khurramābād, see Čirikov, 129. The early inhabitants of Luristān were the Kashshu = Κοσσαῖοι, who imposed their rule on Babylon between 1760 and 1650 B.C. The Achaemenids paid the Kossaioi for the right of passage by the Babylon-Ecbatane route. These highlanders were temporarily subdued by Alexander the Great. Antigonus, pursued by Eumenes, traversed the heart of the Kossaian country, according to Rawlinson on the route Pul-i-tang-Kaylūn pass-Khurramābād (Ritter, *Erdkunde*, ix, 335). The Kossaians (who should perhaps be distinguished from the Κίσσιοι = Οὔξιοι = Uwadja = Khūz) spoke a language different from that of their neighbours, but in it we already find proper nouns borrowed from Indo-European. Cf. E. Meyer, *Gesch. der Altertums*, i/2, Berlin 1913, § 455; Hüsing, *Der Zagros*, 24, and Autran in *Les langues du monde*, Paris 1925, 283. (The name Kashshu has perhaps survived in that of the river Kashgān.)

It is also probable that northern Luristān was more or less dependent on the land of Ellipi, often

mentioned by the Assyrians. This region, which was considerably influenced by Media, is now located in the province of Kirmān<u>sh</u>āh. Cf. Andreas, *Alinza*, in Pauly-Wissowa[2]; Streck, in *ZA*, xv, 379; *Cambridge ancient history*, 1924, ii, cf. map.

We know very little about the Ματιηνοί, a people who (Herodotos, v, 49) were bounded on one side by the Armenians and on the other by the Susians (Reinach, *Un peuple oublié: les Matiènes*, in *Revue des Études Grecques*, vii [1894], 313-18).

Here we can only call attention to these various ethnic elements buried in the later strata of Iranian invasions. In the name of Faraydan, a canton in the northeast of Ba<u>kh</u>tiyārī, we have a reminiscence of the Median tribe of Paraitakenoi (Herodotus, i, 110) and of the province of Παραιτακηνή (Strabo, i, 80), which lay between Media and Persia (in Assyrian: Partakka, Partukka; cf. Streck, in *ZA*, xv, 363). The Iranicisation must have been accelerated by the formation of the great empires, Achaemenid, Macedonian, Parthian and lastly Sāsānid. There are many Sāsānid towns in the valley of the Kar<u>kh</u>ā. Many Sāsānid buildings are attributed by the natives to the Atabegs of Luristān, who were certainly nothing more than the restorers. The complicated system of bridges is very remarkable (cf. the photographs in de Morgan, *Études géogr.*, ii, and *Études archéol.*, Paris 1896-7, 360-74), and the roads which may still be traced on the upper courses of the rivers of Susiana. The remains of roads, paved or hewn out of the rock, may be seen at Tang-i Sawlak (between Bihbahān and Mālamīr) near the Sāsānian bas-reliefs (de Bode, i, 353, 364), to the east and west of Mālamīr (de Bode, i, 390, ii, 820: *d<u>j</u>ādda-yi atābakān*), between Dizfūl and Ḳirāb (Rawlinson, *A march from Zohab*, 93), to the south of <u>Kh</u>āwa (*d<u>j</u>ādda-yi <u>Kh</u>usraw*, Čirikov, 216-21). All these works are evidence of a systematic and continuous penetration. But since at the end of the 4th/10th century the inhabitants of the plain of <u>Kh</u>ūzistān had not yet forgotten the Hūz language (al-Muḳaddasī, 418), colonies of the ancient stocks may have survived in isolated corners of the mountains. The Lur highlands only assumed their present ethnic character under the Atābegs.

The knowledge of the Arab geographers about the Lur country is very summary, although they describe the routes between <u>Kh</u>ūzistān and Fārs (cf. Schwarz, *Iran im Mittelalter*, 173-80; Arra<u>dj</u>ān-<u>Sh</u>īrāz, 190; Arra<u>dj</u>ān-Sumayram), between <u>Kh</u>ūzistān and Iṣfahān (the road started from Ī<u>dh</u>a<u>dj</u>; Ibn <u>Kh</u>urradā<u>dh</u>bih, 57; al-Muḳaddasī, 401) and lastly, between <u>Kh</u>ūzistān and <u>Dj</u>ibāl. As to these last routes, al-Iṣṭa<u>kh</u>rī, 196, reckons from al-Lur to <u>Sh</u>āpūr-<u>Kh</u>ʷāst 30 *farsa<u>kh</u>s*, from there to Lā<u>sh</u>tar (= Alī<u>sh</u>tar) 12 *farsa<u>kh</u>s*, from there to Nihāwand 10 *farsa<u>kh</u>s* (the road must be that which follows the upper waters of the Baladrūd). A few details of this route are cleared up by al-Muḳaddasī, 401, who gives the following eight stages: Kara<u>dj</u> [*q.v.*]—Wafrawand—Dārḳān—<u>Kh</u>urū<u>dh</u> (certainly = Hūrūd, Hūr-rūd, north of <u>Kh</u>urramābād)—Sābur-<u>Kh</u>uwās (= <u>Sh</u>āpūr-<u>Kh</u>ʷāst = <u>Kh</u>urramābād)—Krkūysh (?)—al-<u>Kh</u>ān—Razmānān—al-Lur. Al-Muḳaddasī, 418, also makes one suspect the existence of a road along the Āb-i Diz: from al-Lur to al-Diz, two stages, from there to Rāyagān one stage, from there to Gūlpāyagān 40 *farsa<u>kh</u>s* through uninhabited country (*mafāza*).

Among the inhabited places in modern Luristān may be noted the following: the town of al-Lūr, 2 *farsa<u>kh</u>s* north of Dizfūl (Ḳanṭarat Andami<u>sh</u>), the site of which should be sought in the plain of Ṣaḥrā-yi Lur near Ṣāliḥābād; the town of Lā<u>sh</u>tar, now disappeared, was certainly in the plain of Alī<u>sh</u>tar; and the town of <u>Sh</u>āpūr-<u>Kh</u>ʷāst. The exact location of the latter is important for the comprehension of certain events in the 5th/11th century (Ibn al-A<u>th</u>īr, ix, 89, 146, 211; x, 166; *Taʾrī<u>kh</u>-i guzīda*, 557). Rawlinson had identified <u>Kh</u>urramābād with <u>Sh</u>āpūr-<u>Kh</u>ʷāst (cf. Le Strange, *Lands*, 202). The combined evidence of al-Iṣṭa<u>kh</u>rī, 196, 201, of the *Nuzhat al-ḳulūb*, 70, 176, and particularly of the itinerary of al-Muḳaddasī, 401, fully justify Rawlinson's identification (against Le Strange). The change of name, or moving of the site (cf. Schwarz) must have taken place in the 7th/13th century. The *Nuzhat al-ḳulūb* (740/1340), which does not include <u>Sh</u>āpūr-<u>Kh</u>ʷāst in its enumeration of the towns of the Little Lur, is the first source to mention <u>Kh</u>urramābād (a town in ruins). It is, on the other hand, not at all probable that the *wilāyat* of Mān-rūd, the alleged ancestral home of the Lurs, is near <u>Kh</u>urramābād. It should be sought to the north of the town of al-Lur near Mān-garra (= Mūngarra). Samhā, mentioned in the *Taʾrī<u>kh</u>-i guzīda*, 548, was in Mān-rūd; its fortress Diz-i Siyāh must correspond to the fort of Diz which defends the entrance to Mūngarra and was destroyed by the *wālī* of Pu<u>sh</u>t-i Kūh in 1895 (Mann, *Die Mundarten der Lurstämme*, 117). Finally, the stronghold of Girīt (*Taʾrī<u>kh</u>-i guzīda*, 549, 552) is mentioned by Čirikov, 133, among the encampments of the tribe of Pāpī (to the south of <u>Kh</u>urramābād).

Economic conditions. Apart from the Ba<u>kh</u>tiyārī districts near Iṣfahān, where there are flourishing villages, the Lur territories inhabited by nomads or semi-nomads only export the products of their cattle-rearing. But the fortunes of the part of Luristān lying along the northern rim of the Ahwāz plain have been transformed by the development of the oilfields of Lālī, Mas<u>dj</u>id-i Sulaymān, Nafṭ Safīd and Haft Kel from the time of William Knox D'Arcy's oil discoveries at Mas<u>dj</u>id-i Sulayman in 1908 and the subsequent development of these oilfields by the Anglo-Persian Oil Company (see *Cambridge history of Iran*, i, 518 ff.). Also, Luristān is now crossed by the Trans-Iranian Railway, which follows the Āb-i Diz valley northwards to Arak (Sulṭānābād), Ḳum and Tehran. Already before 1914, surveys were begun by the Persian Railways Syndicate for the Muḥammara (later Bandar <u>Sh</u>āpūr)—Dizfūl—Khurramābād section of what was to be a Trans-Persian Railway, and by the end of 1929 the southern section from Bandar <u>Sh</u>āpūr to Andīmishk had been completed, that one through Luristān being completed in the 1930s. Luristān has thus continued to play a significant role, as it did in ancient times, as a region crossed by routes connecting the main urban centres of western Persia.

(V. MINORSKY*)

LŪRḲA, Lorca, a town of Eastern Spain lying between Granada and Murcia and having a population at present of 58,600. It is the ancient *Iluro* or *Heliocroca* of the Romans. In the Islamic period, it formed part of the *kūra* of Tudmīr [*q.v.*], and was famous both for the richness of its soil and subsoil and for its strategic position. Its *ḥiṣn* was one of the most substantial in Andalusia. It is situated at 1,200 feet above sea-level on the southern slope of the Sierra del Cáno, and dominates the course of the river Guadalentín. Under Arab rule it usually shared the fortunes of Murcia, and reverted to Christian rule in 1266.

LŪRĪ [see LŪLĪ].

LŪṬ, the Biblical Lot (*Genesis*, xiii, 5-13, xvii-xix). The Ḳurʾān, where his story is told in passages belonging to the second and third Meccan periods, places Lūṭ among the "envoys" whose career prefigures that of Muḥammad as a man in conflict with his compatriots, those at whom his message is directly aimed; the crimes of the "people of Lūṭ" were, besides the refusal to believe, their persistence in vices such as lack of hospitality and homosexual practices, a misconduct punished, in spite of intercession by Ibrāhīm [*q.v.*], by the dispatch of angels of destruction who utterly devastated the sinful city, which is not identified by name, simply described as *al-muʾtafika* (pl. *al-muʾtafikāt*), a transposition of the Hebrew word *mahpeka* ("overturning"), used in the Bible in reference to the

destruction of Sodom and of its three sister cities. The city was buried under a shower of marked stones (*sidjill*); Lūṭ and his family were saved, with the exception of his wife, who disobeyed the prohibition and turned round during the flight. The relevant Ḳur'ānic data have been collected by H. Speyer. *Die biblischen Erzählungen im Qoran*, Gräfenhainichen 1931, repr. Hildesheim 1961, 151-8; and by R. Blachère, *Le Coran*, major edition, iii, Paris 1951; index, 1203, single-vol. edition, Paris 1957, index, 721; see also R. Paret, *Der Koran. i. Übersetzung*, Stuttgart 1966, 130, *ii. Kommentar und Konkordanz*, Stuttgart 1970, 165; W. Montgomery Watt, *Bell's Introduction to the Qur'ān*, Edinburgh 1970, 130 ff. and index, 227; D. Sidersky, *Les origines des légendes musulmanes dans le Coran*, Paris 1933, 46-8; presentation in apologetic form by the Muslim scholar ʿAbd al-Wahhāb b. Sayyid Aḥmad al-Nadjdjār (*ca.* 1278-1350/1862-1941; see Ziriklī, *Aʿlām*, iv, 333), *Ḳiṣaṣ al-anbiyā'*, Cairo 1386/1966, 95, 112-18.

The "traditions" passed on by Ḳur'ānic commentators, historians and compilers of cautionary tales, rely for the most part on Biblical details which are not found in the Revealed Book, on elements borrowed from the Jewish *Aggada* or freely invented; the iniquitous judgments of the people of Usdūm (Sodom), the theme of the bed of Procrustes, emphasis on the wickedness of Lūṭ's wife, names attributed to anonymous characters in the Scriptural account; for details, see the article by B. Heller in *EI*[1]; summary of Jewish legends, with sources, in Ginzberg's *The legends of the Jews*, Philadelphia 1909-38 (and re-impression) i, 245-7, v. 241, n. 175, not forgetting M. Grünbaum, *Neue Beiträge zur semitischen Sagenkunde*, Leiden 1893, 132-41. We set forth here only a few references: al-Ṭabarī, *Tafsīr*, original edn., viii, 164-6, new edn. Dār al-Maʿārif, Cairo 1957, xii, 547-53; idem, *Annales*, i, 266 ff., 321, 325-43; al-Yaʿḳūbī, *Ta'rīkh*, ed. Houtsma, 22-4, Nadjaf 1384/1964, 17-19, see Smit, *Bijbel en Legende*, Leiden 1907, 30-2; a later version which (like al-Yaʿḳūbī) follows the Biblical text quite closely, by Rashīd al-Dīn, tr. K. Jahn, *Die Geschichte der Kinder Israels*, Vienna 1973, 35, 36, 38. Popular and cautionary versions: al-Thaʿlabī, *Ḳiṣaṣ al-anbiyā'*, Cairo 1325/1907, 65-7, Cairo 1371/1951, 64-6; al-Kisā'ī, *Ḳiṣaṣ al-anbiyā'*, ed. I. Eisenberg, Leiden 1922-3, i, 145-9. In *ḥadīth* as properly defined, Lūṭ appears in reference to Ḳur'ān, XI, 82/80, in a context giving evidence of the modesty of Muḥammad; al-Bukhārī, *Ṣaḥīḥ*, *Anbiyā'*, 11 (ed. Krehl, ii, 347; *sulṭānī* edition, repr. Cairo 1378/1958, iv, 179); Ibn Mādja, *Sunan*, *K. al-Fitan*, 23, ed. M. Fu'ād ʿAbd al-Bāḳī, Cairo 1373/1953, no. 4962, 1335 ff.; see Wensinck, *Concordance*, iii, 165 ff.

On the basis of the proper noun Lūṭ, and by association with the authentic Arabic root *l-w-ṭ* (with the sense of "sticking", "adhering"), a group of words was formed to indicate unnatural vice [see LIWĀṬ].

In common with other "prophets" of the Ḳur'ān, the figure of Lūṭ was invested with a mystical significance by Ibn ʿArabī [*q.v.*], who considered him the symbol of the spiritual force that subdues the passions of the concupiscent soul. (*Fuṣūṣ al-ḥikam*, 13, ed. Abu 'l-ʿAlā' ʿAfīfī, Beirut 1365/1946, 126-31 and editor's commentary, 155-62). In the same spirit are the reflections of the Indian Ṣūfī Shāh Walī Allāh (1703-62) in his *Ta'wīl al-aḥādīth fī rumūz ḳiṣaṣ al-anbiyā'*, abridged tr. J. M. S. Baljon, *A mystical interpretation of Prophetic tales by an Indian Muslim*, Leiden 1973, 20-2.

LUTE [see AL-ʿŪD].

LUṬF (A.), the opposite of *khidhlān* [*q.v.*]. Derivatives of the root *l-ṭ-f* are used in the Ḳur'ān in two senses, as (a) kind (*e.g.*, XLII, 18) and (b) subtle (XXXI, 15; VI, 103; XXXIII, 34; LXVII, 14; XXII, 62). Senses (a) and (b) are linked by the idea of God organising matters in such a way as to bring about a beneficial state of affairs. It is this religious notion which is applied in the Arabic translation of Alexander of Aphrodisias' *Fī mabādi' al-kull* to refer to teleological direction in nature (265), and by Mūsā b. Maymūn to refer to God's stratagem in the hardships which he obliges his creatures to endure (iii. 32. 528). The term is applied theologically to the notion of divine grace, favour or help, being developed by the Muʿtazila to deal with an aspect of human freedom and its relation to divine omnipotence. Divine favour makes it possible for man to act well and avoid evil (ʿAbd al-Djabbār, *Sharḥ*, 519). It is not granted to the sinner, whom God neither prevents from acting well nor directs to commit evil. ʿAbd al-Djabbār, who provides the most systematic treatment of *luṭf* in the volume of his encyclopaedia of that name (*Mughnī*, xiii), says that for the Muʿtazila, divine grace is all that is capable of helping the agent carry out the duties set for him without interfering with his freedom. If a person believes only because he has received a *luṭf*, he is not as deserving as if he did not require it. A person who will do the right thing does not require a *luṭf*, which is then not necessary. It cannot be true that God necessarily helps all men, since otherwise it would not be possible to sin (*Sharḥ*, 520) and there would be no free will. But if man acts well, he is rewarded and helped by God as a consequence; if he sins, he is deprived of God's help (*Sharḥ*, 520).

Taken more broadly, the description *luṭf* may be applied to many aspects of human well-being, *e.g.* health (*Mughnī*, xiii, 11), wisdom, the use of reason, prophecy and the provision of holy books (*Nihāya*, 411). These all help to direct man in the right direction without compelling him (*Mutashābih*, ii, 734). Hence a rationale is provided also for punishment. God could turn unbelievers into believers, but His favours do not interfere with voluntary belief and so God does not grant favours which directly convert unbelievers into believers (*Maḳālāt*, 247, 575; a list of *alṭāf* is provided in Shahrastānī, 55).

Another sense in which *luṭf* is obligatory (*wādjib*) is that where God is "obliged" to provide as much *luṭf* as possible to whomever is reponsible for his actions. This doctrine was of course strenuously opposed by the Ashʿariyya, who apply the term *luṭf* to all God's acts, bad as well as good (*Irshād*, 173-4, 265). But for the Muʿtazila, God is morally obliged to send to earth prophets and to arrange for the laws which man ought to follow to be communicated to them. Similarly for the Shīʿī al-Ḥillī, the institution of the *imām*, like prophecy, is a "necessary grace" which is imposed on God. Since God has created the world only in the interests of man, he is obliged by a *luṭf wādjib* to guide his creatures by sending them on occasion mediators to make plain His will. The Muʿtazila thought that man would be capable of social existence without the gift of a prophet or *imām*—nevertheless, they hold that God is obliged to

organise the world well, hence due to a *luṭf wādjib*, has to provide mankind with guidance.

LUṬF ʿALĪ BEG b. Āḳā Khān, **Persian anthologist and poet**, who is also known by his pen-name Ādhar which he adopted after having used the names Wālih and Nakhat previously. He was descended from a prominent Turcoman family belonging to the Begdīlī tribe of Syria (Begdīlī-i Shāmlū) which had joined the Ḳïzïlbāsh movement [*q.v.*] in the 9th/15th century. Afterwards, the family settled down in Iṣfahān. Many of his relatives served the later Ṣafawids and Nādir Shāh as administrators and diplomats. Luṭf ʿAlī Beg was born on Saturday 20 Rabīʿ II 1134/7 February 1722 (the date mentioned in the two Bombay lithographs of the *Ātashkada* is erroneous). The invasion of the Afghāns occurring in the same year forced his parents to flee to Ḳum, where they lived till his father was appointed to the post of governor of Lār and the coast of Fārs in *ca.* 1148/1735-6, and they moved on to Shīrāz. When his father died at Bandar ʿAbbās two years later, Luṭf ʿAlī Beg undertook the pilgrimage to the Ḥidjāz and to the holy shrines in ʿIrāḳ. During a subsequent journey to Mashhad he entered the service of Nādir Shāh, whom he accompanied on a campaign in northern Iran. He continued to work for Nādir's successors, but retired in the early years of the Zand period to a life of study and literary pursuits, subsisting on the revenue of a small estate near Ḳum and living at Iṣfahān, where peace had been restored by Karīm Khān Zand. However, in 1188/1774-5, he and some of his fellow-poets had to leave the city on account of the oppressive rule of the Zand governor Muḥammad Runānī. Luṭf ʿAlī Beg died in 1195/1781 according to the chronograms which his friends Hātif and Ṣabāḥī wrote for him (see *al-Dharīʿa*, ix, Tehran 1332/1953, 3).

Luṭf ʿAlī Beg's fame rests in particular on the anthology *Ātashkada*, on which he continued to work from about 1174/1760-1 almost till the time of his death. The work is divided into two parts, styled "censers" (*midjmara*). The first part, on the poets of previous times, opens with a section (*shuʿla*) devoted to royal poets. Three further chapters (called *akhgar* and subdivided into *sharāras*) deal with the poets of Īrān, Tūrān and Hindūstān according to the districts and towns of their provenance. An appendix on female poets (*furūgh*) has been added to it. The main source for this part of the *Ātashkada* was the *Khulāṣat al-ashʿār wa-zubdat al-afkār* of Taḳī al-Dīn Kāshānī. The second *midjmara*, divided into two *partaws*, contains the lives of contemporary poets, many of whom were personal friends of the author. It is preceded by a dedication to Karīm Khān Zand and a sketch of the troubled history of Iran from the time of the Afghān invasion onwards. A short autobiography followed by a selection from Ādhar's own poetry concludes the work.

The *Ātashkada* was often copied in the early 13th/19th century. Lithographs appeared at Calcutta 1249/1833-4, and at Bombay 1277/1860-1 (reprinted Tehran 1337/1958) and 1299/1881-2. An annotated edition by Ḥasan Sādāt Nāṣirī, of which three volumes were published at Tehran (1336/1957, 1338/1959 and 1340/1961), has remained unfinished. N. Bland edited the opening section, the *shuʿla* on royal poets (London 1841), and gave an account of the entire work in *JRAS*, xiv (1843), 345-92. An abridged version, the *Tadhkira-yi Isḥāḳ*, containing the poems only in the alphabetical order of the rhymes, was made by a brother of the author, Isḥāḳ Beg ʿUdhrī (cf. A. Gulčīn-i maʿānī, *Ta'rīkh-i tadhkirahā*, i, 182 f.). The existence of a Turkish translation, mentioned by J. H. Kramers (*EI*[1], s.v. *Luṭf ʿAlī Beg*), has been questioned by Tahsin Yazıcı. For a complete inventory of the biographies occurring in the *Ātashkada*, see E. Sachau - H. Ethé, *Catalogue of the Persian manuscripts in the Bodleian Library*, Oxford 1889, cols. 262-93.

As a poet, Luṭf ʿAlī Beg was also held in high esteem by his contemporaries. Much of his early work was lost when the Bakhtiyārī chief ʿAlī Mardān sacked Iṣfahān in 1164/1750. He became a pupil of Mīr Sayyid ʿAlī Mushtāḳ (d. 1171/1757-8), who was one of the initiators of the "literary return" (*bāzgasht-i adabī*) to the stylistic standards of early Persian poetry which manifested itself among the poets of Iṣfahān and Shīrāz during the Zand period (cf. M. T. Bahār, in *Armaghān*, xiii [1331/1932-3], 713 ff.). Apart from a *Dīwān* (cf. *Bankipore catalogue*, iii, Calcutta 1912, 219-21; Storey, i/2, 870; A. Munzawī, *Fihrist-i nuskhahāyi khaṭṭī-yi fārsī*, iii, 2206 f.), four *mathnawī*s are known: 1. *Yūsuf-u Zulaykhā*, fragments of which are contained in the *Ātashkada* (for separate manuscripts, see Munzawī, iv, 3331); 2. a short poem, known as *mathnawī-i Ādhar*, which he wrote in imitation of a *mathnawī* entitled *Ātashkada*, or *Sūz-u gudāz*, by Āḳā Muḥammad Ṣādiḳ Tafrishī, which seems to have inspired him also in the choice of a title for his anthology (cf. A. Gulčīn-i maʿānī, in *Madjalla-i dānishkada-i adabiyyāt-i Mashhad*, iii [1346/1967-8], 23-51; Munzawī, iv, 3117); 3. a *Sāḳī-nāma* (cf. Munzawī, iv, 2857); 4. a *Mughannī-nāma* (cf. *ibid.*, 3225). Less certain is the attribution to this author of two other works: a prose-work, *Gandjīnat al-ḥaḳḳ*, composed in the manner of Saʿdī's *Gulistān* (mentioned in the *tadhkira Andjuman-i Khāḳān*, cf. Ibn-i Yūsuf Shīrāzī, *Fihrist-i Kitābkhāna-yi madrasa-yi ʿAlī-yi Sipahsālār*, ii, Tehran 1318/1939, 453) and a *tadhkira* on contemporary poets entitled *Daftar-i nuh āsmān* (mentioned by Āḳā Buzurg al-Ṭihrānī, *al-Dharīʿa*, vii, Nadjaf-Tehran 1329/1950, 226; cf., however, Gulčīn-i maʿānī, *Ta'rīkh-i tadhkirahā*, i, 48 note). As it seems, Luṭf ʿAlī Beg wrote some poems in Turkish as well (cf. M. F. Köprülü, *İA*, s.v. *Âzerî*, 139b).

LUṬF ʿALĪ KHĀN, the last ruler of the Zand dynasty of Iran. He was born in 1183/1769, the son of Djaʿfar Khān son of Ṣādiḳ, younger brother of the founder of the dynasty, Karīm Khān [*q.v.*]. During his father's reign, when the Ḳādjār armies had overrun most of northern Iran, Luṭf ʿAlī subjugated Lār and Kirmān and for the last time retook Iṣfahān, but was soon forced back to Shīrāz. When his father was killed in 1204/1789 in a coup led by Ṣayd Murād Khān Zand, Luṭf ʿAlī fled to Bushire (Būshahr), where he was assisted by the governor Shaykh Nāṣir, long a loyal vassal of the Zands. Thus reinforced he marched on Shīrāz, where a fifth column led by the *kalāntar* [*q.v.*] (mayor), Ḥādjdjī Ibrāhīm, aided him to overthrow the rebels.

A brave and likeable youth, in contrast to his cruel and treacherous father, Luṭf ʿAlī was genuinely welcomed by the populace. Though defeated in the field, he held Shīrāz against a Ḳādjār assault; the following year he unsuccessfully besieged Kirmān, then in 1205/1791 set out to recapture Iṣfahān. However, since his accession he had become openly suspicious of the influential Ḥādjdjī Ibrāhīm, and was induced by whispers of his disloyalty to take with him the *kalāntar*'s young son as a hostage. Acting perhaps in self-preservation, Ḥādjdjī Ibrāhīm arrested the Zand officers left in Shīrāz and took over the garrison; his brother, who was with Luṭf ʿAlī's army, fomented a mutiny from which the young Zand leader and three hundred men fled to Shīrāz. Here he found the gates closed against him and was deserted by all but four of his followers. Fleeing again to Bushire, he found that Shaykh Nāṣir's son and successor had elected to support the *kalāntar*. Nevertheless, he recruited some local support and successively defeated both Zand and Ḳādjār forces sent against him. Ḥādjdjī Ibrāhīm's appeal to the Ḳādjār leader to occupy Shīrāz was answered by Āghā Muḥammad Khān in person with an army of 40,000. Luṭf ʿAlī's small cavalry force defeated the Ḳādjār vanguard and that night came within a hair's breadth of capturing the main camp. In 1207/1792 Āghā Muḥammad entered Shīrāz, and Luṭf ʿAlī was henceforth a fugitive, still mounting guerrilla attacks from temporary bases all over south-eastern Iran. Supported successively by chiefs of Ṭabas and Narmāshīr, he twice held the city of Kirmān; in 1209/1794, after a four-month siege, the Ḳādjār army was admitted to the town by treachery and Luṭf ʿAlī barely escaped to Bam. For their support of his rival, Āghā Muḥammad wrought a terrible revenge on the people of Kirmān [*q.v.*]. The governor of Bam, fearing a similar fate, betrayed Luṭf ʿAlī to the Ḳādjār leader, who blinded and tortured him before taking him to Tehran for execution in Rabīʿ II 1209/November 1794.

As the gallant underdog, Luṭf ʿAlī inspired admiration in contemporaries both Iranian and European, though the Persian chronicles, written under Ḳādjār patronage, are of necessity more circumspect. Sir Harford Jones Brydges, who accompanied him during part of his time as a fugitive, and Sir John Malcolm, to whom Ḥādjdjī Ibrāhīm later tried to justify his tergiversation, praise the youth's daring and resilience, which indeed imparted a certain nobility to the largely self-inflicted death throes of the Zand dynasty. His alienation of Ḥādjdjī Ibrāhīm, however, was symptomatic of the dynasty's failure to live up to its early promise. Karīm Khān had been careful to cultivate the trust of the rural and urban classes in addition to that of his tribal army, whereas his successors, including Luṭf ʿAlī, were too intent on feuding among themselves and fending off the Ḳādjārs to promote or even protect the benefits which the bureaucracy, merchants, artisans and peasantry had obtained from Karīm Khān. Having lost the support of the towns, Luṭf ʿAlī's nomad force disintegrated in the face of a Ḳādjār army which was, if not militarily, certainly politically and logistically stronger.

Brydges, *The dynasty of the Kadjars*, London 1833, pp. cxx ff. of the introduction (translated into Persian as *Ākharīn rūzhā-yi Luṭf ʿAlī Khān-i Zand* by H. Nāṭiḳ and J. Gurney, Tehran 1353/1974); ʿAbd al-Ḥusayn Nawāʾī, *ʿĀḳibat-i Luṭf ʿAlī Khān-i Zand*, in *Yādgār*, iii, no. 5, 26-37.

(J. R. Perry)

LUṬFĪ, 14th and 15th century poet in Čaghatay Turkish, and the greatest master of the *ghazal* before ʿAlī Shīr Nawāʾī (845-906/1441-1501). The little that is known about his life comes mainly from 15th and 16th century works, especially those of Nawāʾī. Luṭfī was born in Harāt, and died and was buried at his home in the nearby suburb of Dih-i Kanār at the age of 99 (Muslim) years. Modern scholarly conjecture suggests *ca.* 768-867/1367-1463 (J. Eckmann); or d. 870/1465-6 or even later (H. F. Hofman). He lived quietly, but some contact with the Tīmūrid court is indicated by his dedications of a few poems to princes from Shāh Rukh to Ḥusayn Bayḳara. Nawāʾī, who knew him personally, reports that after studying the secular sciences, Luṭfī was initiated into Ṣūfī mysticism by Shihāb al-Dīn Khiyābānī, that the poet was a saintly person and was a close friend of Djāmī, the great Persian poet and mystic of Harāt.

Luṭfī's poetry has been highly esteemed since his own lifetime. There has been general agreement with the judgement of Nawāʾī who said he was "the Master and King of Speech of his people" (*Ḥālāt-i Pahlawān*), "the King of Speech of his time", peerless in Persian and Turkish, but better known for his Turkish poetry (*Madjālis al-nafāʾis*), and the single Turkish poet comparable to the greatest Persian poets (*Muḥākamat al-lughatayn*). Nawāʾī even incorporated five complete *ghazal*s of Luṭfī into his own poems (*mukhammas* and *musaddas*).

While Luṭfī wrote some *ḳaṣīdas* and two major *mathnawī*s, his poetic gifts and originality were best displayed in the *ghazal* and *tuyugh*. In combining the classical Persian lyric tradition with elements of Turkish popular poetry, he produced *ghazal*s of graceful simplicity which concealed a subtle sophistication, while yet retaining some flavour of Turkish folksong. This results in part from his preference for those *ʿarūḍ* metres which corresponded approximately with Turkish syllabic metres, but also from his use of specifically Turkish features, such as proverbs and folk sayings reflecting ancient Turkish customs and beliefs, and of imagery which was often more realistic than that of classical Persian poetry. His verse seems to contain proportionately more words of Turkish origin and less Arabic and Persian loan words than any of his contemporaries or successors in classical Čaghatay. The musicality he achieved is due not only to his exquisite word choice

and sequence, but also to his technical skill in developing such features as the extended *radīf* [*q.v.*]. The wit and humour displayed in new uses of old images, the enjoyable puns and wordplays in both *ghazal* and *tuyugh*, were also not negligible factors in ensuring his continuous popularity for five centuries. His influence is visible in the works of such contemporaries as Sakkākī, Atāyī and Gadā'ī and of later poets directly, and even more, indirectly, by way of his influence on Nawā'ī's poetry, which was universally admired. Echoes of Luṭfī are heard even in poets from other linguistic areas, such as the Azeri and Ottoman ones, particularly Fuḍūlī (d. 1556) and the Turkmen ones, especially Makhdūm-Ḳulī (18th century). Verses by Luṭfī are frequently cited in Čaghatay-Ottoman and Čaghatay-Persian dictionaries from the 16th century onwards, and are plentiful in anthologies of the same period.

Literary Works. All Luṭfī's known works are in Čaghatay Turkish, except no. 4 (1) *Dīwān*. At least 20 mss. are extant, belonging to five major recensions, but each group contains some material lacking in the others. The total number of poems is not less than 548, of which 378 are *ghazal*s and 112 are *tuyugh*s. (Further research may yield more poems.) Of the recensions, the most reliable is group (a), consisting of 2 mss.: ms. Birnbaum (Toronto) TC1 iii (late 15th–early 16th century) and British Library, Add. 7914 vi (Harāt 914/1509). The former contains 361 poems (1 *munādjāt*, 1 *na't*, 297 *ghazals*, 62 *tuyughs*) and is the longest *Dīwān* of all Luṭfī mss. The latter lacks the last 107 *ghazals*. The other groups are (b) Paris, Suppl. Turc 981 and (c) Gotha T211 (both 16th century, with some similarities); (d) Bursa, Müze 113/156 (16th-17th century). Group (e) comprises all other known mss.: (i) all the mss. in the USSR: Tashkent, Uzbek Academy of Sciences (6 mss.), Navoi Museum (1 ms.), Dushanbe, Tajik Academy of Sciences (4 mss.), Leningrad (2 mss., nos. A109, C1922—the one numbered B1181 is an Ottoman poet Luṭfī); (ii) Istanbul, University Library, T5452; (iii) Tehran, Sipahsālār 174. Group (e) mss. (which may be further subdivided) were all copied in the 18th-20th centuries and show many Uzbek and other local influences. The state of their text is markedly inferior to groups (a)-(d). Hundreds of verses attributed to Luṭfī appear in ms. anthologies in major libraries, especially in the Uzbek and Tajik academies. Most are quotations from *ghazal*s known from his *Dīwān*. Uyghur script copies of 13 *ghazals* are found in 3 mss. from the 9th/15th century. A number of verses from Luṭfī's *Dīwān* appear with minor differences in Sakkākī's *Dīwān*. (2) *Gul u Nawrūz*. An allegorical romantic epic in 2,400 *mathnawī* verses. Composed in 814/1411, it is a free version in simple Čaghatay, based on the Persian work of this name by Djalāl Ṭabīb (composed 734/1334). Seven mss. extant (see Hofman, *TL*). (3) *Ẓafar-nāma* (not extant). Described by Nawā'ī as being a *mathnawī* "translation" of more than 10,000 verses, which never got beyond the draft stage. It was presumably about the exploits of Tīmūr, whose son Shāh Rukh commissioned its writing; it was probably based on Sharaf al-Dīn 'Alī Yazdī's Persian *Ẓafar-nāma*. (4) *Dīwān* in Persian, including *ḳaṣīdas* and *ghazals*. Apparently not extant, but citations appear in biographical *tadhkiras* and ms. anthologies.

Editions. (1) Facsimile edition of Bursa ms., *Lutfi Divanı* [with introd. by] İsmail H. Ertaylan, Istanbul 1960 (incomplete, unfoliated); (2) the *Dīvān of Luṭfī*, including facsimile of Birnbaum ms. TC1 iii, ed. E. Birnbaum (in preparation); (3) Lutfiy, *Devon; Gul va Navruz* (selections, in Cyrillic script, by S. Erkinov), Tashkent 1965.

LUṬFĪ EFENDI, Aḥmad, Ottoman court historiographer (*waḳ'a-nüwīs*). 1. Life. He was born the son of Meḥmed Agha, a master sandal-maker, in 1232/1816-17 in the Aladja Ḥammām quarter of Istanbul. He attended the local Ḳur'ān school and became a *ḥāfiẓ*, and also practised music regularly at the house of Zayn al-'Ābidīn Efendi, Sultan Maḥmūd II's chief *imām*. In 1244/1828-9 he was enrolled in the Mathematical College (*Hendese-khāne-yi berrī*), but left it after a year for the *madrasa* of 'Amūdja-zāde Hüseyin Pasha, where he studied Arabic, Persian, *tafsīr*, *ḥadīth* and *fiḳh*. In 1247/1831-2 he embarked on a scholarly career, and in 1252/1836-7 he became head of the body of religious teachers or *müderrisīn* in Istanbul. The following year, he was charged with collating documents for the official records office (*Taḳwīm-khāne*) and with lecturing before the sultan on selected days in Ramaḍān. He translated al-Ghazālī's *Ta'līm al-muta'allim* into Turkish, with some additions of his own, as the *Tafhīm al-mu'allim* and presented it to the sultan, now 'Abd al-Medjīd. He then took up a job in the secretarial office of the Grand Vizier (1258/1842), where he worked as a Persian translator, until Rabī' II 1266/February 1850, when he was appointed to the itinerant clerkship of the Buildings Council (*'Imāre medjlisi*) in the districts of Vidin and Nish in Rumelia. He returned to Istanbul after a

year and was appointed first to the head clerkship of the Police Council (*Ḍabṭiyye medjlisi*) and then to the *Taḳwīm-khāne* once more, and was charged with the regular and weekly preparation and publication of the official gazette, the *Taḳwīm-i waḳāyiʿ*.

In 1265/1849 he was sent temporarily to Philipopolis (Filibe) in Bulgaria for a period of nine months, in order to collect arrears (*baḳāyā*) of taxation. Meanwhile, he also held the clerkship of the Investigation Committee (*Teftīsh hayʾati*) of Anatolia for two years. When this latter post was abolished, he again returned to the *Taḳwīm-khāne* (1269/1852-3). Eventually, in 1278/1861-2, he became a member of the Medical Council (*Ṭibbiyye medjlisi*) and taught official composition in Turkish (*inshāʾ* [*q.v.*]) at the Medical School. Soon afterwards, in addition to becoming a member of the Education Council (*Maʿārif medjlisi*) and continuing to edit the *Taḳwīm-i waḳāyiʿ*, he was entrusted with the supervision of government printing. At the end of 1281/beginning of 1865 he became *Wāḳiʿa-nüwīs* and remained in this job, in which he achieved fame, for many years. However, in 1293/1876 he again returned to the scholarly field, and his *mülkiyye* rank was changed to the status of the *ḳāḍīlik* of Istanbul. The following year he was appointed a member of the Council of State (*Shūrā-yi devlet*; in Muḥarram 1297/December 1879-January 1880 he was promoted to the *ḳāḍī-ʿaskerlik* of Anatolia; and on 11 Muḥarram 1299/3 December 1881 to that of Rumelia. In 1304/1887, despite his occupying this latter post, one of the highest ranks in the learned institution, he returned to his previous post in the Council of State.

Luṭfī Efendi died at his *yalı* at Boyadjıköy near Istanbul on 2 Ṣafar 1325/17 March 1907 and was buried in the Sofular Mosque cemetery in the vicinity of Aḳsarāy. Highly literate in Arabic and Persian and skilled in poetry and composition, he had also been an adherent of the Mevlevī dervish order.

2. Works. His most famous work was the continuation of the history of Djewdet Pasha [*q.v.*], known accordingly as the *Luṭfī Taʾrīkhi*, written in a straightforward style, and utilising information from the *Taḳwīm-i waḳāyiʿ* and some official documents. It is in 15 volumes covering the events from the beginning of Muḥarram 1241/16 August 1825 to the middle of 1293/middle of 1876; the first seven volumes were published between 1290/1873 and 1306/1889 at the Government Press and the Maḥmūd Bey Press during his own lifetime, and volume viii was published posthumously in 1328/1910 at the Ṣabāḥ Press by the court historiographer ʿAbd al-Raḥmān Sheref Efendi with some additions. The manuscripts of vols. ix-xv, which were presented to the Sultan ʿAbd al-Ḥamīd II, were transferred from the Yıldız Library to the Türk Taʾrīkh Endjümeni Library, and thence placed in the Türk Tarih Kurumu Library in Ankara; they remain unpublished. The original manuscripts of the first volumes of the *Taʾrīkh*, together with some other rough drafts of the author's, are in the former Imperial Museum (now Archaeological Museum) Library in Istanbul.

His book *Dīwānče-yi Wāḳiʿa-nüwīs Aḥmad Luṭfī* contains some of his poetry and some history in poetic form; it was printed at Istanbul in 1302/1884-5 and comprises 100 pages. The original manuscript of his *Lughat-ı ḳāmūs*, a dictionary of 53,000 words, arranged by him alphabetically from a Turkish translation of the Arabic *al-Ḳāmūs al-muḥīṭ* made by the court historiographer ʿĀṣim [see ʿĀṢIM, AḤMAD, and ḲĀMŪS 3, Turkish lexicography], is in the Archaeological Museum Library; only the first two parts of it, covering the letters *alif* and *bāʾ*, have been published (in 1282/1865-6 and 1286/1869-70 respectively).

Bibliography: Luṭfī, *Taʾrīkh*, i, 1-8, viii, 2-6, xv (= TTK Ankara, ms. no. y 531-7), f. 65a; idem, *Dīwānče*, 33, 40; İ.M.K. İnal, *Son asır Türk şairleri*, Istanbul 1969, 896-99; Djemāl al-Dīn Efendi, *ʿOthmānlı taʾrīkh we müwerrikhleri*, Istanbul 1314/1896-7, 120-5; Bursalı Meḥmed Ṭāhir, *ʿOthmānlı müʾellifleri*, Istanbul 1342/1923-4, iii, 136-7, ed. İsmail Özen, Istanbul 1975, iii, 96; İ. A. Gövsa, *Türk meşhurları ansiklopedisi*, 230; idem, *Meşhur adamlar*, Istanbul 1933-5, iii, 976; *Meydan-Larousse*, i, 176. (M. MÜNIR AKTEPE)

LUṬFĪ PASHA B. ʿABD AL-MUʿĪN, Ottoman statesman and Grand Vizier, probably an Albanian by origin, born *ca.* 893/1488 (see M. T. Gökbilgin, *İA*, art. *Luṭfī Paşa*).

As a *dewshirme* [*q.v.*] youth, he entered Bāyezīd II's [*q.v.*] *ḥarem-i khāṣṣ*, where he received a thorough education in the Islamic sciences. He held the post of *čuḳadār* before the accession of Selīm I [*q.v.*], when he graduated (*tashra čıḳmaḳ*) as a *müteferriḳa* with 50 *aḳčes* [*q.v.*] daily, and then held in turn the posts of *čashnigīr bashı* [*q.v.*], *ḳapudjı bashı* and *mīr-i ʿalem*. His first appointment to service outside the Palace was as *sandjaḳ begi* [*q.v.*] of Ḳasṭamuni, and he subsequently became *beglerbegi* of Ḳaramān. Luṭfī Pasha himself gives these details of his life in the introduction to his *Āṣaf-nāme* (ed. with translation and introduction by R. Tschudi, *Das Aṣafnâme des Luṭfi Pascha*, Berlin 1910; ed. Shükrī Bey, with introduction by ʿAlī Emīrī, Istanbul 1326/1908). However, he does not give the dates of his appointments and omits all details of his life before entering the Palace. He may also have served as *sandjaḳ begi* first of Aydın and then of Yanya (Ioánnina), since Ferīdūn Beg [*q.v.*] mentions a Luṭfī Beg who served at the siege of Rhodes (Rodos [*q.v.*]) in 928-9/1522 as *sandjaḳ begi* of Aydın (Ferīdūn Beg, *Münsheʾāt al-selāṭīn*, Istanbul 1274/1857, i, 539), and a Luṭfī Beg who served at the siege of Vienna in 936/1529 as *sandjaḳ begi* of Yanya (*ibid.*, i, 573). These references may well be to Luṭfī Pasha, the future Grand Vizier, since he himself claimed to have participated in both these campaigns (Luṭfī Pasha, *Tewārīkh-i āl-i ʿOthmān*, ed. ʿĀlī, Istanbul 1341/1922-3, 3). In 941/1534-5 he became Third Vizier. By this time he had, by his own account, served in Selīm I's wars against the Ṣafawids in eastern Anatolia, and against the Mamlūks in Syria and Egypt. Under Süleymān I [*q.v.*], he took part in the campaigns of Belgrade in 927/1521, Rhodes in 928-9/1522, Mohács in 932/1526, Buda and Vienna in 935-6/1529, Güns in 939/1532 and against the Ṣafawids in 940-2/1533-6. In the latter campaign he served probably as *beglerbegi* of Ḳaramān, commanding the rearguard of the Ottoman army at Tabrīz in Rabīʿ al-Awwal 941/September-October 1534 (Ferīdūn Beg, *op. cit.*, i, 587). During the same campaign he was active in operations around Lake Van, when he commanded the architect Sinān [*q.v.*] to construct a fleet at Tatvan (Sāʿī, *Tadhkirat al-bunyān*, Istanbul 1315/1897-8; quoted in M. Fuad Köprülü, *Luṭfī Pasha*, in *Türkiyyāt Medjmūʿası*, i [1925], 119-50).

As Third Vizier, Luṭfī Pasha commanded the fleet which left Istanbul on 1 Dhu 'l-Ḥidjdja 943/11 May 1537 to join forces at Avlonya (Valona, Vlorë) with the army under the Sultan, which had travelled overland. While the *Ḳapudan Pasha* Khayr al-Dīn [*q.v.*] sailed to Egypt to collect provisions, forces under Luṭfī Pasha raided the coasts of Apulia. On

the return of Khayr al-Dīn, Andrea Doria's attack on two galleys in the command of the *ketkhüdā* of Gallipoli (Gelibolu [*q.v.*]), and a second attack on a galley which Luṭfī Pasha had sent with messages to Corfu (Körfüz [*q.v.*]), furnished a pretext to attack this island. On 18 Rabīʿ al-Awwal 944/25 August 1537, Ottoman forces under Luṭfī Pasha landed and overran the island, but were unable to take the fortress. On the command of the Sultan, and despite Luṭfī and Khayr al-Dīn Pashas' objections, Ottoman troops began to withdraw on 1 Rabīʿ al-Ākhir 944/7 September 1537. Luṭfī Pasha returned to Istanbul with a section of the fleet (see Kātib Čelebi, *Tuḥfat al-kibār fī asfār al-biḥār*, Istanbul 1329/1911, 48-50).

On the death of Muṣṭafā Pasha on 1 Muḥarram 945/30 May 1538, Luṭfī Pasha replaced him as Second Vizier. In this capacity, he accompanied the army on the campaign to Moldavia (Ḳara Boghdan [see BOGHDĀN]). The army left Istanbul on 11 Ṣafar 945/9 July 1538, and crossed the River Prut on a bridge which Sinān had constructed on Luṭfī Pasha's orders (Sāʿī, *loc. cit.*).

When Ayās Pasha [*q.v.*] died on 20 Ṣafar 946/7 July 1539, Luṭfī Pasha succeeded to the Grand Vizierate. In this position he led the negotiations which ended the war with Venice. By the terms of the peace concluded on 20 Radjab 947/20 November 1540, Venice ceded Monemvasía and Návplion, in addition to all places lost in the war, and paid an indemnity of 300,000 ducats (200,000 according to Luṭfī Pasha, *Tewārīkh-i āl-i ʿOthmān*, 384). Luṭfī Pasha himself received a payment of 10,000 ducats from the Venetians (E. Charrière, *Négociations de la France dans le Levant*, i, Paris 1848, 471). He also headed negotiations with the Habsburgs over Ferdinand's claim to territory in Hungary which Janós Zapolyai had ruled as an Ottoman vassal. The issue eventually led to war, and an Ottoman army left for Hungary in Muḥarram 948/May 1541. At this moment, however, the Sultan dismissed his Grand Vizier. Although Luṭfī Pasha himself represents his removal from office as voluntary retirement to be "secure from the wiles of women" (R. Tschudi, *op. cit.*, Turkish text, 5), it appears to have followed a violent quarrel with his wife, Dewlet Shāhī Sulṭān, the Sultan's sister, whom he had married in 945/1538-9. According to ʿĀlī (*Künh al-akhbār*, quoted by Köprülü, in *op. cit.*), the quarrel followed his wife's objection to his grisly punishment of a prostitute. After his dismissal, Luṭfī Pasha retired to his *čiftlik* [*q.v.*] in Dimetoḳa.

Luṭfī Pasha obviously regarded his administrative activities as the greatest achievement of his vizierate. His *Āṣaf-nāme* summarises his views on the principles of sound administration, at the same time mentioning his own reforms. The greatest of these he regarded as the abolition, except in cases of extreme urgency, of the *ulaḳ ḥükmü*, whereby state couriers (*ulaḳ*) could arbitrarily expropriate horses from the populace for their own and their retinues' use. Instead, he established a system of regular staging posts with their own horses (R. Tschudi, *op. cit.*, Turkish text, 10-11; Luṭfī Pasha, *op. cit.*, 371-82; see also C. J. Heywood, *Some Turkish archival sources for the history of the menzilhane network in Rumeli during the eighteenth century*, in *Boğaziči Üniversitesi Dergisi*, iv-v [1976-7], 50 n. 9). In the financial sphere, he claimed to have reduced state expenditure by, among other things, limiting the number of *ḳapīkulu* troops to 15,000, so that income exceeded expenditure. This had not been the case at the time of his appointment (R. Tschudi, *op. cit.*, Turkish text, 35-40). Evidently to prevent oppressive taxation, he advised against the regular levy of *ʿawāriḍ* [*q.v.*] (*ibid.*, 41-2), and recommended that tax-farms (*muḳāṭaʿa*) be exploited by salaried officials (*emīn* [*q.v.*]) rather than by tax-farmers (*mültezim*) (*ibid.*, 39). Further to protect individuals against the claims of the state, he ensured that the Treasury did not appropriate inheritances until seven years had elapsed without an heir appearing (*ibid.*, 11-12). In strategic matters he rightly stressed the importance of the Ottoman fleet since the time of Selīm I, and claimed responsibility for establishing a number of squadrons outside Istanbul and an *emīn* to supervise naval expenditure (*ibid.*, 33; see also C. H. Imber, *The navy of Süleyman the Magnificent*, in *Archivum Ottomanicum*, vi [1974], 211-83).

An independent witness to Luṭfī Pasha's reforms is Moses Almosnino of Salonica (*ca.* 1515-*ca.* 1580), who reported that he had protected miners against the exploitation of mining concessionaires, and cattle-raisers against drovers and butchers (Moses ben Baruch Almosnino, *Extremos y grandezas de Constantinopla*, Madrid 1638, 130-3). Luṭfī Pasha's vizierate may also have seen the promulgation of the *ḳānūn-nāme* [*q.v.*] of Süleymān I (U. Heyd, ed. V. L. Ménage, *Studies in old Ottoman criminal law*, Oxford 1973, 26-7).

Shortly after his retirement, Luṭfī Pasha returned to Istanbul to request the Sultan's permission to go on the Pilgrimage, which he performed eventually in 949/1547, before returning again to Dimetoḳa, where he spent the rest of his life. In retirement, he devoted himself to writing works on morals, *fiḳh* and theology. He also wrote verse (Sehī, *Hesht behisht*, Istanbul 1325/1907, 25; quoted by M. Fuad Köprülü, *op. cit.*). He himself lists thirteen works in Arabic and six in Turkish (Luṭfī Pasha, *op. cit.*, 3-4; R. Tschudi, *op. cit.*, pp. XV-XVIII). He does not include the *Āṣaf-nāme*, which he may therefore have completed after his *History*, which dates from after 961/1554. He died probably in 970/1562-3 in Dimetoḳa (ʿĀlī, *Künh al-akhbār*; quoted by M. Fuad Köprülü, *op. cit.*).

In Istanbul he endowed a fountain; in the village of Müslim near Edirne, he endowed a mosque and a *muʿallim-khāne* with 100,000 *aḳčes* and the income from twenty shops in Edirne (M. T. Gökbilgin, *Edirne ve pâşa livası*, Istanbul 1952, 506-7).

Bibliography: in addition to the works cited in the text, see J. H. Mordtmann's valuable review of R. Tschudi's edition of the *Āṣaf-nāme* in *ZDMG*, lvi (1911), 599-603. (C. H. IMBER)

LUṬFĪ AL-SAYYID, AḤMAD, Egyptian scholar, statesman and writer, born in the village of Barḳayn, Daḳahliyya Province, on 15 January 1872 and died in Cairo on 5 March 1963. His family were rural gentry (*aʿyān*), and both his father, al-Sayyid Abū ʿAlī, and his grandfather were *ʿumda*s. He was educated in the traditional *kuttāb*, the government school in al-Manṣūra, the Khedivial Secondary School in Cairo and the School of Law in Cairo. The most significant intellectual contacts which he made at the School of Law were with Muḥammad ʿAbduh and Ḥassūna al-Nawāwī. Having graduated in 1894, he entered the legal department of the government service, where he worked until 1905. In 1907, he became editor-in-chief of a new newspaper, *al-Djarīda*, which voiced the views of a number of enlightened and liberal *aʿyān* and the party which they founded later in 1907, the Ḥizb al-Umma ("National Party"). Luṭfī's writings in *al-Djarīda* from 1907-14 comprise his most important and influential body of work. From 1915-18 he was director of the National

Library, but resigned to act as secretary to the original *Wafd* of 1918-19 headed by Saʿd Zaghlūl. He soon returned to the National Library, where he began his second substantial series of works, his translations from Aristotle via the French versions of Jules Barthélemy-Saint-Hilaire. From 1925-41 he was Chancellor of the Egyptian (later Cairo) University, with intermissions as Minister of Education (1928-9) and Minister of the Interior (1929). In his later years, he was a member of the Senate, and on retiring from politics, was president of the Academy of Arabic Language until his death. His liberal philosophy was largely the product of his readings in Western philosophers and sociologists from Aristotle to Locke and Bentham, Mill, Spencer, Rousseau, Comte and Le Bon. He saw Egyptian nationality as the result of historical and environmental factors which Egyptianised all who resided permanently in Egypt and committed their destinies to her. Hence he campaigned tirelessly against Pan-Islamic, Pan-Arab and Pan-Ottoman ideologies in *al-Djarīda*, but granted equal worth to Egypt's Pharaonic and Islamic heritages. Rejecting religion as a basis for nationhood, he insisted that utility was the foundation of all political and social unity. He proclaimed freedom as the right of both the individual and the nation, and followed Muḥammad ʿAbduh's advocacy of a gradualist approach towards a constitutional régime through universal education. By his middle years, he was already called *ustādh al-djīl* ("teacher of the generation"), and his writings are considered a notable contribution in the formation of modern literary Arabic. His autobiography appeared first in *al-Muṣawwar*, Cairo, September-December 1950, and in book form as *Ḳiṣṣat ḥayātī*, Cairo 1962. Selected editorials from *al-Djarīda* have been published in the following collections edited by Ismāʿīl Maẓhar: *al-Muntakhabāt*, 2 vols., Cairo 1945; *Ṣafaḥāt maṭwiyya*, Cairo 1946; and *Taʾammulāt fi 'l-falsafa wa 'l-adab wa 'l-siyāsa wa 'l-idjtimāʿ*, Cairo 1946. His translations from Aristotle comprise: *ʿIlm al-akhlāḳ ilā Nikūmākhūs* (*Nicomachean ethics*), Cairo 1924; *al-Kawn wa 'l-fasād* (*Generation and corruption*), Cairo 1932; *ʿIlm al-ṭabīʿa li-Arisṭūṭālīs* (*Physics*), Cairo 1935; *al-Siyāsa li-Arisṭūṭālīs* (*Politics*), Cairo 1948.

Bibliography: the following deal entirely or in large measure with Aḥmad Luṭfī al-Sayyid and his thought: ʿAbd al-Laṭīf Ḥamza, *Adab al-maḳāla al-ṣuḥufiyya fī Miṣr*, vi, Cairo 1961; G. Delanoue, *Aḥmad Luṭfī al-Sayyid (1872-1963)*, in *REI*, xxxi (1963), 89-103; Ḥusayn Fawzī al-Nadjdjār, *Luṭfī al-Sayyid wa 'l-shakhṣiyya al-Miṣriyya*, Cairo 1963; idem, *Aḥmad Luṭfī al-Sayyid: ustādh al-djīl*, Cairo 1965; C. LUṬFIYYA [see SHĀDHILIYYA].

LŪṬĪ (also Lāṭī, Lawāṭa-kār), in current Persian strictly speaking an itinerant entertainer accompanied by a monkey, bear or goat, which dances to the sound of a drum and coarse songs. This however appears to have been a late restriction of the meaning of the term, deriving perhaps from its earlier use to describe a jester attached to a royal or princely court. In other contexts, it is equivalent to a loose liver, gambler, wine-bibber, and more especially, a pederast. The last meaning lends colour to the generally accepted derivation, through Arabic *lūṭī*, *lawwāṭ*, from the Prophet Lot, though this has been questioned by some scholars. Another less likely source is the Persian word *lūt*, meaning "victuals", whence *lūtī* = "greedy".

One of the earliest recorded uses of the term in Persian is by the 4th/10th century poet Kisāʾī, who associates it with the words *tāz* and *makyāz*, both meaning "catamite". Nāṣir-i Khusraw, writing in the 5th/11th century, uses the term as equivalent to "wine-drinker, thief, whoremonger", while Sūzanī (6th/12th century) warns against commercial dealings with *lūṭīs*, which suggests that the word was by then acquiring its later meaning of "vagabond, wastrel". Djalāl al-Dīn Rūmī (7th/13th century) and ʿUbayd Zākānī (8th/14th century), however, use it primarily in the sense of "pederast".

Probably as a result of the association in certain aspects of Ṣūfī thought between loose living and the following of the Ṣūfī path [see MALĀMATIYYA], expressions such as *lūṭī-yi Allāhī*, *lūṭī-yi Khudāʾī*, are found with the significance of "generous, manly". In current parlance, *lūṭī* also means "rascal, vagabond", *lūṭī-bāzār* or *lūṭī-bāzī* "cheating", particularly in financial matters, *lūṭī-khʷur kardan* "improvidence, wastefulness". On the other hand, *lūṭī-garī* implies "generosity".

LUWĀTA [see LAWĀTA].

LUXOR [see AL-UḲṢUR].

LUZŪM MĀ LĀ YALZAM, "observing rules that are not prescribed", term commonly used for the adoption of a second, or even a third or fourth, invariable consonant preceding the rhyme consonant (*rawī*) which, at least in classical poetry, remains itself invariable [see ḲĀFIYA, iv, 412a, middle]. The term is also used in dealing with rhymed prose (*sadj*) [*q.v.*]. In later Arabic and Persian literary theory the term covers not only the classical *luzūm*, but also a variety of other devices which have nothing to do with the end rhyme. Common synonyms of *luzūm* are *iʿnāt* and *iltizām*, and several authors insist that one finds the terms *taḍmīn*, *tashdīd*, and *taḍyīḳ* in the sense of *luzūm*.

Scholars occupied with rhyme theory point out that the introduction of a second invariable rhyme consonant is rare among the ancient poets; they justify the practice by arguing that some poets chose to regard the suffix *-at* of the third person feminine of the verb in the perfect, the prominal suffixes, *-ka*, *-ki*, *-kum*, *-kumā* (implicitly, see Ibn ʿAbd Rabbih, *al-ʿIḳd*, v, 501), *-hum*, and *-humā* as *waṣl* [see ḲĀFIYA, iv, 412a, middle] which meant that the preceding consonant became *rawī* and as such had to be invariable in addition to these suffixes themselves (cf. the explicit statement by the poet Kuthayyir quoted by Akhfash, *Ḳawāfī*, 18-19); it also meant that a line ending in the demonstrative *dhālika* should prefer-

ably be followed by lines ending in *-lika*, *e.g.*, *hunālika*, and not, for instance, in *bika*. They mention that adoption of a second invariable consonant was sometimes achieved by reduplication of the rhyme consonant, and that sometimes the second invariable consonant (or the reduplication) was maintained in part of the poem only. They do not offer an explanation for this last phenomenon and seem to be unaware of the fact that *rā*ʾ, *lām*, and *nūn* (less often *mīm*) appear at times to be interchangeable, *e.g.*, *djamālikī/bārikī* (Ṭarafa, *Dīwān*, ed. D. al-Khaṭīb and L. al-Ṣakkal [Damascus 1395/1975], 86-8), *ḥallatī/fa-dannatī* (Kuthayyir, *Dīwān*, ed. I. ʿAbbās [Beirut 1391/1971], 95-6, and the lines on p. 107; see also A. Bloch, in *AO*, xxi [1953], 230 and n. 31). Poems or fragments of poems ending on *-llat(ī)*, *-nnat(ī)*, and *-rrat(ī)* are quoted with special frequency. The question of the origin of the figure thus appears complex. The literary theorists beginning with Ibn al-Muʿtazz (d. 296/908), *Badīʿ*, 74-5, who lists the *iʿnāt* (= *luzūm*) as one of the ornaments of style (*maḥāsin*, see BADĪʿ and IBN AL-MUʿTAZZ and cf. *Israel Oriental Studies*, ii [1972], 89-90), made no serious attempt to clarify the history of the figure or to explain to what extent the *luzūm* as practised by the poets of their own time was related to the technique of the ancient poets as recorded by the rhyme theorists. This is true also of Abu 'l-ʿAlā al-Maʿarrī (d. 449/1058), even though in the introduction to his *Luzūmiyyāt* (a work intended to demonstrate the possibilities of the figure and a curious exposition of the author's views on religion and ethics, see AL-MAʿARRĪ) he offers a thorough review of rhyme theory: Abu 'l-ʿAlāʾ seems to suggest that the *luzūm* of later poets was largely independent of these earlier examples (37, ll. 1-3) and implicitly denies that the suffix *-hum* can be taken as *waṣl* (51, ll. 2-7). Ibn 'l-Iṣbaʿ (d. 654/1256), *Taḥrīr*, 519, goes so far as to claim that the *luzūm* in the works of the ancients was unintentional.

At a later stage, the literary theorists discovered examples of *luzūm* in the Ḳurʾān, but these do not involve doubling of consonants or the repetition of suffixes, except in one case (VII, 86, see Ibn Abi 'l-Iṣbaʿ, *Taḥrīr*, 518; idem, *Badīʿ al-Ḳurʾān*, 229) which is not valid, since it does not appear at the end of the verse and cannot be considered a rhyme. However, the examples from the *ḥadīth* and the sayings of ʿAlī quoted by Yaḥyā b. Ḥamza (d. 747/1346 or 749/1348), *Ṭirāz*, ii, 400-1, contain some instances of *sadjʿ* with identical consonants preceding pronominal suffixes.

For a while after its first appearance in Ibn al-Muʿtazz's *Badīʿ* as *iʿnāt al-shāʿir nafsah* the figure received little attention from the literary theorists. Ḳurʾānic examples and one example from poetry appear in Bāḳillānī's (d. 403/1013) *Iʿdjāz al-Ḳurʾān* (ed. A. Ṣaḳr [Cairo 1374/1954], 145-6) in a chapter on *al-tarṣīʿ maʿ al-tadjnīs*, but Bāḳillānī does not mention the term *iʿnāt* which one would expect in this context. Abū ʿAbd Allāh Muḥammad b. Aḥmad al-Khʷārazmī (*flor.* second half of the 4th/10th century) in his *Mafātīḥ al-ʿulūm* (ed. G. van Vloten [Leiden 1895]), defines *iʿnāt* as the poet's following self-imposed rules and does not offer any examples. The term seems even to have been forgotten for some time, as appears from the unpublished *Mawādd al-bayān* of ʿAlī b. Khalaf (5th/11th century) (see *AIUON*, xxxvii [1977], 301 and note, and also I. Kratchkovsky in *AIEO*, xx [1962], 34, 108-9): The definition which ʿAlī b. Khalaf offers is correct, but as a result of a graphic error *iʿtāb* had by this time been substituted for *iʿnāt*; this resulted later in the introduction of a new figure, *ʿitāb al-marʾ nafsahu* which found its way into several handbooks (see, for instance, Ibn Abi 'l-Iṣbaʿ, *Taḥrīr*, 166-7).

The *Khaṣāʾiṣ* of Ibn Djinnī (d. 392/1002) has a chapter on the *taṭawwuʿ bimā lā yalzam* which stands apart from the treatment of the *luzūm* in other grammatical and rhetorical studies: It offers a wide variety of examples, mostly from older poets and mostly in the *radjaz* metre. Ibn Djinnī disregards (or does not recognise) some of the rules adopted by others. He accepts the *nūn* of the second energetic form of the verb as *rawī* (see ḲĀFIYA, iv, 413a second half) and ignores the tendency of ancient poets to consider the *kāf* of *-kumā* as part of the *waṣl* (ii, 249); he points to unique instances of the *luzūm* in a poem by ʿAbīd b. al-Abraṣ where all first hemistichs but one end with the article and in a *radjaz* poem by a certain Ghaylān [b. Ḥurayth] al-Rabaʿī (M. Ullmann, *Untersuchungen zur Rağazpoesie* [Wiesbaden 1966], index), where all lines but one end on a word in the genitive case which cannot be recognised as such because the *ḳāfiya* is not a *ḳāfiya muṭlaḳa* (see ḲĀFIYA, iv, 412a first half; with a view to the case ending being pronounced in singing (?), cf. H. Birkeland, *Altarabische Pausalformen* [Oslo 1940], 12-3). Ibn Djinnī also notes (ii, 262-3) that Ibn al-Rūmī (d. *ca.* 280/893) distinguished himself as a *luzūm* poet (see also Abū ʿUbayd Allāh Muḥammad b. ʿImrān al-Marzubānī [d. 384/993], *Muʿdjam al-shuʿarāʾ*, ed. F. Krenkow [Cairo 1354/1935], 289, ll. 9-10), even though he sometimes did no more than maintain the same vowel before the *rawī* when this was not necessary, or not strictly necessary. In this context he makes a case, though not a well-documented one, for seeing in the *luzūm* of *muwallad* poets (the term generally refers to early ʿAbbāsid poets, but is also used specifically for 4th/10th century poets) a continuation of tendencies which existed in ancient poetry. He is perhaps the first to accept as a form of *luzūm* the use of diminutives in the rhyme. Ibn Djinnī's views may not have been widely known; his observations on Ibn al-Rūmī and on the use of the diminutive are also found in later authors, but are worded differently.

In several works inspired by al-Ḳazwīnī's (d. 739/1338) *Talkhīṣ al-miftāḥ* [see AL-ḲAZWĪNĪ (KHAṬĪB DIMASHḲ)] and in didactic poems on the *badīʿ* (*badīʿiyyāt*) composed between the 8th/14th and 12th/18th centuries, the term is applied in a wider sense than before: one speaks of *luzūm* even if only two lines of a poem show an additional invariable consonant (some of the examples quoted by earlier rhyme theorists are from poems that do not show the *luzūm* throughout). The same is true, of course, of the *sadjʿ*, where often there are no more than two rhyming clauses. There is also question of *luzūm* in internal rhyme, *e.g.*, *wa-mā 'shtāra 'l-ʿasala mani 'khtāra 'l-kasala*. ʿAbbāsī (d. 963/1556), *Maʿāhid*, iii, 306, mentions a collection of *maḳāmāt luzūmiyya*, apparently based on the figure, by al-Ashtarkuwī [see MAḲĀMA, and H. Nemah, in *JAL*, v, 88-92], who died in 538/1143 and quotes some poetry from this author. Moreover, the figure is no longer limited to the rhyme, but involves different kinds of rhetorical games and artifices, such as the avoidance of pointed or unpointed letters or alternating such letters from word to word, the avoidance of labials, the inclusion of a certain letter in every word of the line, the use of all letters of the alphabet in one line, and even graphic devices, such as the omission of connected letters. Suyūṭī (d. 911/1505) credits himself with having

invented the term *tadyīḳ* for such devices. The first example he mentions, however, is a device which involves the rhyme: The rhyme consonant may be, for instance, the *hāʾ*, but the poet imposes upon himself to avoid using the pronominal suffixes of the third person singular (presumably even in cases where this would be permissible, see ḲĀFIYA, iv, 413a middle). Others do not seem to be aware of Suyūṭī's definition and use *tadyīḳ* as a simple synonym of the other terms listed at the beginning of this article.

In Persian rhetoric and prosody, the terms *iʿnāt* and *luzūm mā lā yalzam* are used, as in Arabic, for the adoption of a second invariable consonant in prose and in poetry, and the reduplication of the rhyme consonant. In addition, however, the two terms are used for the repetition of two or more words in each hemistich or line of poetry, and for the use of internal rhyme. Rādūyānī (middle of the 5th/11th century) denotes the latter use specifically as *iʿnāt al-ḳarīna*. Rāzī (beginning of the 7th/13th century), *al-Muʿdjam*, 386, also applies the term *iʿnāt* to the use of double *ḳāfiyas* (*e.g.*, *djahān khabar*/*āsᵉmān sipar*) and points out that most Persian poets adopt an invariable consonant before the *tāʾ* of the feminine ending of Arabic words without considering this convention as *iʿnāt* or *luzūm* (216-17). Some later poets however disregard this rule, especially in cases where the *ḳāfiya* proper is followed by a *radīf*, *i.e.*, a word or particle recurring at the end of each line (see *EI*[1], s.v. REDĪF for a more accurate description which includes the *redif* in Turkish poetry; see also L. P. Elwell-Sutton, *The Persian metres* [Cambridge 1976], 225-6, 230). Another case of *luzūm*, according to Rāzī (262-3), occurs when the poet maintains the *taʾsīs*, i.e., a long *ā* separated from the *rawī* by a variable vowelled letter, throughout his poem (see Elwell-Sutton, 229-30, 233). Djādjarmī [*q.v.* in Suppl.] (*flor.* early 8th/14th century) has collected a number of poems to which forms of *luzūm* have been applied under the heading *malzūmāt* in the 10th chapter of his anthology *Muʾnis al-aḥrār wa-daḳāʾiḳ al-ashʿār* (ed. Mīr Ṣāliḥ Ṭabībī, i, Tehran 1337/1958, *nūn-fāʾ*).

LYDDA [see LUDD].

M

MĀ BAʿD AL-ṬABĪʿA, or MĀ BAʿD AL-ṬABĪʿIYYĀT, a translation of the Greek τα μετὰ τα φυσικά "the things which come after physical things", i.e. metaphysics, an expression which can have two meanings, each of which envisages a particular conception of that science (*ʿilm* or *ṣināʿa*). It can either be a discipline which one embarks upon after physics, utilising the results of the natural sciences, or else it can be one whose goal lies beyond the apprehendable objects which are the concern of physics. The two meanings are not mutually self-exclusive, but the first tends to put the accent on the role of experience and of knowledge of physical things in the search for metaphysical realities, whilst the second invites one to enter immediately into the domain of suprasensible principles in order to deduce from them the nature and laws governing beings of the material world.

One should note at the outset the two synonyms of this expression which denote metaphysics in

Arabic: on one side *al-ilāhiyyāt*, "the divine things", and on the other *al-falsafa al-ūlā*, "the first philosophy", a title which al-Kindī gave to one of his *Rasāʾil* (cf. *Rasāʾil al-Kindī al-falsafiyya*, ed. Abū Rīda, Cairo 1953, i). These two terms were borrowed from the Greeks. In Plato, the word θεολογία normally denotes metaphysics; in his view, there exists a sphere of the divine (τὸ θεῖον), a term taken up by Aristotle, who identifies theology, the first philosophy and what we call metaphysics (*Metaphysics*, 1026, a 17-18). The translation uses the curious turn of phrase *ʿilm al-ashyāʾ al-ilāhiyyāt al-ḳawl* "science of divine things in regard to definition", in which *ḳawl* seems to correspond to the element λογική in θεολογική (*ḳawl* normally translating λόγος in its sense of definition). Ibn Rushd comments in these terms: "Just as the things of nature are those in the definition of which nature is involved, so are the divine things those in the definition of which God is involved" (*Tafsīr Mā baʿd al-ṭabīʿa*, ed. Bouyges, ii, 712). Nevertheless, there does not follow from this that God is the object of metaphysics, neither for Ibn Rushd, who connects this science not with God but with the existence of an incorporeal and immobile substance, this substance being for him *al-mawdjūd fi 'l-ḥaḳīḳa huwa 'l-djawhar* "the being in reality" (*ibid.*, 750), nor for Ibn Sīnā, who thinks that God is not a datum, but can be demonstrated starting from the Necessary Being. Ibn Rushd further follows Aristotle, who brought forward the possibility of a first philosophy (ἡ πρώτη φιλοσοφία) in 1026 a 23, saying that if there exists no other substance except those constituted by nature, then it is physics which should be the first philosophy, concerning which Ibn Rushd comments thus: "It is equally clear that if there is there a certain substance distinct from the moving substance, this substance which has existence will be the first, and the science which one builds upon it will be the primordial science (*al-ʿilm al-aḳdam*); it will be the universal science and the first philosophy (*Tafsīr*, ii, 714). Moreover, for Aristotle, beyond the general idea of the divine there are only the gods of the ancient poets (Hesiod) who come into mythological cosmologies remote from demonstrative philosophy. Commenting on the term θεολόγοι (*Met.*, 1000 a 9), Ibn Rushd writes (*Tafsīr*, i, 251), "Those who speak of divine things (*al-umūr al-ilāhiyya*) are those who hold forth upon a discourse beyond what man can intelligibly understand (*kalāman khāridjan ʿammā yaʿḳiluhu al-insān*)". In other words, before speaking philosophically of God, one must make an intelligible conception, and this is the role of metaphysics.

But how should one understand the expression "primordial science" which Ibn Rushd uses? All the question is included there. Indeed, metaphysics comes *before* the other sciences because it is universal and is concerned with the cause of everything which exists; should one therefore place it in front of the others in research and teaching, or on the contrary keep it back till the end? One may see here merely a difference of method, that of an expository procedure starting from principles and causes, and of a process of discovery starting from concrete and apprehensible experiences. This is al-Fārābī's approach, who tries by this means to reduce the divergencies separating Plato and Aristotle. He accordingly remarks in his *Kitāb al-Djamʿ bayn raʾay al-ḥakīmayn* (ed. A. Nader, Beirut 1968, 86) that for Plato, the most noble primordial substances are those which are near to the intellect and the soul, whilst for Aristotle, the most worthy substances of this name, by anteriorness and by their value (*bi 'l-tafḍīl wa 'l-taḳdīm*) are the first substances, i.e. the individual substances (*al-djawāhir al-uwal allatī hiya al-ashkhāṣ*). But the difference arises from what Aristotle then says from the point of view of the logical and physical sciences, whilst Plato speaks from the point of view of metaphysics (*fī-mā baʿd al-ṭabīʿa*) and theological doctrines (*wa-aḳāwīlihi al-ilāhiyya*). Consequently, one can set oneself within a certain science or within another, or start from one or start from another, as a matter of indifference, according to one's intention. In his *Falsafat Arisṭūṭālīs* (ed. Muḥsin Mahdī, Beirut 1961), al-Fārābī sets forth the Stagirite's thought, following the progressive order of his enquiry as he sees it. After the questions of logic, and with the intention of discovering what makes for perfection in man, Aristotle studies the various questions which concern nature (*ṭabīʿa*), the soul (*nafs*) and the intellect (*ʿaḳl*). "He must also examine profoundly the substances of the heavenly bodies; are they nature, soul or intellect, or are they indeed some other, more perfect (*akmal*) thing; also, are these substances things which are outside physical speculation? The point is that physical speculation only includes what the categories include. Now it is clear that there are other beings outside the categories: the Intellect acting as Agent and the Thing (*shayʾ*), which give to the heavenly bodies a perpetual circular movement.This being so, one has to make speculations about the beings which have a more universal (*aʿamm*) field than those about physics" (*ibid.*, 130). "This is why Aristotle explains in the book called *Mā baʿd al-ṭabīʿiyyāt* that he is making speculations and conducting a deep enquiry into beings in a way which differs from physical speculation" (*ibid.*, 132). One notes that al-Fārābī admits that one can begin by physics, which does not however prevent him from thinking (in fact, wrongly) that Aristotle recognises the existence of a domain of the being which is external and superior to the categories which, according to him, only concern the physical domain. Elsewhere he speaks clearly (131) of a penetrating enquiry into the beings which are above the natural things in the hierarchy of being (*fī 'l-mawdjūdāt allatī fawḳ al-ṭabīʿiyyāt fī rutbat al-mawdjūd*).

Ibn Sīnā and Ibn Rushd take up the Aristotelian definition of metaphysics as being the science of the being as such (*al-mawdjūd bi-mā huwa mawdjūd*). But what is meant to be understood by this?

1. **Ibn Sīnā's viewpoint.** The basic principle is that "the object (*mawḍūʿ*) of all science is something whose existence is admitted (or conceded: *amr musallam al-mawdjūd*) in that science" (Shifāʾ, *al-Ilāhiyyāt*, Cairo 1960, i, 5). It is drawn from the *Posterior analytics* of Aristotle (72 a 20): "If I say that a thing exists or does not exist, it is a hypothesis". Hence if one says that the object of metaphysics is God or the Prime cause (*Musabbib al-asbāb*), this is only an hypothesis which must be verified by means of another science. Now there is no other science, necessarily more particular than metaphysics, which is able to guarantee the existence of such-and-such an object. The *mawḍūʿ* of a science is the object concerning which this science conducts an enquiry (*al-mabḥūth ʿanhu*). But since God or the Prime cause are not data, they are on the contrary the goal of a metaphysical enquiry (*maṭlūb*). Ibn Sīnā concludes that the object of metaphysics is the being as such which is implied by every science, by every
